Evening Classes for Young Men in London.—The sixth year's report and prospectus of the metropolitan committee for establishing evening classes for young men in London and the suburbs, have just been issued. The report gives the satisfactory intelligence that this useful and commendable association has become, by another year's efforts, more widely established and more firmly rooted than before. The reading-room and library at Crosby-hall have been improved, and the lectures have been better appreciated than they have ever been. Most of the classes have comprised no less than 1,529 students, or about 500 per term. The institution is being extended, and ought to be encouraged and supported, as it is doing much good.

Mold.—The magistrates, at the last quarter sessions for the county of Flint, appointed Mr. T. M. Penson, of Chester, surveyor of public works, upon the resignation of their late surveyor.

New Church and Parsonage, Tulse-hill — The designs of Mr. T. D. Barry have been selected. There were seventeen competitors. Messrs. Rowland and Evans have contracted for the whole work, at the sum of 7,500*l*.

Hydraulic Power in Grimsby Tower.—Nearly all the works of the Grimsby Docks are carried on by means of hydraulic power, supplied from a tower, which rises from the centre pier to the height of 300 feet, and can be seen sixty miles out at sea. A steam-engine of 20-horse power, placed at a distance of three-quarters of a mile, pumps into a tank erected in this tower, at a height of 220 feet, a never-failing supply of water. In this way, by mechanism familiar to engineers, a degree of hydraulic power is obtained which at Grimsby serves to open and shut the immense lock-gates, to regulate the sluice-gates, to work the cranes for discharging and for loading ships, and to hoist goods into and out of the lofty warehouses. All this work is accomplished with an ease which appears marvellous, when contrasted with old modes of performing the same operations. For example, at the Liverpool Docks, some sixteen men take half an hour to move a pair of 70-feet gates. At Grimsby, gates equally ponderous can be moved by two men in a couple of minutes. The Grimsby Dock is the only one in the kingdom at which hydraulic force has yet been brought so completely under control for performing the varied handiwork required upon the quay side, but the principle is now being extensively applied, as we long since anticipated it would. The Prince Consort, when lately at Grimsby, complimented Mr. Rendel upon the successful issue of the great works there, which, carried out under extraordinary difficulties, have led to the reclamation of 130 acres of land from the sea, and to the construction of a dock 20 acres in extent, and a tidal basin with an area of 13 acres, affording most complete facilities for the landing and shipment of merchandise.

New Metals for Machinery.—Mr. J. P. Kingston, of Lewisham-road, Kent, has patented the combination of tin, copper, and mercury, and use of the same as bearings, or linings of bearings, and for packings for machinery. The patentee melts (say) about nine pounds of copper, and adds thereto twenty-four pounds of tin. This combination he allows to cool, and again melts it, and then adds 108 pounds of tin; and when the tin is melted, he adds nine pounds of mercury, and then allows the whole to cool. The patentee does not confine himself to the precise quantities of the metals above given. He claims the combining mercury with tin and copper in the manufacture of bearings and packings for machinery.

The Nottingham Warehouse.—By accident, the references to the plan of residence attached to Messrs. Adams and Page's warehouse, given in our last number (page 546) were omitted. We now supply the deficiency:—

A. Entrance-hall.
B. Dining-room.
C. Parlour.
D. Kitchen.
E. Scullery.
H. Hoist.
I. Private staircase.
J. Men's staircase.
K. Women's staircase.

New Inodorous and Smokeless Stove.—The Polish general, Dembinski, has invented a cylinder, of zinc, copper, sheet-iron, or any other metal, with an inner and removable heating cylinder, containing sand or small stones, and connected by means of two tubes with a very small vessel, placed on a fire or over a gas light or lamp. The space between the two cylinders, which is small, is filled with cold water. The vessel on the fire is made of very thin metal, and is filled with water which boils almost immediately. As the water boils it rushes by one of the pipes to the cylinder, and by the other returns to the vessel over the fire, and this process goes on till the whole of the water boils, which is in one-fourth of the time required in the usual way. The process is continued till the sand or stones in the inner cylinder have become perfectly heated. Two stop cocks close to the cylinder are then turned, and the pipes being unscrewed, the cylinder is carried by means of handles to any room which it is intended to warm. The temperature of the room is said to be increased several degrees by the use of this cylinder, which of course gives out neither smoke nor carbonic acid, and at the end of five hours the heat in the cylinder is still, it is alleged, so great, that the temperature of the room is very nearly what it was when the cylinder was first introduced. If more than one cylinder be wanted, the generator remains over the fire, and other cylinders can be attached.

For Laying Pipes in the Earth, and the Junction of such Pipes.—The Earl of Dundonald has patented a carriage having a cutter for vertically parting the earth, with a horizontal tool attached like that of a drain-plough. From the upper part of the carriage a duct descends obliquely to the tool, through which duct, drain-pipes or other pipes, connected by an elastic or other rope, may be continuously deposited in the channel formed by the progressive motion of the apparatus. The junctions may be lubricated by the machinery with clay.

Prevention of Drafts through Doors or Windows.—Mr. J. Greenwood, of Arthur-street West, London-bridge, has patented certain modes of applying india-rubber for these purposes. In the case of the hanging stile of a door, easement, &c. he proposes two modes of using the india-rubber. 1st. A groove is ploughed in that part of the rebate of the door jamb or frame against which the edge of the door will press, when closed, and a corresponding groove in the edge of the hanging stile of the door, so that the two grooves form one chamber when the door is shut. A piece of india-rubber is then cut slightly broader than the depth of this chamber, and glued into either of the grooves, and the projecting part of this strip, passing into the other groove when the door is closed, becomes compressed, and excludes the draft. 2nd. On the stop of the jamb an additional stop, moulded or otherwise, is fixed, containing a groove ploughed along the edge which faces the door at about an angle of 45 degrees with such edge. In this groove a strip of india-rubber is glued, and becoming bent by the closing of the door, shuts out the draft. This strip appears on the face of the door when it is closed. A similar mode to that last described is employed for the sills and meeting-rails of sashes, and the stiles of folding-doors

TENDERS

For nineteen houses to be built for the Ironmongers Company, in St. Luke's parish:—

Wilson	£6,690	0	0
Brown	5,610	0	0
B and C. Hayn	5,555	0	0

Should any lots be left after that time, they may be taken by any person paying the price, or possessing or purchasing the right to borrow the money; and if the whole should not be sold during the first week, the remaining lots may be taken by any person on payment of the price in two yearly instalments, with interest on the unpaid balance at 5 per cent. Persons not having rights of their own, but wishing to obtain early choices, can do so by purchasing the rights of others, and a Register of rights offered for sale, with prices, is kept at the Office. Plans and conditions of sale may be had on application.
29th Oct. 1854. W. E. WHITTINGHAM, Secretary.

HOUSE WANTED.—The Advertiser wishes to purchase the lease of a six or eight roomed house, in a respectable neighbourhood. Lease not less than forty years.—Apply by letter (prepaid), S. W. 33, Leigh-street, Burton-crescent.

WHARF WANTED.—Wanted to rent, a Wharf, or part of a Wharf, on the banks of the Thames: below London-bridge preferred.—Apply to H. MONK, Charbon Cottage, Marlborough Cottage, Chelsea.

TO ENGINEERS AND OTHERS.

TO BE DISPOSED OF, by PRIVATE CONTRACT, a very compact ENGINEERING ESTABLISHMENT, known as the Atlas Works, situate in Emerson-street, New Park-street, Southwark, an excellent situation for the trade. The premises have been occupied for several years for the business of an engineer, but have been fitted within the last few years with several valuable tools, rendering the establishment now in a most efficient state. The machinery includes a large and powerful self-acting planing-machine, self-acting boring-machine, drilling-machine, ten very powerful engine and foot turning and screw-cutting lathes, vices and benches, four smiths' forges, a large assortment of engineers' and smiths' tools, ten horse power steam-engine and boiler, shafting and gearing, screwing apparatus, a valuable collection of new patterns in wood and iron, and every requisite for the employment of about fifty workmen. The premises comprise a substantially built factory of two floors: the upper story used as a fitting-shop, turnery, engine-house, and smith's shop; a workmen's dining-room, stable, yard a convenient residence, and offices. Held on lease for a term of twenty-six years at a rent of 80l. per annum.—For further particulars apply to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

CARPENTER'S BUSINESS (old-established) TO BE DISPOSED OF, in consequence of the sudden death of the proprietor. Goodwill, 50l.; unmanufactured stock, by valuation. The house and premises on a moderate but comfortable scale. Rent will be fair and reasonable being the young widow's own freehold.—Apply to Mr. RUMBALL, Land Surveyor and Auctioneer, St. Alban's, Herts.

TO GASFITTERS, &c.

ISLINGTON.—TO BE DISPOSED OF, the LEASE and STOCK IN TRADE of an old-established House in the Upper-street, Islington, in which the principal trade in the parish has been successfully carried on for thirty-four years by the present proprietor, who is retiring.—Apply to Mr. NEWBON, Auctioneer and Valuer, 5, Church-row, Upper-street, Islington, and 28, Clement's-lane, City.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXPENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH. Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Rough Slate from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

ding universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

MANUFACTURED BY MARK BOWDEN AND COMPANY.

WORKS, NELSON-STREET, BRISTOL. MR. JAMES GILLON, AGENT: OFFICE, 60, ALDERMANBURY, LONDON.

THE BRILLIANT-CUT MAY BE OBTAINED THROUGH ALL WINDOW-GLASS MANUFACTURERS AND MERCHANTS IN THE KINGDOM.

DESIGNS FOR CENTRE-PANES, ON OBSCURED OR RICHLY-COLOURED GLASS, MAY BE HAD GRATIS, POST-FREE.

Prices, and every information, forwarded on application to the Works, Bristol; or at the Agent's Offices, London, where a variety of Specimens may be seen.

THOMAS MILLINGTON

HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great exhibitions it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under plates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen and Gentlemen who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION as the only works in Great Britain where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S-BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other Buildings at the New Houses of Parliament.—A liberal Discount allowed to the Trade.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Haytor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, BITUMINEOUS BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford street, Lambeth. Shop-fronts, fittings staircases, &c. Well seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 70, York road, Lambeth (late Shop Foreman to Messrs. Lawrence and Sons). Sash, Door, and Staircase Manufacturer, with well seasoned materials and super or workmanship, at the lowest possible prices. Glazed and polished goods securely packed for the country and for exportation.—P.S. A full list of prices sent on application.

HENRY PASK, Baker-street, Clerkenwell, Sash, Shop Front and Door Maker to the Trade.

begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

TO BUILDERS AND OTHERS.

WANTED, for a corner house, TWO modern, second-hand, mahogany SHOP SASHES, glazed with plate-glass, one 9 feet high by 7 feet 3 inches long, the other 9 feet high by 12 feet 6 inches long, with shutters and stall-boards complete; also shutters and sitting stall-board for the doorway, about 4 feet 4 inches wide, and three others without shutters and stall-boards, 8 feet 5 inches long, 8 feet 2 inches long, 9 feet long.—each 9 feet high, all requiring a return pane of 2 feet 9 inches by 9 feet high. Apply by letter only, stating price, including fixing, painting, &c. to Mr. PIPER, K. 0, Beaufort-row, Walham-green.

FOREIGN WINDOW-GLASS.—Builders and others can be supplied with the above, 40s. at 18s and 31s.; 32s. ditto, 38s. and 40s.; opaque ditto, at 3d. per foot, in 200 feet cases, large sizes, and good in quality, average 16 oz.—of W. HICKSON, the Importer, 46, Long-acre. Terms, cash only.

GOOD FOREIGN SHEET-GLASS, in cases of 200 feet each: average size, 40 by 30, at 32s. 36s. and 40s. per case; ground ditto, 3½d. per foot; crown and sheet squares, in 100 feet boxes, from 14 by 10 to 22 by 14, 2d. per foot; ¼-inch rough British plate tiles, 11s. per dozen; also, crown and sheet glass, in crates; British and plated stained glass, glass slates, &c. Sheet lead, pipe, white lead, oils, turpentine, colours, &c. G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford street.

The new Ruby Sheet, the best for embossing, from 1s. 3d. per foot.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 28, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTORS, Crispin-street, Spitalfields, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—NEWTON, RUSSELL and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

A CHEAP BARGAIN.—TO BE SOLD, a SECOND-HAND HIGH-PRESSURE STEAM-ENGINE, about 6 horse power, with boiler nearly new, and fittings complete. Has been used in a brewery.—Apply to Mr. GEORGE THOMPSON, C.E. Nantwich.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

BUILDERS,

Contractors, Engineers, Brewers, Papermakers, Chemists, Brickmakers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids hot or cold, raised or forced, will find it really to their interest to use GWYNNE and CO.'S PATENTED PUMPS For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully invited to their very superior Wrought Pumps, with plain or sailing telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to 10-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

NORBITON POTTERY and BRICK and TILE WORKS, KINGSTON-HILL

BENJAMIN LOOKER, Jun. invites the attention of Builders, Contractors, and others, to the following reduced prices of his superior RED SOCKET DRAIN-PIPES, in 2 feet lengths:—

3 inch.	4 inch.	6 inch.	9 inch.	12 inch	15 inch bore
5d.	6d.	9d.	1s. 9d.	3s. 9d.	4s. 3d. each.

Bends, Junctions, Traps, &c. equally low.

These pipes being made by powerful steam machinery, and of unusual thickness, are capable of sustaining double the pressure of ordinary stoneware pipes; and their durability is beyond a doubt, as unglazed pottery, well burnt, is often discovered in a perfect state after being under ground for many centuries.

DELIVERED FOR CASH WITHIN TEN MILES OF THE WORKS, OR AT ANY STATION ON THE SOUTH-WESTERN RAILWAY AND ITS BRANCHES WITHIN FORTY MILES OF KINGSTON, CARRIAGE FREE, IF IN QUANTITIES OF NOT LESS THAN 100 PIPES.

LOOKER'S improved Border Tiles and Coping, Bricks, Land Drain-pipes, Drain-paving, and all kinds of Rooing Tiles, Garden, Kale, Rhubarb, Chimney-pots, &c. &c.

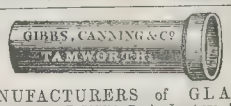
N.B. Bricks, Tiles, and Pipes made to any pattern.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'

PATENT VIBRATING STANDARD PUMP,



which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the process comparatively less than pumps made in the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 36 feet; also, Garden Engines constructed on the same principles.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

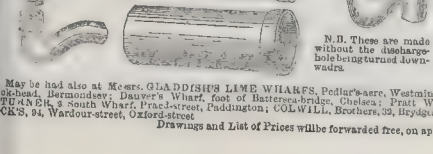
Oxford, November, 1849

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.



I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1781.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

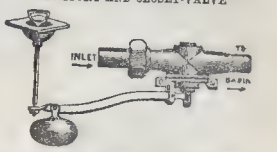
N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Brook-head, Bermondsey; Dauver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; TUNNEL, 2 South Wharf, Praed-street, Paddington; COLWILL, Brothers, 39, Brydges-street, Covent Garden; and at EDWARD COCKS, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.

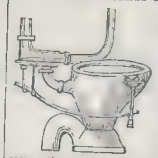


GEORGE JENNINGS,

SANITARY ENGINEER.

A Book containing ILLUSTRATIONS, DESCRIPTIONS, and PRICES of JENNINGS'S various SANITARY INVENTIONS can be had on application, or by post, if Two Stamps are enclosed to

THE MANUFACTORY,
29, Great Charlotte-street, Blackfriars road, London.



LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. ADVERTISEMENTS.

KENT ADJOURNED QUARTER SESSION.—DISTRICT SURVEYOR for DEPTFORD.—Notice is hereby given, that an ADJOURNED GENERAL QUARTER SESSION of the PEACE for the County of KENT will be held, at the Courts of Justice, Maidstone, in and for the said County, on FRIDAY, the 10th day of NOVEMBER next, at HALF-PAST TWELVE o'clock in the afternoon, when the Appointment of a DISTRICT SURVEYOR, under the provisions of the Act 7 & 8 Vict. cap. 84, for Regulating the Construction and the Use of Buildings in the Metropolis and its neighbourhood, for the District comprising the parishes of St. Paul, Deptford, and Saint Nicholas, Deptford, will be made, in the room and stead of the late Mr. Robert Smirke Martyr, deceased.

H. A. WILDES, Deputy Clerk of the Peace for Kent.

Maidstone, Oct. 21, 1854.

BEDFORDSHIRE.—ELECTION of COUNTY SURVEYOR.—Notice is hereby given, that at the next General Quarter Sessions of the Peace, to be holden for the County of Bedford on TUESDAY, the 2nd day of JANUARY, 1855, the Justices then assembled will proceed to the Election of a County Surveyor, in the place of Mr. Thomas South, resigned. The salary is £80 per annum, and he will be required to reside in the county of Bedford. A statement of the duties of the county Surveyor, as far as they can be defined, may be seen at the Office of the Clerk of the Peace. The Justices reserve to themselves the right of appointing a permanent civil engineer, to carry out such public works as they may consider to come within that department of science. Applications from competent professional men, accompanied with testimonials, to be delivered at the Office of the Clerk of the Peace, St. Paul's square, on or before THURSDAY, the 28th of DECEMBER next.

By Bedford, 31st October, 1854.

THE ARCHITECTURAL EXHIBITION, Suffolk-street Galleries.—All DRAWINGS, MODELS, PHOTOGRAPHS of BUILDINGS, and PATENTS, MATERIALS or DECORATIONS, &c. intended for the department of Manufactures connected with Architecture, must be delivered between the 1st and 8th of DECEMBER next.

Those who may intend to become subscribers, and have not yet sent in their names, should do so in good time, as a list will be printed with the Catalogue.

Drawings intended for the French Exhibition will have a special place provided for them, and may be exhibited here first of all, as the Committee appointed by the Board of Trade will not select those that are to be sent till very nearly the period when this Exhibition closes.

Local Secretaries have already been appointed in the following places, who will answer every inquiry on the spot:—

CHESTER	James Harrison, Esq.
COVENTRY	Jas. Edmeston, Jun. Esq.
DERBY	H. Shaw Peal, Esq.
EXETER	E. Ashworth, Esq.
IPSWICH	Fred. Barnes, Esq.
LEEDS	W. Reid Corson, Esq.
MAIDSTONE	J. Whichcord, Esq.
NORWICH	R. Kitton, Esq.
TUNBRIDGE WELLS	E. N. Stevens, Esq.
WOLVERHAMPTON	E. Banks, Esq.

(A further list will be published immediately.)

JAS. FERGUSSON, F.R.A.S.
29, Lonsdale place.
JAS. EDMESTON, Jun
5, Crown-court, Old Broad-street,
} Hon. Secs.

THE ARCHITECTURAL MUSEUM, Canuon-row, Westminster.

The CATALOGUE of the COLLECTION will be issued on the 1st of JANUARY next, including a limited space for advertisements for Fine Art Manufactures.

For particulars, applications should be made to the Publishers, Messrs. MASTERS and Co. 78, New Bond street, and 33, Aldersgate-street, on or before the 1st of DECEMBER next.

Oct. 18th, 1854.

THE ARCHITECTURAL MUSEUM. Canuon-row, Westminster.—A COURSE of THREE LECTURES, on COLOURED DECORATION, will be delivered in the Rooms of the Museum, to workmen engaged in decorative art, as lectures on walls shortly to be given by JOHN RUSKIN, Esq. The First Lecture will be given on SATURDAY, NOVEMBER 11th at TWO o'clock, p.m. Applications for cards and prospectuses must be made at the Museum.

HENRY CLUTTON, Hon. Secretary.

ARCHITECTS' BENEVOLENT SOCIETY.

PATRONS.

Sir Robert Smirke, R.A. George Stanley Repton, Esq.

PRESIDENT—Sydney Smirke, A.R.A.

TRUSTEES.

Sir Charles Barry, R.A. Philip Hardwick, Esq. R.A. } Charles Robert Cockerell, Esq R.A.

TREASURER—William Tite, Esq. F.R.S.

The List of Subscribers and Annual Report may be obtained of the Hon. Secretary. Subscriptions will be received by WILLIAM TITE, Esq. St. Helen's-place, the Treasurer; or by Mr. GOULD, the Collector, 8, Craig's-court, Charing-cross.

J. TURNER, Hon. Secretary.

No. 9, Adelphi-terrace, Strand.

MASONS' PROVIDENT INSTITUTION, for Granting Pensions, and the Erection of an Asylum for Aged and Decayed Masons, their Widows and Orphans.—The Managing Committee beg to announce, that they have engaged the Royal Surrey Theatre for a theatrical BENEFIT in AID of the FUNDS of the above INSTITUTION, on WEDNESDAY, NOVEMBER 15, 1854, when the support of the public and the members of the trade is earnestly and respectfully solicited by the Managing Committee. Tickets may be obtained of the Box keeper at the Theatre; of Mr. W. J. Gilbert, Collector, 134, Lillington-street, Vauxhall-bridge-road; or of the secretary, who, if desired, will have much pleasure in attending with plan of theatre and particulars of private boxes. WILLIAM DIX, Secretary.

14, William street, Hampstead-road.

COMPETITIONS.

TO ENGINEERS, SURVEYORS, &c.

THE SURVEY of the portion of the parish of Wallasey to which the Public Health Act, 1848, is applied, being now ready the Local Board are desirous of obtaining PLANS, SPECIFICATIONS, and ESTIMATES of a SYSTEM of SEWERAGE for effectually draining that district. Premiums of 100*l.* and 50*l.* respectively will be given to the authors of the two plans most approved of, such plans to contain all information regarding materials, &c. necessary to their being practically worked out, and to include, so far as practicable, means for preserving the sewerage matter for agricultural or other purposes. The survey of the parish will lie at the temporary offices of the Board, Queen's Arms, Liscard, between the hours of NINE and ELEVEN a.m. from WEDNESDAY, the 18th instant, till SATURDAY, the 18th of NOVEMBER next, where any additional information may be obtained. Four plans at least, from as many different competitors, must be sent in, otherwise the premiums will not be awarded.—The plans, specifications, &c. signed with a motto or device, and accompanied by a letter marked with a similar motto or device, enclosing the name and address of the Author, to be sent to the Office of Mr. HASSALL, Solicitor, 3, Old Churchyard, Liverpool, on or before the 31st day of DECEMBER next.—Dated 12th October, 1854.

TO ARCHITECTS.

THE DIRECTORS of the CHESTERFIELD MARKET COMPANY are desirous of receiving DESIGNS and ESTIMATES for a MARKET-HOUSE and PUBLIC ROOMS. A Premium of 30*l.* will be paid for the most approved design, and 15*l.* for the next best. The drawings and estimates must be delivered at the Offices of Messrs. SHIPTON and HALEWELL, Solicitors, Chesterfield, on or before THURSDAY, the 21st DECEMBER next, addressed to the Secretary, from whom particulars, together with a plan and section of the intended site, may be obtained on payment of 2*s.*

Chesterfield, Nov. 1, 1854. GEORGE WALLIS, Secretary.

CONTRACTS.

TO IRON-FOUNDERS AND OTHERS.

BURY and RADCLIFFE WATER-WORKS. CONTRACT, No. 3.—The Company are prepared to receive TENDERS for the CONSTRUCTION of TEN WROUGHT-IRON TUBES, 18 inches diameter, and the ERECTION of the same across the river Irwell and Ogden Brook. The trenching and laying not exceeding of about 5,500 yards, of 15 inch, and 2,000 yards of 12-inch cast-iron pipes, and sundry other works connected therewith. The plans can be seen at the Offices of the Engineer, Mr. JOHN F. MAWSON, Town Hall-chambers, Manchester. Tenders to be delivered at my Offices, Bank-street, Bury, Lancashire, not later than MONDAY, the 20th day of NOVEMBER next.

By order J. G. T. CHILD, Secretary.

Bury, Lancashire, October 26, 1854

TO BUILDERS AND OTHERS.

1. COMPLETING the INTERIOR of the BULL POINT MAGAZINE ESTABLISHMENT, with Railroads, Asphalting, Metalling, &c. &c.:
2. FORMING a RAILROAD to connect the Bull Point Magazine with the Powder Establishment at Kinterbury:
3. BUILDING TWO WALLS at or near No. 4 Magazine, Bull Point, as a temporary completion of the Enclosure:
4. BUILDING a GUARD-HOUSE at Bull Point:

For SPECIFIC SUMS,

Will be received at the Ordnance Office, Pall mall, London, on or before the 1st DECEMBER next. Detailed specifications of the above four services, and every requisite information, may be obtained at the Royal Engineer Office, Pull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 17th to the 30th NOVEMBER, both days included.

Royal Engineer Office, Devonport, 25th October, 1854.

EAST LONDON PEOPLE'S CO-OPERATIVE BENEFIT BUILDING SOCIETY. Offices, 242, High-street, Poplar.

The Committee of the above society are prepared to receive TENDERS for BUILDING THIRTEEN FOURTH-RATE HOUSES in Poplar. Plans and specifications may be seen at the Offices of the Society, and after the 8th of NOVEMBER. Sealed Tenders must be sent to the Secretary by TEN o'clock on THURSDAY, the 16th of NOVEMBER and marked, "Tender for Buildings." The committee do not bind themselves to accept the lowest Tender.

CONTRACTS.

Royal Engineer's Office, Portsmouth, 10th October, 1854.

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Notice is hereby given, that sealed TENDERS will be received by the Honourable Board of Ordnance at their Office, Pall-mall, London, on TUESDAY, the 28th NOVEMBER, 1854, before TEN o'clock a.m. for the ERECTION of a BATTERY, with magazine, shell and fuze room, and master gunner's store, near Southsea Castle, Portsmouth, county of Hants. Drawings and specification for the above may be seen any day (Sunday excepted), on and after the 28th instant, on application to Mr. HAWKEN, Clerk of Works, Royal Engineer's Office, Millbank, Portsmouth. Tenders to be sealed and endorsed "Tender for the Erection of a Battery, Magazine, Shell and Fuze Room, and Master Gunner's Store, Southsea, Portsmouth."

TO BUILDERS.—ORDNANCE CONTRACT.

Royal Engineer Office, Portsmouth, N. 1 1854.

NOTICE is hereby given, that TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall-mall, London, on MONDAY, the 20th NOVEMBER, 1854, for such persons as may be willing to CONTRACT for SUPPLYING 150 pieces of MEWEL FIR TIMBER, to be driven as piles in front of the Saluting Platform, Portsmouth, and for driving twenty-five additional piles in the same place (the situation of which may be seen), and the spur piles out, as far after the 6th NOVEMBER, 8.4, on application to Mr. HAWKEN, Clerk of Works, Royal Engineer Office, Mill-dam, Portsmouth.—Tenders to be sealed and endorsed, "Tender for supplying Piles in front of Saluting Platform, Portsmouth."

TO DUSTMEN, SCAVENGERS, &c.

NOTICE is hereby given, that the Trustees of the parish of Bromley St. Leonard, Middlesex, will meet at the Vestry Clerk's office, on TUESDAY EVENING, the 7th day of NOVEMBER next at SEVEN o'clock precisely to receive TENDERS for the PURCHASE and TAKING AWAY of the CANDLE ASHES, RUBBISH, &c. from the houses of the inhabitants of the said parish, for twelve months then next ensuing. Tenders, sealed, with a 10*l.* note enclosed, endorsed "Tender for Dust," to be directed to the said Trustees, and left at the Vestry Clerk's office, at not later than SIX o'clock of the same evening. The 10*l.* note to be returned to the parties whose Tenders are not accepted, the same evening. The Trustees will not pledge themselves to accept the highest or any other Tender; but reserve to themselves the right of accepting such Tender as they may think proper, or all Tenders if they think fit to be rejected, must be prepared with sureties present who are personally known to the Trustees, to enter into a bond for the full amount of the sum proposed, and the due performance of the contract. Particulars may be obtained on application.—By order,

JAMES DUNSTAN, Clerk.

Bromley, Middlesex, 31st October, 1854.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a PAIR of SEMI-DETACHED VILLAS, on the Cattenham park Estate, Wimbledon, may see the plans and specification at my office, 1, Carpenter's-buildings, London-wall. Tenders to be delivered at my office on or before SATURDAY, the 11th of NOVEMBER instant, and sealed "Tender for Villas, Cattenham park," to JAS. COE and SON, Surveyors and Architects, 1, Carpenter's-buildings, London-wall.

TO BUILDERS AND CONTRACTORS.

MANCHESTER MECHANICS' INSTITUTION.—The Directors announce that they are prepared to receive TENDERS from persons desirous of CONTRACTING for the ERECTION of the WHOLE, or for SEPARATE PORTIONS of the New Building. Quantities may be had, and the plans and specifications seen, on application to the Architects, Mr. E. GEOGAN, Cooper-street Manchester, on and after WEDNESDAY, the 8th of NOVEMBER. Sealed Tenders, to be sent in to the Secretary of the Institution, addressed "Building Committee, Manchester Mechanics' Institution," on or before WEDNESDAY, the 22nd of NOVEMBER. The Directors do not bind themselves to accept the lowest Tender

By order,

E. HUTCHINGS, Secretary.

17, Cooper-street, Nov. 1st, 1854.

Patterns may also be inspected on and after MONDAY, OCTOBER 23, from TEN till FOUR o'clock, at the Company's Pattern-room, Euston Station; and any further information required, may be obtained on application to the heads of the several departments. Tenders may be sent in on or before TEN o'clock on MONDAY, NOVEMBER 6th.—By order of the Directors,

CHAS. E. STEWART, Secretary.

Euston Station, October, 1854.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS.

WANTED, TENDERS for TAKING DOWN the late St. Peter's Vicarage, in Derby, and BUILDING in its stead three of THREE SIDE DETACHED DWELLINGS. Plans, conditions, and specifications may be seen at the Office of Mr. GEO. HALL, Architect, Derby, on MONDAY, NOVEMBER 6, and on the day of letting. Tenders to be addressed to Mr. ROBT. PEGG, Vernon-street Derby on MONDAY, NOVEMBER 20. The lowest Tender will not necessarily be accepted.

TO CONTRACTORS, ENGINEERS, AND WELL BORERS.

HALSTED LOCAL BOARD of HEALTH.

The Board hereby give Notice that they are prepared to receive TENDERS from competent persons who may be willing to undertake all or any or either of the following CONTRACTS:—

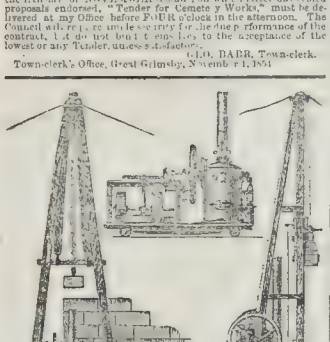
CONTRACT No. 1.—For Constructing and Completely Finishing the Main Drainage and Water Mains, with Reservoir and Works connected therewith.

CONTRACT No. 2.—For Steam Engine Boilers, &c.

CONTRACT No. 3.—For Sinking and Boring Well.

The drawings and specifications may be seen, and forms of Tender containing quantities, &c. may be obtained at the Office of the Engineer Mr. EDWARD MOTTO, Tavistock Chambers, 36, George-street, Westminster, London and after the 1st of NOVEMBER next; and sealed Tenders must be sent in to me on or before MONDAY, the 20th day of NOVEMBER next.

By order of the Board,
O. HUSTLER, Clerk to the said Board.



Halsted, 23th October, 1854.

TO BUILDERS.

GREAT GRIMSBY CEMETERY.—The Council of the Borough of Grimsby, in the County of Lincoln, are prepared to receive TENDERS for one sum for the whole of the works for the ERECTION of the TWO CHAPELS, LODGE, EARTHENWARE, IRON RAILING, and IRON PALISADE BOUNDARY FENCING, and for forming the roads and footways according to the designs adopted for the intended cemetery. And Notice is hereby given, that the drawings and specifications will be lodged for inspection at the Office of Mr. EDWARD MCCLETHWAITE, the Corporation Surveyor, Grimsby; and duplicates thereof at the Offices of the Architects, Messrs. MAUGHAN and FOWLER, in London, from the 3rd to the 17th day of NOVEMBER instant, on which latter day sealed proposals endorsed "Tender for Cemetery Works," must be delivered at my Office before FOUR o'clock in the afternoon. The Council will require ample security for the due performance of the contract, but do not bind themselves to the acceptance of the lowest or any Tender, unless satisfactory.

G. D. BARR, Town-clerk.

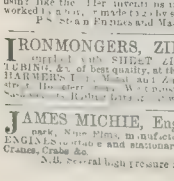
Town-clerk's Office, Great Grimsby, November 1, 1854.

A SAVING of TIME and MATERIALS, with Stability of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM-ENGINES of two, three, four, and six horse power, for grinding mortar, raising bricks, materials, driving piles, circular-saws, pumps, &c. 46 Albert-street, Manchester.

TESTIMONIAL.

From the Trustees of the Birkenhead Docks.



Engineer's Office, Dock-yard, Birkenhead,

"Nathan Gough, Esq. 31st July, 1851.

"Sir,—I have much pleasure in informing you that the three-horse engine which you have placed in the caisson for pumping, answers its purpose admirably, doing its work much better than seventy men could do formerly. From its portability and lightness, it is peculiarly adapted for such a purpose.

"I am, Sir, your obedient servant,

"JAS. ABERNETHY."

PATENT.

BUILDERS will find this the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combining simplicity with economy of manual labour. Can be had only at WEBB & GREENWAYS, Steelhouse-lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener Gudgeon Pattern Casement, and other Window Fastenings, Double-action Floor Door-springs, Cupboard Turns, Barrel Bolts, Pistol, and other Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES and Co. 28, Warner-street, City, and see in motion this very simple, powerful, and expeditious machine, which is the only one ever brought out, for performing these three separate kinds of work by one machine, and as it is self-acting, it does not require any skill or care in using like the Hand Mortising machine. It can either be worked by steam, or manual or steam power.

P.S. Steam Engines and Machinery contracted for.

IRONMONGERS, ZINC-WORKERS, &c. supplied with SHEET ZINC, PERFORATED ZINC TUBING, &c. of best quality, at the lowest prices, at WILLIAM HARMER'S Iron, Metal, and Zinc Warehouse, 1, New Peter-street, Hoxton-square. Wrought-iron Roofing and Gutters. Sanitary Rolling Iron Shutters.

JAMES MICHIE, Engineer, &c. Battersea-park, Saw Mills, manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Crabs, &c.

N.B. Several high pressure Steam engines for Sale.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER, RACK and WATER TROUGH, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention secured by patent, which includes an entirely new method of attaching the halter, bail and ring, giving to the horse greater freedom, and being noiseless in their operation, add much to its comfort whilst feeding and convenience when at rest. The

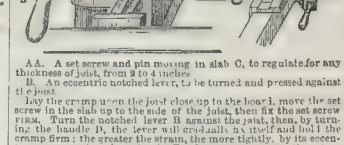
ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection, manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Movable Covers.

Double corner Mangers, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

WORKS, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.



Descriptive Catalogues and Estimates on application.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS. These fittings have all the newest improvements, and are the only patented invention of this description.

Manufacturer of KITE'S Patent Cast-iron Smoke-curing Chimney Caps. 100 of this principle on Buckingham Palace. Price 35s. each.—JAMES BARTON, Iron Founder, Smith, &c. 373, Oxford-street, a few doors east of the Pantheon.

PATENT CRAMP FOR FLOORS, DOORS, AND SASHES.

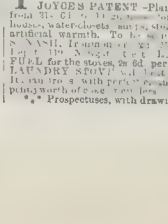
W. BISSELL, PATENTEE, WOLVERHAMPTON, Manufacturer of Rein and Mortise Locks and Builders' Ironmongery.

A A. A set screw and pin moving in slab C, to regulate for any thickness of joist, from 2 to 4 inches.

B. An eccentric notched lever, to be turned and pressed against to eject.

Lay the cramp upon the joist close up to the board, move the set screw in the slab up to the side of the joist, then fix the set screw FIRM. Turn the notched lever B against the joist, then, by turning the handle D, the lever will grind nails in itself and hold the cramp firm: the greater the strain, the more tightly, by its eccentric action, will the lever bind. To the Patentee, is asked the attention of Builders and others, assured that his cramp possesses great advantages. It is a new cramp of the best kind, and as well suited for doors and sashes as for floors. From its superior mechanical principles, it has greater power, and will be found to be more quickly and safely used than any yet brought out, and at the same time it is light and portable.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico. All Works of Art in the various Metals executed at the above Foundry.



JOHN FINCH, Ironfounder, Priory-street Works, Dudley, Wholesale Manufacturer of Fenders, Fireirons, Dish and Hob Grates for Iron Bedsteads, Garden-Seats, Flower-Stands, &c. &c.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLANTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Stoves, Chandeliers, Iron Staircases, Tomb Enclosures, Trellis Paneling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Rangers, &c. always in stock.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c. J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c., flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-iron, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses, Bakers, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER

is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

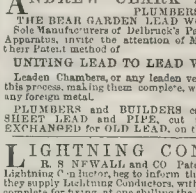
SYLVESTER and CO.

Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

THE ONLY STOVE WITHOUT A FLUE.

JOYCE'S PATENT.—Plain, from 12s. to 48s.; Ornamental from 31. 6l. to 7l. 7s. Stoves for warming halls, passages, greenhouses, water-closets, sheds, shops, counting-houses, &c. produce pure and healthful warmth. To be seen in use at the Patentee's, 5, NEWAL, Ironmonger to the Queen, Regent-street, and at the City Depôt, 109, Newgate-street, London. PATENT PREPARED FUEL for the stoves, 2s. 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE and Heated and keep hot for ironing clothes, and will burn with perfect safety for twelve hours, with one penny worth of coal. Sent free to any part of London.

*** Prospectuses, with drawings and report, forwarded free.



SEVERAL WARM-AIR and GAS-STOVES, both new and second-hand, suitable for small churches, chapels, warehouses, shops, &c. TO BE SOLD, cheap, at WILLIAM HARMER'S Ironmonger, Smith, &c. Horseferry-road, Westminster. Buildings heated with hot water and fitted up with gas, complete. Estimates given on application.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the regular stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 322, Holborn.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at F. EDWARDS and SONS', 42, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney-sweeping is required, and a saving of at least thirty-five per cent is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot-air pedestal stoves. Old grates are altered to this principle.—Prospectus sent on application.

NEW HOUSES of PARLIAMENT.—DEFRIES'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for three-halfpence. Gas Cooking and Heating Stoves for all classes, from H. DEFRIES'S celebrated DRY GAS METERS, upwards of 60,000 in use.—See testimonies at the Office, 145, Regent-street, or at the Manufactory, New-road, St. Pancras, near Pitt-roy-square.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's delivered at a meeting of the Architectural Society, wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'S Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

Brick Moulds kept in stock. Any size made to order.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

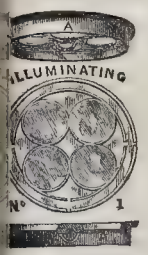
ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

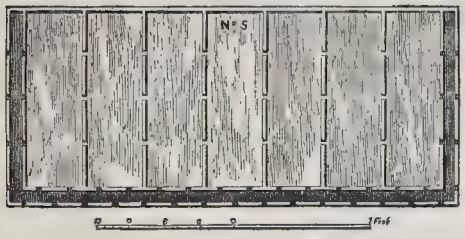
ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.



The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely ure, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, wings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at



No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

for firing underground

STUART AND SMITH'S

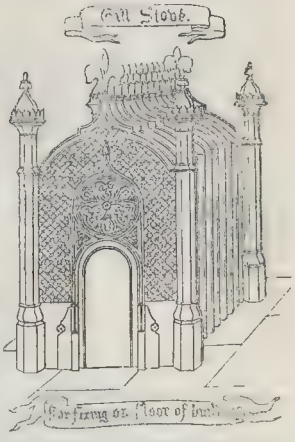
PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.

STUART AND SMITH,



ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

Gill Stove.

for firing on floor of bui

WIRE STRAND FENCING, as furnished with all its fittings, by R. S NEWALL and Co, having obtained the unqualified approval of practical men, is confidently recommended as the best fencing for park and farm enclosures, or subdivisions, for temporary agricultural inclosures instead of any kind of hurdles), for road side and all other fencing.

The PATENT WIRE STRAND FENCE possesses an economy, security, and durability, not to be found in combination in any other fence hitherto introduced. This fence, as fitted by R. S Newall and Co under the model of the fence of this material in the Slopes and Home-park, at Windsor, has the inherent property of remaining equally tight and rigid, under any variations of temperature.

N.B. Estimates given at so much per running yard, for fencing, fixed complete. Specimens, sketches, or any other particulars, will be forwarded on application.

OFFICES—Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

THE PATENT NAIL and SPIKE COMPANY invite the attention of Ship and Barge Builders, Boilers Makers, Railway Contractors, Shippers, and Consumers generally to their PATENT MACHINE FORGED IRON NAILS and SPIKES, which possess a property (fully equal to hand made clench nails, and far superior to all of any machine-made nail yet offered to the public. They are made of the best Staffordshire iron, complete at one operation while red-hot; they are full under the head, and being brought with a proper taper to a chisel point, they can be driven without boring. They will clinch, and the heads cannot be twisted off.

Lists of prices, with patterns, &c may be had on application at the works, No. 9, Sumner street, Southwark-bridge road.

NAILS and IRONMONGERY, from BIRMINGHAM direct.

Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the

LOWEST BIRMINGHAM PRICES

a complete LIST of which will be forwarded upon application.

FREDERICK BEATH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and Co, 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coach-house, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Collinge's Patent." Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

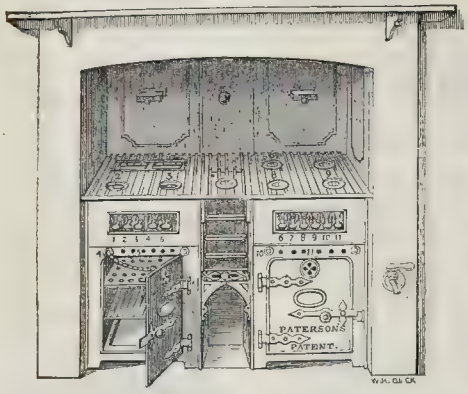
TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade generally.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Ironmonger and Wolverhampton Agent and Factor, 18, Bedford-street, Manchester-square, London, running out of Baker-street, Portman-square.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; Conservatories, requiring to be seen to be known; WARM AIR Apparatus, &c. Apply to S. S. TAYLER, Engineer, Battersea.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Parade-road, Southwark, Manufacturers of COPPER CYLINDRICAL and DIMPLED CANDAL IRON BOILERS, and Conservatory and Hot House Hot-water Apparatus of wood or iron, respectfully call the attention of the nobility, gentry, and Government to their simple and efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Lead and Brass Turning Cornices, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.



Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. &c.

RICHARD EVELEIGH, Brass and Bell Founder and Metal Warehouse, Nos. 10, 11, and 12, Charles-street, Hatton-garden, London.

CHEAP GAS FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, BRACKETS, PENDANTS, and Glass, consisting of Plain Tube, Pronged Cups, &c. &c. Apply to J. JEALS, Stand 21, Old-street, near St. Luke's Church, London.

P.S.—As large and choice an assortment as any house in London.

PATERSON'S PATENT GAS COOKING APPARATUS.

May be seen by applying to the Patentee,

A. PATERSON,
53, VICTORIA-STREET,
WESTMINSTER,

Of whom LICENSES may be had for making them.

On reference to the plate, it will be seen that roasting can be carried on by the open fire, if required; thereby rendering this apparatus the most compact and efficient of any that has yet been brought out.

THEY ARE MANUFACTURED BY

T. WALLER and CO.

Ratcliff Ironworks, Rose lane, Ratcliff near the Stepney Railway Station.

Where they may be seen in operation, and where prospectuses and every information concerning them may be obtained.

Also Manufacturers of every description of

GAS STOVES, BATHS, OPEN AND CLOSE KITCHEN RANGES, HOT WATER APPARATUS, METAL CONSERVATORIES, &c.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc. It therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge weighs	about	18 oz.	per foot super.	
No. 13	"	"	20 oz.	do.	do.
No. 13	"	"	23 oz.	do.	do.
No. 14	"	"	26 oz.	do.	do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 200,000 cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 50 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILESVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by his Grace the Duke of Bedford at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOILESVE, French Engineer, 55, King William street, City.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE,

can be obtained of all

ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

LOSH, WILSON, and BELL,

NEWCASTLE-ON-TYNE,

WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET-IRON and WIRE of every description superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process). Works at the Regent's canal-basin, Commercial-road, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges. Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water-pipes, Hooping, Casting, Furnace-pans, Baths, Buckets, &c. wholesale, retail, and for export. Every description of Ship's Ironwork Galvanized; Dock-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied on moderate prices, and on the shortest notice. An allowance to the Trade.

SAMUEL HEMMING'S PATENT MUCH APPROVED PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRIXTON, to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of this as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.

Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch-street, City.

CHUBB'S LOCKS & FIREPROOF SAFES

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH WESTERN RAILWAY, LIVERPOOL.

"London and North Western Railway Company,
" Liverpool, May 17, 1850

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secured the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1852.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes, Fireproof Safes and Chests, Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Estimates given for large or small manufactories, and Plumbers supplied with the stone and every requisite for fixing. These filters, at one, two three, and four guineas each, holding 5o, 10o, 15o, and 20o gallons per diem, may be had at the Company's domestic depôts in London, and not liable to any delay or disappointment. Manufactories and Breweries are liberally supplied with quantities up to 1,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO
MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such articles becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 63, King William-street, City; JACK and BRABY Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 86, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, 42, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; and in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as the painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. THE PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks in the first class. Contracts are effected a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These usually consist of mixtures containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse gritty appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON —PATENT.

If not so marked, the reason may be inferred.

Every information in the premises to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days —CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering pure sea, is a quick-setting Cement that requires no colouring—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and loses not its value in damp situations. Adapted by COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN, much improved the quality of this Cement without any increase in price.
Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.
ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.
A report of experiments made to prove the extraordinary strength of their patent Portland Cement, may be had at their Office, New Wharf, Allington-street, Westminster; at their Works, Gateshead-on-Tyne, at Messrs. Rostel's Wharfs, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 8, King-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends, and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the best cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put for th by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. have commenced manufacturing Portland Cement at their Works, Granite-wharf, near Bridgewater, on the Canal and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.
These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.
FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.
St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Leaf-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the Trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.
Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.
SECONDS, PAVIORS', STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

TO BUILDERS, CONTRACTORS, AND OTHERS
HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD-WHARF, River Dee, or forwarded by the Chester and Holyhead Railway. Apply to RIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

TERRA-COTTA.—Statues, Statuettes, Vases, Trees, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Praed-street, Paddington-basin, where prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra cotta and red cement combined. Since the execution of these works, Mr. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

O. MCCARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the barge or per barge. Ballast screened or unscreened, per barge or per barge. Stocks, lime and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of all paster no. it is invaluable. A model room can be prepared for 2s. 6d. Prepared only by W. J. STENT, Warminster London Agents Messrs. J. and O. WILLIS, 64, Long-acre. Agent for Ireland—Mr S. BOYD, 53, Mary street, Dublin.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH.
Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney pieces &c. Slab and Rag Slates from the Penrhyn Quarry. Timber, Deals, Lines, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate

REDUCED PRICES.—EDWARD SIMMS (late Wilson Clarke), of Wilton road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand at his Manufactory, the first of its kind ever erected, and well, a very large Assortment of Dr. and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S, late W. Clarke's Flooring Manufactory, Wilton road, Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED RIDLEY begs to inform part existing and new goods to the colonies that he can supply on quality, or sell on as low terms as the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export. Southwark bridge Wharf, Bankside.

TIMBER.—To RAILWAY COMPANIES, CONTRACTORS, BUILDERS, &c.—MACKINNON and CO Commission Agents, Montreal (Canada), and Agents in North America for Messrs. Fairbairn and Sons, Manchester, &c. &c. are prepared to make selections and purchases in Canada, of oak elm, ash, birch, red and white pine timber, hackmatack &c. either in bulk or specific lengths, or cut to any scantling, such as suitable for railway carpet, railway waggon and carriage manufacture, flooring or roofing purposes, sheer piling &c. &c. thereby saving waste freight and additional cost of cutting up in England. MACKINNON and CO are also prepared to state prices (in sterling money) of above, delivered free on board, at Montreal or Quebec.

Montreal, 12th July, 1851.

References.—Messrs. W Fairbairn and Sons, Manchester; Messrs. Laurie, Clark and Co, Liverpool.

MOULDINGS by MACHINERY at 1 E. LORD'S PIECES—ARCHITRAVE and WAINSCOTING begs to inform their customers that the 50 per cent advance heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices. St Pancras Saw Mills, Cambridge-street, Old St. Pancras road.

ENGLISH OAK TIMBER, seasoned, felled from one to ten years, of various dimensions; also a lot of well-seasoned Pine Planks, of various thicknesses, to be sold. Apply to Mr. SMITH, 69, Devonshire, S.S.

By Her Majesty's Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER CUTTING MACHINE by which process a hundred per cent weight is gained upon the ordinary method of cutting veneers. For particulars of prices and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 61, Robert-street, Chelsea, adjoining the King's-road Saw-mills.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Bermondsey, Lambeth.—The General Wood-cutting Co. beg to inform their customers that the temporary additional charge of 20 per cent on their moulding list as advertised on the 31st of November last is removed from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1852.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY is now on Sale Goods imported this year from the American and Baltic Ports. He asks special attention to the following:—

244 Pieces of Timber
150 Planks, Deals and Battens
25,000 Prepared Floor Boards of all lengths and sizes.

The Rolling Pull are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" of the month sent to any part on application.

N.B. The extensive saw mill near will be let or sold.

WOOD and STONE CARVING WORKS, CAMBRIDGE.—TO BE SOLD, cheap on account of its inconvenient height for the show-room, a NEW CAEN STONE FONT, and CARVED OAK COVER, complete, executed in the best manner, but intended for exhibition. It is copied from the ancient one at Castle Acre Church, Norfolk, and would form an imposing object in a good position.

For price, and Engraving to a large scale, apply to Mr. RATTEE,

Manufacturer of Church Fittings, Organ Cases, Antique Furniture, &c. and Contractor for the general Restoration of Churches.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged to all who have seen them to be the best ever produced by machinery. J. S. returns thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that on trial they will receive the commendation of their friends, and ensure a continuance of their favours. Price list forwarded on application, or by letter, enclosing 4 postage stamps, the cost of postage.—Steam Works, 26, North Wharf road, Paddington.

N.B. Parties waiting for Mouldings at the Marble and Stone Chimney pieces, at prices lower than any in London.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical and elegant description of Floor has universally been adopted in Paris and other continental cities, and now introduced into this country. An extensive assortment of specimen patterns may be seen at 29 is per foot, together with every particular of its cost and description, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and Co, 60, New Bond-street.

THE LONDON PARQUETRY'S Annual Circular for the present Season contains:—A short description, illustrated by a sketch of Parquet Wood Floor Boards; Remarks on the Security of Houses from Fire, and Fire-proof Parquet Floors; Parquet Veneered Borders; also some Remarks on the Difference between English and Foreign Parquetry, and their respective adaptation to English Houses.

Architects and Builders favouring the trade present with the above Circular are respectfully informed that it will be forwarded to them (post free) by application to THE LONDON PARQUETRY, 5, White-street-west.

TO THE CLERGY AND TO ARCHITECTS, BUILDERS, &c.

STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and without the disagreeable smell and disfectious consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwelling houses, giving the effect of Oak, Mahogany, Cedar or Wood. The whole of the Entrance Doors of the Great Palace of Peace, which were coloured with these stains, would be struck with their beautiful effect. Prospectuses, giving full particulars, and specimens sent free to any part of the kingdom.

HENRY STEPHENS, 7, Stamford-street, London.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS, 65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NOURIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 44, and 58 James-street, Oxford-street; also Manufact rer of Improved Knotting and Decorative Varnishes.

SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 70, York road, Lambeth (late Shop Foreman to Messrs. Lawrence and Sons), Sash, Door, and Shop-front Manufacturer, will have seasoned materials and super or workmanship, at the lowest possible prices. Glazed and polished goods securely packed for the country and for exportation. P.S. A full list of prices sent on application.

FOR SALE, 1,000 SASH DOORS, with margin lights 7 ft 8 in. by 2 ft 8 in. and 6 ft. 8 in. by 2 ft. 8 in.; also, 500 four-framed doors, 6 ft. 8 in. by 2 ft 6 in. all well seasoned.—Apply to Mr. SAMUEL FLEMING, Portable Building and Roofing Manufactory, Bow, London.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings staircases, &c. Well-season d materials and superior workmanship, at the lowest possible prices. A quantity of sto m and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 26, Regent-street, and at his Steam-works, 165, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted therewith, and numerous large establishments where some are fixed measuring upwards of 400 superficial feet.—SNOXELL, Sole Patentee, who is in attendance for a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 181, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS which they can recommend as being made in the best manner: Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; be t ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in do., 1s. 6d.; reversible blinds of striped cotton, 2s. Transparent blinds in great variety. Engravings, with prices and directions to builders and the trade, forwarded on application, post free.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphaltic Works, 16, Thrunthie, established 1834. Lately laid with Flo ring laid with the above durable material in the best manner. Asphalte for Railway Arches, 8d. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Mayor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses and every description of Pavement laid down at the above low prices, and the work guaranteed.—Apply to JOHN PIERRINGTON, DOLMENALL'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors supplied with the best Bitumen for covering Bridges and Arches.

GUTTA PERCHA TUBING. May be buried for years without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for land manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary; the small inch finch diameter tubing having resisted a pressure of 25 tbs. on the square inch, without bursting. The smaller sizes may be had in 100 feet and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in fire Mills. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City road, London.

CAUTION.—Whereas, certain parties are endeavouring to deceive the public with worthless imitations of CHAPPUIS'S PATENT DAYLIGHT REFLECTORS, representing themselves as from the manufactory, 16, St. Mary-Axe; in every case of such misrepresentation, infringers will be dealt with according to law.

NEW WESTMINSTER-BRIDGE.—The STATIONERS' COMPANY'S SHEET ALMANAC for 1852, price 2s. to be published on November 24 will be embellished with a view of the New Westminster bridge, designed by Sir Charles Barry.

Published by the Stationers' Company, at their Hall, Ludgate-street.

Proofs of the Print, on thick plate-paper, may now be had, price 3s.

TO ENGINEERS, ARCHITECTS, CONTRACTORS, AND SURVEYORS.

ALEXANDER'S TABLES; intended to facilitate the setting out of curves of railways, radius 1 chain to 80 chains centre for arching, &c.; containing the offsets from tangents and chords for every minute of the segments of circles, and the angles formed by the tangents and chords, being a rapid and certain method of ranging curves.—Just published, price 5s. cloth, and had of the author, J. LYON ALEXANDER, Engineering Surveyor, 7, Castle-street, Holborn.

This day is published, price 1s. a Third Edition of HINTS on COTTAGE ARCHITECTURE, being a selection of Designs on Labourers' Cottages, single or in pairs, and in groups, with plans, elevations, and estimates (corrected to present prices), delineated, by express permission, to the Most Noble the Marquis of Lansdowne, K.G. by HENRY WEAVER, Architect and Estate Agent.

Also in the press, and shortly will be published, by subscription, 24s. and non-subscribers, 25s.

HINTS on VILLAGE ARCHITECTURE, being a selection of Designs for Schools, Cottages, and Parsonage Houses adapted to rural districts. By the same Author.

Subscribers are requested to forward their names to the Author, Beverbrook, Calne, Wilts; or to his Publisher, Mr. HENRY POPE, 23, Badge-row, Cannon-street, London.

THE QUARTERLY REVIEW, No. CXC is published THIS DAY.

DESIGNS, SKETCHES, and PLANS for VILLAS and VILLAGES, with Estimates of Cost. By GEORGE JOHN RHODES, Architect and Surveyor, Author of "Remarks on the Purchase of Landed Property." Now ready.

London: J. B. HALE, 6, Tavistock-row, Covent-garden; or by post from the Author, Lincoln's-inn-fields-chambers.

Now ready, price Five Shillings, Third Edition of Part III. of the TREATISE on INDUSTRIAL INVESTMENT and EMIGRATION, being Suggestions for the Extraordinary Improvement of Copyhold, Life, Leasehold and Church Property, by the application of the Life-assurance principle, with Rules and tables for the formation of Copyhold Enfranchisement and Freehold Land Societies, and a Mathematical Appendix, by

ARTHUR SCRATCHLEY, M.A. F.R.A.S.
Actuary to the Western Life Assurance Society, 3, Parliament-street, Westminster.

London: FRIENDLY SOCIETIES' INSTITUTE, 20, Pall-mall, and CHARLES MITCHELL, 12, Red Lion-court, Fleet-street.

TO BUILDERS.

HOW to KEEP a HORSE for 1s. 3½d. per day.—BRUISE YOUR OATS—Chaff cutters, Cut bruisers, a manger-feeding Machines; Mangles, at 50s.; Flour-mills, &c.—MARY WEBLAKE, 24, Fenchurch-street.

Books on Feeding, 1s. post-free.

Will be published March 1st,

THE BRITISH ALMANAC for 1853 Sewed in wrapper, price 1s.

THE COMPANION to the ALMANAC Sewed in wrapper, price 2s. 6d.

THE BRITISH ALMANAC and the COMPANION together, in cloth boards, lettered, price 4s.

London: CHARLES KNIGHT and Co. 22, Fleet-street.

NEW WORK BY MRS JAMESON.

On Friday next will be published, in one volume, square crown 8vo. with numerous Etchings and Wood Engravings,

A COMMON-PLACE BOOK of THOUGHTS, MEMORIES, and FANCIES, original and selected.

By Mrs. JAMESON, author of "Sacred and Legendary Art."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Builder.

SATURDAY, NOVEMBER 4, 1854.

HERETOFORE, the pages of *The Quarterly Review* have afforded some useful contributions to our knowledge of the history of art. An article on "The present ate of Architecture," in the last number, ns out a new track for our literary contem- ary,—one in which we would gladly find n us, pleasant and instructive companions. annot be matter of indifference to us what said relative to æsthetic and professional jects, by non-professional organs,—at least, long as any section of the public receives nout question, opinions in print, howsoever, by whomsoever expressed. The *modus vandi* of the fine arts' department, in certain rters of the region of periodical literature, ved, might reward an exploring expedition h some curiosities of literary experience. ubtless, the enterprising traveller would be to recount much about the manners and toms of—

"The mob of gentlemen who wrote with ease"

ain reviews of the works of an author se star was lately in the ascendant, or high- ding absurdities about the commencement an architectural regeneration in the Exhibi- n building of 1851. We are no friends to acerbity of tone and violent prejudices ch have characterized too many of the ings under various signatures and disguises he hand that we now recognize in the new mel of *The Quarterly Review*. Reflections n the profession, to whom the improve- it discovered in "The present State of hitecture" is mainly due, and undying hos- y to individuals, expressed by him in terms agreeable than parts of the article before used to lead to the want of observation of uable suggestions, also put forth. It is ause there is a shred from the old garment, l hanging about the writer in the *Review*, t we are induced to say we hope this also l be "cast off," and that he will regard his ow men and fellow labourers with kinder s, through an unclouded glass. The alter- ive is not what is chosen by the class of ters before referred to, with whom unlimited ise has been the mere disguise of the want qualifications for intelligent architectural sicism. From further infliction of that prac- , may the good genii of ink and paper pre- ve us.

There is no doubt that the efforts which have n made for the advancement of architecture ring the last five-and-twenty years, are now aring good fruit. The writer in the *Quarterly*, eed, traces the progress, in great measure, fortuitous circumstances,—such as the neces- y for many new buildings, some of them pted to wants which did not previously st;—but the fact of the desire for architec- al enrichment of some kind, in buildings ich formerly did not receive it, must have sen from an independent heightening of the ndard of public taste. The writer is not rect in imputing to architects, jealousy as to progress of knowledge amongst the public. The discernment that is too blind to distin- ish imperfections," he says, "is the discern- nt they require." What, then, is the spirit which many literary labours of professional n are undertaken? Though the writer lauds at has been done in the Liverpool Society, d might have given similar credit to societies d individuals nearer home, he honours our rnal with a mere mention. and that a dis- paraging one, although some of his chief points have been long the staple matter of these pages. Were we more irascible than we are, it might have prompted us to some observations that would not have pleased the writer. It was quite unnecessary to urge, although *we* happen to have done so before the appearance of the number of the *Quarterly*, that every art was intended for the delight of a wider circle of observers than a professional one. If we have any claim to speak for our class, the writer's imputation is an unfair one. That there is a feeling in the profession, which is mistaken, however, is obvious to us, and it is an excusable one. It is simply the preference of an objection to the particular use generally made of "a little knowledge" in art, where possessed by a client. In too many cases, the client in place of proper deference to the possessor of greater knowledge and experience, assumes that he has acquired a power of judging on all subjects. Constant and time-absorbing discussions about every-day questions are the result. The writer in the *Quarterly* would say,—so much the better for art-education. We will merely remark, that *impatience* would be excusable in men who have views in the practice of a profession, additional to those of popular advancement of art. It is doubtless very gratifying at every fresh negotiation, to be able, where the knowledge is wanting, to teach that two and two make four; but real business is put aside unless something of the sort be taken for granted. Again, a very learned man may give a correct opinion, and yet be unfitted to present his own reasons. He may have a perfectly accurate opinion, and yet have forgotten the reasoning which led him up to it. In short, where, as in too many cases, the client has not that deference for the opinion of the architect which one slightly-educated man should have for the professor of a branch of study, it is impossible for the latter to point out that the result of a work will be very different to what is apparent in early stages. At the completion, the mistake may be rendered plain; but then, the mischief is done; and, as people do not generally build houses twice in their lives, the learning of experience is slow to work. The architect requires something more than the "leash of heads,—one for business, one for practical science, and a third for art:" he requires moral qualities, and an amount of tact in protecting his client against the client's self, the want of which in many cases, more than any other cause, tends to the production of inferior works of art. The writer, indeed, brings some capital arguments against the system of competitions, and we entirely agree with him as to the necessity of acquaintance with plans and sections, as to that of general popular education; but he leaves it doubtful whether or not he is of opinion, that the inevitably inferiorly educated man should, as now, make his opinion paramount.

We only say that the writer, in making charges which are unjust, has failed to grasp the true difficulty of the case. What, then, is the course which the profession should take? Clearly not what the writer imputes, to maintain any undue fear about the "danger" of "a little knowledge." The mistake which architects really make, is either that of not arriving at definite conclusions, or of allowing opinions formed on a definite basis, to be overruled. If every architect would be at pains to form a correct opinion, and to maintain it, objects which seem now difficult, would be soon reached.

Let us, however, look to the subjects touched upon in the article.

Contrary to what might be supposed from their prominence, the writer says, buildings make but trifling impression upon the ordinary observer. Something more than the use of eyesight is required: *insight* into the principles of architecture is necessary. In the case of painting and sculpture, the corresponding faculty is bestowed by Nature. But he remarks, that for architecture to attempt the direct imitation of nature, would be hardly less absurd than the hedges and trees, sometimes cut to resemble walls and statues. In the same spirit, he objects to ceilings, such as that of the Sistine Chapel, as we did in a recent article. In short, the reflection from the current literature of art is observable throughout,—though studiously unacknowledged. Flowers and fruit are proper for architectural ornaments, but should be treated conventionally, and Ruskin's dogma, as to festoons—that objects are not grouped so in nature—is refuted by mentioning the case of enriched capitals.

Although there is generally the want of permanent influence from architectural works, upon a common observer, still he discovers that most persons take some sort of interest in buildings of more than ordinary pretension. Quantity, however—as of ornament or material—is that which impresses every eye, rather than artistic quality. From this it is that he deduces the necessity of education in architecture. He then alludes to many modern facilities for illustration. Looking to the practice of architecture, he says that it has now to guard against two insidious influences—doting antiquarianism with its superstitious reverence for whatever is old, no matter how inapplicable to actual requirements; and fashion, self-willed, and morbidly craving after change, to obtain which it will not only tolerate, but even welcome deformity. Fixity is the principle of the one, mutation of the other. Referring to the pseudo-Greek school of the beginning of the century, he speaks of what he calls the common delusion, under which the essential attributes of a style itself, are imputed to all the works which nominally belong to it: and he well remarks that, under the present use of the word style, we want a term for the same signification as the word *style* in the literary vocabulary. He discovers that there is re-action in furniture design, as well as in architecture, but that there is a bad use of excessive ornament and colour. He shows, as we have often done, that much of what is effected by upholstery, should be part of the structural architecture.

Although he finds shadows as well as lights in the picture of the present state of taste, the writer yet discovers that there has been considerable progress, and he refers to New Cannon-street as an illustration of it, contrasting that with the architecture of Regent-street—where, however, the example was set which has led to later metropolitan improvements. Speaking of the new streets, he says,—"The broad lines of traffic which are cut through a pent-up mass of houses, serve to ventilate a whole neighbourhood, both physically and morally." "The lurking-places of vice and crime are thinned out, or swept away, and the poor are no longer crowded together in dens, which were little better than so many black-holes of Calcutta."

The writer here displays a very mistaken apprehension of a very solemn subject. When shall we hear the last of these self-congratulations upon measures which have been so conducted as to entail misery on thousands. It is a melancholy fact, known to those who have studied the subject more than the writer of this article, that if the lurking-places of vice and crime are swept away, so also are the abodes of honest poverty. The poor, so far from being "no longer crowded together," are pressed into close compass,—in that neighbourhood or some other. This, of course, need not be,—but the writer is misrepresenting facts.

The superiority which the writer discovers in

New Cannon-street, is mainly what he characterizes as a certain *largeness* of style. To this the omission of ordinary shop-fronts is conducive. He regrets, however, a certain littleness of effect in the numerous stories, which is always injurious to dignity,—but is reconciled to this, on the consideration that it is perhaps as well that the genuine palatial stamp cannot be set upon warehouses and hotels. But we must differ with him where he says that such arrangement of stories is inevitable. It may be entirely avoided, by grouping two or more stories together. Some of the buildings in New Cannon-street, indeed, manifest a dim perception of the available expedients,—but the slight alterations in string courses are not adequate to the result which may have been intended.

In an allusion to old houses in the City, the writer seems not to have observed the interesting features which are still to be found in some of them. Well-planned staircases, enriched ceilings and panels, carved balusters, parquetried floors, and well-designed iron-work, and even wall paintings, may be discovered, and should be mentioned for the estimate of the architecture of the last century, as fairly as the mansions at Wanstead, Worksop, Wentworth, and Holkham.

Whilst regretting that a properly-planned area round St. Paul's was not provided, the writer questions Wren's ability in street architecture. It might have been stated, that this branch of the art is mainly a thing of modern days. The conflicting difficulties on the one hand, of narrow fronts, varying in their heights, and of a continuous façade, have not been met. One side of Regent-street, in its altered shop-fronts, shows the unsatisfactory result which accrues in very few years,—not to mention one wing of a composition, with shafts of columns in imitation of marble, whilst the other remains nearly in its pristine shineiness.

As further evidence of progress, allusion is made to the neighbourhood of the Mansion-House. Sutherland House, also, is contrasted with Bridgewater House. It is curious that a writer like Dr. Waagen, should have preferred the former. Again, Holford House, Park-lane, is shown to be a great advance upon Apsley House. Testimony is given to the merits of the Italian style of Sir Charles Barry. As an antidote to the prejudice, inherited from the Palladian school, and confirmed by the knowledge of Grecian architecture, we hold it to have had an especial value in forwarding a better state of taste. Of course, the architectural works of Sir Robert Smirke are noticed; also the Houses of Parliament. The Panopticon Institution is regarded as an exotic, with not very complimentary mention.

The general conclusion is, that though many houses remain as evidences of the degraded state of taste but recently existing, some of the public buildings lately completed are noble structures, and the two latest mansions on a palatial scale, surpass everything that previously existed. Still the writer holds that there can be no permanent security unless the public can control the caprices of individuals by their judgment. Unless the public can distinguish between good and bad, architects will labour in vain. Some will make the profession a money-getting business,—and the others will be fortunate, if their plans are not marred by the want of knowledge in their patrons—of the common principles of design.

It is unquestionable, that our *art* must be made a department of popular education,—by which it will be raised in estimation also. We speak of the neglected element of architecture, which is emphatically the *art*. The mere history of styles will not be neglected for itself; but the examination of it may be made productive of larger results in æsthetics than have yet been opened out. This object we have endeavoured to hold in view in recent articles.

There would be no safety in placing a limit upon the popular attainment of knowledge. The attempt on the part of a class of educated men would be inconceivable, as the argument for it would be illogical. Some other mode of removing the false medium which exists between architects and the public, must be found out. One course is plain: definite conclusions will lead to direct action; the suspicion of clients will not be raised as to whether, the architect is himself certain of his own mind; and proper deference to opinion will be claimed successfully in general, because claimed with justice. The public, however, must be less dogmatic on the one hand as to styles, and less ready to catch at every new fancy. When the architect is only the creature of these whims, or a superior clerk of the works, a high character of art is impossible. It is this which the writer's disparaging remarks prevent from being conveyed to the perception of his readers.

SIR CHRISTOPHER WREN: SCRAPS FROM HIS PAY-BOOK.

Do the free and enlightened Britons who sometimes wander into Great Russell-street, to show their country-cousins the "lions," ever ponder on that microcosm, the British Museum? The politically-inclined of them remember that once a year some 50,000*l.* or 60,000*l.* vote for its expenses is brought forward in the "House;" when up start some half-dozen fiery members, who have each found out something connected with its administration (that is, the Museum, not the money), which they consider a "great shame," a "disgraceful error," a "thing which ought surely to be redressed," a "thing which they hope will be inquired into," &c. &c. The patient minister lets them have their growl out, smooths their ruffled plumage by an adroit remark, or a hazy promise, and—the vote is passed. Well, John takes a walk in the Museum which costs him so much, and he is very well pleased with it: he thinks, after all, he gets value for his money. He is right. From the ends of the earth have been gathered the treasures which are clustered in that building. Fire, air, earth, and water have been ransacked, or pressed into service, for his national collection; all the wit of man to bring together in one focus, and all his learning to arrange, the wondrous trophies of this great cabinet. We walk through the rooms filled with antiquities, and see lying around us the far-reaching links of art, which recede through the glorious creations of Grecian genius, to the rude manifestations of the early Egyptian. In one corner we read the indelible records, and trace the actions of that very Assyrian, who "came down like a wolf on the fold, his cohorts all gleaming with purple and gold." In another we gaze upon the princes of three thousand years ago, whose memorials are graven on their coffins. It is a great school. But the general public do not see much that is interesting, and which is telling, although indirectly, on the mind of the nation. The library of the British Museum is a national boon. Its arrangements for readers are the most liberal and speedy of any great collection in the world, and here it is, surrounded by the records and thoughts of great men, that the student of our literature or our history finds food which he turns into chyle for the public benefit.

We have lit upon an old folio manuscript preserved in this place, which is interesting, from associations connected with our great architect, Wren, and is curious in its details. It is an office book, containing the particular lists of accounts of all works and reparations done at the Tower of London, Whitehall, St. James's, Snow Well, near Berkshire House; Hampton Court and Greenwich; with the accompts of allowances for riding charges, and to the officers for incidental matters, for half a year, ending the last of May, A.D. 1667;—attested and subscribed by Sir Christopher Wren, then and still surveyor of the works, and his fellow officers. We shall take some extracts from this ancient Pay-Book, arranging them under the heads of the respective buildings which received "reparacon." They are specimens of the solemn formal style of book-keeping which our worthy ancestors practised, and the elaborate descriptions in which they indulged. Now-a-days, we would fear that a builder presenting such long-winded documents was "making a bill." The rates of wages are worth notice.

The Tower (*Dec.* 1666).

A carpenter imployed in making scaffolds for the masons at the Traytor's-bridge. In putting in some new steppes at the stairs going up to the lodgings ouer the Traytor's-bridge, and fastening the rest of the stepps there. In mending the boarding at the warders at the hill—

ij^{s} vj^{d}. Thomas Borin, ix dayes, xxij^{s} vi^{d}.

A bricklayer imployed in mending the tyleing ouer ye lieftenant's kit, where ye winde had blowne off some tiles, and mending two harths for him, and mending the tiling ouer the Irish tower—

ij^{s} vj^{d}. Thomas Norfolk, x dayes, xxv^{s}.

Labourers imployed in helping and serving the bricklayer, and making of mortar and wheeling of stones to the pauior, and wheeling of rubbish to raise the ground at the wharf—

xviij^{d}. Sam. Gilbert, xxiv dayes, xxxvj^{s}.
& John King, xvij dayes, xxv^{s} vj^{d}.
Thomas George, xvj dayes, xxiiij^{s}.

To Joseph Buckmaster ffor two double loads of grauill; ffor carrying two loads of tiles and three loads of stones from the wharfe into ye tower, at xij^{d} ye load, v^{s}.

To John Russell, ffor ij hundred of lime at x the hundred, xx^{s}.

To Thomas Baggley, his Maj^{y} glasier, for work done in the lieftennantys lodgings, Deputy Wild's, Mr. Whale the minister, Mr Barnes, Mr. Dauis, Mr. Dobson's gentleman porter, Captt. Killizer, lieftennants, ensignes and the souldiers quarters.

New glasse, xxv foote, at vj^{d} ye foote xij^{s} vj^{d}; sett in lead, clxxxxviij foote, at iij^{d} y foote, xlix^{s} vj^{d}; repaired, v(c)xxij, at j^{d} $\frac{1}{2}$ y foote, lxv^{s} iij^{d}; quarries stopt, xvj(c)lxvij, a j^{d} ye quarr. vj^{s} xviij^{s} vj^{d}: in Sr John Robinsons, xlij English squares, ix & viij inches y square, at iij^{d} ye square, xiij^{s}; xiij^{li}—ij^{d}.

A plaisterer imployed in lathing and plaistering the soolings in Mr. Dobson's lodgings, on of the warders ouer the Byward gates, and mending ye broken walls there, ij^{s} vj^{d}. Thos Waker, xiiij dayes, xxxv^{s}.

Plombers imployed in making a cistern and square pipe, which carry the water from the Byward tower to the drawbridge, and turning it ouer with an elbow to the next leads, and making two socketts there, and unstopping two square pipes at the White tower, and sodering some conks in a gutter over the lieftennant lodgings, and cutting up the old lead of the Bentham tower—

ij^{s} vj^{d}. Thomas Heasman, xv dayes, xxxvij^{s} vj^{d}
& John Crispe, xiiij dayes, xxxv^{s}.

Prouisions. To John Russell, ffor ij (c) coalyme, at x^{s} ye c, xx^{s}; to Thomas Norfolke, ffor half a load of heart lathes, xxx^{s}; ffor two double loads of sand, viij^{s}; ffor tenne bushells of wet haire, xv^{s}; liij^{s}.

A Clearke of the Workes.

Richard Gammon, xxviij dayes, at ij^{s} iij p. diem, lviij^{s}; ffor boathir, v^{s}; lxviij^{s}.

[This Richard Gammon figures every month in the Tower expenditure, and signs the auditing docquet along with Wren and the other officials. There used to be an item in old Scotch hotel bills called "*fash.*" Many a southern visitor has stumbled over this cabalistic entry: being interpreted, it means "trouble," or, as we have it now-a-days "servants." Some might suppose that th "clearke's boathir" meant "bother," like th Scotch "fash;" but it is only the antique orthography for boat hire."]

Whitehall.

[The entries here are very numerous and curious, especially the payments to the painters carvers, ironmongers, locksmiths, and th "mazerscowrers," employed in wheeling stones and carrying away rubbish, &c. Their great length precludes them from quotation. Only a few of the shorter charges we subjoin.]

To Phillip Parker ffor three thousand of billetts, at xxij^{s}. ye thousand, lxvj^{s}.

To John Groome, stationer, for half a yeares book bound in rough calves leather, iiij^{li}; ffor ix qurs. of post paper for windowes, vij^{s}; for ix qurs. of browne paper, ij^{s}.; xiij^{s}.

To Sir George Waterman, Knt. and Alderman of London, for a new crane rope, of xx. qdom long, vij. inches about, of ye best hempe and spinning, at x^{d} ye pound, xj^{li} vij^{s} vj^{d}; for carriage of it, from Thames-street to Whitehall, iij^{s}.

To Edward Rundell, ffor an iron rowl for ye crane, and two slices of lignum vitæ, vj^{s}. And for one great block, strapped with iron, to hang under ye gibbet, xxij^{s}.

Sawyers imployed in cutting old oak and new fir timber into small scantlings, cutting oaken plank, for ye joyners to make tressell leggs, cutting deal boards into battens, helping to take up boards and poles at ye wharfe, and carrying them into ye Dial-yard, iij^{s} viij^{d}.

John Watkins and his Partner, xxv dayes, & ho. iiij^{li} viiij^{s} vj^{d}.

To Daniel Biefeild, wyer worker, ffor xv foote of close wyerworke, at the Queen's Milkhouse, at v^{s} vj^{d} ye fot. iiij^{li} ij^{s} vj^{d}.

To Henry Phillips carver, ffor work done in the Queen's Alcove West, ffor vj foot of base, with water leaves, at ix^{d} ye foote, iiij^{s} vj^{d}; for vj foot of sub-base, with leaves and strings, at j^{d} ye fot. iij^{s}; ffor vj of small leaves, at iij^{d} per foot, xviij^{d}.; ffor xvj foot of Gollosse in ye pannells, at vij^{d} ye fot. ix^{s} iiij^{d}; ffor xvi fot. of leaves, at iiij^{d} ye fot. v^{s} iiij^{d}.—xxiij^{s} viij^{d}.

Mattlayers imployed in laying a piece of Portugall matt in the Queene's supping roome, new matting a little closet for the privy gallery keepers, matting a little closet at the Queene's pandery, taking up ye old matts at the King's backstairs, cleaning the roome and new matting it again with Bullrush matt, new matting iiij formes for ye maids of honour, putting a new tape upon the Portugall matt in the Queene's withdrawing roome,—

ij^{s} vi^{d} Walter Wright, three days, vij^{s} vj^{d}.
ij^{s} Edwd. Johnson, three days, vj^{s}.

To Mr. Edward Jarman, ffor his expenses in going to Windsor to make a view thereof, by virtue of his Majesty's Commission, xx^{s}.

Westminster.

Carpenters imployed in putting up an old canopey ouer the Chancery Court, which was had out of the storehouse there:—

ij^{s} vj^{d} Robert Churchill, one day, ij^{s} vj^{d}.
& Wm. Allingham, one day, ij^{s} vj^{d}.
Wm. Addington, one day, ij^{s} vj^{d}.
xv^{d} Charles Hunkinson, one day, xv^{d}.

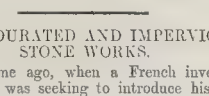
A joyner imployed in mending ye formes in the Painted Chamber, and putting in two iron staves to ye casements in the Ld. Chancellor's withdrawing roome:—

Richard Hodges, one day, ij^{s}. vj^{d}.

St. James's.

To Wm. Wainwright, smith, ffor making an augur of old iron had out of the store, to bore a hole through a brick-wall ij^{s}; ffor pooring two stayes, and making one new iron stay, with three esses for the store cisterne, lxxxviij (lb.) at iiij^{d} $\frac{1}{2}$ ye pound, xxxiij^{s}; ffor mending ye lock and rod of ye balcony doors in the Dutchesse's withdrawing roome, iij^{s}; ffor a bar of iron for the chimney in the same roome, with lix (lb.) at iiij^{d} $\frac{1}{2}$ the pound, xxij^{s} iij^{d}.—lx^{s} iij^{d}.

To Arthur Haughton, ffor four firkins of cise, xiiij^{s}; ffor one grosse of white, iiij^{s} vj^{d}; ffor xviij balls of florry, ij^{s} ix^{d}; ffor v (lb.) of Spanish browne, ij^{s} i^{d}; ffor xij (lb.) of English loker, v^{s}.—xxix^{s} iiij^{d}.



To Edward Martin, for making of frett ceiling in the Duke's withdrawing-room, xxiij^{s} xvj^{s} iij^{d}; ffor cv yards of lathing and plaistering in ye ceiling and particons, at viij^{d} ye yard, ijvj^{s} viij^{s} iv^{d}; ffor vij yards $\frac{3}{4}$ of rendring at v^{d} ye yard, iij^{s} j^{d} $\frac{3}{4}$; for whiting iij frett ceilings, cont. cxxxvj yds. $\frac{3}{4}$ at vj^{d} ye yard, lxviij^{s} iij^{d}; ffor whiting one plain ceilling, xviij^{s}.—xxxiij ij^{s} x^{d}.

To Joshua Marshall, for a chimney-piece of white marble in the Dutchesse of York's library, with a harth-pace and border for it, xiij^{l}; ffor a chimney-piece of black marble in the Dutchesse withdrawing-room, with a harth-pace and border to it, xj^{l}; ffor lxv foote of Rigate in ye harths and backs of ye said chimneys, at xvj^{d} ye foote, iiij^{l} vj^{s} viij^{d}; for two windowes of Portland stone in the Duke's bedchamber, cont. lxiiij fot iiij inches, at iiij^{s} ye fot, xij^{l} xvij^{s} iiij^{d}.—xlj^{l} iiij^{s}.

As the charges set down for Hampton-court, Greenwich, and Snow-well offer nothing different from the foregoing, we content ourselves with the fragments we have given bearing on the different kinds of labour, and the rates at which various materials were to be had. The gross outlay on the different royal buildings for the half-year specified, was as follows:—

	£	s.	d.
Tower of London	139	1	4
Whitehall	2,732	9	8½
Westminster	73	7	5½
St. James's	544	9	1½
Snow-well	87	2	9½
Hampton-court	306	17	4
Greenwich	209	13	11½
Officers' allowance	732	1	5
	£4,825	1	10½

For the benefit of those who may wish to examine at large an interesting volume, we may add that it is No. 1658 of the Harleian Collection. Apart from the value of a comparison of the value of labour 200 years ago, everything connected by association with a great architect is interesting, including the autograph of

THE INDURATED AND IMPERVIOUS STONE WORKS.

SOME time ago, when a French inventor, M. Rochas, was seeking to introduce his process for silicatising soft stone, and even for staying the progress of decay in stone buildings already erected, we spoke of Mr. William Hutchison's patent for indurating and rendering impervious to moisture soft sandstone and other porous stones, plaster of Paris, and various absorbent materials. Since that time a company has been formed to carry out the patent, and we have taken an opportunity which was offered us to inspect the works, and to examine some of the examples of the indurated stone which have been longest exposed to wear and the weather. The works at present in operation are at King's Quarry, close to Tunbridge Wells, which is held under a lease from the Earl of Abergavenny, and furnishes a stone so soft and friable that it may be reduced to powder with very little difficulty. The sandstones, grits, &c. are affected by the weather, either by the mechanical effects of moisture admitted into the interstices, or through the decomposition of the matter cementing the particles together; and Mr. Hutchison's patent, it will be seen, fights against both these operations. The process is extremely simple,—perhaps we ought to say the processes; at all events, two modes are employed, the one changing but slightly the colour of the stone, the other rendering it much darker, in fact, nearly black. The latter is much the cheaper process, and is performed with ordinary gas tar, purified and, to some extent, changed by successive boilings. In a large tank of this, over a furnace, the pieces of stone are placed, and remain on an average about six hours. In some pieces that we broke the tar had penetrated 3 or 4 inches on all sides, and in others had permeated the whole mass. After the stone has been taken out of the tank and cooled the surface is cleaned off. To preserve a light colour the stone is dipped into boiling resin instead of tar.

By the process the stone is made very hard, its specific gravity is considerably increased, and it is rendered non-absorbent. A three-inch cube of stone prepared by the first described mode, after being steeped in water for twelve hours, had gained no appreciable increase of weight; while a similar cube of the stone, in its natural state, absorbed two ounces and a half of water. The stone of which we are speaking, is altogether useless in its natural state. Searching for specimens of the prepared material which had been exposed for some time, we found a tomb-stone that had been out for three years, whereof the arrises were perfectly sharp and untouched, a *grindstone* which had been in use four years, and some pavement lozenges of the black and white alternately, that had been laid the same number of years, and were very sound. Being impervious, it serves to keep down the damp. Copings, sinks, and horse-troughs, appeared to have stood well. For use in hydraulic works, sea walls, dock-basins, tanks, &c. it would appear to have strong claims. We should add that the invention is not confined to stone in a solid state: pounded sandstone or other material may be mixed with loam and rendered hard and impervious by introduction to the tank. We found the workmen, in this way, manufacturing stable-pitching, out of material otherwise useless.

The *Sussex Advertiser* looks to the invention hopefully, as promising great results as regards the district, which has at present, "so to speak, no special manufacture, no distinctive 'staple' of industrial trade." "The important merit," says the writer, "in Mr. Hutchison's invention is the striking fact, that out of two materials—each comparatively valueless in itself, viz. sandstone and gas-tar,—he produces by direct amalgamation, under certain processes, a most valuable and highly useful commodity. It has been held that that man is a benefactor to his country who can make two blades of grass grow where only one grew before; Mr. Hutchison has done more: he has taught us to convert two bodies—nearly useless in themselves—into a material whose uses can scarcely be circumscribed; while, be it added, this material can be furnished at a rate little beyond, we believe, half the usual cost of ordinary stone."

Sir Roderick Murchison, the well-known eminent geologist, has expressed an unqualified opinion in favour of the process. In a letter to the patentee, Sir Roderick says,—"Believing that your method of indurating the soft sandstone of this neighbourhood, and of rendering a material which is so easily worked as *durable as the hardest rock*, and quite impenetrable to moisture, I sincerely wish you may have that success to which you are justly entitled. It is manifest that, in a climate like this, a cheap building stone, which *throws off wet and never can absorb it*, must be highly valuable, not only in the construction of houses but in all hydraulic, paving, and monumental work." He goes on further to say,—"When I further know that every sort of decoration can be chiseled out at the very slightest expense, and with great rapidity, and that in a few hours the material can be rendered *an indestructible rock, with edges that can only be destroyed by violence, and never can be affected by weather*, I conceive that your patent only requires to be known in order to be generally appreciated." We do not go as far as this: we may not pretend to say that the stone as thus prepared "*never can* be affected by weather." Time must settle that question. But it certainly does seem clear to us that in many localities, and for many purposes, the process we have been describing may be employed with very great advantage to the public and much profit to the owners of the patent.

There are two architects, we observe, connected with the company, namely, Mr. N. E. Stevens, of Tunbridge Wells (who, by the way, has built some picturesque houses there and in the neighbourhood), and Mr. Edward Roberts, of London. We sincerely hope the undertaking may prove successful.

BURLINGTON HOUSE.

Office of Works, Oct. 30th, 1854.

SIR,—With reference to the copy of my letter of the 27th ult. which appeared in the *Builder* of Saturday last, I have to acquaint you that at the date of that letter the purchase of the Burlington House property had not been completed, and, consequently, that the privilege of admitting persons upon the premises was one which the Commissioners of this Board had no power to exercise. I am, Sir, &c.

J. THORNBORROW.

*** We willingly give insertion to this letter, but must be permitted to say the statement it contains does not exactly tally with the information we had received. At any rate it would surely have been but courteous to have given this answer to the application, so that we might have applied to those who *had* the power to open the yard gate.

FARM SCHOOLS.

THE CHILDREN OF LONDON STREETS.

SIR,—I have read your pamphlet, "London Shadows, a Glance at the Homes of the Thousands," wherein you describe with so much good feeling and truth, the dreadful scenes which may be found by any who will take the trouble to see for themselves.

No doubt it is a fact that thousands of children in London and other places are in the greatest misery and destitution, with the prospect that a large proportion of them will, if unaided, be tempted to dishonesty and crime from their positive inability to find for themselves the means "to learn and labour truly" to get their "own living" by honest industry. At present there are two great evils; the one alluded to above, the other a decided and increasing scarcity of agricultural labourers and working mechanics, which may, if unchecked, greatly affect the value of property. The important problem is, how we can best make one of these evils a means of counteracting the other, and so provide a remedy for both.

All classes are likely to ask, "What can we do" to abate the evils alluded to? And most of them have both the power and the will to do something. I shall take the liberty of giving them a few hints. Other editors and their correspondents may, and no doubt they will, assist you by giving publicity to any suggestion that seems likely to be valuable. As this is no mere party question, we may hope for a full and fair discussion of whatever seems feasible. As a very imperfect plan is better than none, if it leads to a full discussion, and the adoption of a good one that might not otherwise have been thought of, the following is offered for consideration.—To appoint honorary local trustees to visit and superintend small farms taken for orphan, and destitute, but honest children, to cultivate in fine and suitable weather.

The children could not only cultivate their own garden farm, but do work for others, by contract, as a means of increasing their income. Agricultural tools are generally much heavier than is necessary; but all useless weight is mere waste of strength, as it diminishes the capability of doing useful work. By making tools of the lightest and best materials, children might be made much more useful. The Royal Agricultural Society have already awarded a medal for improved forks and spades, and will be glad to promote the improvement of all agricultural tools and implements. When the weather was not suitable for "out-door work," the children could not only learn to read, write, and keep accounts (especially such accounts as would bear on their own farm and their present and prospective employment), but they could learn to do "in-door-work."

If all detail's were carried out in the best possible manner for making their labour productive, it is probable that, under favourable circumstances, such as where labour is dear and land cheap, children seven years of age might be kept and partly educated from that time for three years without costing 6*l.* more than they had earned; and such sum, if advanced to them as a friendly loan, which they were to repay as soon as they could, would in many cases be returned; as all would be taught that whether it was returned or not would constitute a part of their character, and prove whether they had deserved the friendly assistance of others. It would not be prudent to dismiss the children (except for bad conduct) before they were likely to obtain other employment; but after ten years of age they might be so useful on their garden farm as to earn all they cost.

The conduct and qualities of each child should be registered in a book, so that visitors who had the means of promoting the welfare of the deserving might, on inspecting the register of each school, be able to see at once what the character of each child was stated to be. The walls of the school-room might be usefully covered with lists of children who wanted employment, and employers who had work for young persons. By judicious and systematic training the children might become the best workmen of this country, and the best class of emigrants for the colonies; and by a good system of registration they might have agents in every part of her Majesty's dominions. There should be local management for each school, but the great central societies would be glad to become useful correspondents.

To do all this some funds are necessary; and where are they? it may be asked. My answer is, that although this is not to be considered a mere charitable institution, it probably would be, in many cases, judicious to *lend* any old charity funds now unemployed, or that are available; and that many new funds might be made available, as probably there would be, by such means, as large a proportion of real good done for the money so lent and expended, as by any other that has hitherto been tried. Perhaps part of the income of "Smith's Charity," and several others, would be available; and it may be a question whether that part of the funds of the "Patriotic" Society which will be devoted to the orphans would not be most serviceable in some such form as this. If it was clear that an orphan child could have a fair chance of earning its own living at a small risk of 6*l.* many friends would be willing to advance that, who at present merely consider such cases hopeless.

To render such institutions popular, it would be essential to take care that those who had in equity and strict justice the first claim for admission, should in all cases be the first to share the advantages to be derived from them; and by this rule the orphans of the neighbourhood would be entitled to a preference, except in very peculiar cases.

I have thrown out these suggestions, not with the idea that they are the best that can be adopted, but that others may improve on them.

If each farmers' club appointed a committee to report on this subject, they would be able to inform us what work could be found for the children, and what they would be likely to cost, in any particular locality, beyond what their income would be from their farm and labour.

The society for promoting the amendment of the law might have a committee to inform us what alterations, if any, are necessary to be made in the law before any such system can be fully carried out, and what charitable funds are, or might be made, available for lending for such objects.

The Society for Improving the Condition of the Working Classes would be able to give much useful information; and the officers of that and similar institutions might assist in collecting and circulating information likely to promote the objects in view.

Mr. Wolrych Whitmore and others have tried plans to a certain extent with a similar object: probably they will all be happy to supply any advice their experience may suggest.

It would be of great importance to have suitable masters to superintend the children. To save expense, they should generally be selected from those who have some income from other sources, which, added to this employment, would render them independent, whilst they would have the satisfaction of being useful members of the community.

In some cases, the wounded "sappers and miners," if possessing the requisite experience and knowledge of agriculture, and other matters, would be peculiarly suitable, from their professional knowledge, and from their habits of regularity, discipline, and order.

It is proverbial that a fresh job is almost as good as a rest, and this is particularly true with children; so they should not in any case be too long engaged at the same work, but their work should be judiciously blended with amusement, and their amusement should be instructive; and all should be consistent with giving health, strength, activity of body and mind, so as to give instruction in all things likely to be useful, amusing, and creditable to the children.

Probably nearly all the interesting accomplishments of the boys in the Duke of York's military school in London might be profitably attained as amusement for children in industrial country schools.

If in lieu of the present child's-play "at soldiers," they were taught to fence, and march in military order to their work and to church, if on two or three nights a week they learned military and sacred music, and practised the latter, especially on Sundays, they would not be less able to work at other times; but these exercises would not only keep them out of mischief, but be attractive of the attention of the gentry of the neighbourhood, who, in return, might be invited to suggest any new means of usefully and profitably employing the time of such children.

If with the ready and zealous assistance of the press—the co-operation of all such societies as are alluded to above—any one large landowner will take up the question in earnest, and get two or three of his most intelligent tenants to assist him, all apparent difficulties will soon vanish; but as it is important to prevent mistakes in the first experiments, every step should be well considered before it is taken.

By mutual co-operation, such as is here suggested, surely it is possible for a "practical people," such as we are said to be, to arrange some general plan, by which the whole body of children now exposed to useless wretchedness, may have a fair chance of earning their own living, and by that means not only supply the present deficiency of good labourers, but also greatly contribute to the power and wealth of their country.

BARUCH ALMACK.

ON SEPULCHRAL BRASSES, AND THEIR ART-MANUFACTURE *

A MERE sketch of the treasures stored up in sepulchral brasses, for the herald, the genealogist, the paleographer, and the student of costume, would alone far exceed my limits. I prefer, rather than attempt what I know it would be impossible to accomplish in a lecture on brasses, in general terms to endeavour to impress upon you the diversified interest and value of these memorials.

The earlier examples you will find the best, as works of art: the plates are of harder metal, thicker, and in all respects better prepared: the designs are distinguished by a simplicity, breadth, and boldness which gradually disappeared: the art-workmanship is firmer than in the later brasses,—more expressive—more artistic. The true power and capacity of *outline* were thoroughly understood by the earlier brass-engravers: *they* have left impressions of artists' *touches*, which afterwards, from other hands, degenerated into *scratches*. Certain conventionalities of treatment are at all periods observable. The same may be said with reference to the brasses which prevailed in particular districts. Such local influences admit of easy explanation, and these conventionalities are evidently no more than expressions of the fashion of the times. In all cases, however, fidelity of representation was rigidly observed. To personal portraiture, as we now understand the term, the artists who prepared designs for the mediæval brass-engravers paid but little regard. They seem, indeed, to have considered it unnecessary to impart to the countenances of their figures more than the distinctive characteristics of sex, and of youth or age, as the case might be. The figures themselves varied in size, from the full proportion of life to not more than 15 or 18 inches; but the costume and armour of the time in which the brass was engraved, were always the costume and armour indicated on the brass. And since, as a general rule, the brasses were engraved and laid down immediately after the decease of the person represented, the date of the brass and of the commemorative inscription may usually be regarded as identical. Exceptions to this rule—and those not few in number—will be observed by the student of brasses. These arise chiefly from a habit which prevailed with some persons, and more particularly amongst ecclesiastics, of having their brasses prepared during their lifetime, and under their own directions. In these cases, even the inscriptions were written and engraved, blanks being left for the date of the actual decease. These blanks generally remain; but too often none were found who cared to fill them up. In other instances, a brass may have been laid down to commemorate a person then long deceased; or an early brass may have been appropriated afresh at a subsequent period, and, with a fresh inscription, laid down as the portraiture and memorial of some person of a more modern age. (And here,

* See p. 573, ante.

in a parenthesis, I would observe that not the least remarkable circumstance brought to light by the study of the monumental memorials of the Middle Ages, is the readiness with which the very men who were most anxious to provide monuments for themselves, treated the monuments of others with disrespect, and even removed or appropriated them to their own purposes.) These, and such like exceptions, may easily be detected, so clear and conclusive is the rule itself—the rule of extemporary accuracy and fidelity. On the death of either a husband or wife, the survivor, in placing a brass to the memory of the lost one, usually had the figures of both represented, and the inscription written in the plural number,—blanks being left for the date of the survivor's decease. In these brasses, if two dates appear, the brass itself is almost always of the same period as the earlier date. I say "almost always," because in rare instances the brass to both husband and wife, with figures of both, was laid down at the decease of the survivor.

There is one brass, and it is in every respect one of the finest in existence, which appears to be the solitary exception commonly considered necessary for establishing a general rule. In this case I refer to the rule already set forth, that the costume of the period in which the brass was executed was represented on the engraven effigies. This is the memorial of Sir Robert de Swynborne and his son, Sir Thomas de Swynborne, at Little Horkesley, Essex. The father and son severally died in A.D. 1391 and 1412; and the brass, executed in 1412, represents the two knights, each in the armour of his own time; and as an important change in armour was introduced in the interval between these two dates, the two effigies exhibit some points in marked contrast. Each of these effigies is surmounted by a triple canopy of the utmost grace and beauty; and the entire work, which rests on an altar-tomb, is in a rare condition of preservation.

The brasses of ecclesiastics which yet exist, give us examples of every variety in the habit of the hierarchy, down to the year 1554, 2nd of Mary, and on to 1611, 7th of Charles I. the two latest, being severally brasses to Bishop Goodrich, at Ely, and to Archbishop Harsenett, at Chigwell, in Essex. In these brasses we have effigies of archbishops, bishops, and abbots. Priors and abbesses are also represented on brasses, though at a late period only; and in addition to these, commencing early in the second half of the fourteenth century, there is a long series of priests in eucharistic, processional, and academic habit. The modifications of form and adjustment introduced into some of the clerical vestments, are well shown in these brasses: the varieties of ornamentation also which they show in the chesubles and copes, as well as in the episcopal vestments, are both numerous and of great beauty, and also in many instances indicative of the tone of feeling prevalent at the time.

The brasses of *ladies* and *civilians*, which commence at about the same period with those of ecclesiastics, exhibit abundant varieties in costume. These are all, without doubt, truthful examples of the dresses and ornaments actually worn. From other sources (Illuminated MSS. &c.) we learn, that during the fourteenth and fifteenth centuries, the dresses of both sexes were not only continually changing fashion, but that they were various and fantastic in the extreme. On the brasses, the extravagancies of fashion appear, with the very best taste, "chastened, and the more outrageous forms are curtailed and simplified." A marked similarity between the *general effect* of the costume of the two sexes is observable: the knightly coif of mail was emulated in the wimple of the high-born dame: both knight and lady wore the flowing mantle: the ladies delighted to have their dresses covered with heraldic adornments; and strange to our eyes they would have looked thus *emblazoned*, as in the instance of Lady Tiptoft, whose brass at Enfield shows her in a mantle having three great lions passant on one half of it, and on the other half another lion rampant, at least as large as his three neighbours. The merchant and his lady wore the same flowing tunic: the knightly belt, both in form and adjustment, was closely imitated (I am not aware that those chivalrous accessories, *spurs*, were drafted into the department of female costume). The helmet, with its crest and mantling, were parodied in the ladies' head-gear, while their hair was frequently so dressed as to correspond with the fall of the camail from the knightly basinet; and the jupon, which covered the mail hauberk and the steel breastplate, had its counterpart in the cote-hardi, the graceful and long-retained prototype of the whole species of jackets, now so much (and I venture to consider so deservedly) in favour with the ladies in our own times. Whether the present fashion, which gives so singular a position to the bonnets of our countrywomen, be derived from the *butterfly head-dress*, in favour during the wars of the roses, I will not presume to offer an opinion: certainly a strong argument in favour of such an hypothesis is derivable from the decided tendency which these bonnets exhibit to *fly away* from the fair heads which one might imagine they were intended to cover. In addition to the long array of brasses of ladies, and of merchants of various callings, with that prince of wool-merchants,—"*flos mercatorum lanarum totius Angliæ*," William Grevel (Greville), the rebuilder of the church at Chipping Campden, at their head, there are brasses of judges, from which we learn that, in the fifteenth century, the civilian's sword was worn with the judicial coif and ermine: there also are brasses of serjeants learned in the law, with coif and bands; of notaries also, with ink-horn and penner; and of crown-keepers and yeomen of the guard to the sovereign; yeomen, and others.

The *armour* represented in brasses commences with the mail suit worn in the time of the first Edward, and furnishes examples of almost every change and modification in the panoply worn by the chivalry of England. The earliest military brasses are at Stoke d'Aubernon, Trumpington, Acton, Chartham, Buslingthorpe, and Croft, the last two in Lincolnshire. I know no brass in which the principal effigy is accompanied by the knightly lance, except in that to Sir J. d'Aubernoun. The weapon is still in use amongst English warriors, and, as of yore, decorated with a fluttering penon: perchance, during this very day, its deadly efficiency may have been demonstrated by our gallant 17th in the Crimea.* The brasses to Sir R. de Trumpington and Sir R. Septvans, are still unfinished.† Those at Croft and Buslingthorpe are half figures. The brass to Sir R. Bures is singularly fine; and its preservation is absolutely wonderful.‡

From the unmixed mail, we are carried on to the first decided addition of defences of plate, or perhaps of prepared leather (*cuir-bouilli*): during the succeeding period—the earlier years of Edw. III.—we have but few examples: § one of these, however, though much worn and mutilated, is a splendid work of art, and in the matter of armour and arms, a little arsenal in itself: this is the brass to Sir H. Hastings, at Elsyng, which is also equally valuable from its architectural and heraldic accessories. Here is one of the earliest known examples of a quartered coat of arms—the royal arms on the jupon of Edw. III. himself, who appears in a compartment of the canopy; and the sub-canopies of these compartments of the principal canopy afford admirable hints for designs for stained glass. Examples increase as the reign of Edw. III. advances, and they abound during those of his unfortunate grandson, Henry IV.

The camail* was then universal. To this martial appendage the gorget of steel succeeded, under Henry V. and thus the armour became of unmixed plate.

Every plate that in process of time was added in hopes of strengthening the defensive equipment against the shock of the charge in the lists or on the field, and every fresh device for giving increased freedom to the sword-arm of the knight without detracting from its security, are found to have been carefully rendered on the brasses of the fifteenth century. The decadence of armour also is fully illustrated in brasses, which themselves give evident proofs of art rapidly declining.

The full value of the representations of armour given in brasses cannot, perhaps, be fully appreciated, without instituting a comparison between these engraven figures and the actual relics of suits of armour preserved in the Tower and other armories. A comparison between the designs of brasses and those of sculptured effigies, seals, illuminations, and stained glass, will also tend greatly to enhance our opinion of the value of these engravings.

As a matter of course, all these figures of which I have been speaking, supply us with illustrations for our national history—illustrations of the people, drawn in their own times. No less admirably do they illustrate our greatest national writers in other departments of literature. How very valuable, in this respect, are the brasses of Alianora de Bohun, Duchess of Gloucester, of Lord Berkeley, and Sir Wm. Bagot,—all characters in our great dramatist's *Richard the Second*; also the brass of the standard-bearer to that unfortunate prince, Sir S. de Felbrigg, K.G. who appears with Royal banner by his side, and who married a maid of honour to Anne of Bohemia, the queen. Then, there is Lord Camoys, also a K.G. who led the left wing at Agincourt; and Sir Anthony Grey (brother of Lord Grey, of Groby, the first husband of Elizabeth Woodville, afterwards queen of Edward IV.), who, with his brother, fell at the battle of Bernard's Heath, near St. Alban's, February 17, 1460; and still later, at Hever, is the brass to Sir T. Bullen, the father to the ill-fated mother of Queen Elizabeth; while at Blickling, another Anne Bullen, aunt to the Queen, is represented in a brass. It would be easy very considerably to extend this series; but I must be content to specify only one other example of poetic interest—the brass to Thomas, son of Geoffry Chaucer, the poet, at Ewelme.

I may here mention, that the *most numerous series* of brasses yet known to remain in any one church is at Cobham, in Kent: these are also specimens of rare interest. By some oversight, it would seem, the spoiler neglected to lay his hand upon this noble collection. I much regret to add, that neither their unique character nor the power of association has secured for the Cobham brasses any careful regard from the present lords of the place.

In the earliest *inscriptions* in brasses, each letter was cut out of the metal, and fixed in a hollow sunk in the slab for its reception; but as early as the brass at Trumpington, inscriptions were cut on fillets of metal. These fillets with the inscription formed a border to the engraven composition: at the angles the emblems of the Evangelists were commonly placed as if to denote that the person commemorated had lived and died within the pale of the church. Subsequently, plates with inscriptions were placed at the feet of the effigies, either in addition to the border-legend, or in its stead. When brasses were placed on altar-tombs, the fillets of the border-legend were sunk in the midst of the group of mouldings worked about the edges of the slab, and there set chamfer-wise, with excellent effect.

The varieties of character, and of language also, used in these inscriptions, and the various sentiments and forms of expression contained in them, it is impossible for me now to notice. I must be content to observe that these inscriptions not unfrequently record the person represented and commemorated in the brass, to have

---

* Writing upon the brass of Sir John d'Aubernoun, Mr. Waller observes, that, "considered as a work of art, it will be found that the figure is ill-proportioned but the arrangement of the drapery judiciously contrived; whilst, as a production of the burin this brass is not excelled by subsequent example: each link of the mail is distinctly represented, and the mere work of graving up so large a surface must have cost many weeks of patient labour." *Mail* in brasses is expressed by rings; and half-room incisions, with and without bands.

† *De Trumpington* was a Crusader, having assumed the Cross in 1270, and followed Prince Edward to the Holy Land. *De Septvans* was one of the warriors at the Siege of Caerlaverock in 1300: his grandfather was present with Rich. I. at Acre.

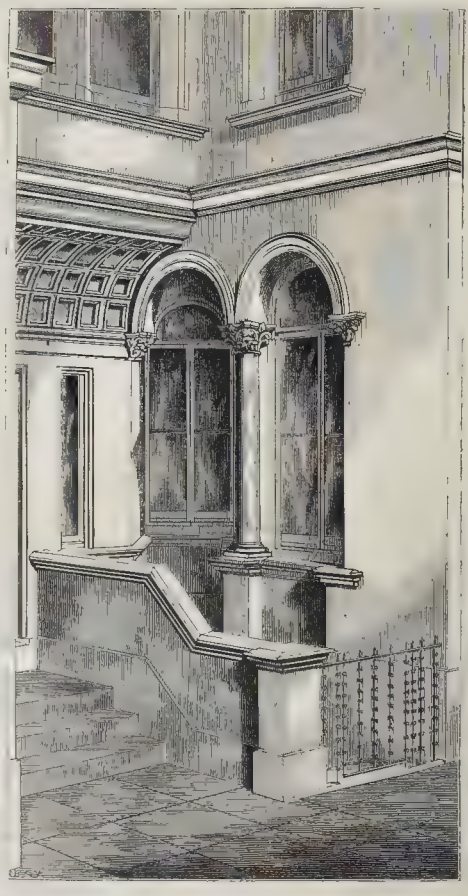
‡ If a brass might, under any circumstances, be removed, this to Sir De Bures ought to be taken to the National Museum, and a fac-simile laid down in its place.

§ 1325 Sir J. de Creke and lady, Westley.
1327. Sir J. d'Aubernoun II.
C. 1330 Sir J. de Northwode, Minster.
1347 Sir H. Hastings, Elsyng.
1347 Sir J. de Wantyng, Wimbish.
C. 1360 Sir Wm de Aldeburgh.
1354 and c 1365. Cobham Knights.
1368. Sir T. Cheyne, Drayton Beauchamp, &c. &c. &c.

* The camail appears to have been frequently fastened down by points, or sometimes by *ouches*, or enriched brooches: of the former, in sculptured effigies, an example is preserved at Newton Solney, Derbyshire; and of the latter, fine specimens remain at Ashborne, Derbyshire; Pennuydd, Anglesea; and in the Tudor Monument at Beaumaris.

either founded or restored the church, or that part of the church, in which his monument was placed; hence exact dates for certain architectural structures are obtained, the importance of which you can readily appreciate. It was an occasional usage to scatter small scrolls of brass, engraven with precatory ejaculations, or with various devices, over the surface of the slab.

As with inscriptions, so also in the matter of *heraldry*. Time will not permit me to say more than that in brasses, it is interesting and valuable in the highest degree.



Before I bring these but too discursive remarks to a close, there are a few general observations upon *monumental effigies and their canopies*, which I shall submit to you.*

C. B.

LONDON HOUSES.

MESSRS. CAPEL AND CO.'S OFFICES, THROGMORTON-STREET.

THE great value of land and position in the city of London, and the general tendency to improvement which exists, have led to the fact, that wherever houses are rebuilt or sites are obtained by the opening of new streets, solid costly buildings are now erected. In illustration of this, we give a view of a house recently completed for Messrs. Capel, Norbury, Trotter, and Co. in Throgmorton-street, close to the Bank, and which is wholly occupied as offices by themselves and others. It was built by Messrs. W. Cubitt and Co. from the designs of Mr. J. J. Cole, architect. The land, with the houses then upon it, cost 10,500*l.*; the contract for the new building was 11,900*l.* and the total cost, when all is finished, will probably be little less than 25,000*l.* All the fronts are of Portland stone, and it is as good a piece of masonry as we have seen for some time: indeed, throughout, the work appears exceedingly well executed. The mouldings are well drawn, the details agreeable. Flues are provided in most of the rooms for ventilation. A passage-way through the ground-floor leads to Shorter's-court, where the rear elevations of the house, being irregular, have some nice effects of light and shade. The windows are cleverly treated, and there is a little piece of design apparent in the arrangement, which we have sketched, to give light to two rooms, and form a back entrance. The shaft of the central column is of polished granite. The frontage of the house is 53 feet.

In Shorter's-court, Throgmorton-str et.

THE IMPROVEMENT OF LONDON.

As you are the only medium through which that part of the public who take an interest in metropolitan improvements can make itself heard, I trust you will excuse my intruding on your columns to endeavour to induce those high in office to make some commencement for the improvement of London, at a time when public feeling has so strong a tendency that way.

It appears to me that these improvements might forthwith be commenced, and if properly managed, at a comparatively slight expense.

1. Let the Nelson Column Committee be forthwith called upon to complete the column by the erection of the four granite lions. The answer will probably be,—no funds. Then let the Government take upon itself the erection of the lions, and at the same time let it be made a standing rule in the office of public works that for the future no committee of private persons shall be suffered to erect a monument on ground over which the Board of Works have any authority, without first entering into a bond to complete such monument by a given time.

2. Let the statue of Richard, which has been so signal a failure in Palace-yard, be erected in the centre of the open space between the Athenæum and United Service Clubs, a little to the north of the spot facing the entrance of the former club. Now, I think it will not require a very large increase of the income-tax for both these undertakings.

3. Let both the present fountains at Trafalgar-square be removed, and let two others be erected, which should for the most part cover the respective reservoirs: no greater pressure of water would be required, as it is a great mistake, I submit, to require water to be thrown to any great height in the centre of a city. The point is to have water gushing from many mouths, which a slight pressure of water would effect. By having fountains of more extensive size, the present annoyance of dirty reservoirs filled with filth to be emptied out two or three times a year would be avoided, and we should have something more worthy of the name of fountains. Why, also, should not the present disgraceful mob of boys be swept away? they are removed from every other part of London, and why is Trafalgar-square to be so disgraceful an exception? If it was known that such fountains were about being erected, I feel almost persuaded that—presuming there was no jobbery—public-spirited individuals would be found who would be induced to present the public, if not with such fountains, at least with the stone for their erection.

I think, therefore, I am justified in saying, that such before-mentioned improvements may be effected at a small cost: at all events, it would be worth while to see whether the public are really in earnest when they extol the beauties of Paris, and bitterly bewail their own London.

With regard to the New National Gallery, I think that may be left to take care of itself, as the Government will be forced to do something in the matter. There are, however, two other improvements, which, although on a much larger scale, might forthwith have a commencement made of them, and be extended over a period of five or six years, so that really we might turn round with some satisfaction to foreign nations, and show how really we were in earnest. I allude, firstly, to the destruction of the small number of houses lying between the Duke of Sutherland's and Lord Ellesmere's mansions: by that means the Green Park would be thrown open to view from Pall-mall; a fine view would be obtained of our two finest mansions in London; a fine sweeping road would be made round by the Lord Chamberlain's Office, instead of the present dangerous twist; and, if I remember rightly, such might be done at the expense of the demolition of about eight or nine houses.

Lastly, I would refer to a *commencement* being made of the destruction of the houses on the west side of Parliament-street, so that the fine, broad road in front of the Treasury might be continued to Westminster-hall. I am well aware of the expense of such an undertaking, but who would grudge the expense of such a vast improvement? Let it be extended over a series of years, and after all, we shall not have incurred a fraction of the expense now going on in Paris, about which we Englishmen rave. The improvements to which I have alluded are, I believe, not matters of opinion, but are considered as such by all; and it only requires a chief commissioner of public works, with a very small amount of moral courage, to make a beginning.

V. A. A.

* To be continued.

MESSRS. CAPEL AND CO.'S OFFICES, THROGMORTON-STREET.——MR. J. J. COLE, ARCHITECT.

PROVINCIAL NEWS.

Spilsby.—Arrangements are in progress to transform the space beneath the Town-hall here into a corn exchange. "Notwithstanding that a number of new windows," says the *Lincolnshire Chronicle*, "are being put in, 'regardless of expense,' and in a style corresponding with the architecture of the building itself, it is feared the new exchange will be fitted for *darker* deeds than the buying and selling of corn."

Loughborough.—The ceremony of laying the first stone of the new Town-hall and Corn Exchange for this town took place on Monday in last week. The site is irregular in shape, and presented difficulties to the architect. The plan is now arranged consists of a large room to the right of the entrance for the magistrates, with clerk's office and private room in the rear, and to the left a room for public library and reading-room, with offices for librarian and porter. These form the ground-floor facing the street. Over them are the assembly-room, with refreshment-rooms, &c. The assembly-room is 70 feet long by 40 feet broad, and 25 feet high, is lighted by seven windows towards the street, and by corresponding windows on the opposite side. The windows are arched, and the ceiling is coved. The whole presents a front of two stories, faced with Ancaster stone, and divided into a centre piece, slightly projecting with arcades of three arches in both stories, the lower having attached columns of the Tuscan and the upper of the Ionic order; the whole surmounted by a clock turret of light design, rising to an altitude of 85 feet from the ground, and wings with arched windows corresponding in character with the central design. A balcony forms a feature in the centre of the front, which is divided in height by string courses enriched by panels filled with Derbyshire marble, and surmounted by a bold vignolan cornice and balustrade. The front is 90 feet long, and from the pavement to top of balustrade is 49 feet. The Corn Exchange is a room 80 feet long by 45 feet wide, and 35 feet high, and is reached by the common entrance and by a side entrance for delivery of goods. Externally, this part of the building is entirely shut out from public view. Internally, the sides and ends are enclosed by blank arcades solid in appearance, from the piers of which spring laminated timber arches, strengthened by ornamental ironwork. The whole length of the roof is glass. The architect is Mr. William Slater, of London; and the estimated cost of the work is 4,000*l.*

Banbury.—The new Town-hall, of which we some time since gave an engraving, is now finished, and has been formally opened with some ceremonial by the mayor and council, who arranged with the inhabitants, and formed a party of 250 at a dinner on the 24th ult. and one of 600 at a *soirée* on the 25th, to celebrate the opening of the hall. The cost has been: for the site, 750*l.*; for the building, 2,536*l.* The hall, which is situate at the junction of Bridge-street North and Bridge-street South, has two principal entrances, and a back entrance to the second floor; but the public entrance is from the Cow-fair. The hall covers an area of 560 yards, is built of Bath stone, with arched cellars beneath, and is raised upon a bold chamfered plinth of Headington stone. The tower, which rises to a height of 76 feet, is of Portland stone. It is in the Decorated English style. Immediately above the principal doorway is a stone balcony, surmounted with an ornamental canopy. On each side of the tower there are two mullioned windows. Over the south entrance there are two mullioned and one wheel window. The north side has four mullioned windows and a wheel window, the back entrance, and the door of the engine-house. The principal entrance leads into a vestibule 14 feet square, from which a broad geometrical or hanging-staircase leads to the hall. Entering by the south door is another vestibule 36 feet by 11½ feet, by which the rooms on the ground-floor are reached. The principal of these are a magistrates' room, 22 feet by 17 feet, lighted with two large windows; the witnesses' room, 13 feet by 17 feet, lighted by one window; the Board of Health office, the police station, and six cells for prisoners. The hall is 60 feet in length, 34 feet in breadth, and 29½ feet high. Opposite the principal door there is a semi-circular recess, bench, jury boxes, &c. the division being moveable, so as to give further accommodation for concerts and public meetings. The hall is lighted by six large windows and three smaller ones, and in the evening by a number of gas brackets. Oak panelling, 5 feet in height, forms the wainscotting to the room, and opposite the dais in the tower there is a small gallery, with a stone balustrade, capable of seating seventy or eighty. The hall, it is estimated, will hold 600. Mr. Burton was the architect.

Oxford.—It is said to be in contemplation to erect a hall especially for Dissenters in Oxford University, under the sanction of the members of the Evangelical Alliance, from which body a committee has been formed to carry out the project.

Bristol.—On Wednesday in last week the Bristol Athenæum was inaugurated by a *déjeuner*, at which Lord John Russell, Earl Ducie, the Bishop of Gloucester and Bristol, various M.P.'s, and other gentlemen assisted. The building is situate between Corn-street and Nicholas-street, and is approached from each street by a corridor; that from Corn-street—the principal entrance—opening into an entrance-hall or quadrangle, roofed with glass. This contains a cast-iron bronzed staircase, and is made the means of lighting a number of apartments on the ground, and the first and second floors. On the right on entering, are the secretary's office and the library; and on the left the ladies' reading-room and the library of reference. Passing onwards through a carved stone screen or arcade, we arrive at the lecture-hall, having the reading-room on our left. The lecture-hall is an apartment of about 65 feet by 35 feet, including a gallery on the entrance lobby, and is capable of accommodating about 600 persons. The ceiling is carved, and, together with the walls, enriched with panelling. The light is admitted through a ground-glass ceiling, which serves also as a medium for the admission of gas-lights from burners placed over it in the roof. A series of small gas-burners is also placed round the cornice. The reading-room is about 62 feet by 32, with a library of reference adjoining and communicating. The ceiling is trabeated, and the walls decorated with Corinthian pilasters resting on a stylobate, with three marble chimney-pieces corresponding. Nine enriched niches are placed in the walls for the reception of statuary. The room is lighted by means of an ornamental lantern and subsidiary windows, and at night by a large gaselier in the centre, and pillar lights on the reading-tables. The two upper floors surrounding the entrance-hall are occupied by rooms for the board, and the several societies and classes attached to the Institution. The style of the building is Italian, rather freely rendered, to suit the exigencies of the site. The contractors were, for the masons' work, Messrs. Wilcox and Sons; the carpenter's work, Mr. Maggs; the plastering, Mr. Charles Lee; the plumbing, Mr. W. S. Lawrence; the smiths' work, including gas-fittings and warming apparatus, Messrs. Butcher; and the glazing, Mr. Isaac Williams. The architects were Messrs. Foster and Wood, of Bristol. Two windows of ground-glass were presented by Mr. John Wesley Hall, and two coloured panels of their "brilliant" cut-glass by Messrs. Mark Bowden and Company. The refreshment-rooms have been decorated by the conductor, Mr. Heal, from designs by Mr. Hirst.

Cheddleton.—The new national schools for the parish of Cheddleton, in Staffordshire, were opened on the 19th ult. The schools are built in the late Gothic style, of stone, from the neighbouring quarries, and lined inside with brick. They consist of boys' and girls' schools, each 30 feet by 16 feet; a class-room, 18 feet by 12 feet; lobbies for caps and bonnets, &c. affording accommodation for 150 children, at a cost of about 450*l.* Mr. George Lamb, of London, was the architect; and Messrs. Goldstraw and Clowes, of Cheddleton, the contractors.

Weymouth.—The architect of the new fish-market explains, that the charge for taking out quantities mentioned at p. 545, *ante*, had reference to a previous design for the same building, and that he had nothing to do with the charge personally. He further denies that he had given the council reason to believe that the cost would be less than what turned out to be the case.

Manchester.—In a report recently presented to the town council, it was stated that the total extent of sewerage constructed in Manchester by the corporation, from 1830 to June 24, 1854, exceeded 112 miles; that eight miles of private drains had been constructed at the expense of the owners of the property adjoining the public sewers since 1849; and that since 1847 upwards of 7,000 syphon-traps have been laid down in streets, passages, yards, and houses.

Newcastle-upon-Tyne.—Mr. Dobson's plans for the rebuilding of the space ravaged by the late fire, and which are now under the consideration of a committee of council, comprise a street from the Sandhill to Pandon, parallel with the Quayside, and three lateral streets, with a glass-roofed area for purposes of 'change. Pilgrim-street and Trafalgar-street will each be continued to the Quayside.

DINNER OF THE BUILDERS' BENEVOLENT INSTITUTION.

THE seventh anniversary festival in aid of the funds of this valuable charity, founded in 1847, for giving relief, and granting pensions to decayed members of the various branches of the building trade and their widows, was celebrated at the London Tavern, on Thursday evening last. The president of the society, Mr. W. Lee, M.P. took the chair, and amongst those present were Mr. H. Lee, Mr. G. Plucknett, Mr. A. Smith, Mr. H. Everest, Mr. T. Piper, jun. Mr. Eales, Mr. Tyerman, Mr. Godwin, Mr. Alderman Rose, Mr. Jay, Mr. S. Cozens, Mr. T. Stirling, Mr. J. Bird, Mr. Keys, and many others connected with the building interest.

After the usual loyal and constitutional toasts had been proposed, the chairman gave "the Army and Navy," and in doing so bore testimony to the gallant manner in which, in the battle of the Alma, they had sustained the reputation of their forefathers. Mr. Alderman Rose replied stating, that having the honour to hold a commission in the lieutenancy of London, he could not allow it to go unanswered. He believed that it was the feeling of approbation expressed at such meetings as these which had encouraged our men to the brilliant acts to which the chairman had referred. When he thought of what those fleets and armies had done within the last ten months, he felt that the highest compliments were due to them. The troops had most gallantly done their duty, and though decimated with cholera, had wrested from Prince Menschikoff, in three hours, the heights of Alma, a position which he had written to the Emperor to say he could hold for three weeks.

The chairman then rose to propose the toast of the evening, "Success to the Builders' Benevolent Institution," and in doing so, narrated its past history and operations, from which it appeared that two elections of pensioners had taken place during the past year, the first in August, 1853, when five were elected from twelve candidates, three males, and two females; the second in May, 1854, when three others were added to the number, namely two females and one male, from a list of twelve candidates, being an addition of eight persons during the last twelve months, and making the total number of pensioners now supported by the institution twenty-four. The sum paid for pensions since its commencement amounted to upwards of 1,570*l.* The directors had, from the subscriptions of the past year, added 700*l.* to the funded stock, three per cent. consols, of which 400*l.* had been purchased for the relief fund, and 300*l.* for the building fund. The total amount invested was 4,350*l.* divided in the following proportions; 3,050*l.* for the relief, and 1,300*l.* for the building fund. The chairman expressed his regret that with so many almshouses rising around them, the building trades should be so far in the background as to have none of their own. Originally, the rules had prohibited the erection of any almshouses until the sum of 5,000*l.* had been collected for the purpose; but seven years having elapsed, during which only 1,300*l.* had

been contributed, the rules had been altered, and the amount reduced to 2,500*l.* an amount which he hoped would be made up before he left that chair that night; or, at all events, during the year of his presidency. He trusted that he should have the honour of laying the foundation stone of the "Builders' Almshouses," and he hoped that those present would subscribe liberally for that purpose. The chairman concluded, amidst loud cheers, by making an appeal on behalf of the funds of the charity.

Mr. Cozens, in reply to the toast of the treasurer, said that he thanked the chairman and the company for the honour they had done him in coupling his name with that of the treasurer, Mr. George Bird, whose illness he deeply regretted. If that gentleman had been present he could have replied in a much abler manner than himself. In conclusion, he would merely state that he had done all that lay in his humble power to advance the interests of the institution, and would continue to do so.

Mr. Thomas Piper made an excellent speech, proposing the health of their "Commander-in-Chief," the president (a very martial spirit prevailing throughout the evening); and Mr. Henry Lee and others addressed the meeting.

In reply to the toast, "The Architects and Surveyors," in proposing which the chairman alluded to the character of the architects as a body,

Mr. Godwin said he believed that a high sense of honour did distinguish the architects of Great Britain; and he was sure they felt that they best served their clients by acting liberally towards the builders. Although the society had made considerable progress, he thought it should be greater. When we saw that there were in Great Britain 182,000 carpenters and joiners, 101,000 masons and paviors, 63,000 bricklayers, 63,000 plumbers, painters, and glaziers; 35,000 sawyers; 31,000 brickmakers, besides plasterers, slaters, and others, making a total of 536,000 persons, exclusive of 2,970 architects, the largeness of the interests involved was made evident. The position which builders and contractors had taken in England was unexampled: they commanded armies of men; had their William Cubitt, Peto, Jackson, and others in Parliament; and were among the largest encouragers of art and literature.

Mr. A. G. Harris, the secretary, read the list of subscriptions, which amounted to 500*l.* and included Mr. William Lee, M.P. 52*l.* 10s.; Messrs. Henry Lee and Sons, 62*l.* 10s.; annual, 5*l.* 5s.; Mr. John Jay, 10*l.* 10s.; Messrs. William Cubitt and Co. 10*l.* 10s.; Mr. Jas. S. Wilson, 15*l.* 15s.; Mr. Jas. Davis, 10*l.* 10s.; Mr. H. D. Austin, 10*l.* 10s.; Messrs. Lee and Lavers, 10*l.* 10s.; Mr. William Webb, 21*l.*; Mr. J. Weston, 10*l.* 10s. &c.

The dinner was numerously attended, and Mr. Bathe did his part well, as he always does.

BUILDERS' AND ENGINEERS' CONTRACTS.

PREMIUMS AS WELL AS PENALTIES.

I SEE by the *Times*, that the Minister of Public Works of France has, with the approval of the Emperor, arranged that the two suspension-bridges of Arcole and the Invalides shall be taken down and replaced, the former by a metal arch of 80 metres span, the latter by a stone bridge of four arches, at an expense of 1,950,000 francs. The contractors have entered into an agreement to have these bridges open to the public by the 1st of May next, under a penalty of forfeiting 1,200 francs for every day's delay beyond that period; *but, as a set-off, they will receive a premium for every day they may gain on that time in the completion of these works*, the total amount of the premium not, however, to exceed 25,000 francs. I wish to call attention to the italicised portion of the foregoing statement, as it contains a principle of fairness which would be an advantageous element in agreements in this country. The contract system, as too frequently carried out in the building and engineering trades, is something like the following:—Tenders from several in the trade are solicited and obtained, and after a close scrutiny, the most advantageous one is selected. A new clause is, at this stage of proceedings, introduced into the bargain, viz.—that the contract be completed on a fixed date, under a heavy penalty for every day after that date on which the work is not finished: should the contractor object, he is very likely told that another will be happy to execute the work on the terms named.

I do not say this is the universal system, as there are honourable exceptions. By the insertion of this letter you may suggest to architects and engineers engaged in drawing up specifications for contracts the propriety of inserting a saving clause in favour of punctual contractors.

A CONTRACTOR.

BERLIN ART-EXHIBITION.

LATEST WORK OF KISS.

THE present Berlin exhibition is considered unsatisfactory, although all the spaces are crowded. The insignificant and even bad are so numerous, that the good almost loses itself at their side. Amongst the hundreds of oil paintings, not one historical piece of any worth is to be descried. The largest plastic work has been exhibited by Professor Kiss, in his *atélier*—St. George vanquishing the Dragon, or the Victory of Faith over Infidelity, which, however, is another amazon transposed into the masculine gender. In such colossal proportions, the saint vanishes too much before the animality of the horse and dragon. There will be a plaster copy of this next year at the Universal French Exhibition, and the casting in bronze, we are told, will take place in London. It will be an expensive work.

CHURCH-BUILDING NEWS.

Snaith.—Three new churches have of late been erected and endowed in this parish, at the cost of Lord Downe. Two of these were consecrated in week before last. Trinity Church, Cowick, is one of them. The foundation-stone of this edifice was laid on 4th July, some progress having been made in the building. It stands between Selby and Thorne, and about a mile from Snaith, near Cowick Hall, and surrounded by a burial-ground. Adjoining is a school-room and teacher's residence. There is a parsonage-house nearly opposite the entrance to the churchyard. The church and other buildings are in the Gothic style, with some peculiarity of design. The church is mostly built of red bricks, and covered with flat tiles of same colour. The windows are of stone, from Hare-hill quarry, near Leeds, and are glazed with quarry lights. The church has nave, chancel, and side aisles, with a bell turret on the west-end gable, in which is fixed a bell, from Messrs. Taylor and Son's, of Loughborough. Variety of colour is given to the interior by the introduction of stone, plaster, and red brick. The floor is covered with encaustic tiles from Messrs. Minton's. The seats are of stained deal, all open and free, and there is accommodation for about 380 people. The roof is an open one. The east window is painted glass, representing the Crucifixion and Resurrection, and one of the west windows represents the arms of the Downe and Bagot family. The consecration of this church took place on Thursday, the 12th ultimo. —— Hensall Church, the foundation-stone of which was also laid on 4th July, is erected on a rising ground adjoining the high road from Snaith to Pontefract, and about four miles from the former. It is a Gothic structure something similar in design to Cowick Church, except that, instead of there being a bell-turret on the west-end gable, there is a tower on the north side at the west end, through which the church is entered on the north, and an entrance-porch on the south side. The interior fittings are pretty nearly the same as Cowick, and there is accommodation for 300 people. The east window is painted glass, representing the twelve Apostles, and one at the west end represents the arms of the Downe and Bagot family, as at Cowick Church. The minister's residence, school-room, and teacher's house are near the church, and a plot of land is reserved for burial-ground. This church was also consecrated on the 12th ult. ——Pollington Church, it is said, will be ready for consecration in a week or two. It is of the same design as the other two. Mr. Butterfield is the architect of the three churches; Mr. C. Ward, of Lincoln, the builder; and Mr. R. H. Norris, clerk of the works. The cost of the three churches, with the residences, &c. is 15,000*l.*

Ramsgate.—A memorial window, in stained glass, designed and executed by Mr. W. Holland, of Warwick, has been fixed in St. George's Church here. It is divided into two lateral subjects under canopied tracery, in both of which our Lord is the principal figure, the one having the motto, "He healeth all our diseases," and the other, "Thy brother shall rise again." The former has a medallion beneath with the lamb, and the latter one with the pelican. The window was put in by members of a Liverpool family named Dockrey.

Barnack.—The *Northampton Herald* states, that on 19th ult. Barnack Church, which has been entirely reseated and restored, was re-opened on its completion. The whole of the seats in the nave and aisles are uniform, and facing east: they are of solid oak, unvarnished, and ornamented with carving. The only old wood-work remaining in the church has been preserved: this consists of a parclose to Mr. Nevill's chantry, and the lower part of the old chancel screen. To the north-west of this a carved wooden pulpit stands on a stone base too plain for its superstructure. The whole of the stone work has been retained, it is said, in its original, condition, and no attempt made to restore any ornamental details: thus the old Saxon work is intact and authentic. A fourteenth century wall, that blocked up the tower arch, has been removed, and the old work is now seen in its true proportions and details, as it has not been seen for 500 years, and it is said to be as sharp and fresh as the first day it was executed. The restoration has been carried out by Mr. Browning, of Stamford. With the exception of an arch to Mr. Neville's chapel, he has not interpolated any stone-work of his own. The roof of this chapel has been restored in oak. Besides the opening of the great tower arch, probably 1,000 years old, other Saxon features in the tower have been recovered by opening windows and doors. The church also contains specimens of every succeeding style, down to the latest. There is still a deficiency on the outlay which, on the whole, it is said, cannot be estimated under 1,000*l.*

Exton.—The parish church of St. Peter and St. Paul, Exton, in Rutland, has been recently restored, or rather rebuilt. It is a large structure, with a decorated tower and steeple, placed at the west end of the nave. The tower is of the earliest period of that style, and in design much resembles the Early English towers in that and adjoining counties: it is in good preservation. The stone of which it is built is principally Barnack rag, and the blocks are all finely squared and closely jointed: little or no mortar was used in putting them together. The steeple was thrown down some few years ago by lightning, and has since been restored. The lightning traversed the greater part of the church, doing much injury to the walls, already in an unsound state from neglect and decay, and rendering it necessary to re-build nearly the whole of them. According to the report of the Church Building Society, a church of the Norman period has evidently existed on the site of the present one, as fragments of moulded arches were found during the progress of the restoration in a portion of a foundation to the chancel, which had to be disturbed, and also from some indications on the outside of the east end of the nave; but no traces of its size or form could be found. The chancel arch and the arches of the arcades are Early English, and some of them have deep mouldings and carved capitals. The whole of the windows were much decayed, and all had debased perpendicular insertions. A western gallery has been removed, which completely blocked up a tower arch, and the groining in the tower has been completed, which appears never to have been put up, although every provision was made for it. The old roofs have given place to those of much higher pitch, and are all re-leaded. The pews were of all heights and sizes, but

they have now been replaced by open oak sittings, and one hundred and seventy additional seats have been thereby obtained for the use of the poor. The restoration was carried on and completed under the direction of Mr. J. L. Pearson, of Westminster; and the entire cost has been about 4,000*l.*

Islip.—The parish church of St. Nicholas, Islip, has undergone some considerable repair. It was in a most dilapidated state, and has been new roofed with English oak, covered with lead. Oak benches replace the old pews, and every part of the woodwork connected with the church is of same material. By re-arrangement, about seventy additional sittings are obtained, and, in consequence of a grant of 80*l.* from the Incorporated Society, 190 sittings will be free. The church is warmed with hot-air flues connected with a furnace outside the chancel wall. The walls and all the stone-work of the interior have been scraped and new faced, mullions replaced, and lights filled with opaque glass. In carrying out the works, the principle said to have been followed is that of restoring what was decayed, but following up, as far as possible, old models. The whole expense of the works will be about 1,050*l.* exclusive of chancel roof. There is a deficiency of more than 300*l.* The church was to be reopened on 1st inst.

Sheinton.—The church of Sheinton, between Harley and Much Wenlock, has been repaired, or rather rebuilt. Mr. S. Pountney Smith, of Shrewsbury, was the builder selected to carry out the necessary alterations. The church has been nearly all rebuilt. The old roof was divested of its plastering, and, being repaired, was fitted again upon the new walls and sheeted with timber. The pews were removed from around the altar. To compensate for the loss of these sittings, a new north aisle has been added. The west wall and chancel arch have been rebuilt, and traceried windows introduced. The bell-turret, which before crushed the nave roof, has been brought forward westward, so as to throw its main weight on the wall, and perpendicular supports of timber sustain the weight of the two angles projecting over the nave. The whole of the church has been fitted with new pews, stalls, reading-desk, pulpit, &c. the old oak carved boards being used in their construction, as well as new stained deal. The chancel is raised some few steps above the nave, and it is intended to add a reredos. The porch is in its original state, and next spring it will be restored according to the style of the remainder of the building.

Nottingham.—The foundation-stone of the new chapel of the General Hospital here was laid on Thursday before last. The architect of the additions and improvements is Mr. T. C. Hine, of Nottingham. The additions to the main building, consisting of an extra story, we may here remark for the sake of connection in detail, comprise four male wards, four female wards, six rooms for the accommodation of nurses and servants, bath-rooms, sculleries, and other offices, and also a large roof-story to be used as store-rooms. On the ground-floor, between the main building and the fever hospital, the new chapel, with the gable ends facing the north and south, will be erected, the lower or ground story of which will form a day ward. The approaches to the chapel will be from the main building on one side and the fever hospital on the other, and will be 54 feet 6 inches long, by 19 feet 6 inches wide. It will have an open roof, be fitted up with benches, and will be externally as well as internally ecclesiastical in character and appearance.

Halifax.—The new church at Heptonstall, in the parish of Halifax, was consecrated on Thursday week by the Bishop of Ripon. The old church is now in a very dilapidated state: a few weeks since some of the ceiling of the north aisle fell, and cracks and fissures are visible in all directions; and the interior has a desolate aspect, so that the new church has not been finished before is is needed. The foundation-stone of the new church was laid in May, 1850. It is in the English Perpendicular style, and consists of a western tower, nave, with clerestory and aisles, and chancel, with aisles extending two bays eastward, the nave having porches north and south. The nave is separated from the aisles by six arches. The whole of the pewing is low and ornamented with the linen pattern. The interior dimensions of the church are as follows:—Tower, north to south, 24 feet; east to west, 23 feet. Nave, north to south, 24 feet; east to west, 80 feet. Aisles, north to south, 17 feet; east to west, 80 feet. Chancel, north to south, 24 feet 6 inches; east to west, 42 feet 6 inches. Aisles, north to south, 17 feet; east to west, 29 feet. Extreme length, 145 feet 6 inches; extreme width, 58 feet. Height of tower, about 90 feet. The east and west windows, together with the gable, were presented by the Sunday scholars, Freemasons, and others. The north-east and south-west windows are memorial windows by the relatives of the late Rev. T. Charnock and Mr. Richard Sutcliffe, of Heptonstall. The church will accommodate 1,200. The cost, it is estimated, will be about 6,000*l.*——On the following day, Pellon Church was also consecrated. The site of this church is the gift of Mrs. Lancashire, and Mrs. Brooke, of Birks Hall. The style of architecture is Decorated, of fourteenth century. The edifice consists of nave, chancel, and vestry, a south aisle, divided from nave by four bays, and a tower, containing a peal of three bells, the gift of Mr. Gott, and ere long a clock, now in progress, will be erected at the cost of Mrs. Gott. The church will accommodate 300, and the district will be taken in nearly equal proportions from the parochial chapelry of Illingworth and the district of St. James's, in the township and borough of Halifax.

Leeds.—The foundation-stone of a new church for Brewery-field, Leeds, was laid on Monday before last. The building is to be dedicated to St. Barnabas. There are still to be raised some 300*l.* or 400*l.* to complete the sum required for the building.

Gamston.—On Tuesday week a considerable portion of the roof of Gamston Church, near Grimsby, fell in, doing considerable damage to the building. The principal beam ends are quite decayed with dry-rot. Treswell Church is said to be in as bad condition.

Darlington.—Carmel House Conventual Church, lately opened, consists of a choir for the use of the religious, giving accommodation for thirty nuns; a church in which stands the high altar, as yet only a temporary one; a secular chapel to the north for the use of the laity, as its name implies; and a side chapel, dedicated to St. Leontia, an early martyr, whose relics, obtained from the catacomb of St. Agnese at Rome, are laid in a tomb betwixt the chancel and this chapel, and a sacristy beyond. The style of architecture selected as most appropriate to the rigid simplicity of the order of Carmelites is Early English of thirteenth century. The eastern window is stained, by Wailes, from a design by the architect, and represents in the centre light "The Madonna and Child," and in the remainder of the window various saints of the order. The roofs are panelled, and variously decorated with symbolical devices in colour, with scriptural passages in the cornices, by Mr. Earby, of Birmingham. The carving is chiefly by Mr. Lewis, of the firm of Messrs. Lane and Lewis, of Birmingham, who are occupied, according to our authority, the *Darlington Times*, upon some important works for various Catholic churches. The architect is Mr. Goldie, now of the firm of Messrs. Weightman, Hadfield, and Goldie, of Sheffield, the design having been made by him, it is said, some years ago, whilst a pupil of the two former gentlemen.

Gateshead.—Mr. Dobson, the architect, according to the *Newcastle Courant*, has been appointed by the Gateshead parish authorities to ascertain and report whether the injuries sustained by St. Mary's Church be such as to render it expedient to repair and retain it; and, if so, what may be the cost of reparation; the report to be laid before a meeting of the parishioners. "To repair the church," says the *Gateshead Observer*, "we fear would be, in comparison to the building of a new one, a mere throwing away of money. The expense would be enormous at least a quarter the cost of a new church; and after it had been incurred there would be no security against further repair, the whole fabric being ricketty, and affected, in addition, with a disease (the dry-rot) than which, so far as buildings are concerned, none are more productive of both danger and expense." The Bishop of Durham, it seems, offers 600*l.* for the erection of a new parish church, and 300*l.* only in case the old church is to be repaired.

IN ANSWER TO THE QUESTION, "WHAT ARE THE OBJECTS OF ENGINEERING SCIENCE?"

The objects of engineering science may be defined to be the utilization of the powers and the adaptation of the works of nature for the purposes of man. The utilization of the powers, water, air, and their products, have from an early period been the study of the most real benefactors of mankind, and every successive step has tended to the great results, the lessening of human drudgery, the increase of human happiness, and the triumph of human intelligence in the person of the engineer. Within our time, the world has looked with wonder, and enjoyed with *in*sufficient gratitude one of these engineering accomplishments, the utilization of the power of steam, and the numerous, and beneficent as numerous, purposes in which the skill of the engineer has availed of it.

The adaptation of nature's works to the purposes of man may be said to be another great object of engineering science. However extensive our lakes, magnificent our rivers, grand our harbours, how useless, how injurious, how dangerous, might not each become without the engineer to adapt them to man's purposes? The river flowing through this city, instead of an advantage, a blessing—cleansing, enriching, and beautifying,—would, if neglected, be how different! no longer navigable, choked by its own deposits, inundating the surrounding country, and the city it now cleanses, enriches, and beautifies turned, by it, into a pestiferous marsh; its very course an obstruction without the bridges the engineer throws over it. Of the powers and works of nature in the *grand*, with which the engineer has to do, it is as true as of nature in the *small*, with which other professions have to do, that nature has been left unfinished for man's uses. The Great Father of the Universe intended that man should exercise upon it the intellect with which He has endowed him. The great river, the harbour, and the sea and the land, require the exercise of his skill and labour to make them what they may be, as the simple single flower requires the gardener's care to cultivate it into *double* beauty: the thistle may become the artichoke,—the crab produce the peach apple,—and, more wonderful still, the boorish schoolboy may become the gentleman. Improvements are possible in all created things, and it is the duty of all created intelligences to strive for it. Improve ourselves, and all with which we come in contact. Improvement in the physical world is *the object* of engineering science.

SAYINGS AND DOINGS IN LIVERPOOL.

Sir,—Hard words have been used by some of the members of the Liverpool Architectural Society toward Messrs. Mason and Hunt, for simply dedicating their little work on Birkenhead Priory to the Historic Society of Cheshire in preference to the Liverpool Archæological Association, who say they fostered the scheme. Are we to understand that the Association bought the drawings by awarding the prize, or was the prize a nominal guinea one for the best set of drawings on a given subject? If these questions are answered by any of the members, your readers will then be able to form some opinion on the monstrous ingratitude the authors are charged with.

In the opening address of the President of the Society, he makes some observations on the architecture of St. George's Hall, and the general improvements in Liverpool since the society last met; and as he uses such technical terms as the "scaffolding of lofty genius, and framework of eager and poetic spirits," I shall follow by saying that he has not hit the right nail on the head, when he charges Mr. Bardwell exclusively with "abortive attempts" to sully the fame of others. I think if Schinkel were alive he would question the president of the Liverpool Society about his charge of abortive attempts, and would be able to tell him wherein the piracy lay by comparing the exterior of St. George's Hall with some works executed by himself. The president also states that St. George's Hall is worth all it cost. It would be as well to know how he can make that out, if he includes, as he must, the cost of the useless experi-

ments made by other architects on that building. He must also approve of the disposition of the edifice in every way, inside and out. Plaster caps on polished granite shafts cannot be very architectural, and the Law Courts are so badly arranged, that the judge has a difficulty in collecting the evidence, through the voice not being heard distinctly.

Whilst I am on the subject, it may be as well to question the originality of the design which appeared in your number of the 14th inst. being a perspective view of new schools just commenced in Liverpool, which has the name of a member of the same society attached as the author, the original of which I lately saw in Coventry, nearly finished; the only difference that I can see being the addition of a lower story to the Liverpool schools. PARALLEL.

FILTERS.

A PERFECT filter should be self-filling, and this is most easily accomplished by immersion. If the apparatus be immersed, the water drawn therefrom necessitates the admission through an air-pipe of the atmospheric air, which is in its turn again expelled, and the apparatus filled with the water permeating the filtering medium: with such an apparatus no trouble exists; and it is but to draw from the top the quantity needed, and the filter is in active preparation for the next requirements.

Now, it is to this apparatus, or the preliminaries for its adoption, that the attention of our builders requires to be more especially called in the construction of all domestic cisterns. A small half-inch service should be laid on from the main tank to the ball-cistern for the supply of the kitchen boiler; this same pipe to be provided with a hand service in any convenient position for draught. Thus the only difficulty standing in the way of the universal use of filtered water would be removed, and a lasting benefit conferred on the public generally. It would remain only for the occupant of the premises to obtain a filter to immerse in the tank: the junction may be made momentarily between the pipe before mentioned and the filter by a few inches of vulcanized India-rubber tube, or it would be a more convenient junction to allow the service to terminate on the inside of the cistern with a union, by which means it could be more readily detached, the whole of which apparatus may be obtained at a comparatively small cost. As far as the apparatus and its material is concerned, I need only remark that all substances liable in themselves to contamminate or decay should be avoided, and the medium of purification should be that so strongly recommended by Mr. Simon, viz. animal charcoal. I know of nothing as a mechanical medium better adapted to its purpose than artificial stone, and this material appears to be all that can be desired, as far as rapidity of action is concerned. There remains but one more requisite. Whatever apparatus is used, should be constructed on the principle of ascension. This must be seen at a glance to be the only principle by which to secure a permanent success, and is as self-cleansing to a filter as the law of specific gravity is to water, the grosser particles ever depositing, and thus withdrawing or descending from the surface allotted to permeation. S. T.

STREET BRIDGES.

THE public have so much to thank you for, in the advocacy of suggestions calculated to promote the welfare and convenience of society, that I feel little hesitation in requesting your giving publicity to the following observations on the necessity of adopting some plan, to secure the lives and comfort of the thousands, who now perambulate this mighty metropolis, in the apprehension of serious accidents whenever they attempt to cross the existing crowded carriage-ways. It is not an entirely novel idea, that I now submit to the consideration of the London public; but to those whose duties daily expose them to accidents from the endless stream of vehicles with which our streets are filled, the greatly increased danger of their position need not be pointed out, while every one will concur in the desirableness of a remedy for the evil alluded to.

As one of the many who have this ordeal to encounter, allow me space in your columns to submit the practicability of erecting light and elegant *street bridges* for foot passengers over the most crowded public streets or crossings. These bridges could be of such an architectural character as would be unobjectionable wherever placed, and the advantages such modes of transit would confer on ladies and all the older members of society, by the security they would afford them, must be admitted by all parties.

These bridges need not exceed in height some 12 or 14 feet, and if made on the suspension principle, would not interfere with the existing currents of passengers. I would suggest, by way of trial, that one of these bridges be first tried at the crossing from St. Paul's-churchyard, to the south side of Cheapside, the foot-pavements there being nearly in a straight line. Another could be placed in the Poultry, a third in Gracechurch-street, &c. N. C.

Miscellanea.

RAILWAY MATTERS.—The Royal Danish line was opened with great ceremony and *éclat* by the King of Denmark, on Wednesday week. The new line extends from Tonning, *vid* Husum, to Flensburg, a distance of about forty miles. From Husum a branch extends to Rendsburg, and forms a junction with the Kiel and Altona line, on the direct route to Hamburg. The distance from London to Tonning can be accomplished in thirty hours *vid* Lowestoft, and the north of Europe steam vessels. Mr. S. M. Peto, M.P. and other gentlemen from London connected with the railway, assisted at the ceremony of opening the line. His majesty was entertained by Mr. Peto, and his friends on board the *Cygnus*, and the king invested Mr. Peto with the insignia of Knight Commodore of the Dannebrog.——At the American Institute Farmers' Club, in New York, a paper was recently read by Judge Meigs upon the subject of rapid railway travelling, in which he stated that, while with others he admired the progress made in the velocity of trains, up to 100 miles per hour, which had been accomplished in England, he entertained views far beyond anything yet ventured to be expressed. With rails ten times the strength of those at present in use, with locomotives on wheels of 12 or 15 feet diameter, an equivalent gauge, signals, and times perfectly settled, and the whole line walled in, instead of 100 miles, 300 miles per hour might be attained! The writer of this paper forgets that there is a maximum of every sub-lunar operation, even to railway travelling: 300 miles an hour exceeds the velocity of a ball from a cannon, and involves a rapidity in the action of piston, valves, and cranks, heating and destruction of metal, formation of steam and quantity of water necessary to be evaporated per minute, which would send the whole concern, as some one says, to "almighty smash." The Americans are indeed a go-a-head people.

FALL OF PORTION OF A MILL.—Owing to the boisterous state of the weather on Tuesday week, an accident occurred in Ancoats, by the fall of a portion of a mill, which, about three weeks ago, had been completely gutted by fire, nothing but the bare walls and some burnt beams being left standing. On Wednesday morning before last, the whole of the centre portion of the mill fell in, a portion of the walls falling against two end cottages in Butterworth's-buildings. The first house struck had the roof, front wall, and bedroom-floor completely smashed in. There were eight persons sleeping in the bedroom at the time, and most of them were buried in the *debris*; but owing to the joists which supported the floor being pretty strong, and giving way at the sides and not in the middle, they were precipitated to the floor more gently than they otherwise would have been. Several were injured, but not one killed, and three escaped without any injury whatever. In the next house there were twelve inmates. The front wall of this house was knocked in, but beyond a few bruises, the inmates received no injury either. The mill, which was a very old one, was five stories high, and since the fire took place, persons have been engaged in taking down the upper portion of it, and those parts which were considered in a dangerous state.

PREMIUMS AWARDED BY INSTITUTION OF CIVIL ENGINEERS.—The Council of the Institution of Civil Engineers have awarded the following premiums, for papers submitted:—1. A Telford Medal, to Mr. Nathaniel Beardmore. 2. A Telford Medal, to Mr. Andrew Henderson. 3. A Telford Medal, to Mr. John Pigott Smith. 4. A Telford Medal, to Mr. Alfred Charles Hobbs. 5. A Telford Medal, to Mr. James Yates. 6. A Council Premium of Books, suitably bound and inscribed, to Mr. John Thoruhill Harrison. 7. A Council Premium of Books, suitably bound and inscribed, to Mr. Daniel Kinnear Clark. 8. A Council Premium of Books, suitably bound and inscribed, to Mr. James Simpson, Jun. 9. A Council Premium of Books, suitably bound and inscribed, to Mr. William Michael Peniston. 10. A Council Premium of Books, suitably bound and inscribed, to Mr. David Chadwick.

THE "ANNUAL VALUE" OF WATERWORKS.—Will you allow me to inquire, through the medium of your columns, what is the meaning of the words "annual value," as used in the Acts of Parliament relating to waterworks? According to recent legislation, the companies are bound to rate tenements according to their *annual value*, but there is nothing in such Acts to show whether this annual value means gross rateable value, or net rateable value, as used in poor-rate valuations, whether it means the annual rent paid by the tenant, or this rent, free of deductions for other rates, for repairs, &c. In fact, the Acts of Parliament leave it quite uncertain what really is meant by annual value. I take the liberty of drawing your attention to this subject, as I am of opinion that great injustice is at present inflicted by the mode in which the companies themselves pretend to fix the annual value. I am aware that the Act of 10 Vict. enacts that any dispute as to annual value shall be settled before two justices; but the same Act, in case of a refusal to pay water-rate, gives power to the company to cut off the water. This seems a sorry way of protecting the householder pending the dispute. Allow me to ask are any of your readers aware whether any decisions have been made as to the meaning of annual value, as used in these Acts of Parliament?—S. U.

STREET LAMPS.—Purify gas to the utmost extent possible, but pure or not do not waste it. Does it not strike you that vast quantities of the light produced by gas is wasted in our streets by the want of a reflector from the top of the lamp? Why not paint the outside of the upper panes of glass with white paint, so as to throw down a great part of the light which is now wasted on the clouds and stars. *They* don't want it, *we* do. E. C.

CHARLTON BURIAL-BOARD COMPETITION.—The Charlton Burial-board having received twelve sets of designs for chapels, &c. in answer to their advertisement in the *Builder* of the 30th ult. have selected one (bearing the motto "Crosier") which has been sent in by Mr. Samuel Hewitt, of Montague-close, Southwark.

MOULDINGS.—The *Worcester Herald* lately gave, in a list of new patents, the name of Mr. George Sterry, of Worcester, as the inventor and patentee of a new method of manufacturing mouldings for cornices, picture-frames, architectural decorations, &c. On inspecting Mr. Sterry's invention, the *Herald* says that it commends itself to notice for cheapness, durability, and adaptability to any shape or form of surface. Instead of employing wood or plaster, he uses, as a basis or foundation, rope, cord, and twine, glued together into a shape nearly approximating to that of the finished moulding; and completes the moulding and brings it to a sharp finished edge by applying a composition of whiting, size, and turpentine. By the process thus adopted, mouldings of almost any sectional form may be produced, possessing great strength and durability, and not liable to crack or open.

LIFTING BRICK BUILDINGS BY HYDRAULIC PRESSURE.—A letter from San Francisco, in the *North American*, says,—They are now grading the streets of the city, filling in some and cutting down others. When the former process is being done, it becomes necessary to raise the houses. You have heard of moving houses entire, but here we lift them up by hydraulic pressure. Whole piles of brick buildings are being raised in this mode where the streets have been filled up, and thus the lower floors are brought up to the new level of the streets. Last week, a warehouse belonging to Alsop and Co. 50 feet front and 70 feet deep, having three stories and a basement, a heavy brick building, was raised 5 feet, and then under-built with stone, all without moving out, or even disturbing the clerks with their pens at the desks! Another store, not quite so large, but having in it 2,000 tons of hardware, was raised in six days, and a new story added to it at the bottom.

TENDERS

Tenders delivered at Sessions-house, Clerkenwell, for building depôt for the 2nd or Queen's Own Regiment of Tower Hamlet Militia, Bethnal-green. Mr. Clifton, architect:—

Norris	£6,494 0 0
Lawrence	6,340 0 0
Sanders	6,300 0 0
Piper	5,986 0 0
Wilson	5,910 0 0
W. Hill	5,705 0 0
J. Perry	5,670 0 0

For sewers and road-making, on the Paddington and St. Panoras Building Society, at Hackney:—

Phillips	£1,259 0 0
Fraser	1,211 9 0
Pound	1,099 9 0
Hockin	1,055 0 0
Culverhouse	979 0 0
Radley	944 17 0
Nicholson	938 0 0
Campbell (accepted)	874 7 0
Rogers	750 0 0

TO CORRESPONDENTS.

S." "E. A." (shall appear), "S. O." (ditto), "G. A. C." (ditto), "J. S." (ditto), "Z." "Lord S." "F. S. A." "A Competitor."

"*Books and Addresses.*"—We have not time to point out books or find addresses.

ADVERTISEMENTS.

TO ENGINEERS AND SURVEYORS

ONE or TWO good SURVEYORS are required—Apply, by letter only, with terms and references, to Mr. EDWARD RYDE, 30, Parliament-street, Westminster.

TO BOILER-MAKERS' FOREMEN

WANTED, at a Boiler and Gasholder Works, in Staffordshire, a FOREMAN, who must be well acquainted with marine boiler work, and smiths' work generally To a competent man a liberal salary will be given.—Apply, by letter, stating when last employed, to R. G. at Messrs. Dawson and Sons', Advertising Agents, Cannon-street, City, London.

WANTED, a respectable Person, of good address, and thoroughly acquainted with the Building Trade, to sell an article of large consumption on commission. Unexceptionable references will be required.—For cards apply at the Office of "The Builder."

TO ARCHITECTURAL DRAUGHTSMEN

WANTED, a competent ASSISTANT, for a permanency. One who has been accustomed to take out quantities and measure artificers' work would be preferred. Address, stating salary required, to Mr. T. M. PENSON, the Bars, Chester.

WANTED, a FOREMAN of SMITHS. He must have filled a similar situation before, and have been used to builders' work, and also iron roofs and heavy work.—Address, stating where last employed and wages required, to L. M. Office of "The Builder."

WANTED, in a Builder's Office, a CLERK and TIME-KEEPER. Must be thoroughly acquainted with prime cost and the routine of a builder's office.—Apply by letter, post-paid, to B. Office of "The Builder."

TO ASSISTANT ENGINEERS AND SURVEYORS.

WANTED, an ASSISTANT (permanent, if suitable), thoroughly experienced in surveying, levelling, setting out and superintendence of works; must be capable of taking out quantities, a neat draughtsman, and acquainted generally with the routine of an engineer's office; if experienced in sewerage and water-works will be preferred. None but sober, active, and fully qualified persons need apply.—Address, stating age and terms, with testimonials, to Mr. J. M. LANDBOROUGH, 24, Queensgate, Bradford.

WANTED, some good HANDS, either Cabinet-makers or Joiners, perfectly conversant with VENEERING, for the manufacture of ORNAMENTAL FLOORS. None but first-rate men with good references need apply. Wages 33s. or piece-work, for a commencement.—Apply, about Twelve and Two o'clock, at the Office of THE LONDON PARQUETRY, 8, Whitefriars-street, Fleet-street.

TO MASTER PLUMBERS AND BUILDERS

WANTED, by a strictly sober Man, a SITUATION as PLUMBER. Good reference can be given. Address, J. Z. No 2, Harford place, John-street, Upper Holloway, Islington.

TO BUILDERS AND CARPENTERS.

WANTED, an APPRENTICE a LAD, aged 15, to the above trade. A small premium will be given.—Address, E. S. 34, Newington causeway, Borough.

TO CARPENTERS AND JOINERS.

WANTED, to ARTICLE a YOUTH, as IMPROVER to the above trade for three years. No remuneration required.—Direct, W. S. M. 9, Redcross-square, Aldersgate-street.

WANTED, by a Man aged 30, competent to prepare working drawings, JOINERS' WORK of several houses, or to take charge of same. No objection to take a carcase. Address, W. B. 26, Salisbury-terrace, Islington-road, Islington.

WANTED, by a Young Man, a permanent SITUATION, as WRITER, GRAINER, GILDER, and HOUSE PAINTER.—Direct by letter, to A. OLIVER, 9, Dolly-street, Stonebridge-square, Chelsea. No objection to Town or Country.

TO LEAD AND GLASS MERCHANTS, BUILDERS, PLUMBERS, &c.

WANTED, a SITUATION, by a respectable Young Man, aged 25. Is a good Plumber, Lead and Glass Cutter, Glazier, &c. with some Knowledge of Colours, having fulfilled responsible situations in London and the Country. Warehouse or shop preferred. Has references from town or country employers.—Apply by letter, prepaid, stating terms, to GLASS-CUTTER, care of Allbut and Daniel, Hawley, Staffordshire Potteries

TO OWNERS OF HOUSE PROPERTY, SURVEYORS, BUILDERS, AND CONTRACTORS.

WANTED, by an experienced person, of middle age, a SITUATION in the Office of a Builder, or as Clerk of Works, or to collect the rents and superintend the repairs of an estate of houses. Can have unexceptionable references as to character, &c. Address to J. B. Mr. Low, Stationer, 31, Aldersgate-lane, London.

WANTED, by a Young Man, 24 years of age, a SITUATION as CLERK in a Builder's Office, or as Timekeeper or Storekeeper. Address G. W. 54, Galway-street, Bath-street, City-road.

WANTED, by a respectable steady Man of great experience, a SITUATION as CLERK of WORKS or BUILDER'S FOREMAN. He has been many years similarly engaged, and, having just completed a large public job, unexceptionable references can be given. Address to J. C. 100, Chalton-street, Euston-square

TO JOINERS AND HORTICULTURAL BUILDERS.

WANTED, as FOREMAN, a person who is well acquainted with all the details of horticultural building, a good joiner, and able to give plain line elevations, and general instruction. Address, stating wages required, proper references and age, A. R. N. T., Horticultural Builder, Chobham.

TO BUILDERS, DECORATORS, AND OTHERS

WANTED by a Young Man, a RE-ENGAGEMENT as CLERK. References to his present employers. Address post-paid to G. G. Mr. Dunstan's, News Agent, 44, Upper Rosary-street, Pimlico.

TO CARPENTERS, BUILDERS, &c

WANTED, a permanent SITUATION, by a Young Man used to the general work of a shop.—Address, W. T. L. 1, Garden-street, Shepley-green.

TO ARCHITECTS AND OTHERS.

THE Advertiser, of considerable experience, will be happy to PREPARE DESIGNS or DRAWINGS for GOTHIC and ITALIAN WORKS; perspectives in outline or coloured, and working drawings, specifications, &c.—Address, G. F. Office of "The Builder."

TO ARCHITECTS.

THE Advertiser, accustomed to prepare working details, and finished drawings and perspectives, and capable of generally conducting a business under direction of the principal, wishes for an ENGAGEMENT as ASSISTANT.—Address, M. A. Post-office, Ludgate-street.

TO PLUMBERS, PAINTERS, GLAZIERS, &c.

THE Advertiser, a Young Man, aged 17, who has been in the above line for three years and a half, wishes to place himself under an experienced hand for two years.—Direct, W. F. 10, John-street North, New-road, Marylebone.

TO ARCHITECTS

A GOOD and expeditious DRAUGHTSMAN, who is perfectly capable of getting up working and finished drawings, perspectives, &c. is a good colourist, and understands the routine of an office, is desirous of meeting with an ENGAGEMENT. Terms moderate.—Address, C. R. 5, Caledonian-road, Islington.

TO BUILDERS.

AN efficient BUILDER'S CLERK and ACCOUNTANT, having just resigned his situation, will be happy to meet with a RE-ENGAGEMENT. Highly respectable references.—Letters to Y. Z. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN is desirous of an ENGAGEMENT; he is a good draught-man, has a knowledge of quantities and specifications, and has had extensive practice in land surveying, levelling, &c. Good references and testimonials. Terms moderate.—Address, P. M. at Poulet's Newspaper Office, 16, Carlton street.

A SURVEYOR is disengaged. Is quick and accurate in filling in detail, &c. and a first-rate draughtsman, &c.—Address (prepaid), to X. Y. Post-office, Bridge-street, Westminster.

TO CIVIL ENGINEERS ON RAILWAY AND GOVERNMENT WORKS, ARCHITECTS, LAND AGENTS, AND BUILDERS

A LIBERAL PREMIUM will be paid with a young gentleman who is clever at drawing and mathematics, and respectably connected.—Direct, with list of works in hand, or appointments, and terms for resident or out-doors, to L. 91, Piccadilly

TO ENGINEERS.

A YOUNG MAN, 25 years of age, who has had extensive practical experience in the manufacture of lead and marine engines (has been with the latter at sea), is OPEN to an ENGAGEMENT. He is a good draughtsman and workman, speaks and writes German fluently, and is fully conversant with French. Can give unexceptionable references.—Address, letters pre-paid, OMICRON, W. N. Horton's Library, Royal-hill, Greenwich

TO CARPENTERS AND JOINERS.

A YOUNG MAN, who has been three years at the above Trade, wishes for IMPROVEMENT. Has no objection to article himself for a term of years. Wages not so much an object as constant employment.—Address, J. B. No. 3, Free-school-street, Horse-ydown, London.

TO BUILDERS AND CONTRACTORS.

A YOUNG MAN, who has served his apprenticeship to a respectable provincial firm, is desirous of EMPLOYMENT in the office or otherwise of a London house. Has had considerable general experience, but would accept moderate remuneration in consideration of opportunities of improvement. Unexceptionable references can be given.—Address, free, to J. C. 34 Castle-street, Cambridge

TO ARCHITECTS AND CIVIL ENGINEERS.

A YOUNG ARCHITECT, in practice, not having his time fully occupied, will undertake to PREPARE COMPLETE SETS of WORKING DRAWINGS, with specifications, &c.—Address, O. H. care of C. Fowler, Esq. 13, Furnival's-inn.

TO ARCHITECTS, &c.

AN Assistant of nine years' practical experience, is open to an ENGAGEMENT, either office or superintendence of works. Can make finished and working drawings, specifications, abstract, measure work, and is well acquainted with the routine of an office. Can produce unexceptionable testimonials and references. No objection to go abroad.—Address, BETA, care of Mr. Kennett, 14, York-street, Covent-garden.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, of some experience, a good DRAUGHTSMAN, wishes for a SITUATION, where he would have an opportunity of gaining further practical knowledge K. Z Post-office, New Brentford.

TO ARCHITECTS, SURVEYORS, &c.

AN ARCHITECTURAL DRAUGHTSMAN, accustomed to prepare finished, working and detail drawings, take out quantities, and measure artificers' work, is desirous of a RE-ENGAGEMENT. Country practice no objection; good references.—Address, A. B. Post-office, Folkestone.

TO ARCHITECTS, SURVEYORS, AND OTHERS.

A GENTLEMAN, having some spare time, would be happy to undertake any kind of ARCHITECTURAL or SURVEYING DUTIES, on moderate terms.—Address, ZEBRA, Mrs. Watling's, No 408, Strand, will receive immediate attention.

TO LAND AGENTS, ARCHITECTS, SURVEYORS, BUILDERS, and those it may concern

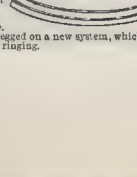
A YOUNG MAN, who practically understands both plain and ornamental painting, paperhanging, distempering, &c. &c. and will in his leisure frequently useful in the several branches, as repairing of buildings, is desirous of meeting with a permanent SITUATION, either in town, country, or abroad; is leaving his present employment from scarcity of work. References as to proficiency, if required. Address, post-paid, to H. CARLING, 8 Mcinett's-place, Brompton, Middlesex

TO LAMP-BLACK MANUFACTURERS.

WANTED, a party to ERECT or superintend the erection of CHAMBERS for the manufacture of Vegetable and Spirit Blacks. Also a party to conduct the manufacture. Apply by letter, post-paid, to No. 103, care of Mr. Barker, 12, Birchin lane, City.

TO THE CLERGY, ARCHITECTS, and CHURCHWARDENS.—GILBERT J. FRENCH, BOLTON, Lancashire, having declined appointing Agents for the sale of his Manufactures of CHURCH FURNITURE, ROBES, &c., requests immediate application to all Parties interested to him at Bolton, from which place only orders are executed. He respectfully invites direct communications, as by far the most economical and satisfactory arrangement.—Parcels free at the principal Railway Stations.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.



J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and less costly than heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

THE LAW COURTS and ST. GEORGE'S-HALL, LIVERPOOL.

—The inauguration of St. George's-hall, and the universal admiration which it has elicited as a work of consummate architectural magnificence and public utility, force bly remind us of the obligations and the respect we owe to the genius and the efforts of its lamented author, the late H. L. Elmes.

We should feel the obligations the more sensibly from the conviction that those efforts in our favour were amongst the proximate causes of his premature death, and from the fact that his surviving widow and son have been thereby subjected to pecuniary privations and embarrassments which we are humanely bound to mitigate by every means in our power. A committee has, therefore, been composed of the subjoined gentlemen, to carry out this expression, in which it is confidently believed every individual of our community will warmly participate, by the provision of such means as will relieve Mrs. Elmes from those embarrassments under which she is now suffering.

The late Mr Elmes rose early into eminence upon very limited means; but the expenses consequent upon such professional distinction were unfortunately unredeemed by that recompense, which, with time, would naturally have followed his meritorious labour. Still he neglected none of the duties of son, a husband, and a father. The prudent insurance of his life in the Sun Office was unhappily vitiated by his voyage in search of health in Jamaica, and his death there in 1847, of which a small sum only was recovered by the liberality of the directors of that institution.

The following gentlemen have been appointed a committee to receive subscriptions, and your contribution is respectfully solicited.

COMMITTEE.

The Mayor.	John Hay, esq.
William Brown, esq. M.P.	Wilfred Troutbeck, esq.
William Rathbone, esq.	William Fletcher, esq.
James Aspinall, esq.	Rev. Dr. Hume
J. K. Jeffery, esq.	Thomas Avison, esq.

ARCHITECTURAL OUTLINES, coloured and engrailed with landscape for competition or exhibition, by GEORGE CHILDS, 12, Amwell-street, Pentonville.

THE ARCHITECTURAL and CIVIL ENGINEERING CLASSES, 24, Guildford street, Russell-square, are OPEN for the reception of pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing boards, squares, &c. and instruction in architectural and civil engineering, drawing and colouring, making finished and working drawings, preparing specifications, taking out quantities, estimating, &c. &c. For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. at the Offices.

ITALIAN and GALWAY MARBLE QUARRIES. Depôt, Whitehall-wharf, Parliament-street. Mr. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade, that he has just landed in the St. Katherine's Docks, ex *Roberto* and *Betty*, from Leghorn 53 blocks of MARBLE, consisting of large open statuary, suitable for sculpture, Sicilian, veining statuary grounds, dove, Bardilla, &c., which at his depôt may be found 100 blocks of marble, consisting of open statuary, vein, Sicilian, black and gold, Galway black, and St. Ann's, and 25 different coloured marbles. A large stock of sawn slabs of every description of marble.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Cresent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer is agent

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.

Just arrived, per *Roberto Thom Betty, Natalia*, and *Harbertina*, 150 Blocks of Marble, and 12,000 feet of Sawn Slabs, Mantels, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for Sale on convenient Terms. The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN—WEST END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bunsor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Pipe Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public every description of their extensive assortment of veined, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London. THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing Room Chimney Pieces in Statuary Marble, bold massive Chimney Pieces in Black, Black and Gold, Breccia, Sienna, Veri Antique, Brocatella, Dove or Ann's, and Sea-eating Marble, Inferior for Dining-Rooms, Libraries, Vestibules, and Entrance Halls; and a great variety of others in Veined, Sea Foam, Emperor's Red and Amber Marble, for Bed-room Breakfast-Rooms, Best, and Secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c., the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

CAEN and AUBIGNY STONE.—P. FOUCARD Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Lunard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite and other stone from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freights to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones in blocks and ashlar of specified dimensions and fine scappled; also random and coursed rubble. It is easily worked to a good face and arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining. For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe

BATH STONE DEPOT, BOX STATION. ROBERT STRONG, STONE MERCHANT, Box, Wilts.—Box Grey and Stone, Scallett Block, Ashlar, Rauxwork, &c. &c. Supplied direct from the Quarries; also every description of Stone-work for Building purposes, both plain and ornamental, prepared ready for putting up, forwarded to any part of the Kingdom. Vases in elegant variety always on view; Urns, Fountains, Chimney-pieces, Tombs, &c. &c.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall

London Agents—HEGGIE and TAYLOR, 3, Pinner's-court, Old Broad-street, Manager—THOMAS TRATHEN, Liskeard. This Granite is selected from the New Westminster-bridge

GRANITE.—S. SNOOK, Salesman for a number of granite quarries, begs attention to the stock of curb and landing STONE now at the wharf, Glob-bridge, Globe-road, Mile-end. Specimens of monumental slabs, gate-posts, troughs, &c. on view, and orders received, and estimates given.

NORTH-WESTERN STONE DEPOT, Hampstead-road, Bridge, Camden-town.—W. ASHMALL has for sale the undermentioned materials, brought from his Stone Quarry, Portland, Bath, Box, and Potterne, and Corsham, Harris Bath, Chilmark, and the Box Stone Quarry, Kintbury, Hungerford, Berks, viz.:—Portland Stone in Blocks, Hard and Landing and Slabs, Bath Stone, Chilmark Stone, Kintbury and Hungerford Landing and Slabs, Box Grey, Corsham, Gurney, and Haytor Granite Curbs and Pitchers, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

IMPERISHABLE STONE.—TRICKETT and PERKINS having erected new and powerful machinery, at their extensive quarries, are now able to execute orders to any extent with their much-esteemed RAWDON-HILL STONE, which, from its strength and durability, together with its beautiful colour and readiness of conversion, renders it one of the most desirable stones out, being at once useful and ornamental. Architects and others are requested to test its qualities for strength and durability, either for external, internal, or ornamental purposes. Samples and prices furnished by SAMUEL TRICKETT, Stone Wharf, Isle of Dogs.

NOTE.—Can be got any size, or delivered to any part by rail or water carriage.

ANSTON STONE.—Contractors for the Grimsby Dry and Fish Craft Docks are informed they can be supplied with this very valuable "Magnesian Limestone," delivered at Keyingham Sidings, on the Manchester, Sheffield, and Lincolnshire Railway. Further particulars may be obtained, as to price, &c. on application to Messrs. DUNCAN, LIDDLE, and CO. Anston Stone Quarries, Rotherham; or at 67, Princes-street, Leicester-square, London.

Anston Quarries, October 21st, 1854.

TO PAVIOURS, CONTRACTORS, &c.

TO BE SOLD, cheap, a large quantity of FOREST of DEAN PAVING, of excellent quality, delivered at Paddington, or any station on the Great Western Railway. Apply to Messrs. RUSSELL, BUTCHER, and CO. Belmont Wharf, King's-cross, London.

ON SALE, at UPNOR POTTERY, near ROCHESTER, a quantity of STONE and RED-WARE PIPES, suitable for House and Land Drainage, sizes from two inches to twelve inches diameter. Also, Paving, Pan, and Plain Tiles, Oven Bricks and Tiles, Filters, Vases, and other articles of novel shapes, at prices less than any London Houses.—Apply to JOHN ROBERTS, as above.

STONE PIPES.—E. and W. STURGE are enabled to offer PIPES at very low prices for cash, with every variety. Paving, sinks, steps, sills, and coping, &c. &c. Country orders promptly attended to. E. and W. STURGE, Bridge Wharf, City-road.

BRAMLEY-FALL STONE and LARGE LANDINGS. Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flags, steps, sills, copings, sinks, &c. &c. at the lowest wholesale prices. Note.—No charge made for supplying to dimensions.—Apply for price, &c. to S. TRICKETT, Stone Wharf, Isle of Dogs.

INDURATED STONE COMPANY, for rendering all Soft Stone, Bricks, Tiles, and Building Materials of all kinds hard and impervious to weather or moisture

Capital, 50,000*l.* in 1*l.* Shares, 10*s.* to be paid on completion of registration, and the remainder at call. Under Her Majesty's Royal Letters Patent. Provisionally Registered under 7 and 8 Victoria cap. 110

Prospectuses, containing the various uses to which this invaluable Patent may be applied, and also the expressed opinion of the most eminent Geologist of the day, may be had at the Offices of the Company; of Messrs. Pazden and Hodgkinson, Solicitors, 71, Mark-lane; of N. E. Stevens, esq. Managing Director at Tunbridge Wells; of Edward Roberts, esq. 16, Hollis-street, Cavendish-square, Surveyor to the Company; and of George Lawford, esq. 5, Warnford-court, Throgmorton-street, Broker to the Company.

Any allocation for 50 shall be made by the Managing Director at Tunbridge Wells, to the Solicitors, and to the Broker Offices of the Company, 14 and 15, St. Swithin's-lane; and High-street, Tunbridge Wells. The works are in operation at King's Quarry, Tunbridge Wells.

The Directors of the above Company have hitherto abstained from making any public statements of the comparison between the price of stone subjected to their patent process and that of other stones in ordinary use, they were desirous to obtain, from practical investigation, the most accurate results as to the cost of their produce.

The following prices will at once exhibit a comparison so favourable to the Indurated Stone, as not only to command the attention of all persons interested in the use of materials of this description, but to insure a higher rate of profit to the shareholders.

	Average price of Sandstone	Portland Stone.	Tooled York Stone
		s. d.	s. d.
Prime cost on the wharf, per foot cube	4d.	2 3	2 6
Waste Sawing per foot super	1½d.	0 6	0 9
Plain work, exclusive of sawing	2d	0 4½	0 9
Sunk work, ditto, ditto ...	5d.	0 9	1 0
Moulded work, ditto, ditto	8d.	1 0	1 6

Cost of indurating the Sandstone, including every expense—for the Black, 6*l.* and for the Light, 9*d.* per foot cube

The reason why Portland and Yorkshire stones are introduced in comparison with the Indurated Stones, is in consequence of the peculiar adaptation of the latter for all purposes for which the other stones are now used, possessing, as it does, superior advantages as to durability, with the imperviousness to moisture, the impossibility of vegetation arising on the surface, and the economical non-expenditure of cleanness with which the Sandstone can be worked to any form previous to indurating.

The Company have already made arrangements for granting licenses in important localities on liberal terms, and they will also be prepared to indurate stone or other materials, in large quantities, in any locality, thus avoiding the cost of carriage.

The Directors have confidence in stating that the profits will amount to a clear 30 per cent. on the capital employed; indeed, a glance at the foregoing prices will fully bear out such a statement, and needs no further comment.

Prices of various articles for which the Indurated Stone is especially adapted, showing the relative cost of production with Portland and Yorkshire Stones:—

	Indurated Stone. Blacks.		Lights.		Portland Stone.		Tooled York Stone.	
	s.	d.	s.	d.	s.	d.	s.	d.
Rubbed & Squared Paving, 2½ in. thick, not exceeding 4 feet 6 in. superficial	0	8	0	9	1	6	1	0
Ditto, in 12 in. or 9 in squares, 3½ in. thick ...	0	7	0	8	2	0	-	
Window Cills, 8 by 4 weathered, stopped, & throated, per ft. lineal	1	3	1	6	2	3	1	9
Plain Coping, 13 by 3 ...	0	10	1	0	2	0	1	6
Saddle back Coping, 13 by 4	1	10	2	0	3	0	3	0
Sinks, 6 in. thick, rubbed and sunk	2	0	2	6	3	6	3	6
Curbs for Areas, 9 by 6	1	4	1	6	2	6	2	6
Steps, 12 by 6	2	0	2	6	3	0	3	0

The difference increased with the amount of work. For all ornamental purposes, such as Chimney pieces, Parapet Ornaments, Pedestals, Tomb stones, &c. the advantages in favour of the indurated stone would be still greater.

By Her Majesty's Royal Letters Patent.

THE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they enter into CONTRACTS for supplying Dressed General Work for Architectural Work of any description, for which estimates will be given on application. E. MENDHAM, Secretary. Whitehall Wharf, Cannon-row, Westminster.

MONUMENTS! MONUMENTS! — For POLISHED GRANITE MONUMENTS, apply to G. H. CLARK, Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Penitentiaries, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 29 and 40, Upper Belgrave-place, Pimlico.

TO STONE MERCHANTS AND CONTRACTORS.

FREE-STONE QUARRIES TO BE LET on lease, situated on the east coast of Scotland. The quarries have been long worked, and are among the principal ones in the north of Scotland. They are now in first-rate working order. The stone is well known, and commands an extensive sale in this country and abroad. There is no land carriage, and ships of a heavy draught can load at the quarry pier.—For specimens and particulars, apply to Mr. H. SMITH, 24, Southampton-buildings, Chancery-lane, London, before November 30.

LOANS.—Persons desirous of obtaining ADVANCES, from 50*l.* to 250*l.* upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6d. each copy, or 1*l.* per post. CHARLES JAMES TIDDER, Resident Secretary.

SMOKE PREVENTION. — (OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—NOTICE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

PAPIER MACHE ENRICHMENTS.—WHITE and PARLBY respectfully solicit the attention of Architects, Builders, and Decorators, to the PAPIER MACHE ENRICHMENTS, for internal or external Decorations. They will be happy to supply Pattern Boards of their Moulding, Ceiling Flowers, &c. on show, free of expense; also, if required, to supply Drawings of Architects' Designs modelled free of extra charge. Papier Mâché, Composition, and Carton Pierre Works, 4, Rathbone-place, London.

GOOD FOREIGN SHEET-GLASS, in cases of 100 feet each; average size, 40 by 30, at 32*s.* 36*s.* and 40*s.* per case; ground ditto, 34*s.* per foot; crown and sheet squares, in 100 feet boxes, from 10 by 8 to 22 by 14, 36*s.* per foot; 1-inch rough British plate tiles, 11*s.* per dozen; also, crown and sheet glass, in crates; British and patent plate fluted and stained glass, glass slates, &c. Sheet lead, pipe, soil, and waste lead, oils, turpentine, colours, &c.—G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

WHOLESALE BRITISH and FOREIGN WINDOW-GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT METTAM begs to draw the attention of Builders and the Trade in general, to his present prices of British and Patent Plate, Rough Plate, Sheet, and Ornamental Window Glass of every description now manufactured. Extra size Sheet Glass of all qualities and substances for Shop Fronts. Estimates and Price Lists forwarded post free, on application at the Warehouse, 30, Princes-street, Leicester-square, London.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 286, Oxford street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Hartley's Patent Rough Plate Tiles from 10*s.* per dozen.

Sashes Prime and Glazed with good Crown Glass from 3½*d.* per foot.

Strong Sheet Glass packed in boxes of 100 feet, from 12*s.* per box.

The new Ruby Sheet, the best for embossing, from 1*s.* 3*d.* per foot.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 28, SOHO SQUARE.

ALFRED GUSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish. ROUGH PLATE, BROWN, GREEN, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

THE PATENT CRYSTAL WINDOW, consisting entirely of plate glass, supported by flat-glass sash bars, presents most important features in the construction of shop fronts, viz. perfect transmission of light, elegance, and novelty of appearance, imperishability from rust or decay, and the greatest economy in labour, &c. from the facility with which it is kept clean and bright, as contrasted with either polished metal or wood. Examples of the window may be seen at the London Mantle and Shawl Company, north side of St. Paul's Churchyard, London, at Birmingham Bean Company, Worcester, Abergavenny, Shrewsbury, &c. The application, also, of the Crystal Sash-bar for the construction of Lantern Glass, may be seen in the Birmingham Court and East Gallery of the Crystal Palace, Sydenham, to which the attention of exhibitors is particularly invited. Full particulars may be had, and from the patentees, Messrs. LLOYD and SUMMERFIELD, Cut and Plate Glass Manufacturers, Plate Glass Works, Birmingham.

PATENT SANITARY GAS SHADES.—These shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, possess entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and not expensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTER'S, Crispin-street, Spitalfields, London.

IMPROVED PATENT ROUGH PLATE, PLAIN, FLUTED, AND IN QUARRY PATTERNS.

BRITISH PLATE, PATENT PLATE, SHEET, CROWN, AND COLOURED WINDOW GLASS. PURE WHITE SHADES FOR ORNAMENTS.

Pumps, Water-closets, and Plumbers' Brass Work. Genuine White Lead, Paint, Colours, Varnishes, Brushes, &c.
Tariffs of the above on application to

T. MILLINGTON, 87, Bishopsgate-street Without, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

eing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 6 to 15 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, ribs are unnecessary, and when used in greenhouses no scorching occurs; its NON TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate. -May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to
Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company. J. FARRELL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article, to insert in their specifications.

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER
THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.
OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small. 6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.
CROGGON and CO.'S PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

PRIZE MEDAL, CLASS 22.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, AND TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

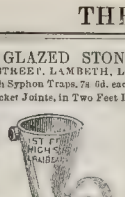
Solid vulcanized India-rubber tubing and cord for the joints of glass-doors, sashes, frames, &c.—Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

HAYES, BROUGH, and CO.

Works: Liwynenion, near Wrexham.
Offices: 11, James street, Haymarket, beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Speer's Patent" Machinery which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.



AMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS TRAPS, &c 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Pickford, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD CK'S, 94, Wardour-street, Oxford-street

Drawings and List of Prices will be forwarded free on application

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs, Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hutton's, Crown and Hammonds Wharf, No. 6, Upper Foames-street. C. Richardson's, South Wharf, Paddington.—C. Erith's, Cambridge Heath Wharf, Hackney.—Mulwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve, can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. COMPETITIONS.

TO ENGINEERS, SURVEYORS, &c.

THE SURVEY of the portion of the parish of Wallasey to which the Public Health Act, 1848, is applied, being now ready, the Local Board are desirous of obtaining PLANS, SPECIFICATIONS, and ESTIMATES of a SYSTEM of SEWERAGE for effectually draining that district. Premiums of 100*l.* and 50*l.* respectively will be given to the authors of the two plans most approved of, such plans to contain all information regarding materials, &c. necessary to their being practically worked out, and to include, so far as practicable, means for preserving the sewerage matter for agricultural or other purposes. The survey of the parish will lie at the temporary offices of the Board, Queen's Arms, Liscard, between the hours of NINE and ELEVEN a.m. from WEDNESDAY, the 18th instant, until SATURDAY, the 18th of NOVEMBER next, where any additional information may be obtained. Four plans at least, from as many different competitors must be sent in, otherwise the premiums will not be awarded.—The plans, specifications, &c. signed with a motto or device, and accompanied by a letter marked with a similar motto or device, enclosing the name and address of the author, to be sent to the Office of Mr. HANSALL, Solicitor, 3, Old Churchyard, Liverpool, on or before the 31st day of DECEMBER next.

Dated 12th October, 1854.

TO ARCHITECTS.

THE DIRECTORS of the CHESTERFIELD MARKET COMPANY are desirous of receiving DESIGNS and ESTIMATES for a MARKET-HOUSE and PUBLIC ROOMS. A Premium of 30*l.* will be paid for the most approved design and 15*l.* for the next best. The drawings and estimates must be delivered at the offices of Messrs. SHIPTON and HALEWOOD, Solicitors, Chesterfield, on or before 10 o'clock a.m. on the 21st DECEMBER next, addressed to the Secretary, from whom particulars, together with a plan and section of the intended site, may be obtained on payment of 5s.

Chesterfield, Nov. 1, 1854. GEORGE WALLIS, Secretary.

TO ARCHITECTS, BUILDERS, &c.

THE Committee for the Erection of National Schools in the parish of Ludlow, Salop, are desirous of receiving PLANS and ESTIMATES of adequate and economical BUILDINGS for 150 boys, 150 girls and 200 infants, with class-rooms, suitable residences for master, mistress, and infant schoolmistress, covering, as to be erected, according to the requirements of the Committee of Privy Council on Education, in a plain and substantial manner, such as the Committee of Council will approve, as regards height of rooms, ventilation, &c.—All such Plans must be sent, on or before the 1st of JANUARY, 1855, to the Rev. J. BANKS, Hon. Secretary, Grammar School, Ludlow, of whom further particulars may be obtained.

THE BURIAL BOARD of the PARISH of PUTNEY (appointed under the Metropolitan Interment Acts) is desirous of receiving PLANS, DESIGNS, and ESTIMATES of the following WORKS:—Laying out a new Burial-ground, of 3 acres, the plan and position of which can be seen at my Office; Enclosing the Ground, Draining the Land; the Level-, and par tculars, showing the capabilities of the land for burying, to be had at my Office; Building a Lodge, with entrance-gates; Building two Chapels, one to be consecrated and one not. The successful applicant will, at the discretion of the Board, either have the superintendence of the works, or be paid 15*l.* 15*s.* for his plans, designs, and estimates, which must be delivered at my Office by the 24th inst. Each plan must be marked, and accompanied with a sealed letter bearing the same mark, and the author's name and address, which will be returned to the unsuccessful competitors. Dated Nov. 3, 1854

EVAN HARE, Clerk to the Board.

Office, 1, Mitre-court, Temple

CONTRACTS.

LUTON, BEDFORDSHIRE.—To BRICKLAYERS, IRONFOUNDERS, and OTHERS.—The Trustees of the Luton Burial-ground are prepared to receive TENDERS for the ERECTION of SEWARE BOUNDARY WALLS, PIERS, &c. in front of the New Burial ground at Luton. Also for Supplying and Fixing complete about 120 YARDS of CAST-IRON PENCING, 3 feet 6 inches high, with cast coping for 9-inch dwarf wall, and a pair of 10-feet entrance-gates to correspond. Plans and specifications may be seen at my office, or will be forwarded by parties

HART AND SON, MANUFACTURERS,

53, 54, & 55, WYCH-STREET, AND 91, DRURY-LANE.

CONTRACTS.

TO BUILDERS

GREAT GRIMSBY CEMETERY.—The Council of the Borough of Grimsby, in the County of Lincoln, are prepared to receive TENDERS (in one sum) for the whole of the works for the ERECTION of the TWO CHAPELS, LODGE, ENTRANCE GATES, BOUNDARY WALL, and IRON PALISADE BOUNDARY FENCING, and for the formation of the carriage and foot ways, according to the designs adopted for the intended cemetery. And Notice is hereby given, that the drawings and specification can be inspected, from the Office of Mr. EDWARD M. CALETTI WATE, the Corporation Surveyor, Grimsby; and duplicates thereof at the Offices of the Architects, Messrs. MAUGHAN and FOWLER, 13, Louth, from the 21st to the 27th day of NOVEMBER inclusive, on which latter day sealed proposals, endorsed, "Tender for Cemetery Works," must be delivered at my Office before FOUR o'clock in the afternoon. The Council will require ample security for the due performance of the contract, but do not bind themselves to the acceptance of the lowest or any Tender, unless satisfactory.

GEO. BABB, Town-clerk.

Town-clerk's Office, Great Grimsby, November 1, 1854.

TO CONTRACTORS, ENGINEERS, AND WELL BORERS.

HALSTED LOCAL BOARD of HEALTH. The Board hereby give Notice that they are prepared to receive TENDERS from competent persons, who may be willing to undertake all or any one or other of the following CONTRACTS:—

CONTRACT No. 1.—For Constructing and Completely Finishing the Main Drainage and Water Mains, with Reservoir and Works connected therewith.

CONTRACT No. 2.—For one Engine Boiler, &c.

CONTRACT No. 3.—For Sinking and Boring Well.

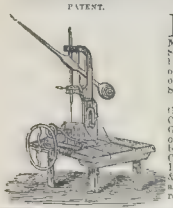
The drawings and specifications may be seen, and forms of Tender and Contract obtained, at the Office of the Engineer, Mr. EDWARD GOTTO, 35A, Great George-street, Westminster, London, on and after the 1st of NOVEMBER next; and sealed Tenders must be sent in to me on or before MONDAY, the 27th day of NOVEMBER next. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,

O. HUSTLER, Clerk to the said Board.

Halsted, 25th October, 1854.

TO BUILDERS.

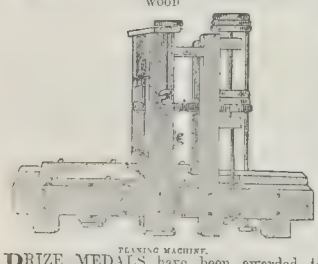


PERSONS desirous of CONTRACTING for the ERECTION of a VILLA RESIDENCE, at May Bank, between Newcastle-under-Lyme and Wolstanton, Staffordshire, for James Edwards, Esq., may inspect the plans and specifications at our Offices at Hanley, and obtain any information from MONDAY, the 13th inst. until THURSDAY, the 23rd day of NOVEMBER next, when the Tenders intended to be acted on will be selected, proper sureties required. The lowest tender not necessarily accepted.

WARD and SON, Architects.

Hanley, Staffordshire Potteries, October 31, 1854.

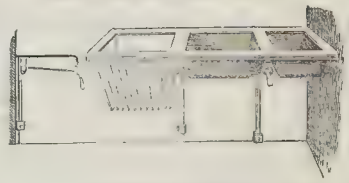
N.B. The buildings will be of stone from the Beach Bank Quarry, near Swinnerton.



PATENT.

BUILDERS will find that the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combining simplicity with economy of manual labour. Can be had only at W. BRAGG'S NEW WAYS, Steelhouse-lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener, the Patent Casement, and other Window Fastenings. Double-action Floor Door-springs, Cupboard Turns, Barrel-bolts, Patent Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.



VALUABLE PATENT MACHINES FOR WORKING IN WOOD.

PLANING MACHINE.

PRIZE MEDALS have been awarded to these celebrated machines, both by the Great Exhibition in London, and many scientific institutions. They are extensively used throughout the United Kingdom by joiners, contractors, coach & railway makers, railway carriage and wagon builders, machinists, agricultural implement makers, shipbuilders; and also by the British and French Governments, for planing, grooving, rebating, tonguing, grooving, beading, rebating, sinking and boring. Their operation is unequalled for perfection, either in hard or soft wood, and will perform a little ordinary hand-work in addition to the trades in a very rapid and superior manner and at a greatly reduced cost. Sold only by WILLIAM FURNESS, Patentee, 20, Lawton-street, Liverpool, from whom full particulars may be obtained.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

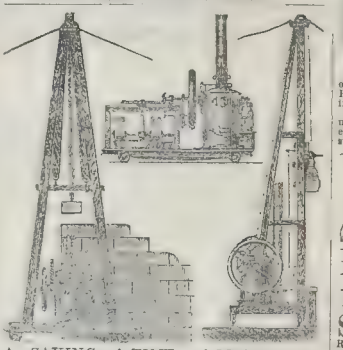
COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER, RACK and WATER TROUGH, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention secured by patent, which includes an entirely new method of attaching the halter, ball, and rein, giving to the horse greater freedom, and being noiseless in their operation, and much to its comfort, whilst feeding and convenience when at rest. The

ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection, manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Movable Covers.



Double corner Mangers, Harness-room Appendages, and every Article in Stable Furniture kept on show.

WORKS, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

Descriptive Catalogues and Estimates on application.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES and Co. 20, Watling-street, E.C., to see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or may be got by steam power.

P.S. Steam Engines and Machinery contracted for.

A SAVING of TIME and MATERIALS, with Saving of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM-ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

TESTIMONIAL

From the Trustees of the Birkenhead Docks,
Engineer's Office, Dock-yard, Birkenhead,
21st July, 1851.

"Nathan Gough, Esq.

"Sir,—I have much pleasure in informing you that the three-horse engine which you have placed in the cabs is for pumping, answers its purpose admirably, and does its work much better than seventy men could accomplish. From its portability and lightness, it is peculiarly adapted for such a purpose.

"I am, Sir, your obedient servant,

"JAS. ABERNETHY."

NORTH BRITISH CAST and WROUGHT IRON WORKS, Scotland, and near Birmingham Stores of Builders' Castings, at the London Wharf; and an assortment at the Office, 18, King William street, Charing-cross, London, at manufacturer's prices, as the following net lists will testify:—

Rain Pipes	2 inch.	2½	3 inch.	
	10½d.	1s 1½d.	1s 5d.	per yard.
Cast-iron Gutters	3 inch.	4	4½ inch.	
	8½d.	9½d.	1s.	per yard.

The new O-G Socket Gutters: clips, instead of loose, are cast on and from the Sockets:—

	3½	4	4½ inch.
Plain	1s. 3d.	1s. 4d.	1s 6d. per yard.
Long-head	1s. 8d.	1s. 4d.	1s 8d. "

All the larger sizes of Pipes and Gutters equally cheap.

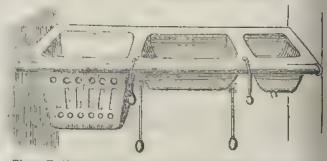
Air Bricks, a new registered pattern, 4s. per dozen.

Galvanized Cast-iron Furnace Pans, 6 to 25 gallons, at 10d. per gallon.

Sash Weights, 8s. per cwt.

Self-acting Cottage Range, with Oven and Boiler, from 32s. each

Register Stoves from 24s.; Elliptic, from 9½d. per inch

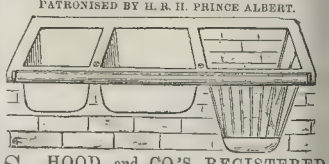


Bar Iron, 16s. 6d. per cwt.

Cash on delivery

Manager Mr. RUSSELL, 18, King William street, Charing-cross, London

THOMAS EDINGTON (lately senior partner of the Phœnix Iron Works, Glasgow), Iron Merchant, Contractor, Agent for Patents, General Commission Agent, Importer of Railway Bars and Castings, 17, Gordon-street, Glasgow. Agent on commission for the purchase of Scotch Pig Iron, Scotch Railway Bars, Scotch Bar-Iron, Scotch Castings, the sale of English Boiler and Ship Plates, English Angle and Rivet Iron, English Anchors, Turned Pales, English Chains, Cables, Anchors, Nails, Steel, English best Bar-Iron, &c.



BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented invention of this description to be had. Plain, Enamelled, and Galvanized. All kinds of Stable Furniture kept in Stock. Iron Hurdles, Gates, Fencing, &c.

Manufacturer of KITE'S Patent Cast-iron Smoke-curing Chimney Cans. 100 of this pumpkin on Buckingham Palace. Price 3½s. each.—JAMES BARTON, Ironfounder, Smith, &c. 270, Oxford-street, a few doors East of the Pantheon.

PATRONISED by H.R.H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.

Castings Warehouse, 81, Upper Thames-street.

PARNELL'S PATENT DEFIANCE and NATIONAL LOCKS, WHICH CANNOT BE PICKED. These Locks are recommended to the public for their simplicity, durability, and perfect security; also Parnell's Patent Noiseless Box-staples and Striking Plates, Fire-proof Safes, Deed and Cash Boxes, Copying and Lever Presses.—Descriptions and lists of prices may be had at the Depôt, 22, Strand, gratis.

STREET-DOOR LATCHES, WITH TWO SMALL NEAT KEYS, WARRANTED SAFE FROM PICK-LOCKS, FIFTEEN SHILLINGS EACH.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnishers of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

SAW-MILL MANUFACTORY, Chelsea, London. WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of men covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely ...ire, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, ...wings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being Lead, and the other pure Zinc, whilst the centre combines the Stiffness of Zinc with the Ductile Qualities of Lead. The Lead of the sheet being laid outward, effectually protects the Zinc below from the atmosphere, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several ...ds thickness and weight.
Being Zinc not requiring to be more than one fourth or one-fifth as thick as Sheet Lead, is consequently much cheaper than ...aterial.
For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the ...er side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches

No. 11 Gauge weighs about 18 oz. per foot super.			
No. 12	"	"	20 oz. do. do.
No. 13	"	"	23 oz. do. do.
No. 14	"	"	26 oz. do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PROTECTION FROM LIGHTNING.

...e many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING ...NDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has ...t the approval of some of the most eminent scientific men.
Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS ...d FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

...HE PATENT NAIL and SPIKE COM...PANY invite the attention of Ship and Barge Builders, ...lers, Sawyers, Railway Contractors, Shippers, and Consumers ...erally to their PATENT MACHINE-FORGED IRON NAILS ...d SPIKES, which possess properties fully equal to hand-made ...ils, and far surpass these of any machine-made nail yet ...red to the public. They are made of the best Staffordshire ...n, complete at one operation while red-hot; they are full under ...e head, and being brought with a proper taper to a chisel point, ...y can be driven without boring. They will clinch, and the ...ds cannot be twisted off.
...ists of prices, with patterns, &c. may be had on application at ...works, No. 9, Sumner-street, Southwark-bridge-road.

...AILS and IRONMONGERY, ...from BIRMINGHAM direct.
...ilders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
...WEST BIRMINGHAM PRICES.
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

LIGHTNING CONDUCTORS.—R. S. NEWALL and Co. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and Co.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.

Brick Moulds kept in stock. Any size made to order.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico. All Works of Art in the various Metals executed at the above Foundry.

JOHN FINCH, Ironfounder, Priory-street Works, Dudley, Wholesale Manufacturer of Fenders, Fire-irons, Dove-tail Joints for Iron Bedsteads, Garden-Seats, Flower-Stands, &c. &c.

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT—Plain, from 12s. to 42s.; Ornamental from 31s. 6d. to 10 guineas for warming halls, passages, green-houses, water-closets, shops, store-rooms, and all places requiring artificial warmth. To be seen in use at the sole Proprietor's, S. NASH, Ironmonger, &c. 233, Oxford-street, and at the City Depôt, 113, Newgate-street, London. PATENT PREPARED FUEL for these stoves, 3s 6d per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and Italian irons, with perfect cleanliness, for twelve hours, with one pennyworth of coke or cinders. Price 12s.

*** Prospectuses, with drawings and report, forwarded free

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D and E BAILEY, 272, Holborn.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at F. EDWARDS and SONS, 42, Poland-st. Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty fire per cent is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air pedestal stoves. Old grates are altered to this principle.—Prospectus sent on application.

NEW HOUSES OF PARLIAMENT.—DEFRIE'S GAS STOVES, RANGES, and BATHS, in action for two years at the above building. A great variety in stock upon the same principle. Gas Baths from 7l. by which a warm bath may be obtained for more halfpence. Gas Cooking and Heating Stoves for all classes, from 1l. DEFRIE'S celebrated DRY GAS METERS, upwards of 60,000 in use.—See testimonials at the Office, 145, Regent-street, or at the Manufactory, New road, St. Pancras, near Fitzroy square.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork; WARM AIR Apparatus, &c.—Apply to S. S. TAYLER, Engineer, Battersea.

TO ARCHITECTS, TIMBER MERCHANTS, and BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks, and houses, is obtained by the BOLLESVE'S PATENT CALORIFERE, evaporating in twenty-four hours about 6,000 lbs of water, without altering the finest forms or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or wharfs saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-pavine Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Vogan, Son, and Raymond, Dock-head; and several maltsters, millers, and manufacturers in London and country. Apply, per post, to T. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, sod-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-house-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, oil cas, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices. JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillars, Brackets, Iron and Brass Tube, Tin and Composition Pipe, &c. &c. at J. JEAL'S 21 and 21, Old-street, near St. Luke's Church, London.

P.S.—As large and choice an assortment as any house in London.

AUSTIN'S IMPERIAL

PATENT SASH and BLIND LINE, can be obtained of all

COPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE, Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and STEWART'S PATENT CAST-IRON GAS and WATER PIPES. Office, No. 7, Sise-lane, London.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus. (Gas works erected complete.) And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, steam and Range Boilers, and every descr ption of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c. JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his immense stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 31d. 4½d. 7d. 8d and 9d. per inch.

4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-founding of trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat. COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN.—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application to

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

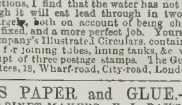
FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and the principle has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great rigidity, and forming, at once, a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other materials.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.



Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York-buildings, Adelphi.

IRONMONGERS, FOUNDERS, and ENGINEERS, are respectfully informed by Mr. BILLINGAY, that he has those attentions requested by PRIVATE CONTRACT or PUBLIC AUCTION, and VALUATIONS.—Communications should be addressed to Mr BILLINGAY, Valuer and Auctioneer to the Metal Trades, 21, Coleman-street, City.

IRON DOOR and FRAME TO BE SOLD, a BARGAIN, the premises being to be pulled down. A capital Wrought Iron Panelled Door and Frame, 6 ft. 6 in. by 2 ft. 8 in. Barron's Patent Lock, with full box of wards.—Apply to Mr. W. H. GREEN, Solicitor, 38, Moorgate-street.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with reading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852. —In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

GLASS PAPER and GLUE.—Important to CABINET MAKERS.—F. J. DAY'S celebrated extra large Glass Paper, 14s. per ream; Cox's finest Scotch Glue, 57l. per ton, 6½d. per cwt.; finest Imperial Glue, 53l. per ton, 5¾d. per cwt.; best London Glue 48l. per ton, 4¾ per cwt. Russian, German, and Gelatine Glues, in great variety. Wholesale and Retail, 6 and 7, New Inn-yard, Curtain-road, Shoreditch, London.—Country orders executed on receipt of a post-office order, payable as above.

MARBLE.—The attention of the Trade is respectfully called to an important SALE by AUCTION, which is announced to take place in the NEW-ROAD, St. Pancras, during the present MONTH, and which will consist of ONE THOUSAND TONS of MARBLE of the choicest qualities; also 20,000 feet of Slab, and the magnificent contents of the extensive Shocks, yards, comprising an endless variety of MANUFACTURED STOCK, including 200 chimney pieces of the finest designs and beauty of execution, table-tops, monuments, tablets, mortars, basins, vases, pedestals, &c. rendering this one of the most complete and important Marble Sales ever brought under notice of the public; and a Dissolution in the Partnership of the Firm (which will be duly gazetted), makes it of importance that the whole be disposed of by Public Sale, without more delay than is requisite for the preparation of complete catalogues, which will be forwarded, post-free, on application to Messrs. Evans and Son, Horse, Auctioneers, 40, Parliament street. The marble block and slab lie on a wharf close to the Great Northern Terminus, convenient for water or railway conveyance. Credit at four months will be given by approved bills.

TO BUILDERS, MASONS, and OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hazel ill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, crandall curb, &c. All goods careful y packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing Mills, Commercial-road, Pimlico, London.

ITALIAN and GALWAY MARBLE QUARRIES Depôt, Whitehall-wharf, Parliament street.—Mr. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade &c. that he has just landed in the St. Katherine's Docks, the Roberts and Betty, from Leghorn, 30 blocks of MARBLE, consisting of large open statuary, suitable for sculpture, Sicilian, veined (statuary ground), dove, Bardilla, &c. Also, at his depôt may be found the blocks of marble, consisting of open statuary, veined, Sicilian, black and gold, Galway black, and St. Ann's, and 23 different coloured marbles. A large stock of sawn slabs of every description of marble.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Blue and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble as celebrated throughout all Italy, England, and America.

MARBLE.—THOMPSON and HOLMES Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, by COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES. Just arrived, per *Roberts*, *Hero*, *Bride*, *Natale*, and *Hannah*, 150 Blocks of Marble, and 12,000 feet of Sawn Slab, Statuary, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Foots, &c. for Sale on consignment.—3, Cadogan Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall bridge.

MARKET-WHARF, REGENT'S-PARK BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bunner Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer masons and the building public generally their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS QUARRYMEN and STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lee Waterloo-bridge. Offices: 246, High-street, Southwark, near London Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Lund, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stone from their depôts, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freights, to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch and at moderate charges.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones, in blocks and ashlar of specified dimensions and fine scappled; also random and coursed rubble. It is easily worked to a good face and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents:—REGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard. This Granite is selected for the New Westminster-bridge.

GRANITE.—S. SNOOK, Salesman for a newly-opened quarry, invites attention to the stock of Cornish and other STONE, now at the wharf, Globe-bridge, Globe-road, Mile-end. Specimens of monuments, gate-posts, troughs, &c. for view, and orders received and estimates given.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 20 and 40, Upper Belgrave-place, Pimlico. Patronised by Her Majesty, Prince Albert, the nobility, architects of eminence, and honoured with the Medal of the Society of Arts, and the Prize Medal of the Great Exhibition.

'ANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. W ins, beg to call the attention of Builders and others to their of Bangor slates, baths, plaster, Roman, Portland, and 'ey cement, blue lias, Dorking, and chalk lime, plasterers' Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, e-pans, and traps, Welsh fire-bricks, gravel and shells for m paths, ballast, sand, &c. Materials landed, wharfed, and l.

'ORTH - WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL, to call the attention of Contractors, Builders, and Masons, to tock of Portland, Park Spring, Potternewton, Newton, Hare- Bath, Caen, and other Block Stone; York Paving, Landings, k, Sinks, Bills, &c.; Park Spring, Robin Hood, Harehill lings and Slabs. Also, Aberdeen, Guernsey, and Haytor alite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work

'ONE PIPES.—E. and W. STURGE are enabled to offer PIPES at very low prices for cash, with r variety. Paving, sinks, steps, sills, and coping, &c. &c. tter orders promptly attended to.—E. and W. STURGE, te Wharf, City-road.

'ONUMENTS! MONUMENTS! — For POLISHED GRANITE MONUMENTS, apply to G. H. RK, Granite Agent, Devon Haytor Wharf, Rotherhithe, on.

'ALENTIA SLATE SLABS.—

The Valentia Slab Company invite attention to their Slabs supplied, of very large dimensions and of superior quality. have been used at the British Museum, National Gallery, lem Hospital, various Lunatic Asylums, the Ordnance Works l Prison, Pentonville, and other Penitentiaries; Malting s in Bedfordshire and Hertfordshire, Breweries, the Race l at Brighton, Portsmouth Barracks, and are kept in stock in quantities by Messrs. FREEMAN, Millbank-street; also ssrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere where terms may be obtained.

TO PAVIOURS, CONTRACTORS, &c.

O BE SOLD, cheap, a large quantity of FOREST of DEAN PAVING, of excellent quality, de- at Paddington, or any station on the Great Western Rail- Apply to Messrs. RUSSELL, BUTCHER, and CO. Belmont rf, King's-cross, London.

'NDURATED STONE COMPANY, for rendering all Soft Stone, Bricks, Tiles, and Building Mate- of all kinds hard and impervious to weather or moisture pital, 50,000, in 1l Shares -10s. to be paid on complete regis- on, and the remainder at call. Under Her Majesty's Royal ve Patent. Provisionally Registered under 7 and 8 Vict. 110

ngt ectuses, containing the various uses to which this invalu- Patent may be applied, and also the expressed opinion of the eminent Geologist of the day, may be had at the Offices of the pany, of Messrs. Pazden and Hodgkinson, Solicitors 71, ch-lane; of N. E. Stevens, esq. Managing Director at Pan- o Well-, of Edward R berts, esq. 16, Hollis-street, Cavendish re, Surveyor to the Company; and of George Lawford, esq. 5, ve-court, Throgmorton-street, Broker to the Company

plications for Shares to be made to the Managing Director at ridge Wells, to the Solicitors, and to the Broker Offices of Company, 14 and 15, St. Swithin's-lane; and High-street, ridge Wells. The works are in operation at King's Quarry, ridge Wells

e Directors of the above Company have hitherto abstained making any public statement of the comparison between the e of stone subjected to their patent process, and that of other s in ordinary use, they were desirous to obtain from practi- vestigation, the most accurate results as to the cost of their ts.

e following prices will at once exhibit a comparison so favour- to the Indurated Stone, as not only to command the atten- of all persons interested in the use of materials of this de- ption, but to insure a higher rate of profit to the shareholders.

	Average price of Sandstone	Portland Stone.	Tooled York Stone
	s. d.	s. d.	s. d.

lded work, ditto, ditto	8d.	1 0	1 6

st of indurating the Sandstone, including every expense for Black, 9d. and for the Light, 8d. per foot cube.

e reason why Portland and Yorkshire stones are introduced, mparison with the Indurated Stones, is in consequence of the ior adaptation of the latter for all purposes for which the r stones are now used, possessing, as it does, superior advan- s to durability, with the important additions of impervious- to moisture, the impossibility of vegetation arising on the ce, and the ease and consequent cheapness with which the stone can be worked to any form previous to induration.

e Company have already made arrangements for granting ses in important localities on liberal terms, and they will also repared to indurate stone or other porous materials, in large ities, in any locality, thus avoiding the cost of carriage

e Directors have confidence in stating that the profits will unt to a clear 30 per cent. on the capital employed; indeed, a ces at the foregoing prices will fully bear out such a statement, needs no further comment

ses of numerous articles for which the Indurated Stone is espe- ly adapted, showing the relative cost of production with Port- l and Yorkshire Stones:—

he difference increased with the amount of work. For all orna- tal purposes, such as Chimney pieces, Parapet Ornaments, estals, Tombstones, &c. the advantages in favour of the Indu- d stone would be still greater.

By Her Majesty's — Royal Letters Patent.

'HE SILICEOUS STONE COMPANY beg to inform ARCHITECTS and BUILDERS that they er into CONTRACTS for supplying Dressings and Details for hitectural Work of any description, for which estimates will given on application. E. MENDHAM, Secretary. Whitehall Wharf, Cannon-row, Westminster.

WHITE OXIDE OF ZINC AND ZINC PAINT.

(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innox ous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any sourious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material procured, or made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purel sers of such oxides becomes a very expensive result to the owner of the premises painted with them

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City: JACK and HUBBARD, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs LAWFORD and CO. of 45, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-hush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 l s and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Port-mouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 13, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. THE PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to their purposes; possessing the great requisites of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures contain deleterious pernicious ingredients, are hazardous to health and worthless in use, whilst the inexperience of these limitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON -PATENT.

If not so marked, the reason may be inferred

Every communication or order to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days —CHARLES FRANCIS and SONS, Manufacturers of Keene's Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements tried at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr ASPDIN, much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are num erous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as P rtland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf Allington-street Westminster; at their Works, Gateshead-on-Tyne, at Messrs. Rosher's Wharfs, Hollond-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its chemical hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and carries by the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO have commenced manufacturing Portland Cement on their Premises, at their Works, situate near Bridgewater, on the Bristol and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

Certain Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on applicat on, and can offer favourable terms to large purchasers and exporters.

St Mary-treet, Bridgewater, July 26th, 1834.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St Andrew's Wharf, Bartlerest, Millwall, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Blue Slates, and Slate Slabs. Price-lists, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulicity of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by Messrs. Longdon Agents, BLYTH, BROTHERS, 18, South Wharf, Paddington; and at the Works, Stocklou-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above is its best recommendation.

Gibbs, Canning, and Co's Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SEYSSELS, PAVIORS' STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at the ENFIELD-WHARF, River Dee, or forwarded by the Chester and Holyhead Railway.—Apply to RIGBY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

TERRA-COTTA.—Statues, Statuettes, Vases, Terms, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No 1, Pmedstreet, Paddington-basin, where prices and designs can be obtained. Examples of Terra-cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, as are the fountains at the Renaissance Court and the roof of the Alhambra Court. The Pompeian roofs is of Terra-cotta and of cement combined. Since the formation of these works J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT. Whitemans Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING, is the result of practical experiments and long experience: it is unfailing in its application. Entire hous s have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s. 6d. Prepared only by W. J. STENT, Warminster. London Agents Messrs J and G WALLIS, 64, Longacre. Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dublin.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH. Builders having works to execute south west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Re fing Slates from the Penrhyn Quarries. Timber, Deals, Limes Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

GREAT REDUCTION OF PRICES.—SAMUEL PUTNEY respectfully begs to draw the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.—

Fine Planks, 12 ft. 3 in. by 11 in. from 8s.; Spruce Deals, 12 ft. 3 in. by 9 in. 8s.; Yellow ditto, 12ft. 3 in. by 9 in. 4s.; Honduras Mahogany, from 7d. per foot; Sawn ditto, 5d. per foot; Wainscot ditto, 9d. per foot; Spruce Paling Laths, 10s. 6d. per 120; Yeoman Bitted Laths, 7s. 6d. per bundle; Veneers and cut stuff of every description at equally low prices.—Borough-road, Southwark, and Elm street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand at his Manufactory, (the first of its kind ever established), a very large Assortment of Dry and Well seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from 1 inch to 1¼ inch, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Yards, Oak Planks, Scantlings, Sash sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S late W. Cleave's Flooring Manufactory, Wilton road, Pimlico Basin.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply as quality or description at the lowest prices of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept inbond for export. Southwark Bridge Wharf, Bankside.

MOULDINGS by MACHINERY at REDUCED PRICES.—CRICHTUTT and ATKINSON beg to inform their customers that the 20 per cent advance heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices.—St. Pancras Saw Mills, Cambridge-street, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20p cent on their mouldings as advertised on the 8th of November last is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.
1st January, 1854

ACORN TIMBER WHARF, Canal-bridge, Old kent-road.—RICHARD MAY has now on Sale Goods imported this year from the American and Baltic Ports. He asks special attention to the following:—
2,400 Pieces of Timber
15,000 Planks, Deals, and Battens.
35,000 Prepared Floor Boards, of all lengths and sizes.
The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.
All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.
N.B. The extensive Sawmills are now in operation.

TO BUILDERS AND OTHERS.
AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned Flooring and MATCH BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff, Sawing, Battens, Planed Laths, Oak Planks, Sash Sills, &c. Timber of all kinds, Planks, Deals, and Battens, fetched from the docks, sawed by patent machinery in the best manner and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico London.

TO FANCY-WOOD MERCHANTS
VENEER CUTTING-MACHINE (by knife only), by which process double the number of veneers can be produced more than by the ordinary method.—For specimens of work and particulars of price, apply to J. CHACK Sole Patentee, Veneer Cutting Works, 41, Robert-street, adjoining the King's-road Saw-mills, Chelsea.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price list can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 23, North Wharf road, Paddington.
N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London

WOOD and STONE CARVING WORKS, CAMBRIDGE.—TO BE SOLD, cheap, on account of its inconvenient height for the show-room, a NEW CAEN STONE FONT, and CARVED OAK COVER, complete, executed in the best manner, being intended for exhibition. It is copied from the ancient one at Castle Acre Church, Norfolk, and would form an imposing object in a good position.
For price and Engraving to a large scale, apply to Mr. RATTEE,
Manufacturer of Church Fittings, Organ Cases, Antique Furniture, &c. and Contractor for the general Restoration of Churches.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country in an extensive assortment of specimens and patterns commencing at 1s per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. ERNST, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80 New Bond-street.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen street, Cheapside, London, submit the following PRICES of WINDOW BLINDS which they can recommend as being made in the best manner.—Venetian blinds, per square foot, 8d.; best holland ditto, on rollers, 6d.; best ditto, on string rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discount to builders and the trade, forwarded on application, post free

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1824. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 35s per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Devon Harbor Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, POLICNEAUS BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 34, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arch a.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

CAUTION.
Whereas, certain parties are endeavouring to deceive the Public with worthless imitations of
CHAPPUIS'S PATENT DAYLIGHT REFLECTORS,
Representing themselves as from the Manufactory, 10, ST MARY AXE, in every case of such misrepresentation, infringers will be dealt with according to law.

BUILDER'S PREMISES and BUSINESS. A most eligible opportunity is here presented for a respectable Young Man, as a general Builder. The premises are spacious and conveniently arranged, with all the requisites for doing a good trade. Situation healthy, near Blackheath. Coming in very moderate. Apply, in the first instance by letter, addressed to B. B. Office of "The Builder."

TO SURVEYORS AND OTHERS
TO BE DISPOSED OF, on the Southern Coast, the BUSINESS of a BUILDING SURVEYOR, to which has been attached that of an Auctioneer and House Agency. The House (which is a first-class and in a good situation) to be taken on lease; the furniture in the house, the office fittings, and business, to be taken at a price.—For further particulars apply by letter, addressed Mr VOYSEY, Auctioneer, &c. 4, Eversfield-place, St. Leonard's-on-Sea.

TO CARPENTERS AND BUILDERS.
TO BE DISPOSED OF, an old-established BUSINESS, situate in the best part of a country market-town, with a good House, Shop, and Yard, and every convenience for the trade. For particulars apply by letter, pre-paid, addressed to W S 38 St. George-street, Leicester.

TO POTTERS, TILE-MAKERS, AND OTHERS.
TO BE SOLD by PRIVATE CONTRACT, or LET on LEASE, with immediate possession, extensive FREEHOLD POTTERIES and TILE and PIPE WORKS, within the distance of a mile from the London and Dover Railway, by means of which easy access is had to London. These works, upon which several thousand pounds have been recently expended, with every convenience for carrying on the business, are complete with every requisite, including a steam-engine, flues by hot air, and near 8 000 square feet of well-built drying lodges, and are surrounded by an inexhaustible supply of the very finest clay most suitable for the manufacture of brown iron stoneware, and every sort of tubular drain-pipe, tiles, bricks, pots, &c. and which are now being made in large quantities. A genteel family residence, with near sixty acres of fruit plantation, shrubberies, and paddock, can be had with or without the works. For further particulars apply to Messrs HILDER and ARNOLD, Solicitors, Gravesend, Kent.

HOPE IRON FOUNDRY and STEAM-ENGINE MANUFACTORY, Burnham, Bucks.—TO ENGINEERS, IRONFOUNDERS, MACHINISTS & OTHERS.—Mr. W. C. BROWN is instructed by the proprietor, who is relinquishing business, to DISPOSE OF, by Private Contract, the whole of this valuable CONCERN, which has been successfully carried on for upwards of twenty years. The premises are fitted up with every convenience for carrying on an extensive trade. The valuable stock of steam-engines, from four to 12 horse power, manufactured on the proprietor's improved oscillating principle, also complete sets of well-made patterns for each size of engine. The working plant consists of a highly-finished steam-engine and boiler fixed, to drive the machinery; powerful double-geared self-acting turning and screw-cutting lathes, complete sets of superior tools, excell at four dry blowing machines, iron foundry complete, two iron furnaces, blocking mill, set of four dry tools, and large assortment of patterns in iron and wood, a quantity of iron flasks, pig and scrap iron, stock of agricultural implements, consisting of threshing machines, chaff cutters, bean drills, cake crushers, corn blowers, ploughs, &c. The above will be required to be taken to at a fair valuation. The dwelling-house contains four bed-rooms, two parlours, a kitchen, wash-house, pantry, and usual domestic offices, with a large garden and orchard (about an acre), well stocked with choice fruit trees, &c. May be viewed by applying on the premises; or to Mr. W. C. Brown, Auctioneer, Valuer, and Estate Agent, High-street, Uxbridge, Middlesex; also of Mr. Peter Broad, Auctioneer, &c. 39, Tavistock street, Covent-garden, London.

MONEY on LOAN at 3½ per Cent. per Annum.—LEWEAN'S CHARITY. NOTICE IS HEREBY GIVEN, that the Trustees of this Charity are ready to lend out the Trust Moneys to poor occupiers or traders resident within the City and Liberty of Westminster, that is to say, within the parishes of St. Margaret and St. John the Evangelist, St. Anne, Soho, St. Clement Danes, St. George, Hanover-square, St. James, St. Martin-in-the-Fields, St. Mary-le-Strand, and St. Paul, Covent garden. The amount of each Loan is not to exceed 100l. is to bear interest after the rate of 3½ per cent. per annum, and to be secured by the bond of the borrower, with two sureties. Printed Forms of Application, and all necessary information, may be obtained by applying personally, between the hours of Ten and Three o'clock in the day, at the office of the Clerk and Solicitor to the Trustees, No 14, Great Queen-street, St. James's Park.
By order, EDWARD S. STEPHENSON,
Clerk and Solicitor to the Trustees.
NOTE.—The Trustees meet on the second Wednesday in every month, to consider such applications for loans as have been sent in one clear week at the least before the first day of the month.—The sureties must be unexceptionable.

MONEY is ready to be ADVANCED immediately, to any amount, upon Landed Estates, House Property, Reversions, deposit of Deeds, Shares, &c.; also upon Furniture and approved personal security. Bills of exchange cashed. Properties purchased.—Apply to Messrs. HALE, 183, Piccadilly.

SEVERAL INVESTMENTS WANTED immediately, by Capitalists, who are seeking to invest various amounts in any secure way, at a moderate rate of interest. The persons selling their properties may retain power to repurchase after a fixed period, if so desired.—All applications to be made to Mr. ALFRED COX, Estate Agent and Auctioneer, 68, New Bond-street.

Second Edition, with a Key annexed, price 2s
SMITH'S LESSONS on ARITHMETIC, in Principle and in Practice, for the Instruction especially of Young Merchants, Tradesmen, Mechanics, and Farmers.
"He who takes up this arithmetical work, with the expectation of seeing only what he has seen before, will be surprised and gratified at the novelty it contains. The learner is here led step by step, secundum principle following principle, and has laid before him, in simple language, clear views on a subject heretofore treated of in a conventional and unintelligible jargon."—*Athenæum.*
By the same Author, in 8vo, price 2s.

WYATT PAPWORTH, Hon. Sec.
14 a, Great Marlborough-street, Nov. 7, 1854.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill. NOURSE and CO having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

The Builder.

ATURDAY, NOVEMBER 11, 1854.

THE learned Rajah, Kaleekishen, has given us an odd fable about a king and a mendicant, from the Persian of Tazkiratush-shura. There was a king, whose army s as numerous as the host of angels, and his nity exalted above all human beings. He l a daughter in his palace famous for every tue. Her moon-like face was shaded with curling hair falling on her forehead: her s were so black that they shamed those of antelope: her hair, so long as to reach her t, seemed spread like a net to catch the bird ned chakora.* Her house was immensely h, with a window as radiant as the gate of ven, in which, when the princess sat, she s-like the rising morning sun.

A mendicant seeing her, became desperately moured: her looks pierced his heart like ows. This became known to all: it was the ject of conversation everywhere. The news the beggar's love at last reached the ears of sovereign, her father. Upon which his jesty called his prime vizier, and asked,—What am I to do in this difficult business? I in need of your counsel." The vizier kissed ground, and replied,—"O king, who art the ity of the crown and of the throne: should head of this man be by your orders sepa-ed from his body, the people would stigmatize ir generous disposition." With this the g agreed. But, to put an end to the tter, the vizier invited the lover to his own se, and with due respect addressed him s:—"Your union with that darling object whom you are burning to distraction would easy were you to bring one hundred of the rls named shub-chiraght at any time." The ment he heard this, to him, happy intelli-ice, the mendicant ran joyfully to the ocean, k out his wooden cup, and began to take up ter with it. When this was heard by the abitants of the water, they assembled to ness his strange act. One of them came ward, and asked, "What is your wish? and at will you gain by this?" He replied, "I l throw out all the water, and make the ocean tte dry to get its pearls." Upon this, having sulted among themselves, they went down the bottom, and emerging again, scattered rls on the shore; for they said, "Should he rsevere, he might accomplish his intent." e mendicant, seeing the pearls, hastened fill up his cup, joyfully returned to the king, l offered them to his majesty, who had been d by the vizier of the plan to dishearten the ggar. When the king saw the pearls, he emed low-spirited, thought much, but could t come to a conclusion upon anything. The ndicant, observing the displeasure of his jesty, kissed the ground, and addressed him is: "O king! may this world be subject to ar power: if it be unpleasing to you to grant the object of my ardent desire, I shall dis-ade my mind from the possession of it." But king rose, and presenting him with many luable jewels, said, "You are the only fit rson to have my daughter;" and accordingly marriage was celebrated. The Persian ralist adds, "Now it is evident that the shes of the mendicant were realised solely by courage and boldness. Courage only is wned with success. The ants even, if they courageous, may become Solimans."

We have used this quaint Oriental invention as a prelude to a catalogue of a few things which we, as Englishmen, need or desire, and which we shall not achieve without the qualities which won the mendicant his bride—courage and perseverance. There are mountains of "vested interests" to be levelled or jumped over, or tunnelled, or, if there is no other way, walked round about, ere we obtain many results which we have been long promised, and sadly want. The war abroad and disease at home engross most justly the largest share of time, money, attention, and energy. But now that Providence has placed the means of a most bountiful harvest in our hands, we ought next session to advance to the realisation of many hopes which in the last proved futile.

The long-promised measure of Parliamentary reform should surely accomplish something, if only an approximation to the purifying of that august but motley assemblage—the House of Commons. The question of Decimal coinage, now that it has been sifted by our ablest theorists, and their deductions have been winnowed before the keen blast of practical commercial experience in our "Chambers of Commerce," ought to be ripe for legislation. We might then take the first step towards arriving at a simple and satisfactory monetary system, promising the advantages of those of our French allies and American brethren. Nor should it be forgotten, when this subject comes before our senators, that the measures of capacity employed in the various counties of England are in a state of disgraceful chaos, puzzling from their intricacy and variety, and by consequence a fruitful source of miscalculation, error, and loss. Again, the great measure projected for the emancipation of offices under the Crown from the patronage system, is an idea so fine in its conception, so fraught with good, as a means of lending fresh life to the engine of State, and attended with so few of the difficulties which encompass other sweeping reforms, that it is to be hoped an earnest effort will be made to try the experiment on a proper scale. "Many are the works of human industry" (says Dr. Johnson, when alluding to his own great book), "which to begin and finish is hardly granted to the same man." This is true, not only of mere works of industry, but of those large and statesmanlike ideas which, having a cosmopolitan breadth, tell with effect not only upon a nation, but on the world. To lay open to the effort of talent alone, the honour and advantage of serving Queen Victoria, was a noble and worthy idea: to create a new profession, was to confer a national benefit: to persevere till he executed the idea, would be a lasting triumph, and an enduring monument to the minister who had the courage to propose it.

Take another group. We need courage and perseverance to get our large towns thoroughly purged from burying-grounds, and supplied with water which is fit for human beings to drink. We want our railways so managed, that a false economy shall not conduce to an establishment of overtasked and wearied officials, leading to grave disasters.

We want more. There is yet to be arrived at a scheme of education so large and liberal that it shall, free from the warp of sectarianism, permeate the foul hives of misery in our cities and the stolid ignorance of our agricultural districts, shedding the beams of knowledge upon the darkness which developes vice and fosters disloyalty and crime. We need, too, ragged churches, to leaven the masses, where the poor man may come to worship his Maker without being frightened by a temple which brings out garishly the meanness of his garments and the tatters of his coat, filled with a supercilious congregation, who look coldly upon his poverty.

If we turn to the fields of learning and taste, there is much to be done which demands courage and perseverance. There is need for those who control our Department of Science and Art to strain every nerve to render the rising generation of workmen fit to cope with the æsthetical demands of advancing civilization—demands which will be supplied from other sources if not from ours. That our works and manufactures may henceforth bear the impress of taste as well as a character for sterling worth is an end to be striven for the harder that it is yet far from being reached.

When, too, shall we have a gallery fit to contain those gems of art which, while they are national property, ought, if their value could be known, to be a national boon?

When shall we have that catalogue which will let the public know the treasures of book lore which lie buried in the British Museum, half sealed for want of the key which even the most talented man cannot supply by any effort of the brain? Or the great reading-room, which shall at night be open to the myriads whom necessity binds to a daily toil and present rules condemn to a knowledge—like that of Tantalus—that within that huge building in Montague-place stretch sixteen miles of library shelving, groaning with the gathered thought and experience of all time, and which are yet shut out from the use of thousands of able, thoughtful men, by a little span of three or four hours, to anticipate which the stern realities of life deny the possibility.

But our roll-call must end here for the present. To do one-half of what we have pointed out, many will imagine requires a boldness and a patience fully equal to that of the poor man who went down to empty the sea. We shall not have fabled in vain if we keep our readers in recollection of what Englishmen should insist on by all constitutional means, and our statesmen grant with all the haste which is consistent with security.

THE COURTS AND ALLEYS OF LAMBETH.

IMPROVED DWELLINGS FOR THE POOR.

WITHIN the last few days, in my capacity of Secretary to the Lambeth Association for Providing Improved Dwellings for the Labouring Classes, I have had occasion to make a survey of the courts and alleys of Lambeth. As I feel assured that, notwithstanding all that you and others have so ably written and said, but few have the least idea that many hundreds and thousands of their fellow-creatures have their homes and spend the whole of their existence in such miserable abodes as they do, I trust that you will deem the matter of sufficient importance to allow a few facts, gathered from the report of that survey, to appear in your paper. I need not trouble you with many instances: they might, unfortunately, be multiplied to almost any extent. The following will suffice:—

Granby-place, Lower Marsh.—This place contains eleven houses, some of which have three rooms, one above the other; others, but one room. There are eighty-eight inhabitants in the whole court, some of the houses being much crowded; for instance, at No. 53, there are twenty-one inmates; in the room on the ground floor, about 12 feet by 10 feet, the family consists of five, man and wife, and three children; in the first floor, a small room, about 13 feet by 9 feet, and a small recess, of ten—man, wife, and eight children; and in the attic, six, a man, wife, and four children. For the use of these eighty-eight persons, there are three necessaries at the end of the court, in a most disgusting state, and adjoining them is the dust-bin, common to all: the stale water runs down the centre of the court to the drain: cabbage-leaves, decayed vegetable, and other refuse are thrown in front of the houses, and become putrid and rotten. These various matters create most offensive and pestilential odours, especially in summer time, and are most active agents for creating and spreading disease. The greatest evil, however, is (and this applies to nearly every court in Lambeth)

* A fabulous bird, satisfied with the moonbeams, upon which it said to subsist.
† The Night-illuminator.

the system of water supply. There is not a supply to each house; but, for one or two hours per day, the water is allowed to run through an inch and a-half pipe, at which time the poor people have to catch all that they will want for the next twenty-four hours, and sufficient to clean the courts, &c. &c. It may easily be imagined that many who have scarcely any furniture or utensils whatever, have but scanty convenience for storing a supply for a day; but how much worse is this, when, on Saturday, they have to catch sufficient to last until Monday, as the water is off on Sunday. The flooring of the houses is giving way: there are large holes between the passages and rooms; and, to complete the catalogue of discomforts, some of the houses adjoin a slaughterer's yard, from which so horrible a smell arises, that one tenant is obliged to board up a window to prevent it from penetrating, though no amount of ingenious boarding will prevent the rats from entering the rooms at night, and running over the sleepers as they lie upon the floor.

Hereford-buildings, Fore-street, consists of eleven houses, with three rooms in each house. In this court there are two water-cocks, which are allowed to flow for two hours each day, including Sunday. Here the houses are upon one side, the necessaries upon the other: the foul water runs down the centre, and the refuse is thrown in front. Disease is always present.

Windmill-court, Fore-street.—All one side of this most miserable place has fallen down, and the other seems likely to follow its example. There is scarcely one whole pane of glass in the windows of the houses: some, indeed, have no window frames; and the occupants are compelled in cold weather to keep their shutters closed. Here the inhabitants have no "necessary" or water supply whatever. No description can convey any idea of this wretched place.

Brook's-court contains eight houses in a plight but little better than those in Windmill-court. There is no water in this court, and it can only be obtained by begging it, stealing it, or from the river. In the centre of the houses, which form two sides of a square, while a portion of another row forms a third side, are the pigsties, necessaries, dust heaps, &c. &c. from which the most hurtful effluvia arise, which readily penetrate the glassless windows, and generate typhus and other disease.

Harpur's-court, Brother's-row, Black Boy-alley, York-wharf, Eagle and Child-court *alias* Naked-boy-alley, Lemon-wharf, Wellington-place, and Gloucester-street, Moss's-fields, with many others, are similar in most respects to those described, all in a most fearful condition. An endless statement of what comparatively are minor discomforts, might be added, if space permitted. Such, then, are the homes of hundreds and hundreds. Comment from me upon these facts would be useless, if they will not of themselves command attention. The great wonder of all who have ever visited these dark spots of our metropolis is, not that the inhabitants thereof are mostly sickly, dirty, or vicious, but that they are ever healthy, cleanly, or moral.

I shall be most happy to accompany any of your readers and convince them of the truth of these statements. GEO. A. CAPE, Jun.

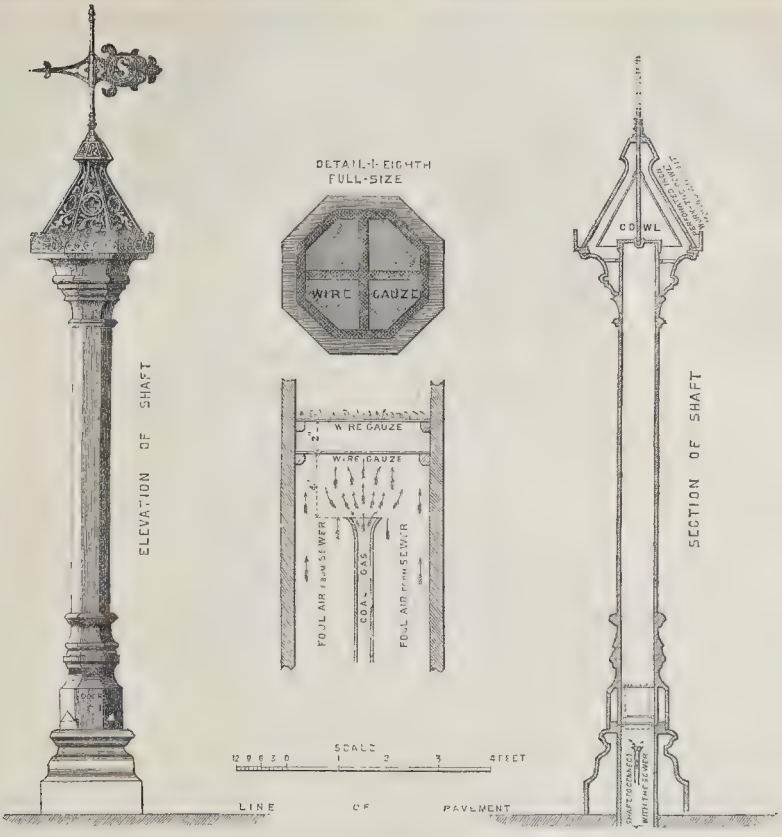
SHAFT FOR VENTILATION OF SEWERS.

THE arrangement for ventilating sewers, illustrated by our engraving, is the design of Mr. J. Sharp, of the Gas Works, at Southampton. It consists of a cast-iron shaft, to be fixed in the most convenient situation, with a main leading to the sewer. It is not necessary that the shaft should be fixed *over* the sewer. At the bottom of this shaft, a mixture of coal gas, with air from the sewer, is to be burnt through wire gauze, which will prevent explosion in the sewer, on the principle of the Davy Lamp, and also without consuming the poisonous gases. The heat produced at the bottom will cause a rapid current up the shaft. The cowl on the top is to protect the opening from the effect of wind, which might otherwise check the egress from the shaft.

ON MONUMENTAL EFFIGIES AND SEPULCHRAL BRASSES.*

IN *monumental effigies*, the head of the figure was commonly represented as resting upon a pillow, or sometimes on two pillows, placed (in most instances) diagonally one above the other. Small figures of angels were also, in many examples, introduced on either side of the head, as if supporting and soothing the pillow of the dying. In the case of warriors, the tilting-helmet, with its crest and mantling, was generally substituted for the pillows; and the angelic forms are also to be found in many monuments, as ministering beside this far from peaceful support. When the head of an armed effigy reposes on pillows, the tilting-helmet with its accessories was sometimes added to the composition, being then placed above the head of the figure. Occasionally a heraldic or other device appears, in place of the pillows, beneath the heads of effigies. When an effigy, or its *fac-simile*, or a drawing from it, is placed in an upright position, the pillows or cushions have a singular, and indeed a very disagreeable effect; but when laid down horizontally, they appear to be consistent, and also ornamental appendages of the recumbent figure.

At the feet of effigies representing persons of every rank and calling, and of both sexes also, it was the prevailing usage to represent a lion, a dog, or some other animal or figure, as couching down. These figures in certain cases have evidently some symbolical signification, or they have some heraldic association with the person commemorated: thus, in the former case, the dragon which is so often seen trampled down at the feet of ecclesiastics, would denote the triumph of the church over the arch-enemy of man; while, on the other hand, the bear and ragged staff at the feet of an effigy of an Earl of Warwick, would at once be recognised as the distinctive cognizance of that noble house. The lion and dog have, it is considered, been chosen for general adoption, from the circumstance of their expressing the qualities of courage and fidelity: it is, however, highly probable that some symbolical allusion may be conveyed through these animals. One or more small dogs were commonly placed at the feet of ladies; and in such instances they may certainly be considered either to represent some canine favourites, or simply to denote that noble or gentle rank to which in those days the possession of such animals was an exclusive privilege. In two brasses the names of the favourite dogs are written on their collars: they are Jakke and Terri.



The *attitude* of mediæval monumental effigies, properly so called, was recumbent; and, as a general rule, that attitude may be said to have been so adjusted as to represent the two-fold sentiment of resignation and prayer. The effigy was placed on its back; the hands were uplifted and pressed together; and an air of solemn repose, combined with an expression of prostrated physical power, was imparted to the entire figure. In producing that peculiar effect, neither the full energy of life, nor the complete passiveness of the dead, which appears to be the true characteristic of consistent monumental effigies, the artists of the Middle Ages were eminently successful. They seem, indeed, to have conceived a most just ideal of what a monumental effigy ought to be; and they have shown us that, with their faculty of conception, their power of execution was fully commensurate.

Certain modifications of the ordinary recumbent attitude were occasionally introduced, which, extending simply to the disposition of the figure, were still in keeping with the true recumbent character. Amongst this class must be included the effigies of husband and wife, which are occasionally to be seen *hand in hand*. Effigies in this attitude appear generally, if not always, to denote a memorial placed by a widow to her departed lord. In brasses, the earliest examples to which I can refer are Berkhampstead, A.D. 1356 (R. Torrington and wife); Chrishall, c. 1370; Southacre, 1384; and Draycot Cerne, c. 1385, all figured in my volumes. Stothard gives an etching of the now lost brass to Sir Miles and Lady Stapleton, once at Ingham, 1365, in the same attitude. At Dartmouth, 1403, Sir J. Hanley appears between his two wives: he holds his second spouse by the hand. The same attitude is repeated in the brass to Lord and Lady Camoys (1424), at Trotton. Sculptured effigies are also thus represented. As remarkable examples, I may mention the effigies of Richard II. and his queen. My no less judicious than talented and accomplished friend, Mr. E. Richardson, discovered that this was the original attitude of the group, from a close examination of the mutilated figures in Westminster Abbey; and having obtained corroborative proofs of the correctness of his conjecture, he restored the cast of this fine monument in the Crystal Palace in accordance with the original design. I cannot thus make mention of the Crystal Palace, without expressing my admiration of the casts of mediæval monuments in that remarkable structure: when this department is made as *complete* as it ought to be, and as it easily may be, and when the several examples are *properly arranged and correctly described* (*which is not the case at present*), it will be difficult to over-estimate the importance of this collection. There ought to be *brasses* in the Mediæval Courts of the Crystal Palace: they are incomplete without them: their excessive polychrome stands greatly in need of the relief of some broad surfaces of such metal.

Other examples occur, in which the effigies, though recumbent in their actual position, do yet purpose to convey the idea of living, and sometimes of energetic action. A strange association, or rather confusion of ideas, is sometimes apparent in military effigies of this class, when they exhibit varied expressions of living attitude—such as drawing, or returning the sword, or grasping the naked weapon by the hilt,—and yet, at the same time, they have the head resting upon a helmet, or even upon pillows.

The *cross-legged* attitude in which several brasses and so many of our finest early military effigies sculptured in relief are represented (and many other brasses in the same attitude are now lost), has been considered to denote certain important circumstances connected with the career of the persons thus commemorated. Thus these "cross-legged knights" have been regarded, first as Templars, and then as Crusaders. Most certainly, however, this attitude does not denote a Knight of the Temple, since many of these effigies are memorials of well-known personages who never had any association with the Temple chivalry; neither do the effigies themselves exhibit any traces of Templar costume or insignia. And so also it is no less certain that a large proportion of the known cross-legged effigies do not represent warriors of the crusades. It is a very singular fact, in connection with these effigies, that, while this peculiar attitude is so prevalent during a certain period in England, it has in no single instance been observed upon the continent of Europe. In Ireland a few examples have been found, and others are in all probability yet to be discovered there. The most remarkable of these Irish effigies are at Cahell, where there are three figures of *ladies*—certainly not Templars—in this attitude, and one figure of a knight in mail. Had it been designed to signify by this peculiarity in the treatment of the effigy, that the deceased had been either a Brother of the Temple or a Crusader, the same association might assuredly have been expected to have prevailed throughout the countries which contributed to the ranks both of the Templars and of the Soldiers of the Cross. The fact of the crossed-legged attitude being restricted to a particular locality would of itself appear to indicate that its special signification (if any) must be of a local character. Much as well of thoughtful reflection as of careful investigation has been bestowed upon these most interesting works; but without any such result as would lead to a conclusive opinion of their attitude having any definite signification whatever. And such would seem to be the fact—that no definite signification whatever is to be attached to this attitude in effigies. The attitude itself appears in the earliest examples under two distinct forms of adjustment. In the one case the figure represents the living warrior, who is depicted in

* See p. 570, *ante*.

SCHEME FOR THE VENTILATION OF SEWERS.

; act of drawing or grasping his weapon; l here the legs appear to have been ossed, in order to give an aspect of firm- ss or of energy to the composition: in ; other case, all living action is entirely sent; the effigy lies in deep repose (the right nd being sometimes laid upon the hilt of the eathed sword), and the lower limbs are dis- sed the one over the other, as at rest. This ter aspect of the crossed-legged attitude (and rticularly with the hands closed in prayer) is nd generally to have prevailed; and it may all probability be assumed to have been opted *simply as expressive of repose*,—while it uld enable the artist to produce a figure more aceful and effective in every respect than one ving the legs stretched side by side. This itude is rarely to be found later than A.D. 25: at that period plate-armour was rapidly perseding the earlier defences of mail; and, the crossed-legged effigies disappeared with ail-armour, it would seem far more reasonable associate their peculiar attitude with the xible panoply of their times than with an ternal symbolism which at best is both imper- rt and uncertain. In some examples, the ms, or simply the hands, are crossed, as well the lower limbs. Very singular is the tena- y with which many persons adhere to the mplar theory for crossed-legged effigies: the est and strangest instance that I remember curs in a splendidly illustrated work on certain ble remains of Gothic art, in which an en- aving of the figures of Sir — Netham and dy, in Howden Church, York, is entitled Monument of a Knight Templar and his ife!"

Perhaps I may here appropriately advert to a remarkable instance of a late recurrence to the crossed-legged attitude, which may be seen in Ely Cathedral: this is the monument of Robert Steward, Esq. A.D. 1570, situated in the south aisle of the choir: its architecture is quasi-Roman, but the armed effigy resting on its left side, and having the bare head supported by the ungloved left hand, has its right leg crossed stiffly over the left.

Monumental effigies have occasionally been observed in which the hands of the figure are represented as if holding a heart: the real intention of the artist in the majority of such examples appears to have been to depict some heart-shaped reliquary-case, which was actually placed in the hands of the corpse when buried. A small cross may sometimes be seen held in a similar manner, and doubtless it is also a representation of such a cross so placed upon the person of the deceased.

I pass on now to some brief observations upon an important accessory to a mediæval monument, the *canopy*. My chief object in so doing, is to point out to you that these beautiful works appear under two distinct varieties, which I would distinguish as *tomb canopies* and *effigy canopies*. The former of these are the architectural coverings with which the more important altar-tombs were occasionally surmounted; and which, being primarily designed to correspond architecturally with the character of the altar-tombs themselves, were made to harmonise with those portions of the edifices in which the monuments were placed. These *tomb canopies* may be considered to have been derived from the small, separate, mortuary, or chantry chapels, which sometimes were erected for the special purpose of receiving altar-tombs; and, indeed, they would appear designed to convey the idea of such chapels. The chapels themselves may be traced to the arched recesses, constructed, in earlier times, in walls of churches, for the reception of monumental coffins of stone, with their effigies or crosses; and if we go a step farther, we may perhaps deduce these recesses from that consecrated sepulchral shrine in Palestine, which would be sure to make a deep impression on the minds of the Crusaders, and which they would not fail to regard, on their return to Western Europe, as the general model for their more important monumental designs.

Very different are the *effigy-canopies*, which, deriving their origin, without doubt, from the stern prototype of monumental effigies themselves—the stone coffin, with its lifeless occupant,—belong absolutely to the effigies, and with the effigies are designed to be recumbent. The stone coffin had almost invariably a cavity adapted purposely for the reception of the head of the dead: thence, when on the coffin-lid the figure of the deceased came to be portrayed, above the head of the carved portraiture was placed, as a covering, a low arch; and, with the progress of monumental art, the *effigy-canopy* assumed a high degree of importance in the general design, and was made to harmonise with the architectural features of the entire monument, and also with the architecture of the church in which the monument was erected. Niched statues, those most beautiful accessories of Gothic architecture, and in particular of Gothic altar-tombs, may thus have been

derived from the first simple canopied coffin-lid effigies, and through them from the stone coffins themselves. A niche, in its simple form, might be defined as one of the early stone coffins set erect. Possibly, could we investigate the subject to its actual source, we might discover that the rude carving at the head of the stone coffin was an adaptation from some covering of honour, assumed by the living man; but, from what remains to us of these interesting relics, the canopied niche and the tabernacled stall appear to have been derived from the stone coffin, the accessory of honour to the living from the last resting-place of the dead.

It is true that in *brasses* the canopies with which the effigies are so commonly accompanied, and with such happy effect, are in very many examples of a strictly architectural character; and also that in design they closely resemble the architectural tomb-canopies of the period. In the earlier brasses which possess, or which once did possess, canopies, these accessories, though harmonising, as I have already said, with the architecture of the time, were exactly true to their own proper use and object.*

The result of a careful examination and consideration will be to assign the same consistent character to the greater number of the canopies of later brasses; while in many examples the two varieties of canopy will be seen represented in the same composition. First, in such brasses there is the true effigy-canopy above the figure, and then above this there rises a representation of the embattled architectural canopy for tombs. The brasses to Archbishop Cranley, A.D. 1417; and Lord and Lady Camoys, A.D. 1424, are good specimens. This compound canopy is found under many modifications and varieties of treatment, as the simple effigy-canopy itself appears single, double, triple, quadruple, and, where there are two effigies in the same brass, under diversified modifications of these forms. There is a very fine canopy in brass to prior Thomas Nelond, at Cowfold, Sussex, A.D. 1433.

A large number of very fine canopies remain; and the *despoiled slabs* which so thickly stud our larger and nobler churches, point out the loss of very many others, even finer and more interesting. Some splendid examples have been lost from Ely. There is a complete series at St. Alban's, at Chichester, and at Lincoln. And so, in comparatively greater or smaller numbers, these eloquently silent witnesses to deeds of violence may be found, wherever that most mischievous of destructives, the ignorant and injudicious restorer, has not busied himself to substitute (after the fashion of the magician in the tale of "Aladdin") new pavements for old. Advantages attend upon making copies of despoiled stones. They exhibit the lost composition with the utmost fidelity; so much so, indeed, that in many cases it would be an easy task to restore the lost plates through a comparison with the details of contemporary brasses. These despoiled stones also frequently supply us with examples of designs of which there are no known existing specimens. This is the case at Lincoln; and I may specify another singular specimen at Worcester. In one church in Suffolk, Stoke-by-Hayland, there are the despoiled slabs of three crossed-legged knights, and a massive pew covers the lower half of another slab, which would very probably add a fourth to the series, with leaves of true foliage (Stradett. Emana de Monthault).

Permit me to bespeak your regard, then, not only for the brasses which have come down to us along the stream of time, but also for the humbler yet still interesting brass-despoiled slabs. They will frequently well repay attentive study: they always may claim considerate respect, if only from their associations, and because of the losses which they have sustained. Whenever you are able, take rubbings, or obtain rubbings of both brasses and slabs, and send them to the Museum. Let us all combine in a united and a strong endeavour to gather together in the "Architectural Museum" *fac-similes* of all that our country possesses, when we can, and as far as we can,—*fac-similes* also of all that other countries possess, which can rightly, worthily, and beneficially be brought to bear, whether, directly or indirectly, upon the study of *architecture, your* (will you permit an amateur student like myself, to say, *our*) noble and ennobling art.

I hope that the time is approaching, in which many of these venerable relics may have brasses restored to them. An admirable example of such restoration has been effected at Ely, and the restored marble, with its brilliant appendages, contributes, in no slight degree, to the fine effect of the restorations so judiciously effected in that grand cathedral. Such brasses were original components of our cathedrals and churches: their presence is needed to make up the completeness of the design. A metallic surface is needed, as Sir Walter James so well remarked, both to complete the harmony, and to bring out the full power of colour. Brasses in our church-pavements are just such surfaces of burnished metal as the colour we admit into our churches requires. At Lincoln the pavement was once resplendent with glittering brasses: not a fragment now remains, and the very stones have long been most barbarously removed from over the graves which at the first they so worthily covered; and grievously have they suffered in the removal. Still, last summer, when staying at Lincoln, for the purpose of studying in the cathedral, I was enabled to identify (from the worn indents of the lost brasses) almost every one of the more important slabs, by the aid of some sketches in a MS. of Dugdale's upon the monuments in Lincoln cathedral.* I hope that the present authorities may be induced, first to restore the slabs to their proper places, and then to restore proper brasses to the slabs. I have adduced these despoiled slabs at Lincoln to show the possible value of the outlines which they still retain.

Restoration, however, at best must be taken in hand cautiously, and amounts to no more than a tribute to the past. It is for us to work for times yet to come. Having mastered the principles of Gothic art, our vocation is to put forth our strength in the full energy as well as in the pure truthfulness of the Gothic spirit. There is a future to the Gothic as well as a past; and we are concerned at least as much with the former as with the latter. In our days Gothic art has been awakened after its slumber of centuries: we are altogether unworthy of so great a revival, if we are content to apply it simply for a retrospect. In architecture—as in our Christian calling itself—as in every Christian grace, in all that is of good report—we are to study to advance towards a perfection not yet attained. And this holds of all architectural accessories—and especially it holds of the monumental memorials which we *erect* (we have learned this verb from the tablet-defaced walls of our churches)—which we, I will rather say, *lay down*. With the development of Gothic architecture, monumental art maintained a corresponding advance; or, perhaps, this art may claim to be regarded as taking the lead in the onward movement which led to such glorious results: and, as they advanced together, so did architecture and monumental art together decline and fall; and here also, as in their advance, monumental art may be considered to have first displayed sure tokens of the evil days which were at hand. To be true to its proper position, monumental art ought to have the lead in these our days of Gothic revival. I plead for a recognized place for brasses amongst our national monuments,—amongst those monuments which we ourselves produce. We have able artists who have engraved many excellent examples;† but monuments of this class require a public recognition. When once fairly re-established, they are sure of a public welcome. Their beauty, their durability, their consistency in many points of view, cannot fail to secure them such a welcome. I shall, indeed, have occasion to rejoice, if what is here said should lead to the substitution of one true Gothic monumental brass instead of another of the unmeaning anomalies which disfigure, if they do not actually desecrate, our churches.

ELECTRICITY AND ITS ALLEGED CONNECTION WITH DISEASE.

WHAT IS ELECTRICITY?

BEFORE noting, as we wish to do, some matters of general interest and importance regarding the mutual relationships of cholera and fever (plague inclusive), and the probable relation of cesspool and other kindred emanations, such as those from marshy and uncultivated lands, to both fever and cholera, involving what may be called the general pathology of such scourges, irrespective of, as well as with reference to, the ozone theories, to which we have recently drawn particular attention,—we are desirous, in the first instance, of offering some preliminary, and perhaps (unavoidab'y) even rather abstruse, remarks on electricity, to which the excitement of the vital air converting it into "ozone" has been attributed; and which, hence, would appear, on Schonbein's view of ozone as the great cause of epidemics, to be their essential cause, as operative to the formation of ozone itself; and even on the contrary view, ascribed to Liebig, of a deficiency of this ozone, or electrified oxygen, being the great general cause of epidemics, still the inquiry as to electricity is of the utmost importance.

It is not in a few glibe sentences, on any view, that light can be shed, either on the mysterious epidemical cause of cholera, or on the nature of that electrical principle to whose excess or deficiency it has been attributed. Our readers will excuse us, therefore, on so vitally and universally interesting a question in sanitary science as this is, for endeavouring to penetrate as deeply as possible into the heart of the mystery; and even though we fail, the mere endeavour may be of use, in the suggestion, to others, of clearer and more correct views, even though evolved from the errors of a first attempt.

It may be regarded as a very presumptuous question when we ask,—*what is* electricity? but really when we consider what a stalking-horse it has been made, to be turned out to show off its paces, to be put to its mettle, and to "go in and win" all and every kind of theoretical sweepstakes, it is full time we knew, or attempted to know, something more about it than we yet do. In fact, "electricity" is beginning to be looked upon with some suspicion as an explanative cause, so many mysteries have been attempted to be explained by it, while it is itself one of the greatest mysteries of all. There are many credulous and easy-going people who look upon the word "electricity" as a magical wand which at once removes every difficulty, and "presto," explains away everything. There are others, however, no less credulous, who think they occupy a grand vantage-ground in the face of popular credulity by expressing, on the contrary, more than a mere doubt, real or affected, as to whether there be such a thing as electricity at all,—in other words, by expressing something very like a credulous belief that no such thing exists. Let us carefully steer our course between two absurd extremes such as these. To enable us the better to do so, however, we really *must* endeavour, however presumptuous it may at first sight appear, to shed some little light on the dark question,—

WHAT IS ELECTRICITY?

There are a limited series of recognized or recognizable physical *forces* operative in the general economy of nature, both interior and exterior to those masses and strata of which our planet, and probably the whole system of planets to which it belongs, consists, and which seem to be more or less engaged in all that genera economy, at least on the face of our own little planet. Of the general nature of these forces all we need at present say is, that they are regarded as essentially of two kinds only—namely, attractive and repulsive forces, although variously operative, as in what have been called atoms, molecules, particles, masses, strata, and spheres. To one division of the attractive order of these forces we give the name of chemical attraction; to another, magnetic attraction; to a third, cohesive force; to a fourth, weight; and to a fifth, gravitation; but all of these are essentially just attractive force. Now, it would appear, on a little consideration, as if Nature were quite capable of carrying on all her strictly

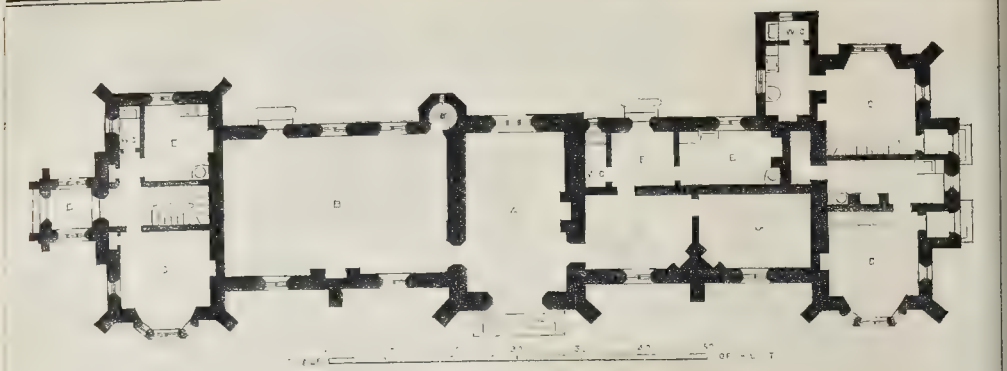
physical operations,—all her compositions and decompositions, expansions and contractions, changes, and elections,—all the attractions and repulsions, in short, amongst the atoms, molecules, particles, masses, strata, and spheres of which men of science have felt themselves obliged to conclude that she is the aggregate,—simply by means of these attractive and repulsive forces, the existence of which they are also obliged to stipulate.

But there is another set of mongrel principles—hypotheses, we might still fairly call them—to which much of that economy of nature has been ascribed, namely, "fluids," such as "caloric" once was, and as "electricity" still is, considered to be. Even light was once regarded as of something like the same nature,—a fluid series of particles or atoms emanating from the sun, and for ever pouring into the atmosphere of the earth. It is a notable circumstance, however, that the drift of all modern progress towards a knowledge of *what* these "fluids" are, has been towards the conclusion that they are not fluids at all, but forces, or at least vibrations, as heat and light at all events are now looked upon as being, much rather than fluids. The hypothesis which regarded them as fluids was, indeed, a cumbrous one, which really explained nothing; for still the operations of repulsive and attractive force were required to aid in the explanation of those very phenomena which these fluids were supposed to be capable of producing. Indeed, it was quite unphilosophical to stipulate for, or call in the existence of, any such "fluids" so long as those repulsive and attractive forces which men of science felt the necessity of recognizing and believing in, appeared to be in themselves capable of explaining such operations as those of heat, for instance, without any such "fluid" as "caloric" introduced between the attracting particles of heated masses, or mutually repelling them. It was even singular and unaccountable why the cause of cohesion should not be regarded as a "fluid," while the cause of expansion was so. Is there any more reason why electricity should be called a fluid—the electric fluid? That it is a force—a mighty and most irresistible force—we very well know; but there is no more reason for supposing the electric force to *be* a fluid, than there is for supposing the force of impulsion or of friction to be a fluid, although capable of exciting or infusing both light and heat, and electricity as well, into masses. Light, heat, and electricity, in short, are all equally entitled to be regarded simply as forces, and the only questions which remain to be considered are, what kind of force each is, and with what precise form of the substructure of masses,—whether atoms, molecules, or polarcles, or whatever we may choose or feel induced to call such forms,—each of these powers or forces is most intimately connected; for that each has some one region, as it were, or substructural form, in masses, with which it is more particularly connected, will at once appear to be highly probable.

But before we proceed to any consideration of these important questions, it may be well to remind our readers that there are other forces besides those we have just enumerated, but intimately associated with them, and which must also be considered, and must also obtain their true place in whatever category of forms and powers we may come to place light, heat, or electricity. The other forces or powers to which we more particularly allude are the magnetic and diamagnetic forces, the actinic force, the force—the positive active force—of cold, whatever we may regard that force to be, whether mere cohesive force operative in the withdrawal of heat, or a special force associated with it, much as the magnetic force may be with the diamagnetic, or the positive electric force with its negative. As for heat, that it is a repulsive force and not an attractive,—a radiative force, as for certain onerous reasons we may occasionally term it, and not a concentrative,—is clearly manifest. So is it of light. So is it of that third principle in the threefold solar ray, the actinic force. Indeed, so much akin are these three forces, light, heat, and actinism, that some philosophers have maintained them to be identical, or but different forms or manifestations of one and the same principle. Different *forms* they truly *have:* there *are* thus differences as well as identities: indeed, how else do we distinguish them? While their identities consist in this,—that they are all three radiative or repulsive forces, their diversities will be found to consist in this,—that they are each connected with a different *form* or substructure of matter, such as the atom, the molecule, and the polarcle, if we may be allowed so to designate three of the substructural regions of matter, the existence of which, though not all the names it may be, will be found to be already necessarily and unavoidably assumed by men of science, as in the beautiful atomal theory of chemistry, in which atoms, as the first recognizable rudiments of matter, are regarded as mutually attracted and repelled into and out of the form of molecules, and molecules mutually attracted and repelled into and out of still more compound or grosser forms, whether we call these polarcles, or crystlets, or merely particles.

Suffice it here to say, that by a patient induction of facts, continued throughout many years of study and research, the writer has verified the general idea now evolved, and has, as he believes, determined the nature and the mutual relationships of these various forms, and of the powers or forces proper to each particular form; so that it appears that light, for instance, *is* the repulsive force of physical points (or of the minutest and most subtle of all appreciable *atoms* rather) operative in or out of chemical "atoms," or the atoms recognised by chemists as the elements of "molecules;" that heat *is* the repulsive force of these chemical "atoms," operative in or out of the "molecules;" and that actinism *is* the repulsive force of the molecules operative in or out of what we may term the "polarcles," since anon we shall find these particular forms of substructural matter to be the more immediate basis of the magnetic and diamagnetic polar and equatorial forces.*

The writer feels inclined to think that to the inquiring mind of the student of nature the probability of these conclusions will be almost intuitively appreciated, more especially when he has shown out the whole of his conclusions, as he will now proceed to do; merely observing, so far as regards that beautiful triunity the solar ray, that it would be very difficult to find any other explanation of the simultaneous identities and differences, and mutual correlations, of its subjective terms, light, heat, and actinism, equally satisfactory.



As for the other known or probable physical forces which remain to be added and included in our philosophical category, there are several considerations to which we wish in the first place to draw particular attention.

If, in the endeavour to resolve the problem involved in the question, *what are* light, heat, and actinism? we conclude that light *is* the punctual repulsive force, heat the atomal repulsive force, and actinism the molecular repulsive force; we cannot but observe that, as the molecules forming polarcles *are* nothing but the atoms of which they consist, and as atoms are nothing but the points or parts or minuter atoms of which *they* consist, the forms of polarcles and molecules are ultimately based on the more subtle atomal forms: and so with regard to the forces or powers which actuate these forms, that actinism and heat are ultimately based on light as the fundamental radiative or repulsive energy or force. It is precisely on this account, that light, heat, and actinism have been regarded as identical, and that heat and actinism have even been regarded as merely collateral vibratory effects produced by light. And then, again, the repulsive or radiative forces in points, atoms, and molecules, have each respectively their counteractive force of attraction, namely, the attractive or concentrative force in points, atoms, and molecules. Now, what are *these* forces? or by what names do we call them, if indeed we at all recognise any such forces? That we do recognise at least one or more may be very easily shown. If heat be the force of mutual repulsion actuating atoms,—cold, its peculiar antithesis, can be no other than the force of mutual attraction actuating these very atoms, and not therefore a mere negative, but a positive opposite force to heat, as in fact we very well know when we employ it as a powerful agent operative in cooling red hot iron bars, used to draw walls together that may have fallen outwards from the perpendicular. True, it is by merely withdrawing the heat, we may say, from the iron bars, that we develop that attractive force; but in saying so, we admit the existence of the very force we would deny.

And now we come to the force peculiarly antithetical to the actinic,—that is counteractive to the repulsive or radiative force as operative in what we have called molecules,—in short, to the attractive or concentrative force, as operative in molecules—in the molecules of polarcles, let us say,—for polarcles must be regarded as a distinctly recognized form in the superstructure, or rather the substructure, of the more massive forms of matter. This was long felt by the writer to be a puzzling question; but considering the more ready solution of the farther question involved in the necessity for conceding the attractive and repulsive forces to these polarcles themselves when mutually co-operative, as in crystlets—and indeed the necessity for providing a *locus standi*, as the lawyers might say, both for the magnetic force and the electric,—it at last became very obvious that the electric force, which so distinctly holds its ground as a basis and evolver of magnetic force as manifested in the science of electro-magnetism, and is as distinctly related in turn to the force of heat, as in thermo-electricity,—must occupy the vacant place and office between the more elementary region of atoms and the more mechanical region of polarcles, and must, in fact,—since the radiative or *repulsive* force peculiar to that region—the molecule—was already appropriated by the actinic force, or chemical repulsive force, as of the solar ray,—be no other than the mutually *attractive* force of molecules with molecules in polarcles,—the force of elective affinity, co-operative with actinism or the chemical ray in short,—which force on the one hand displays itself in the vast field of chemistry, as in the chemical decompositions and recombinations of the galvanic circle, for instance; while, on the other, it also, there or in the electro-magnetic battery,—as elsewhere—in the lightning and the electric shock,—displays its semi-mechanical power and its magnetic affinities.

Electricity then having resolved itself into the attractive force of molecules in polarcles and magnetism into the attractive force of these polarcles thus based on the electric molecules,—and with much labour, and, as far as possible, these positions have also been verified,—it remained only to ask, so far as regarded these recognized physical agencies, to what known or recognized agencies the repulsive force of polarcles on the one hand, and the attractive force of points on the other, must be referred. At the time when these questions presented themselves, nothing was known of diamagnetism, but its existence was thus anticipated as the repulsive force of polarcles in crystlets. So with the attractive force of points,—the positive opposite or antithesis of light and not the mere negative, darkness, but an active agency operative in the darkness or in the comparative absence of light, as well as mutually co-operative with the light constitutional to bodies formed of atoms and molecules, this attractive or concentrative force co-ordinate with light being truly the only appreciable or resistive base of all physical forms and all physical powers, and hence being named by the writer the hezekal force, from the Hebrew word "hezek," denoting "darkness which may be felt;"—the "odylic force," since alleged to have been recognized by Riechenbach and others, in darkness, would appear to have been anticipated in this hezekal force, as was the diamagnetic in the repulsive force of polarcles. It is to the

* Every one at all versant in the progress of science knows that difficulties often arise as to the proper application of new terms, and the necessity for adopting such terms. Thus there is here a necessity for giving a special name to that most subtle form, if we can so call it, of substructure with which we have regarded light as being more peculiarly connected. To use the term "atom" in this case, would lead to confusion. We have preferred, therefore, to adopt the term "point," or "physical point," without intending it to imply any decision as to the question of the infinite divisibility of matter, into which we do not wish here to enter. The term point thus applied, therefore, must merely be considered to denote, as we have said, the minutest and most subtle of all appreciable atoms or parts of which matter in the aggregate is made up. We may refer however, for some interesting speculations on this subject, to the writings of Professor Faraday, as well as to those of Boscovich.

GROUND PLAN OF HOUSES AND SCHOOLS, FULHAM.

electric force, however, and its relation to the power of cold in particular, that we desired to draw attention in entering on the present disquisition, and to that we shall confine ourselves, although we might have proceeded with the category, through the cohesive and elastic forces of the still grosser crystlets or particles of masses, to the forces exterior, as we may term it, to the massive forms of matter, and to which forces or powers we ordinarily give the names of weight and levity as between masses in strata, the depressing and elevating force of geologists as between strata in spheres, and the centripetal and centrifugal forces of astronomers as between spheres in stars or solar systems.

We are now prepared to give something like a feasible reply to the pertinent question, *What is electricity?* It is the attractive force of molecules, a form of the substructure of material nature, and is co-ordinate with the actinic force of the solar ray, which is its positive antithesis, while it stands closely related to cold and heat on the one hand, and to magnetism and diamagnetism on the other. It is with its relations to cold and heat, however, that we are here more particularly interested. This point, together with what we mean to say in explanation of the alleged malign influence of ozone or *electrified* or inflamed oxygen in producing epidemics, and the relationship of that ozone, and of the electricity which forms it from the vital air or oxygen, to all such emanations as those of cesspools and stagnant drains, and saturated town sites, as well as to the miasmata from marsh lands, and other uncultivated, or damp, and undrained districts, or countries, we must leave to another opportunity. Meantime, we may conclude for the present, by arranging the physical agencies, or forces, more particularly treated of, in that order in which we regard them to rank in nature's mutual co-relationships, and so explaining not only *what* electricity appears to be, but incidentally and correlatively (and hence unavoidably) what light, heat, and actinism, magnetism, and diamagnetism, elasticity and cohesion, each and all respectively are.

	Substructural and Constitutional Powers or Forces proper to the Aggregates or Forms of Matter.	
Substructural and Constitutional Forms or Aggregates of Matter.	Repulsive or Indicative.	Attractive or Concentrative.
Points with Points in or out of Atoms	Light.	Heat.
Atoms with Atoms in or out of Molecules	Heat.	Cold.
Molecules with Molecules in or out of Polarets	Actinism.	Electricity.
Polarets with Polarets in or out of Crystlets	Diamagnetism	Magnetism.
Crystlets with Crystlets, or Particles with Particles, in or out of Masses	Elasticity.	Cohesion.

THE HAMBURG COMPETITION.—The drawings for the new senate-house were to have been sent in on the 15th ult. as required by the instructions for architects. We shall be glad to hear whether the drawings are to be exhibited, and when; and when the adjudication is likely to take place.

NEW HOUSES AND SCHOOLS, FULHAM.

THIS building is now in course of erection for a gentleman at Fulham, and consists of dwelling-houses for several inmates, central entrance-hall, and two school-rooms. The work is being carried out with more than usual regard to durability. The walls are faced with red brick, and the dressings and other details are executed in stone, obtained from the Ketton Quarries, near Stamford.

The architects for the works are Messrs. F. and H. Francis; and the builders, Messrs. Bird, of Hammersmith.

The following references will explain the plan:—

A. Hall with room over.
B. School.
CCC. Living-rooms.
D. Porch.
EEE. Sculleries.
F. Lobby.
G. Bed-room.

The school-room is 36 feet by 22 feet; the hall, 26 feet by 16 feet; and the living-rooms, 17 feet 6 inches by 11 feet 3 inches.

CHURCH-BUILDING NEWS.

Poole.—St. Mary's Church, Branksea Island, was consecrated on Wednesday week. It is a Gothic building, with square tower, surmounted with small octagon turret. It was erected for the accommodation of about 150 persons, but 306 tickets of admission were taken at the doors at the consecration.

Newport.—The new St. Thomas's church, says the *Hampshire Advertiser*, is beginning to rear itself amid the ruins of the old edifice. The only standing memento of the old fabric will be the tower, which, although it remain, is to be encased with fresh-cut stone, and carried so much higher as not to be at all recognised as the "old" tower: in fact, the roof of the new church will be carried up to nearly its present height, and the additions to it will point some 40 feet beyond that. Of the old interior, the carved oaken pulpit is to be re-erected, as also the antique screen: the various marble tablets will likewise have suitable uniform places allotted to them; and the alabaster monumental statue of Sir Edward Horsey, Captain of the Island in the reign of Elizabeth, will be restored, and have a more prominent position assigned than in the old church. As to the memorial to be erected by the Queen to the memory of her relative, Elizabeth, daughter of Charles Stuart, our authority "cannot speak decidedly as to the *kind* of memorial intended, as the design is not yet publicly known, but it is whispered it will be a monumental tomb of beautiful design, and will have an appropriate place in keeping with the effigy of Sir Edward Horsey, the light thrown upon them to pass through ornamental stained windows."

Milton-under-Wychwood, Oxfordshire.—The adjacent hamlets of Milton and Lineham are in the parish of Shipton-under Wychwood, and the increased population of the former hamlet, together with the recent inclosure of its open field lands, having characterised it as a distinct village from Shipton, requiring separate spiritual provision, a new church has been erected, at the expense of Mr. J. H. Langston, M.P. and the Rev. Anthony and Mrs. Huxtable (his brother-in-law and sister). The edifice occupies a site near the village of Milton, and so as to embrace the small hamlet of Lineham. Besides the church, school-rooms and a master's residence have been built, and it is intended to complete the group by a parsonage-house. The church is from a design by Mr. Street, the diocesan architect, and has been built by Mr. Hope, of Oxford. On Saturday in last week the consecration took place.

Woburn.—The Independent chapel here, which has recently been rebuilt, was re-opened on 26th ult. It has been increased in length by 32 feet, the old galleries removed, and a new one erected, to accommodate singers, organ, and 130 children. The pulpit is of oak; the seats of deal, stained and varnished, part being free, affording accommodation for 450 persons. The architects were Messrs. Lauder and Bedells, London. The builder was Mr. Welch, Lidlington. The Duke of Bedford was a liberal contributor.

Willenhall.—The new parish church of St. Stephen's, Willenhall, was consecrated on Tuesday in last week, by the bishop of the diocese. There was a deficiency of 400*l.* in the building fund previous to the consecration; but 200*l.* appear to have been realised on that occasion.

Longside (near Banff).—The consecration of St. John the Evangelist's church, Longside, according to the *Banffshire Journal*, took place on 18th ult. (St. Luke's Day), when the Right Rev. Bishop Skinner, D.D. the bishop of the diocese, officiated. It is described as one of the most substantial churches erected in the north for many years. It is of Gothic structure, with tower of 80 feet, supported on pillars, rising from east end of nave. The church is 101 feet long, by 53 feet wide, the chancel being about 30 feet by 16 feet. The roof, which is open, and stained oak colour, is supported on granite pillars and arches, with clerestory windows. The chancel is laid with encaustic tiles. The eastern window over the communion-table is of three lights, and contains representations of the principal events of our Saviour's life, the crucifixion in the centre of the middle portion. This window is understood to be the gift of a nephew of the bishop. The church is seated for 500 or upwards, and is without galleries. The pews are all open, with carved ends. The pulpit is of rosewood, carved. The panels are open, and it stands on a highly polished granite pillar. The organ and choir are in a recess on the south side of the chancel, and the vestry on the north side. The cost of the edifice has been about 1,800*l.* or 2,000*l.* all defrayed. The architect's name does not appear in the paper referred to.

NEW HOUSES AND SCHOOLS, FULHAM.—MESSRS. F. AND H. FRANCIS, ARCHITECTS.

PROVINCIAL NEWS.

King's Lynn.—It has been finally determined to erect the new workhouse on a piece of land consisting of about 3½ acres, in Exton's-road. The cost of site will be 1,100*l.* tenants' compensation, &c. inclusive.

Lowestoft.—The new market here was opened to the public on Wednesday week, when the contractor, Mr. Geo. Allen, delivered up the keys. The market consists of an oblong enclosure, and occupies ground where once stood the Queen's Head Hotel. Its front consists of iron palisades and white brick pillars, between two of which are the east entrance-gates. It has also a western, northern, and southern entrance, the last of these leading into the Crown Hotel yard. At the western end is the weigh house, clerk's office, &c. The stalls are arranged in parallels running east and west, and are covered with a roof of corrugated galvanised iron, supported on iron pillars. The company's waterworks, according to the *Norfolk Chronicle*, are likely to be opened in a month.

Exeter.—The St. Sidwell's parochial schools are now completed, consisting of two schoolrooms, 78 feet 6 inches by 18 feet, class-rooms for boys and girls, and a residence. They are to be occupied at once. The walls are of brick, with Bath stone dressings. The outlay on buildings is about 1,500*l.*; boundary-walls and fences, 240*l.* Mr. Ashworth is the architect, and Mr. Ware, the builder.

Chester.—On 1st inst. the first general meeting of the shareholders of the new music-hall was held. The estimated cost of the building, decorations, and furniture is 3,100*l.* and shares have been subscribed to 2,940*l.* In consequence of a desire having been expressed that when all the interior work of the theatre was removed, the outside walls should be examined, the services of two architects were engaged to examine and report thereon, namely, Mr. Arthur Holme, of Liverpool, and Mr. James Harrison, of this city. Reports from these gentlemen were accordingly presented, and from these it would appear that the building is convertible as intended with safety to the public.

Leek.—The new Wesleyan schools recently erected in this town were opened on the 12th ultimo. The building comprises, on the ground-floor, a day school, with an area of 1,610 square feet, a library, two reading-rooms, five private class-rooms, entrance, and corridor. From the corridor, staircases lead to the Sunday school, which occupies the whole of the upper floor, and contains an area of 4,250 feet. Beneath one of the class-rooms, in an area rendered fireproof, are placed the heating apparatus and boilers for heating water for public tea meetings. The whole premises are heated by hot-water pipes, of triangular shape, placed beneath the ground-floor. Fresh air passing over the large heated surface of these pipes, is conveyed, warm, by flues in the walls, to all parts of the building,—separate and independent flues being appropriated to each division. On the side of the building opposite to that in which are the warm air flues, are flues for the extraction of vitiated air, which communicate with a large flue or shaft beneath the ground-floor, and this shaft is continued into a square shaft, 70 feet high, which surrounds the circular smoke flue from the heating apparatus. Provision is made for supplying either cold or warmed air at the floor or ceiling level, and the vitiated air may be drawn off in a similar manner, as the state of the atmosphere may require. A small furnace is placed at the foot of the ventilating shaft, for the purpose of creating a current in the shaft, in the summer season, when the furnace of the heating apparatus is not in action. Two dwelling-houses, in connection with the schools, are in progress of erection, which, if required, will form residences for the schoolmaster and superintendent. The buildings are of Italian character, in red brick, with stone dressings, and have been erected from designs by Mr. W. Sugden, of Leek, architect. It deserves to be noticed that Mr. Richard Culling, of that town, has subscribed 1,000*l.* towards these erections.

Hull.—The Royal Institution building, erected jointly by the Hull Literary and Philosophical Society, and the Hull Subscription Library Association, was opened with a bazaar, in aid of the building fund, on Tuesday in last week. The building covers an area of 2,200 square yards. The principal façade is 160 feet long, and is entirely built of stone. The style of architecture is Roman, and of the Corinthian order, and the centre part is deeply recessed with ten coupled columns in front, disposed after the manner of the Louvre at Paris. The wings slightly project, and have pilasters and pediments on them, the whole standing upon a bold rusticated basement, and surmounted by an attic and balustrade. The entire colonnade will be crowned by a group of figures, from the studio of Mr. Thos. Earle, of London, representing the arts and sciences. The museum is an apartment 90 feet by 65. The central part of it consists of an Ionic arcade, decorated, and pricked out with colour in the polychromatic mode. Adjoining the museum is the large lecture-hall, which will seat 600 persons. It is semi-circular in form, with a panelled ceiling, and is lighted from the side walls above the seats; and behind this are the laboratories, lecturer's room, and committee-room, the whole of which, like the other parts of the building, are now nearly in a state of completion. The library consists of book-rooms calculated to hold upwards of 60,000 volumes, a reading-room, entrance-hall, committee, deposit, and other rooms, the whole quite separated from the Royal Institution. The reading-room and entrance-hall are surrounded with Ionic and Corinthian columns and pilasters. Both institutions are heated with hot water. The library books now number about 30,000 volumes. Mr. Cuthbert Brodrick, of Hull, is the architect, and Mr. John Brown the clerk of the works. The painting and decoration of the interior of the buildings, including museum, library, lecture-hall, &c. were executed by Mr. William Wardale, of this town. The columns in the corridor are facsimiles of red granite, the capitals white and edged with gold, the cornices wrought out with various shades of colour, and the panels of ceiling light ultra-marine. The mouldings of panels are covered with foliage, in colours, and other kindred ornaments. The plinths or bases of the columns are in verd-antique. The other individuals who have been engaged are Simpson and Malone, who have executed the mason work; Mr. B. Musgrave, the brick and plaster work; Mr. Margison, the wood work; Dawber and Sons, the slaters; Mr. Merrikin, the plumber; and Thompson and Stather, the iron-founders.

Gateshead.—In a communication from the Gateshead borough surveyor, Mr. W. Hall, C.E. to the local *Observer*, it is said that the public quay and improvements contemplated by the corporation of Gateshead are calculated to effect striking changes in the river-side property contiguous to Tyne-bridge. The corporation have determined to make application to Parliament in the ensuing session for full and effective powers to carry out the project. The whole of the buildings on the east side of Bridge-street and Church-street, to the churchyard of St. Mary's, and extending down the river to the goods-drop of the North-Eastern Railway Company, are intended to be cleared away, and will give place to a block of buildings, at the distance of about 100 feet from the edge of the river, having a frontage running parallel with the course of the Tyne, and extending upwards of 1,126 feet in length. These buildings will be five stories high, and 52 feet wide. The south elevation will form the front of another street, 45 feet wide, connecting Church-street with Oakwellgate. On the south side of this street there will be a block of buildings four stories high, adjoining to and extending the whole length of St. Mary's churchyard. On the quay will be laid two lines of tramway, and hydraulic cranes will be placed for the expeditious working of the traffic on the quay. The River Tyne Improvement Commissioners have opportunely resolved to throw a wider bridge across the river, a little to the westward of the existing fabric. To carry out the approach to the new bridge, the buildings in Pipewellgate will be cleared away.

Edinburgh.—In a short time, according to the *Edinburgh Post*, a wide and handsome new roadway will be carried from the Abbey-hill, past the front of Holyrood, to join the Queen's drive, superseding the present approach. The plans are said to have received the highest sanction, and the works will be provided for in the first official estimates. Connected with this improvement, new gardens are to be laid out round the palace, embracing the present area of garden-ground; and these are to be freely open to the public at all times, except when her Majesty is actually resident at Holyrood. These alterations are to be effected at the expense of the Commissioners of Works.

St. Helier, Jersey.—On 10th ult. the committee for erecting a public monument to the late constable, Mr. Le Sueur, selected the design of Messrs. Poulton and Woodman, of Reading. The design consists of an obelisk in Jersey granite, elevated on a spreading basement, and at each angle is to be placed the crouching figure of a leopard (the heraldic animal of the States), sculptured in granite. On each of the four sides of the base of the monument, provision is to be made for the future construction of a fountain, the water from which will fall into reservoirs formed between the angle figures. The total height of the monument will be 40 feet, and the extreme width of base, 20 feet. Mr. Le Sueur marked his long tenure of office by sanitary measures, embellishment of the town, completion of the harbour, and many legal reforms.

LIGHTNING CONDUCTORS.

You have done me the favour to report what I said at Liverpool about lightning conductors. It is to me astonishing that the accounts of what passes in hasty conversation are so accurate as they are, and I should not have troubled you with anything like a correction, but that one or perhaps two slight errors in what I said, or ought to have said, has misled others. I did not say that I had been consulted about the application of a conductor to the Duke of York's pillar; but that when I inquired why it was affixed so as to be a great disfigurement to the erection, the parties who supplied it told me it had not been asked for until the column was completed. A little lower the account says that certain contrivances for insulation are *absurd*, a better word would be *useless*.

M. Faraday.

THE STANLEY MEMORIAL WINDOW.

At the last meeting of the Norfolk Archæological Society, Mr. Harrod, one of the secretaries of the Association, read a paper on the Stanley Memorial Window, recently placed in Norwich Cathedral. The early artists, Mr. Harrod observed, took infinite pains to maintain a proper balance in the colouring and design of their works, and endeavoured to make each window complete in itself. Sometimes a window contained the entire history of the Bible from the Creation to the Last Judgment; sometimes a legendary story; sometimes an incident in the Life of Christ contrasted with Old Testament types. There was a complete unity between all the subjects treated of, and (up to the beginning of the sixteenth century) the stone-work was admirably adapted to enhance the general effect. The size of the human figure was never permitted to exceed that of an ordinary man, the artists well knowing that any exaggeration in this respect would spoil the effect of the surrounding objects. Applying these principles to the Stanley Memorial Window, he would observe, in the first place, that the prevalence of light blue in it had an injurious effect, as it produced a transparency, which the mediæval artists sedulously avoided; and as the artist had been very successful in producing brilliant colours, it was much to be regretted that there was not a proper harmony in the general arrangement. The selection of subjects appeared to be an entire jumble, and could only lead to the conclusion that it was determined by lot, for there was a want of harmony apparent which was completely at variance with the practice of the old masters. The window began with the Nativity, and ended with the Presentation of the Law by Moses; and though the lifting up of the brazen serpent, which was introduced in one light, would harmonise with the Crucifixion, it did not correspond in any way with the

Ascension. In another compartment, the subject of "Christ blessing little Children" had been introduced—very improperly, as he thought—in commemoration of the affection entertained by the late bishop for children; and good taste had been violated in a similar manner in the east window, in which a memorial had been placed in honour of a deceased canon, the figures of the good Samaritan and the aged Simeon being introduced. If this practice was to be generally adopted, the sooner memorial windows ceased to be fashionable the better, for Holy Writ must not be ransacked to magnify the merits of individuals. The unnatural size of the principal figures in the window was much to be regretted.

A writer in the *Norwich Mercury*, said to be no mean critic, contended that the design was justified, archæologically, by the style of the surrounding architecture; but the stonework of the window was erected in 1450, and no specimen of glass at all resembling that in the window could be produced of an earlier date than 1500. As far as the memorial had any character at all, it was *Cinque-cento*, and even the artists of that period made their work harmonize, to a certain extent, with the architecture. In the Stanley window, on the contrary, no line fell in with the tracery. The committee, starting badly, took it for granted that no artist could design any new subjects, and selected five well-known pictures for illustration, which were inconsistent with the principles of the early masters. On the whole, he had come, with great regret, to the conclusion, that the design was not justified archæologically with the era of the architecture; and that neither in the colouring nor in the choice of subjects was it fitted for the position which it occupied, or an appropriate memorial of the excellent prelate whose loss every one deplored.

The chairman (Sir S. Bignold), in moving a vote of thanks to Mr. Harrod, said the late Lord Colborne, Mr. Whinstone, and Professor Way—men of acknowledged taste—had been consulted by the committee, who had made great efforts to give satisfaction. Whether they had been successful or not, it would be difficult to raise 1,500*l.* to replace the present window.

PREMIUMS FOR ARCHITECTURAL AND SANITARY IMPROVEMENTS.

The Society of Arts have issued notices of premiums for the following objects connected with architecture, or works of sanitary improvement:—

106. For the cheapest and best smoke-consuming and fuel-economising Open Grate.

107. For the cheapest and best application of smoke-consuming and fuel-economising principle to Domestic Fire-places.

108. For the best adjustment of a Tubular Chimney, with ventilator to the above, with the results of the trials of its working.

109. For the best Water-closet, with the following properties:—1. A scour for the complete removal of the soil. 2. The best trap against the ingress or regurgitation of effluvia from the general system of drainage with which each soil-pan must communicate. 3. The consumption of the least quantity of water for a complete scour and perfect trap. 4. Durability, or freedom from the liability of (*a*) breakage in consequence of frost; (*b*) derangement of the machinery; (*c*) breakage by careless usage: (*d*) stoppages. 5. Easy repair. 6. Cheapness when manufactured on a large scale.

121. For an account of any material improvement in the Moulding, Burning, or general Manufacture of Bricks; the chief qualities required being strength, indestructibility, and cheapness.

122. For the best form of Kiln for the manufacture of draining tiles, hollow bricks, roof tiles, paving tiles, or common bricks; which Kiln shall be the cheapest and simplest to construct, with the least quantity of materials for transport; the most complete combustion of fuel, and the least in consumption, with or without means of drying in the Kiln itself or in a shed attached to it; to be verified by trial works and the cheapest production of perfect goods.

123. For the best and cheapest white or light-coloured Glazed Tiles and Bricks, to be used in cottage construction.

124. For a means of imparting additional firmness and tenacity to the Clay used for Artistic Modelling, without diminishing its plasticity.

125. For an account of the Clays produced in these Islands and their uses, with especial reference to the manufacture of stone-ware pipes, for sewage, and other sanitary purposes.

126. For a means of rendering the Plaster used for Casts less absorbent and more adhesive, so as to facilitate its use for repairing purposes.

112. For the best specimens of Cisterns suitable for household or other purposes, made of Glass in one piece.

113. For a cheap quality of Glass, applicable for drains, water-pipes, sinks, shelves for larders, dairies, &c. in which coarseness and want of transparency are not regarded.

54. For an account of improvements in the Furnaces of Manufactories, especially in Glass Works, Iron Foundries, and the like, for the consumption or prevention of Smoke.

DAMP ON WALLS.

I am one of those who cannot pretend that *all* "things in heaven and earth are dreamt of in their philosophy," but I must confess to having been more than once amused at the solemn air of mystery with which this subject is invested by many, and of which I have been reminded by an extract from the *Gardeners' Chronicle*, in the *Builder*, p. 551, *ante*.

It appears to me that the appearance of damp on walls, in the cases spoken of, may be easily explained.

It is well known that the atmosphere always contains a greater or less quantity of water in suspension, and that this in *fine* weather is *invisible*, but in *damp* weather the atmosphere is surcharged beyond its capacity of holding moisture; and on coming in contact with any substance (or current of air) of a lower temperature, the invisible vapour is condensed, and becomes apparent. A familiar illustration of this may be perceived by breathing on a window pane, when the moisture of the breath will become visible on the surface of the glass. Or let a tumbler of cold water be grasped by a perspiring hand, and the moisture of the perspiration will appear condensed on the surface. For the same reason, the breath becomes visible in cold weather; and the same principle in action causes the formation of *dew*, and of *clouds* of visible vapour in the higher and colder regions of the atmosphere. It also accounts for the damp appearance of granite, Caithness flagstones, and slates, as compared with sand and stone. The appearances of these are the reverse of the realities. The freestone *absorbs* the moisture, while the granite, &c. do not allow it to penetrate much, if at all, beyond the surface.

The application of this to the *painted* and *unpainted* portions of the walls in the extract referred to, is obvious; and if it be asked why the moisture does not show itself on the *unpainted* parts, the answer is equally obvious, namely, that it is absorbed as soon as condensed by the colouring matter and the plaster, the quantity being much too minute to saturate them beyond their capacity for holding water. I have seen oil-painted walls in a staircase (*without a fire*) absolutely stream with moisture on a thaw occurring suddenly after a frost, and before the walls attained the increased temperature of the adjacent atmosphere.

I think, therefore, that there need be no surprise at the limestone flags (in the extract referred to) being damp only on the surface; and that the idea of there being "innate moisture" in limestone, or any other kind of stone, does not need serious refutation.

Should, however, any of your readers be aware of facts incompatible with, or not fully explained by the above, they and you will doubtless favour the professional public with them.

Of course there are many cases where the damp *in* walls is derived, by capillary attraction or absorption, from the earth on or in which they stand, but this is another question from that now discussed. S. O.

BURIAL BOARDS' COMPETITION.

I am one of those architects alluded to by "J. N." in his letter on cemetery competitions, p. 557, who "not only degrade themselves, but also bring disgrace upon that noble art of which they are the too unworthy professors," by competing on the terms now frequently being offered for the appointment of architect-superintendent to the building, &c. of an extra-mural cemetery. His letter is so good and just, that I would not pick holes in it, but think that a little newspaper talk might bring the newly-constituted burial-boards to fit better than they do into the flooring of the stage architectural, which they are now generally in a hasty manner called on to form and invite architects to tread.

"When," says your correspondent, "will architects be wise and united?" Only when by making a stand against "sending in" for shabby premiums, they find some party of a low grade, half builder, half surveyor, half land-drainer, with a touch of the nurseryman and seedsman, ousting them from their occupation, and designing "decorated" chapels and late Early English lodges, from "Instrumenta Ecclesiastica," or other of the planning-made-easy books put forth with such laudable motives, to assist non-professional persons in the art of architectural designing. Competition cannot be put down with a high hand: as in mechanics' strikes, fresh hands would rise to do the work, in spite of any intimidation the profession might attempt.

Who is there that is ignorant

> "How hard it is to climb
> The steep where Fame's proud temple shines afar?"

And who can blame young and inexperienced architects for trying their utmost, even if no premium be offered, to get the superintendence of a work which, when carried out, may at once lead to their being respectably established? Better these efforts, than puffing themselves in print as superior draughtsmen and designers wanting engagements, advertising to prepare drawings and specifications for others at their own offices, just as if a man of business would put out his plans and specifications as matters irrelevant;—better than giving their energies to ideal perspectives and landscape, or figuring on the walls of the Academy.

Some fresh arrangement is wanted: as it is, a burial-board is enrolled upon a sudden order to close the parochial graveyard. The vestry grants over and above the price of a field perhaps 1,500*l.* for the erection of chapels, lodge, fences, gates, and roads. What architect's commission can be squeezed out of such a sum? They must in the nineteenth century have good architecture. They look round and see what others have done. Here is an advertisement cut and dried, price for chapels fixed, premium not necessary: *ex uno disce omnes*. That the Boards cannot appreciate the labour of preparing working drawings and arranging contracts is visible from the advertisements, where detailed estimates are required before specifications, and working drawings before the design be adopted.

Some leading and influential architects might step forward and put matters on a better footing; and if by some distinguished member of the profession, the moral evil of competitions, deceitful drawings, and false estimates could be clearly represented, the burial-boards might be less anxious to advertise. Z.

Notices of Books.

The Census of Great Britain in 1851, *with an Analytical Index. Reprinted in a condensed form, by authority of the Registrar-General.* Longman, Brown, Green, and Longman. 1854.

This is the public's own edition of the voluminous blue-books, in a convenient and condensed form, and at a moderate price, the whole being stripped of much tedious detail, the results of which are summed up, as it were, to hand, so as to save the public much trouble, while at the same time giving them the benefit and advantage of the whole mass of returns within a small compass.

We have already used the returns ourselves pretty freely, and, therefore, need say little more here on the subject. We may quote a few of the remarks, however, on houses and

lats, in which we scarcely think that clear justice has been done to the latter in comparison with the former. A quotation from Dr. Carus's well-known work on the "English People" had previously been given, with the English remark that he had made rather a hasty generalization on the subject of the English perpendicular house system, as he called it, by comparison with the French and German horizontal house system, or system of flats or isolated floors:—

"The possession of an entire house is, it is true, strongly desired by every Englishman; for it throws a sharp, well-defined circle round his family and hearth,—the shrine of his sorrows, joys, and meditations. This feeling, as it is natural, is universal, but it is stronger in England than it is on the Continent; for although, there, the great bulk of the population in the country is in separate dwellings, while in many English towns several families are in the same house, the crowding to which Dr. Carus refers, of the middle and higher classes, who sleep in flats, stratum over stratum, is carried to an inconceivably greater excess in the capitals and the other cities of the Continent than it is in England. The department of the Seine, for instance, in 1835-6 contained 50,467 houses and 1,106,891 persons, or 22 persons to a house; so that there must be four or five families in Paris to a house; whilst London, in 1851, contained 2,362,236 persons, 533,580 occupiers, in 305,933 houses; and, consequently, nearly eight persons to one house; or, more exactly, 77 persons, forming 17 families, to 10 houses. It will be shown that, in a certain number of English towns, 15, 20, and 24 families are in 10 houses, on an average; but these cases are exceptional, and the general rule is, that each family in England has a house.

The towns and cities of the two northern English counties and of Scotland, however, are built somewhat in the continental style; and the families of the middle classes, as well as of the poor, often live in large flats, which constitute separate tenements within the same party-walls."

The houses, or rather the tenements of the horizontal system—for, in Scotland at least, it is the whole mass of "houses" or flats surmounting each other that is called a tenement—if they could be supposed to be turned over, so as to represent the English narrow horizontal system, would, on an average, occupy the same space as the latter horizontally. That is to say, the narrow English houses—three or four of them,—if they, on the other hand, could be supposed to be turned over, so as to rise one above the other, and so represent the horizontal system, would not occupy more space on an average than the *one* tenement or mass of flats on the horizontal system. The fact, then, that on the English system there are, on the average, only eight persons to a single tenement, while, on the Continental or horizontal system, there are twenty-two persons to a tenement, by no means implies that there is any comparative "crowding" on the latter system. As well might it be said that a cube of three or four narrow London houses, if converted into just such a cube on the perpendicular system, with its three or four "houses" laid one above another, and their common pavement converted into a common stair, had become more crowded than it was, for that now it was converted into one "house," containing three or four times the number of persons that any other London house contained. *Cæteris paribus*, the perpendicular system is the one best adapted to so overgrown an aggregate of human dwellings as London; and each "house" would still be just as much a "castle" as before, or rather more so; for, indeed, a vast number of the London houses—ill adapted as they are—already contain each several families who live in common in a way intolerable to those who have been accustomed to properly *separated* flats.

Increasing the Strength of Metals.—According to Mr. Fairbairn, all bodies solidifying under great pressure have their strength and specific gravity increased. No law has yet been given for the increase of either; but it would appear from the experiments conducted by Mr. Fairbairn, that great results are expected from the solidification of metals under high pressures. He and his colleagues, Messrs. Hopkins and Joule, have carried their experiments as high as 90,000lbs. pressure to the square inch, or exceeding 42 tons. The use of pressure will doubtless tend very much to improve the metals by preventing internal flaws.

Miscellanea.

Engineering Works for Russia.—The Czar has long and largely benefited by the peaceful labours of our English engineers. He is about to have a specimen of what they can do in war times. A dozen at least of new floating batteries are said to have been ordered to be built, as strong as iron and wood can make them. They are to be protected by plates of iron 4 inches thick, which have been tested and found to be ball and bomb proof. The decks will be of iron, 8 inches thick; but corrugated iron, of lighter though not less strong construction, has been recommended in preference. Each battery will be equivalent to a ship of 1,300 tons. The whole are destined for the Baltic in spring. Could not our war-ships at same time be protected, at least "between wind and water," by just such iron plates, 4 inches thick, securely bolted on their sides, and so despatched along with the batteries to make surety double sure, and settle the Czar's business off hand; for, once the Russian bear's two main tusks, the Baltic one and that of the Euxine, are extracted by such neat little instruments as those we have just described, Europe need not much mind his loving hug on either hand. The ships sunk at Sebastopol—not by the Anglo-French or Franco-English, but by the Lord High Admiral of the sunk fleet himself—are to be blown up by engineering apparatus ordered by the Admiralty to be made by Messrs. W. G. Armstrong and Co. of Newcastle, the patentees of the hydraulic crane. Cylinders of three tons weight each are to be charged with a ton of gunpowder, and lifted and sunk, if we rightly understand, by help of hydraulic cranes, and fired by galvanic batteries.

Preservation of Oak Doors.—After the doors have been freed from the dirt and old varnish, by washing and scraping, give one coat of boiled linseed oil, coloured with a little prepared asphaltum: allow three days for the oil to penetrate the wood and dry; then give two coats of copal varnish, allowing three days between each coat for the varnish to dry. This will restore the doors to their original colour. It is one thing to be right; it is also another thing to keep right. If the doors are allowed to go from year to year accumulating dirt, &c. it will fix with the crust, which forms on the varnish, and the doors will be as bad as ever. To prevent this, let the doors be kept clean by washing them at least every three months, at the same time give them a good rub with raw linseed oil, the same as would be applied to the top of a dining-table.—J. S.

English Oak, when it is to be used for church or other external doors, exposed to the effects of the atmosphere, should be felled in winter, when the sap is concentrated. It is usual *now* to cut it in the spring, when the sap is flowing through the tree, for the sake of the bark or tan, injuring the timber, and leaving a vacuum in the pores, which, being exposed to the atmosphere, imbibes the wet, and mixes with the acid and stringent quality of the sap, causing the discolouration of the wood.—W. S.

Fall of a House at Norwich.—On Saturday morning of last week the inhabitants of St. Stephen's-street were alarmed by a noise, and in the course of a minute or two a lofty house, which had given no forewarning sign of instability, had become a mass of ruins. The house had been used as a grocery establishment; and on one side of it a building had been cleared away, that a more commodious structure might be raised in its place. The removal of these adjoining premises had evidently left the grocery establishment insecure; and the side wall having suddenly fallen, floor after floor came down in succession, till the whole was a mass of ruins.

Bronze Statue of the late Duke of Wellington.—Messrs. Robinson and Cottam have just made a casting, in bronze, of Mr. Evan Thomas's statue of the late Duke of Wellington. The figure stands about 8 feet high, in a contemplative attitude. It is intended for erection in the town of Brecknock. A granite pedestal has been prepared for its reception, upon the sides of which are *relievos*, in bronze.

Wellington Statue for Manchester. The model of the colossal statue of the late Duke by Mr. Noble, for Manchester, is finished, and ready for the bronze foundry.

Effigy in Sheinton Church, Salop.—Seeing a notice of this church in the last number of the *Builder*, I would mention that a very interesting effigy of a lady has been discovered, of about the year 1320, and for the preservation of which we are indebted to Mr. Pountney Smith. It was discovered in a hole under the font, in two pieces: it is of a coarse imperfect sandstone, and measures only, with its slab, 2 feet 4 inches by 1 foot 1 inch at head, and 9 inches at feet. As Sheinton Church was in some way connected with Buildwas Abbey, it was at first conjectured to be the effigy of a nun. The drapery is well arranged, and the book in left arm is peculiar.

E. R.

Contract for Landing-stage at Liverpool.—From council proceedings, and a communication in the Liverpool *Journal*, it appears that two local firms were asked to contract for a landing-stage, about to be made for channel steamers, and that the tender of one of these firms was for 140,000*l.* and the other for not much less. Several others were then applied to, and the following tenders were made, viz., —Tayleur, 135,000*l.*; Harrison, 110,000*l.*; Cochrane, 103,000*l.*; Fairbairn, 102,000*l.*; Baker, 102,000*l.*; Vernon, 99,000*l.*; Butler, 91,000*l.*; Mabon, 90,414*l.* The finance committee, as well as their engineer, Sir William Cubitt, were of opinion that the stage could not be made as they wished it to be for the amount of the lowest tender,—indeed, for the amount of any one of five out of the eight, it would appear, including Mr. Fairbairn's,—and finally the tender of Messrs. Cochrane and Co. was fixed upon, and recommended by the finance committee to the council, who, by a majority of twenty-three to twenty, have decided on its acceptance, in preference to advertising for tenders, as desired by the minority. Mr. Mabon had previously complained that his tender was not accepted, being the lowest, and no objection appears to have been made as to his respectability, or that of his sureties. He had referred the finance committee to various large contracts which he had executed for Mr. Brassey, and had enclosed a letter from that gentleman to a near relative, manifesting great confidence in Mr. Mabon as a contractor, and recommending his employment. Other extensive contracts, either done or in hand, for railways, on one of which Mr. Brunel is the engineer, had also been at same time referred to by Mr. Mabon, who had also explained how he was prepared, from peculiar arrangements, so to form the landing-stage, and float it to its site, as to enable him to do so at so low a tender.

Conversazione of the Norwich School of Art.—In order to make the objects and working of the Norwich School of Art more generally known, the committee made arrangements to have a *conversazione* on a liberal scale, at the Assembly-rooms, and about 600 invitations were issued. A very large and fashionable attendance of ladies and gentlemen was the result, and the company was found to be too numerous to be accommodated in the large room, especially as a large portion of it was occupied by apparatus, and therefore the other room was appropriated to a small collection of works of art, which had been got together in the course of a few hours. The great feature of the *conversazione*, however, was not the works of art, as that was to take place on Friday, in the society's gallery, St. Andrew's, but to listen to addresses which were delivered by Mr. J. H. Gurney, M.P. the president, and by other gentlemen. Amongst those present were Lord Ranelagh, Lord Royston, &c. The company afterwards remained for some time in the rooms inspecting the works of art, and the entertainments of the evening concluded with a dance.

First Information under Act to abate Smoke Nuisance in London.—On 1st inst. Mr. Jonathan Keen, owner of the saw-mills on the west side of Waterloo-road, appeared before Mr. Elliott, at Lambeth Police-court, to answer to a summons and information laid against him in the usual form, by order of Lord Palmerston, as Home Secretary. After some procedure, the summons, by consent of all parties, was allowed to stand over for a month, to allow Mr. Keen to fulfil a promise to have Prideaux's patent applied to his furnace, as advised by a witness who had given evidence in course of the procedure.

Mons. Jullien and his Music.—As all of our readers must already know who are in any way interested in music as a recreation, and these are not few, M. Jullien has returned from America, and once more entrenched himself in Drury-lane, where he is providing the million with music, cheap and good. M Jullien, as we have often said, has done much in establishing a taste for music amongst the people, who are in consequence greatly indebted to him for this addition to their pleasures: they seem to be grateful in the most substantial shape, for he is attracting large audiences as heretofore. The decorations have been prepared under Mr. Gye's superintendence, and are, as usual, tasteful and appropriate.

History of an Acre of Land.—In the early days of South Australia, the land was sold at 12s. an acre; and the purchaser of a town acre was entitled to an acre in some suburban allotment. One of the purchasers of just such a brace of acres held his land for a year or two, when he sold it for 400*l.* At the end of a few years this person sold his country section for 500*l.* and within a few years, the town acre for 2,000*l.* This last was resold, after three or four years, for 8,000*l.* Not long since, three-fourths of this acre have been disposed of for 18,000*l.* and the remaining one-fourth is now about to change hands at the rate of 32,000*l.* the acre. This land, though in the best situation in Adelaide, has not yet been built on.

TAKING CARE OF EMPTY HOUSES. — At the Marylebone County Court recently, an action was brought by the temporary occupant of an untenanted house, against the landlord, a builder, in which some of the numerous annoyances of the kind suffered by landlords were manifested, and which it would be well for them to take measures to obviate. In the case of Phipps *v.* Mead referred to, plaintiff complained of the defendant assaulting him by turning him out of a house, and damaging his furniture. He also swore defendant agreed to pay him wages for taking care of an empty house. The solicitor for defendant commented in strong terms upon the way builders were treated, and called Mr. Mead, jun. who stated that plaintiff asked if he had an empty house to put him in, and it was understood that if plaintiff did not keep the house clean he would be turned out. Nothing was ever mentioned about witness or his father paying the plaintiff. When desired to quit, the plaintiff refused to give up possession, and so barricaded the house as to defy them, and it was only by stratagem the plaintiff was at last ejected. A great disturbance was caused, and the police interfered and took care of the man's furniture, none of which was injured in any way by their (defendant's) men. They had lost a good tenant through the plaintiff, and had been put to great expense and trouble. Other witnesses were called, and the judge at once gave a verdict for defendant, with costs of witnesses. The latter part of the judgment might as well have been left out.

COST OF "OPENING" ST. GEORGE'S HALL.—The Liverpool corporation have had the following abstract of accounts submitted by the special committee for opening the Hall:—Receipts, 3,668*l.* 4s.; payments already made, 3,433*l.* 7s.; cash in hand, 234*l.* 17s.; outstanding accounts, 755*l.* 1s. 9d.; deficiency, 520*l.* 4s 9d. Mr. Alderman Turner referred to the expense which the mayor must have incurred in entertaining the British Association, and observed that, on the occasion of their visit to Liverpool in 1837, 397*l.* 1s. 9d. had been voted to the then mayor, to reimburse him for his necessarily increased outlay. The reception of the Association this year by the mayor was quite equal to that of 1837; and he should, therefore, move that 1,000*l.* be granted as an additional allowance to cover the deficiency on the opening of the Hall, and to reimburse the mayor for the expense he had incurred in entertaining the British Association. After some grumbling, the motion was carried by a majority of 29 to 14. The town-clerk had offered, it seems, to pay the corporation 2,000*l.* on condition that he should be allowed to manage the opening in his own way, and to his own profit, if any.

TO TAKE OUT GREASE FROM LEAVES OF BOOKS.—After having warmed the paper, take as much of the grease or oil out as possible by means of blotting-paper. Then dip a small brush in well-rectified essential oil of turpentine, heated almost to ebullition, and draw it gently over both sides of the paper, which must be kept warm. This operation must be repeated as often as necessary. Then dip another brush in highly rectified spirit of wine, and draw it over the place which was stained, and particularly round its edges. The spot will thus totally disappear, and the paper assume its original whiteness, and though written on or printed, no harm will ensue.

ROYAL INSTITUTE OF BRITISH ARCHITECTS. — The first ordinary meeting of the new session will be held on Monday evening, the 13th of November, when a paper by Mr. D. R. Hay, "On the Application of the Harmonic Law of Nature in the Orthography of Architectural Design," illustrated by a Gothic elevation, similar to that of the east end of Lincoln Cathedral, will be read. The council have called attention to the circumstance, that although the Institute possesses about forty copies of various editions of Vitruvius, copies of the following editions are still wanting (see Rhodes' list of editions):—

1.	Florence,	fol.	1496 Latin.
2.	Venice,	fol.	1497 Latin.
3.	Florence,	8vo.	1522 Latin Junta.
4.	Venice,	fol.	1535 Italian.
5.	Rome,	8vo.	1544 Philandri.
6.	Parissiis,	8vo.	1545 Ditto.
7.	Nurnberg,	fol.	1548 Gualterius Rivius.
8.	Venetiis,	8vo.	1557 Latin.
9.	Mantua,	fol.	1558 Italian.
10.	Tolose,	4to.	1559 French.
11.	Paris,	4to.	1565 Ditto, repeated.
12.	Basiliæ,	fol.	1575 German.
13.	Compluti,	fol.	1602 Spanish.
14.	Basel,	fol.	1614 German.
15.		12mo.	1674 Perault, abrégé.
16.	Loudon,	8vo.	1703 Ditto, translated.
17.	Venice,	8vo.	1711 Perault, translated.
18.	London,	fol.	1730 Castel.
19.	Venice,	8vo.	1747 Perault, translated.
20.	Nurnberg,	8vo.	1757 Ditto, German.
21.	Madrid,	fol.	1787 Spanish.
22.	Leipsig,		1796 Rode.

METROPOLITAN COMMISSION OF SEWERS.—At a special court held on 31st ult. the available balance in the hands of the treasurer was stated to be 48,134*l.* odd, and payments for works in progress were ordered to the amount of 10,217*l.* odd. In respect to thirty-four small tenements at Bethnal-green, the state of which had been complained of by the Registrar-General, and which an engineer of the commissioners stated to be partly drained into cesspools and partly into open channels in front, causing a great nuisance, the commissioners ordered a 12-inch pipe sewer, 400 feet in length, to be laid down at an estimated cost of 77*l.* The chairman said that a vast number of other places in the same parish equally required their attention, but that it would require two and a half years' entire rental to do what was required. A report was made as to the Pig-hill distillery, at Battersea, by Mr. Grant, the engineer, in which complaint was made that the distillers had unlawfully reopened a drain which the commission had stopped up to prevent hot refuse from entering the sewers, where it was said to ferment the contents, and annoy and injure the inhabitants of the district. The offenders were summoned to show cause why they should not be fined 100*l.* for unstopping the drain. Various contracts for new works were entered into.

LONDON PUMP-WATER.—It is said that the district about Golden-square, where cholera raged so fearfully of late, is supplied with water mainly from a pump in Broad-street, sunk in gravel, only four or five yards from the main sewer, and that the water contains a great deal of impure matter, evidently derived from the sewer. Dr. Snow is said to have found, on inquiry, that in nearly every instance the families having cholera were in the habit of drinking water from this pump. In houses where it had not been lately used, the deaths (from all causes, we presume) were only six, and not beyond the average of other healthy districts.

THE WELLINGTON STATUE AT NORWICH.—The inauguration of this statue took place on Wednesday in last week, in presence of a large concourse of citizens, and with appropriate ceremonial. The statue, which is of bronze, from a design by Mr. Adams, of Chelsea, occupies a position in the centre of the market-place. It has been erected, pedestal and fixing included, at a cost of about 1,000*l.* The weight of the statue is two tons; that of the pedestal between eight and nine tons. The latter is of solid Aberdeen granite. The pedestal proper is composed of two blocks of granite, and is 8 feet 6 inches high. The statue surmounting it is 8 feet high. The hero is represented in an exceedingly plain dress—the boots, cloak, and other portions of dress actually worn at Waterloo, having, it is said, been placed at Mr. Adams' service when he was engaged in modelling the figure. The artist's intention was to represent the great Duke as he appeared on the field of Waterloo. He is supposed to be standing in a thoughtful mood, having in his right hand a sword, the point of which touches the ground. In the back-ground is a howitzer. In front of the pedestal is a device, designed and executed by Mr. Adams, consisting of an emblematical grouping of all the orders conferred in honour of some one or other of the hundred fights in which the late Duke was engaged, and comprising badges and orders of England, Austria, Russia, Portugal, Spain, Denmark, Hanover, &c. These are surrounded by flags, on which are inscribed the names of all his victories, from Assaye to Waterloo, the whole surmounted by a Field Marshal's cap and feathers. Beneath the device, which is made of metal from cannon taken in his battles, is the word "Wellington," in plain and conspicuous letters.

COMPETITIONS.—It appears to me that both architects and "committees" are labouring under a mistake as regards competition premiums. We constantly see letters in your paper decrying the smallness of the premium offered to architects for the best plan which may be sent in; such as 15*l.* for a building which is to cost 2,000*l.* and even sometimes a lower premium for a higher cost of erection. Now, in *almost* every case the author of the best design, or rather the design which the committee select as the best, is employed to carry out the work, and he, of course, receives his commission of 5 per cent. upon the outlay, *the premium offered being part of that per centage*. What, then, to the architects competing does it matter, whether the premium is high or low? But I think it would be wise of the committees, and to their interests, if they would at once offer as the premium for the best design the amount which would be payable to the successful architect at 5 per cent. For instance, in the case before alluded to, the cost of erection being 2,000*l.* the premium offered should be 100*l.* By this the committees would be no losers, but, in my opinion, gainers, and all parties more satisfied. I think, also, that there ought to be a second premium of 1½ per cent. upon intended outlay for the author of the design which should be considered second in merit.—AN ARCHITECT.

THE FIRE AT MEMEL destroyed three churches, five schools, nine public edifices, 256 private dwellings, eighty-three warehouses, 133 stables, forty-nine coachhouses, and two mills, in all valued at 848,000 thalers, exclusive of merchandise.

STAINED GLASS.—According to a local paper, Mr. J. J. King, of Norwich, has lately produced some new designs in stained glass, and has supplied a window for a new chapel at Camberwell. The dimensions are 24 feet by 12 feet; the design geometrical, the forms defined by fillets of coloured glass, filled in with foliated ornaments on glass of a greyish green tint.

A FINE ART GALLERY FOR GLASGOW. — Mr. Archibald M'Lellan, a late citizen of Glasgow, has just died, bequeathing, it is said, a valuable collection of pictures and statues, his library, and his gold and silver plate, to the Corporation, for the purpose of founding a Fine Art Gallery in his native city; and it is reported he has also made provision for a Fine Art chair in the University of Glasgow. Mr. M'Lellan took a warm interest in the architectural renovation and embellishment of Glasgow, and a prominent part in the restoration of its cathedral. He enjoyed the intimate friendship of Sir David Wilkie and Sir Francis Chantrey while they lived.

THAMES TUNNEL COMPANY.—For the week ending the 4th of November, 18,614 passengers passed through, and paid 77*l.* 11s. 4d.

PHILLIPS'S LIQUID METAL PURIFIER.—A summary of experiments, under sanction of the Admiralty, gives, it is said, a cohesive strength in tons, with the purifier, of 56½; without, 51½; and transverse strength in cwts. with the improved method, 78½; without, 73½; or about 9¾ and 7 per cent. respectively in favour of the discovery. These trials, however, are not regarded as conclusive.

ASSYRIAN EXCAVATION FUND.—Mr. W. K. Loftus, the explorer, in Assyria and Babylonia, on behalf of the Assyrian Excavation Fund, writes from Mosul, August 22, 1854, at Nineveh:—I have struck upon a palace or a part of a palace, 20 feet below the level of any yet discovered. High up among the rubbish are beautiful fragments from the north and latest palace which was supposed to contain the perfection of Assyrian sculpture. You may conceive my satisfaction when I tell you that they can bear no comparison with those just disentombed. The figures are in high relief, and have less of conventionality than usual. The designs are full of vigour and spirit, the execution is admirable, and the minuteness of the details almost requires a microscope.

WATER-PIPES.—Mr. Waite, of Leeds, has patented water-pipes formed internally of white delph, with a glazing like that of porcelain, and surrounded and compacted with a thick covering of a sort of concrete, forming a strong and impervious substance, it is said, not liable to decay, and as capable of resisting violence as iron pipes, and more economically produced. They are also said to be well adapted for gas-pipes, and to be so air-tight as to prevent leakage.

TENDERS

For house at Hammersmith; commencement of a new undertaking. Mr. Godwin, architect. Amounts exclusive of bricks and old materials.

Hayne, Brothers	£1,180	0	0

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

SAMUEL HIBBERT, Esq Chairman.
WILLIAM R. ROBINSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500l and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value

SECURITY. Those who effect insurances with this Company are protected by its subscribed capital of 750,000l of which nearly 140,000l is invested, for the risk incurred by members of Mutual assurance.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

On the 31st October, 1853, the sums assured, including bonus added, amounted to	£3,500,000
The premium fund to more than	800,000
And the annual income from the same source, to..	120,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

THE ALBERT ASSURANCE COMPANY. Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. YARDY, Manager.

LONDON NECROPOLIS COMPANY.—It is intended to OPEN the CEMETERY on the 13th NOVEMBER, and this Company will undertake Funerals on and after that date.

A train, conveying Funerals and Mourners only, will start from the Westminster-road Station daily at 11.30 a.m.

Forty-eight hours' notice of any intended Funeral must be given at the Office of the Company, 2, Lancaster-place, Waterloo-bridge, where full particulars of the general arrangements may be obtained The charges are:—

First Class Single Grave in perpetuity, including conveyance of Coffin to Woking, Funeral Service, and Interment	£9 10 0
Second Class, ditto ditto	1 0 0

This Company has also contracted with eminent and responsible Undertakers and Statuaries, so that the Public may either employ their own Undertaker or Statuary, or by one payment obtain all the requirements of a Funeral.

A detailed Tariff may be obtained on application, either in person or by letter.

By order, RICHARD CHURCHILL, Sec.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

ing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

Lists of Prices and Estimates forwarded on application.

THE PATENT CRYSTAL WINDOW, consisting entirely of plate glass, supported by fine cast-glass sash bars, presents the most important advantages in the construction of shop fronts, viz. perfect transmission of light, elegance, and novelty of appearance, imperishability from rust or decay, and the greatest economy in labour, &c. from the facility with which it is kept clean and bright, as contrasted with either polished metal or wood. Examples of the window may be seen at the London Mantle and Shawl Company, north side of St. Paul's Churchyard, London, at Birmingham, Leamington, Worcester, Abergavenny, Shrewsbury, &c. The application, also, of the Crystal Sash Bar to the construction of Exhibition Cases, may be seen in the Birmingham Court and East Gallery of the Crystal Palace, Sydenham, to which the attention of exhibitors is particularly invited.—Full particulars may be obtained from the patentees, Messrs. LLOYD and SUMMERFIELD, Cut and Plain Glass Manufacturers, Park Glass Works, Birmingham.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr JOHN SHORTOR'S, Crispin street, Spitalfields, London.

MOORE'S PATENT LEVER VENTILATOR and PATENT RESPIRATOR, Sekford Works, St. James's-walk, Clerkenwell, London, and the Furniture Court, Crystal Palace, Sydenham.

WANTED, immediately, TWELVE DOBBIN CARTS, in working order. Inquire of Mr. MAINE, Horse and Groom, Lea-bridge

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heret fore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale.

With improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

DESIGNS PREPARED for SHOP FRONTS, INTERIOR FITTINGS, and GENERAL ARCHITECTURAL ARRANGEMENTS, by Mr. JOHN DWYER, 11, Great Marlborough street.

TO BE SOLD, TWO PASTE or COLOUR MIXING MACHINES.—Apply to Messrs. KNIGHT and CARTHEW, 3, York-street, St James's-square.

Several Hands wanted in the DRAIN PIPE TRADE.—Apply at No 18 Wharf, City Basin, not later than MONDAY next.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy acting Ball-valve ever offered to the public. They are entirely free from all those objections of bringing such as spindles, slides, and cylinder fittings, so fatal to Ball valves generally. They are perfectly quiet in action, and cannot by any means stick fast, there being no point of friction from fittings in their construction. They are so arranged as to accumulate the power of closing against the column of water whenever required, and are warranted to stand any known pressure of water

	inch.	inch.	inch.	inch.	inch.
Complete with Balls:—Plain shank	5s.	6s.	6s. 6d.	7s. 3d.	12s. 6d. each.

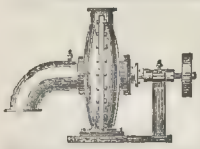
May be hired at a rental, or purchased, and can be seen at work at Messrs MEDWIN and HALLS, Engineers and Portable Engine Makers, 92, Blackfriars-road. These engines have been successfully employed for years.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.



PUMPS ON HIRE

Pumps of any size, single or double barrel, up to double 12-in diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto ... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

BUILDERS, Contractors, Engineers, Brewers, Paper-makers, Chemists, Brick-makers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids (hot or cold) raised or forced, will find it greatly to their interest to use GWYNNE and CO'S PATENTED PUMPS For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

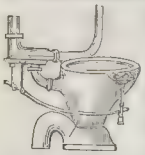
A large stock of Wrought Pumps, from 3-inch single to 9-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to

JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,



which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the pump considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, trunks, wire, lead traps, &c. Any number of Closets can be supplied from one main.

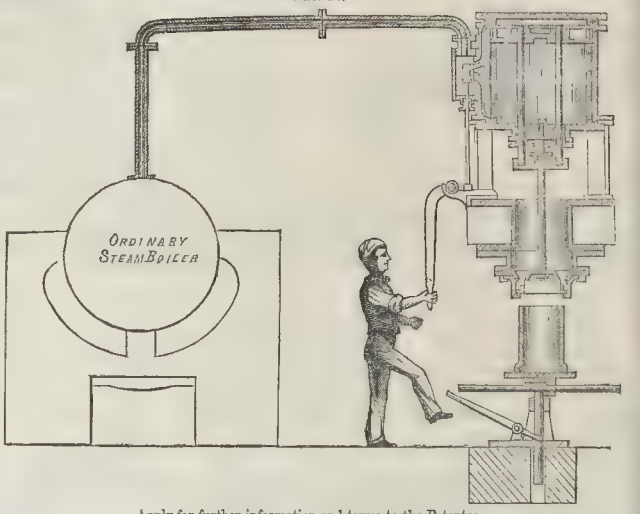
Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health Government, and other large public establishments, in addition to numerous private mansions. Drawings, testimonials, and references of the highest respectability forwarded by post. Prices of Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 92, Old Fish-street, near St. Paul's, London.

NORBITON POTTERY and BRICK and TILE WORKS, KINGSTON HILL

BENJAMIN LOCKER, Jun. invites the attention of Builders, Contractors, and others, to the following reduced prices of his superior RED SOCKET DRAIN PIPES, in 2 feet lengths —

3 inch.	4 inch.	6 inch	9 inch.	12 inch	15 inch bore.
5d.	6d	8d	1s. 3d	2s 2d	4s 2d each.

Bends, Junctions, Traps, &c. equally low



These pipes being made by powerful steam machinery, and of unusual thickness are capable of resisting double the pressure of ordinary stoneware pipes; and their durability is beyond a doubt. As unglazed pottery, well burnt, they are often discovered in a perfect state after being under ground for many centuries.

DELIVERED FOR CASH WITHIN TEN MILES OF THE WORKS, OR AT ANY STATION ON THE SOUTH-WESTERN RAILWAY AND ITS BRANCHES WITHIN FORTY MILES OF KINGSTON. CARRIAGE FREE, IF IN QUANTITIES NOT LESS THAN 10 PIPES.

LOCKER'S improved Border Tile and Coping Bricks, Land Drain pipes, Drain traps, and all kinds of Roofing Tiles, Garden, Kale, &c. &c. Chimney-pots, &c. &c.

N.B. Bricks, Tiles, and Pipes made to any pattern.

LICENSES GRANTED
FOR THE USE OF
SPENCER'S PATENT;
VIZ. FOR
DIRECT-ACTION STEAM-PRESS, SOCKETING DIES,
(These Dies are used without crosses or arms);
DIES FOR HOLLOW EARTHENWARE,
(As Garden-pots, Pans, Basins, Crucibles, &c.);
Bends direct from the Machine, Stilts and Kiln for Vitrifying and Burning;
FOR MAKING
SANITARY TUBES, DRAIN-PIPES, EARTHENWARE,
&c. &c. &c.

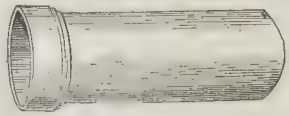
Apply for further information and terms to the Patentee,
THOMAS SPENCER, PRESCOT.
N.B. Licenses are already granted to parties in London, York, Leeds, Sheffield, Newcastle, Darlington, Birmingham, Liverpool, Wrexham, Edinburgh, Glasgow, and Aberdeen, or their localities.

SEWERAGE, WATER, GAS, AND CHEMICAL PIPES, &c. &c.
From 1 to 24 inches diameter, in 3 and 9 feet lengths.

BROWN STONE WARE and other PIPES.

JUNCTIONS, BENDS, TRAPS, &c. &c.

WATER-CLOSET PANS WITH SYPHON TRAPS.



In superior WHITE METALLINE-GLAZE STONEWARE.

Also in common BROWN STONEWARE.

Reference by permission to the Borough Engineers of Liverpool, Manchester, Preston, Bolton &c. &c.

THE FARNLEY IRON COMPANY, WORTLEY, near LEEDS.

Manufacturers of FIRE BRICKS, TILES, QUARRIES, &c., White Building Bricks, Fire-clay CHIMNEY-TOPS, in Norman, Egyptian, Saxon, Tudor, Grecian, Gothic, and Elizabethan styles.

TERRA COTTA

Fountains, Vases, Pedestals, Capitals, Trusses, Brackets, &c., in great variety, which for beauty and elegance of design are unequalled. The designs of Architects modelled with the greatest exactness.

Also of PATENT GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, &c., well adapted for pressure, being made extra pressed under "Spencer's Patent." Superior White Glazed CLOSET PANS, TRAPS, &c.

The Works of the Company are situated in the immediate vicinity of the well-known bed of WORTLEY FIRE-CLAY, and their manufacture of BRICKS, for the use of Forges, Gas Companies, Foundries, Potteries, and Glassworks, is confidently recommended for all purposes where extreme heat is required. Their GROUND CLAY is also particularly adapted for the manufacture of CRUCIBLES, MELTING POTS, &c.

OFFICES AND STORES:

LONDON	No. 14 York chambers, York-buildings, Adelphi; No 16, Bath-place, New-road; St. Ann's-wharf, Limehouse.	MANCHESTER	No. 46, Travis-street, and 23, 24, and 25, Birmingham-street, London-road.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 29, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Rotherhithe, Bermondsey, Danvers Wharf, foot of Battersea-bridge, Chelsea; Fruit Wharf, King's-road, Camden New Town; TURNER, 2, South Wharf, Pratt-street, Paddington; COLWILL, Brothers, 32, Brydges-street, Covent Garden; and at EDWARD COCKS, 94, Wardour-street, Oxford-street.

Drawings and List of Prices willbe forwarded free on application.

egistered Flushing Basin, the most effective Syphon-trap yet offered to the public.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1850.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

Corbett, in consequence of the lease of the premises having expired. The Stock consists of useful oak timber trees, elm, ash, and lime in timber and boards, about 500 sawn oak posts of various lengths, 100 pairs oak cart rails, 5,000 oak cleft pales, oak ash sills, quartering, gravel plank, oak stocks, ash halvelings, wheeling planks and barrow, useful slabs, firewood, and various other effects. May be viewed the day preceding the Sale; and catalogues had at the Inns in the neighbourhood of Blackheath, Greenwich, Deptford, Bromley, Camberwell, Dulwich, Sydenham, Lee, and Lewisham; at the place of Sale; and at Mr. MARSH'S Offices, 2, Charlotte-row, Mansion-house.

KENT—CHISLEHURST.—TO BE LET, on Building Leases, in this delightful, healthy, and much-frequented village, abounding with pleasant walks and drives, THREE PLOTS of FREEHOLD LAND, together about six acres in one or more lots, most picturesquely situate, with extensive views to the south, and a few minutes' walk from the Churches of England and Rome. Water excellent and provided. Drainage good, and five miles from the rail, with daily conveyance to and fro. Also, valuable FREEHOLD LAND, suitable for Cottages, at the leisure hill, near the cricket-ground.—Apply to GEORGE BASKCOMB, Esq. Chislehurst; or R. P. BROWN, Esq. 30, Clement's-lane, and Greenwich.

TO BE LET, on a Repairing Lease, direct from the Freeholder, TWO HOUSES, Nos. 2 and 3, Yorkstreet, Westminster, in the immediate vicinity of the new street.—For particulars apply, by letter, to Mr. KNIGHT, Architect, 57, Charlotte-street, Portland place.

OXFORD.—To BUILDERS.—BUILDING GROUND, at Park Town, TO BE LET, on long Building Leases, at moderate ground rents (to include sewers, road and iron railing), with option of purchasing the fresh land, several of the best positions having been selected for the erection of Suburban Villa Residences. This is worthy the notice of respectable builders, to whom if required advances will be made as the work goes on. A plan of the estate can be seen at the office of Mr. THOMAS WYATT, Architect, &c. 2, Maiden-street, Regent-street.

FREEHOLD BUILDING GROUND TO BE LET or SOLD; ten acres. Capital roads. Twenty-five miles from town, two and a-half from Horley and Three Bridges stations (Brighton line), a loop line nearly completed to East Grinstead, with a station at a convenient distance, which doubles its value,—near two churches and other buildings (some good private dwellings) contiguous; views delightful; situation healthful; soil good. Brick earth is supposed to be on the property, as bricks are made not very far distant. Terms moderate. Plans to be seen at the Offices of JOHN BURGES WATSON, Esq. Architect, 9, Nottingham-place, New-road, Regent's-park.

NEW METROPOLITAN CATTLE-MARKET.—BANKING-HOUSES TO BE LET.—The Markets' Improvement Committee will meet at Guildhall, on THURSDAY, the 16th of NOVEMBER inst. at ONE o'clock precisely, to receive TENDERS for the BANKING-OFFICES at the New Market. Tenders must be sealed, and endorsed, "Tender for Banking-offices." Parties offering the highest terms per annum will be entitled in rotation to preference in the selection of offices. The Committee do not bind themselves to accept any offer which may be below the value estimated by them. Plans may be seen, and particulars obtained, at the Architect's Office, Guildhall, any day (Sundays excepted) between the hours of TEN and FIVE. MEREWETHER.

NEW METROPOLITAN CATTLE-MARKET.—PUBLIC-HOUSES TO BE LET.—The Markets' Improvement Committee will meet at Guildhall, on THURSDAY, the 16th day of NOVEMBER inst. at ONE o'clock precisely, to receive TENDERS for the FIVE PUBLIC-HOUSES at the new market, viz.: the Lion, the Lamb, the Black Bull, the White Horse, and the Butchers' Arms. The particular house required, must be specified in the Tender. Tenders must be sealed and endorsed "Tender for Public-house." The committee do not bind themselves to accept the highest Tender. Plans may be seen, and particulars obtained, at the Architect's Office, Guildhall, any day (Sundays excepted) between the hours of TEN and FIVE. MEREWETHER.

LAND adapted for METROPOLITAN CEMETERIES.—Sewers Office, Guildhall, 24th October, 1854.—The Commissioners of Sewers of the City of London, acting as the Burial Board for that City, have about 100 ACRES, of valuable FREEHOLD LAND, which they are desirous of SELLING to any parish or parishes for the purpose of a cemetery. It being peculiarly adapted for such purpose. The land is situate in the parish of Little Ilford. The Eastern Counties Railway runs close by it, and may by arrangement run directly into it. It is also directly accessible by the high road from London and from Wanstead, and is about a quarter of a mile west of Ilford. The ceme tery for the City of London is formed on the adjoining portion, and the said Commissioners will sell the land in question, subject to the restrictions that no building is to be erected on it except for agricultural purposes or the purposes of a cemetery. The land-tax is redeemed. Plans of the property may be inspected at the office of the Surveyor to the Commissioners, at No. 14, Old Jewry-chambers, where further particulars may be known, or of the undersigned.

JOSEPH DAW, Principal Clerk.

BUILDING GROUND TO BE LET.—KING'S CROSS, opposite the Station (Houses or Factories). EALING, near the Railway Station (Villas). SUTTON, close to the Station (Villas and Inn). WIMBLEDON PARK, near the new Station (Villas). VAUXHALL, abutting on the Station and River (an extensive Wharf and Warehouses, Freehold, to be Sold). Apply to NELSON and INNES, Architects, 28, Regent-street.

FREEHOLD LAND, WIMBLEDON, SURREY, FOR SALE, a Plot on the Cottenham Park Estate, 28 ft. 6 in. frontage, by 180 ft. deep. Price 38l. including conveyance. 25l. may remain on mortgage, to pay at 5l. per month. Apply to J. A. BOOSEY, 5, Oxford-street, Cownhouse-road, Islington.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Lease. Money advanced to respectable builders. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

A THOUSAND YEARS.—MONEY LENT. A BUILDING LAND TO BE LET, for the above term. Ground-rents moderate. Charges moderate. Advances liberal.—Apply to Mr. WILLIAM ELLISON, Architect and Surveyor, 19, Stainsby road, Limehouse

EXTENSIVE and commodious BUILDING and YARD, known as the Bishopsgate Workhouse, situate in Dunning's-alley, Bishopsgate, TO BE LET or SOLD. The building is very capacious, and well adapted for factories or warehouses. The piece of ground is about 80 feet from east to south side of Dunning's-alley, and of average depth of 77 feet from north to south. Tenders are to be sent on the 30th of NOVEMBER instant, to the Office of Mr. MARTIN, 25, Sun-street, Vestry Clerk.—Further particulars required may be had on application to the Vestry Clerk; or of Mr. MEREDITH, No. 7, Great Winchester street, Broad-street.

TO BE SOLD, a FREEHOLD PLOT of GROUND (on which is a house called Walnut-tree Cottage), desirably situated North-end, Fulham, within three miles of Hyde-park-corner, for building purposes, having a frontage near the high road, with an average depth of 300 feet, and admirably adapted for building purposes, and is considered to be particularly suitable, from its extent and the nature of the locality, for the erection of buildings of the second or third rate, suggestive of which block plans have been prepared.—Particulars may be obtained, and plans of the property may be inspected, at the Offices of Mr. HERBERT PRICKETT, Surveyor, 15, Chancery-lane, and 23, Paddington-green.

TO PLUMBERS, PAINTERS, AND GLAZIERS

TO BE LET, on lease, extensive PREMISES, with a good BUSINESS attached. Established fifty years. The proprietor retiring. No premium. Near Regent-street and Oxford-street.—Apply at the Counting-house, 38, Great Castle-street, Regent-street.

THE FINSBURY and GENERAL FREEHOLD LAND SOCIETY.—Established 1850. Office, 48, Bedford-row.—A PUBLIC BALLOT for Rights to Allotments in the Market-Field Estate will take place at the Sportsman, City-road, on WEDNESDAY, the 22nd of NOVEMBER. Chair to be taken at EIGHT o'clock precisely. All shares issued previously on which one month's subscription has been paid, will be eligible for the ballot.—Monthly subscription, 4s.; entrance and rules 1s. 6d. R. A. MARCH, Secretary.

NATIONAL FREEHOLD LAND SOCIETY, 14, MOORGATE-STREET. TO BUILDERS AND OTHERS.

Portions of LAND of various sizes, and suitable for the erection of first, second, and third-class houses, for SALE, on the following estates of the National Freehold Land Society:—

ENFIELD,	WALTHAMSTOW,
CLAPHAM,	RED HILL,
CROYDON,	DORKING,
ROMFORD, and	KINGSTON-HILL.

In several of these neighbourhoods there is a great demand for houses, and the land may be purchased on the payment of a deposit of 10 per cent. and the balance in nine equal annual instalments, with interest. W. E. WHITTINGHAM, Secretary. November 14th, 1854.

CARCASES FOR SALE.—TWO SEMI-DETACHED VILLAS, Birch-lane, Brook-green, Hammersmith. For terms, apply to Mr. BARLOW, 11, Portman-street, Portman-square.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of CON Brothers, and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, November 11, 1854.

ADVERTISEMENTS.

TO the Justices of the Peace for the County of Kent.

My Lords and Gentlemen,—I beg to offer to you my grateful thanks for the confidence you have placed in me by returning me a successful candidate for the office of District Surveyor of Romford, under the Metropolis Buildings Act. The Legislature has deputed great power and responsibility on the officer holding the appointment, and it will be my duty, as it is my full intention, to transact the business of the office personally, and I trust in such manner as will justify the appointment you have made.

I have the honour to be, my Lords and Gentlemen, your most obedient servant,

JOHN WHICHCORD, F.S.A.

Fellow of Royal Institute of British Architects.

3a, Poets'-corner, Westminster Abbey, 13th Nov., 1854.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.

The CATALOGUE of the COLLECTION will be issued on the 1st of JANUARY next, including a limited space for advertisements for Fine Art Manufactures.

For particulars, application should be made to the Publishers, Messrs. MASTERS and Co 78, New Bond-street, and 33, Aldersgate-street, on or before the 1st of DECEMBER next.

Oct. 18th, 1854.

THE ARCHITECTURAL MUSEUM, Canon-row, Westminster.

The SECOND of a COURSE of LECTURES, addressed to workmen engaged in decorative art, will be delivered at the Museum, on SATURDAY, NOVEMBER 25th, at TWO o'clock (in stead of THREE o'clock, as originally arranged), on the GENERAL PRINCIPLES of OUTLINE, by JOHN RUSKIN, Esq.

Students' cards may be had at the Museum.

HENRY CLUTTON, Hon Secretary

ARCHITECTURAL PUBLICATION SOCIETY.—At a Special Meeting of the Subscribers, held at the Rooms of the Institute of British Architects, on Wednesday evening, the 15th inst. it was moved by W. G. Habershon, esq. and seconded by H. B. Garling, esq. and resolved unanimously, "That in the opinion of this meeting the Dictionary of Architecture is worthy of the support of the profession, and of the public generally."

Resolved unanimously, "That this meeting sees no reason to alter the mode of conducting the work, being assured that all suggestions kindly offered to the committee will be carefully considered."

Moved by Professor Donaldson, and seconded by C. C. Nelson, esq. and carried unanimously, "That the best thanks of the meeting be given to the chairman, William Tite, esq. F.R.S. for his kindness in taking the chair on this important meeting, and the urbanity and judgment with which he has conducted the discussion."

WYATT PAPWORTH, Hon Sec.

THE ARCHITECTURAL EXHIBITION, Suffolk-street Gallery.—All DRAWINGS, MODELS, PHOTOGRAPHS of BUILDINGS, and PATENTS, MATERIALS DECORATIONS, &c. intended for the department of Manufactures connected with Architecture, must be delivered between the 1st and 5th of DECEMBER next.

Those who may intend to become subscribers, and have not yet sent in their names, should do so in good time, as a list will be printed with the Catalogues.

Drawings intended for the French Exhibition will have a special place provided for them, and may be exhibited here first of all, as the Committee appointed by the Board of Trade will not select those that are to be sent till very nearly the period when this Exhibition closes.

In addition to the former list of Local Honorary Secretaries, the following gentlemen will act, and afford information on the spot:

BIRMINGHAM	W. W. Bateman, esq.
BRISTOL	S. C. Fripp, esq.
CORK	W. W. Lrash, esq.
DURHAM and County	H. W. Pritchett, jun. esq. Darlington.
LLANDAFF	J. P. Seddon, esq.
MANCHESTER	J. E. Gregan, esq.
NOTTINGHAM	Thos. C. Hine, esq.
OXFORD	J. L. Seekham, esq.
READING	Chas. Heaman, esq.
YORK	Geo. F. Jones, esq.

JAS. FERGUSSON, F.R.A.S. 20, Lansham-place, } Hon. Secs.
JAS EDMESTON, Jun. 5, Crown-court, Old Broad-street, }

EVENING LECTURES.—The First of a Series of Courses of Evening Lectures at the Government School of Science will consist of TWENTY LECTURES on the CHEMISTRY of NON METALLIC BODIES, with special reference to their applications in the Arts, to be given by Dr. HOFMANN, F.R.S. on the Evenings of Wednesdays and Fridays, at Eight o'clock, commencing on the 24th of November next.

Tickets for the whole course may be obtained, at 5s. each, on application to the Registrar of the School, Museum of Practical Geology, Jermyn-street. SPECIAL TICKETS for SCHOOLMASTERS of Public Schools, at 2s 6d each, for the whole course, may also be had there, and at the Department of Science and Art, Marlborough House

COMPETITIONS.

BRIDGES.—To BRIDGE ENGINEERS and CONTRACTORS.—Any person desirous of submitting economical PLANS for ERECTING a HIGHWAY BRIDGE and FOOTWAY over the River Wye, at Hoarwithy, near Ross, in the county of Hereford, and preparing plans for deposit on 30th NOVEMBER inst. as required by the Houses of Parliament, may communicate at once to Mr. J. F. SYMONDS, Solicitor, Hereford.

TO ARCHITECTS.

THE DIRECTORS of the CHESTERFIELD MARKET COMPANY are desirous of receiving DESIGNS and ESTIMATES for a MARKET-HOUSE and PUBLIC ROOMS. A Premium of 30l will be paid for the most approved design, and 15l. for the next best. The drawings and estimates must be delivered at the Offices of Messrs. SHIPTON and HALEWELL, Solicitors, Chesterfield, on or before TEN a.m. on the 21st DECEMBER next, addressed to the Secretary, from whom particulars, together with a plan and section of the intended site, may be obtained on payment of 5s.

Chesterfield, Nov. 1, 1854. GEORGE WALLIS, Secretary.

TO ARCHITECTS, BUILDERS, &c.

THE Committee for the Erection of National Schools in the parish of Ludlow, Salop, are desirous of receiving PLANS and ESTIMATES of adequate SCHOOL BUILDINGS for 150 boys, 150 girls and 200 infants, with classrooms, suitable residence for a master, mistress, and infant schoolmistress, fencing, &c to be erected according to the requirements of the Committee of Privy Council on Education, in a plain and substantial manner, such as the Committee of Council will approve, as regards height of rooms, ventilation, &c. All such Plans must be sent, on or before the 1st of JANUARY, 1855, to the Rev. J. BANKS, Hon. Secretary, Grammar School, Ludlow, of whom further particulars may be obtained

KING'S LYNN UNION.—PLANS for NEW WORKHOUSE.—PLANS and GENERAL SPECIFICATIONS and ESTIMATES are required for a Workhouse, to be erected on land in Extn'sroad, South Lynn, to contain 450 paupers. Information as to the rooms and offices required, to ensure proper classification, and a plan of the site, may be obtained, and all other particulars known, on application to me. Plans, &c to be received by me on or before the 21st DECEMBER next. The Architect producing a plan which shall be accepted by the Guardians, and approved by the Poor-law Board, will receive a premium of 50l; and his plans, &c. will become the absolute property of the Guardians, who may, at their discretion, employ the Architect producing them to superintend the building or not. If employed, his remuneration will be hereafter agreed on, and will include the premium. The Guardians do not bind themselves to accept any of the plans which may be submitted.

By order, JNO. JAS. COULTON, Clerk.

Lynn, 10th Nov. 1854.

CONTRACTS.

LLANELLY LOCAL BOARD of HEALTH WATER WORKS.—CONTRACT No. 3. Private Improvement Works, &c.—To PLUMBERS, FITTERS, and OTHERS.—Notice is hereby given, that the Llanelly Local Board of Health are ready to receive TENDERS for the supply of sundry small PIPES, BENDS, ANGLE, ELBOW-PIECES, SOCKETS, NIPPLES, FERRULES, COCKS, TAPS, &c. and apparatus for water supply, together with the laying, fixing, jointing, connecting and perfecting the same from the street, main, and service water-pipes to sundry houses, places, buildings and premises, all situate at Llanelly, with the supply of sundry other articles, materials, apparatus, labour, and other works. A specification can be seen, and form of Tender obtained, at the Office of the undersigned, on and after TUESDAY, the 21st day of NOVEMBER inst. upon payment of two shillings and sixpence. All Tenders must be made according to the prescribed form, and delivered to me, at the Office of the said Board of Health, on or before FOUR o'clock on FRIDAY, the 1st day of DECEMBER next. The Local Board do not bind themselves to accept the lowest or any Tender.—By order of the Llanelly Local Board of Health.

(Signed) F. L. BROWN, Clerk.

Llanelly, November, 1854.

BRIDGNORTH BOARD of HEALTH.—To CONTRACTORS, PIPE-MAKERS, and OTHERS.—The Town Council of Bridgnorth give notice, that they are prepared to receive TENDERS from persons willing to contract for the following, being Contracts Nos. 1 and 2, for the DRAINAGE of part of their district, viz.:

CONTRACT No. 1.—For the supply of Glazed Stoneware Sewer and Drain Pipes, Junctions, &c.

CONTRACT No. 2.—For laying Sewer and Drain Pipes, and for making and completing about 1,470 feet of 9-inch Brick sewer.

The specifications and conditions of contract of either of the above may be obtained upon payment of 5s. and drawings, plans, and sections inspected, by application at the offices of JAMES PILBROW, Esq. C.E. Tottenham, Middlesex Engineer to the said Board, or RICHARD TAYLOR, Esq surveyor, Bridgnorth. Sealed Tenders, properly endorsed, and addressed to the Local Board of Health, Bridgnorth, must be sent on or before THURSDAY, the 7th of DECEMBER next.

By order of the Board, J. J. SMITH, Clerk.

Bridgnorth, Nov. 10, 1854.

CONTRACTS.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES, viz.—

1. COMPLETING the INTERIOR of the BULL POINT MAGAZINE ESTABLISHMENT, with Railroads, Asphalting, Metalling &c. &c.:
2. FORMING a RAILROAD to connect the Bull Point Magazine with the Powder Establishment at Kinterbury:
3. BUILDING TWO WALLS at or near No. 4 Magazine, Bull Point, as a temporary completion of the Enclosure:
4. BUILDING a GUARD-HOUSE at Bull Point:

For SPECIFIC SUMS,

Will be received at the Ordnance office, Pall mall, London, on or before the 1st DECEMBER next. Detailed specifications of the above four services, and every requisite information, may be obtained at the Royal Engineer Office, Pull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 7th to 24th NOVEMBER, both days inclusive.

Royal Engineer Office, Dev.nport, 29th October, 1854.

TO BUILDERS.

Royal Engineer Office, Eastbourne, 14th Nov. 1854.

TENDERS will be received by the Hon. Board of Ordnance, at their Office, Pall Mall, London, on THURSDAY, the 30th day of NOVEMBER, 1854, from such persons as may be willing to undertake the ERECTION of a BATTERY, with MAGAZINES, &c at Newhaven, in the county of Sussex. The plans, specifications, and conditions of contract for the above works may be seen, and every information obtained on application at the Office for at the Royal Engineer Office, Portsmouth, between the hours of TEN and FOUR each day Sundays excepted. Tenders to be endorsed, "Tender for the Erection of a Battery, with Magazines, &c. at Newhaven, in the county of Sussex."

TO CONTRACTORS, ENGINEERS, AND WELL BORERS.

HALSTED LOCAL BOARD of HEALTH. The Board hereby give Notice that they are prepared to receive TENDERS from competent persons who may be willing to undertake all or any or either of the following CONTRACTS:—

CONTRACT No. 1. For Constructing and Completely Finishing the Main Drainage and Water Mains, with Reservoir and Works connected therewith

CONTRACT No. 2.—For Steam-Engine, Boilers, &c.

CONTRACT No. 3.—For Sinking and Boring Well.

The drawings and specifications may be seen, and forms of Tender and stipulated quantities, &c. may be obtained at the Office of the Engineer Mr. EDWARD GOTTO, 35, Great George-street, Westminster, Lond n, on and after the 1st of NOVEMBER next; and sealed Tenders must be sent in to me, on or before the 29th DAY, the 29th day of NOVEMBER next. The Board do not bind themselves to accept the lowest or any Tender.

By order of the Board,

O. HUSTLER, Clerk to the said Board.

Halsted, 28th October, 1854.

Sewers Office, Guildhall, November 14, 1854

CITY of LONDON CEMETERY. The Commissioners of Sewers of the City of London, acting as the Burial Board for the said City, hereby give notice, that they will meet at GUILDHALL, on TUESDAY, the 12th DECEMBER next, at TWELVE o'clock precisely, for the purpose of receiving TENDERS for the EXECUTION of an ENTRANCE GATEWAY and GATES, PORTERS and SUPERINTENDENTS HOUSES, EPISCOPAL and DISSENTERS' CHAPELS, and for the CONSTRUCTION of DRAINS, GULLIES, &c and other Works, at the City of London Cemetery, at Little Ilford, in the County of Essex. The Tenders are to be sealed up, endorsed on the outside, "Tender for Works at City Cemetery," and delivered at the Office of the Clerk of the Commission, Mr. JOSEPH DAW, on or before TWELVE o'clock on the said 12th DECEMBER, after which hour no Tenders will be received. The parties tendering, or some one on their behalf, are to be in attendance at the time of opening the Tenders. The commissioners do not bind themselves to accept the lowest or any Tender—Further particulars may be known, and the plans and specification seen at the Office of Mr. WILLIAM HAYWOOD, 10, Old Jewry Chambers. Security for 4,000l. will be required from the party whose Tender may be accepted. JOSEPH DAW, Principal Clerk.

OXFORD MARKET.

CONTRACT FOR IRON AND GLASS ROOFING

THE COMMITTEE for the MANAGEMENT of the OXFORD MARKET are prepared to receive TENDERS from builders and others for the CONSTRUCTION of an IRON ROOF, of about 23 feet by 28 feet, to correspond with the present iron roof over the principal avenue of the new market, and for taking off the slates from a certain portion of the roof of the principal avenue of the new market, and substituting glass for such slates and for other works.

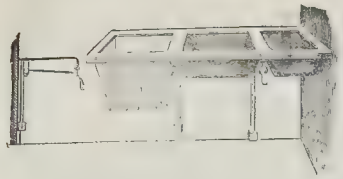
Plans and specifications of the works to be executed are now lying at the Committee Room in the Market-street, Oxford, and may be inspected on application to Mr. T. COOK, the Market Beadle

Sealed Tenders for the execution of the works in question, endorsed "Tender for Oxford Market Works," to be addressed to Mr G. DAYMAN, Solicitor, Oxford, Clerk to the Market Committee, and to be sent before the 29th instant.

It is to be understood that the committee do not pledge themselves to accept the lowest or any Tender.

G. DAYMAN, Clerk to the Market Committee.

Oxford, Nov. 13, 1854.



TO BUILDERS AND CONTRACTORS.

A CHURCH being about to be erected at Torquay, Devon, persons desirous of CONTRACTING for the same may deliver TENDERS, in or before the 24th day of DECEMBER next, to Messrs. W. and C. KITSON, Torquay, at whose Office the plans, specifications, and conditions may be seen, and from whom, or of A. SALVIN, Esq. 30, Argyle-street, London, any further information may be obtained. The Committee for Building the Church reserve the option of rejecting any Tender.

Torquay, Nov. 13, 1854.

[For remainder of Contracts see next page.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGEL RACK and WATER TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements by direct invention secured by patent, which includes an entirely new method of attaching the halter ball and rein, giving to the horse greater freedom, and being noiseless in operation, add much to its comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

Of the Best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An Improved CAST IRON TRAP, strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the Trap-plate will pass any matter the top grating will let through, and therefore is not liable to stoppages and well adapted to Stables and Stable-yards, for saving the best part of liquid Manure.

CONTRACTS.

FURNESS RAILWAY.—The Directors are prepared to receive TENDERS for the WIDENING of their RAILWAY between Cross-cans and Lindal Stations, being about 1,55 lineal yards in length including the enlargement, or open cutting of the present Lindal tunnel, about 563 lineal yards in length. Plans, sections, with specification and form of Tender may be inspected on application at the Offices of Messrs McCLEAN and STILEMAN, the Company's Engineers 17, Great George street, Westminster; or at the Company's Offices, Barrow, Ulverstone, Lancashire, after TUESDAY, the 21st NOVEMBER next. Sealed Tenders to be forwarded, addressed to the Secretary, on or before the 5th DECEMBER, 1854. The Directors do not bind themselves to accept the Lowest Tender. By order,

JAMES RAMSDEN, Secretary

Barrow, Nov. 16th, 1854.

TO BUILDERS.

NEW BAPTIST CHAPEL, BRENTFORD, MIDDLESEX.—TENDERS are required for BUILDING the above CHAPEL. Persons willing to contract for the same can see the drawings and specification by applying to Mr. BIGGERS, at the Town-hall, Brentford, from SATURDAY, NOVEMBER 18th, to MONDAY, the 27th, between the hours of NINE and FIVE. The Tenders are to be delivered at the Office of the Architect, Mr CHARLES G. SEARLE, 25, Poultry, on or before TUESDAY, 28th NOVEMBER, at TWELVE o'clock punctually. The Committee will not bind themselves to accept the lowest or any Tender, unless satisfactory.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a PUBLIC-HOUSE, on a Plot of Ground adjoining the Wandsworth-road, Pimlico, may inspect the drawings, at the offices of the Architect, on and after MONDAY, NOVEMBER 20th next. The Architect does not bind himself to accept the lowest, or any Tender.

GEORGE MORGAN, Architect, 5, Chancery-lane.

TO BUILDERS.

PERSONS desirous of CONTRACTING for the ERECTION of a PAIR of VILLAS, in the Avenue St. Margaret's, Richmond, may inspect the drawings, at the Offices of the Architect, on and after NOVEMBER 27th. The Architect does not bind himself to accept the lowest, or any Tender.

GEORGE MORGAN, Architect, 5, Chancery-lane

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a FARMHOUSE and TWO HOMESTEADS upon the Treverry Estate, near St. Cear's, in the county of Carmarthen, may inspect the plans and specifications, on application to Mr. NICHOLL, Bailiff, at Treverry Farm, and at the Offices of Messrs. DENTON and DRAKE, 62, Parliament-street, Westminster, on and after the 21st day of NOVEMBER. Tenders for the proposed building to be forwarded to Messrs. DENTON and DRAKE, on or before the 21st day of DECEMBER next.

N.B.—The estate is situated about three miles from the St. Clear Station, on the South Wales Railway.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's.—JONES and BLAKTON, having made great additions to the STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Cupolas, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Gratings, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.

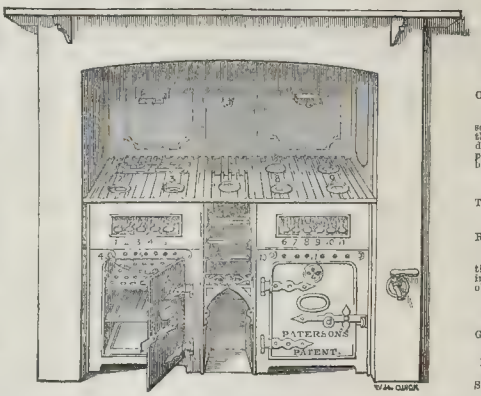
Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.

GLOVERS' IRONWORKS,

163, DRURY-LANE, and CHARLES-STREET.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico. All Works of Art in the various Metals executed at the above Foundry

JOHN FINCH, Ironfounder, Priory-street Works, Dudley, Wholesale Manufacturer of Fenders, Fire-irons, Dove-tail Joints for Iron Bedsteads, Garden-Seats, Flower-Stands, &c. &c.



TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices. JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 13, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillars, Brackets Iron and Brass Tube, Tin and Composition Pipe, &c. &c. at J. JEAL'S 2 and 21, Old-street, near St. Luke's Church, London.

P.S.—As large and choice an assortment as any House in London.

PATERSON'S PATENT GAS COOKING APPARATUS.

May be seen by applying to the Patentee,

A. PATERSON,

53, VICTORIA-STREET, WESTMINSTER.

Of whom LICENSES may be had for making them.

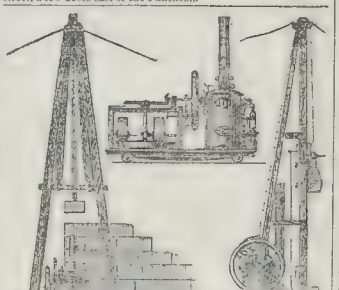
On reference to the plate, it will be seen that roasting can be carried on by the open fire, if required; thereby rendering this apparatus the most compact and efficient of any that has yet been brought out.

THEY ARE MANUFACTURED BY

T. WALLER and CO.

Ratcliff Ironworks, Rose-lane, Ratcliff, near the Stepney Railway Station.

Where they may be seen in operation, and where prospectuses and every information concerning them may be obtained.



Also Manufacturers of every description of

GAS STOVES, BATHS, OPEN AND CLOSE KITCHEN RANGES, HOT WATER APPARATUS, METAL CONSERVATORIES, &c.

N.B. The Trade supplied with Iron Bush Bars, bent to any shape or design. See "The Builder" of Sept. 16.

BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS. These fittings have all the newest improvements, and are the only patentee invention of this description.

Manufacturer of KITE'S Patent Cast-iron Smoke-curing Chimney Cans. Use of this principle on Buckingham Palace. Price 35s. each.—JAMES BARTON, Iron Founder, Smith, &c. 370, Oxford-street, a few doors east of the Pantheon.

A SAVING of TIME and MATERIALS, with Solidity of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM-ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.

TESTIMONIAL

From the Trustees of the Birkenhead Docks.

"Engineer's Office, Dock-yard, Birkenhead, 21st July, 1851.

"Nathan Gough, esq.

"SIR,—I have much pleasure in informing you that the three-horse engine which you have placed in the caisson for pumping, answers its purpose admirably, doing its work much better than seventy men could accomplish. From its portability and lightness, it is peculiarly adapted for such a purpose.

"I am, Sir, your obedient servant,

"JAS. ABERNETHY."

PATENT.

BUILDERS will find that the best MORTISING MACHINE, for both Hard and Soft Wood, ever invented, combining simplicity with economy of manual labour, can be had only at WEBB & GREENWAYS, Steelhouse-lane, Birmingham.

W. and G. direct attention to their recently Patented French Casement Stay and Fastener, Gothic Pattern Casement, and other Window Fastenings, Double-action Floor Door-springs, Cupboard Turns, Barrel-bits, Pistol and other Thumb Latches, &c. &c. which can be had from all respectable wholesale and retail Ironmongers in London.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 36, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

THOMAS EDINGTON (lately senior partner of the Phœnix Iron Works, Glasgow), Iron Merchant, Contractor, Agent for Patents, General Commission Agent, Inspector of Railway Bars and Castings, 17, Gordon street, Glasgow. Agents on commission for the purchase of Scotch Pig-iron, Railway Bars, Bar-Iron, Castings; and for the sale of English Boiler and Ship Plates, Bar-Iron, Angle and Rivet Iron, Anchors, Tunnel Plates, Chains, Cables, Nails, Steel, &c. &c.

TANK WANTED, of iron or other material to hold from 2,000 to 4,000 gallons. Send size, description, and lowest price delivered, to Mr. J. BOLTON, Royal Clifton Spa, Bristol.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furniture of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 300 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

CHUBB'S LOCKS & FIREPROOF SAFES.

INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,

"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs. Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 18, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

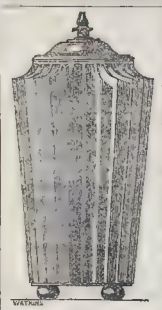
IRONMONGERS, ZINC-WORKERS, &c. supplied with SHEET ZINC, PERFORATED ZINC, TUBING, &c. of best quality, at the lowest prices, at WILLIAM HARMER'S Iron, Metal, and Zinc Warehouse, 1, New Peter-street, Horsferry-road, Westminster Castle-iron Rain Pipes and Gutters, sash-weights, Railing Bars, &c. at wholesale prices

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT—Plain, from 12s to 42s.; Ornamental from 31s 6d to 10 guineas—for warming halls, passages, green houses, water closets, shops, store rooms, and all places requiring artificial warmth To be seen in use at the sole Proprietor's, S. NASH, Ironmonger, &c, 233 Oxford-street, and at the City Depôt, 116 Newgate-street, London. PATENT PREPARED FUEL for the stoves, 2s 6d per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and Italian irons with perfect cleanliness, for twelve hours, with one pennyworth of coke or cinders. Price 12s

*** Prospectuses, with drawings and report, forwarded free.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 30, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 272, Holborn

DR. ARNOTT'S new OPEN SMOKELESS FIRE GRATE having been brought to full perfection, may now be seen in daily operation at FEDWARDS and SONS, 39, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot-air or vestal stoves. Old grates are altered to this principle. Prospectus sent on application.



HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; Improved Boilers, requiring no brickwork; WARM AIR Apparatus, &c. Apply to S. S. TAYLER, Engineer, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c to their improved apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's, delivered at a meeting of the Architectural Society, wherein Mr Bigge shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Constructors and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and parsonymen to their ample but efficacious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4 000 buildings, consisting of churches, prisons, lunatic asylums, halls, and shops, galleries, conservatories, forcing houses, &c can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood and of iron and wood combined. Estimates upon application COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

CUNDY'S PATENT PURE WARM-AIR STOVES The only Pedestal Stove which gained a Prize Medal (Class 4?8) at the Great Exhibition in 1851. Especially adapted for warming with great economy churches, chapels, schools, entrance-halls, and libraries. Can be purchased only at the manufactory of CUTLER and SONS, Ironfounders, &c. 16, Great Queen-street, Long-acre, where a large stock is always ready for immediate delivery.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation To be seen in action at DEFRIES'S office, 147 Regent-street, London.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849. A 2-inch cubic feet room warmed by hot air only, at 65 degrees Fahrenheit, in burning 10 lbs. of coal per hour The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damper vitiated air, that makes it very desirable for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses The Calorifere has been adopted by his Grace the Duke of Bedford, at Woburn Abbey by several architects, and it may be seen in operation in many places in London and country.—Apply, per post, to T. BOILEVE, French Engineer, 55, King William-street, City.

AUSTIN'S IMPERIAL PATENT SASH and BLIND LINE, can be obtained of all ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Iron Metal, &c. &c.

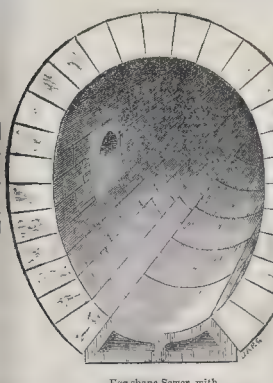
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10 11, and 12, Charles-street, Long acre, London.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c J. JONES, Iron Merchant, Iron-bridge Wharf, No 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c &c

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

CAST-IRON PIPES, IRON-WORK FOR OVENS, &c. RAIN PIPES, &c. — F. A. TIDDEMAN and CO. St. Ann's Wharf, Earl-street, City, near Blackfriars-bridge, keep a large stock of Rain Pipes, Heads, Shoes, Elbows, &c. half-round and O-G Gutters, Socket Pipes for Water or Gas, Flange Pipes, Hot Water Pipes and Connections, Sash Weights, and other castings; Iron work for Bakers' Ovens of every description, fitted complete, to be had in sets or in parts.—Prices equal to all competition Contracts taken to any extent. Goods landed. A powerful crane.

HENRY DOULTON AND CO.'S

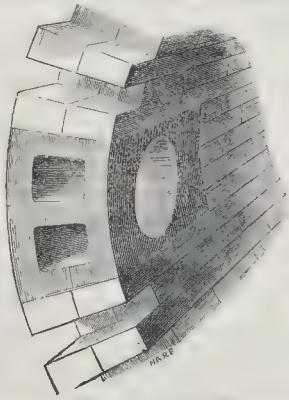


PATENT SEWER JUNCTION BLOCKS AND INVERT BLOCKS,

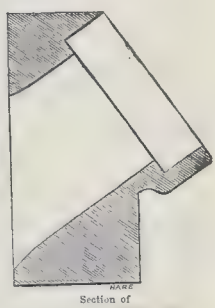
IN GLAZED STONE WARE,

HIGH-STREET, LAMBETH, LONDON.

The connection between pipe drains and sewers, and brick sewers, is made perfect and secure by the use of DOULTON'S PATENT JUNCTION BLOCKS. Each block is made to correspond in thickness with the order of the brick sewer, so as to build or bond in with the brickwork; the inner surface is made to correspond with the internal figure of the sewer. Each block has a socket, either within its thickness or just protruding beyond it, to receive the end of a pipe. They are made to receive pipes, entering either straight or obliquely. When fixed, they form part of the sewer, they cannot be improperly placed, and a certain and proper fall is secured at the point where the junction is made.

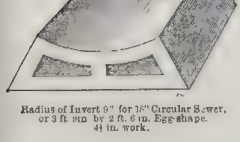


THE PATENT JUNCTION BLOCKS MAY BE FITTED WITH METAL FLAP-TRAPS IF REQUIRED.



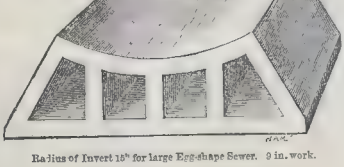
Egg-shape Sewer, with DOULTON'S PATENT JUNCTION AND INVERT BLOCKS.

Section of STRAIGHT JUNCTION BLOCK.



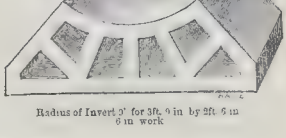
JUNCTION BLOCK as fixed in Sewer.

Section of OBLIQUE JUNCTION BLOCK.



DOULTON'S INVERT BLOCKS, in stone ware, form a glazed, even, and imperishable surface for the bottoms of brick sewers, and also a sure foundation for the structure. They have been used extensively by the Metropolitan and City Commissioners of Sewers, and in all cases have been highly approved by the engineers both for the facilities they offer in the construction of sewers, and for their subsequent action in permitting an easy and uninterrupted flow of the sewage matter. They offer the means for carrying off all superfluous water while the sewer is in course of construction, and when required give a channel for land drainage independent of the sewage.

No. 1.



Radius of Invert 9" for 18" Circular Sewer, or 3 ft. 9 in. by 2 ft. 6 in. Egg-shape. 9 in. work.

No. 6.

Radius of Invert 18" for large Egg-shape Sewer. 9 in. work.

No. 5.

Radius of Invert 3' for 3ft. 9 in by 2ft. 6 in 6 in. work

A full description, with sizes and kinds of both Junction and Invert Blocks, forwarded on application, post-paid.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

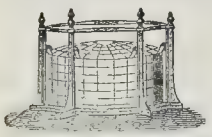
ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanized Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses.

Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at



No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from spreading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11	Gauge	weighs	about	18 oz.	per foot super.
No. 12	"	"	"	20 oz.	do. do.
No. 13	"	"	"	24 oz.	do. do.
No. 14	"	"	"	26 oz.	do. do.

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS,
19, Wigmore-street, London;
and at the Crystal Palace, Sydenham.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at FEELL and STEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

IRON ROOFS, Wrought-iron GIRDERS, Girder Bridges, Railway and Builders' Wrought-iron Work, Gasholders, Tanks, and Boilers.
CHARLES WALKER and SONS,
Midland Iron Works, Tipton, Staffordshire.
Office, Little Sutton-street, London.

THE PATENT GALVANIZED IRON.
TUPPER and CARR,
Owners of Craufurd's Patents, and Successors to
THE GALVANIZED IRON COMPANY,
Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.
An allowance to the Trade.
GALVANIZING WORKS,
REGENT'S CANAL DOCK, LIMEHOUSE;

List of Prices had on application at the Warehouse, or by letter prepaid.

TO BE SOLD, by PRIVATE TREATY, a GASHOLDER, 30 feet diameter by 12 feet deep, with suspension chain and wrights. Also a wrought-iron TANK, 31 feet diameter by 12 feet deep, with guide rods, &c. A STATION METER to pass 5,000 cubic feet of gas per hour. A sixteen 6-inch pipe CONDENSER, with bottom box complete. The whole of the above are in a sound condition, and in good working order.—For particulars, apply to J. EUNSON, Jun. Gas Works, Northampton.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company. J. FARRELL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 42 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor.

INODOROUS FELT, for damp walls and for damp floors, under carpets and floor cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c., and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel, and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 2, DOWGATE-HILL, LONDON.

SECOND-HAND or NEW small PORTABLE FORGE WANTED.—Address, stating particulars and price, &c. to F. C. T. Office of "The Builder."

HYDRAULIC PRESS.—For SALE, by private contract, an HYDRAULIC PRESS, by Bramah and Robinson, with 18-inch ram, base plate, 5 feet 9 long, 2 feet 6 wide; pair of Pumps, with 1-inch and 2 inch plungers; Press-box and apparatus, in excellent condition. Apply to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s per ton Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe. G. H CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

MARBLE.—1,000 tons in Block, and 20,000 feet in Slab, of the choicest quality, and of the following descriptions, viz. Statuary, Vein, Sicilian, Black, Bardilla, Dove, Black and Gold, Sienna, Griotte, Languedoc, Sarrancolin, Verte des Alpes and St. Ann's, are included in the sale of the first portion of the important Stock advertised by Messrs. EVERSFIELD and HORNE, TO BE SOLD, at the WHARF, Maiden-lane, King's-cross, on the 23rd and 24th instant.

MARBLE CHIMNEY-PIECES.—An ASSORTMENT of nearly 200 CHIMNEY-PIECES, including many in Statuary of the richest design and execution, besides a large variety of a less costly character, in all the most admired Marbles, together with the other valuable Contents of the Show-rooms, including table tops, monuments, vases, baths, &c. will be included in the Sale of the Second Portion of the important Stock advertised by Messrs EVERSFIELD and HORNE, to be sold on the Premises, near St. Pancras Church, New-road, on the 25th and 26th instant.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention that defy competition in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c. at the Marble and Stone Sawing-mills, Cambridge-heath, Hackney. WM. HUSTLER, Proprietor.—Two Marble Masons wanted.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public, that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr. Thompson being no longer his agent.

Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

BUILDERS, &c. &c.—Take notice of the extraordinary reduction made in the price of marble work. A Vein Marble Box Chimney-piece, including a neat Stove, only 11 12s. A good-sized Vein Marble Chimney-piece, with caps and bases on plinths fitted up in the best style, including a very elegant Stove, 2l. 6s. Terms, net cash and wholesale; also several large statuary carved chimney pieces on view, from 20l to 50l. each.—Westminster Marble Company, Earl-street, Millbank.

ITALIAN and GALWAY MARBLE QUARRIES. Depôt, Whitehall-wharf, Parliament-street.—Mr. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade, &c. that he has just landed in the St. Katherine's Docks, ex *Roberto* and *Betty*, from Leghorn, 50 blocks of MARBLE, consisting of large open statuary, suitable for sculpture, Sicilian, vein (statuary ground), dove, Bardilla, &c. Also, at his depôt may be found 100 blocks of marble, consisting of open statuary, vein, Sicilian, black and gold, Galway black, and St. Ann's, and 25 different coloured marbles. A large stock of sawn slabs of every description of marble.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.

Just arrived, per *Roberto*, *Ythan*, *Betty*, *Natalie*, and *Harlerdina*, 150 Blocks of Marble, and 12,000 feet of Sawn Slab, Mortars, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London.

THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marbles, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MONUMENTS! MONUMENTS!—For POLISHED GRANITE MONUMENTS, apply to G. H. CLARK, Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Manager—JAS. J. TRATHAN, Liskeard.

This Granite is selected for the New Westminster-bridge.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large STOCK kept of Mantel pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises. White Wharf, Cannon-row, Westminster.

BIDEFORD, DEVON.—To STONE and MARBLE MASONS.—TO BE SOLD, by Private Contract, the STOCK IN TRADE, of the late Mr. JOHN MARTIN, consisting of several large blocks of marble; Portland, Forest of Dean, and free stone; Delabole stones and slates of different scantling; several Forest of Dean tomb and head-stones, and working tools, &c. now on the yard adjoining the Newstead Inn, Bridford. To a person about to engage in a business of this description, such an opportunity rarely occurs, as the purchaser will have the option of taking for a term of years the newly-built dwelling-house, which is pleasantly situate, and replete with every convenience—an excellent garden, commodious yard and workshop, where the business has for a number of years been successfully carried on.—For further particulars and to treat for the same, application to be made to Mr WILLIAM MARTIN, or to Mr ROBERT HOLMAN, Bideford.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 59 and 60, Upper Belgrave-place, Pimlico.

TO SLATE MERCHANTS AND TIMBER MERCHANTS.

WANTED, about 300 squares of SLATING, and about 300 loads of TIMBER and DEALS, in exchange for some small houses.—Apply to J. T. MERRICK, 15, Lowther-arcade, Strand any Evening from Six to Nine o'clock.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank street; also by Messrs. Sharpe, Tooley street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

BRAMLEY-FALL STONE and LARGE LANDINGS.—Mrs. ANN HUSLER can supply any quantity of BRAMLEY FALL STONE, large landings, flags, steps, sills, copings, sinks, &c. & at the lowest wholesale prices. Nota No charge made for supplying to dimensions.—Apply for price, &c. to S. TRICKETT, Shadwell Wharf, Isle of Dogs.

TO NOBLEMEN, GENTLEMEN, BUILDERS, AND OTHERS.

FOR SALE, TWO splendidly-finished SCAGLIOLA PILLARS, about 2 feet in height; cost a very considerable sum of money, but will be sold very cheap to any one requiring them for a grand portico entrance for any building. Can be seen on application to Mr. BRUCCIANI, opposite the stage-door of Drury Lane Theatre.

INDURATED STONE COMPANY, for rendering all Soft Stone, Bricks, Tiles, and Building Materials of all kinds hard and impervious to weather or moisture.

Capital, 50,000l. in 1l. Shares—10s. to be paid on complete registration, and the remainder at call. Under Her Majesty's Royal Letters Patent. Provisionally Registered under 7 and 8 Vict. cap. 110.

Prospectuses, containing the various uses to which this invaluable Patent may be applied, and also the expressed opinion of the most eminent Geologist of the day, may be had at the Offices of the Company, of Messrs. Paden and Hodgkinson, Solicitors, 71, Mark lane, of N. E. Stevens, Esq. Managing Director at Tunbridge Wells; of Edward Roberts, esq. 16, Hollis-street, Cavendish-square, Surveyor to the Company; and of George Lawford, esq. 9, Warnford-court, Throgmorton-street, Broker to the Company.

Applications for Shares to be made to the Managing Director at Tunbridge Wells, to the Solicitors, or of the Broker. Offices of the Company, 14 and 15, St. Swithin's-lane; and High street, Tunbridge Wells. The works are in operation at Kings Quarry, Tunbridge Wells.

The Directors of the above Company have hitherto abstained from making any public statement of the comparison between the price of stone supplied to their premises and that of other stones in ordinary use, they were desirous to obtain from practical investigation, the most accurate results as to the cost of their produce.

The following prices will at once exhibit a comparison so favourable to the Indurated Stone, as not only to command the attention of all persons interested in the use of materials of this description, but to insure a higher rate of profit to the shareholders.

	Average price of Portland Stone	Tooled York Stone.
Prime cost on the wharf, per foot cube	s. d.	s. d.
	4d.	2 3
Whit Sawing per foot superficial	1½d	0 6
Plain work, exclusive of sawing	9d.	0 7½
Sunk work, ditto, ditto	5d.	0 3
Moulded work, ditto, ditto	8d.	1 0

Cost of indurating the Sandstone, including every expense—for the Black, 6d and for the Light, 9d per foot cube.

The reason why Portland and Yorkshire stones are introduced, in comparison with the Indurated Stone, is in consequence of the peculiar adaptation of the latter for all purposes for which the other stones are in most requisition, as it does superior advantages as to durability, with the important addition of imperviousness to moisture, the impossibility of vegetation arising on the surface, and the case and non-expensive progress with which the Sandstone can be worked to any form previous to induration.

The Company have already made arrangements for granting license to apportion Canada on liberal terms, and they will also be prepared to indurate stone or other porous materials, in large quantities, in any locality, thus avoiding the cost of carriage.

The Directors have reason to anticipate that the profits will amount to a clear 50 per cent. on the capital employed, indeed, a glance at the foregoing prices will fully bear out such a statement, and needs no further comment.

Prices of various articles for which the Indurated Stone is especially adapted, showing the relative cost of production with Portland and Yorkshire Stones:—

	Indurated Stone Black.	Indurated Stone Light	Portland Stone	Tooled York Stone.
	s. d.	s. d.	s. d.	s. d.
Rubbed & Squared Paving, 9 in. thick, not exceeding 4 feet 6 in. superficial	0 8	0 9	1 8	1 0
Ditto, in 12 in. or 9 in squares, 14 in. thick	0 7	0 8	2 0	—
Window, 8 by 6 weathered, stopped & throated, per ft. lineal	1 2	1 6	2 3	1 9
Plain Coping, 13 by 3, throated	0 10	1 0	2 0	1 6
Saddle back Coping, 13 by	1 10	2 0	3 0	2 0
Sinks, 9 in. thick, rubbed, and sunk	2 6	2 6	3 6	3 6
Curbs for Areas, 9 by 6	1 4	1 6	2 6	2 6
Steps, 12 by 6	2 0	2 6	3 0	3 0

The difference increased with the amount of work. For all ornamental purposes, such as Chimney pieces, Parapet Ornaments, Pedestals, Tombstones, &c. the advantages in favour of the Indurated stone would be still greater.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS, 65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.

MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

CAUTION.

Whereas, certain parties are endeavouring to deceive the Public with worthless imitations of

CHAPPUIS'S PATENT DAYLIGHT REFLECTORS,

Representing themselves as from the Manufactory, 10, ST. MARY-AXE; in every case of such misrepresentation, infringers will be dealt with according to law.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

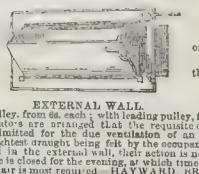
STONE PIPES.—E. and W. STURGE are enabled to offer PIPES at very low prices for cash, with every variety. Paving, stable, steps, sills, and copings, &c. &c. Country orders promptly attended to.—E. and W. STURGE, Bridge Wharf, City-road.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-road, &c. Offices, 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE, late Lourd, Beedham, & Co.'s, General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage, also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway and water carriage at a price far below most other stones in books and ashlar of specified dimensions and fine scappled; also random and coursed rubble. It is easily worked to a good face and has many of the beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and on cities adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe.



GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Whiting Manufacturers and Whitesmiths, and Wholesale Dealers in Hearth and Burr Stone, that they can be supplied in quantities from three tons and upwards with the above, delivered at the South Eastern Railway Goods Depôt, Bricklayers Arms Station, Old Kent-road, at the current price. Terms, samples, and other information may be obtained at the Office of the Wharf above.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Commissioners, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

A QUANTITY of PORTLAND STONE CHIPPINGS TO BE DISPOSED OF. Also of AUSTON STONE CHIPPINGS.—Apply to Mr. CLARKE, 7 and 8, Cannon-street, City.

VENTILATION.—PURE AIR.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—NOURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

NOTICE to INVENTORS.—New Patent Law.—PATENT OFFICE, 4, Trafalgar square, Charing-cross. The "Circular of Information," and plain instructions for the protection of inventions in the United Kingdom or foreign countries, may be had gratis, by applying personally, or by letter, pre-paid, to Messrs. PRINCE and CO.

LONDON MECHANICS' INSTITUTION, 29, SOUTHAMPTON-BUILDINGS, CHANCERY-LANE. Architectural, Mechanical, and Ornamental Drawing Classes meet every MONDAY and FRIDAY EVENINGS, throughout the year, from EIGHT till TEN o'clock, for the study of the above. Terms, to non-members of the Institution, 5s. per quarter. Institution members, 4s. per quarter. Teacher Mr. KNIGHTLEY.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO BUILDERS.

WANTED IMMEDIATELY, several HOUSES to PAPER, from 5s. 6d. per dozen. Staircases equally cheap. W. KENNETT, Paperhanger to the Trade, 18, Pratt-street, Paddington.

TO CHURCHWARDENS AND ALL OTHER PARISH OFFICERS.

Just published, in one volume, 12mo, price 14s. cloth,

THE PARISH: its Obligations and Powers, its Officers and their Duties. With Illustrations of the Practical Working of this Institution, in all Secular Affairs. By TOULMIN SMITH, of Lincoln's-inn, Esq. Barrister at Law. S. SWEET, 1, Chancery-lane.

NEW SEWERAGE DISTRICTS.

Just published, price 2s. sewed,

PRACTICAL DIRECTIONS for the FORMATION of SEWERAGE DISTRICTS, and for the Conduct of Sewerage Boards, in the Neighbourhood of the Metropolis, under the Statute 17 and 18 Vict. cap. 111; with the necessary Forms, and Abstract of the Metropolitan Sewers Acts. By TOULMIN SMITH, Esq. of Lincoln's-inn, Barrister at Law. S. SWEET, Chancery-lane, Fleet-street.

Now ready, price Five Shillings, Third Edition of Part III. of the TREATISE on INDUSTRIAL INVESTMENT and EMIGRATION, being Suggestions for the Enfranchisement and Improvement of Copyhold, Life, Leasehold, and Church Property, by the application of the life assurance principle, with Rules and tables for the formation of Copyhold Enfranchisement and Freehold Land Societies, and a Mathematical Appendix, by ARTHUR SCRATCHLEY, M.A. F.R.A.S. Actuary to the Western Life Assurance Society, 3, Parliament-street, Westminster.

London: FRIENDLY SOCIETIES' INSTITUTE, 33, Pall-mall, and CHARLES MITCHELL, 12, Red Lion-court, Fleet-street.

LAXTON'S BUILDERS' PRICE-BOOK for 1855 will be published, with considerable alterations, early in DECEMBER next. All ADVERTISEMENTS to be sent before the end of this Month, to the Office of the "Civil Engineer and Architect's Journal," 18, Arundel-street, strand.

Just published, in grained roan tuck, with gilt edges, price SIX Shillings,

ADCOCK'S ENGINEER'S POCKET-BOOK for 1855, with copious Additions and Improvements. Containing, among other useful matter, numerous and extensive Tables, constructed and arranged with special reference to the convenient Designing and Contracting, together with succinct Statistic Treatises on the subjects most important to Practical Men, including Artificers' Work, the Laws of Motion, Strength and Stress of Materials, Hydrodynamics and Resistance of Water, Heat, Chemistry, Friction, Marine Engineering, the Steam Engine, &c.; and a Variety of new Miscellaneous Information. London: Published by SIMPKIN, MARSHALL, and Co. Sold by G. HEBERT, 89, Chepside; and by all Booksellers.

TO LANDLORDS AND HOUSE AGENTS.

GRIMLEY'S WEEKLY TENANT'S RENT BOOK; the best Form published. Also, GRIMLEY'S LANDLORD'S RENTAL. London: PARTRIDGE, OAKEY, and CO. Specimens forwarded on application, enclosing two postage stamps; to H. N. GRIMLEY and SON, Accountants, Estate Agents, and Surveyors, 13, Bennett's-hill, Birmingham.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series, Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VII. for October, just published. GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

THE SOCIETY for IMPROVING the CONDITION of the LABOURING CLASSES, No. 21, Exeter-hall.

THE DWELLINGS of the LABOURING CLASSES, their Arrangement and Construction, with a Description, Plans, &c. of the Model Houses belonging to the Society. Numerous Designs for Dwellings adapted to Towns as well as to Agricultural and Manufacturing Districts, and an Appendix, containing H.R.H. Prince Albert's Exhibition Model Houses, Hyde-park, 1851. The Model Cottages, &c. built by the Windsor Royal Society. By HENRY ROBERTS, Esq. F.S.A. Third Edition, enlarged. Cloth, 4s.

The Builder.

SATURDAY, NOVEMBER 18, 1854.

WRITING or talking about the miserable condition in which thousands of our fellow-creatures are forced to live, and of the alterations required, is of no use unless it lead to *doing*. In the various statements and appeals on the subject which we have felt it our duty again and again to make, and which have been considerately reprinted by our contemporaries in every corner of the three kingdoms, we have uniformly sought to point out what ought to be done, and how it could be done, so as to lead, as speedily as might be, to practical results. In many cases they had that effect; and, if we now again refer to them, it is with no feeling of vain gratulation, but because we believe the reference will strengthen the hands of those who, like ourselves, are seeking to produce such a state of public opinion as shall insist on effectual improvement. Looking back to these statements in their collected form as "London Shadows, a Glance at the Homes of the Thousands," published many months before the cholera descended on the metropolis, it will surely be considered as something more than a coincidence when it is seen, that the first illustration is taken from the neighbourhood of Berwick-street and Broad-street, where occurred that frightful visitation which carried hundreds to their graves in a few days; while the last engraving represents the condition of the houses about Ewer-street and Gravel-lane, Southwark, where the disease gave the last serious manifestation of its power in the metropolis. It is not presumption to assert that if the warnings given in our pages had been attended to, thousands of lives might have been saved, and thousands of pounds. Never shall we forget that frightful night and day in Broad-street and Berwick-street; when men stood in groups, awe-struck and paralyzed, and Death hovered over every house, leaving desolate homes and fatherless children to mark his fearful track. We can speak of these things now without fear of alarming: we could not do so at that time. It has occurred to us to visit many unwholesome dens, and to penetrate very offensive atmospheres, without experiencing much personal inconvenience. The visit to Berwick-street, however, had a very different effect upon us: the scene exhibited there, and possibly the condition of the air, produced great depression, and destroyed all moral courage for two days, during which time the impression of coming illness and a fatal result was insurmountable. We shall need excuse, perhaps, for this personal reference, but it illustrates to some extent the effect of fear: we will not carry it further.

In our previous papers, allusion has been often made to the miserable condition of the courts and alleys about Drury-lane, mentioning amongst others, although it is not the worst, Wild-court, turning out of Great Wild-street, and in the immediate vicinity of Great Queen-street, Lincoln's-inn-fields. Fig. 1 is a plan of it.

This court, and the neighbourhood adjoining, have long enjoyed an unenviable celebrity, the court itself, which is of considerable extent, having been in parts filled with persons troublesome to the police, and in some others densely packed with those whom various circumstances of ignorance, neglect, or misfortune, had here collected together. A view of this court, taken, say on a bright sunny Monday morning, would strike a traveller from the "west end," or the green country, with astonishment and sorrow, and yet in this neglected and dangerous population there is, in spite of the shadows, an amount of good which demands protection, and will repay care.

The figures represent the numbers of the houses, and Fig. 2 shows the entrance to the court, when the population is in full activity.* Fig. 3 gives a view of No. 2 in the court, and shows that the houses are of some size, containing ten rooms each, if we include the basement, and in the case of No. 2, twelve rooms. Well, the Society for Improving the Condition of the Labouring Classes have taken thirteen of these houses at a low rent, intending, by the judicious expenditure of a certain sum of money, to render them fit for the habitation of human beings; and they have no doubt, nor have we, that they will prove a very profitable investment, and that the society will make money by doing good. We should like to get all the world on this same tack. The houses which the society have already converted from health-and-morals-destroyers into decent homes, are paying from fifteen to seventeen per cent. These houses in Wild-court teem with people. It is very difficult to get at the truth, but at all events, the thirteen houses have a population of one thousand persons, without reference to the crowd of non-residents who throng the passages and stairs at night, and to the fact that the rooms in the basement are not occupied, but are full of decaying animal and vegetable refuse, emitting at times most foul effluvia.

A few days ago, Lord Shaftesbury, active for good, invited some who take interest in these matters to see the present condition of the houses, so that they might appreciate the change which is to be effected hereafter by means of good drainage, full supply of water, general repair, and the provision of such appliances as knowledge and common sense may suggest. Perhaps, too, they will roof over the court with glass, due provision being made for ventilation, so that the children may play in the dry.

The miserable condition of the houses, with decaying floor-boards, broken glass, and falling plaster, is too evident to need pointing out, but many would look into the small yards and fail to realise the evil effects of what they saw, so little accustomed are the majority to reflect on such things. Yet here we have, in a space, say 15 feet long, and 5 feet wide, the doorless convenience (we fear to describe it), the butt for water and the unemptied dust-bin, all under the windows of the dwelling-rooms. The holes in the broken pavement are filled with decomposing matter, and the broken tap in the water-butt concurs to render the whole sloppy and disgusting. Fig. 4 shows the arrangement of one of the yards. There is no occasion to go more fully into details: Mr. Baxendell has done so in the Society's Journal, wherein he says, as to the water supply,—"In each of the yards of Nos. 2 and 4, a cement tank is constructed, the latter for the supply of the three houses, Nos. 3, 4, and 5. Several houses are supplied by butts placed in the basement at the foot of the stairs, and quite in the dark. There are loud complaints of the want of water throughout the whole court, especially on a Sunday. This deficiency is principally owing to the means provided for drawing the water, and the rotten state of the butts into which it comes. I have been there at three o'clock in the afternoon, and

* See p. 593.

Fig. 1.—*Ground Plan of Wild-court in its Present State.*

a. Conveniences. b. Dust-bins. c. Cement-tanks.

Fig. 5.—Internal View of a front Garret, showing the Gutter that conveys the Soil and Slops from this Floor to the Gutter in front.

there has scarcely been a drop of water in the court, and the inhabitants were running about the neighbourhood begging for it.

Dust-bins are placed in one corner of the yards, and generally emptied once a week—sometimes, and I fear very frequently, once a fortnight only. Complaints have often been made of the stench arising from these places, especially by the tenants occupying the back rooms on the ground-floor. Every morning the yards are abominably filthy, and present more the appearance of large cesspools than anything else. I have seen some of them about six inches deep in places of all manner of soil and filth, through which any person requiring water must wade."

The front ground-floor room of one of these houses has been held sacred for some years, as a sort of club for thieves: no one would rent it, for fear of interfering with them. It appears that they have been in the habit of meeting in this room every night about twelve o'clock, to gamble and concoct mischief, entering by the cellar window, and then ascending through a hole in the floor, specially made for the purpose! *Wild*-court, indeed!

If we step upstairs, we shall find that the evil arrangements are not confined to the lower part of the houses. Here, incredible as it may seem, the gutters and water-pipes are made to play the part of *sewers*, the inhabitants throwing into them all their soil and refuse. Those living at the back throw them into the middle gutter, from which there is a wooden trunk, marked B, in fig. 5, leading to the front gutter, and which passes through the front room, as shown in the sketch. A indicates the opening to the middle gutter from the landing of the stairs. It scarcely needs fig. 6 to show the condition of the front gutter, as seen from the garret windows.

The society have already effected much good, and have aided in spreading the movement to a considerable extent. In several parts of the United States large blocks of houses have been constructed to afford healthful dwelling-places to the poorer classes; and in connection with several large manufactories, improved houses are being built for the workpeople. Mr. Wallis, in his report, on the occasion of the New York Exhibition, describes thirty-two boarding-houses which have been erected for the workpeople of the Bay State Mills, at Lawrence, in Massachusets. Each house accommodates thirty-six boarders, chiefly women.

The French Government has voted ten millions of francs, as we mentioned some time ago, for the improvement of the lodgings of workmen in large manufacturing towns. In April last, about 4,000,000 of these had been granted in the way of subventions to private speculators, who undertook to build lodging-houses on receiving from the Government about one-third of the cost; and several large buildings had been raised, providing healthful lodgings for some thousands of persons. This mode of proceedings does not at once commend itself to us as a step to be imitated in England, however wise it might have been under particular circumstances in France.

Fig. 6.—View of the front Gutter, as seen from the Garret Windows.

Returning for an instant to Wild-court, we shall look most anxiously for the result of the experiment, although we have no doubt whatever of its success. Bad as this court is, there is a vast number of places in London, and in other large towns, very much worse; and we implore the authorities, and those who have power, to remember that, although the cholera has happily ceased its ravages, there are other diseases, the attendants on bad drainage, foul air, and want of water, that quietly carry off their victims by hundreds, pauperising and demoralizing those who do not fall, and which may be prevented with certainty by the adoption of obvious means.

Tower of St. Mary's, Taunton.—According to a Bristol paper, Mr. B. Farmer, of that city, has offered to restore the tower of St. Mary's, at Taunton, under the superintendence of a Bristol architect.

THE DESIGNS FOR THE OXFORD MUSEUM AND LIBRARY. PUBLIC EXHIBITION.

The mode of conducting the preliminaries of this competition has been so much more satisfactory in several respects than is usual in similar cases,—in such, particularly, as affording the competitors a reasonable time in which to prepare their designs, offering fair premiums, defining what was requisite with tolerable precision in the original instructions, and appointing a really responsible tribunal,—that we felt little surprise at finding that the governing powers had determined to carry out the wise plan of exhibiting the designs submitted in response to their invitation, in order that public opinion might be brought to bear upon the subject, previous to any final decision being made in relation to the respective merits of the plans. The exhibition was opened on Monday, the 6th, and we were much gratified in observing the careful way in which the series, contributed by no less than three-and-thirty members of the profession, had been arranged in the well-lighted gallery of the Bodleian. All are hung within a convenient distance from the eye, and all have been grouped with fair advantages of light and position, although connected in such a series as to materially assist the discriminating eye of the examiner. All this is as it should be, and if, to such just and prudent treatment of the various competing architects, the delegates who are ultimately responsible for the final decision add the precaution of requiring from some competent and disinterested professional man a report to them, which shall be publicly circulated, together with the results of their own final deliberations, very little will possibly be left to be desired as to the straightforward conduct of those upon whose anticipated justice and probity so many have staked long days of weary and feverish toil.

Before proceeding to notice any of the designs, it may be well to remind our readers that the leading features of what we may call the prospectus of the competition, stated that upon a given site a building was to be erected, to comprise various museums, to contain, among others, Mr. Hope's entomological collections, as well as a large library and extensive lecture-rooms, &c.; the curator's house to be detached. The general form of the building proposed was to be that of three sides of a quadrangle, the space enclosed being covered with glass roofing. The cost was limited to 30,000*l.* and the tribunal by whom the premiums (respectively 150*l.* 100*l.* and 50*l.*) were to be awarded, was to consist of a limited number of delegates appointed by convocation.

As might readily be supposed, the Gothic architects predominate, since an analysis of the various styles adopted gives, as nearly as we could ascertain, by jumping at conclusions, aimed at, in some cases, rather than attained, the following results:—

Gothic of all kinds	12
Greek, more or less German in treatment	3
Roman, more or less after Wren, with pedimented porticos, columns, &c.	4
Italian, more or less Barryan or Palatial	6
Elizabethan	1
The Order of Confusion	2
Original, Crystal Palace work tacked on to various regular book details	3
Abominations, about	2
Total	33

Out of the whole number, about half possess merit, and several in a very high degree. The most remarkable, in one way or the other, in the respective classes, appear to be the following:—

Gothic—"*Forsan*"—picturesque, but rather too continental. "*Fiat justitia ruat cœlum*"—one design imitated from Burgundian models,—able plan, but too foreign-looking for Oxford. "*Kunst macht Gunst*"—wiry in detail, and poor in plan. "*Multæ mortalibus artes cœlicolis una,*"—if this be a good sample of the "*una,*" mortals have but little cause to envy the gods, for a composition breathing less nectar or ambrosia, or exhibiting less "*ichor,*" we have not seen for many a day: thin and precise, it looks at once correct in working out, and as wilfully ugly as is compatible with the strict elaboration of the severest type of Pointed architecture.

"*In spe*"—picturesque in its combination of forms, and possessing the advantage of marking externally the leading component parts of the design: its principal defect is in the management of the glass roof, which is by no means graceful. "*Virtus in arduis*,"—agreeable externally, though with a slight tendency to spikiness in outline, suppressing the glass roof as much as possible. On the whole, the mediæval designs are by no means the best. The styles selected are rather ecclesiastical than collegiate, and have a tendency to Nuremberg and Ratisbon sympathies rather than to those of Oxford or Cambridge. It seems somewhat a pity that, as if by common consent, those types of art should have been avoided, to a brilliant application of which the most celebrated and beautiful of the Oxford universities are indebted for their wide-world fame.

Of the Greek designs little or nothing need be said: their merits are academic, and they fail to evince any symptoms of that power to make classic art accommodate itself to reasonable conditions of utility, without losing its peculiar beauties, by means of the possession of which, the great modern masters in that branch of art, Schinkel, Von Klenze, Gandy Dering, Cockerell, Hittorff, and Visconti, have vindicated its claims to our love and admiration.

Of Roman, or rather columnar architecture, the designs of "Alma," "*Spes*," "Four diamonds arranged crosswise," and "*Fiat justitia ruat cælum*," afford very interesting studies. "Alma" is regular Palladian, with long passages, and a defective connection between the principal entrance and the principal apartments. "*Spes*" presents us with a really noble arrangement of a great circular hall, domed and lit after the fashion of the Pantheon at Rome, a composition worked out with a fine sense of scenic effect, more particularly in the internal combinations. "Four Diamonds" is careful, but exhibits a rather uncomfortable agglomeration of well-known and overworked ingredients, columns everywhere, campaniles with no efficient indication of their intention to soar aloft carried down beneath the principal entablature, forming the main horizontal line. "*Fiat justitia*" (designs A and D), in external aspect is close, even to a reproduction of certain besetting sins, to the style which Sir Charles Barry has adopted for the Board of Trade and some other buildings. In plan and leading features of arrangement, both designs are excellent. The leading feature of the set of drawings marked A is a fine glass vault, extending longitudinally, with contributory glass vaults running into it at a low level, somewhat after the manner of the Basilica of Constantine at Rome. In the design D, the plan is entirely different. A noble hall leads immediately into a long glass-vaulted nave, the end of which terminates in a glass dome, from which depart right and left two similar vaulted naves—the three naves forming altogether a T shape. The three extremities of the arms of the T are connected by a series of apartments, arranged in a quadrangular form, so as to embrace, as it were, the great glass building. Every part has been admirably studied, but we must confess that the style adopted is not the one we should have thought most to be preferred for Oxford; and were it possible to retain all the structural features of the plan, and the agreeable balance of lines and masses, and to clothe them with more national detail, it would probably be for the advantage of all parties that such an alteration should be effected.

With the palatial Italian designs we were not so well pleased, as with some of the last series to which we have alluded, or as indeed with some of the Gothic. On the whole, that of "A. Z." was by far the best, since if its merits were not very transcendent, at least it offered few points of objection. The plan was well laid out, and the style based on good Tuscan models.

The one Elizabethan design, that marked with "intersecting compasses," we would place high in the list. The style is bravely worked out, both externally and internally, and the glass roof neither burked nor made a monster of. To carry notices of these designs further would be rather a pain than a pleasure, our own impressions being tinged rather with regret for anxious labour misapplied, than with admiration for excess of beauty or ingenuity. In the drawings of those who had swamped the academic, so indispensable to university associations, in the utilitarian, we were unable to recognise any new constructional elements. Bent glass, a costly and hazardous material, was freely indicated, and independence in the treatment of metal work, was in no case allied to analogous independence in determining the forms of stone and wood work. In some designs such as that of "Home," railway shed roofing of the commonest kind was married to incongruous Venetian, in ill-assorted union.

In spite, however, of some exhibitions of feebleness, we must on the whole congratulate the profession, and not less the University which benefits by them, on the ability and spirit displayed in this interesting series of designs.

HAVING recently had an opportunity of inspecting the drawings sent in, in competition for the proposed new museum at Oxford, a few remarks on them may not be uninteresting to your readers.

I shall not, of course, attempt to criticise individual designs, nor to forestall the decision of the committee, but confine my remarks to the bearing of the competition on the much-mooted question of competitions generally, and the impression the drawings convey of the state and prospects of architectural art in this country.

Fortunately no suspicion can, in this instance, rest on the judges, either of jobbery or of ignorance. The position in society, and the education, of the delegates, place them above that. There can be no doubt but that they are earnestly anxious to procure the best possible design for their purposes, and will fairly make the best selection they can, without reference to personal motives; so that if they err or fail in getting as good a design as they should, it must be from some error of judgment, or from some inherent defect in the system of competitions generally.

Nothing could be fairer or more distinct, as far as it went, than the prospectus they issued. The price was fixed at 30,000*l.* and the accommodation required was all specified with sufficient distinctness. To meet this last requirement, most of the competing architects (twenty-nine in number) have sent in designs with frontages varying from 200 to 300 and even 400 feet in extent, and from 160 to 300 feet in depth. Taking their cubic contents, some do not allow 2d. per foot cube, few more than 4d. and every architect knows how little good architecture or sound construction is to be obtained for such a price. It is true they almost all cover a courtyard in their centre with a glass roof, so diminishing the cost considerably, and we have here the much-abused architecture of the Crystal Palace reproduced with every conceivable variety of Classical or Gothic detail: but with all this the money allotted is certainly insufficient for the purpose, and the university must either increase the sum or decrease the requirements, or be content with a mere warehouse to contain their collections.

The delegates ought certainly to have consulted professional men on the subject beforehand, as they will do a great injustice to those architects who have honestly tried to keep within limits, and whose designs in consequence look so cold and meagre that they are sure to be neglected, or the delegates must depart from the conditions they have established.

Some of the designs, on the other hand, could not certainly be erected for twice, probably not for three times, the sum specified: this they are now going to call in professional assistance to ascertain. If these designs are in consequence thrown out, the architects have themselves only to blame. If this condition is not rigidly adhered to, great injustice will be done, and the delegates will find themselves unable to carry out the design they may select.

Another point that seems injudicious, is the concealment of the names of the architects by mottoes, inasmuch as no one at all familiar with the works of the principal architects of the day can hesitate in assigning at least all the principal designs to their proper authors. At all events, all men like to show their cleverness by guessing; and if a name is likely to influence a judge to give his vote for an inferior design, he will do so now, with this difference, that he may give it after all to the wrong person.

The concealment of names does not prevent canvassing, as any man may send in his cypher to any member of the committee and ask his vote; and he being supposed not to know, may assume an appearance of disinterestedness which he could not do if all were known. As well might we conceal the names of the plaintiffs and defendants from the judges in suits at law, as was done in old Greece. One feels astonished that any committee of gentlemen should confess to so little confidence in their own honesty of purpose, as to be swayed by personal interests in performing a public duty; and it will not be till the judges understand that they must be above such suspicions, and dare the responsibility of their own acts, that competitions can be fair tribunals to judge of merit.

In the present instance it would be an immense advantage to the delegates to be able to put themselves in communication with the architects—to ask for explanations and information, and to ascertain from them whether they are prepared to find a builder to execute their designs at the price specified. Where everything is open and above board, jobbery is impossible, and it certainly appears to be a mistake in a body of gentlemen to allow anything like secresy or mystery to prevail in any part of their proceedings.

Another point the committee would have done well to determine beforehand, is the style they propose adopting. As it is, they have got thirty-two designs in thirty-two different styles. Twelve or thirteen are in various forms of Mediæval architecture, from Early English to Jacobean, with one or two in Continental Gothic. About the same number are Italian, or modern, and the remainder Classic. In such a medley, classification is impossible, or even the selection of any one design as the best, for there is no means of weighing the Classic against the Gothic, or the Italian with either.

It must, in fact, now come to a vote in the committee. If the tastes of the majority are Classical—by no means an impossible event in Oxford—all the Gothic designs are rejected *ipso facto*, wholly irrespective of their merits: if, on the contrary, the Church party prevail, all the Classical designs are rejected in like manner.*

It would have been better that this vote should have been come to beforehand. It would have been fairer to the architects, would a far greater mass of materials from which to select.

These remarks might easily be extended, but are already too long; but the subject is a tempting one, for this is no doubt one of the fairest and best competitions that has occurred for a long time, and it may be some time before such an opportunity occurs again of improving a system that has hitherto been such a source of heart-burnings to the profession.

If the delegates had only taken a little more time and pains to consider these objects, and the means of carrying them out, they might have made a step in the science of competition which would have been of the greatest benefit to architects, and have facilitated their own labours considerably. It may be long before such a tribunal have again to adjudicate on so important a cause. When they do, it is to be hoped that they will thoroughly make up their minds what they want and what they can get before they come before the public, and afterwards that everything shall be done in open court. When this is the case competition, instead of being the bane, may be of the greatest possible benefit to the profession.

With regard to the progress in improvement shown in these designs, I am afraid there is not much cause for congratulation. All the best are

* One architect, or group of architects, has met this difficulty in rather a novel manner, by furnishing three external designs for one interior,—one Gothic, one Classic, and one Italian, and it certainly is puzzling to say which is the most, or rather the least, truthful or appropriate. It proves, however, only too clearly how little meaning there is in modern architecture, that, like a masquerade suit, it will fit anybody, or conceal anything.

by well-known artists, and are neither better nor worse than the works which these gentlemen have already executed. There is no new star risen above the horizon to lighten our darkness.

As a general rule, the Gothic designs are by far the most picturesque, though generally somewhat deficient in dignity and elegance.

The Classical show how utterly intractable that style is, even in the best hands, and how impossible it is to make great columnar porticoes fit two-storied modern buildings; and, notwithstanding their abstract beauty, to make them, in modern times, and in this climate, anything better than graceful but expensive mockeries and shams.

The Italian, on the contrary, shows itself capable of combining the elegance of the Classic with the picturesqueness of the Gothic, and when freely used, does seem capable of progress, which the other two are not. Every year the public are becoming more knowing in Gothic forms and details, and more critically fastidious in insisting on absolute fidelity, both as to detail and ornament; and no deviation from the one chosen style can be tolerated. Every year this will be more and more felt as the public become better instructed; and if we are content to choose Gothic as our style, we must be content to let it remain where our forefathers left it in the middle ages: we can add nothing to it.

The Italian, on the other hand, never was a style, properly so called. We could hardly copy it if we tried; but it occupies the neutral ground between the Classic on the one hand, and the Gothic on the other, presenting every shade of combination, from the Early Renaissance to the *pseudo* Classic of the present day, and consequently admitting of the beauties of either style being culled and again worked up together into any shapes we please. In this style, therefore, progress is possible, and if the national taste were fairly to settle down to elaborate beauty out of this style, its Classic and its Gothic elements would soon disappear in new combination, and we might at last have a style of our own, more beautiful, as it certainly would be more appropriate than either.

Is there any prospect of this? is there any hope of such a consummation? One or two of the designs at Oxford seem to indicate a glimmering of such an idea; but it is to be feared that neither the architects nor the public are prepared for the task, nor aware of the means by which success in it may be attained.

J. F.

THE DRAINAGE QUESTION.

HARROW.

A REPORT to the Harrow Local Board of Health, by Mr. John Roe, is about to be made public, and will, doubtless, be considered important by those who are interested in the questions of which it treats, Mr. Roe's long experience and acquaintance with the subject being well known. Although written as long ago as July last, it has for several reasons not been made public till now. We have not space for the whole of it, but give those passages which contain the pith of it.

"About three-and-a-half miles in length of main sewers have been laid down; private drains from 345 houses have been formed; 256 cesspools have been cleared out and filled up; and altogether the sanitary improvement is such, that I may well congratulate you who have so zealously aided the good work."

"Discussions have lately occupied the attention of many professional men, as to the relative merits of pipe and brick sewers; and, as it happens that the whole of your new drainage is composed of pipe sewers, it will not, I hope, be deemed irrelevant if I enlarge a little on this subject, particularly as I am addressing a Local Board of Health, whose chairman is the principal of a school wherein are congregated so many youths, some of whom will probably be actively engaged in carrying out works of this description; others who will hereafter become members of the Legislature which presides over sanitary affairs, forming not the least onerous of its duties.

During a period of near twenty years, I served under the Commissioners of Sewers, the first part thereof under the commissioners for the Holborn and Finsbury divisions, and afterwards as chief surveyor, under the Metropolitan Commissioners of Sewers, until the state of my health induced me to resign that situation.

From my first entering on the duties of my office, I began a series of observations on the passage of water through the ramification of sewers, in the Holborn and Finsbury divisions. I was thus early made aware of the necessity of much improvement in this description of works, and sought to introduce remedies."

"The introduction of stoneware pipes for general drainage arose from a suggestion made by Mr. Chadwick to me, in his desire to obtain a smooth interior surface, and the first pipes made for that purpose in the metropolis were for the Holborn and Finsbury Office, in consequence; and looking at the general state of the drainage of very many towns and villages, and the peculiar points that have to be dealt with in forming sewers for the same, it is not too much to say that an immense benefit to sanitary measures has been afforded by the use of these pipes, where judiciously applied, and the works properly executed.

So applied, they have, in the case of Harrow, enabled the drainage to be carried out at about one-third of what it would have cost had brick sewers, large enough for men to go through, been formed in the streets, and this after allowing for the subsoil and road drainage.

Another feature in your drainage is, that greater part of the sewers has been formed at the back of the houses, thus shortening the length of private drains, so as to prove a considerable saving to individuals in the length of drain.

There has been much discussion in the metropolis on this point, which is called 'back drainage,' but like the extremes of brick and pipe sewers, it should be viewed with regard to the locality to be drained. Almost every locality requires a somewhat different treatment to another, in some of its details, and in a town different portions require, or will allow of, different methods of carrying out the object required. It is the duty of the engineer to point out, without a prejudice in favour of one set of opinions or the other, what he sees to be best; efficiency and economy joined."

"That back drainage, when properly applied, is not attended with all the disadvantages pointed out by the adversaries to its adoption, is certain.

About thirty-six years since, the Holborn and Finsbury Commissioners allowed upwards of 200 houses on one estate to have back drainage, on the owner building about 500 feet of outlet sewer to receive the drains. No complaint of the drainage has come to the office during the period that has since elapsed. There are other instances in those divisions of its successful application.

In laying out an entirely new district, and in many country towns and places, back drainage may be usefully adopted: on the other hand, there are situations in old towns where its adoption would be worse than an absurdity."

"Reverting to the remark that for the drainage of each locality a somewhat different treatment may be required, it fortunately happens, as regards cost, that Harrow is peculiarly favourably situate for the application of the pipe system; whereas Eton College and precincts, from certain local and periodical circumstances, required brick sewers of considerable size. The inclinations of the sewers at Harrow are very great: the sewers at Eton (with the exception of a small portion near the river) have no inclination, yet the drainage at Eton College is as perfect for the passage of the sewage as that of Harrow. The sewers were put down twelve years since, and not a spadeful of foul deposit has accumulated in any of them. This result has been obtained by continuing one feeder on a level with the sewers for half a mile, until it reached the River Thames above the Brocas, and another to a backwater at the Timberhalls; so that in dry weather many thousands of cube feet of water pass through these sewers every hour. At Harrow, the great inclination of the sewers requires only a fair supply of water to prevent deposit from accumulating. In a few minutes excret a will pass from the inlet to the outlet.

Eton Town, drained in 1850, from similar local circumstances that affect the College precincts, has one of its main sewers of considerable size, the others are some half-brick, and some pipe sewers. In this case anything but back drainage would have been particularly injudicious.

Again, Windsor has one portion of its drainage in brick sewers, and the other portions consist of pipe sewers, laid down in 1850-1. To have formed all in brick sewers, would have been a waste of money; but the main line required a capacity too great for pipes. A due application of the two (brick and pipe) has afforded a drainage at a moderate cost,* and of undoubted efficiency, if the sewers have a fair supply of water; but as the water supply was not laid on to every house, I caused a small tank to be formed at the head of each long line of pipe drain, to enable them to be flushed periodically, and if this (which may be done at a trifling cost) be properly attended to, no stoppage will ever take place.

Without referring to other places, where a different system has been pursued, I would observe that, although had you been required to construct your drainage on the larger scale, you would have done so at any cost, so desirous were you of making this improvement; yet it is certainly gratifying to you to be enabled to save many thousands of pounds of the ratepayers' money, by the use of a method of drainage which will, if fairly dealt by, be in good working condition 500 years hence. The pipes are remarkably good; the greatest care has been taken in fitting and laying them; and not a failure of any kind has accrued. The clerk of the works, who superintended (Mr. J. W. Wilkins), is amongst the most trusty and useful of those employed on such works, and your Board was fortunate in securing his services, as you have also been in appointing Mr. Winkley as your clerk, and Mr. Smith as your surveyor. It is mainly owing to the independent and zealous conduct of the latter gentleman, that so much has been done in getting rid of the many cesspools and other baneful nuisances."

Mr. Roe here refers to his table of sizes of sewers published by the General Board of Health, and to his plan for the Northern Drainage of the Metropolis now before the Commissioners, which latter, he maintains, could be carried out at half a million less cost than the plan lately adopted by them.

"Returning to the drainage of Harrow;—the following list shows the length and sizes of your new main sewers:—

223	feet of pipes	18	inches	diameter.
2,900	,, ,,	15	,,	,,
6,912	,, ,,	12	,,	,,
7,766	,, ,,	9	,,	,,
663	,, ,,	6	,,	,,

Total, 18,464."

"A part of your drainage was formed in 1851, and a large portion in 1852."

In closing his report, the writer gives a letter from the surveyor to the Board as to the state of the drainage at the date of the report, containing the following questions and replies:—

"1. Will the drain-pipes be sufficiently large to carry off the whole of the sewerage and also the surface-water?

2. Should we have much dry weather, will there not be many stoppages in the pipes for want of water to flush the sewers?

3. Will not the substitution of closet-pans, without water laid on, be a greater nuisance than open privies with cesspools under; being liable to stoppage?

4. Many of the privies being exposed, will not the frost crack the pans, and consequently common closet-pans be constantly broken?"

Answers.

"1. We have had floods of water from heavy rains; floods from melting of snow; and I have watched the result, and we have never had a stoppage: the sewers and drains carried off sewerage and surface water, and I never, at the greatest flow, saw the pipes two-thirds full.*

2. There has been sufficient water, from private drainage, to meet the case, even in the greatest drought. The only difference seen has been in the colour of the sewer-water at the outlets, where it is continually running; nor does any sediment rest in the pipes, although we have turned all our surface water into the pipes.

3. Very few persons have water laid on the pan closets, but, by a little attention, sufficient waste and slop water is thrown down, which carries everything away: it only requires cleanliness and attention. In the whole district, the stoppages in the pans have not exceeded ten; and, upon examination, we have found it in every case arose through carelessness—by things thrown down by children or servants, which would have caused a stoppage if water had been laid on.

4. Of this last question I myself was fearful; for, in exposed places, amongst cottages, with the doors constantly open, and perhaps only a few feather-edged boards between the pan and the open air, there was a danger; but I have never heard of one in any way affected or frozen so that it could not be used, and I have examined numbers for my own experience."

* By the use of back drainage and pipe sewers, the saving has been near 8,000*l.* after allowing for the cost of subsoil and road drainage.

* There is a 6-inch iron pipe-drain, of some half mile in length, which takes the drainage from one of the large cow-yards of the metropolis, and also the drainage from thirty large houses. This drain was laid down upwards of thirty years since, and from that time, and until the spring of this year, it has not required any attention, and then only trifling.—J. R.

THE NEW SEWERS COMMISSION.

THE following is a list of the gentlemen who are to constitute the new Commission of Sewers for the metropolis:—Richard Jebb,esq.(chairman); Sir John Villiers Shelley, bart., Thomas Hawes, esq.; Lawrence Redhead, esq.; G. Spencer Smith, esq.; Augustin Sayer, esq. M.D.; James Pascall, esq.; George Offer, esq.; Francis Chalmers, esq.; John Thwaites, esq.; William Evans, esq.; John Wade, esq.; Cuthbert William Johnson, esq.; Joseph Hodgson, esq.; Frederick Oldfield Ward, esq.; Waller Augustus Lewis, M.D. Mr. Jebb (the chairman), with Mr. Hawes, Mr. Redhead, and Mr. Spencer Smith, were members of the late commission; Sir John Shelley, Dr. Sayer, and Messrs. Pascall, Offer, Chalmers, Thwaites, Evans, and Wade, have been nominated by the representatives of the metropolitan constituencies; while Messrs. Johnson, Hodgson, Ward, and Dr. Lewis, are selected by the Home Office. How this Board will work we will not pretend to say, but the elements are so discordant that we look for some violent ebullitions before its course of action is determined on.

THE GUILDHALL AND THE NEW LORD MAYOR OF LONDON.

JUSTICE has not been done by the newspapers to the decoration of the Guildhall for the banquet on the 9th of November. So far as we can remember, it was never so effective before. The removal of the ugly trelliswork from the temporary lining of the lower part of the wall was a great improvement; and the groups of English, French, and Turkish flags were appropriate and effective. The large picture against the east wall of the hall was not a transparency, as generally stated, nor were the smaller pictures ("The Landing at Varna," &c.) in the adjoining apartments so: they were all opaque paintings in tempera, with the light thrown on them from the front. The large picture in the hall, which was designed by Mr. David Roberts, R.A. and painted by Mr. Absolon and Mr. Fenton, included female figures typical of the city of Paris (Notre Dame in the background), and the city of London (St. Paul's seen behind), at the foot of a pedestal bearing medallions of the Queen and Prince Albert and the Emperor and Empress of the French, with appropriate inscriptions, arms, and adjuncts. On a screen a short distance in front of the main picture, and which divided it into three compartments, were figures, life-size and capitally painted, of an English sailor, English foot soldier, a French soldier, and Turk. It was executed in a very short space of time, and was most creditable to all concerned. The willingness manifested by several leading artists to give their aid on the occasion if it had been needed, speaks in strong terms for the course pursued by the present Lord Mayor in his connection with them.

The Recorder said, justly, in his customary address before the Barons of the Exchequer, that the Lord Mayor had had the good fortune, in the course of his progress, to combine in his pursuits the advancement of the liberal arts of the land with an endeavour to improve the character of men by encouraging and fostering their efforts to increase the taste of all classes of society. Mr. Alderman Moon had had the further good fortune of publishing the great works of Wilkie, of Roberts, and of Landseer, as well as of many other of the well-known artists of his day, and it was to the encouragement that he had afforded to these artists that Mr. Alderman Moon, the present Lord Mayor, had devoted so many long years. Most successful had been his efforts, and he had not failed to have these exertions recognised by his fellow-citizens, as well as by the artists themselves, who, in the year 1843, had presented him with a most gratifying testimonial.

We have reason to believe that art and literature will receive full recognition during his mayoralty, and that the year, including, as it will, the Great Exhibition of '55 in Paris, and, we may hope, the success of our arms in the Crimea, will be one of more than common interest.

The Corporation, it will be remembered, have voted 1,000*l. per annum*, for ten years, for the production of statues, to fill the vacant niches in the Egyptian Hall, in the Mansion-House (for which they deserve the thanks of all interested in the progress of art), and the first of the statues so produced was amongst the adornments on the 9th. It is a half-draped female figure by Mr. Bailey, incarnating "The Morning Star;" and, although a little too fully developed, as it seems to us, is a fine work of art.

The card of invitation to the banquet was an elegant production; and even in the wands of the Lord Mayor's and Sheriffs' committee, and the medal which the Lord Mayor presented to each member of it, although marred by the executants, design was aimed at, and a good intention shown.

A WORD ABOUT MR. RUSKIN'S LECTURE AT THE ARCHITECTURAL MUSEUM, CANON-ROW.

I WAS induced by the prospectus, issued from the Architectural Museum, to attend there on the 11th inst. for the purpose of hearing Mr. Ruskin lecture on "decorative colour, as applicable to architectural and other purposes." This is a very grand announcement for a very subordinate purpose, when we come to read the small printing, which says, that "these lectures will be exclusively addressed to workmen who are in the habit of executing designs (more especially letterings) on walls and shop-fronts."

Now, I am in my humble way somewhat of an illuminator, although not very much of an *illuminatus;* so I went to hear what Mr. Ruskin, by his spirit of observation, might be so good as to teach me. But I found that at a very early step he declared, that he wanted us to teach him how his theories were to be carried out. At this, however, I was not very much surprised, when he showed his very first illustration, which consisted of an initial letter of the seventh century, consisting of a poor single line, singularly involved, and twisted and twirled about, and with little or no grace and meaning. And I was again surprised with other specimens, which he exhibited, in which the letters themselves were indistinct, and with difficulty legible, so much were they surrounded and mixed up with ornaments and forms, which seemed to battle with the initials, striving for the mastery, and to supersede their importance. Oh, how I longed to show Mr. Ruskin honest John Shaw's goodly volume of letters, judiciously selected, methodically arranged, and a real book of reference for the working man. I very much admired the good sense which led Mr. Ruskin to denounce the use, or I might rather say the abuse, of rich decorations in the Bible, which he and I and all earnest simple-minded Christians, would fain read with the understanding undisturbed by such attractions. But may not the same be said also of all books? Why should the typical illuminator strive with the author? Mr. Ruskin talked much about nature and the introduction of natural objects. But, for my part, I could not understand this praise of nature, with the approval of birds or animals, whose heads or tails ran a race all round the letter, or to the bottom of the page, united to the body by a mere line twisted and twirled about until the eye was lost in following its gyrations. And there was a trefoil leaf, each division of which was of a different glaring colour, and the outline hard and crude. Did these properly illustrate Mr. Ruskin's meaning in its full extent, or only partially so?

Comte, in his Positive Philosophy, as translated by Miss Martineau, considers that, in the study of human intelligence, each branch of our knowledge passes successively through three different theoretical conditions—the theological, the metaphysical, and the scientific. Perhaps we may also in like manner divide the development of architecture into the conventional or historical, the useful, and the practical. And the same divisions will apply to illumination or letter-printing. With regard to the first, it is well to look back on antiquity, as Mr. Ruskin tells us he is earnestly striving to make us do, but not to *go* back to antiquity, that is retrogression and not progression. And if we adopt the lettering of past times, we must teach the people to learn the alphabets now out of use; and I must own how often in the modern churches I have been puzzled to read the inscriptions of the Commandments, and Paternoster, and Credo, and given them up in despair, unable to distinguish the Belief from the Lord's Prayer, and quite at a loss to make out the pious sentences on the walls and pillars. As to the second division, the useful, I believe that the object of inscriptions on shop-fronts is, that they should be distinctly legible at a glance, and at once tell the name and business of the tradesman without an effort to the passer-by. But if we adopt Mr. Ruskin's birds and animals and flowers and leaves, we shall but imitate some unhappy and ambitious attempts lately made in London, and as signally succeed in rendering them *not understandable*. As to the practicable division of our subject, Mr. Ruskin expects that he is to be taught by us. It is from those who practise an art that we must acquire the full knowledge of its powers, its short-comings, and its difficulties.

I have never before had the privilege of hearing Mr. Ruskin, and have read very little of his writings, for I have not the time; and (I must own my ignorance) very frequently not the capacity to understand his beautiful sentences. But it appears to me, that he is a gentleman with a remarkably vivid imagination, very impressionable, having a glowing force of language when he writes, though feeble when he speaks, as he did the other day. And he thinks that, because he feels strongly, he understands correctly, and has discovered a new world of sensations and intelligence, of which others are ignorant, and whom, therefore, he would kindly teach. I think (I will not say I fear) he is mistaken, because it appears to me, that he has not the technical preparation to enable him to arrive generally at sound conclusions, and that his very want of knowledge of his subject misleads himself, and by the glowing eloquence of his style is apt to mislead others.

ILLUMINATOR.

*** In our next we shall let Mr. Ruskin speak for himself in a full report of the lecture. The second lecture will be given on Saturday, the 25th, at two o'clock, and will treat of "the general principles of Outline."

THE LATE MR. MACKENZIE, OF ELGIN, ARCHITECT.

MR. MACKENZIE'S name is familiar to our readers. Although in the prime of life, he expired of a cerebral disease on the 15th ult. at his residence at Ladyhill, Elgin. He was an enthusiast in his profession, and especially delighted in the old Scottish baronial style. He studied first, it appears, under Mr. John Smith, city architect, Aberdeen, and subsequently under Mr. Archibald Simpson, of the same city.

Mr. Mackenzie commenced business in Elgin in 1841, and his first effort in that city was the Museum. Along with his partner, Mr. Matthews, of Aberdeen, he also designed the Commercial Bank. The New Market and Railway Hotel at Elgin, and a house at Laurelbank, belonging to Dr. Geddes, are all from designs by Mr. Mackenzie. But his architectural labours were not confined to Elgin. Amongst others of his works are the buildings used for Milne's Schools, at Fochabers; the castellated building erected in Botriphnie for Admiral Duff, of Drummuir; and a similar building for Mr. Matheson, on his property of Ardross; while at the present moment there is being erected in Perthshire a castle for Mr. Robertson, of Strowan, also from designs furnished by Mr. Mackenzie.

A specimen of his talents in another style of architecture may be seen in the Free Church at Inverness, a building in the Perpendicular style of Gothic architecture. The United Presbyterian Church at Nairn was also designed by him, and the Caledonian Bank at Forres. Another design of his, is the erection in which are comprised the poor-houses at Aberdeen.

In making additions to buildings Mr. Mackenzie was also skilled. One of his most important labours of this kind was the remodelling of the modern portions of the old castle of Ballindalloch, and the erection of additions; all in keeping with the old towers and turrets, which date from the middle of the sixteenth century. Another work of the same kind was some additions to the old castle of Cawdor, which have only recently been completed. Another of the same character, although on a smaller scale, has been

his restorations, by direction of the Earl of Fife, of the tracery and architecture of the old priory of Pluscarden.

In Banff, there are some specimens of Mr. Mackenzie's talents; for example, the new hall of St. Andrew's Lodge—an erection in the Italian style, and the residence, just completed, for Mr. W. Grant.

By his wife, who survives him, and who is daughter of the late Mr. M'Innes, of Daudaleith, and a niece of Colonel Marshall, Mr. Mackenzie leaves, we believe, five children. In private life, the deceased was everywhere held in high respect.

PROVINCIAL NEWS.

Broughton.—A building in Broughton, capable of holding from 200 to 250 persons, according to the *Hampshire Independent*, has just been converted into a lecture-hall.

Dudley.—The sanitary reformers in Dudley have work cut out for them for some time to come. Yielding to the "pressure from without," in the shape of a memorial signed by the principal inhabitants, and dreading a visit from old King Cholera, the Board of Health wisely made an order for the removal of all "swine" from a certain district defined in the map of Dudley by red lines, and called by its opponents, *par excellence*, the "pig plan." Acting upon the impulse of the moment, the poor pigs' friends got up a towns meeting (as they did in the "Pig Movement" at Leicester), and sent a deputation to the next meeting of the Board, at which they first *petitioned* for a reconsideration of the question, and finally ended by telling them *point blank* that if they did *not*, they, the deputation, would kick them out at the next election. The Board, very unwisely, granted a reconsideration, but if we could strengthen their hands we would say, "Adhere to your wisely-formed resolution, and prevent the poor man from 'herding with swine.'"——The district committee of the Metropolitan Association have entered into a contract with Messrs. Burkets and Nelson, of Wolverhampton, for the erection of a block of ten dwellings in the Dock-lane, and the works are rapidly progressing. In consequence of the fall in the lane and the rise of land adjoining, it has been found necessary to build a breast-wall of cinders, faced with brick, forming a terrace 160 feet long, and of a mean depth of 5 feet above the road. The houses now building have three bed-rooms, and cost 173*l.* each.

Brierly Hill.—Contracts have been entered into for the erection of twenty-four stalls to the public market at Brierly Hill, and the works commenced. The site (occupying nearly 3,000 square yards) is to be covered with eighty-four stalls, having gangways 21 feet in width, roofed with iron and glass. The stalls average 12 feet by 9 feet, and are so arranged that the classes will be distinct. The frontage will be occupied by an assembly-room, magistrates'-room, room for mechanics' institute, &c. but this portion, together with the remainder of the stalls, will not be proceeded with until the spring. The architect is Mr. M. Wigginton, of Dudley; and the builders, Messrs. Hinton and Meredith, of Pensnets.

Melton Mowbray.—The foundation-stone of the public rooms connected with the Corn-Exchange here was laid on Saturday in week before last. "The Melton Mowbray Corn Exchange and Public Rooms Company" was formed with a capital of 3,000*l.* in 600 shares of 5*l.* each. Fifty-two donations, amounting to 483*l.* 8s. were given by landowners, inhabitants, and others; and 539 shares are now held by 104 persons. The site was purchased for 1,025*l.* The buildings will comprise a Corn-Exchange, 80 feet long, 40 feet wide, and 41 feet high, with settling-rooms, and a residence for the secretary or manager, in the rear; also a news-room and library, with savings' bank, room for magisterial and county court, and a basement story for offices on the front, next to Nottingham-street. The architects are Messrs. T. Mallinson and Son, of Nottingham; clerk of the works, Mr. Mallinson, sen.; builders, Messrs. John Norman and Son, of Leicester. The Corn-Exchange itself is so far forward as to be ready for the roof, which will now be an open one.

Matlock.—On Monday evening before last the inhabitants of Matlock Bath experienced for the first time the full convenience and benefit of gas illumination. The shops and houses have been for some time supplied with gas, but the street lamps were then lighted for the first time. A band of music from Matlock town paraded the principal part of the village from an early hour, bonfires blazed, fireworks whizzed and banged, and the fire beacon on the Victoria prospect-tower sent forth its ruddy glow for ten miles round.

Ulverstone.—It has been resolved to erect a covered market here, and four sites are under consideration.

Newcastle-upon-Tyne.—The foundation-stones of two of the schools connected with the vicar of Newcastle's ten-school scheme were laid on Wednesday before last, in the parishes of St. Andrew and All Saints respectively. These will be the first two connected with the scheme.

THE TIMBER TRADE AND THE WAR.

Timber-laden ships from Quebec and other ports of our North American colonies continue to arrive in the river Thames and discharge in the various docks, contrary to the notices which were issued by the dock companies a few weeks since, stating that on account of the excessively crowded state of the docks no timber-laden ships would be admitted. The quays of some of the docks are now so crowded with timber and deals as to occasion the utmost inconvenience and danger to those connected with shipping. Our large timber merchants and builders, speculating for a fall in the price of timber, have not as yet availed themselves of the overstocked market, and as it is known that a number of ships are now on their passage to England, freighted with North American timber, the docks, in all probability, will be encumbered for some time with it, unless its consignees clear their cargoes at builders' and timber merchants' own terms. The cause of this influx is strangely brought about by the war: it appears that so many of our English ships have been taken up by Government, and the requirements of the public service call for still further tonnage, for the transport of troops and stores to the East, as to cause a scarcity of English ships for emigration and mercantile purposes, the result of which is that London freights are inordinately high, and charterers, in many instances, have had to defer exporting heavy cargoes.

The deal season being over in America caused an excess of tonnage there, and North American shipowners, finding there was a deficiency of ships here, despatched their idle craft to the London and Liverpool freight-market; but, not wishing to sail with empty bottoms, no cargo was more ready to hand than their native timber, and hence so many ships freighted with it to the port of London.

SCRAPS FROM IRELAND.

The works at Armagh Cathedral are proceeding. The triforium of the choir is stated to be complete, and the walls of the transepts with their towers raised to same height. We are told that the great eastern window of choir is being erected. The nave is far advanced, and the triforium on the north side completely finished, and that on south raised to level of springing of arches. Frame-work for four great arches at crossing of transepts with nave and choir is erected, and the work in progress.

The new R.C. church at Rostrevor has been lately consecrated. In plan it resembles a Greek cross, and was designed by the late Mr. Duff, of Newry. Mr. P. Byrne, architect, of Dublin, was entrusted with the carrying out of the work.

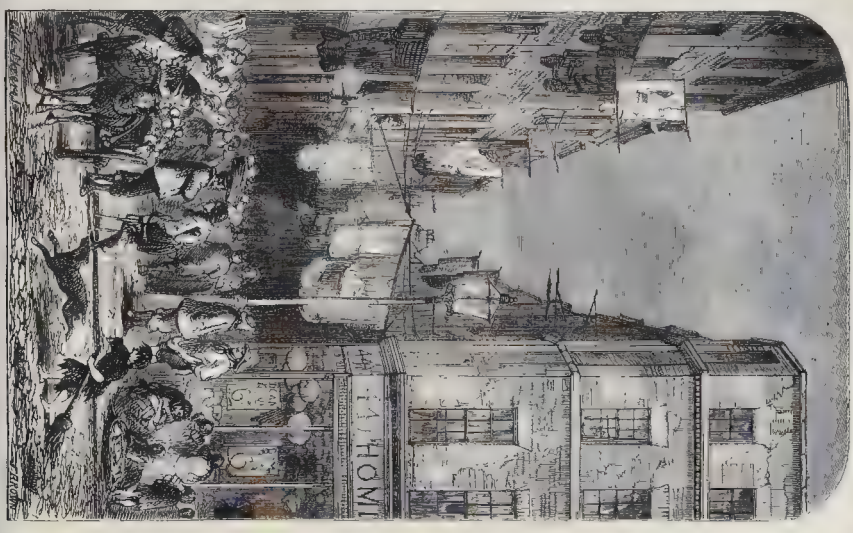
Preparations are being made, according to a local journal, for the commencement, early in spring, of the Magee College, Derry. The plans and elevations have, however, been materially altered from the original designs, previously described in the *Builder;* and we are informed that the intended cost of the collegiate buildings will not exceed 6,000*l.* Mr. E. P. Gribbon, architect.

The new campanile at Trinity College, Dublin, is very nearly complete. We understand it is in contemplation to fix in it a peal of bells, instead of the bell at present in Botany Bay-square. With reference to this bell, we may mention, that it weighs 8,000 lbs. and, according to the inscription thereon, was cast in Gloucester in 1744, by Abel Rudhall. The structure itself occupies a position in Parliament-square, is 94 feet 4 inches in height, with square basement, perforated by arches with rustic piers and pilasters of the Roman Doric order. Above the entablature is a raised platform, circular in plan and broken into steps, with figures of *Divinity*, *Law*, *Science*, and *Physic* (resting on blocks at the angles), from the studio of Mr. J. Kirk, sculptor. From the top of this portion rises an octagonal superstructure, pierced by arches, with columns at each pier, of the Corinthian order, surmounted by a domical stone roof, richly ornamented. Over this is placed an open lantern, nearly similar in feature to the portion below, and covered by an elongated oval roof, ornamented likewise, and finished with a bronze cross 5 feet 6 inches high. It is generally remarked that the design would have been improved by an addition to the height. The total cost will be about 3,500*l.* defrayed by the Lord Primate. Mr. Lanyon was the architect. Mr. Kingsmill, builder.

The new Bank, erected by the Ulster Banking Company, was to be opened for business on Monday last. It is situated at the corner of Irish-street and Market-street. A considerable portion of the building is of cut stone. The architect was Mr. Jackson, of Belfast, and the contractors, Messrs. Martin and Stockdale, of Downpatrick.

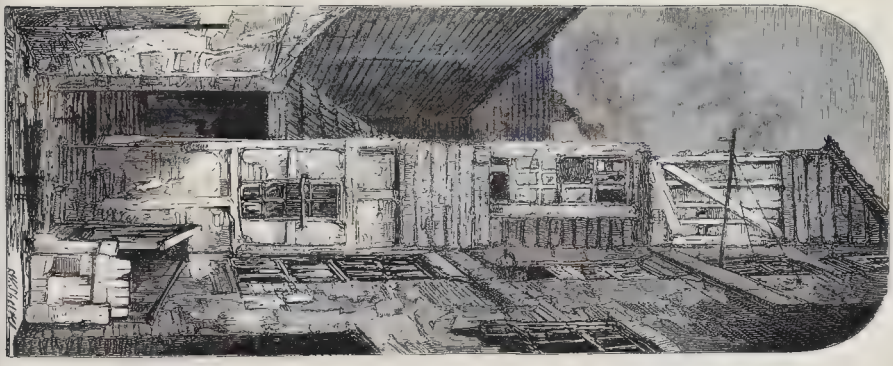
DOINGS ABROAD.

A correspondent who before sent us some notes from abroad (Mr. Blatchly, at p. 562), further writes:—



At Strasburgh, the interior of the south porch of the church of St. Pierre, in which there appears to be some very good work, is being restored.

At Frankfort-on-the-Main the interior of the cathedral is literally a "forest of scaffolding: the whole is being scraped (*late whitewash*) and restored, so far as can be seen at present, with satisfactory care. I understood from the foreman that the gallery will be entirely removed. There appears at present little chance that the hovels erected against the best part of the exterior will share the same desirable fate.



No one interested in architecture should leave Frankfort without visiting Seiler Strasse and another street in the same line: they are on the north side of the town, and contain several exceedingly interesting examples of modern street architecture.

At Cologne new quays are in progress at the south end of the town: they will, when completed, extend from Nächel's Werft to the Bayenthurm, thus completing the line of quays along the whole river-front. A part of the old wall standing near is being removed, and the materials used in the new works: the old mortar, while in some places little better than rubbish, is in others so good that blocks of brick and rubble work, weighing 4 or 5 cwt. when thrown upon each other from a height of 20 feet, scarcely ever fracture. The value of the Prussian pumps on the works appears to be about four to one English.

At Brussels the periodical exhibition of "Industrial Arts," open in the *Palais d'Industrie*, is this year rather a poor affair. There are a few (not more than half-a-dozen) iron-castings that are good, also a few pretty good specimens of wood-carving on furniture. The architectural designs and drawings, which occupy in proportion rather a large space, are for the most part not remarkable either for excellence in idea or execution. There are some designs for furniture, and some pen-and-ink drawings; among the latter, a portrait of Rubens, about 3 inches square, "*Fait à la Plume, par un Elève de l'Ecole des Frères de Chaule à Bruges,*" appears to be singularly meritorious. The only signs of building at Brussels are a few ordinary houses near St. Gudule.

THE HOMES OF THE LONDON POOR.

CHURCH-BUILDING NEWS.

Salford, Oxfordshire.—On Monday in week before last, the Bishop of Oxford consecrated the parish church of Salford, which has been re-built, with the addition of a new aisle.

Northampton.—The consecration of the new church and burial ground at Denshanger took place on Thursday before last. The new church is an Early English edifice, having at the west end a large and unusual gable turret, carried on a recessed arch with massive buttress abutments, and containing three bells. The building consists of a nave, chancel, and one aisle on the north side, with an open-timbered porch on the south. The east window is a triple lancet. The general face of the walls is of the local stone, with dressings of Bath stone. The north aisle is separated from the nave by an arcade of four arches, with circular pillars. The interior arrangement consists entirely of open sittings. The floor is of red and black Staffordshire tiles. The design was by Mr. Ferrey, and the contractor was Mr. Hailey, of Stony Stratford. The amount of the original contract was 1,777*l.* and the money collected, including grants from the Incorporated and Diocesan Societies, nearly 2,000*l.*

Faringdon.—The restoration of the parish church here, now completed, comprised the following works;—The removal of all pews, galleries, and other fittings; the entire re-building of the south aisle of the nave, and of the aisle which runs parallel with the south transept, called the "Littleworth Aisle;" building an organ chamber out from the north aisle of the nave; repairing all the stone work where damaged by the erection of the galleries, or from other causes; placing a new roof of the original pitch on the nave; re-seating the whole church with oak open benches; and paving the floor with Minton's plain tiles. The transepts were separated from the Unton aisle on the north, and the Littleworth aisle on the south, by masses of masonry, which under the present arrangement of the seating would have proved great hindrances both to sight and hearing: this masonry has therefore been removed, and arcades formed by the introduction of circular piers. Eastward of the north transept a vestry has been erected with a high pitched roof, and beneath it is the chamber for the hot-water apparatus. The works executed within and about the chancel and Pye Chapel, at the cost of Mr. D. Bennett, the lord of the manor, embrace the external restoration of the fabric; new glazing to the windows; oak stalls and subsellæ in the chancel; restoration of the ancient sedilia, and furnishing them for use in future services; an entire new floor of Minton's encaustic tiles without the rails; and a dais for the Communion-table, formed of similar tiles. Mr. Bennett has also seated the Pye Chapel with open benches. The panels of the reredos have been filled with the tables of Commandments, the Creed and Lord's Prayer, and two texts above the doors of the singularly placed aumbries in the east wall. The oak benches are all of the uniform height of 2 feet 8 inches. The Caen stone pulpit is a portion of an octagon, low with moulded trefoils in the several panels and small carved spandrels—open at the back, and approached by four steps from the floor of the nave. The prayer-desk is of oak in a stone base, and has carved finials in the standard. The vestry has an oak parclose up to the springing of the arch, which was discovered in the east wall of the north transept, and is fitted up with the necessary closets for vestments, &c. The gas fittings of brass, and the corona in the chancel, are from designs by the architect. Three stained-glass memorial windows, by Wailes, of Newcastle, have been placed in the Littleworth aisle. Mr. Hugall, of Cheltenham, was the architect.

South Mimms.—A vestry meeting was held a short time since, attended only by five or six persons, at which a resolution was passed authorising the vicar to call in "a surveyor" to survey the dilapidations of the parish church, and to estimate the costs of restoring the same. A report was therefore obtained, accompanied by plans, suggesting certain restorations and alterations at the cost of about 1,900*l.* and recommending that further works, shortly to be required, at a cost of from 300*l.* to 400*l.* more, should also be done. A second vestry was last week called, for the adoption of these plans and report. Capt. Trotter urged that the resolution referred to merely contemplated works necessary to keep the church in repair, and objected to the alterations "proposed by an architect who, after destroying the simplicity of a neighbouring parish church, converted it into a model of a Roman Catholic chapel." The expense, he said, was a secondary matter. The vicar said he had no wish to depart from the simplicity of Protestant worship, but he thought that those who were always ready to ornament their own dwellings, should be still more anxious to beautify the House of God. An amendment, however, to the effect "that such repairs only as were required for upholding the church should be authorised, and that the costs of the present plans should be borne by the church-rate," was carried by an overwhelming majority.

Chippenham.—A site for a new burial-ground, of nearly four acres, on the London road, has been purchased, and is to be divided into two parts, one for the Established Church, and the other for Dissenting communities and general use. The architect of the burial board has designed two mortuary chapels, one for the consecrated, and the other for the unconsecrated portion. Both are small, but sufficient for the objects designed, and contracts for the works necessary for enclosure and building of entrance lodges and chapels, have been taken. The board reported to the vestry that 2,400*l.* would be necessary for the land, laying out buildings, &c. and a grant of 2,500*l.* was voted. It is intended to borrow the amount from the Board of Works, repayable with interest from the poor-rates by annual instalments.

Starcross.—An alteration has been made in the district church of St. Paul's, Starcross, Devonshire. An entirely new chancel, of bold character, has been erected, with a vestry on the south side. A bell-turret, about 70 feet in height, has been built at the west end, and a new porch entrance constructed on the north side of the edifice. The roof timbers have been laid open to view, and ventilation provided for. New freestone windows have been inserted throughout the building, in lieu of the former wooden sashes, and glazed in church patterns, with Hartley's patent rolled glass, and stained glass borders. The pews have been lowered to a uniform standard with the free seats. A stone reredos has been erected at the east end of chancel, and the whole interior of the fabric generally renovated.

Penzance.—The plans and specifications for the chapels and other buildings to be erected in connection with the new cemetery at Penzance, according to the *Cornish Telegraph*, were prepared some time since by the clerk of the works, Mr. J. Matthews, and exhibited in the Guildhall, after which a vestry meeting was held, at which resolutions were passed, approving the plans, and sanctioning an expenditure of 2,500*l.* The site comprises three and a half acres, and will have its entrance from the road leading from Penzance to Madron.

Knighton.—The foundation-stone of Crûgbyther church, Beguildy, was laid on Monday in week before last. Crûgbyther church is said to be the first additional church built in Radnor since the Reformation. It is to stand on a spot central to the two townships of Crûgbyther and Midwaleth. The site, about nine miles from Knighton, was presented gratuitously by Mr. C. Vialls. The funds are to be raised by subscription, and there is still a large deficiency to be made up. The scheme comprises a schoolroom and house for schoolmaster. The architect is Mr. H. Lote, of London. Mr. G. Griffiths, of Heyop, is the builder.

Chester.—It is proposed to raise a public subscription for an obituary window of stained glass and appropriate design, in the church of St. Mary, Chester, to the memory of the gallant heroes of the 23rd Royal Welsh Fusileers who fell at the battle of the Alma, with a tablet, on which will be inscribed the names of the dead. The Bishop of Chester, Sir W. W. Wynn, bart. and Lady Wynn, have each subscribed 10*l.* towards the memorial.

Burnley.—St. Peter's Church, Burnley, was lately re-opened. The old roof has been taken down, and a full clerestory erected over the nave. The organ-gallery, which blocked up and rendered useless the upper portion of the east window, has been removed to the west end. The old east window has been taken out, and its place supplied by one in the Perpendicular style. The design embraces many of the most striking incidents of our Saviour's life, and the prominent features of the career of St. Peter (patron saint of the church) are depicted in the various compartments. The Teaching in the Temple, the Baptism of John, the Last Supper, and the Ascension, occupy prominent positions. A Gothic panelling has been put along the whole of the front of the three galleries. The number of seats has been considerably increased. All the old pews have been removed, and their places supplied with open benches of uniform design

Leeds.—The consecration of St. Peter's Church, in the district of Burmantofts, took place on Thursday in last week. St. Stephen's Church is built from designs by Mr. Dobson, architect, in the Geometrical Decorated style, and consists of nave, 81 feet 6 inches long, by 31 feet wide; chancel, 24 feet long, by 20 feet 6 inches wide; and vestry, 22 feet by 11 feet, interior dimensions. The extreme length of church, over buttresses, is 131 feet 2 inches; extreme width, 43 feet 6 inches. The nave is lighted by three light tracery windows, and by a large wheel window in the west gable, about 15 feet diameter; the chancel by a two-light window, a spherical triangular window over the vestry roof on the north side, and a large five-light east window. The church is furnished with low open seats for 605 persons. The stairs to gallery are enclosed in an octagonal turret, about 82 feet high, placed at the south-west angle of the building. The contractors, according to the local *Intelligencer*, were as follow:—Masons, Messrs. Mawer and Whiteley; carpenter and joiner, Mr. W. Britton; plumber, Mr. John Garlick; plasterer, Mr. James Charles; slater, Mr. John Preston; painter, Mr. Lister: the ironwork, bell, and heating apparatus were supplied by Messrs. Singleton and Tennant: all of Leeds.

Burley.—The church of Burley, near Leeds, was consecrated on Friday before last. The edifice is in the Geometrical style. The plan is cruciform, with an engaged tower, 21 feet 6 inches square, at west angle of south transept: the tower is of three stages, and forms the entrance to the church. It is stone vaulted, and surmounted by a spire 166 feet in height. The dimensions of the nave are—length, 79 feet 6 inches; breadth, 25 feet 2 inches; height, 43 feet to apex of roof. The transepts are 66 feet 10 inches long, 23 feet 2 inches wide, and same height as nave. At their intersection are lofty arches, having hood moulds and carved bosses. The chancel is raised two steps. Its dimensions are—length, 27 feet; breadth, 23 feet; height, 39 feet. The piers are clustered. The east window has eight lights, the west six lights, the transepts four lights, the nave and chancel aisles two lights, the whole having geometrical tracery in the heads. The roofs are open. The seats have low backs and fronts, filled with tracery. The font, tablet, and all the carved work, are of Caen stone, and have been executed by Mr. Robert Mawer, of Leeds. The church is erected of sandstone, by Mr. Thos. Moxon, of Headingley; the joiners' work and carving by Messrs. Winn and Pawson; the staining and decorating by Messrs. Joseph Wood and Son. Messrs. Perkin and Backhouse were the architects. The church was warmed and ventilated by Messrs. Haden, engineers, of Trowbridge. The tower is to contain three bells, which are to be cast by Messrs. Taylor and Son, of Loughborough.

Askrigg.—The church of Askrigg, in Yorkshire, was reopened on Tuesday in week before last, by the Bishop of Ripon, after being partly rebuilt. The foundation of the nave piers having given way, it was necessary entirely to rebuild the body of the church. The old windows have been replaced by new ones: the large east window is of five lights, with tracery, and divided in two heights by an embattled transom. The nave roof, of oak, has been repaired and reinstated. A western gallery which blocked up the tower

arch has been removed, and the bell-chamber enclosed from the church by a stone groin. A new staircase turret gives access to the upper part of the tower. The seating is of Memel fir, stained and varnished: the pulpit, reading-desk, and chancel stalls, also the parcloses in the easternmost arches, are of English oak. The new work is in the Perpendicular style. Mr. Thomas Dickons, of Durham, was the architect. The general contract has been carried out by Mr. John Holmes, of Bramham; the oak work by Mr. Redshaw, of Durham; the decorating by Mr. Greathead, of Richmond. The cost of the work has been about 1,350*l.*

Scotby (Carlisle).—The foundation-stone of Scotby Church, now in course of erection, was laid by the Bishop of Carlisle on Tuesday in last week. The church is to be built of red sandstone, in the Early English style, from designs by Mr. Salvin, and will contain 200 sittings, one-third free. The whole cost of the edifice will be defrayed by Mr. Head, of Rickerby House; and Mr. David Hodgson, of Liverpool, endows it with 1,000*l.*

THE "SOCIETIES."

The Institute of Architects commenced the session on Monday last; and of the paper read our readers will have an account.——The Institution of Civil Engineers began on Tuesday, with an essay, "On the Means of avoiding Smoke from Boiler Furnaces," by Mr. W. Woodcock.——On Wednesday the Society of Arts opened their one hundred and first session, Viscount Ebrington reading an able address. ——The Royal Society and the Society of Antiquaries met for the first time this session on Thursday.

ARCHITECTURAL WORKS IN CAMBRIDGE.

In the last report of the committee of the Cambridge Architectural Society, the following allusions are made to the chief architectural works carried out in the university during the past year:—

"The very fine lectern belonging to King's College has been carefully repaired, and is now replaced in the centre of the choir, from which it was removed in the latter part of the last century.

The new buildings at Caius College are fast advancing towards completion. Your committee being anxious, as much as possible, to avoid expressing opinions which can justly give offence to others, regret that they cannot reconcile themselves to the style employed. They think, however, that all credit is due to the architect for his successful treatment of a very difficult site, and the amount of accommodation he has managed to provide.

The works in the hall at Queen's College, which commenced some time ago with the erection of a new roof, are now being continued by the restoration of the oriel, the details of which are carefully copied from the existing remains: the lights are filled with an excellent specimen of Hardman's stained glass, containing the arms of the founders and distinguished members of the college. Stained glass by the same artist has been recently placed in the four lancets on the south side of the chancel at Jesus College. These windows your committee would recommend for attentive examination, as affording a good specimen of the best treatment of this material.

In the chapel of Magdalen College colour has been introduced in the details of the screen, and in the operation, unusual in a college chapel, in describing the decalogue on the east wall. The effect of this, though a great relief to the general appearance, falls short in both cases of what could be wished, partly owing, perhaps, to the want of a general system of colour in the chapel. Your committee would suggest that texts when inscribed below the string-course *are, besides being contrary to ancient precedent, difficult to read*, and thus defeat the very purpose for which they were placed there. A diaper pattern over the whole surface of the wall would seem to be more suitable.

Your committee have observed with much satisfaction the appointment of a syndicate on the subject of St. Mary's Church: they trust that the time has at length arrived when something may be done (to provide additional sittings, which are so much needed) to make it more worthy of its character as the University Church.

The new aisle of St. Benet's Church has been completed this summer, and the works have resulted in the discovery of the quoins at the east end of the nave, which belonged to the original Saxon church.

Your committee had hoped that something might be effected to preserve the ancient Lesser Chapel of St. Mary Magdalene, Stourbridge, and adapt it to a practical use by removing it to the cemetery for re-erection as the burial chapel: it would certainly appear that by this means a good deal of expense might be saved, and a most interesting early building be preserved for sacred purposes.

On St. Andrew's Day, 1853, the work of restoration commenced at St. Andrew's, Barnwell. Since that time the walls and roof have been put into a state of thorough repair, and a vestry has been added. The restoration has been superintended by your committee, who feel it incumbent upon them to state that not only has every feature of importance connected with the original building been preserved, but one or two of great interest, hitherto unknown, have been laid open in the course of the work."

THE LATE W. TURNBULL.

We hear with regret of the death of Mr. W. Turnbull, the writer of many mathematical papers which have appeared from time to time in our pages. He was an industrious labourer in his own particular field, and a few months before his death showed us a series of his works, some in his own name and some in others, filling a small chest, which he was about to send to the Prince Consort. He was connected with the late Peter Nicholson, and claimed the authorship of some of his books. Amongst the works published in his own name, are volumes on Great Circle Sailing, Trigonometrical Surveying, Spherical Trigonometry, Spherical Astronomy, &c. From circumstances which are probably explainable, he never rose out of poverty, and has left his widow in a state of destitution.

SCOTTISH EXHIBITION OF ARTS AND MANUFACTURES

CONNECTED WITH ARCHITECTURE.

The Glasgow branch of the Architectural Institute of Scotland have undertaken an exhibition of arts and manufactures connected with architecture. They have purchased ground, and erected galleries as exhibition-rooms, and have converted a house on the property to serve as a home for the institute. The council are desirous of promoting a love of art in that part of Scotland, of extending the means of education, and of assisting in the foundation of a permanent museum of architecture, sculpture, painting, and art-manufacture. We need not say that we sympathise with them in their efforts, and would gladly aid in procuring contributions of objects of art and manufactures. We understand they have experienced some difficulty in obtaining contributions in England, manufacturers especially appearing to be unaware of the field thus opened up to them in the great manufacturing metropolis of Scotland.

The Scottish architects associated in this enterprise are desirous of promoting a knowledge and the sale of every object of real merit produced either at home or abroad; and whilst inviting the contributions of their English and foreign brethren, they hope that the exhibition may be of advantage to them; and the council will do their utmost to promote the success of all who may contribute.

CONTRIVANCES FOR FLOWER-BEDS OUTSIDE WINDOWS.

The inhabitants of London and of large towns, generally, are great lovers of flowers, and fond of decorating their windows with plants; but the mode of doing it seems capable of great improvement.

The contrivances now used are flower-pots and wooden boxes, both of which are objectionable. The pots take much room, and are liable to injury in high winds. The wooden boxes are expensive, and soon wear out. Lately terra-cotta vases, urns, &c. have been introduced, and when made long, to fit the sill of the window, they are a great improvement; but they are expensive.

The thing really required has not yet been invented, at least I have not seen any advertisements on the subject. The object to be attained is to provide space for a little flower-bed, extending all along the outside of the window, and projecting as far out as the taste of the amateur gardener may suggest. This bed should be filled with fine leaf mould, and, if planted with bulbs in the winter months, and geraniums in the summer, would become a very pretty object, affording a constant subject of interest and employment to the ladies of the family.

A large slab of stone, or slate, should first be firmly set, and on this a bed might be formed of tiles of earthenware, or terra-cotta, expressly made for the purpose. The tiles might be made in pieces, so as to be capable of fitting to window-sills of any size: some should be flat, others at right angles, to form the sides, and the outside tiles should have holes, or a gutter, terminating in a hole, conveniently placed, to allow of the surplus water draining off. Iron castings should be adapted to the support of these tiles, so that when all were laid, there should be a firm flower-bed of not less than say 6 inches in depth.

Might not a thriving branch of industry spring up in the supply of these flower-beds, to assist in gratifying so universal a taste as a fondness for flowers?

P.

SPRING-HILL COMPETITION.

We have received a long letter, signed "Will. Fowler," on behalf of the committee, in reply to the protest signed by four architects, which appeared in the *Builder*, of September 30th (p. 513), admitting that when they returned the designs first selected, they said, after specifying the alterations required, "that the other conditions remained as before." The letter goes on as follows:—

"By this expression, they referred to the other conditions to be complied with by the architects; and notwithstanding the protest, they still consider this to be the correct interpretation, for the following reasons:—1. The committee distinctly stated that they did not invite to a second competition, and that they would give no premiums: the original conditions, therefore, relating to a competition, and an award of premiums, could not be referred to. 2. The connection in which the sentence occurs (immediately after directions as to the exterior form and internal arrangements of the building, diminution in the number and size of rooms, and an increase of the sum to be expended), shows that the committee referred to the conditions to be observed in the plans, and not to the mode of deciding upon them. 3. It is only in connection with cost that any intention is intimated of taking a further professional opinion. 4. There was no occasion for further professional opinion as to style and external beauty, since the original plans, of which modifications were requested, had all received the express approbation of the architect who had been consulted. 5. When the committee resolved upon the course now complained of, they informed the six architects of it, and from only one did they receive any objection.

"That one, either from the absence of the secretary, or from some inadvertence, appears not to have been brought to the attention of the committee, and remained unanswered; but if communicated to them, it certainly would not have altered their plan, approved, as they would have considered it, by the other five gentlemen. The method of decision adopted was that, that on the point on which it was intimated in the circular letter, that a professional opinion might be taken, the committee resolved to take something more decisive and more favourable to the architects than any professional opinion, namely, tenders by competing builders upon the plans in succession, until one should be found to stand the test in point of expense."

We are compelled to say, after an examination of the original "conditions," and of Mr. Fowler's letter respecting the sending in of amended designs, that this is not an answer to the objection raised in the protest. We are informed that the successful candidate is a nephew of the chairman of the committee. This, of course, may be quite consistent with equity, but it is an additional reason why the committee should be able to show that they have kept faith with the competitors.

It is right we should mention that Mr. Fowler goes on to say that the architect consulted on the plans originally sent in, declared, that the least costly would have required nearly half as much again as the prescribed sum, and consequently, that the committee would have been justified in refusing to pay the premiums to any. Nevertheless, they did pay them.

Notices of Books.

A Dictionary of Terms in Art. Edited and Illustrated by F. W. Fairholt, F.S.A. *With Five Hundred Engravings on Wood.* Virtue Hall, and Virtue, 25, Paternoster-row.

The articles on art-terms which appeared in the *Art-Journal*, together with their numerous illustrations, have now assumed the form of a neat volume, which deserves our best commendation. This work, of which Mr. Fairholt is both writer and illustrator, includes all such terms as are generally employed in painting, sculpture, and engraving, and, in fact, "comprises the æsthetics of art as well as their practical results." As a handbook for those who are interested in art, all such terms, ancient as well as modern, as may be used in describing the contents of a museum or a picture-gallery are explained in it. Thus technical terms and implements are described, pictures anatomised, notices given of the various schools of art and public picture-galleries in England

olours analysed, precious stones and ornamental oods described, saints and their symbols noted, nd art manufacturing processes explained. The nge of this dictionary is therefore somewhat ide and comprehensive, and it constitutes a very seful book of general reference for all students r amateurs in the Fine Arts, and an instructive rt-guide and an interesting and curious collecion of readily-accessible art-lore to readers in eneral, many of whom it may lead into a love nd study of art while used as a mere dicionary.

In succeeding editions, to which it is sure to ome, Mr. Fairholt will be able to make it even ore complete in parts, and to rectify some lips unavoidable in the first issue of such a ork.

Examples of Vases, Tazzas, Paterœ, &c. manufactured in Terra Cotta. By J. M. Blashfield, Mill-wall, Poplar. 1854.

We have before now spoken of Mr. Blashfield's erra-cotta, and here we have a volume of engravngs of the works manufactured by him, and hich may be very usefully referred to. He entions in his preface as amongst his works in he Crystal Palace and Park, the Statue of Australia, the four colossal Tritons, the centre ountain in the Renaissance Court, and the pper portion and statuettes over the Venice ells. The roof of the Alhambra Court is an xample of red terra-cotta by him, and the roof f the Pompeian House one of red terra-cotta nd red cement combined.

VARIORUM.

Manuals of Hydrostatics, Mechanics, Plane Trigonometry, and Optics, by Professors Galraith and Haughton, have been issued in a eries by Messrs. Longman, Brown, Green, and Longmans, comprising the essential principles f each of the sciences treated of in small compass, and at a low price.——A treatise on paper, in Tomlinson's "Objects in Art-manufacture" (published by Harrison, of Pall-mall), as been issued to schools by the Board of Trade Department of Science and Art: it contains some curious historical and other interesting matter, with specimens of straw paper, marbled, and various other kinds of paper.——'The Lady's Almanac for 1855," is an illustrated periodical, containing, besides the usual almanac, various entertaining or instructive extracts, &c. suitable to its readers, and forming the first of a series which may be made interesting.——A report has been made, and printed for the use of the Birmingham Council, in which Messrs. R. Rawlinson and J. P. Smith, civil engineers, propose a new source of water supply to that town, to be obtained from the rivers Cole and Blythe, at Blythe-mill, through a storage or settling reservoir and filter-beds, established at that point, and raised into a fountain reservoir near Coleshill, whence it would flow through an aqueduct along the Tame Valley to Birmingham. The cost for works delivering 6,000,000 gallons in twenty-four hours is estimated at 111,880*l.*——A similar report has been made by Mr. T. Brazill to the Corporation of Dublin, and published by Falconer, of Upper Sackville-street, in that city, in which it is proposed to supply Dublin with pure water at high-pressure, from a point, on the river Liffey, 430 feet above the sea, and in the counties of Wicklow and Kildare, near its sources, where an artificial lake is contemplated for the supply of 79,000,000 gallons a day, at an estimated cost of 105,256*l.*——A pamphlet "On Baths and Washhouses for the People," by E. T. Bellhouse, has been reprinted from the Transactions of the Manchester Statistical Society, by Cave and Sever, of Manchester. His main object is to urge the establishment of public baths and washhouses at Manchester, to which end the various encouraging statistics of progress at Liverpool and in the metropolis are quoted, and other useful information given.

Opening of the Metropolitan Necropolis at Woking.—This extensive necropolis was consecrated on the 7th instant, by the Bishop of Winchester. The subject is of too much importance to be passed over without a personal visit, and we shall revert to it hereafter.

Miscellanea.

New Buildings in Glasgow.—A local paper speaks of the plan of a building to be erected in Trongate, and of much the same style as that of Messrs. Campbell, already noticed; but with something of a Flemish as well as of a Scottish character. Mr. Rochead is said to be the architect; Messrs. Taylor, the builders; and Mr. J. Bain, of Morriston, and the City of Glasgow Bank, the proprietors. In the north quarter, Messrs. Buchanan and Hay, who lately projected the bazaar in Clyde-street, have commenced on that district a bazaar forming a direct road from Cowcaddens to Hope-street. Preliminary operations for the erection of the suspension-bridge at the Green are proceeding. In Miller-street there is a building in progress designed by Messrs. Kirkland and Russell as a warehouse; and another rising beside it designed for a calenderer, to which our authority points attention from their ornamental details. The architect of the latter is Mr. Burnet. A number of new churches are in course of erection or about to be erected. The first noted is that now building for the Free Wellpark congregation, Duke-street. It is said to be an elaborate structure in the Gothic style. The architect is Mr. Hay, of Liverpool. The greater part of the mason work is finished, except the spire. A new Established church, in the Early English style, is well advanced in Dumbarton-road. The architect is Mr. Bennet, of London. Another Established church, it is said, is shortly to be erected on the north side of the West-end-park, and there is to be a new Free church in that neighbourhood. On the south side, in Salisbury-street, a plain Gothic structure, with a low tower in front, and embattled parapet following the slope of the roof, is in progress for the Reformed Presbyterians.

Important Sanitary Inquiry at Manchester.—At a meeting of the Manchester City Council, held on Thursday, a letter was read from Mr. Samuel Brooks, offering to place at the disposal of the Corporation the sum of 1,000*l.* to be expended in preliminary inquiries and experiments with the view of ascertaining the practicability of applying the night soil and sewerage of the city to agricultural purposes. Mr. Brooks, in his letter, states that 100,000*l.* are annually lost to Manchester by the present mode of dealing with the refuse of the city, and he suggests that a committee of inquiry should be appointed by the Council, who should secure the services of Mr. William Fairbairn and Mr. Bateman for the engineering department, and Mr. Crace Calvert and Dr. Angus Smith for the chemical department.—*Morning Chronicle.*

Memorial of the late Mr. Higgins.—A large memorial window has just been placed in St. Jude's Church, Southsea, at the east end of the chancel, by the three sons-in-law of the late Mr. J. W. Higgins, one of whom, Mr. T. E. Owen, built and endowed the church, to which Mr. Higgins was also a liberal contributor. The window, which has five bays, is chiefly composed of architectural forms and foliage, but the central bay has a painting of Moses lifting up the brazen Serpent. The painting is said to be a very creditable effort of Messrs. Hartley, of Sunderland.

An immense Fly-wheel.—Considerable interest was excited during the proceedings of the British Association in Liverpool, by the announcement by Mr. Clay, of the Mersey Steel and Iron Company's Works, of the enormous fly-wheel which was then being erected at the south end of Liverpool. This wheel is now completed, and its capabilities were first tested on Wednesday last. It is 35 feet in diameter, and weighs upwards of sixty tons, twenty-four of which are absorbed in the rim. It is the largest of the kind in the kingdom, and when in motion, such is its size, it is fearful to stand within several feet of it. The object of so large a wheel is to give the proper momentum, and to counteract shocks in the manufacture of iron plates. Everything in connection with this ponderous piece of machinery is indicative of strength. The bedding for the shaft is composed of upwards of 20 feet deep of solid masonry, half of the wheel being below the surface. Some idea of its size may be ascertained from the fact that when it is making thirty-eight revolutions in a minute, which will not be much above its usual momentum, its periphery is travelling at the rate of a mile a minute. The engine by which it is turned is horizontal, and of the nominal power of eighty horses.—*Liverpool Mercury.*

Clay Reservoirs.—Your correspondent, Nov. 4, wishes to be informed of the methods adopted to prevent vegetation in clay reservoirs. I can only give him my judgment,—First and best, to line the interior with sound hard bricks, but this will prove a very expensive work; secondly, give it a good coat of bituminous asphalte; or, thirdly, a good wash of thick stone lime, used when hot. I am not aware that the last two methods would affect the water, considering its great quantity.—T. G.

Deptford Surveyorship.—Mr. John Whichcord has been elected by the justices of Kent district surveyor of Deptford. There were several candidates, viz.—Messrs. Henry Jarvis, Edwin Nash, George Barnes, Williams, Legg, and Pring. Mr. Williams stood second.

Large Contract for Iron Plates for Russia.—Government now, we hear, has entered into a contract for the manufacture of about 2,000 tons (worth 50,000*l.*) of enormous iron slabs or plates. They are to be made of the best scrap iron, with which the powerful floating batteries of which we spoke are to be covered, so as effectually to render them proof against the heaviest shot the Russians can throw. These plates vary from 8 to 12 feet in length, are from 21 to 36 in. broad, and about 4½ in. thick. Each plate will weigh from about 1½ ton to upwards of 3 tons; and, after being fitted, they are to be bolted to the outside of the floating batteries. From experiments, it appears that iron plates of the scantling here mentioned not only resist the heaviest shot, but break them in pieces when they strike. So urgent are the authorities to have the batteries ready for active operations against Russia in the spring, that the contract has been divided amongst the principal makers in Glasgow, Newcastle, Lowmoor, and other places in the north of England. Surely the idea we started as to fitting every one of our war-ships with at least a single row or two of such plates "between wind and water" must have suggested itself to the authorities. Floating-batteries require time to build. Every war-ship already afloat is a floating-battery, though not so strong, probably, or so able to carry plates of such weight, but the size of plate could easily be suited to the strength of timber, and an immense advantage be thus readily and at once attained throughout our whole fleet.

Architect and Horse Doctor.—I send you a copy of an advertisement from a Cambridge paper, for the benefit and edification of the building world, and architects in particular:—"John Noakes, certified member of the Royal College of Veterinary Surgeons, London, begs to thank his friends and the public, for their liberal support during fourteen years' residence in Ely, and assures them he still continues to practise the *veterinary art*, contrary to reports set abroad by farriers and empirics to the effect, he has relinquished his practice as a veterinary surgeon. He also states that to the above profession, he has added that of *architect, surveyor,* and *builder,* and will be happy to produce high testimonials as to qualification in either professions."—What next?——Another correspondent, who directs our attention to the same advertisement, says, "The fine arts seem to be in the ascendant in Ely, for in front of a barber's shop near the railway station, there is the usual tonsorial pole, and under it this announcement:—"J. Toombs, Hair Dresser, Perfumer, and Portrait Painter."

Somersetshire Archæological Society.—At the first *conversazione* for the forthcoming winter, the Rev. Frank Warre was chairman, and introduced the business of the evening by referring to the success of the past season's conversational gatherings. Mr. E. Walter, of Percome-hill, then read a short paper on a newly-discovered Roman pavement at Wadford, near Chard. Rev. F. Warre followed, with Mr. Mogg's paper on heraldry, which was illustrated by numerous coloured examples. After the tea and coffee interval, the Rev. A. Jones made some remarks on a singular candlestick, used in Wales for burning rushes steeped in tallow. Mr. Tomkins read a paper on Tickenham Church, near Clevedon.

The Parish Church of St. Mary, Stoke Newington, has become too small for the accommodation of the parishioners, and a new church is on the *tapis,* the design by Mr. Scott. On the 29th of October the rev. the rector of the parish preached a sermon in behalf of the new church fund, in the course of which he gave the following pledge,—"That no wood stained to imitate that of richer grain, no plaster moulding to take the place of that upon which thought and patient labour had been bestowed, that no stucco transparently counterfeiting the more costly stone, should be admitted into its construction; but that every detail should bear the impress of truth." The building is to cost 7,500*l.* the fittings, 1,000*l.* The foundations have been commenced, and it is to be hoped that means will be forthcoming to prosecute the work without delay.

Architectural Lending Library.—One of the chief things lamented by most—and I do not doubt all architects—is the want of a public architectural library. Will not some person start such a thing? It is true that architectural works are expensive, and that it would require a small capital to commence with; but would not a subscription, of say a couple of guineas per annum, be eagerly paid by most architects, their clerks, and pupils? It appears, from the Post-office Directory, that there are about 600 architects practising in London alone.

Spes.

Accident at an Iron-Yard. — Three hundred tons of iron fell last week in the iron-yard belonging to Messrs. Farmer, tool-merchants and ironmongers, St. John-street, Clerkenwell, and caused the death of Henry Lynn, the foreman of the yard. The iron, which was all bar of different thicknesses, varying in length from eight feet to sixteen feet, was kept in the yard beneath a roof of a shed-like construction, itself being stacked perpendicularly in a number of stacks, according to its substance, space being left between each stack enough for any one to go in and examine the metal. Each separate stack leant against separate bars of timber, trebly supported by tressels of very great strength, and secured with iron caps and clamps

Railway Carriages.—It would be a great convenience if railway directors would cause time-tables to be fixed up in their carriages, instead of some of the advertisements we see there. In first-class carriages they might have a loose board to attach them to. I should also like to see the handles of the carriage doors inside as well as out, in somewhat the same manner as house doors, so that a person might let himself out without having the trouble of pulling down the window, or running the risk of smashing his hat in so doing.—G. F.

Builders' Clerks.—In the present day when so much is said and so much good done for the working men, can nothing be done to ameliorate the condition of the working clerks? Is it not too hard that they should be expected (as some are), to work from half-past eight in the morning till seven in the evening, and that every day in the week, Saturdays included, for a smaller pittance than is awarded to a journeyman carpenter? Is it not a discredit that a young man of respectable education (and it is well known that a builder's clerk must have a good general education to be efficient), should be compelled to work early and late, destroying his health and enervating his mind, for such a paltry consideration as he now obtains? Will you, sir, kindly use your influential pen in our behalf, and endeavour at least to put us on a footing with clerks of equal abilities in other trades, and oblige,—One of Them.

M. Berckmans, Architect, of Antwerp, whose church at Borgerhout we illustrated a few months ago (p. 239, *ante*), died of cholera at the beginning of last month. His wife died the previous day, and on the Wednesday following both his servants, and two "Sisters of Charity" who had attended M Berckmans, were killed by the same disease. A sad story! M. Berckmans was anxious to be elected a corresponding member of the Institute of British Architects, and a short time before his death, had forwarded us a statement of the buildings he had erected. He was architect to the city of Antwerp, and a professor in the university there.

Institution of Mechanical Engineers.—The general meeting of the members of this institution was held on 1st. inst. at the house of the institution in Newhall-street, Birmingham; the president, Mr. Fairbairn, F.R.S. in the chair. The nomination of officers for the ensuing year took place for the next annual election; also the election of a number of new members. The first paper, read by Mr. John E. Hodgkin, of Birmingham, was a description of "Prideaux's Self-closing Valve for Preventing Smoke in Steam Boilers and other Furnaces." The second was a description of an "Improved Wrought-iron Piston," by Mr. James E. McConnell, of Wolverton. The next was a description by Mr. Henry Wright, of Saltley, of an "Improved Steam-engine Boiler," invented by Mr. W. B. Johnson, of Manchester. The last was a description of a "Friction-hammer," by Mr. James Kitson, of Leeds. The meeting then terminated.

Panic in a Chapel at Cork.—In South parish chapel, where a dense crowd had collected to hear one of the "Redemptorist Fathers," on Monday in week before last, a panic suddenly ensued on the crash of a long stool which was broken in the middle, when an outcry arose that the galleries were coming down, and a rush, as usual in such cases, was instantly made to the door, where many persons were crushed and trampled on, so that twenty-eight persons, men, women, and children, were all more or less injured, some of them it was feared fatally.

Sharp's Ventilating Shaft.—By an imperfection in Mr. Sharp's description of this shaft, it was merely stated that the poisonous gases were not exploded or consumed while in the sewer. But it ought to have been more explicitly explained, that these gases were consumed, as well as the sewer ventilated, by the flame, although the wire gauze prevented them from being either exploded or consumed while in the sewer itself.

Consumption of Smoke. — A correspondent points out that the invention in use at Messrs. Cubitt's, and lately described by us, is suggested in a paragraph headed as above, at the bottom of p. 631 of our tenth volume.

"Steam Power superseded."—Some account of "Poulson's patent pendulum T-lever," which is to "supersede steam-power," as so many other inventions have done,—have threatened to do rather,—appears in *Herepath's Journal*. It is there stated that, by means of this T-lever, two men in a sitting position, will be able, with ease, to propel a railway engine of 25-horse power, with its full complement of carriages, at any speed attainable by steam power! The tenders and boilers of the present engines will, of course, be no longer required, and the new engine will be constructed of about one-fourth the weight, and at, say, one-sixth or one eighth the cost. The principle will be applied at once to ships' pumps, as well as of course to marine engines in general. "Four men will be able to pump the largest vessel dry." But surely that will depend on the question whether the leak be not capable of filling the ship as fast as the four men can pump, even with the T-lever. Otherwise, why four men should be required to pump one ship while two men are equivalent to 25-horse power, it is not easy to see. Surely it does not require 50-horse power to work any pumps that are ever likely to be fixed in one ship, however large. We should have rather thought that this wonderful "superseder" would have sufficed, for instance, to render less preposterous and more hopeful, even the exertions of that one poor soul, the stewardess of the ill-fated *Arctic*, whom Captain Luce found, all alone, at work on the pumps, while the ship was sinking. If two men, by the way, can work a T-lever, yielding 25-horse power, why not set *one* (say) of the *horses*,—once set agoing,—to work the two men's work, and so do without manual labour at all? To make manual labour do the work of steam power, is not quite satisfactory *progress*, even with all its promised advantages. The grand end of all such inventions is the substitution of some other power for that of men, and not the reverse, as to some extent, at least, in the present instance.

London Improvements.—Mr. Pym, says a contemporary, has designed a plan for relieving the bridges and thoroughfares, by building miles of tubular superway, somewhat similar to the Britannia tubular bridge, running first from the South-Eastern Railway station to the Blackwall and Eastern Counties stations; from the Blackwall station to Charing-cross, by way of St. Paul's; and from the Eastern Counties to Tottenham-court-road, by way of Holborn. The South-Eastern and South-Western Railways would be joined by a line which would run on to Westminster, and there would be junctions connecting the east and west lines, as well as branch lines to the Elephant and Castle, to the Angel, Islington, Euston-square, King's-cross, Whitechapel, Lambeth, and such other points in the principal thoroughfares as might be found desirable. The tubes would be wide enough for a double line of railway, and be carried on columns of masonry in the rear of the principal streets, sufficiently high to pass over the tops of the buildings in the streets below. Trains to be passing along the lines without intermission, and to consist of first and second-class carriages, with fares 3d. and 1d. for all distances, with stations at all the junctions and all the principal cross-streets, passengers being raised and lowered in chambers by machinery. The cost of such a superway Mr. Pym estimates at 500,000*l.* a mile, and he calculates that when in work it would yield 1,458*l.* a day, or 10,206*l.* a week. A very comprehensive scheme; but would it not cast too much of a shadow on London as it is?

Fall of a House at Glasgow.—On Saturday last, part of the wall of a building in course of erection at the foot of Washington-street, in this city, fell without warning, from the height of about 20 feet, upon the workmen employed there. One of them was killed on the spot. Another got an arm and leg broken, and a frightful gash inflicted above the right eye. A third had his right arm broken. Several others were also more or less injured.

Military Asylum, Chelsea. — Additions are about to be made here, and a correspondent expresses doubts as to the good judgment shown in the position of the new buildings.

Increased Value of Land at Leicester.—The sale of the Stoneygate estate, containing 40½ acres, took place on Wednesday week, and realised nearly double the amount at which it was last purchased, and more than three times the amount at which it was purchased within the memory of many old inhabitants. Stoneygate House, with rather more than 7 acres of the land, was knocked down for 4,100*l.* and the several lots of the land, with frontage towards the London-road, were sold at 415*l.* 400*l.* and 330*l.* an acre. Thos lots, with frontage towards Knighton-lane, were sold at 230*l.* 210*l.* and 200*l.* an acre, while the land at the back, with frontage to a new proposed 40 feet road, were sold at 250*l.* 245*l.* and 230*l.* an acre. Thus the 40½ acres and the house realised nearly 13,000*l.*

Working Men's College, Red Lion-square. —The success of this institution is said to have exceeded the most sanguine expectations of its promoters. It numbers already 114 students within the first week of its opening. Most of these students attend two or three, and some as many as four or five classes; so that the average attendances on all the classes far exceeds the total number of the scholars. No member is admitted into the college without having passed a preliminary examination in reading, writing, and the first four rules of arithmetic.

Value of Land at Stockton. — Six acres of land, adjoining Portrack-lane and the Clarence line of railway, at Stockton, recently brought 240*l.* an acre; and other five acres, lying beside the same railway, sold at 250*l.* an acre. The former lot is said to have been purchased, not many years ago, for 60*l.*

Scientific Schools for Cornwall. — Central schools for the mining districts of Cornwall are to be established at Truro, under the control of the department of science and art. There will be three teachers —one for mineralogy and chemistry, another for mathematics and mechanics, and a third for practical mining. Exhibitions at this department are suggested; and it is believed that the Prince Consort, in name of the Prince of Wales, as Duke of Cornwall, will aid in their establishment.

London from above.—Oh, it was such a dream by daylight—such a dream, and yet so true! All was so little, and I was still the same! All the streets were millions of dolls' houses; and along the streets little specs, moving—moving, sometimes in twos and threes, and then altogether, in one long black, gliding thread. And then the cattle and the horses! I felt that I could take up the biggest of them, like shrew-mice, in my fingers—look at 'em and set 'em down again. And then the smoke! the beautiful smoke! Oh, in millions of silver feathers it came from the chimneys up and up; and then somehow joined in one large shining sheet; and went floating, floating, over houses and church-steeples, with hundreds of golden weather-cocks glittering, glittering through. And then the river and the ships! The twisting water, shining like glass! And the poles of the ships, as close, and straight, and sharp as rushes in a pond! And then far off, the hills, the dear green hills; with such a stir below, and they so beautiful and still, as though they never heard, and never cared for the noise of London—a noise that when we listened, hummed from below; hummed for all the world like a hundred humble-bees, all making honey, and all upon one bush!—*Douglas Jerrold's Heart of Gold.*

Submarine Telegraph Communication without Wires.—A New York paper states that 100 years ago, Dr. Franklin made this experiment with success, and that nine years ago Professor Morse made successful experiments across the Susquehanna River, and expended a good deal of time and money with the hope of being able ultimately to transmit intelligence in the same way across the Atlantic. In 1748, it is said, Dr. Franklin invited his philosophical friends to what he termed an electrical feast on the shore of the Schuylkill, near Philadelphia, where he tried his experiments. In describing them to his friend, Peter Collinson, of London, he says, "The hot weather coming on, when electrical experiments are not so agreeable, it is proposed to put an end to them for this season, somewhat humorously, in a party of pleasure on the banks of the Schuylkill. Spirits are to be fired by a spark sent from side to side through the river, without any other conductor than the water; an experiment which we some time since performed to the amazement of many."

TENDERS

For Corn Exchange, Spalding. Messrs. Bellamy and Hardy, architects, &c. Lincoln.

C. Bennett, Lynn	£5,127	0	0
Ward, Lincoln	5,057	0	0

CYCLORAMA, Albany-street.—Now Open, with a COLOSSAL MOVING DIORAMA of the CITY and BAY of NAPLES, MOUNT VESUVIUS, and POMPEII, exhibiting the Great Eruption of '79, and present state of the excavated City, painted by Mr. McNevin, from sketches taken on himself in 1852.—Daily at Three and Eight o'clock, with appropriate music and description. Admission, 1*s.* Children and Schools half-price.

TO AVOID COLD within DOORS, use the highly-approved PATENT DRAUGHT and DUST EXCLUDER, the cheapest, most simple, and useful invention for the purpose. Price from 1*d.* to 6*l* per yard. Sold at R. HELBRONNER'S, Sole Patentee, 265, Regent-street, near the Circus, Oxford-street; and at 103, Newgate-street.

REDUCED PRICES.—EDWARD SIMMS (late William Cleaver), of Wilton road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S (late W. Cleaver's) Flooring Manufactory, Wilton-road, Pimlico Basin.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.:—

Pine Planks, 12 ft. 3 in. by 11 in.	from 4*s.* 6*d.* cash.	
Spruce Deals, 12 ft. 3 in. by 9 in.	„ 2*s.* 10*d.*	„
Yellow ditto, 12 ft. 3 in. by 9 in.	„ 3*s.* 9*d.*	„
Honduras Mahogany	„ 7*d.*	per foot.
Spanish ditto	„ 8*d.*	„
Wainscot ditto	„ 3*d.*	„
Spruce Paling Laths	10*s.* 6*d.*	per 120.
Venetian Blind Laths	7*s.* 6*d.*	per bundle.

Veneers and cut stuff of every description at equally low prices. Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

PREPARED FLOORING, &c.—ALFRED ROSLING begs to inform parties shipping wood goods to the colonies that he can supply any quality or description at the lowest price of the day, and with the greatest possible despatch. Also mouldings in great variety. A large stock of Baltic deals kept in bond for export.—Southwark-bridge Wharf, Bankside.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road. RICHARD MAY respectfully begs to inform the Building Public, that all Baltic Goods are dearer and American spruce and Pine are cheaper.

He asks special attention to the following, which are now on sale:—

2,000 Pieces of Timber.
20,000 Planks, Deals, and Battens.
30,000 Prepared Floor Boards, of all lengths and sizes.
5,000 Rough Boards.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.

N.B. The extensive Saw-mills are now in operation.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 2, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

MOULDINGS by MACHINERY at REDUCED PRICES.—ARCHBUTT and ATKINSON beg to inform their customers that the 20 per cent. advance heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices. St. Pancras Saw Mills, Cambridge-street, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings as advertised on the 5th of November last is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

By Her Majesty's — Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers. For particulars of prices and specimens of work done by the machine, apply to J. CRACK, Patentee, Farnborough-road, Surrey, 44, Robert-street Chelsea, adjoining the King's-road Saw-mills.

FIR TIMBER, lying close to the Farnborough station, on the South Western Railway.—TO BE SOLD, in lots of 25 and 50 each, several thousand large and small FIR TREES, fit for railway sleepers, scaffold poles, fencing, &c. A quantity of cedar and tulip plank also for sale. Apply to Mr. GOODFELLOW, at the Manor Farm, Farnborough.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6*s.* per gallon. Varnishes for WINSLOW'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1*s.* per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs ARROWSMITH and CO. 20, New Bond street.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the secession and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner.—Venetian blinds, per square foot, 9*d.*; best holland blinds, on rollers, 6*d.*; best ditto, on spring rollers, 9*d.*; gauze wire blinds, in mahogany frames, 2*s.*; perforated zinc blinds, in ditto, 1*s.* 10*d.*; outside blinds of striped cloth, 2*s.* Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and luminous qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs T. B. MORLEY and CO., and by the Company's Grinding Agents. In London, Messrs CHARLES DEFAUX and CO. Wholesale Agents, 62, King William-street, City; JACK and BHABY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs LAWFORD and FOX, of 45, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-hush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY hereby informs the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with the high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures containing frequently poisonous ingredients, are harmful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer thus—

HUBBUCK——LONDON——PATENT.

If not so marked, the reason may be inferred

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Kingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharfs, Hollis-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cement). It possess extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millwall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Mid'le Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stuccoing than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

STOCKS, PASTORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TO BUILDERS, CONTRACTORS, AND OTHERS.

HALKIN MOUNTAIN HYDRAULIC LIME and LIMESTONE SHIPPED at GREENFIELD WHARF, River Dee, or forwarded by the Ches er and Holyhead Railway.—Apply to HUGHY and SALKELD, Liverpool, or to Mr. THOMAS SMEDLEY, Holywell.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No. 1, Pratt-street, Paddington-basin. Prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court, Tropical and Australian Yards, as Medici and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the Fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian reliefs of Terra-cotta and red cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened by the yard or per barge. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 3s. 6d. Prepared only by W. J. STENT, Warminster. London Agents—Messrs. J. and G. WALLIS, 64, Long-acre. Agent for Ireland—Mr. S. BOYD, 46, Mary-street, Dublin.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH. Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Rough Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

BRICK-MAKING EXTRAORDINARY!! by OATES and INGRAM'S PATENT MACHINE.—The above machine will produce (from unprepared clay) twenty-five solid bricks per minute, of a superior quality, unattainable by any other method, and sufficiently dense and dry as to be ready for kiln-burning in twenty-four hours after leaving the machine, which is entirely self-acting, requiring only the labour of feeding and carrying off. To be seen in daily operation at the Vaughton Hole Brick Company's Works, near Birmingham, by order only.—Applications to view the machine, or for the purchase of the patent right for counties or royalties of districts, to be addressed to T. WELLS INGRAM, Engineer, Lombard-street, Birmingham; or to J. P. OATES, Surgeon, Inventor and Patentee, Lichfield.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical and Alhambric Mosaics, manufactures of a highly decorative character, and extreme durability, Slabs and Tiles for Fireplaces and Hearths, Copings for Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

MAW'S ENCAUSTIC TILE PAVEMENTS a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance halls, passages, verandahs conservatories, &c.

MAW and CO. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense. BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

PANTILES, PAVING, &c.—J. H. ANDREWS, Wisbech, Cambridgeshire, begs to offer Pantiles, at 40s. to 52s. 6d. per 1,000; Floor Bricks and 6 inch Pavings, at 40s. per 1,000; 8-inch Pavings, at 60s. per 1,000; 9-inch Pavings, at 72s. 6d. per 1,000. Cash prices. Delivered on trucks in London on Eastern Counties line.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address. Mr. WM. WEBB, Brick-fields, Stone Newington.

WHITE SUFFOLK and RED FACING BRICKS.
COWLEY, KENT, and ESSEX BRICKS.
Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE (successors to Mr. Benjamin Gough), 57, Newington-Crescent, Newington-butts.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand (approved quality) constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Kent Grey Stocks, of superior quality. Also, Wire Suffolk and Red Facing Bricks.—Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

AT the KESGRAVE BRICK MANUFACTORY, near IPSWICH, WHITE SUFFOLK FACING BRICKS, of superior quality and colour, FOR SALE. Apply to FRANCIS PISK, Brickmaker, Ipswich.

WOODBRIDGE WHITE BRICK MANUFACTORY.—THREE HUNDRED THOUSAND SUFFOLK WHITE FACING BRICKS of very superior quality, FOR SALE. Apply to THOMAS PEAKE, Woodbridge.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 23s. at WARD'S OLD-ESTABLISHED HOP DURAS WHARF, BANKSIDE, London. Builders, Engineers, Gas Companies, and others, supplied with every sort of coarse Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Maltine and Corn-drying perforated Tiles, real Dutch Clinkers, River and Concrete Gravel, Founders' Loam, White and Red Horse Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this office, either for long or short periods, on freehold and leasehold property, reversionary interests and on good personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. VARDY, Manager.

INDISPUTABLE LIFE POLICY COMPANY.
72, Lombard-street, and 23, Connaught-terrace.
TRUSTEES.
Richard Malins, esq. Q.C. M.P. | Richard Spooner, esq. M.P.
James Fuller Made, esq. | John Campbell Henton, esq.
William Willcox, esq.

A reduction of 28 per cent has been made on the premiums of all policies of five years' standing.
ALEX. ROBERTSON, Manager.

LONDON NECROPOLIS COMPANY.—It is intended to OPEN the CEMETERY on the 13th NOVEMBER, and this Company will undertake Funerals on and after that date.

A train, conveying Funerals and Mourners only, will start from the Westminster-road Station daily at 11.30 a.m.

Forty-eight hours' notice of any intended Funeral must be given at the office of the Company, 2, Lancaster-place, Waterloo-bridge, where full particulars of the general arrangements may be obtained. The charges are:

First Class Single Grave in perpetuity, including conveyance of Coffin to Woking, Funeral Service, and Interment..... £8 10 0
Second Class, ditto ditto..... 1 0 0

This Company has also contracted with eminent and responsible Undertakers and Stonemasons, so that the Public may either employ their own Undertaker or Statuary, or by one payment obtain all the requirements of a Funeral.

A detailed Tariff may be obtained on application, either in person or by letter.

By order, RICHARD CHURCHILL, Sec.

MONEY is ready to be ADVANCED immediately, to any amount, upon Landed Estates, House Property, Reversions, Deposit of Deeds, Shares &c; also upon Furniture and approved personal security. Properties purchased.—Apply to MESSRS. HALE, 133, Piccadilly.

LOANS.—Persons desirous of obtaining ADVANCES, from 50l. to 250l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 37, New Bridge-street, Blackfriars. Rules, 6d. each copy, or 5s. per post.
CHARLES JAMES THICKE, Resident Secretary.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

eing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 19 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

BOWDEN'S BRILLIANT-CUT ORNAMENTAL WINDOW-GLASS.

MANUFACTURED BY MARK BOWDEN AND COMPANY.

WORKS, NELSON-STREET, BRISTOL. MR. JAMES GILLON, AGENT: OFFICE, 60, ALDERMANBURY, LONDON.

THE BRILLIANT-CUT MAY BE OBTAINED THROUGH ALL WINDOW-GLASS MANUFACTURERS AND MERCHANTS IN THE KINGDOM.

DESIGNS FOR CENTRE-PANES, ON OBSCURED OR RICHLY-COLOURED GLASS, MAY BE HAD GRATIS, POST-FREE.

Prices, and every information, forwarded on application to the Works, Bristol; or at the Agent's Offices, London, where a variety of Specimens may be seen.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms —

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

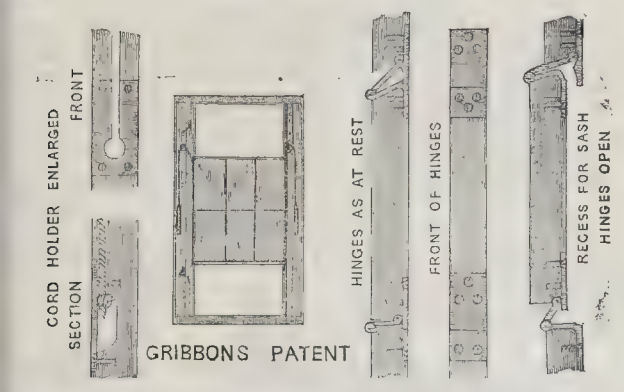
PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE.

87, BISHOPSGATE-STREET WITHOUT, LONDON.

JAMES RHODES,



No. 6, MACCLESFIELD-STREET NORTH, CITY-ROAD, LONDON.

MANUFACTURER OF SASHES AND FRAMES, DOORS, &c. AND EVERY DESCRIPTION OF HOUSE JOINERY

Glazed goods securely packed for the country. Prices on application at the Counting-house, as above.

GRIBBONS' PATENT,

A MOST IMPORTANT INVENTION IN SASH MOVEMENTS.

THE attention of Architects, Builders, and the public generally is called to this valuable improvement, which supplies a long-felt want, in a manner at once simple, ingenious, and economical; by its use, sashes of any kind can be taken out for the purpose of cleaning, painting, or repairing, with the greatest facility, without removing a single nail, screw, or bead, dispensing altogether with that most difficult and dangerous practice of outside window-cleaning, and avoiding entirely the possibility of accidents, which, under the old system, are frequently attended with fatal consequences

It can be applied to old windows as well as new, at the trifling cost of 3s. each, and may be obtained of all wholesale and retail ironmongers in the kingdom; from the Manager to the Patentee, Mr. I. GRAHAM, No. 1, D'Olier-street, Dublin; or Mr. JOSEPH PARKES, 29, Cursitor-street, Chancery-lane, London.

The following Testimonial has been received from Professor Donaldson:—

"Bolton gardens, Russell-square, 18th October, 1851

"DEAR SIR,—I have been much pleased by your very ingenious system of sash hanging, which is very simple and effective, and I heartily wish you success in the application of your valuable apparatus.

"Believe me very sincerely yours,

"W. P. Gribbons, esq. Architect." "THOMAS L. DONALDSON.

REVOLVING SAFETY WOOD and IRON SHUTTERS—SNOXELL, Patentee, 26, Regent-street, and at his Steam-works, 15a, Old-street. These Shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to noblemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

FOR SALE, 1,000 SASH DOORS, with margin lights, 7 ft. 8 in. by 2 ft. 8 in. and 6 ft. 8 in. by 2 ft. 8 in.; also, 500 four-framed doors, 6 ft. 8 in. by 2 ft. 8 in. all well-seasoned.—Apply to Mr. SAMUEL HEMMING, Portable Building and Roofing Manufactory, Bow, London.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 28, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES

GOOD FOREIGN SHEET-GLASS, in cases of 200 feet each; average size, 16 by 20, at 32s. 36s. and 40s. per case; ground ditto, 3½d. per foot; crown and sheet squares, in 18-feet boxes, from 1s. by 13 to 20 by 14, 2½d. per foot; 7-inch rough British plate tiles, 11s. per dozen; also, crown and sheet glass, in crates; British and patent plate, fluted and stained glass, glass slates, &c. Sheet lead, pipe, white lead, oils, turpentine, colours, &c.—G. PARMILOE and SON, 118, St. John-street, West Smithfield, London.

WHOLESALE BRITISH and FOREIGN WINDOW-GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT MUTTAM begs to call the attention of Builders and the Trade in general, to his present prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description now manufactured. Extra size Sheet Glass of all qualities and substances for Shop Fronts. Estimates and Price Lists forwarded post-free, on application at the Warehouse, 36, Princes-street, Leicester-square, London.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Hartley's Patent Rough Plate Tiles from 10s. per dozen

Sashes Primed and Glazed with good Crown Glass from 3½d. per foot.

Strong Sheet Glass packed in boxes of 100 feet, from 12s. per box.

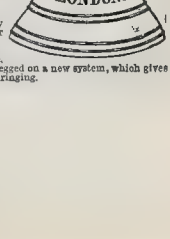
The new Ruby Sheet, the best for embossing, from 1s. 3d. per foot.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and fine sizings, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 115, OXFORD-STREET.

PATENT and BRITISH PLATE GLASS JAMES HARTLEY and CO. beg to inform Architects Builders, and the Trade generally, that their new Tariff of Prices for the above will be sent on application: they will also on receipt of particulars, furnish estimates for any description of Glass now manufactured.—Patent Plate, Sheet, Crown, and Ornamental Window Glass Warehouse, 33, Soho-square, London.

THE PATENT CRYSTAL WINDOW, consisting entirely of plate-glass, supported by flint-glass astragal bars, presents most important advantages in the construction of shop fronts, viz. perfect transmission of light, elegance, and novelty of appearance, imperial ability from rust or decay, and the greatest economy in labour, &c. from the facility with which it is kept clean and bright, as contrasted with either polished metal or wood. Examples of the window may be seen at the London Mantle and Shawl Company, north side of St. Paul's Churchyard, London, at Birmingham, Leamington, Worcester, Aberystwith, Shrewsbury, &c. The application, also, of the Crystal Sash Bar to the construction of Exhibition Cases, may be seen in the Birmingham Court and East Gallery of the Crystal Palace, Sydenham, to which the attention of exhibitors is particularly invited.—Full particulars may be obtained from the patentees, Messrs. LLOYD and SUMMERFIELD, Cut and Plain Glass Manufacturers, Park Glass Works, Birmingham.



ECCLESIASTICAL and DOMESTIC ORNAMENTAL GLASS WAREHOUSE, Bedford-chambers, 28, Southampton-street, Strand.—N. W. LAVERS, many years at Powell's, of Whitefriars, begs to solicit the attention of architects, builders, &c. to his patterns of ORNAMENTAL GLASS, in all kinds. Specimens and designs forwarded on application. Quarry glazing, for churches, &c. in rough plate-glass, tinted, 1s. 4d. per foot; stained quarries, from good examples, from 3s.; borders, extra, from 6d. per foot run: geometrical designs, from 8s. per foot; painted figures, medallions, and coats of arms; embossed plate and other glass, for hall and staircase windows, from 4s. per foot; enamelled patterns, from 1s. per foot. Patent plate, rough plate, &c. Iron ventilators of the most approved kind, for church purposes.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

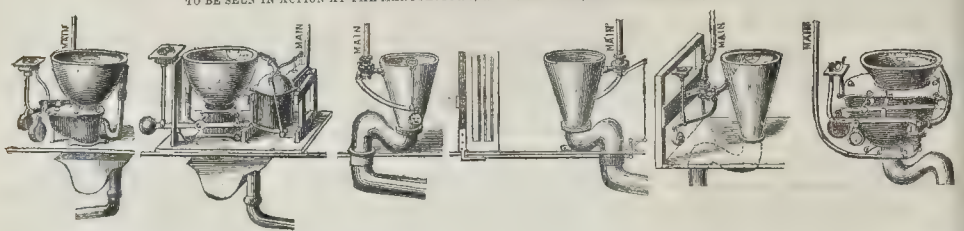
DUTCH CLINKERS should be ORDERED at ONCE, as during the next three months the opportunities for getting them over are very few, and it may take weeks to supply an order.—H. VANKEMPEN, Sole Importer, 4, Birchanel-court, Philpot-lane, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.



Stocked and wheels ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

J. TYLOR AND SONS'

PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON.

No. 1. No. 2. No. 4. No. 5. No. 6. No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No. 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 2l. 4s.
No. 2.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET, WITH PATENT SERVICE-BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 3l. 10s.
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 2l. 12s. 6d. With Blue Basin and sunk opal handle, 3l. 3s.
No. 4.—J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast-iron trap, 1l. 13s. Enamelled Iron Trap, extra, 4s. 6d.
No. 5.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelled Iron Hopper, cast-iron trap, and door action, 1l. 13s. Extra for Enamelled Iron Trap, 4s. 6d. This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2l. 2s. Enamelled Iron Trap, 4s. 6d. extra.
No. 6.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE STOOL-VALVE. This Valve is particularly short in its action. 1-inch Valve, with sunk handle, 14s. 6d.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.

J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, 1l. 15s.
The usual allowance to the trade.

PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, barge, brickmakers, contractors, gold diggers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 12 in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST-IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump..... £1 12 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing..... 2 12 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.

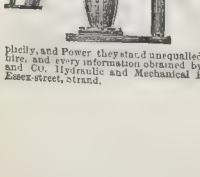
May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.
The usual allowance to the Trade.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells. PUMPS ON HIRE.



Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

BUILDERS, Contractors, Engineers, Brewers, Paper-makers, Chemists, Brick-makers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids (hot or cold) raised or forced, will find it greatly to their interest to use GWYNNE and CO'S PATENTED PUMPS For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on application, and every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

JENNINGS'S PATENT DRAIN-PIPES.

AS these Pipes have not appeared in "The Builder" for the last eight weeks, many inquiries have been made in consequence, and the Patentee offers the following explanation:—

The demand is, and has been, so great, the Patentee could not execute half the orders received.

THESE PIPES (unlike the ordinary Pipes or Half-socket Pipes) CAN BE READILY EXAMINED, in case of Stoppage, WITHOUT IN ANY WAY DISTURBING THE GENERAL DRAINAGE.

Professor Hoskin has employed these Pipes for some important works in Cannon-street, and nearly 9,000 15-inch Pipes are now being laid at the Crystal Palace, they are also being extensively used in the city of Ely and other large towns, to which reference will be shortly made, with TESTIMONIALS.

Engineers and Architects specifying these Pipes will have the satisfaction of knowing that their drains can always be examined, or Junctions introduced, without the slightest trouble.

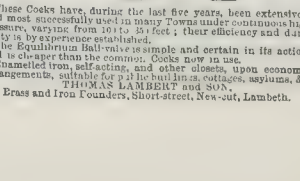
Although the Patentee was unable to supply the London Hospital, the St. Mary's Hospital, the New Schools at Sutton, and many other Works, after Architects had kindly specified them, he hopes that such disappointments will never occur again, as he is now turning his attention to the production of Machinery for the Manufacture of Earthen Pipes,—that will not only facilitate their manufacture, but reduce the cost.

Particulars of JENNINGS'S WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALL'S, Engineers and Portable Engine Makers, 92, Blackfriars-road. These engines have been successfully employed for years



---

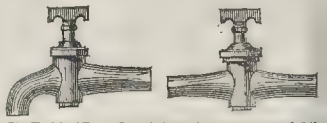
LEATHER BANDS for DRIVING MACHINERY EDWARD'S PATENT.—Engineers, Millowners, Printers, and others using bands for driving machinery, are respectfully invited to inspect EDWARD'S IMPROVED FOLDED FLAT and ROUND LEATHER BANDS, the round bands from ¼ inch to 2 inch diameter), which for strength, durability, and straightness in working, surpass any bands at present in use. Manufactory, 32, Great Sutton street, Clerkenwell.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary, the small half-inch diameter tubing having resisted a pressure of 250 lbs on the square inch, without bursting. The smaller sizes may be had in 100 feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

PRIZE MEDAL, CLASS 28.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 10 to 150 feet; their efficiency and durability is by experience established.



The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c

THOMAS LAMBERT and SON,
Brass and Iron Founders, Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

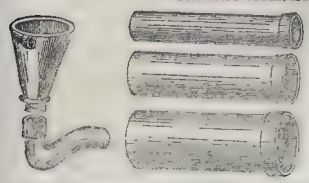
The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

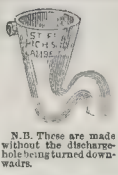
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c.—JAMES LYNE HANCOCK'S VULCANIZED INDIA-RUBBER TUBING is now manufactured especially for the above purposes, and is of greater flexibility than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the mains of water-works or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, branches, stop-cocks, roses, and jets complete. Vulcanized India-rubber suction-pipes for pumps, any length or size, to order; HOSE for brewers' use, fire-engines, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India-rubber tubing and cord for the joints of glass-doors, sashes, frames, &c.—Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

AMERICAN OILSTONES, very superior in quality to the Turkey oilstone; a new and invaluable discovery, for giving, with ease and rapidity, a perfect and sharp edge to those tools used by carvers, carpenters, die-sinkers, engravers, engineers, &c. &c.—To be had of various shapes and sizes, at 105, Newgate-street, London.



THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railways, which are adopted and are being applied to more than 3,000 miles of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.



JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS TRAPS, &c 39, HIGH-STREET, LAMBETH, LONDON. Established 1761.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

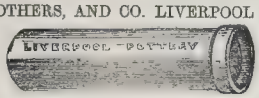
N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town J. TURNER, 3, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 33, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street

Drawings and List of Prices will be forwarded free, on application.



DOULTON AND WATTS,

LAMBETH POTTERY, LONDON.

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.

Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS,

TRAPS, &c. at the

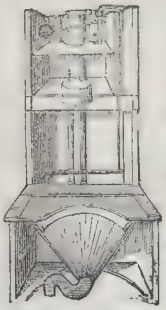
NEAR POOLE, DORSET;

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London, Agent; or to Mr. J. HUDSON, Agent, at the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin, the most effective Syphon-trap yet offered to the public.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

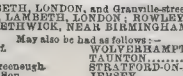
PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1848.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.



HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

HENRY DOULTON and CO.'S DRAIN PIPES in GLAZED STONE WARE.

ISAAC PARRY'S POTTERIES, Copperas-

lane, Church-street, Deptford, Kent, beg to invite the attention of Contractors, Builders, and Wholesale Dealers to his extensive assortment of articles in the GLAZED STONEWARE, for sanitary and other purposes; likewise Red Drain-pipes, Chimney-pots, &c. The only manufactory of the kind in the neighbourhood.

HAYES, BROUGH, and CO.

Works Llwynenion, near Wrexham.

Offices: 11, James-street, Liverpool,

beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it ensures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use, and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders it impossible

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs, Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Bridge-street, Chelsea; and at the Pottery.

HENRY TURNER, 3, SOUTH WHARF,

PADDINGTON,

Traps, 2s. 6d. 3s.

The attendance of the Trade is particularly desired, as the greater portion will be sold without reserve.—May be viewed on the premises, and catalogues had of the Brokers, at the Marble Wharf, Thames Bank, Pimlico.

SALES BY AUCTION.

TO AN ENTERPRISING PERSON IN THE BUILDING TRADE.—A most eligible opportunity is now offered in the following property, and where a very lucrative business is being carried on in the manufacturing of the Roman Cement being well situated near the Sea, at Bognor, in the County of Sussex, thereby possessing very great advantages in locality, and having part of the material on the spot for manufacturing the article. The property comprises a very desirable FREEHOLD CEMENT MILL, and MANUFACTORY, complete, driving two pairs of stones with wind power (a steam-engine might be added with advantage), together with two kilns, about 12 feet deep, store, room for 300 casks of cement, coopering house, two-stalled stable, cart-house, two cottages, with small gardens in front, all adjoining, and contiguous to the sea for loading, &c. which will be offered to PUBLIC AUCTION, in one lot, by

MR. LEAR, subject to such conditions of sale as will be then and there produced, at the CLAREMONT HOTEL, at Bognor Sussex, on THURSDAY, the 7th day of DECEMBER, 1854, at TWO o'clock p.m.—For a view and further particulars, apply to Mr STANDEN, the proprietor, West-street, Bognor; or at the Offices of Mr. Lear, Auctioneer, General Valuer, Land and Timber Surveyor, and Estate Agent, Arundel and Littlehampton, and at 74, Cannon-street, City.

6,000 Pieces of Paperhangings, and 30 Vein Marble Chimney-pieces.

MR. BRAY, Jun. will SELL at his Rooms, 159, High Holborn, on WEDNESDAY, NOVEMBER 29, at TWELVE, upwards of 6,000 pieces of PAPERHANGINGS, and vein marble CHIMNEY-PIECES, ready for fixing.—May be viewed, and catalogues had.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Lease. Money advanced to respectable builders. Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

KENT—CHISLEHURST.—TO BE LET, on Building Leases, in this delightful, healthy, and much-frequented village, commanding with pleasant walks and drives, THREE PLOTS of FREEHOLD LAND together about six acres (in one or more lots), most picturesquely situate, with extensive views to the south, and a few minutes' walk from the Churches of England and Rome. Water excellent and provided, drainage good, and five miles from the rail, with daily conveyance to and fro. Also, valuable FREEHOLD LAND, suitable for Cottages, at Chislehurst hill near the cricket-ground. Apply to GEORGE H. BASKCOMB, Esq. Chislehurst; or R. P. BROWN, Esq. 39, Clement's-lane, and Greenwich.

FREEHOLD BUILDING GROUND TO BE LET or SOLD; ten acres. Capital roads. Twenty-five miles from town, two and a-half from Hurley and Three Bridges stations (Brighton line), a loop line nearly completed to East Grinstead, with a station at a convenient distance, which double its value, near two churches and other buildings some good private dwellings contiguous; views delightful; situation healthful; soil good. Brick earth is supposed to be on the property, as bricks are made not very far distant. Terms moderate. Plans to be seen at the Offices of JOHN BURGES WATSON, Esq. Architect, 9, Nottingham-place, New-road, Regent's park.

LAND adapted for METROPOLITAN PAROCHIAL CEMETERIES.—Sewers Office, Guildhall, 24th October, 1854.—The Commissioners of Sewers of the City of London, acting as the Burial Board for that City, have about 100 ACRES of valuable FREEHOLD LAND, which they are desirous of SELLING to any parish or parishes for the purpose of a CEMETERY, it being peculiarly adapted for such purpose. The land is situate in the Parish of Ilford. The Eastern Counties Railway runs close by it, and may by arrangement run direct into it. It is also directly accessible by the high road from London and from Woodford, a quarter of a mile west of Ilford. The cemetery for the City of London is formed on the adjoining portion, and the said Commissioners will sell the land in question, subject to the conditions that a building is to be erected on it except for agricultural purposes or the purposes of a cemetery. The land-tax is redeemed. Plans of the property may be inspected at the Office of the Clerk to the Commissioners, No. 14, Old Jewry chambers, where further particulars may be known, or of the undersigned.

JOSEPH DAW, Principal Clerk

TO ARTISTS AND OTHERS.

PORTLAND-ROAD, PORTLAND-PLACE.—TO BE LET, unfinished, a good HOUSE, with two large bay-window rooms fronting the east, with garden to the road, and stone staircase. Apply to W. and S. ARTAUD, 79, Wimpole-street, Cavendish-square.

BUILDING LAND TO LET, at Burgess-hill, Brighton Railway. Brick-earth on the estate. To be let or sold in one lot, about six acres.

KEYHILL, Brighton Railway.

STREATHAM-HILL, near the intended station on the Crystal Palace Railway.

ADVERTISEMENTS.

TO the MAGISTRATES of the COUNTY of KENT.

GENTLEMEN,—I beg to thank you for the votes I received at the recent election for the District Surveyor of Deptford.

The late period at which I became a candidate, placed me under many disadvantages, or I cannot but believe the result of the election might have been different.

I beg to congratulate you upon having selected such an efficient gentleman to fill the office.

I have the honour to be, Gentlemen, yours most respectfully,
Camberwell, Nov. 17, 1854. THOS. J. PRING.

ARCHITECTURAL ASSOCIATION.—At the next MEETING, DECEMBER 1st, Mr RICKMAN will resume the subject of "The Characteristic Forms of Classic Mouldings". The Class of Design will meet December 8. Subject for Sketch, "A Summer-house."

ARTHUR CATES, } Hon. Secs.
T. W. GOODMAN, }

Lyon's-inn-hall, Newcastle-street, Strand.

THE ARCHITECTURAL MUSEUM, Cannon-row, Westminster.

The CATALOGUE of the COLLECTION will be issued on the 1st of JANUARY next, including a limited space for advertisements for Fine Art Manufactures.

For particulars, application should be made to the Publishers, Messrs. MASTERS and Co. 78, New Bond-street, and 33, Aldersgate-street, on or before the 1st of DECEMBER next.

Oct. 18th, 1854.

ARCHITECTURAL PUBLICATION SOCIETY.—At a Special Meeting of the Subscribers, held at the Rooms of the Institute of British Architects, on Wednesday evening, the 15th inst. it was moved by W. G. Habershon, esq. and seconded by H. B. Garling, esq. and resolved unanimously, "That in the opinion of this meeting the Dictionary of Architecture is worthy of the support of the profession, and of the public generally."

Resolved unanimously, "That this meeting sees no reason to alter the mode of conducting the work, being assured that all suggestions kindly offered to the committee will be carefully considered."

Moved by Professor Donaldson, and seconded by C. C. Nelson, esq. and carried unanimously, "That the best thanks of the meeting be given to the chairman, William Tite, esq. F.R.S. for his kindness in taking the chair on this important meeting, and the urbanity and judgment with which he has conducted the discussion."

WYATT PAPWORTH, H. n. Sec.

THE ARCHITECTURAL EXHIBITION, Suffolk-street Gallery.—All DRAWINGS, MODELS, PHOTOGRAPHS, BUILDINGS, and PATENT-MATERIALS DECORATIONS, &c. intended for the department of Manufactures connected with Architecture, must be delivered between the 1st and 9th of DECEMBER next.

Those who may intend to become subscribers, and have not yet sent in their names, should do so in good time, as a list will be printed with the Catalogues.

Drawings intended for the French Exhibition will have a special place provided for them, and may be exhibited here first of all, as the Committee appointed by the Board of Trade will not select those that are to be sent till very nearly the period when this Exhibition closes.

In addition to the former list of Local Honorary Secretaries, the following gentlemen will act, and afford information on the spot:—

BIRMINGHAM	W. W. Bateman, esq.
BRISTOL	G. C. Fripp, esq.
CORK	W. W. Ipsah, esq.
DURHAM and County	H. W. Pritchett, jun. esq. Darlington.
LLANDAFF	J. P. Seddon, esq.
MANCHESTER	J. E. Gream, esq.
NOTTINGHAM	Thos. C. Hine, esq.
OXFORD	J. L. Seckham, esq.
READING	Chas. Heuman, esq.
YORK	Geo. F. Jones, esq.

BUILDERS' BENEVOLENT INSTITUTION.—THURSDAY NEXT.—The EIGHTH ELECTION of PENSIONERS will take place on THURSDAY next, 30th inst. at the LONDON TAVERN, Bishopsgate-street.

WILLIAM LEE, Esq. M.P. President, in the chair

Polling commences at TWELVE, and closes at THREE o'clock precisely.

A. G. HARRIS, Secretary.

Nov. 24, 1854.

COMPETITIONS.

PARISH of ST. JOHN, at HACKNEY.—To ENGINEERS and ARCHITECTS.—WANTED, DRAWINGS and an ESTIMATE of the probable COST for the CONSTRUCTION of a SUBSTANTIAL IRON CARRIAGE BRIDGE over the Old River Lea, near Temple-mills, in the Hackney-marshes, 50 feet span, 20 feet in width, and 3 feet above the present level of the embankment or roadway. For further particulars, apply to Mr. C. H. PULLEY, at the Town-hall, Hackney.

TO ARCHITECTS.

NEW CHAPEL, Mare-street, Hackney.—Competing Architects, with the exception of the gentleman whose motto is "Alpha," are requested to apply for their plans to Mr. ALFRED TOZER, 23, St. Thomas-square, Hackney, on MONDAY 27th, and TUESDAY, 28th NOVEMBER, between the hours of TWO and SIX, p.m. A written order embodying the motto, and number of plan, together with a receipt on delivery will be required.

LUDLOW NATIONAL SCHOOL ERECTION.—The Secretary trusts that those Architects who have received no answers to their inquiries touching these Schools, will ascribe it to the crowd of letters he has received asking the particulars best arrive at by personal observations.

CONTRACTS.

LLANELLY LOCAL BOARD of HEALTH WATER WORKS.—CONTRACT No. 3. Private Improvement Works, &c. To PLUMBERS, FITTERS, and OTHERS.

Notice is hereby given, that the Llanelly Local Board of Health are ready to receive TENDERS for the supply of sundry small PIPES, BENDS, ANGLE, T, ELBOW-PIECES, SOCKETS, NIPPLES, FERRULES, CROSS, TAPS, &c. and apparatus for water supply, together with the laying, fixing, jointing, connecting, and perfecting the same from the street, main, and service water-pipes to sundry houses, places, buildings, and premises, in the district of Llanelly, with the supply of sundry other articles, materials, apparatus, labour, and other works. A specification can be seen, and form of Tender obtained, at the office of the undersigned, on and after TUESDAY, the 21st day of NOVEMBER in the upon payment of two shillings and sixpence. All Tenders must be made according to the prescribed form and delivered to me, at the office of the said Board of Health, on or before FOUR o'clock on FRIDAY, the 1st day of DECEMBER next. The Local Board do not bind themselves to accept the lowest or any Tender. By order of the Llanelly Local Board of Health,

(Signed) F. L. BROWN, Clerk.

Llanelly, November, 1854.

BRIDGNORTH BOARD of HEALTH.—To CONTRACTORS, PIPE MAKERS, and OTHERS.—The Town Council of Bridgnorth give notice, that they are prepared to receive TENDERS from persons willing to contract for the following, being Contracts Nos. 1 and 2, for the DRAINAGE of part of their district, viz.:

CONTRACT No. 1.—For the supply of Glazed Stoneware Sewer and Drain Pipes, Junctions, &c.

CONTRACT No. 2.—For laying Sewer and Drain Pipes, and for making and completing about 1,470 feet of 15 inch Brick Sewer

The specifications and conditions of contract of either of the above may be obtained on payment of 5s. and drawings, plans, and sections inspected, by application at the Offices of JAMES PILBROW, Esq. C.E. Tottenham, Middlesex (Engineer to the said Board), or HENRY HAVILD TAYLOR, Esq. Surveyor, Bridgnorth. Sealed Tenders, properly endorsed, and addressed to the Local Board of Health, Bridgnorth, must be sent on or before THURSDAY, the 7th of DECEMBER next.

By order of the Board, J. J. SMITH, Clerk.

Bridgnorth, Nov. 16, 1854.

TO BUILDERS

Royal Engineer Office, Portsmouth, Nov. 16, 1854.

TENDERS will be received by the Honorable Board of Ordnance, at their Office, Pall-mall, London, on MONDAY, the 4th DECEMBER, 1854, from such persons as may be willing to undertake the CONSTRUCTION of a GLACIS in REAR of the BATTERY at LITTLEHAMPTON Tin plans, specification, and conditions of contract for the above work may be seen, and every information obtained, any day (sundays excepted), on and after the 22nd instant, on application to Mr. KIRTON, Clerk of Works, Royal Engineer Office, Mill-dam, Portsmouth. Tenders to be endorsed "Tender for the Construction of a Glacis at Littlehampton Battery, in the county of Sussex."

FURNESS RAILWAY.—The Directors are prepared to receive TENDERS for the WIDENING of their RAILWAY between Crookhall and Lindal stations, being about 1,550 lineal yards in length, including the enlargement, or open cutting of the present Lindal tunnel, being 33 lineal yards in length. Plans, sections, with specification and form of Tender, may be obtained on application at the Offices of Messrs. McCLEAN and PILKINGTON, the Company's Engineers, 17, Great George-street, Westminster; or at the Company's Offices, Barrow, Ulverstone, Lancashire, after TUESDAY, the 21st NOVEMBER next. Sealed Tenders to be forwarded, addressed to the Secretary, on or before the 9th DECEMBER, 1854. The Directors do not bind themselves to accept the lowest Tender.—By order,

JAMES RAMSDEN, Secretary.

Barrow, Nov. 13th, 1854.

THE WEST COWES LOCAL BOARD of HEALTH are desirous of receiving TENDERS for the SUPPLY of 500 feet of EGG SHAPED GLAZED STONEWARE DRAIN PIPES, 24 inches by 18, 1,000 feet ROUND PIPES 12 inches in diameter, and 3,000 feet DITTO, 9 inches in diameter, together with the necessary JUNCTION PIPES.—Forms of specification and Tender may be had on application to me, price 5s. each. The agencies to be sent to me, on or before TUESDAY, the 26th of DECEMBER next.—By order of the Board,

HEN. JAMES DAMANT, Clerk.

West Cowes, Nov. 22, 1854.

CONTRACTS.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES, viz.—

1. COMPLETING the INTERIOR of the BULL POINT MAGAZINE ESTABLISHMENT, with Railroads, Asphalting, Metalling, &c. &c.:
2. FORMING a RAILROAD to connect the Bull Point Magazine with the Powder Establishment at Kinterbury:
3. BUILDING TWO WALLS at or near No. 4 Magazine, Bull Point, as a temporary completion of the Enclosure.
4. BUILDING a GUARD-HOUSE at Bull Point:

For SPECIFIC SUMS.

Will be received at the Ordnance Office, Pall mall, London, on or before the 1st DECEMBER next. Detailed specifications of the above four services, and every requisite information, may be obtained at the Royal Engineer Office, Pull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 17th to 28th NOVEMBER, both days inclusive.

Royal Engineer Office, Devonport, 23th October, 1854.

TO BUILDERS.

Royal Engineer Office, Eastbourne, 14th Nov. 1854.

TENDERS will be received by the Hon. Board of Ordnance, at their Office, Pall Mall, London, on THURSDAY, the 30th day of NOVEMBER, 1854, from such persons as may be willing to undertake the ERECTION of a BATTERY, with MAGAZINES, &c. at Newhaven, in the county of Sussex. The plans, specifications, and conditions of contract for the above works may be seen, and every information obtained on application at this Office for at the Royal Engineer Office, Portsmouth, between the hours of TEN and FOUR each day (Sundays excepted). Tenders to be endorsed, "Tender for the Erection of a Battery, with Magazines, &c. at Newhaven, in the county of Sussex."

Sewers Office, Guildhall, November 14, 1854.

CITY of LONDON CEMETERY. The Commissioners of Sewers of the City of London, acting as the Burial Board for the said City, hereby give notice, that they will meet at GUILDHALL, on TUESDAY, the 12th DECEMBER next, at TWELVE o'clock precisely, for the purpose of receiving TENDERS for the ERECTION of an ENTRANCE GATEWAY and GATES, PORTERS and SUPERINTENDENT'S HOUSES, LODGE, CHAPEL and PRESENTATION GATES and for the CONSTRUCTION of DRAINS, GULLIES, &c. and other Works, at the City of London Cemetery, at Little Ilford, in the County of Essex. The Tenders are to be sealed up, endorsed on the outside, "Tender for Works at City Cemetery," and delivered at the Office of the Clerk of the Commissioners, Mr. JOSEPH DAW, on or before TWELVE o'clock on the said 12th DECEMBER, after which hour no Tenders will be received. The parties tendering, or some one on their behalf, are to be in attendance at the time of opening the Tenders. The commissioners do not bind themselves to accept the lowest or any Tender.—Further particulars may be known, and the plans and specifications at the Office of Mr WILLIAM HAYWOOD, 14, Old Jewry Chambers. Security for 1,000l. will be required from the party whose Tender may be accepted.

JOSEPH DAW, Principal Clerk.

OXFORD MARKET.

CONTRACT FOR IRON AND GLASS ROOFING.

THE COMMITTEE for the MANAGEMENT of the OXFORD MARKET are prepared to receive TENDERS from builders and others for the CONSTRUCTION of an IRON ROOF, of about 28 feet by 28 feet, to correspond with the present iron roof over the principal avenue of the new market, and for taking off the slates from a certain portion of the roof of the principal avenue of the new market, and substituting glass for such slates and for other works.

Plans and specifications of the works to be executed are now lying at the Committee Room in the Market street, Oxford, and may be inspected on application to Mr. T. COOK, the Market Bailiff.

Sealed Tenders for the execution of the works in question, endorsed "Tender for Oxford Market Works," to be addressed to Mr G. DAYMAN, Solicitor, Oxford, Clerk to the Market Committee, and to be sent before the 29th instant.

It is to be understood that the committee do not pledge themselves to accept the lowest or any Tender.

G. DAYMAN, Clerk to the Market Committee.

Oxford, Nov 14, 1854.

TO STONE MERCHANTS, WHARFINGERS, AND OTHERS.

THE COMMISSIONERS for PAVING, &c. Camden-town, will meet at their Rooms, in Pratt-street, Camden-town, on THURSDAY, the 7th day of DECEMBER next, at TEN o'clock in the forenoon precisely, to receive TENDERS for supplying the said Commissioners with ENGLISH YORK FLATS, KENTISH RAG STONE, HARD CORE, and SIFTED PIT GRAVEL, to be delivered upon the district of Camden-town, from time to time as the same may be required. The contract to be for three years, determinable at the option of the commissioners at the end of the first or second year; and the contractor will be required to give security for the due performance thereof, and to pay the costs of stamping the contract, and a duplicate, if required.—Further particulars may be obtained at this office; and at the offices of Messrs. DENT and SON, Surveyors, 38, Highstreet, Camden-town. By order of the Board,

SAML. BARKER BOOTH, Clerk to the Commissioners,
51, Tavistock-square.

TO BUILDERS AND OTHERS.

PERSONS desirous of CONTRACTING for the ERECTION of a FARMHOUSE and TWO HOMESTEADS upon the Treventy Estate, near St. Clears, in the county of Carmarthen, may inspect the plans and specification, on application to Mr. NICHOLL, Bailiff, at Treventy Farm, and at the Offices of Messrs. DENTON and DRAKE, 52, Parliament-street, Westminster, on and after the 21st day of NOVEMBER. Tenders for the proposed building to be forwarded to Messrs. DENTON and DRAKE, on or before the 31st day of DECEMBER next.

N.B. The estate is situated about three miles from the St. Clear Station, on the South Wales Railway.

[For remainder of Contracts see next page.

CONTRACTS.

EXTENSIVE PREMISES in the CITY of LONDON. The Trustees of Parish Estates, of and belonging to the parish of St Botolph Without Aldersgate, will MEET in the Vestry-room of the Parish Church of the said Parish, on Thursday the 4th day of DECEMBER next, at SIX o'clock in the evening precisely, for the purpose of taking TENDERS for TAKING to LEASE those spacious PREMISES, situate, and being the Nos. 1 and 2, Aldersgate-street, at present used as a WORKHOUSE by the Guardians of the East London Union.—Maybe viewed by card only, which can be had on application at the Office, No. 4, Aldersgate-street. Plans of the property may be seen, and further particulars obtained, at the Office of Mr. BLYTH, Architect and Surveyor, No. 13, Aldersgate-street.

DONCASTER CEMETERY.—To Builders. Persons desirous of giving in TENDERS for the several WORKS required in the Erection of Two Cemetery Chapels, and Lodge, and Entrance Gateway, for the Commissioners under the Doncaster Cemetery Act, may see the plans and specifications at the office of Mr. R. J. JOHNSON, the Architect, 24, Bennett-street, No. 6, Cavendish-square, from Monday the 8th to Monday the 15th of DECEMBER inst.; and Tenders are to be sent in on or before TUESDAY, the 16th, to THURSDAY, the 18th DAY of DECEMBER, 1854—the Tenders are to be sent in on or before SEPTEMBER, the 21st DECEMBER endorsed "Tender for Cemetery Buildings," addressed to T. B. MASON, Clerk to the Commissioners.

Town Clerk's Office, Doncaster, Nov. 24 1854.

Copies can also be seen, during the same period, at the Offices of the Architect, Mr. G. SCOTT, 20, Spring-gardens, London. The Tenders are to be delivered on or before TWELVE o'clock on TUESDAY, DECEMBER 21st, addressed to WILLIAM LYNES, Esq., Accountant, Coventry, and endorsed "Re-slating of Holy Trinity Church." The lowest Tender will not necessarily be accepted.

LONDON, BRIGHTON, AND SOUTH-COAST RAILWAY.—TENDERS for PIPES. The Directors of the London, Brighton, and South-Coast Railway are prepared to receive TENDERS for the immediate supply of about 3 miles of 9-inch and 200 tons of 3-inch CAST-IRON WATER-PIPES, to be delivered upon the Company's wharf at Deptford. Specifications and forms of Tender may be obtained from the Storekeeper at the Brighton terminus. Tenders must be delivered to the undersigned, not later than WEDNESDAY, the 6th day of DECEMBER next, endorsed "Tender for Water-Pipes," and addressed to the Local Board of Health, Watford, Herts.—By order of the Board, JOHN SEDGWICK, Clerk.

Watford, Nov. 23, 1854.

TO BUILDERS

PERSONS desirous of CONTRACTING for the ERECTION of a PAIR of VILLAS, in the Avenue, St. Margaret's, Richmond, may inspect the Drawings, &c. at the Offices of the Architects, on and after NOVEMBER 27th. The Architect does not bind himself to accept the lowest, or any Tender.

GEORGE MORGAN, Architect, 5, Chancery-lane.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE. Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after many hours' exposure to intense heat. COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son.

"GENTLEMEN,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the contents enclosed (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 57, St. Paul's Churchyard, London, 28, Lord-street, Liverpool; 16, Market-street, Manchester; and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved style of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION of BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or cast iron with concrete so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desiderata of fire-proof construction, even for ordinary dwelling-houses and domestic purposes, within the reach of every one.

Further information may be obtained of the Proprietor of the Patent,—Mr. BARRETT, 13, York-buildings, Adelphi.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillars, Brackets, Iron and Brass Tube, Tin and Composition Pipe, &c. &c. at J. SEALS, 30 and 31, Old-street, near St. Luke's Church, London.

P.S. As large and choice an assortment as any house in London.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.

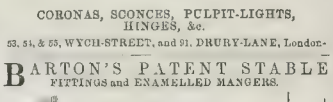
IRONMONGERY WAREHOUSE established for the exclusive supply of the above trades, at wholesale prices. JOHN TOY, No. 8, Branchdale, and Wolverhampton, Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his stock of Ironmongery, Brass Founding, Nails wrought and cut, Copper and Zinc, Patent Locks of all descriptions, China, Glass, and Wood Furnitures of all kinds, with Patent-shifting Spindles, Dr. Arnott's Ventilator, as in the new registered Venetian Ventilator, as much admired. 4s. 6d. each.

J. H. BOOBBYER (late TURCH and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

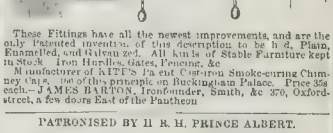
THE LOCK and SAFE QUESTION.—The public and all parties interested in the security of Patent Locks and Fire-proof Safes, are respectfully invited by JOHN TANN (late E. Tann and Sons) to inspect the recent improvements made and patented by him. He has just completed a very highly finished Safe for the French Exhibition of 1855; also Four large strong safes for the government. The above are on view for a few days at the Manufactory, 1, Hope-street, Hackney-road.



HART AND SON,
IRONMONGERS AND MANUFACTURERS.
PITT'S PATENT SELF-ADJUSTING DOOR FURNITURE.

CORONAS, SCONCES, PULPIT-LIGHTS, HINGES, &c.

53, 54, & 55, WYCH-STREET, and 91, DRURY-LANE, London.



BARTON'S PATENT STABLE FITTINGS and ENAMELLED MANGERS.

These Fittings have all the newest improvements, and are the only Patented invention of this description to be had. Plain, Enamelled, and Galvanized. All kinds of Stable Furniture kept in Stock. Iron Hurdles, Gates, Fencing, &c.

Manufacturer of BARTON'S Patent Cast-iron Smoke-curing Chimney Cans, one of this principle on Buckingham Palace. Price 25s. each.—JAMES BARTON, Ironfounder, Smith, &c. 370, Oxford-street, a few doors East of the Pantheon.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled. Castings Warehouse, 81, Upper Thames-street.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street Blackfriars-bridge (Surrey Side).

SECOND-HAND or NEW small PORTABLE FORGE WANTED.—Address, stating particulars and price, &c. to F. C. T. Office of "The Builder."

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

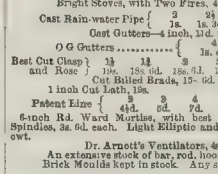
BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PFEIL and STEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

IRON ROOFS, Wrought-iron GIRDERS, Girder Bridges, Railway and Builders' Wrought-iron Work, Gasholders, Tanks, and Boilers.
CHARLES WALKER and SONS,
Midland Iron Works, Tipton, Staffordshire.
Office, Little Sutton-street, London.

THE PATENT GALVANIZED IRON.
TUPPER and CARR,
Owners of Crauford's Patents, and Successors to
THE GALVANIZED IRON COMPANY,
Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wire-cable, rope, and fencing.
An allowance to the Trade.
GALVANIZING WORKS,
REGENT'S CANAL DOCKS, LIMEHOUSE;
BROAD-STREET and BERKLEY-STREET, BIRMINGHAM
LONDON OFFICE, 3, MANSION HOUSE PLACE.



PATENT GALVANIZED IRON.
(IMPROVED PROCESS)
JOHN SYMONDS and CO.
WORKS—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.
Roofs fixed complete.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process) Works at the Regent's-canal-basin, Commercial-road, Limehouse, London. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Soil, and Gas and Water pipes, Hooping, Castings, Furnace-pans, Baths, Buckets, &c. wholesale, retail, and for export. Every description of Ships Iron-work Galvanized, Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete. J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

SAMUEL HEMMING'S PATENT much improved PORTABLE BUILDING and ROOFING MANUFACTORY REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished
Island Foundry and Ironworks, Millwall, London.
Offices: 13, Fenchurch-street, City.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 139, Shoreditch.

Dr. Arnott's Ventilators, 4s. 6d. each.
An extensive stock of bar, rod, hoop, and sheet iron.
Brick Moulds kept in stock. Any size made to order.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (the works erected complete). And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both combined and economic. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise.

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico. All Works of Art in the various Metals executed at the above Foundry.

JOHN FINCH, Ironfounder, Priory-street Works, Dudley, Wholesale Manufacturer of Fenders, Fire-irons, Door-mat Joints for Iron Bedsteads, Garden-Seats, Flower-Stands, &c. &c.

THOMAS EDINGTON (lately senior partner of the Phœnix Iron Works, Glasgow), Iron Merchant, Contractor, Agent for Patents, General Furnisher on Agent, Inspector of Railway Bars and Castings, &c., Gordon-street, Glasgow. Agent on commission for the purchase of Scotch Pig Iron, Railway Bars, Bar-Iron, Castings; and for the sale of English Boiler and Ship Plates, Bar-Iron, Angle and Rivet Iron, Anchors, Tinned Plates, Chains, Cables, Nails, Steel, &c. &c.

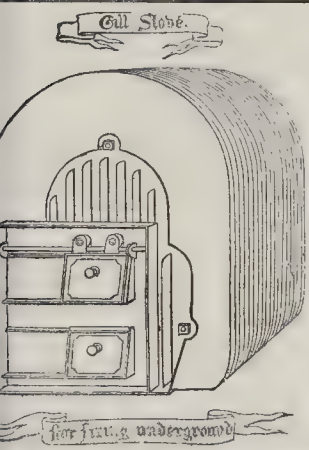
TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,



ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

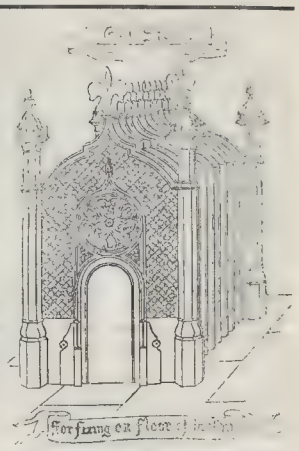
No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

STUART AND SMITH'S
PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.



STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

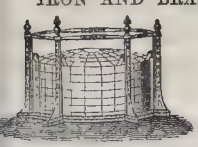
Prospectuses, and every information, sent on application.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO B. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON. House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentee, POWIS, JAMES, and Co 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT -Plain, from 12s. to 42s.; Ornamental from 31s. 6d. to 10 guineas -for warming halls, passages, greenhouses, water-closets, shops, store-rooms, and all places requiring artificial warmth To be seen in use at the sole Proprietor's, S. NASH, Ironmonger, &c 233 Oxford-street, and at the City Depôt, 118, Newgate-street London. PATENT PREPARED FUEL for the stoves, 56 lbs. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and Italian irons with perfect cleanliness, for twelve hours, with one pennyworth of coke or cinders. Price 12s.

*** Prospectuses, with drawings and report, forwarded free.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 16, insures perfect combustion, consumes fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 224, Holborn.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at F. EDWARDS and SONS, 42, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air or metal stoves. Old grates are altered to this principle.—Prospectus sent on application.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork; WARM AIR Apparatus, &c.—Apply to S. S. TAYLER, Engineer, Battersea.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior materials for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bugg's, delivered at a meeting of the Architectural Society, wherein Mr. Bigg shows that heating by hot water is truly the only effective system applicable to warming churches and other large buildings. It is free from all objections, as economical in its working, and produces perfect ventilation with a moist atmosphere throughout the building. Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street London.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.

THE best and quickest drying of the wood, bricks and houses, is obtained by the HOLDSWORTH PATENT CALORIFERE, evaporating twenty-four hundred or two tons of water, without alteration of the finest forms or injuring the quality of the most precious articles. The Calorifere works by hot air only, without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or waste saved, and greatly considered, reduced by the use of the above valuable stove. It is in operation at Wood-prime Company's Works, Pimlico; at Mr. Mackenzie's, Architect, of Victoria-street, Westminster; Young, Son, and Raymond, Bookbinders; and several maltsters, millers, and manufacturers in London and country.—Apply, per post, to T. BULLEYS, Engineer for French Flour Mills, Turbines, &c. 26, King William-street, City.

SEVERAL WARM-AIR and GAS STOVES, both new and second-hand, suitable for small churches, chapels, warehouses, shops, &c. TO BE SOLD cheap, at WILLIAM HARMER'S, Ironmonger, Smith, &c. Horseferry road, Westminster Buildings heated with hot water, and fitted up with gas, complete. Estimates given on application.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO. (opening to the Monument) London-bridge. Established A.D. 1700.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Ironfounder, Church-yard No. 6, Bankside, London, near the Southwark-iron-bridge.

CUNDY'S PATENT PURE WARM-AIR STOVES. The only Pedestal Stove which gained a Prize Medal (Class 4th) at the Great Exhibition in 1851. Especially adapted for warming with great economy churches, chapels, schools, entrance-halls, and libraries. Can be purchased only at the manufactory of CUNDY and SONS, Ironfounders, &c. 16, Great Queen-street, Long-acre, where a large stock is always ready for immediate delivery.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 65, Bridge-road, Lambeth, where a great variety are always on view for church, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double acting spring hinges, and superior cabe fastenings, at moderate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire. Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Gornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.
Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at
RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 19, Charles-street, Long-acre, London.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES,
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
186, Strand, London.
47, Hyde-park-street, Glasgow.
27, Dale-street, Manchester.

LOSH, WILSON, and BELL, NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Size-lane, London.

IRONMONGERS, ZINC-WORKERS, &c. supplied with SHEET ZINC, PERFORATED ZINC, TURNS, &c. of best quality, at the lowest prices, at WILLIAM HARMER'S Iron, Metal, and Zinc Warehouse, 1, New Peter-street, Horseferry-road, Westminster.—Cast-iron Rain Pipes and Gutters, cash-weights, Railing Bars, &c. at wholesale prices.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.
JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade, to the inspection of his large stock of ironmongery, which cannot be surpassed in variety, quality, and cheapness by house in London.

Elliptic Stoves, double backs, 3d. per inch, and upwards.
Register Stoves, 5½d. 6½d. 7d. 8d. and 9d. per inch.
Self-acting Ranges, with circular ovens and back boilers, best wrought bars and bright fittings:—
3 ft., 2l. 18s.; 3 ft. 6 in., 3l. 5s.; 4 ft., 3l. 18s.
3-feet Cottage Ranges, with ovens and back boilers, 35s. each.
3-feet self-acting ditto, ditto, 36s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 56s. Ditto, Scotch, 66s. per cwt.
Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell-hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

HYDRAULIC PRESS.—For SALE, by private contract, an HYDRAULIC PRESS, by Bramah and Robinson, with 12-inch ram, base plate, 5 feet 9 long, 2 feet 8 wide; pair of Pumps, with 1-inch and 3-inch plungers; Press-box and apparatus, in excellent condition.—Apply to Messrs. FULLER and HORSEY, 13, Billiter-street, City.

LONDON and NORTH-WESTERN RAILWAY.—The Directors of the London and North-Western Company are prepared to receive OFFERS for a few small-sized LOCOMOTIVE ENGINES, which they have now on sale. The engines have 13-inch cylinders, four wheels coupled and uncoupled, 5 feet and 5 feet 6 inches diameter, copper fire-boxes, brass tubes and tablets, and their machinery is in fair working order. The engines may be seen, on application to Mr. MCONNELL, Locomotive Superintendent, at Wolverton Station.—By order,
CHARLES E. STEWART, Secretary.
Euston Station, Nov. 17, 1854.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE, can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.

MARBLE CHIMNEY-PIECES.—An ASSORTMENT of nearly 300 CHIMNEY-PIECES, including many in Statuary of the richest design and execution, besides a large variety of a less costly character, in all the most admired Marbles, together with the other valuable Contents of the Show-rooms, including table tops, monuments, vases, baths, &c. will be included in the Sale of the Second Portion of the important Stock advertised by Messrs. EVERSFIELD and HORNE, to be sold on the Premises, near St. Pancras Church, New-road, on the 28th and 29th inst.

MARBLE CHIMNEY-PIECES manufactured by Machinery, improved by the proprietor's own invention that defy competition, in price and quality. The trade supplied with Marble and Stone Chimney-pieces, Slabs, &c at the Marble and Stone Sawing Mills, Cambridge-heath, Hackney.—WM HUNTLER, Proprietor.—Two Marble Masons wanted.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account.
Mr. Thompson being no longer his agent.
Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

ITALIAN and GALWAY MARBLE QUARRIES. Depôt, Whitehall-wharf, Parliament-street.—Mr. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade, &c. that he has just landed in the St. Katherine's Docks, ex *Roberto* and *Betty*, from Leghorn, 50 blocks of MARBLE, consisting of large open statuary, suitable for sculpture, Sicilian, veining statuary grounds, dove, Bardilla, &c. Also, at his depôt may be found 100 blocks of marble, consisting of open statuary, vein, Sicilian, black and gold, Galway black, and St. Ann's, and 33 different coloured marbles. A large stock of sawn slabs of every description of marble.

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, verd antique, &c. Portland, Hareshill, Park spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.
Just arrived, per *Roberto*, *Wham*, *Betty*, *Natalie*, and *Harlequin*, 150 Blocks of Marble, and 1200 feet of Sawn Slab, Mortars, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MONUMENTS! MONUMENTS!—For POLISHED GRANITE MONUMENTS, apply to C. H. CLARK, Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

GRANITE.—The Checsewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street; Manager—JAS. J. MATHIAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Whiting Manufacturers and Warehousemen, and Wholesale Dealers in Hearth and Burr Stone, that they can be supplied in quantities from three tons and upwards with the above, delivered at the South-Eastern Railway Goods Depôt, Bricklayers' Arms Station, Old Kent-road, at the current price Terms, samples, and other information may be obtained at the Office of the Wharf above.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Hareshill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Slabs, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

BANGOR WHARF, King's-road-bridge, Camden-town. STRINGFIELD and COOPER, late W. W. Rawlins, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

By Her Majesty's Royal Letters Patent

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon-row, Westminster.

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lot's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Lourd, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stone from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.
N.B. Heavy goods landed, transhipped, or carted with despatch and at moderate charges.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones in blocks and ashlar of specified dimensions and fine snapped; also random and coursed rubble. It is easily worked to a good face and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe.

TO STONE MERCHANTS AND CONTRACTORS.
FREE-STONE QUARRIES TO BE LET on lease, situated on the east coast of Scotland. The quarries have been long worked, and are among the principal ones in the north of Scotland. They are now in free-rate working order. The stone is well known, and commands an extensive sale in the country and abroad. There is no land carriage, and ships of heavy draught can load at the quarry pier. For specimens and particulars, apply to Mr. H. SMITH, 23, Southampton-buildings, Chancery-lane, London, before November 30.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Wet Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Kent Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

A LARGE QUANTITY of ROAD SAND FOR SALE, situate on the Banks of the Grand Surrey Canal.—Inquire of C. HOWARD, Builder, Peckham, Surrey.

INDURATED STONE COMPANY, for rendering all Soft Stone, Bricks, Tiles, and Building Materials of all kinds, hard and impervious to weather or moisture.
Capital, 50,000l. in 1l. Shares—10s. to be paid on complete registration, and the remainder at call. Under Her Majesty's Royal Letters Patent. Provisionally Registered under 7 and 8 Vict. cap. 110.
Prospectuses, containing the various uses to which this invaluable Patent may be applied, and also the expressed opinion of the most eminent Geologist of the day, may be had at the Offices of the Company; of Messrs. Pagden and Hodgkinson, Solicitors, 5, Mark-lane, or N. E. Stevens, esq. Managing Director at Tunbridge Wells; or Edward Roberts, esq. 16, Hollis-street, Cavendish-square, Surveyor to the Company; and of George Lawford, esq. 4, Warnford-court, Throgmorton-street, Broker to the Company.
Applications to be made to the Secretary, at the Offices of the Company, 14 and 16, St. Swithin's-lane; and High-street, Tunbridge Wells. The works are in operation at King's Quarry, Tunbridge Wells.
The Directors of the above Company have hitherto abstained from making any public statement of the comparison between the price of stone subjected to their patent process, and that of other stones in ordinary use, they were desirous to obtain, from practical investigation, the most accurate results as to the cost of the products.
The following prices will at once exhibit a comparison so favourable to the Indurated Stone, as not only to command the attention of all persons interested in the use of materials of this description, but to insure a higher rate of profit to the shareholders:

	Average price of Sandstone.	Portland Stone.		Tooled York Ston	
		s.	d.	s.	d.
Prime cost on the wharf, per foot cube	4d.	3	3	2	6
Working and raising of same	1½d.	0	6	0	9
Plain work, exclusive of sawing	2d.	0	5½	0	9
Sunk work, ditto, ditto	3d.	0	9	1	0
Moulded work, ditto, ditto	3d.	1	0	1	6

Cost of indurating the Sandstone, including every expense—the Black, 6d. and for the Light, 9d. per foot cube.
The cheapness with Portland and Yorkshire stones are introduced in comparison with the Indurated Stones, is in consequence of the peculiar adaptation of the latter for all purposes for which the other stones are used, possessing, as it does, superior advantages as to durability, with the important additions of impervious ness to moisture, the impossibility of vegetation arising on the surface, and the ease and consequent cheapness with which the Sandstone can be worked to any form previous to induration.
The Company have already made arrangements for granting licences in important localities on liberal terms, and they will also be prepared to indurate stone or other porous materials, in large quantities, in any locality, thus avoiding the cost of carriage.
The Directors have confidence in stating that the profits will amount to a clear 30 per cent. on the capital employed; indeed, a glance at the foregoing prices will fully bear out such a statement, and needs no further comment.
Prices of various articles for which the Indurated Stone is especially adapted, showing the relative cost of production with Portland and Yorkshire Stones:—

	Indurated Stone. Black.		Indurated Stone. Light.		Portland Stone.		Tooled York Stone	
	s.	d.	s.	d.	s.	d.	s.	d.
Rubbed & Squared Paving, 2½ in. thick, not exceeding 4 feet 6 in. superficial	0	8	0	9	1	6	1	0
Ditto, in 12 in. or 9 in. square, and 1½ in. thick	0	7	0	8	2	0	—	
Window Cills, 8 by 4, weathered, stopped, & throated, per ft. lineal	1	3	1	6	2	3	1	9
Plain Coping, 15 by 3, throated	0	10	1	0	2	0	1	6
Saddle-back Coping, 15 by 4	1	10	2	0	3	0	3	0
Sinks, 6 in. thick, rubbed, and sunk	2	0	2	6	3	6	3	6
Curbs for Areas, 9 by 6	1	4	1	6	2	6	2	6
Steps, 12 by 6	2	0	2	6	3	0	3	0

The difference increased with the amount of work. For all ornamental purposes, such as Chimney pieces, Parapet Ornaments, Pedestals, Tombstones, &c. the advantages in favour of the Indurated stone would be still greater.

THE BUILDER.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands preeminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

AGNUS'S ENAMELLED SLATE.—As miscable imitations of this much-admired material being made, parties are recommended to supply themselves in the Manufactory, 39 and 40, Upper Belgrave-place, Pimlico, ronised by Her Majesty, Prince Albert, the nobility, archi- of eminence, and honoured with the Medal of the Society of s, at the Prize Medal of the Great Exhibition.

O SLATE-MERCHANTS.—Wanted, about 300 SQUARES of SLATING, in exchange for a Sixned House.—Address to J. T. MERRICK, 15, Lowther-arcade, and.

HE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC INT is unequalled for permanency of colour, hardness, and illiancy of surface; it is unaffected by sulphureous or any other ours of emanations. Being completely innoxious and free from pernicious effects of white lead, it may be employed in all rtments whilst in use without any inconvenience to the ines.

he greatest caution is recommended to avoid any spurious rapounds that might be sold at cheap rates as Pure Oxide of c. If any adulteration has taken place in the oxide, either in sequence of impurity in the material primarily made use of to duce it, an imperfect mode of production, or by mixing with oxide certain substances calculated to give it increased weight. hen produces a very inferior instead of a very superior paint, d the economy realised by the purchasers of such oxides omes a very expensive result to the owner of the premises nted with them.

he VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground ill, are sold with the VM mark.—In Hull, by Messrs. BLUNELL, SPENCE, and CO.; when ground in Oil, dry, by Messrs. S. MORLEY and CO., and by the Company's Grinding Agents.

London, Messrs CHARLES DEVAUX and CO. Wholesale nts, 62, King William-street, City; Messrs. JACKSON and BRIARLY, wholesale and Retail Agents, 8, Tottenham-court, New-road, and Upper Thames-street, City. In Manchester and Liverpool, by ers. LAWFORD and CO of 49, Norfolk-street, Liverpool, who also acknowledged Painters to the Company for Zinc Paints, d undertake painting ships, warehouses, dwelling-houses, &c. Leith, by Messrs. R. ANDERSON and CO., when ground in Oil, dry, by IDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, be had of the Company's Agents in Birmingham, Newcastle, arrow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, ole, and the Isles of Jersey, Guernsey, Man, and Wight; also Dublin, Cork, and Belfast.

he Company also employ an acknowledged painter in London, o will undertake any description of painting with Zinc Paint contract.

or further particulars, apply to the Company's General Agent London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

HE VIEILLE MONTAGNE ZINC . MINING COMPANY beg to inform the public that they ve appointed Messrs. T. and S. KNIGHT, of Great Suffolk-eet, Southwark, as their painters, who will be ready to execute e description of painting and decorating with the Pure Patent ite Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, riously confined by the cost to the use of the wealthy, is by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT —Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one apted to all their purposes; possessing the great desideratum of mony, combined with the high excellence as a paint, it stands one. Contractors effect a saving of 25 per cent by using UBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be ciated against imitations of their Paint. These manufactures, ntaining frequently pernicious ingredients, are baneful to health d worthless in use, whilst the inexperience of these imitators in e production of pigments is evidenced, not alone by the coarse ny appearance, but also by the deficiency of that body in their oduce, which is known to the painter to be all-essential. That imposition be not practised, therefore, notice that the cask is arked with the name of the original manufacturers, thus—

HUBBUCK LONDON —PATENT.

If not so marked, the reason may be inferred

Every information in the circular to be had of THOMAS UBBUCK and SON, Patent Varnish Manufacturers, Copper ast Smithfield (opposite the London Docks), London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known rd stuccoes dry quickly, and can be painted upon within a few ys. Made and sold by JOHN BAZLEY WHITE and OTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days CHARLES FRANCIS and SONS, Manufacturers of Roman arian under patent, and all other Cements in use for buildin rposes Nine Elms, London

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-tting Cement, that requires no colouring.—Sold exclusively by OHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the ural Cements with the additional advantage that it greatly ds them in its constituous properties; that it is not affected y frost, and does not vegetate in damp situations. Account of OMPARATIVE EXPERIMENTS on the strength of this and ther Cements read at the Institute of Civil Engineers, to be btained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one under only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks Grindstones, Cement Chimney-tops, ditto Vases, Ridging e Pavuts, Stucco, &c. Marble Merchants and Importers of Porcelino

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs ASPDIN, ORD, and CO have much pleasure in informing customers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN, much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior to most of the Cements sold as P rtland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Almondon-street, Westminster; at their Works, Gateshead-on-Tyne, at Messrs. Rosher's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Queen's Dockhouse; or from their Agent, Mr HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes therein applicable.—Orders received at Great Scotland-yard, and at the Works.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the Kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Mid ile Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junc tions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

PLAIN, STAINED, and other Bricks.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is unfailing in its effects. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s. 6d. Prepared only by W. J. STENT, Westminster London Agents, Messrs. J. and G. WALLIS, 64, Long acre. Agent for Ireland Mr. S. BOYD, 46, Mary-street, Dublin.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their peculiarly oil-cloth coverings; for entrance-halls, passages verandahs conservatories, &c.

MAW and CO send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 981, of the Great Exhibition, rank the Manufactories known as long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 33s. to London bridge or Newington; beyond that distance, moderate charge carriage Bricks of all description; yellow and light pickings equal to seconds. Red facings, at 29s. in field; red and glazed pipes, about half the price of stoneware, white sand, nearly silver in field or by barge; flunders' sand and loam; good coloured gravel Address, B. PARKS, Lewisham Brickfields.

BRICKS.—Kent Grey Stocks, of superior quality. Also, White Suffolk and Red Facing Bricks.—Apply to Mr W. ALLAWAY, 4, Catherine-court, Tower-hill.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT and ESSEX BRICKS

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr Benjamin Gough), 37, Newington-Crescent, Newington-butts.

250,000 SOUND BRIGHT STOCK BRICKS, 1st and RED BRICKS, and 2nd fine WHITE PAVING ditto, FOR SALE, at a low price. They could be delivered on any portion of the Eastern Counties Railway —Address, R. BLACKET, Witham, Essex.

N.B. Pipes and tiles of best quality for land drainage.

GREAT NORTHERN RAILWAY.—L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross, beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that they can be supplied upon the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

N.B. Orders received overnight can be delivered by the early morning trains.

BLUE BRICKS.—TO BE SOLD, a quantity of VITRIFIED BLUE STAFFORDSHIRE BRICKS; to be seen at Bellmont-wharf, King's-cross. Prices, &c. of all other description of Terro-metallic Goods, Stourbridge Fire-bricks, &c. to be had by applying to Mr. J. UNWIN, 69, Nelson square, Blackfriars-road, London.

GREAT NORTHERN WHARF, York-road, King's cross.—WHITE BRICK and TILE DEPOT. L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants beg to inform builders, contractors, and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place; white cutters, second and paviors; oinkers, red cutters, and stocks; plain and pan tiles, 6 in. 9 in. and 12 in.; white and red paving tiles; blue, red, and white ornamental tiles, blue and red ornamental ridges; Stourbridge, Welsh, and Yorkshire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewer-pipes, bends, junctions, and syphons; closet-pans and traps, terra-cotta chimney tops, trusses, brackets vases, moulings and patents of the most improved patterns. Architects' designs worked to with accuracy and despatch. Lump and ground grey stone, lime, chalk lime for plastering, blue lias lump and ground lime, Roman, Portland, and lias cements, coarse and fine plaster, laths and hair.

N.B.—30,000 bundles of prime Gothenburg laths are now on sale at the above wharf, price 12s per load.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address, Mr. WM. WEBB, Brick-fields, Stoke Newington.

WANTED to LET the LABOUR of from Seventy to One Hundred Rods of BRICKWORK. A liberal price will be given.—Apply at 198, Upper Whitecross-street, City.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-rubbed Stocks, and Place Bricks also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO at the Counting-house, Hoxton Brick-fields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Lichfield and Dudley's approved quality, constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WOODBRIDGE WHITE BRICK MANUFACTORY.—THREE HUNDRED THOUSAND SUFFOLK WHITE FACING BRICKS of very superior quality, FOR SALE.—Apply to THOMAS PEAKE, Woodbridge.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 37s.; Cowley Stocks 25s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile; Fire Bricks, Lumps, Tiles and Clays. A THOUSAND YEARS.—MONEY LENT.
BUILDING LAND To BE LET, for the above term. Ground Rents low. Charges moderate. Advances liberal.—Apply to Mr. WILLIAM ELLISON, Architect and Surveyor, 19, Stanley-road, Peckham.

GUILDHALL, Nov. 21, 1854.
THE COMMITTEE for LETTING the CITY'S LANDS will MEET at Guildhall, on WEDNESDAY the 29th day of NOVEMBER instant, at ONE o'clock precisely, to receive PROPOSALS for LEASES of a HOUSE at the west end of Artillery-place, adjoining the Finsbury or St. Bunhill-ground, and of a House, No. 191, on the west side of Whitecross-street, and a tenement behind, in Shrewsbury-court. The premises are to be let for thirteen years, less three days, from Christmas next. Further particulars and plans may be seen, and forms of Tender obtained, at the Architect's Office, Guildhall.
FERDINAND BRAND, Comptroller.

KENT—CHISLEHURST.—TO BE LET, on Building Leases, in this delightful, healthy, and much-frequented village, bounding with pleasant walks and drives, THREE PLOTS of FREEHOLD LAND, together about six acres in area or more, but most picturesquely situate, with extensive views to the south, and a few minutes' walk from the Churches of England and Rome. Water excellent and provided, drainage good, and five miles from the rail, with daily conveyance to and fro. Also, valuable FREEHOLD LAND, suitable for Cottages, at Chislehurst hill, at the great ground. Apply to GEORGE H. BASKOMB, Esq. Chislehurst; or R. P. BROWN, Esq. 30, Clement's-lane and Greenwich.

LAND adapted for METROPOLITAN PAROCHIAL CEMETERIES. Sewers office, Guildhall, 24th October, 1854.—The Commissioners of Sewers of the City of London, acting as the Local Board for that City, have about 300 ACRES of suitable FREEHOLD LAND, which they are desirous of SELLING to any parish or parishes for the purpose of a CEMETERY, it being peculiarly adapted for such purpose. The land is situate in the parish of Little Ilford. The Eastern Counties Railway runs close to it, and may by arrangement run direct into it. It is also directly accessible by the high road from London and from Wanstead, and is about a quarter of a mile west of Ilford. The cemetery for the City of London is forward on the adjoining portion, and the said Commissioners will sell or hand in gunshots, subject to the restrictions that no building is to be erected on it except for agricultural purposes or the purposes of a cemetery. The land-tax is redeemed. Plans of the property may be inspected at the office of the Surveyor to the Commissioners, at No. 14, Old Jewry-chambers, where further particulars may be known, or of the undersigned,
JOSEPH DAW, Principal Clerk.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other sites, suitable for villas of all classes, TO BE LET, on Building Leases. Moses advanced to responsible builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

OXFORD-STREET, near Regent-street.—About a quarter of an acre of vacant GROUND, having the principal entrance from Oxford-street, TO BE LET, on building lease. Offering an unprecedented opportunity for the erection of a public edifice, commercial rooms, bazaar, galleries, a religious or scientific hall, or any other buildings requiring a spacious area with an approach from a great west-end thoroughfare.—Further particulars will be given upon personal application only, to Messrs. RUSHWORTH and JARVIS, Surveyors and Auctioneers, Saville-row, Regent's-quadrant.

UXBRIDGE-ROAD, Fulham Parish.—BUILDING LAND TO BE LET, with a valuable supply of Brick earth, several hundred feet of excellent frontage on the main road, with a depth of 200 feet, suitable for villas or other private residences. Also some back frontages, suitable for smaller property. The freeholder will advance two-thirds of the cost as when the houses are built. The brick-earth adjoining is of an excellent quality and may be secured at a small royalty. For further particulars apply to Mr. A. C. HOOK, Land Agent, 12a, Great George-street, Westminster.

TO BRICKLAYERS AND BUILDERS.
TO BE LET, with immediate possession, a SIX ROOMED HOUSE, with large yard and convenient out-buildings, situate in the centre of the town of Hounslow, and long established in the above business. For particulars, apply to Mr. WOOLD'S, Auctioneer, Hounslow.

WATERSIDE PREMISES.—To CONTRACTORS, BOILER MAKERS, and OTHERS.—TO BE LET, for such a term as may be agreed upon, a good WHARF, with river frontage, drawing deck, and large yard, with workshops and stabling. Also BUILDING LAND for manufactories or cottages.—For particulars, apply to Mr. WM. DREW, Mordeu wharf, East Greenwich.

TO BE LET, on a Repairing Lease, direct from the Freehold, TWO HOUSES, Nos. 2 and 3, York-street, Westminster, in the immediate neighbourhood of the new street. For particulars apply, by letter, to Mr. KNIGHT, Architect, 57, Charlotte-street, Portland-place.

BISHOPSGATE WORKHOUSE, Dunmow's-alley. TO BE LET or SOLD, capital FREEHOLD BUILDINGS and YARDS, suitable for a builder's manufacturer. The buildings are four stories high, with ample light and ventilation, and in good repair. For further particulars, apply to Mr. SMART, 25, Sun-street, Bishopsgate; or to Mr. MERRIDITH, 7, Great Winchester-street, Broad street. Frontage 147 feet; average depth, 77 feet.

TO BUILDERS AND BRICKMAKERS, MANUFACTURERS, &c.
PREMISES, and TWENTY ACRES of FREEHOLD BUILDING, TILE, and BRICK MAKING GROUND, TO BE LET on lease to a respectable person for 10, 14, or 21 years, at only £ per year, and 2s per 1,000 of 3½, but not less than 2,000 feet of suitable frontage, beautifully situate, twenty-four miles from London. The brick-earth is first-rate, and, if desired, no objection to advance money for extensively pushing the brick-making, which proves again true, as there is a great demand in the neighbourhood. There is a fine pond of water, and there would be no objection to let a portion of the land for manufacturing purposes. Apply to Mr. WENSLEY, at the Crown, Back-hill, Hatton-garden, London.

HOUSES WANTED, to Rent or Purchase, by the Directors of the Metropolitan Association for improving the Dwellings of the Industrious Classes, suitable to their purpose. Freeholds or Long Leaseholds only will be entertained, and those situate in well peopled districts will be preferred. Letters, stating rent, duration of lease situation of property, condition of repair, number of rooms in each house, and full particulars, to be addressed to C. GATLIFF, Secretary, 19, Coleman-street.

AMERICAN OILSTONES, very superior in quality to the Turkey oilstone; a new and invaluable discovery, for giving with ease and rapidity, a perfect and sharp edge to razors now used by carvers, carpenters, die-sinkers engravers, engineers, &c. &c. To be had of various shapes and sizes, at 18, Newgate-street, London.

TO ENGINEERS.—Partnership or otherwise.—Good or more WANTED, in a profitable established business, free from risk, returns about 1500l. and capable of extension in proportion to the increased capital. A young man acquainted with engineering will find this concern well worth attention.—Address, M. C. T. Mr. S. Deacon's, Advertisement Agency, Hood court, Walbrook.

CAUTION.
Whereas, certain parties are endeavouring to deceive the Public with worthless imitations of
CHAPPUIS'S PATENT DAYLIGHT REFLECTORS,
Representing themselves as from the Manufactory, 10, ST. MARY AXE; in every case of such misrepresentation, infringers will be dealt with according to law.

This day is Published, Price 3s. 6d. cloth lettered,
ORR'S CIRCLE OF THE SCIENCES,
VOL. II.
BEING THE MATHEMATICAL SERIES.
INCLUDING:—
SIMPLE ARITHMETIC, ALGEBRA, AND ELEMENTS OF EUCLID.
By J. R. Young, late Professor of Mathematics, Queen's College, Belfast.
PLANE AND SPHERICAL TRIGONOMETRY, SERIES, LOGARITHMS, AND MENSURATION.
By the Rev. J. F. Twisden, M.A. Professor of Mathematics, Sandhurst.
AND
PRACTICAL GEOMETRY.
By Alexander Jardine, Esq. Civil Engineer.
Also, uniformly bound, Price 3s. 6d. THE FIRST VOLUME,
CONTAINING:—
THE PRINCIPLES OF PHYSIOLOGY; STRUCTURE OF THE SKELETON AND TEETH; AND VARIETIES OF THE HUMAN SPECIES. WITH AN INTRODUCTORY TREATISE ON THE NATURE, CONNECTION, AND USES OF THE GREAT DEPARTMENTS OF HUMAN KNOWLEDGE.
By Professor Owen, Dr. Latham, and Dr. Bushnan.
LONDON: HOULSTON AND STONEMAN, PATERNOSTER-ROW;
WM. S. ORR AND CO. AMEN CORNER.

TO CARPENTERS AND BUILDERS.
TO BE DISPOSED OF, an old-established BUSINESS, situate in the best part of a country market town, with a good house, shop, and yard, and every convenience for the trade.—For particulars apply by letter, prepaid, addressed to W. S. 35, St. George-street, Leicester.

TO BRICKLAYERS AND BUILDERS.
TO BE DISPOSED OF, in consequence of the death of the Proprietor, the GOODWILL, LEASE, and STOCK (an old-established) business, a few miles from town, at the west end. There is an excellent jobbing connection. The situation is good, healthy, and respectable, and the coming-in low.—Apply to C. D. Mr. Spoler's, 38a, Lower 302, Holborn-hill.

TO CARPENTERS, BUILDERS &c.
TO BE DISPOSED OF, in consequence of the declining health of the Proprietor, an excellent JOBBING BUSINESS, established above fifty years, in a central part of the metropolis near the waterside, and in the City of London, employing upon an average about fifty men. There are capacious workshops and premises, timber yard, saw mill, stabling, &c. well adapted for a first rate business requiring accommodation for a large staff of men. Apply to Messrs. HAMMOND and LILGART, Estate Agents, &c. 28, Chancery-lane.

DRAFT ROUND DOORS and WINDOWS PREVENTED, by using GREENWOOD'S PATENT INDIA-RUBBER "TOUS" the neatest and most effectual plan ever invented for the purpose. They are made in deal, wainscot, and mahogany mouldings, to fit round the jamb linings. The door closes against the India-rubber, and makes them perfectly air-tight. Gives Cases made on this principle, as a reduced cost.
JOHN GREENWOOD, patentee, 16, Arthur-street West, London-bridge.

TO AVOID COLD within DOORS, use the high approved PATENT DRAUGHT and DUST EXCLUDER, the cheapest, most simple, and useful invention for the purpose. Price from 1d. to 6d. per yard. Sold at R. HELBRONNER'S, Sole Patentee, 295, Regent-street, near the Circus, Oxford-street; and at 103, Newgate-street.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made it next to impossible to use gas together in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country, an extensive assortment of specimen and patterns of examples at is per foot super together with every particular of its cost and adaptation, can be obtained of Mr. HURT, 9, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and Co. 89, New Bond-street.

Just published, price 1s.
THE BRITISH ALMANAC for 1855.
THE COMPANION to the ALMANAC.
Sewed in wrapper, price 2s 6d.

THE BRITISH ALMANAC and the COMPANION together, in cloth boards, lettered, price 4s.
CONTENTS OF COMPANION FOR 1855.

PART I.
1. On the Motion of the Earth.
2. The Census of America.
3. Improved Dwellings for the Labouring Population.
4. Occupations of the People.
5. Fluctuations of the Funds.
6. Average Prices of Corn.

PART II.
7. Abstracts of Public Acts.
8. Abstracts of Parliamentary Documents.
9. Chronicle of the Session of Parliament, 1854.
10. Private Bills of the Session of Parliament, 1854.
11. Public Petitions, 1854.
12. Public Improvements (with Woodcuts).
13. Chronicles of Occurrences, 1854.
14. Necrological Table of Literary Men, Artists, &c.
15. *The Campaign.*

"Foremost amongst our year-books, both as a manual of facts for domestic use and as a repository of original reports and speculations on the events of the time, is the 'British Almanac and Companion,' projected by Mr. Charles Knight. It aspires to be the companion of all opinions and supplies useful information to every side."—*Athenæum.*
London: CHARLES KNIGHT and CO. 90, Fleet-street.
And sold by all booksellers in the United Kingdom.

This day is published, price 15s. a Third Edition of
HINTS on COTTAGE ARCHITECTURE, being a selection of Designs on Labourers' Cottages, singly, in pairs, and in groups, with plans elevations, and estimates (corrected to present prices), dedicated, by express permission, to the Most Noble the Marquis of Lansdowne, K.G. by HENRY WEAVER, Architect and Estate Agent.
Also in the press, and shortly will be published, by subscription, 21s. and to non-subscribers, 25s.
HINTS on VILLAGE ARCHITECTURE, being a selection of Designs for Schools, Cottages, and Parsonage Houses, adapted to rural districts. By the same Author.
Subscribers are requested to forward their names to the Author, Beversbrook, Calne, Wilts; or to his Publisher, Mr. HENRY POPE, 32, Budge-row, Cannon-street, London.

GLEIG'S SCHOOL SERIES.
In 16mo. with Woodcuts, price One Shilling.
LIGHT and HEAT; in which the Principles of Science are familiarly explained for the Instruction of Beginners, and illustrated by numerous Experiments and Diagrams.
By T. TATE, F.R.A.S. of Kneller Training College.
Also by Mr. TATE, in Gleig's School Series.
MAGNETISM, VOLTAIC ELECTRICITY, and ELECTRO-DYNAMICS, price One Shilling.
ELECTRICITY for BEGINNERS, price One Shilling.
ASTRONOMY for BEGINNERS, price One Shilling.
HYDROSTATICS, HYDRAULICS, and PNEUMATICS, price One Shilling.
FIRST THREE BOOKS of EUCLID, price One Shilling.
EXPERIMENTAL CHEMISTRY, price One Shilling.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In course of publication, in 12mo. price 2s. each,
A SERIES of SCIENTIFIC MANUALS.
By the Rev. JOSEPH A. GALBRAITH, M.A.
Fellow of Trinity College, and Erasmus Smith's Professor of Natural and Experimental Philosophy in the University of Dublin; and the Rev. SAMUEL HAUGHTON, M.A. Fellow of Trinity College, and Professor of Geology in the University of Dublin.
Already published,
MANUAL of MECHANICS (new and improved edition), 2s.
MANUAL of OPTICS, 2s.
MANUAL of HYDROSTATICS, 2s.
MANUAL of PLANE TRIGONOMETRY (new edition), 2s.
In preparation,
MANUAL of ARITHMETIC, 2s.
MANUAL of ASTRONOMY, 2s.
MANUAL of HEAT, 2s.
MANUAL of ALGEBRA, 2s.
MANUAL of ARITHMETIC (new and improved edition), 2s.
EUCLID'S ELEMENTS, First Six Books, 2s.
**** The Prospectus may be had of Messrs. LONGMAN and CO. and gratis of all Booksellers.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

On Thursday next, in Two Parts, price 1s. each; or in 1 vol. price 2s 6d. cloth,
SELECTIONS from the Rev. SYDNEY SMITH'S WRITINGS. Parts III. and IV. Forming Nos. 71 and 72 of the "Traveller's Library."
**** The Selections from Sydney Smith's Writings, in 2 vols. 2s. 6d. each, cloth; or in Four Parts, at 1s. each.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND CHEAPER EDITION
The Third Edition, in 8vo. price Two Guineas,
GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. Illustrated with more than 1,000 Engravings on Wood, by JOSEPH BRANSTON, from Drawings by J. S. GWILT. With a Supplement on Gothic Architecture.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

PART I.
MENSURATION FOR THE MILLION.
Written expressly for the Working Mechanic.
Just published, price One Shilling, or post-free, on receipt of Fifteen Queen's heads.
MENSURATION MADE EASY, or the DECIMAL SYSTEM, and its Application to the Daily Employments of the Artizan and Mechanic.
By CHARLES HOARE.
EFFINGHAM WILSON, Publisher, 11, Royal Exchange.

LAXTON'S BUILDERS' PRICE-BOOK for 1855 will be published, with considerable alteration early in DECEMBER next. All ADVERTISEMENTS to be sent before the end of this Month, to the Office of the "Civil Engineer and Architect's Journal," 19, Arundel-street, Strand.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series, Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VII. for October, just published
GEO. ROUTLEDGE and CO. Farringdon-street; and
H. SPENCER, 314, High Holborn.

THE SOCIETY for IMPROVING the CONDITION of the LABOURING CLASSES, No. 11, Exeter-hall.
THE DWELLINGS of the LABOURING CLASSES, their Arrangement and Construction, with a Description, Plans, &c. of the Model Houses belonging to the Society. Numerous Designs for Dwellings adapted to Towns as well as to Agricultural and Manufacturing Districts, and an Appendix, containing H.R.H. Prince Albert's Exhibition Model Houses, Hyde-park, 1851. The Model Cottages, &c. built by the Windsor Royal Society.
By HENRY ROBERTS, Esq. F.S.A.
Third Edition, enlarged. Cloth, 4s.

The Builder.

SATURDAY, NOVEMBER 25, 1854.

NOTWITHSTANDING the absorption of public attention by the frightful war in which we are engaged, evidences appear in various quarters of coming endeavours to obtain means for the better regulation of the internal economy of the metropolis, and to effect improvements in its streets and buildings. Recent parliamentary returns have made evident the extraordinary manner in which the metropolis is now governed, and the evils which result from the hosts of uncombined authorities who now discharge that office. It is high time something should be done, with due reference nevertheless to the representative principle, to bring about united and intelligent action.

Most singular it is to find that men in a corporate capacity, worthy, excellent men in the main, who would be scandalized at the idea of an unpaid bill, and look with contempt upon the improvidence of those who will not take the means necessary to provide for their next quarter's rent—that these very praiseworthy and in some respects model men, will yet, when they get banded together in any little official linkwork, straightway forget their principles, and behave like a parcel of improvident scapegraces. That is to say, instead of acting upon the common-sense principle of ordinary life, looking forward to make the best of the future, by studiously avoiding every course or track which the past has warned them will lead to danger, they are content to scramble through the difficulty of the day, leaving the morrow to take care of itself. Thomas Carlyle has said somewhere, that "experience takes dreadfully high school wages." We commonly take rather good care of our costly purchases of whatever sort, but it would appear that schooling is in great measure lost upon the magnates who control parishes and towns. Else why should cholera, which has over and over again given notice of the causes which provoke and feed it, be once more a sound which fills the stoutest with dread, and a presence which has smitten thousands, who have succumbed to its influence, and been laid in a premature grave? Just because we think of reforms only when the scourge is upon us; and, like the debauchee, the moment health returns, we are back to revel in our filthy ways. There has been a Smoke Act passed, which is yet in great measure inoperative; and large sums of money have been spent on a system of sewerage which is notoriously inefficient.

There are two places in the city of Paris where the visitor can command most superb views of that magnificent capital. On the one hand, the grounds of Père la Chaise; on the other, the summit of the Triumphal Arch. Before you lies the basin of the Seine, through which its waters roll in limpid purity. As far as the eye can reach from either point is a dense mass of human habitations, but nowhere are they hidden from the sight by a pall of smoke, and nowhere is the sky concealed until it dips to the horizon. There are two places also from which a panoramic view of unexampled magnitude can be obtained of the "nation of London." Standing on Primrose-hill on a glorious autumn day, or on the knoll near the Crystal Palace, at Sydenham, when the sun is riding in mid-heaven, and what do we behold? The largest city of the greatest and most intelligent people in the world, inhabited by a population of itself a sovereignty, and whose wealth no arithmetic can compute, content to live in an atmosphere compounded of the filthiest vapours, depressing to the spirits, destructive to property, and in many respects very fatal to life. How comes it that this is the case? Simply because there is no controlling power directed to the enforcement of required precautions, or next to none; for the solitary or scattered efforts of a few local authorities are completely nullified by the apathy of those surrounding them, who cannot be stirred into exertion till death taps at their door.

The late attack of cholera has shown the good effects of even a partial improvement steadily carried out. The "City" has escaped almost harmless, thanks to the vigorous measures adopted by the authorities within their bounds. Not that the City is a model in all respects: so long, for example, as there are in existence such things as the Paternoster-row nuisance, rivalling in intensity the most stifling and malarious stenches of Bermondsey, it is not what it ought to be. It is really surprising that the works to which we have alluded, are allowed to be carried on in such a quarter. No one who has the misfortune to be condemned to pass daily under the shadow of St. Paul's, can require an explanation of our meaning. There is a tallow-melting establishment in "the Row," whose chimney belches forth an atmosphere so baneful, that strong men sicken under its influence, and every one hurries past the sphere of its influence with the energy imparted by fear of contagion. There is another poison factory of this sort somewhere within range of the Euston-square station. This seems, however, to choose night for the time when it shall vomit its most pestiferous exhalations, as any unfortunate wight who has occasion to traverse an arc of its circle, bitterly experiences. Add such things as the untrapped sewers of our defective drains, the shambles in the densest centre of our commerce, and the over-crowded and ill-constructed habitations, to the thousand and one varieties of abominable impurities emitted from the processes carried on in the buildings which stud every nook and corner of the metropolis, and it will seem no wonder that disease and death stalk round our dwellings.

We have no wish that the Legislature should violently interfere with men's vested rights, but there is a required exercise of authority, which, if it had been timeously exerted, would have prevented the erection within certain limits of certain works which are now established. Again, there are other evils which, if they can plead their ancient establishment in a position where the city has grown around them, ought yet to be removed with a strong hand for the safety of the Commonwealth. Why, for instance, should not London, at once and for ever, abolish its scattered shambles, and erect a fresh system of *abattoirs*, resembling those at Montmartre, in Paris? Edinburgh has copied these institutions with the happiest effect; and there is no good reason why it should not be done here. So long as London suffers an annual decimation in many quarters, expense should not be an element to create a moment's pause. Those whose avocations compelled their residence in town during the past summer, wandering through streets reeking with the odours of unflushed drains, ere the grateful rain-shower gave a moment of relief, were little surprised at the progress of the fatal disease. Men began to think when the tap of the coffin-maker's hammer was heard at the corner of every street, when the funeral-bell was always tolling, when the hearse was in every thoroughfare, and the only thriving men seemed to be the undertakers, of that ancient and dreadful plague so vividly depicted by Defoe, when the grass grew in the streets of London, and the living could not bury their dead. Every one who has a shadow of authority in his locality should recollect that if we are emerging from terror we are only exchanging the evils of one season for those of another, and that it behoves all officials to see rigidly and perseveringly carried out within their bounds the powers—limited enough, it is true—with which the law has armed them. It is to be hoped that ere long we shall see some sufficiently comprehensive scheme devised and authorised by the Legislature for the proper regulation of the internal economy of London.

Sir William Molesworth has signified his intention to submit to Parliament early in the ensuing session a Bill for the amendment of the Acts now in force for regulating the construction and use of buildings in the metropolis and its neighbourhood, and has sought the opinion of the district-surveyors, severally, upon certain points which have been pressed upon his attention. The chief of these are,—first, whether or not it be true, as some have suggested, that the provisions of the existing Acts have been a chief cause of the confined and unhealthy dwellings of the poor, and have, generally, retarded the architectural improvement of the metropolis; and, secondly, as to the desirability of substituting for the present existing tribunal for the disposal of cases under the Buildings' Acts, an open court with summary jurisdiction; the decisions to be pronounced, and recorded by a registrar. We shall take another opportunity to discuss these and other points connected with the matter: all will agree in desiring such a court: the question is as to its constitution. A committee of the Middlesex magistrates, we may add, have been collecting information touching the working of the present Acts, and the alterations desirable, and will, we suppose, make a report for the assistance of the Government.

Amongst the most recently suggested schemes of improvement, we must mention the designs which were submitted a few days ago to Sir William Molesworth (in his capacity of Chief Commissioner of Works), for the erection of an extensive pile of buildings for Government offices at Downing-street.

The design is by Mr. John Tarring, architect, and contemplates the removal of the buildings between the Horse Guards and Great George-street, Westminster, as far as Charles-street. It is also proposed to remove the block of houses between King-street and Parliament-street, although not absolutely necessary, to open the thoroughfare, and improve the appearance of the new buildings. Dover House, which is situated between the Horse Guards and the buildings occupied by the Board of Trade and Council-office, it is suggested should also be removed, in order to form a public entrance into St. James's-park, instead of a passage through the Horse Guards as at present: this would have the effect of giving a good view from the park of the Banqueting-house, Whitehall.

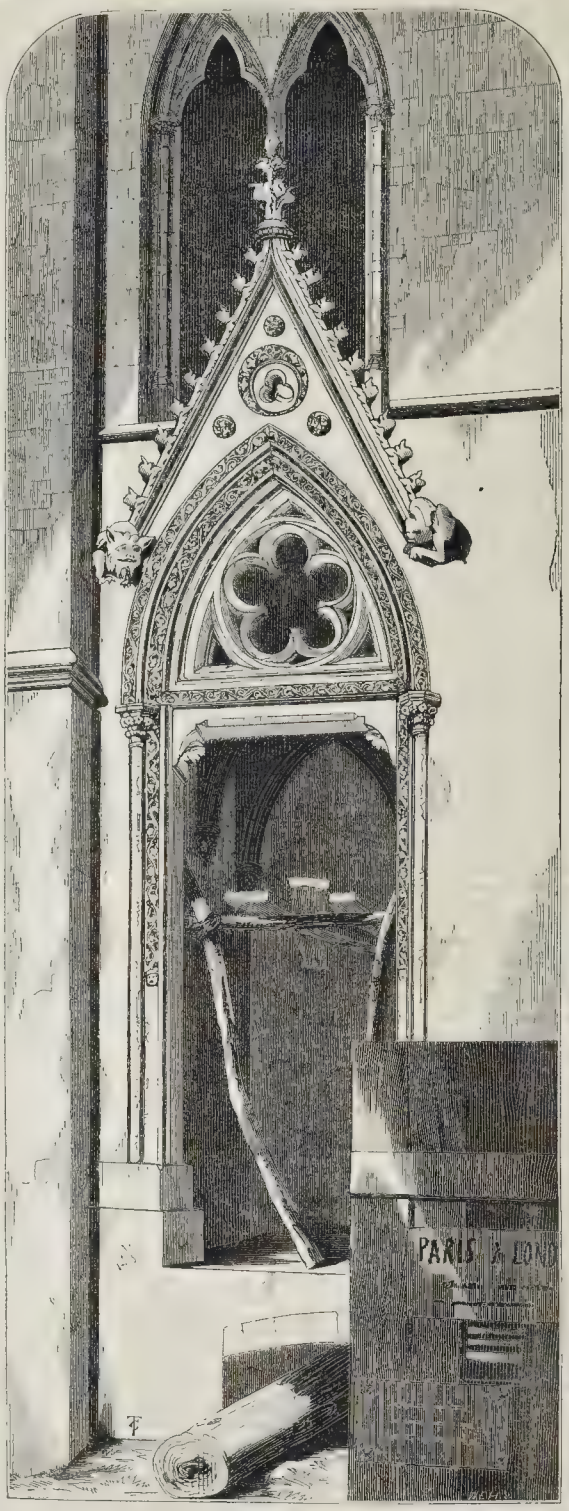
The block of buildings now occupied by the Council-office and Board of Trade, as refaced by Sir Charles Barry, would remain, and is taken as the basis of the new design: it would form one wing of the façade towards Whitehall: a similar wing would extend from about Fludyer-street to Charles-street, the intermediate space between being filled up with a grand centre of considerable height, and a lofty arched entrance. The whole frontage would be about 700 feet. On the north side facing the Horse Guards, and the south side facing Charles-street, the buildings would be carried down at right angles into the park, to a distance of 400 feet, and have in each front a centre and arched entrance. The front in the park looking westwards, would be similar to the front in Whitehall, and the whole

would form an oblong pile of building, 700 feet by 400 feet, with four façades.

The interior would be divided into three squares by two rows of buildings running parallel with the north and south sides: the centre of these squares would be the largest, and there would be an archway in the middle of the north and south sides of it, in a line with the archways in the flanks of the buildings. The cost has been estimated at nearly 700,000*l.* and to meet the financial difficulties started by Sir William Molesworth, the parties who submitted the plans, offered to carry them out, and present the buildings to the Government, on condition of receiving 32,000*l. per annum* for fifty years. It is stated that the Government are now paying nearly 20,000*l.* a year for rent and repairs of disconnected and inconvenient buildings. We shall probably give our readers an opportunity to judge of the effect of the proposed pile. Without reference to the character of the buildings, we must say that the proposal to bring together the various Government offices, and to make the whole an architectural adornment of the metropolis, has our full concurrence. It is evident from the statement of Sir William, that something is about to be done in this direction, and it is of the utmost importance that it should be looked at in a comprehensive spirit.

There is evidently a movement in London.

PARIS.



The new church of St. Clotilde, at Paris, is rapidly advancing towards completion. It is a large church, in the Pointed style, with the usual nave and aisles, transepts, choir, numerous chapels, and a pair of western towers and spires. It shows to what a height copyism is still practised, yet still there are some points about the building worthy of notice. The *bas-reliefs*, for instance, in the interior, illustrative of the life of Our Saviour, are good; and the doorway, which we engrave this week, has something novel about it, and looks very well in execution.

We learn from *Galignani* that workmen have commenced the construction of a bridge over the Seine, between the Pont des Invalides and the Pont d'Iéna, starting from the Rue de la Vierge on the left bank to the opening on the right bank opposite the Allée des Veuves and the Rue Jean Goujon. It is to have five arches, and to be finished in six months, for the Universal Exhibition.

The same journal says, that the lining with concrete of the large basin of the Rond du Roi in the Bois de Boulogne having been completely terminated, water has been let in, and that not a drop of water escapes. Part of the two rivers which wind round the islands has also been finished, and has received water. The hand-posts, indicating the different roads which are being established, are to be surmounted with gas-lamps. In addition to this, 300 iron seats are being fixed in different parts, and shrubs are being planted.

We may add from *La Presse* that the new stone bridge of Austerlitz, consisting of five arches, has been opened to the public. It was on the 7th of August that the demolition of the old bridge was commenced, and in ninety-two days the old bridge was swept away and the new one substituted.

Harrow.—It would not be altogether out of place to call the attention of capitalists and builders, through the medium of your useful paper, to the favourable opportunity there is at this place for investment, with every chance of a good return. Houses of every description are much in demand in this locality, consequent chiefly on the healthfulness of the situation, its proximity to the metropolis, the advantages to be derived from Harrow School, and also the privilege offered by the London and North Western Railway Company, viz. of a free first-class pass to and from London for eleven years to residents of new houses worth 50*l.* a year. We have now excellent drainage, a good supply of water, and the immediate prospect of having gas.—Progress.

DOORWAY, ST. CLOTILDE, PARIS.

MR. RUSKIN'S LECTURES ON DECORATIVE COLOUR AT THE ARCHITECTURAL MUSEUM.

1. THE DISTINCTION BETWEEN ILLUMINATION AND PAINTING.

MR. RUSKIN commenced by stating, that he was not going to read a paper, or to speak from notes, and it was a mistake in the advertisement to say that he intended to deliver a lecture. It was not a lecture, but a talk, and his object was to address himself to the students present, and place before them, in a familiar way, things which were useful.

Before entering upon his subject, however, he wished to glance at one or two historical points, with the view of explaining the examples he proposed to set before them. In these days it was a very common practice to laugh at the middle ages, and hold them up to ridicule. Truly, they were ridiculous in many senses, but certainly they were not ridiculous in their way of writing. They did not write in those days so much as we do now, but they wrote much better when they did write. Even so far back as the seventh century, the Saxon writing began to acquire character and dignity, though the writing of that period differed materially from anything that we did now. The specimen he now submitted (an initial letter) was written as an ornament to a psalter belonging to a lady who died in the year 656, St. Salaberga. It would be perceived that the colours employed in writing in that day, were simply black, yellow, and red. The design in the example was a continuous scroll, beginning in a bird's beak, and terminating in a sort of yellow dragon. It never encountered itself at a turn, but it glanced off and met again in some different part of its progress, and never doubled simply upon itself. Such was the general character of the MS. of that century. It was not very easy to imitate. He had himself tried it, but found it difficult, and to do it well, considerable practice would be required. He wished, however, to draw attention to the fact that there was a character and a finish about this writing which was not found in common penmanship.

From these yellow and black scrolls they went on improving until the time of Charlemagne, when the art of illuminated writing received a great impulse. Then more and more colour was introduced in the finish, and greater variety in the outline. It had been frequently said that Charlemagne could not write: true, he could not write in what would be called writing now; for what we now understand as writing would not have been called writing in the days of Charlemagne. Here was an example of the writing of that age. This (the specimen exhibited) was written in the eighth century, and it was the beginning of one of the books of the Gospel. It would be observed that more colour was introduced about this time; and they would notice how, it was stolen in, as it were, upon the gold. But though it was said Charlemagne could not write, though he could not write as we write now, yet he could write after a fashion. He always carried tablets about with him, upon which he from time to time put down anything he desired to remember. He could not, however, write like the specimen the meeting were now examining; but he employed those who could, and paid great respect to them. Immense respect was paid to the writers of those days. He (the lecturer) would much like that respect paid to the art of writing now. As showing the kind of respect which this art commanded in the Middle Ages, he would read an anecdote respecting an eminent writer who lived in the time of Charlemagne. "There was in the monastery of Arnisberg a writer named Richard, an Englishman, who had with his own hand copied a great number of books, hoping to receive in heaven a recompense for his labours. When he quitted this life his brother monks buried him in a place of honour. Twenty years afterwards his tomb was opened, and his right hand was found in as perfect a state of preservation as though it were alive, and appeared to have been recently cut off from an animated body, while all the rest of the corps was dust. This hand is shown as a great miracle to this day in the monastery of Arnisberg." This showed the honour with which a good writer was regarded at that period; and not only was the art honourable and profitable to those who practised it, but its effect was profitable and valuable to others. We had an instance of this in the history of one to whom we were indebted for all our English literature—he alluded to King Alfred. Alfred himself was honoured in France for his writing; and the best writing of that period came from France. It was well known that the French princess Judith, who was Alfred's stepmother, took great pains to teach him; but it would seem that he had naturally no more taste for study than other children, for it was recorded of him that he lived to twelve years old before he was taught to read. How he was induced to learn was, according to Mr. Sharon Turner, in this wise: "When Alfred was twelve years old, she [Judith] was sitting one day surrounded by her family with a MS. of Saxon poetry in her hands. With a happy judgment she proposed it as a gift to him who would the soonest learn to read it. The whole incident may have been chance play, but it was fruitful of consequences. The elder princes,—one then a king, the other in mature youth or manhood,—thought the reward inadequate to the task, and were silent. But Alfred, captivated by the prospect of information, and pleased with the beautiful decoration of the first letter of the writing, inquired if she actually intended to give it to such of her children as would the soonest learn to understand and repeat it. His mother repeating the promise with a smile of joy at the question, he took the book, found out an instructor, and learned to read it. When his industry had crowned his wishes with success, he recited it to her. To this important though seemingly trivial incident we owe all the intellectual cultivation and all the literary works of Alfred, and all the benefit which by these he imparted to his countrymen." In this case the beautiful initial letter was the attraction—a letter probably like that which he (the lecturer) had just exhibited as characteristic of the date of Charlemagne. This was the first inducement to study with our English Alfred, and he was not quite sure whether it would not be better generally that children should remain until they were twelve years of age, and then be tempted to read by such inducements as these, rather than that we should go on impressing upon their minds in infancy the enormous fallacy that "A" ever was, or under any circumstances could become, an apple-pie. The main idea of the age of which he was now speaking, however, was that a book was a noble and a sacred thing, to be respected and revered. It became precious because it was written with so much labour and with so much beauty: and then came the idea of its sanctity. It was noble, inasmuch as it was the means of making human thought—the most transient and evanescent of all things—the most permanent of all things. Well, this being the idea of books, which then obtained in men's minds, they worked, and worked on, to attain greater excellence in their writing, by systematizing their colour more and more, until they arrived at a perfect system, which, however, they might have found out long before they did, and which it was strange that we ourselves had not discovered. It was strange that those who were familiar with the Bible, wherein they were told that the colours directed to be used for ornamenting the tabernacle, were gold (or yellow), and blue, and purple, and scarlet, as being those calculated to form the basis of the richest, most harmonious, and glorious combinations, should not have adopted them in all cases where such results were required. The thirteenth-century people, however, had not, it appeared, derived their knowledge from the Bible; they went on working and experimenting until they found it out. Here (exhibiting it) was a Bible of the year 1220: it was but a common example, but worth exhibiting, on account of the clerkly manner in which the letters were written. He now came to the middle of the thirteenth century, when an immense development of the art took place. It was well known that the whole spirit of the middle age was to be found in the writings of Dante: there it must be sought. Dante was the prophet of the middle ages. In his "Purgatory" he introduced a description of certain people suffering the penalty of pride. He represented them as being crushed under great stones, in the position of which we have so many examples in the architectural decorations of that period, as in figures bearing corbels, brackets, &c. It was curious to see what Dante appeared to think most calculated to create the feeling of pride in the human breast. It was not valour, nobility, or success in battles, but excellence in writing. These were his words:—

> "Listening, I bent my visage down, and one
> (Nor he who speaks) twisted beneath the weight
> That urged him, saw me, knew me straight, and call'd,
> Holding his eyes with difficulty fix'd
> Intent upon me, stooping as I went,
> Companion of their way. 'O!' I exclaim'd,
> 'Art thou not Oderigi? Art not thou
> Agobbio's glory?—glory of that art
> Which they of Paris call the limner's skill?'
> 'Brother,' said he, 'with tints that gayer smile,
> Bolognian Franco's pencil lines the leaves,
> His all the honour now—my light obscured.'"

The line which is given by Cary (for this is his translation)—

> "Which they of Paris call the limner's skill,"

is not properly translated. The word which in the original is "*alluminare*," does not mean the limner's art, but the art of the illuminator — the writer and illuminator of books. The passage gave a peculiar interest to the illuminated works of the date in which Dante wrote. This period—the middle of the thirteenth century—was marked also by the career of St. Louis, and the next example which he (the lecturer) had to produce, was from a psalter, which was peculiar in having, in addition to the names of the saints, the names of the members of St. Louis's family, with the date of their death, but not of that of St. Louis himself. First, there was the name of Count Robert of Artois, St. Louis's brother, who lost his life while charging the Saracens at Mansourah—just as our light cavalry had charged the Russians at Balaklava. There was thus a note of his death which was put down as a sort of martyrdom. Then there were the names of King Philip II. then that of Louis VIII. the father, and of Blanche of Castile, the mother of St. Louis, but not his own. Now Queen Blanche died in 1252, and St. Louis himself in 1270, so that it was evident this psalter was written between those two periods, and the different portions of it at some distance of time from each other. The leaf exhibited was one of the common leaves taken from the beginning of the book. The flourish of the initial letter he had enlarged, in order to show more clearly what sort of a thing it was. The prevailing colours were blue, purple, and scarlet, with gold: leaves were introduced, and the ornament, it would be perceived, was constantly changing in form and in the curve and lie of the leaf. If there were no change there could be no life. That might be taken as the great rule of art. He might, while upon this point, remark, that one of the great evils of the day was an intense love of symmetry. Nothing in nature was perfectly symmetrical. No two sides of any animal, tree, or other natural object, were exactly alike. Try to brush your hair exactly alike on both sides, and you will find it could not be done. A statue to be graceful must not have the arms and legs in the same action on both sides; they must be in different actions. In nature they always *were* in different actions. In sculpture, in painting, as in everything else, in art as in nature, without dissimilarity there could be no grace. The next specimen he would present to their notice was a capital letter at the beginning of a psalm. In this they would observe, that animals, as well as natural leaves, were introduced. Up to this period nature had not been followed in writing to the same extent, but had been treated in the manner represented in the previous examples. The little Bible he had in his hand, in which the initial capital, of which the letter he exhibited was an enlargement, occurred, was a good example of the style of writing of the year 1230. Here, they would observe, the prevailing colours were the same, blue, purple, and scarlet, with white introduced at intervals, like beautiful pearls. It was a great point in the arts—which many did not seem to be aware of—to know how precious white was. Here were two of the introductory leaves of a psalter which he wished to bring to notice, on account of the human faces intro-

duced in the ornament of the letters. One of these illuminations represented Solomon, having been named David's successor, being made to ride upon the king's own mule, and the burial of King David. Both of these examples were remarkable for the beauty of the faces. Outline and colour were, however, the principle of these examples; beyond that there was no imitation of nature. But from this time they began to enrich their MS. more and more: the systematization of colour went on until they reached a point of enormous luxury. With that luxury of ornament and colour came carelessness and the gradual degradation and decline of the art. The MS. now produced, one given to Queen Blanche, in the sixteenth century, exhibited that carelessness and degradation in a marked degree. The art having reached its culminating point about the middle or towards the close of the thirteenth century, from that period began to decay, the principles of it having been lost sight of in the attempt to attain greater luxuriousness of drawing and effect, those principles which he insisted upon as the fundamental principles of the art being clearness of outline and simplicity of colour, without the introduction of light and shade. He had said that writers were not reverenced sufficiently in these days,—he said also that neither were painters reverenced as they ought to be. It was a very difficult thing to paint well—much more so than most people imagined, and to lay on light and shade properly, to realize and to convey upon canvas a thorough impression of the varying effects of sunshine and shadow, in the colour of the air, and in the tints given to every object in nature, was a far more difficult thing than most men were capable of accomplishing. This was the reason why we had so few really good painters, and so many bad paintings. There had been never more than three or four really good painters in the world in any one age, and no wonder, for it required talent of a very rare order to be a painter in the higher sense of the term. It was as difficult, and required a natural capacity as extraordinary, to be a good painter, as it did to be a Duke of Wellington; but though it was necessary to possess a first-rate capacity, and talents of the highest order to be a painter, it was not so to enable persons to outline truly from nature, and to lay on simple colour beautifully. This also was a peculiar gift not possessed by every one; but it was a gift which hundreds of persons possessed naturally. Amongst dressmakers there were many who instinctively, as it were, evinced an aptitude at arranging flowers and putting on colour, so as to throw in depth or light as required, for the purpose of producing harmonious combinations, and the instinct to arrange bouquets of flowers so as to combine in harmony the various hues was common. But the mischief was, that when young people were found to possess the talent of outlining or arranging colour in more than an ordinary degree, they were pressed to learn to draw, though they might not have brains enough ever to draw well. He would urge upon those of his audience who had the the gift of colour not to allow it to be checked or run away with by pursuing that which it was more than doubtful that they would ever succeed in. There might be first-rate art exhibited in the pursuit of colour only. The field was narrow, no doubt; but if a man made up his mind to be an illuminator—if he possessed the gift of arranging colour, and his opportunities and time did not admit of his making himself a good painter, then let him take up this principle, that every form he drew must be in pure colour, without shadow. He might use what colours he pleased, but let him not resort to shadow in any shape—the object should always be represented in gradated pure colour, with true outline. The first step was to be perfect master of outline. Outline was susceptible of great beauty and infinite variety; but it must be firm and true; not thickened on the side opposite to the light, with a view of showing something like a shadow. It must not be shadowed at all. Nothing could be more absurd than to attempt to throw in shadow by thickening the line, for if the outline was ever lost, it would oftener be on the dark side than on the light side. Besides, the veracity of the line would lie within the compass of a hair. It must be right or wrong. If right, the thickening of the line destroyed the correctness, and the thickness must be removed before the outline could be true, the truth lying somewhere within the thick line. The first thing to practise was perfectly faithful outline, and an important thing to know was how much could be expressed by it. Here was an example of the fourteenth century, containing nothing but outline. They would observe that there was a blue bird in the composition, which appeared all but animated, because it was as far as it went so beautifully drawn. This example, and some of the others, would however appear to those who were close to them somewhat coarse, in consequence of their having been considerably enlarged from the original MS. But there might be as much perception of nature in working out these mere outlines as in working out a fully shadowed drawing, like one he now exhibited (a bunch of leaves very far inferior as a work of art to either of the examples of MS. shown), and it was much better that they should possess, for the purposes of decorations generally, the daring conventionality of colour shown in other specimens he submitted to them with pure outline, than that they should be imitators of the spurious examples produced by painters who could not paint, and which violated the eye wherever they were seen. He had said that the peculiar character of the decorative work of the thirteenth century, was the introduction of nature, and that was the circumstance that would make it especially agreeable to those who pursued this art now, if it could (as he hoped) be revived amongst us. In practising it, they need not limit themselves to birds and leaves, as in the examples before them, but might avail themselves of every natural object. As soon as they could trace an outline correctly, he wanted them to watch closely every living object around them—groups of children in the streets, leaves, trees, birds, and the animals in the Zoological Gardens; but he would warn them against introducing too much; and when they were painting, let them never introduce the same letter twice, or the same figure or animal twice in the same composition.

Now, what were the fields for an occupation of this kind? This was a serious question, and unless the change took place which he was now striving to bring about, he found himself wedged in between two difficulties. He frequently received letters from persons who said to him, "Build us a house, or paint us a room in this way." The reply he was compelled to make was, that he had not the workmen who could do it; and then it was said, naturally enough, that he was a humbug. He went to the workmen, and they said, "We cannot devote our time to that kind of work; there is no demand for it, and we could not earn our money by it." Now, he had asked the students and workmen to come together there that day, that they might aid him in the attempt to revive the art to which he had been directing their attention, by recommending to those by whom they were employed to introduce this kind of decoration wherever opportunity offered. There was a great field for it in ornamenting the interiors of churches. There was the lettering of the commandments, and the writing over the communion-table, the windows, and other ornamental work, where illuminated letters might be introduced with great effect. The patterns might be perpetually varied, and animals, birds, leaves, trees, and other natural objects, might be made to give life and diversity to them. But he would urge upon them whenever they were required to paint anything in a church to do it as well as they could, and to introduce as much of nature as they could in a graceful manner. Then there was the decoration of rooms,—though upon that point he confessed he saw considerable difficulty. He liked pictures and prints in rooms, and would, as far as he could, induce people to buy them, and the examples he had exhibited certainly would not look well with those. He would say nothing further upon this point, therefore, except that he should like to receive the advice and suggestions of workmen themselves upon it. In the lettering on the outside of shop-fronts, illuminated letters might appropriately be employed, and would form a pleasing change from the dingy appearance which many of the shop-fronts, especially in the metropolis, presented. He would urge upon them, when they had shop-fronts to decorate, to endeavour to induce the shopkeeper to allow them to introduce such letters. He believed the effect would be good, but he was not over-sanguine when he looked at that unhappy thing in Leicester-square, which was abominably ugly, in spite of its colour. Another, and a most important field for the exercise of this art, was the decoration of books. He did not say that every book should be illuminated; some books, as the Bible, should, he thought, be as simple in lettering as possible; but books of poetry or art, which might be very appropriately decorated as suggested. He was anxious to see a taste for decorating books in this manner, because he believed we were falling into a very careless way of regarding our books. It might be, that we had so many books now as compared with what persons in similar positions in life formerly possessed. It had been said that it was better to have a few books than many; he could not say that that was his feeling; he considered it a most delightful thing to have a library; at the same time, he should like people to value and love their books more than they did. The feeling that prevailed in the middle ages with regard to books was, that they were holy things, and those who were employed upon them felt that they were engaged upon a holy work. He would like to bring back something of that feeling, and he would also like to bring back for the workmen the employment of illuminating books, for he thought it must have been a most happy employment. He did not know at what cost now an illuminator might be able to produce a finely-illuminated page. That was a subject on which he was anxious to obtain information. He wanted to have the data, and if the workmen would furnish him with that, he would endeavour to bring the subject before the public. What he wanted was the information to enable him to say, when asked, what would be the cost of illuminating some beloved book, which it might be desired to preserve as a valued work in a family. He thought very many persons would gladly avail themselves of the opportunity, if it were offered them, to have books of this character so decorated to be preserved as heirlooms. For his own part, he would rather have an illuminated book in his library than a picture. He would like to have a book of which every page was a picture. The great point was to make this art of book illumination fashionable; if that were done, it would go on as a matter of course. A new school of art would be introduced; the eye for colour would become disciplined; the perception of truth and form in outline would become disciplined; and the art of painting would be more and more appreciated. A Titian could only be appreciated by those who understood harmony of colour. It was not the extraordinary effects of the light and shade—beautiful though they were—that marked the true Titian, so much as the beautiful harmony of his colours; and by disciplining the eye to those harmonies a feeling would be created in the public mind which was now almost dead. There was another advantage that would result from the revival of this art to the student and the illuminator. He could not imagine a happier life than that which would be led by any person of quiet and studious habits with something like the disposition of the old monks who were the illuminators in past times, while following this occupation. If it were cultivated, a totally new impulse would be given to art in every direction, and possibly also to literature, for people would feel that it was better to have a monument in the shape of an illuminated book than in that of an illuminated window; and many a man engaged in writing a book would feel more interest in his work, and take more care in its composition, if he knew that it was to be beautifully illuminated, to be placed in a library as a beloved thing, to be handed down from father to son, and from generation to generation, than if it were printed in the ordinary way, tossed about by printers' devils, and thrown aside as soon as read. As showing the kind of life he would encourage, he would ask permission to read a passage from Longfellow,

describing the Friar Pacifico transcribing and illuminating the Gospel of St. John:—

"It is growing dark! yet one line more
And then my work for to day is o'er:
I come again to the name of the Lord,
Ere I that awful name record,
That is spoken so lightly among men,
Let me pause awhile, and wash my pen;
Pure from blemish and blot must it be
When it writes that word of mystery!
Thus have I laboured on and on,
Nor by through the Gospel of St. John.
Can it be that from the lips
Of this same gentle Evangelist,
That Christ himself perhaps has kissed,
Came the dread Apocalypse?
It has a very awful look,
As it stands there at the end of the Book.
Ah me! when I think of that vision divine,
Think of writing it line by line,
I stand in awe of the terrible curse,
Like the trump of doom in the closing verse.
God forgive me! if ever I
Take aught from the Book of Prophecy;
Lest my part, too, should be taken away
From the Book of Life on the Judgment-day."

Then notice the change of feeling—how natural!

This is well written, though I say it!
I should not be afraid to display it,
In open day, on the self-same shelf,
With the writings of St. Thecla herself,
Or of St. Theodosius, who of old
Wrote the Gospels in letters of gold!
That goodly folio standing yonder.
Without a single blot or blunder,
Would not bear away the palm from mine,
If we should compare them line by line.
There, now, is an initial letter!
King René himself never made better!
Finished down to the leaf and the snail!
Down to the eyes on the peacock's tail!
And now, as I turn the volume over,
And see what lies between cover and cover,
What treasures of art these pages hold,
All ablaze with crimson and gold,
God forgive me! I seem to feel
A certain satisfaction steal
Into my heart, and into my brain,
As if my talent had not lain
Wrapped in a napkin, and all in vain.
Yes, I might almost say to the Lord,
Here is a copy of thy word,
Written out with much toil and pain;
Take it, O Lord, and let it be
As something I have done for thee."

He looks from the window:—

"How sweet is the air! How fair the scene!
I wish I had as lovely a green
To paint my landscapes and my leaves!
How the swallows twitter under the eaves!
There, now, there is one in her nest:
I can just catch a glimpse of her head and her breast;
And will sketch her thus, in her quiet nook,
For the margin of my Gospel Book."

This was the kind of life he wished the students of this art to follow. He proposed to leave the various examples he had exhibited in the Museum, that those who desired to do so, might come in if they pleased, and work from them between then and the next lecture. In the next lecture he proposed to explain the general principles of outline, and to exhibit examples; and in the third lecture he intended to explain the principles of colour.

AMERICAN INGENUITY IN STONE, WOOD, AND IRON WORKING.

WE have already incidentally adverted to Mr. Joseph Whitworth's special report connected with his visit to the American Exhibition. It is a pity that one so well qualified should have been prevented by circumstances from giving us an elaborate account of Transatlantic advancement in machinery generally. The tiny blue-book, to which we have referred, contains much interesting matter, set forth in that clear, curt style, which may be expected from a practical man who has neither time nor inclination to spin words, but simply to tell you about a bit of mechanism, and how it works. We have selected a few of the heads which bear on building operations. It may be interesting for those engaged in similar operations, to compare the results in the two countries, and notice how nearly every little labour-saving contrivance is made available. Certainly, as Mr. Whitworth remarks, no country has done so much as our own in the most difficult applications of machinery to working in wood,—from Brunel's great and complicated inventions at our dockyards downwards. But it must be confessed that we have been a little slow in adapting it to the numerous minor processes such as are successfully carried on in America by its aid. Doubtless, the peculiarly favourable nature of the patent law to their own citizens, has fostered a multitude of mechanical inventions—the efforts of poor but ingenious men,—which in our island would have been smothered by the costly and cumbrous legal fencework necessary to procure protection. This is now remedied, and we may expect to find under the new patent law an impetus given to a great variety of effective improvements. The law is not in all respects what it should be, but it is a vast boon when compared with the old rules and prices. Brother Jonathan had once a shadowy sort of excuse for pirating books, and charging a British subject sixteen times as much for a patent as he did himself. Now, when we have abolished the one grievance, and are eager to redress the other, he is surely prepared to reciprocate?

Lock-making.—The manufacture of locks appears to be rapidly extending. In an establishment at Pittsburg, employing 350 men in making locks, coffee-mills, copying presses, &c. good work was being turned out. Another at Newhaven, Connecticut, employs about 200 men in making locks and lock-handles. The latter are made of coloured clays, so mixed as to present a grained appearance. They are first moulded by hand, then turned in a self-acting lathe with great rapidity, and are afterwards baked in a furnace. Padlocks are made here of a superior quality to those of the same class imported from England, and are not more expensive.

Saw-mills, Lowell.—The trees sawn up in the Lowell saw-mills, are floated down from the interior of the country by river: they are docked in a basin by the timber-yard, and are dragged up an inclined plane into the interior of the mill as they are wanted. In an upper story are placed two large saw frames, and between them travels an endless chain, running along the shop floor over pullies, and extending down the inclined plane nearly to the edge of the basin. To any part of this endless chain may be hooked another chain, which, being passed round one or more trees, as they lie in the basin, drags them up into the mill, and deposits them alongside the saw frames. Shingles used for covering the roofs and sides of houses are made in vast quantities. A circular saw cuts them 16 inches long, from 3 to 9 inches wide, and of a thickness tapering from $\frac{3}{8}$ths to $\frac{1}{4}$th of an inch, at the rate of from 7,000 to 10,000 per day, according to the nature of the wood. Timber is also cut up into laths, 4 feet long, at the rate of from 60 to 100 per minute, by a circular saw, attended by two men.

Saw-mills, Buffalo.—In these saw-mills, boards are sawn into "sidings," that is, long wedge-shaped boards, for the sides or roofs of houses, by a circular saw, at the rate of 17 feet per minute. The board is introduced at the back of the saw, and moves in the direction in which it revolves. It thus cuts with the grain, and the strength of the cut assists the forward feeding motion of the board. Subdivision of manufacture is advantageously adopted on a system. Many works in various towns are occupied exclusively in making door, window frames, or staircases, by means of self-acting machinery, such as planing, tenoning, mortising, and jointing machines. They are able to supply builders with the various parts of the woodwork required in building, at a much cheaper rate than they can produce them in their own workshops, without the aid of such machinery. In some of these manufactories twenty men were making panelled doors at the rate of 100 per day. Portable sawing-machines, driven by horse power, are commonly used for sawing up logs of wood for fuel, particularly at the various stations on the railroads, where the wood intended for the consumption of the locomotives is stored in piles. The "horse-power machine" consists of a stout frame supporting a railway, about 7 feet long, on which run the rollers of an endless travelling platform. The axles of the rollers are of iron, five-eighths inch diameter, stretching across the rails, but are connected together by a series of links, each about 12 inches long, so as to form an endless chain, which passes over a fixed segment at one end and the chain wheels at the other. The travelling platform is made by planks of wood, about 12 inches broad, $1\frac{1}{4}$ inch thick, fastened transversely to the endless chain. It is inclined at an angle of about 7° to the horizontal line, and the horse being placed on the platform pushes it backward from under him, which causes the chain wheels at the end of the frame to revolve, and the motion thus obtained is conveyed to the circular saw or other machine required to be driven. Some horse-power machines are made to admit two horses abreast. They are found very useful to farmers. When requisite they are mounted on wheels, and may be easily taken from place to place, to saw up trees which could not conveniently be moved entire.

Planing-machines.—A numerous variety of planing-machines are in common use. For flooring-boards, Woodworth's machine is found to answer very satisfactorily. In planing-mills at Philadelphia, are four of them working in one room, side by side: they have three cutters on each horizontal axis, having a radius of 6 inches, and making 4,000 revolutions per minute. The cutters are said to be capable of planing from 2,000 to 3,000 feet of work without being sharpened with the oil-stone, and from 20,000 to 30,000 without being ground. They plane boards 18 feet long, varying in width from 3 to 9 inches, at the rate of 50 feet per minute. At the same time that the face of the board is planed, it is tongued and grooved by cutters, revolving with a radius of about 3 inches, on vertical axes on each side of the board. The chips made by the four planing-machines are driven through large pipes, and fall into a trough about 20 inches wide, running across the room immediately under the cutters. In this trough works an endless chain, in which are fixed wooden scrapers, that carry along the chips as they fall to a recess at the side of the room. Here they are carried off by the scrapers of another endless chain running up an inclined plane. The pullies on which this side-chain works are larger in dimensions than those of the transverse chain, which works inside. The transverse chain thus deposits its chips in the trough of the inclined plane, and they are carried up to a hole in the ceiling of the fuel-room, adjoining the boiler-house: through this hole they fall into the fuel-room, and fill it up, if necessary, to the top. Where an accurately smooth surface is required, Daniel's planing-machine is employed. It consists of an upright frame, in which a vertical shaft revolves, having horizontal arms, at the ends of which are fixed the cutters. The work is carried along on a travelling bed under the cutters, which are driven at a very high speed.

Box-making.—In a box manufactory at Worcester, a machine made on Woodworth's principle planed boards 10 inches wide simultaneously on both sides. Boxes are made in great numbers, from boards which are tongued and grooved by what is called a "matching machine," and then put together as that operation is finished. The tonguing and grooving cutters are fixed in horizontal axes, and the workman passes the boards alternately over the one or the other, as the sides require them to be tongued or grooved. Other varieties of planing-machines are also in use, known by the names of their different inventors. Some of them have fixed, vertical, or horizontal cutters, others vertical or horizontal revolving cutters, and various other combinations, according to the purposes for which they are intended.

Stone-planing Machines.—In an establishment at Washington which has but recently commenced operations, there were two planing-machines and a grinding or polishing machine. Considerable difficulties have hitherto attended the employment of machinery for planing stone, such as granite and stone of similar formation. Here difficulties have, however, been surmounted most successfully by the construction of planing-machines, such as are used in stone works in New York and Washington, in the former of which upwards of 400 men and ten machines are employed. The planing-machine consists of an upright frame, in which revolves a vertical shaft carrying three horizontal arms. At the extremities of these arms are fixed circular cutters, inclined outwards about forty-five degrees from the perpendicular, or about the angle at which the workman would hold his chisel. They are about 10 inches in diameter, and $\frac{3}{4}$ of an inch thick, made of steel and bevelled on both sides, leaving a sharp edge. They are fitted upon axes, and are at liberty to revolve loosely in their bearings as their edges strike the stone. The cutters are carried round the

shaft at the rate of about eighty revolutions per minute when planing freestone, and sixty when planing granite. The stone is moved forward on a bed to which it is keyed: the cutters strike its surface obliquely as they are carried round on the revolving arms, turning at the same time on their own axes, and chipping and breaking off the projecting portions of the stone at every cut. The machine planed the face of a stone slab, 4 feet long and 2 feet wide, in seven minutes. Another modification of this machine, which is not so economical, is employed when it it necessary that the face of the stone be left in lines as it comes from the tool. The stone is keyed in a travelling bed and passed under a frame, in which works a sliding carriage driven by a crank: in this carriage is fixed the circular cutter at the required angle, and as the stone is carried along the cutter is driven backwards and forwards across its face at right angles to the direction in which it moves, and strips off parallel breadths of stone at every cut. The cutters can be used for planing from 300 to 400 square feet of freestone surfaces, and about 150 square feet of granite without being ground.

Stone-polishing Machine.—The stone is polished by a flat circular disc of soft iron, which is made to revolve horizontally. The axis of a disc is fixed at the end of a heavy frame, which moves round a strong centre shaft in a radius of about 12 feet. The polishing disc revolves at the rate of 180 revolutions per minute. It is driven by a strap, to which motion is given by a driving-pully fixed in the centre shaft. The disc is guided and its pressure regulated by hand. It will polish about 400 square feet of surface in a day of ten hours.

Brick-making with Dry Clay.—A machine for making bricks from dry clay, is now in operation in Staten Island, about nine miles from New York. The works are carried on under extensive sheds, near to the water-side, and are connected with a wharf by a railway, which also extends to the bed from which the clay is dug. A large moveable shed is erected on the bed of clay at the terminus of the railway. In dry weather the clay is collected by slicing it from the surface with a kind of shovel, having a sharp edge, which is drawn by two horses, and will hold about two barrowfuls. In wet weather the surface of the clay is harrowed to the depth of 2 or 3 inches, by a triangular wooden frame, carrying nine teeth, a process which, in the powerful rays of an American sun, soon causes the moisture to evaporate. It is then taken off by the scoop, or shovel, above described, and conveyed to the shed, where it is carried by rail to the machine-shed. It is deposited close to a cylindrical screen, revolving on a fixed axis, which has projecting loose bars. The screen is about 8 feet long and 3 feet in diameter, and consists of bars 5-8ths of an inch square, riveted on two cast-iron wheels, which form the ends: the bars are about 1-16th of an inch apart, and the clay is riddled through them. The screen is inclined, and the clay is fed in between the arms of the shed, and, as it revolves, the small pulverized particles fall through the bars, while the large stones pass out at the lowest end. The clay is next raised by elevations, which are fixed to an endless leather belt, about a foot wide, to the height of about 12 feet, and conveyed to rollers. It is ground and shovelled into hoppers, which feed the moulds. These are 8 inches long, 4 inches wide, and 4 inches deep. The clay is dropped into the moulds, which are placed six in a row to the depth of 3 to 3¼ inches, according to the quantity of moisture it contains, and is afterwards compressed to the thickness of 2 inches in the following way:—Six presses, or rams, fixed in a heavy frame, are raised by a cam, and being allowed to fall, exert very great pressure by their impost on the clay. The blow is repeated, and then the bricks are powerfully compressed, above and below, by revolving cams. Thirty-six bricks are made per minute. They are at once conveyed to the kiln, which is under the shed, at a short distance from the machine. After being burnt, they are separated into three shades of colour, of light and deeper reds. The best burnt bricks are equal in quality to the best English stocks, and were selling at twelve dollars per 1,000.

In a brickyard at Washington, Sawyer's machine, which had been in use for sixteen years, makes about 1,800 bricks per hour, from dry clay, by compression only. The clay is obtained from a pit close by. As it is dug out, it is carted up an inclined plane to the floor over the room where the machine is at work. A roller, weighing 1,600 lbs. and making sixty revolutions per minute, grinds it upon a grating, through which the pulverised particles fall into the room below. There it is shovelled into a hopper which supplies the brick moulds by feed pipes. Three bricks are made at one time, being compressed by top and bottom pistons or pressers, which are connected together by long iron rods, and from the top part are suspended levers, with toggle joints, worked by cranks. The bricks were sold at the rate of 6½ dollars per 1,000, and were of a medium quality between English seconds and stock bricks.

At Pittsburg, 250 men are employed in manufacturing bar iron, rods, sheets, and nails. The iron is manufactured both with anthracite coal and charcoal. They have fifty-one machines for making cut nails: many of them are self-acting in the feeding for the smaller sizes; the strip of iron is inserted in a tube, which is made to revolve alternately half round each way. They make 2,000 kegs of such nails per week, each weighing 100 lbs. and containing sizes from fourpenny up to tenpenny nails. A rivet-making machine was at work, which made rivets weighing seven to the pound, at the rate of eighty per minute. Its main shaft carried two cams, one a side cam, which gave the motion for cutting off and holding the iron between the dies; the other a direct cam for forming the head of the rivet. The cams for the nail-machines are made of drilled cast-iron, and that part of the lever which acts against the cam, is faced with a plate of bell-metal. Several large grinding stones were used, having mouldings on their peripheries for restoring the dies when broken. It is usual in England to soften the dies by annealing previous to restoring their shape, and again hardening them subsequently. The shape may be thus more perfectly restored, but at a greater cost, and the operation of softening and rehardening deteriorates the quality of the steel.

THE OXFORD MUSEUM DESIGNS.

THE Vice-Chancellor has announced that the six undermentioned designs have been selected to be submitted to professional judges, according to the statement of requirements of the museum delegates furnished to competing architects:—

No. 5—Cypher, Cross Compasses.
No. 6—Cypher, A. Z.
No. 11—Fiat Justitia ruat Cœlum, design A.
No. 22—Nisi Dominus ædificaverit domum.
No. 26—Spes.
No. 29—Virtus in arduis.

The remaining designs have been rejected.

LIKE your correspondent, J. F. I have had the pleasure of an examination of the designs for the above building. Though I do not agree with him in his opinions about competitions in general, nor this in particular, I will not enter into a discussion of the points upon which I differ from him, but will refer to a matter which he does not notice. In the discussions about competitions and the criticisms of the decisions of committees, we have heard a great deal about morality and honour, and particularly of the want of it on the part of *committees*. I have read letters in your valuable journal which would lead me to conclude that their authors—generally unsuccessful competitors for some building—were men of the most unimpeachable honour and unquestionable morality, and I do not doubt the *general* truth of my impression.

If, however, I may draw general conclusions from this particular competition, I much fear that architects are not always true to themselves,—that their morals are as weak as those of committees are said to be, and that in their anxiety and avidity for success, they sacrifice their principles of honour sometimes.

One of the conditions of the museum competition was, that no coloured drawings should be sent, but that they were to be got up in indian-ink or sepia. What did I find on my visit, but amongst the rest two designs got up in all the splendour and with all the charms of colour. This was, of course, an attempt to hoodwink the judgment of the delegacy—to charm them by means which they, probably, would not distinguish from the internal or special merit of the *design* considered by itself.

This, Mr. Editor, is a phase of the competition which, I think, you will consider worth notice, for it is ridiculous for architects to expect honourable treatment at the hands of committees if they stoop to trickery themselves. The gentlemen in question have clearly been guilty of a breach of honour to their professional brethren.—SUBSCRIBER.

ROYAL INSTITUTE OF ARCHITECTS IN IRELAND.

THE first meeting for the session took place on Saturday evening, the 18th inst. Mr. G. Papworth, V.P. in the chair. Mr. J. Owen, Hon. Sec. having read the report of the council, which stated that the Institute was in an improving condition, its adoption was moved by Mr. J. J. Lyons, seconded by Mr. Symes, and carried unanimously. An election subsequently took place for officers for the ensuing session, and the result of the ballot was as follows:—President—Marquis of Clanricarde. Vice-Presidents—Messrs. Jacob Owen, G. Papworth, and P. Byrne. Council—Messrs. Wilkinson, Clarendon, Welland, Lanyon, Symes, Sir J. Benson and Sir Thos. Deane. Hon. Secretaries—Messrs. P. Neville and Jas. Owen. Auditors—Messrs. Montgomery and McCurdy. The chairman addressed the meeting respecting the desirability of gentlemen in the profession coming forward more energetically with their literary contributions, whether by the reading of papers or otherwise, and stated that, in order to set the example, he would endeavour against the next night of meeting to be prepared with an essay himself.

LODGING-HOUSES FOR CLERKS AND MEN OF SMALL INCOMES.

THE interest which you take in the welfare of the public, as regards their health and comfort of habitation, induces me to call your attention to the above subject. Model lodging-houses for the industrious and working classes are now daily rising around us; but there is one class, and that a very numerous one, to whom these places are not either fit or convenient in consequence of the very mixed classes which are generally found to be associated therein. The class to which I refer is that of the great number of clerks, who, receiving not very large salaries, would gladly avail themselves of the opportunity, if afforded, by the establishment of such houses, where the accommodation would combine economy with comfort in the arrangements.

I beg leave to suggest, for the consideration of capitalists, the erection or conversion of some suitable building, in some central locality, near the Strand or Fleet-street, in which that numerous body of clerks, and also other respectable persons with small incomes, might have the benefit of similar institutions without the drawbacks of those now existing.

An investment of this kind would, I am well convinced, not only be a safe one, but, as the progress of those already established shows, a very remunerative one.

ONE WHO HAS OFTEN BEEN "TAKEN IN AND DONE FOR."

CHAPTER-HOUSE, YORK-MINSTER.

AMONG the most beautiful specimens of ancient architecture remaining to us, are the chapter-rooms attached to our cathedrals. From time to time, as occasion served, we have given illustrations of those which have come under our notice. We now add to the list an engraving of the exterior of the Chapter-room at York-minster, a building that has peculiarities about it deserving of special notice. An octagon in plan, and without a centre shaft (as at Lincoln, Wells, and Salisbury), it has a groined roof of timber, which, for boldness of conception, may fairly vie with those above named. It has another peculiarity—it is so well cared for as to make it a model for imitation. Some of the fine specimens we have named are little better than lumber-rooms; while others are in so bad a state as to create anxiety for their safety; but here it is not so; internally, the whole of the work has been carefully restored, and it is in other respects so well preserved, that time seems to have had but little effect beyond that of adding to its beauty.

CHAPTER-HOUSE, YORK-MINSTER.

PROVINCIAL NEWS.

New Swindon.—The Market is now completed and opened. It is built entirely of Bath stone, with a raised parapetted terrace surrounding it, in Swindon stone and Bath dressings. The place is octagonal, and the shops being back to back, in two rows, one faces towards the terrace, and the other towards a well lighted and roofed space for the accommodation of those tradesmen who require shelter for their wares. In the centre is a Bath-stone fountain, and above that, pendant from the roof, a simple but large three-tier corona, which is sufficient to light the shops as well as the enclosed space. The Mechanics' Institution and Hall is approaching completion, and expected to be opened on New Year's-day, with a ball. The hall will accommodate about 1,000 persons for such a purpose, and of course considerably more for the lectures and theatrical representations, for which there is an excellent stage provided. The architect is Mr. Edward Roberts. It will be remembered that we published the design some time since.

Dunmow.—The Town-hall here has been nearly rebuilt, and was opened by a *conversazione* of the members and friends of the Dunmow Literary Institution, on Wednesday evening before last, followed by a ball. The side and front walls of the upper room have been taken down and rebuilt, and a gallery, capable of accommodating nearly 100 persons, has been erected on the north side. The large room, instead of 8 feet, is now upwards of 16 feet high, besides the space in the open roof, and the small side room and lobby, having folding doors opening into the hall, now form, as meetings may require, a larger area. The windows, in casements, with hexagonal quarries, have been enlarged. All the new work has been timber framed, and grained as oak. The works, exclusive of the clock, will cost upwards of 350*l.* The whole has been executed by Messrs. Cock and Franklin, of Dunmow, builders, under the superintendence of Mr. Fenton, of Chelmsford, architect, and a committee of subscribers. A new ornament in the hall is a carved ornamental chair, presented by the ladies of Dunmow to Viscountess Maynard.

Ryde.—Messrs. Bennett and Holdsworth, of London, are the successful competitors for the performance of all the works in their line required for the Ryde water supply. The engines and pumps will be made by Easton and Amos, the hydraulic engineers.

Weston-super-Mare.—Staffs of engineers, surveyors, &c. have been of late engaged in measuring and preparing plans for the proposed pier, docks, railways, &c. in connection with the scheme for uniting the South Coast and Southampton, preparatory to applying for the necessary Acts of Parliament (notice for doing which has been given), for carrying out the works.

Cardiff.—Drainage operations are now briskly carried on in this town, trenches of considerable depth being cut through various streets.

Aberdare.—The Local Board of Health having received a very large number of applications for the office of surveyor, they determined to invite seven of the candidates to present themselves. Each having had a personal interview, the election was proceeded with. On the first division, the votes were given as follows:—For Mr. William Griffiths, of Britonferry, 5 votes; Mr. William Williams, of Bridgend, 3; Mr. W. S. Rampling, of Liverpool, 4. The name of the gentleman who had received the lowest number was then struck out, and a second division was taken, when the following was the result:—For Mr. Griffiths, 6 votes; for Mr. Rampling, 6. The number being even, the chairman gave the casting vote in favour of Mr. Rampling.

Ulverston.—The site at present decided upon for the erection of a covered market-house is Briggs'-yard, with adjoining garden. The main entrance will be in the market-place. The committee estimate that the building, when complete, will cost 5,000*l.* They have issued a prospectus, and plans and specifications are in preparation.

Glasgow.—The foundation-stone of the new premises now in the course of erection in Gordon-street, for the Commercial Bank of Scotland, was laid on 24th ult. Mr. David Rhind, F.R.S.E. is the architect, and Messrs. David Rae (mason), John Shennan (wright), Thomas Leadbetter and Co. (plumbers), William Baird (plasterer), and Field and Allan (slaters), are the contractors.

CHURCH BUILDING NEWS.

Broughton Sulney (Nottinghamshire).—A parsonage-house is now in the course of erection here, also a new chancel to the ancient church. The church is to be renovated. The expense is estimated at about 3,200*l.* The style of architecture is Early English; the rectory to correspond. Mr. Teulon is the architect, and Mr. H. Quarterman, of Oxford, the builder.

Newhaven.—The ancient church of Newhaven, in Sussex, has recently undergone a process of restoration, and has been re-opened.

Cheltenham.—A new church in Cheltenham, dedicated to St. Luke, was consecrated on Tuesday in week before last. The church is Decorated in style, from a design by Mr. F. W. Ordish, of London; and consists of nave, transepts, and chancel. At the east end there is a tower, surmounted by a broached spire, and about 140 feet in height. The broaches are curved, and are thought to give the spire an unsightly appearance. There are sittings to accommodate 1,000 persons. The seats are low and of stained deal, but, except the free seats, with doors. The tower-arch and transepts, it seems, are blocked up with galleries. The chancel is filled with moveable benches. The lighting was done by Messrs. Skidmore, of Coventry.

Nantwich.—The parish church here is to be restored. The intended restoration, it is estimated, will cost 8,000*l.* about one-third of which only has been raised as yet.

Hereford.—Notice has been given by the cathedral authorities that application is to be made to Parliament in the ensuing session, for an Act to enable the dean and chapter to raise money on mortgage, for the purpose of restoring and repairing the cathedral, and discharging certain existing debts.

Sutton-in-Ashfield.—At a meeting of the parishioners of Sutton-in-Ashfield, Notts, on 8th inst. a rate was unanimously granted to the churchwardens for the repairs of the parish church.

Bolton-upon-Dearne.—The reopening of the parish church of this village took place on the 2nd inst. The church has been repewed, a considerable portion of the roof rebuilt, together with a large part of the north and east wall, a new vestry leading out of the north chancel added, and the churchyard wall considerably raised.

Birkenhead.—Mr. M'Bride, of Liverpool, has completed a bas-relief, which, with architectural decorations, will be fixed as a memorial to a late local celebrity, Mr. W. Stevenson, surgeon, in St. Mary's Church, Birkenhead. The subject of the bas-relief was suggested by the text, "Sick and ye visited me." It represents the deceased watching over and tending a beautiful maiden, whose relatives are represented as earnest and anxious spectators. The relief is canopied and surrounded by work of a Gothic character, in Caen stone, to harmonise with the character of the church. The inscription tablet is fixed below the relief.

Alne.—The church of St. Stephen, built and endowed at the sole expense of Lady Frankland Russell, and situated on her estate in the parish of Alne, was consecrated by the Archbishop of York on Tuesday fortnight. The building consists of a nave, chancel, north and south transepts, with semi-octangular ends, and four recesses, which can scarcely be designated aisles, at the junction of nave, chancel, and transepts. The chancel is raised one step above the nave, and the altar two steps above the chancel. Open stalls are arranged for the congregation. The roof is of open oak timber. The external walls are of pebble rubble and bricks, the latter laid in diagonal or herring-bone courses, alternating with the rubble. The mouldings, &c. are of magnesian limestone.

Wykeham.—On Wednesday in week before last, the Archbishop of York also consecrated the new church at Wykeham, near Scarborough, built and endowed at the sole expense of Lord Viscount Downe. The edifice has been erected on a new site, fronting the Malton and Scarborough-road. About three weeks previously, the archbishop consecrated two other new churches, as already noted, at Cowick and Hensall, both in the parish of Snaith, built and endowed at the sole expense of the same nobleman. To each of these three churches Lord Downe has attached a new house for the residence of the incumbent, together with a school and teacher's house.

COMPENSATION CASE, EAST GRINSTEAD LINE.

IN the case of J. H. Wilson, esq. of Worth, near Crawley, Sussex, from whom the East Grinstead Railway Company took 4a. 2r. 36p. of land (freehold, or equal to it), a reference was determined on, under the "Lands' Clauses Act," and Mr. Powell was named arbitrator by the Board of Trade. There were peculiar circumstances in the case. The line cuts off sixty acres from the main estate, takes away the approach to the residence, and might have been formed, it was asserted, more cheaply in a position to have avoided this. Mr. Wilson had offered a sum of money to induce the directors to move it. There are a church, school, &c. as a nucleus for building operations, and the land contained stone and brick-earth, which had been used by the company. The claim made for land and compensation was 5,000*l.* which included some timber and a cottage. Messrs. Bowers and Son were the solicitors for the claimant. Mr. Montague Chambers and a junior appeared on that side; and Mr. Edwin James and a junior for the Company. Mr. Job Bintley, Mr. G. Morgan, Mr. Godwin, and several others supported the claim. Mr. Jones, Mr. Pownall, Mr. Hood, &c. gave evidence on the part of the Company; and the referee has awarded the sum of 1,400*l.*!

It was shown in evidence that the stone and brick-earth actually used by the Company must have saved them more than the amount of the claim. Mr. Wilson has no cause to be grateful to the East Grinstead Railway Company.

THE TOLL-BRIDGES OF THE METROPOLIS.

AN interesting Parliamentary Blue Book, recently issued, furnishes some instructive data as to the traffic over the River Thames, per toll-bridges.

From the evidence taken before the Committee on the Metropolitan Bridges, it appears that Southwark-bridge, with approaches, cost 666,000*l.* Its present annual income is 2,900*l.*; its expenditure, 1,200*l.* Before the opening of New London-bridge in 1831, the income of Southwark-bridge was 7,000*l.* but in 1832 it sank to 4,544*l.* and in 1834 to 3,983*l.*

Waterloo-bridge cost, including approaches, 937,391*l.* 11s. 4d.: of this, 476,000*l.* was raised by 4,763 100*l.* shares, 309,000*l.* by 5,000*l.* annuities of 60*l.* each, 200,000*l.* by 5,000 annuities of 40*l.* each: a further sum of 54,000*l.* was raised by bonds, which makes the whole sum contributed 1,030,852*l.* The receipts for this bridge for the year ending February last were 19,197*l.* 0s. 11d. This cheerful revenue is mainly attributable to the erection of the South-Western Railway Terminus at the foot of the Surrey side of the bridge, whilst Vauxhall-bridge, on the other hand, has suffered a great diminution in their receipts from the cause of Waterloo's prosperity. About three per cent. interest is paid on the annuities of both classes of Waterloos, which are now about worth 29*l.* 10s. and 25*l.* respectively. The original shares fetch 5*l.* 5s. to 5*l.* 10s. The arrears due to annuitants amount to 2,399,937*l.* 10s. (*sic.*)

About 113,000*l.* have been spent upon the Hungerford Suspension-bridge, and it is estimated that the proposed alterations to this bridge will cost 150,000*l.* more, making the whole cost of the bridge 269,000*l.* More than 3,000,000 passengers pass over this bridge annually, and about 2,500,000 pass to and fro from the steam-boat pier at the north side of the bridge. By the projected alterations, it is estimated that the revenue of this bridge would amount to 30,000*l.* annually.

Vauxhall-bridge and its approaches cost 300,000*l.* exclusive of 70,000*l.* for its lawyer's bill. The receipts for the last year were 11,000*l.* but the average annual receipts before the removal of the South-Western Terminus were 12,700*l.* The expense of keeping this bridge in repair is about 2,300*l.* a year, and the dividend paid last year was 26s. a share. The capital of the company consisted of 5,800 shares, of the nominal value of 64*l.* but their market price is but 23*l.* each.

It will be seen from these statistics, that our London bridges, with the exception of Hungerford, have proved a not much better investment to moneyed men than the Thames-tunnel has to its fortunate shareholders.

En passant, the disfigurement of London-bridge by black broad arrows and numbers has been rubbed off, since the notice of the reprehensible practice appeared in the *Builder*.

PROBLEM IN CARPENTRY.

ALLOW me to suggest (though, perhaps, coming rather late) what appears to me a more practical mode of solving the problem referred to in the *Builder*, p. 537.

In the diagram describe the right-angled triangle ABC, having for its base the side of the purlin AB, and for its altitude the rise of it from D to A: the hypothenuse BC is the length of the required line.

This simple rule is of very general application. J. R. C.

The problem in practical carpentry that appeared in a recent number of the *Builder* is of the greatest importance in the practical demonstrative department. The facility of cutting the down bevel, upon your worthy correspondent "F. P.'s" principle, as yet surpasses all that I have hitherto seen, and I shall feel obliged if your correspondent will give an arithmetical rule to calculate the length of line that will coincide at octangular intersections. J. B. G.

THE FATHERLESS TENDER.

AUDI ALTERAM PARTEM.

I SHOULD regret at any time to see your columns occupied with trifling matter. Your space is too valuable to admit of anything thin, innutritive, or unrefreshing. I therefore feel it to be my duty to apologise for submitting the following particulars: at the same time I cannot avoid doing so, as I hope will appear:—

In the *Builder* of November 11th, amongst the notices of tenders, was published a list of tenders "received by the National Freehold Land Society for two villas at Enfield." This was done without the sanction or knowledge of the directors or officers of the Society: had it emanated from here by authority, it would have done so directly from myself. The two last tenders stated in the list, are those of "Clever and Co. (accepted), 930*l.*; B. and C. Hayne (withdrawn), 925*l.*"

In the course of the week after publication, a letter was received by the Board of Directors, through the secretary, from Messrs. Hayne, saying, in reference to that notice, and these villas,—"We did not tender for the same, or authorize any one so to do, much less to withdraw in favour of another builder. As this statement is calculated to reflect upon our character as contractors, we flatter ourselves we are not asking too much of you to furnish us with the name of the party who so unwarrantably made use of ours." The secretary replied to Messrs. Hayne, that no one was authorised to make such communication to the *Builder*; and that their statement, that they did not tender for the erection of the two villas, he had forwarded to the surveyor. In the *Builder* of November 18th, after the notices of tenders, is a note in compliance with a desire which had been expressed by Messrs. Hayne, that it should be stated that "they did not tender for these villas, or authorize any one to do so for them, although their names appeared in the list of tenders."

It is interesting to have mysteries cleared up; and I should like that this were. That there is one, seems certain; but I fear I can only be a contributor towards its revelation. I have before me,—1stly, a tender, received at the same time with others, bearing date, Sept. 4th, and purporting to come from Messrs. Hayne's place of business, saying, "Sir,—We will undertake to erect the double villa at Enfield for the sum of 925*l.*—Yours, &c. BEN. and C. HAYNE." 2ndly. Draft of letter addressed by me on Sept. 7th, to Messrs Hayne, and delivered at their office, informing these gentlemen that the tenders referred to had that day been opened; and further saying to them, "The merits of your tender, the committee were prevented entering into, in consequence of the absence of a list of prices for the regulation of additions, deductions, and instalments, and a statement of the time within which you would undertake to complete the houses from the date of signing the contract,—both which particulars were required by the specification. I shall feel obliged if you will furnish me with these," &c. 3rdly. The reply of Messrs. Hayne, acknowledging receipt of the preceding, and saying, "In reply, beg to state, that unexpected business engagements will prevent our erecting the double villa at Enfield, according to our tender, and render it unnecessary that we should forward you a schedule of prices."

The first part of the mystery is, how a copy (erroneous in some points, but none of them affecting the present question) of my private abstract of the tenders, which is the only one here, obtained, without my knowledge, a place in the *Builder*; but the other portions leave that quite in the shade. I allude to the correspondence of handwriting which appears in the signatures to the tender and withdrawal, as well as in the other parts thereof, the repetition of the expression "double villa," the reference, in the withdrawal, to "our tender" (which suggest that the former document emanated from the same source as the latter), and the disavowal to the society's directors, and to the *Builder*, by Messrs. Hayne, of having tendered or having withdrawn. Somebody has been imposed upon. If builders are liable to have liberties of this kind taken with them, whatever may be the object, they should unmask the system if possible; and it is of consequence that architects should be aware how they, too, are liable to have spurious tenders foisted upon them.

I regret occupying so much space with such a subject; but finding myself in a measure arraigned, I could not avoid presenting my defence.

JAMES WILSON, Surveyor, N.F.L.S.

ON THE MEANS OF AVOIDING SMOKE.

INSTITUTION OF CIVIL ENGINEERS.

IN the paper read on the 14th inst. "On the means of avoiding Smoke, from Boiler Furnaces," by Mr. W. Woodcock, the author commenced by explaining the nature of smoke as existing in furnaces, the cause of its formation, its component gases, and the temperature at which they became inflammable, and then pointed out a method of preventing the evolution of opaque smoke, by simple and apparently effective means. It was stated, that ordinary pit coal, under the process of destructive distillation, gave off various volatile substances, some of which were gases, such as "Hydrogen,"—"Marsh gas,"—"Olefiant gas,"—"Carbonic Oxide," &c.: these and others existed, in the furnace, only in a gaseous state, becoming liquid or solid when in the external air, and of such coal tar was composed; and amidst them the carbon, in minute sub-division, was held in suspension, giving to the smoke its sable hue. All these gases were combustible at given temperatures, provided a certain amount of oxygen was present. It was then shown, that the air containing this oxygen, if imparted to the gases, after leaving the fuel on the bars, must be administered so as not to reduce the temperature of the gases below their "flame-points."

The formation of smoke, or visible carbon held in suspension, was stated to depend entirely upon the insufficiency of the supply of oxygen in the furnace, as the heat of the furnace would cause the various gases to be given off more rapidly than their combustion could be supported, by the quantity of oxygen passing through the fire-bars in the same period of time; this evil being much aggravated by the heat of the air as usually supplied from the ordinary ash-pit, generally ranging from 200 degrees to 300 degrees Fahrenheit, and the air, at that heat, containing less oxygen by about one-third than at the usual atmospheric temperature, and consequently that the combustion of the fuel to which it was supplied, must be one-third less perfect.

The simplest means of preventing the formation of smoke, were shown to be by providing for an ample supply of oxygen in a condensed state, in the form of cold air, to the fuel on the fire-bars, and by administering such further supply of oxygen to the heated gases, as might be necessary for their complete combustion, whilst in contact with the boiler; this latter supply being given at such a temperature as would insure the successive ignition of the gases as they were evolved. Thus by establishing nearly perfect primary combustion, the quantity of smoke evolved was shown to be reduced to a minimum, of which no visible trace ever reached the summit of the chimney.

The apparatus by which this desirable end was attained was described to consist of two parts, each being the addition of a very simple apparatus to the ordinary boiler-furnace. The first of these was a double set of thin iron bars, lying horizontally in the direction of their length, parallel to each other, immediately beneath the grate in the ash-pit. Each set of bars resembled a Venetian blind in its arrangement; the bars being inclined at an angle of 45 degrees to the horizon in the direction of their width. The bars of the two sets were thus inclined in opposite directions, and being so close together that a vertical straight line could not pass between any adjacent pair of them; yet far enough apart to allow all cinders to fall freely through, and the air to pass freely upwards to the fire. The bars were of the same length as the grate, so to extend from front to back. It would be perceived, that the effect of this arrangement must be to screen the ash-pit completely from the heat radiated directly downwards from the grate, and so that scarcely any would pass through by reflection. In fact, not a ray of heat could reach the ash-pit from the furnace, without suffering four reflections from rough iron surfaces, which would leave a mere shadow of a ray for further progress.

Thus a large quantity of heat, which otherwise would be radiated out of the furnace into the ash-pit, thence reflected, and so lost, was saved for the boiler. The ash-pit, also, was only slightly heated by the cinders which fell through; and this source of heat might be reduced to any extent by frequently removing the rubbish from the pit. Another consequence was, that the air passing from below through the grate, not being heated in the ash-pit, entered the fire cold, and therefore not, as it did from ordinary ash-pits, in a rarefied condition. By its coolness, this air prevented, to some extent, the burning of the grate bars; and, by its unrarefied state, it produced a more intense and rapid combustion of the fuel, after it had passed the bars.

Another part of the contrivance was more especially the smoke-burning apparatus. It consisted of a set of tubes, open at both ends, passing through the furnace horizontally from front to back, and terminating within the wall of the front of the bridge, with valves to regulate the access of air into the tubes. The fire-bridge differed importantly from that of an ordinary furnace. It was hollow, and was divided into two parts, the larger of which stood up from below: the other, which was shallower, was in contact with the boiler. Between them all the products of combustion passed from the furnace. The two parts communicated with each other by channels at the sides, and thus formed together an annular chamber. The tubes before mentioned entered the front wall of this chamber, and thus established a communication between its interior and the outer air. The back wall, or plate, both of the upper and of the lower part of this chamber, or bridge, being perforated with numerous holes, opening from the interior of the bridge to the space beyond it, established a direct communication between the outer air and the throat of the flue. There was a second solid bridge beyond the first, descending from the upper side of the flue: this, by interrupting the direct channel through that part of the passage, retarded the flow of the smoke and gases, and caused their perfect mixture with each other, within the space between the bridges.

The result of this arrangement was, that a current of highly-heated air, which passed through the tubes in the furnace, escaped at the bridge, through the perforations in the back wall, and mixing with the gases from the furnace, which held the smoke in suspension, converted the smoke into flame.

It was stated that this apparatus had been very satisfactory at Messrs. Meux's brewery: there was not the slightest appearance of opaque smoke from the chimney, and the money saving, resulting not only from the more perfect combustion of the fuel, but from the use of an inferior quality of coal at a lower price, amounted to full 20 per cent.

Notices of Books.

Notes on the Nimbus. By GILBERT FRENCH. Printed for presentation. Bolton: 1854.

THE object of this pamphlet is not so much to give an account of the nimbus, and the variety of shapes it has assumed, already done by M. Didron, as to combat an explanation set forth in that archæologist's work, and generally received as correct. The nimbus, when it belongs to one of the persons of the Holy Trinity, is divided by two lines drawn from the outer edges, intersecting each other at right angles in the centre, and forming four rays, one of which is concealed by the head. M. Didron views this as the form of the cross; and the writer of the paper before us, Mr. French, says,—

"It would thus appear that the cross, the well-known emblem of Christianity, was adopted by ancient religious artists to indicate the representations of the Deity, and this idea is un-

oubtedly accepted at the present time by the ll but universal use of the term "cruciform imbus" whenever it is referred to. It is one bject of this brief paper to suggest that an ntirely different meaning was intended by the ncient artist in painting the divine nimbus, and hat the modern name is objectionable, as conveying an erroneous idea."

Mr. French points out that this "cruciform imbus" was used by the eastern Pagans, and s connected with the idea of fire or light. He ees its origin in the fact, that if we "look at he sun, the moon, or any brilliant artificial ight under the same circumstances as those with which the ancient Pagan or Jew approached his Deity,—that is, with the eyes overed with a veil, or half-closed,—it immediately presents the appearance of emitting clustered rays of light at right angles, corresponding with those passing from the Hindoo goddess Maya, and from the numberless representations of the Deity produced by Christian mediæval artists."

The writer is of opinion, "that with occasional, but very rare exceptions, the mediæval Christian artist, when painting the nimbus of the Deity, did not intend to represent, or at all refer to the cross; but that his purpose was to demonstrate, by three rays of light proceeding from the divine head, that the one person represented was invested with the power, and the glory, as well as the identity, of the other persons forming the Holy Trinity."

Mr. French gives a number of curious illustrations, and adds a chapter on "Rayed Banners," as bearing on the subject.

The Micrographic Dictionary. By J. W. Griffith, F.L.S. and A. Henfrey, F.R.S. J. Van Voorst, Paternoster-row. 1854.

The microscopic world is a strange and wonderful one. Modern science and research have immensely expanded its explored and known territories; but every day is opening up something new and extraordinary in it. Like the world at large, it comprises three great natural kingdoms, the animal, the vegetable, and the mineral, and through each and all of these the microscope has been ranging, and is ever adding to the wonders of this actual land of Lilliput. In the mineral or crystallographic branch of micrography, we have been often struck with the singular analogies of certain microscopic forms to those strewn over the astronomical firmament which modern telescopic appliances have revealed. And even in the minuter vegetable forms evolved by the microscope, how singular it is to find as a prevailing elementary form, those spirals whose telescopic discovery in the starry firmament has created so much astonishment amongst men of science. It is as if the infinitely great were but a reflex of the infinitely minute,—as if the telescope were but an astronomical microscope with which we Lilliputian in-dwellers within the precincts of a starry atom, were contemplating the interior and elementary shapes of some Brobdignag of crystalline or vegetable origin.

The microscope is making most useful and interesting discoveries in the animalcular branch of micrographic science, and especially in regard to blights, infusoria, &c. as they affect not only the vegetable creation, but the air we breathe, and the water we drink. In the very interesting dictionary under notice, which is well illustrated with multitudes of such forms, we find a passage, in reference to epidemic diseases, which it may be worth while to quote under present or (happily as we may now say) passing circumstances and as a specimen of the work itself:—

"The air has frequently been examined in regard to the presence of animal or vegetable organisms which might account for the production of epidemic and infectious diseases. In none of these cases have any bodies ever been found which could in any way be interpreted as the origin of the diseases: nothing more has been met with than common infusoria and such other bodies as may at all times be found in air, from whatever source. As these experiments cannot, however, be too frequently repeated, it may be well to point out the method of making them. The best plan is to connect a glass tube, twice bent at right angles, with an aspirator: the free end of the tube should be drawn to a fine point; and just above this, the tube should be blown into a bulb. The point is then immersed in a small quantity of pure water, and the water allowed to run very slowly from the aspirator. The water is then slowly drawn into the tube, and the air is washed as it passes by the water in the bulb. When a large quantity of air has been washed by the water, the latter is shaken briskly and allowed to run into a clean glass for examination.

Another method consists in closing, by fusion, the end of a glass funnel, filling this with ice, and collecting the drops of water condensed from the air in a receptacle placed beneath."

Dr. Griffith and Mr. Henfrey are doing good service to science, by the publication of the work under notice.

A Dictionary, Geographical, Statistical, and Historical, of the various Countries, Places, and Principal Natural Objects in the World. Illustrated with Maps. By J. R. M'Culloch, esq. Member of the Institute of France. A new edition, revised, with a supplement. In two volumes. London: Longman, Brown, Green, and Longmans. 1854.

This admirable work forms a treasure of national and even international importance,—not so much from the nature of its contents as from the manner in which they have been treated, and from the celebrity of the author. Geographical Dictionaries are not rare, but the circumstance of an author such as M'Culloch having brought his talents to bear upon a subject usually handed over to mere obscure and anonymous compilers, casts one and all of these and their productions into the shade, and most justly so, considering that this is a work on which not only the name, but the abilities of its well-known author have been most successfully and profitably expended.

The first edition of M'Culloch's "Geographical Dictionary" was issued in 1841. Extraordinary changes having taken place in this and most other countries since that time, partly of a political nature, and partly from the unusually rapid progress of population, wealth, and civilization, an immense deal of labour and no little cost were again expended on the work, and exceedingly numerous alterations and amendments made on it, the greater number of the principal articles having been either wholly or partially re-written; and the new work, as we may almost call it, was first issued in 1851. Even since that recent date, however, the book has been further materially improved, and the articles on Russia, Turkey, and Australia, with others of less importance, have been mostly re-written. It is now, therefore, in every respect a mature and most valuable work. The type is very clear, and so close and compact, that each of the two volumes contains at least three or four times the quantity of matter contained in many large quarto volumes of similar character, although the size is only that of imperial octavo. There are no less than about ten hundred pages of small type in each volume, however, which seems to account for so immense a mass of miscellaneous information, in reference to every country, province, county, city, and town, throughout the whole world, being embodied within the limits of two volumes octavo.

Village Development; based on Practical Principles; or, the Old Vicar's Advice. Cox, Covent Garden. 1854.

This little volume seems to be written in a right spirit, and contains a good deal of advice, useful to incumbents of parishes and others, who have it in their power to improve the manners and habits, and cultivate the intellect and morals of village populations.

Bury St. Edmunds' Cemetery Competition.—The committee of the Burial Board of Bury St. Edmunds, in answer to their advertisement, received thirteen designs; and from these, those sent by Messrs. Cooper and Beck, of London, have been selected, and will be carried out forthwith at the usual commission.

Caution to Owners of Houses.—A gentlemanly-looking person called a few days since at a house in Park-place, Regent's-park, for the purpose of looking over the same: it being totally unfurnished, the person in charge did not accompany him. Judge of her surprise on her next perambulation, to find that eleven of the keys (worth about 9d. each) had disappeared with this "diurnal depredator."

J. B. W.

Miscellanea.

Manchester and Salford Sanitary Association: The Health Question.—On Thursday evening before last, Mr. Thomas Turner, surgeon, delivered a lecture, under the auspices of the Manchester and Salford Sanitary Association, at the Town-hall, Chorlton-upon-Medlock, on "The recent alarm of cholera, and the influence of human agency in preventing its visitation and its fatal results." Mr. Turner said that the object of the Manchester and Salford Sanitary Association was not curative, but preventive. Of all policy prevention was the best. The preventible causes of disease formed the bulk of the causes which produced disease, and took away life. There were very few causes of disease which were not preventible. Ignorance was the greatest evil in our sanitary proceedings. Time was when medical science was totally unknown except to medical men; but it was not so now, and he had no hesitation in saying that by human agency the visitation of the cholera might be averted. To be forewarned was to be forearmed. He attributed the recent exemption from cholera in Manchester to the human agency employed by the Manchester and Salford Sanitary Association, and to the efforts of the Corporation. The greatest boon ever conferred upon Manchester was the Waterworks, and he could speak of the purity of the water. Water was an essential part of our blood. In 1,000 parts of blood there were no fewer than 784 parts of water. But we were too much in the habit of polluting this water. Spirituous liquors were a dreadful addition. They fired the blood, injured the heart, lungs, and brain. He had been astounded to find it asserted, on the authority of Mr. Porter, before the Board of Trade, that the people of England, Scotland, and Ireland, taxed themselves for beer, spirits, and tobacco, to the amount of from 57 to 58 millions of money annually; that a working-man earning from 10s. to 15s. a week spent at least one-half that sum on his own person in drink. The lecturer next referred to the great necessity of inhaling pure air. Whenever they went home and smelt any noxious vapour, they ought to root it out. Take care that the cesspools and drains were attended to. By doing this they would make their houses sweet, and a sweet home was a happy one. There was nothing so expensive as disease: it always cost a great deal of money. It was certain that cholera could only be averted as a fatal disease by strict treatment of premonitory symptoms. Preventive measures stood foremost, premonitory treatment stood next; and if these two things were their watchwords, and they carried out the laws of health which were now so generally made known, and all the means used to remove abominations about us, and the sources of disease of our own creation, he believed that we would be exempt from cholera. At the close of the lecture a vote of thanks was given to Mr. Turner, on the motion of Dr. Angus Smith.

Restoration of Limehouse Church.—It will be remembered that, excepting the walls and tower (which were seriously injured), this fine church was destroyed by fire on Good Friday, 1850. Being insured for only 5,000*l.* while the damage amounted to nearly 13,000*l.* a church-rate of one shilling in the pound was made; and with the proceeds and various subscriptions the repairs were so far proceeded with as to enable the edifice to be opened with temporary fittings—offering a painful contrast to its former state. These funds being all exhausted, and there being difficulties in the way of another church-rate, it has been resolved to attempt to obtain the requisite funds by an appeal to the parishioners and others for voluntary subscriptions. A public meeting of the inhabitants was accordingly held on the 8th inst. presided over by Mr. W. Baker, coroner for Middlesex. The meeting was well attended, and the utmost unanimity of sentiment and determination on the part of all to do all they could to accomplish the object appeared to prevail. At the conclusion of the meeting a list of subscriptions from influential firms and individuals in the parish, amounting to upwards of 600*l.* was announced.

Lightning Conductors. The report in your journal of the discussion upon lightning conductors at the meeting of the British Association, when Professor Faraday pronounced the insulation of the conductor by the use at intervals of glass or other material ineffectual, has suggested to me the idea that a more complete, and perhaps thoroughly effectual, insulation might be effected by coating the rod or rope throughout its length with some non-conducting substance, as for instance gutta-percha, in the same manner as the submarine and subterranean telegraph-wires are treated. Would not this prevent the electric fluid leaping from the conductor to the lead or iron-work connected with the building itself, and allow of the rod or wire-rope being closely attached to the walls, which simplifies so much the operation of fixing?—Fulmen.

CONVICTION UNDER THE NEW SMOKE AND NUISANCE ACT.—Mr. George Thompson, an extensive tanner in the Spa-road, Bermondsey, was convicted last week at Southwark, under the new Smoke and Nuisance Act, by order of Lord Palmerston, and at the instance of the Commissioners of Police, of carrying on the trade and business of a tanner, such causing a noxious and offensive effluvium, so as to annoy the inhabitants in the neighbourhood, without using the best practicable means for preventing or counteracting the annoyance, &c. Mr. Combe fined the defendant 40s. and costs, intimating at same time that he would render himself liable to a penalty of 10*l.* next time, and double that amount every day he continued the nuisance afterwards. He further informed the defendant that this was a mild proceeding on the part of the Government, as he might have been indicted and put to great expense.——In another case, Mr. Richard Trotman, an extensive bone-boiler, at the corner of Green-street, Friar-street, was summoned, under the same Act, for carrying on an offensive trade, so as to be a nuisance, and injurious to the healths of the inhabitants, &c. In this case, Mr. Bodkin consented to an adjournment for a week, Dr. Taylor in the mean time waiting on Mr. Trotman to suggest to him certain means to prevent the nuisance. Shortly after, the first defendant returned, and begged Mr. Combe to suspend his judgment in that case, to give him time to make alterations, as allowed to Mr. Trotman. Mr. Combe said he could not alter his judgment in the absence of the counsel for the Crown; but he would suspend infliction of the penalty for a week, to give Mr. Thompson an opportunity of writing to the Home Office on the subject, and making similar proposals to Mr. Trotman's.

PERMANENT WAY.—A pamphlet has been published by the Permanent Way Company, of Westminster, as a circular, containing an account of the various patents purchased by the company, in order to enable them to carry out their business design of improving and strengthening the permanent ways of our old railways, and laying down the new in accordance with those principles of strength and true economy which have not been observed as they ought to have been in many instances, even apart altogether from the subsequent introduction of heavier engines and greater speed than previously in practice. It is long since the *Builder* predicted a complete revolution in the mode of forming the permanent way, as an inevitable result of modern practice, and pointed out the immensely increased risk the public would otherwise come to experience when the full effect of heavy engines and great speed on permanent ways originally ill adapted to such circumstances was accomplished. Much has since been done to obviate these anticipated consequences, and it is to be hoped that still more will be done, not only on new lines, but on the old, to alter and strengthen the system of permanent way. To this end, the Permanent Way Company cannot but be a most useful agent. In their circular just referred to, they not only describe various important inventions to that end, now in their hands, but accompany their details with numerous diagrams and sketches, showing the forms of joints, rails, sleepers, &c. and the modes of laying them down. They also propose to purchase other approved inventions, and to issue new circulars occasionally as new inventions or improvements on old may present themselves or occur to the able engineers by whom their stock of patents has been originated.

THE LIVERPOOL WELLINGTON TESTIMONIAL.—The "Wellington Testimonial Fund" Committee at Liverpool met on Monday week, when it was stated that the sum subscribed amounted to 6,000*l.* The sum raised, it was urged, would not suffice for the erection of a column, as originally proposed, and, after considerable discussion, it was resolved to ask the subscribers as to the disposal of the surplus, after payment of expenses.

TEMPERANCE PLEASURE-GROUNDS.—At the last weekly meeting of the West London Anti-Enclosure and Field Garden Allotment Society, a committee was formed for the purpose of opening pleasure-grounds on temperance principles. Already they have had the offer of a field for such purposes. Part of such grounds they will set apart for field garden purposes.

G.

AIR-TIGHT WINDOWS.—How very simple are some of the contrivances for which patents are taken out, as in the case of one mentioned in p. 564, *ante*, for certain modes of applying india-rubber to doors and windows, a practice adopted by me some years ago. I had at the Great Exhibition of 1851 a model window in artificial stone, with a casement to shut against a tube of india-rubber sunk in a groove, and therefore shall feel myself justified in executing any similar work, and to advertise for it, especially as mullioned windows generally require some such contrivance to make them weather-tight, the lack of which has led their adoption to be objectionable.

J. P.

THE IRON TRADE.—Sheet iron, it appears, has been lately sold as low as 9*l.* There is, nevertheless, a great want of orders amongst the immense multitude of furnaces and ironworks of every description, which have been blown in and erected within the last few years. These have so far increased the powers of production as to render it impossible to obtain an adequate demand under anything like a general depression of the trade, such as now seems to be approaching: and the sooner a large proportion of them are blown out the better for the ironmasters. As yet, however, the furnaces are still blazing, with the exception of some two or three lately noticed. A daily drain upon the labour market by the recruiting sergeants goes on and is likely to continue. The increased demand for marine and general military purposes is regarded as a complete refutation of the opinion entertained by some that the war is doing all the damage to the trade. The Americans are becoming too self-dependent (thanks to our own iron-trade speculators and their overweening desire for high prices) to be likely henceforth to be of much service in sustaining the surplus of furnaces at work: indeed, there is a complaint of continued embarrassment on the score of the American market, although there is an admitted reduction of at least twenty shillings a ton on recent prices.

BEDFORDSHIRE ARCHÆOLOGICAL SOCIETY.—The general meeting of this society was held at Bedford, on Tuesday in last week, when the High Sheriff took the chair, and opened the meeting The report, congratulating the society on its continued progress was then read and adopted, and office-bearers elected. The Rev. W. Monkhouse read a paper on Risinghoe Castle, which he regarded as no castle at all, far less a Norman or Roman one. Some account of this paper appears in the *Bedford Times*. Several members present agreed with Mr. Monkhouse. Mr. G. Hurst then read a paper "On Churchwardens' Ecclesiology." This paper was professedly compiled from a churchwarden's manuscript, strangely discovered among a quantity of grocer's shop-paper,—

"Saved from packing
Soap and candles, lard and blacking."

Under a show of gravity, the various disfigurements known by the name of churchwardens' repairs, embellishments, and improvements, are ironically recommended. In advancing the claims of compo, it was declared that the inventor ought to have had a statue erected to his memory, cast in Roman cement; and, to avoid the sin of idolatry, the ornaments and figures about a church should be formed of compo, as then no one would think of worshipping them, and they could not be objected to, as being either molten or graven images. In warming churches, a common, vulgar stove, with a pipe carried up through the window tracery, is advised on the score of cheapness, and to be placed especially for the comfort of the squire and principal parishioners, and the minister, provided he be a beneficed clergyman! Various chippings away of stone ornaments, whitewashings, and yellow ochreings, plastering up of sedilia and piscinæ, are with apparent earnestness enforced. As a means of saving, when lead is dear, and the roof is out of condition, it is recommended that the metal should be sold and tile or slate substituted, by which the expense would be defrayed, and, accordingly, praises would be received from the parishioners in vestry assembled. The paper concluded with a vindication of churchwardens' dinners, as one of the glorious institutions of the great Alfred, and therefore a link in the chain of the British Constitution!

THE NEW NORTH DOCK BRANCH RAILWAY AT LIVERPOOL.—All the arches on the main line are finished, and the spandrils levelled up to the height of the extrados of the arches. The embankment from the canal up to Sandhills-lane is also completed, and nearly ready for the rails. The goods-yard, between Blackstone-street and Walter-street, is being laid out, and quay walls built, so that 100 railway waggons can be placed around it and simultaneously loaded. Over this a shed is to be erected, covering an area of nearly 8,000 yards. Seventy turntables are in course of construction, and numerous other appliances are arranged. In little more than four months, upwards of 10,000,000 of bricks have been used on the work, and 120,000 cubic feet of ashlar, from various quarries in Yorkshire and Lancashire; to unite which in a solid mass of the required form, 10,000 tons of prepared mortar have been required. The number of men employed to execute the work has averaged about 900. The new line, when completed, will run directly to Stanley-dock, Nelson-dock, Wellington-dock, and Sandon-dock. The works, it is thought, will be ready for use by the end of the present year; at all events, early in 1855.

PORTSEA ISLAND.—The gas works here have been let on lease to Mr. Penny, engineer, of London. Within the last two years upwards of 30,000*l.* we are told, have been spent by the company in improvements and extensions.

OPENING OF THE NEW RAGGED SCHOOLS AT STOKE NEWINGTON.—The new room, which has been built out of the proceeds of a bazaar held some time since, is a plain structure, but the ventilation is said to be well attended to. Attached to the school is a bath-room for the use of the scholars. On Wednesday in last week about 150 children were treated in the school-room, in honour of the recent opening of the school.

THE CHELSEA WATERWORKS COMPANY.—A correspondent says, the Chelsea Waterworks Company have given notice to the Fulham Bridge Company (commonly called Putney-bridge) of their intention to drive their main *under* the Thames 50 yards above the bridge, and the work will be at once proceeded with. The well-known white cottage on the Bishop of London's grounds is already purchased for removal, and this end of the tunnel will terminate at the site of the present Savings' Bank, at the top of the High-street, Fulham, that building, and one or two other houses adjoining, being removed.

WORKERS IN GRANITE.—I often notice in reading the *Builder*, "wide estimating," which, in common with others in the building branches, astonishes me vastly. I have, in my recent experience, a case I think too good in point to be lost sight of. As undertaker, I recently interred a lady in one of the cemeteries. The husband was desirous to have a granite ledger of Aberdeen grey, and I was instructed to give a price for a block, 6 feet 6 inches, 2 feet 6 inches, and 6 inches, axed only. I applied to two masons, one of whom named eight guineas, the other 14*l.* These being deemed high, the husband made inquiries personally, and gave the order at once to the proprietors of a stone wharf in the neighbourhood of one of the bridges, who completed it and actually delivered it (some two miles away) for the sum of 5*l.* 10s.—A.W.

SEWER-FLUSHING APPARATUS.—Some important, and it appears highly successful experiments with a new and ingenious apparatus, invented by Dr. Gray, of the *Dublin Freeman's Journal*, have been recently made at Dublin, in presence of the High Sheriff, the presidents of the Colleges of Physicians and Surgeons there, Professor Sullivan, of the Museum of Irish Industry, Mr. W. D. Butler, architect; Mr. Neville, city engineer; Professor Aldridge, Sir H. Jervis, Sir A. Clarke, and many other intelligent and influential gentlemen belonging to Dublin, and all of whom attested, by a formal resolution, passed on the spot where the experiments were made, that they had been perfectly successful, and recommended the general application of the apparatus, both for house purposes, and for general city drainage, as a simple, effective, and valuable invention. The model exhibited, comprised about 60 feet of house-drain, with, at the sewer extremity, a syphon trap, of the ordinary S shape, filled with water, and at the house extremity an ordinary beer-barrel (used to show how cheaply the apparatus might be fitted up). In the bottom of this barrel was a large valve, communicating through a tube with the house end of the drain, and a simple apparatus, it is said, was contained in the barrel, or cistern, by means of which, so soon as the cistern was filled (from the ordinary water-pipes and through a small pipe with a crane), the valve was opened, and the water, amounting to some thirty or forty gallons, suddenly flushed the drain, carrying with it stones, clay, or other contents, and expelling not only these, but the foul gases that might be contained in the drain, all of which, together with the water, are ejected successively as by a squirt or pop-gun through the S syphon-trap into the sewer, while the foul air is replaced by air from the house, and the drain is thus thoroughly ventilated as well as flushed. The crane attached to the supply-pipe is intended for use so as to fill the cistern only by dribblets, and once or twice every twenty-four hours, or as often or as seldom as may be desired, the whole apparatus being thus self-acting when once regulated.

TENDERS

For model lodging-houses, to be erected in Lisson-grove, for the Marylebone Association for Improving the Dwellings of the Industrious Classes. Quantities supplied. Messrs. Habershon, architects:—

	House in Lisson Grove.	Two Groups of two Houses each	Drains.
	£.	£.	£.
Cooper	2,360	2,343	86
Higgs	2,167	2,389	122
Rowland and Evans	1,995	1,875	82

References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

ding universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

CHEAP AND DURABLE ROOFING.

By Her Majesty's Royal Letters Patent.

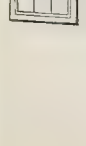
F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it is now exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen, who have extensively used it, sent free to any part of the town or country. A Dry-hair Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 20 per cent in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and to prevent the roofing it made are F. McNEILL and CO.'s Manufactories, LAMB'S BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.



SHOP FRONTS and OFFICE FITTINGS with the greatest despatch.—J. FISHER, 70, York road, Lambeth (late Shop Foreman to Messrs. Lawrence and Son's), Sash, Door, and Staircase Manufacturer, with well seasoned materials and superior workmanship, at the lowest possible price. Glazed and polished goods securely packed for the country and for exportation.—P.S. A full list of prices sent on application.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 6d.; best holland blinds, on rollers, 8d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 3s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

FOR SALE, 1,000 SASH DOORS, with margin lights, 7 ft. 8 in. by 2 ft. 8 in. and 6 ft. 8 in. by 2 ft. 8 in.; also, 500 four-framed doors, 6 ft. 8 in. by 2 ft. 8 in all well-seasoned. Apply to Mr SAMUEL HEMMING, Portable Building and Roofing Manufactory, Bow, London.

HENRY PASK, Baker-street, Clerkenwell, Sash, Shop Front and Door Maker to the Trade,

begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

ASPHALTE.—GERVASE FOOTTIT, Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 3s. per ton. Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and all the work guaranteed.—Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 294, Oxford-street.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

WHOLESALE BRITISH and FOREIGN WINDOW-GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT METTAM begs to call the attention of Builders and the Trade in general, to his present prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description now manufactured. Extra size Sheet Glass of all qualities and substances for Shop Fronts. Estimates and Price Lists forwarded post-free, on application at the Warehouse, 30, Princes-street, Leicester square, London.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 148, OXFORD-STREET.

THE PATENT CRYSTAL WINDOW, consisting entirely of plate-glass, supported by flint-glass sash bars, presents most important advantages in the construction of shop fronts, viz. perfect transmission of light, elegance, and novelty of appearance, imperishability from rust or decay, and the greatest economy in labour, &c. from the facility with which it is kept clean and bright, as contrasted with either polished metal or wood. Examples of the window may be seen at the London Made and Shawl Company, north side of St. Paul's Churchyard, London, at Birmingham, Leamington, Worcester, Abergavenny, Shrewsbury, &c. The application, also, of the Crystal Sash-bar to the construction of Exhibition Cases, may be seen in the Birmingham Court and East Gallery of the Crystal Palace, Sydenham, to which the attention of exhibitors is particularly invited.—Full particulars may be obtained from the patentees, Messrs. LLOYD and SUMMERFIELD, Oil and Plate Glass Manufacturers, Park Glass Works, Birmingham.

PATENT PLATE, ROUGH PLATE, CROWN, and SHEET GLASS.—JOSEPH POULSON, Window-Glass Merchant, No. 164, Piccadilly, has at all times on hand a very large stock of every description of the above, avoiding the delay consequent upon sending to the works.—Present price of Crown, 30s. per crate; Sheet Glass, 2d. per foot extra long Patent Plate and 32 oz. Sheet; also enamelled, always in stock. Sheet Lead, 21s. 6d. per cwt.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and nngalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 18-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.

TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to
JOHN WARNER & SONS'
PATENT VIBRATING STANDARD PUMP,

which is recommended for the simplicity of its construction, and the ease with which it works.

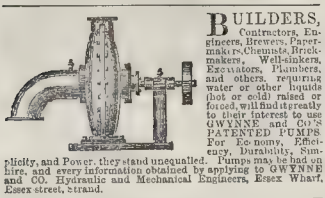
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS.

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

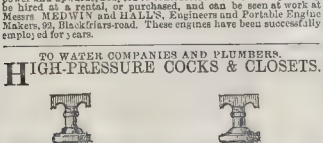


PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.



Upper Ground-street, Blackfriars Bridge, Surrey Side.

BUILDERS, Contractors, Engineers, Brewers, Papermakers, Chemists, Brickmakers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids shot or cold raised or forced, will find it greatly to their interest to use GWYNNE and CO.'S PATENTED PUMPS For Economy, Efficiency, Durability, Simplicity, and Power, they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex street, Strand.

TO CONTRACTORS.
PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs MEDWIN and HALLS, Engineers and Portable Engine Makers, 99, Blackfriars-road. These engines have been successfully employed for years.

TO WATER COMPANIES AND PLUMBERS.
HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

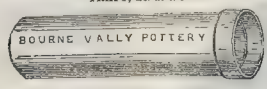
VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with treading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.



WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET;

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London, Agent; or to
Mr. J. HUDSON, Agent, at the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

JOHN DOULTON, BROTHERS, AND CO. LIVERPOOL POTTERY, ST. HELEN'S.

STONE WARE PIPES, BENDS JUNCTIONS TRAPS, &c.

TERRA COTTA VASES, CHIMNEY-TOPS, &c. FIRE-CLAY FLUE PIPES

PRESTON .....J. Armstead, Hudson-street.	WIGAN .....James Fairclough, King-street.
KENDAL .....Robt. Thompson.	LIMERICK.....W. Burgess and Sons.
BLACKBURN ....W. Hopwood, Clayton-street.	

The most economical and efficient system of drainage is formed with DOULTON'S STONE-WARE PIPES.
Testimonials as to their superiority have been received from the Borough Engineers of Liverpool, Glasgow, and other cities

DOULTON AND WATTS,
LAMBETH POTTERY, LONDON.

REGISTERED CLOSET-PANS IN ENAMELLED STONE WARE.

IMPORTANT TO BUILDERS.

REGISTERED CAST-IRON CHIMNEY-HOPPER and CHIMNEY-BAR COMBINED, ensuring a perfect formation of the Flue, and rendering smoky chimneys impossible. One trial will cause their adoption in every building.

Price from 8s. 6d. each, according to size.

IRON GIRDERS and COLUMNS to MODEL or DRAWING.

IRON PIPES and connections for gas, water, and liquid manure.

RAIN-WATER PIPE and EAVE GUTTERS, at wholesale prices. Also, O-G Gutters, Sash-weights, STABLE FITTINGS, pumps, tomb railing, cattle and pig troughs, and COLUMNS with caps and bases, and every kind of builders' castings, in stock, at LYNCH WHITE'S Iron Wharf, Upper Ground-street, London near Blackfriars-bridge.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill. NOURSE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr. C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1839.

In answer to your inquiries respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have adopted it largely, both on account of being cheaper than lead, much easier fixed, and a more perfect job. Yours, &c. C. Hacker."

N.B. The Company's Illustrated Circulars, containing instructions to plumbers for joining tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

BUILDING MATERIALS.
BECK'S WHARF, ISLEWORTH. Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slate and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c. N.B. This wharf is very near the St. Margaret's estate.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-inn, Holborn (between 1 and 3½ p.m.); or to Mr. H. B. BARLOW, Office for Patents, Duke-place, Exchange, Manchester.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSSS'S WHOLESALE WAREHOUSE, 24, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross, SOLE AGENTS for Collier's Terro-metallic and Red Earthenware Socket Drain-pipes, Bends, Junctions, and Syphons. This ware, allowed by all to be of the best manufacture by the unparalleled quality, combined with cheapness, will be found to meet the approbation of customers.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.
A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic Engineer, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

NORBITON POTTERY and BRICK and TILE WORKS, KINGSTON-HILL.

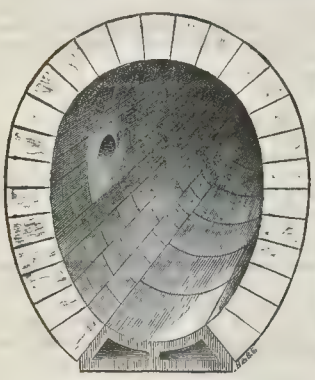
BENJAMIN LOOKER, Jun. invites the attention of Builders, Contractors, and others, to the following reduced prices of his superior RED SOCKET DRAIN-PIPES, in 2 feet lengths:—

2 inch.	4-inch.	6-inch.	9-inch.	12-inch.	15-inch bore.
5d.	6d.	1s. 2d.	2s. 2d.	4s. 2d.	each.

Bends, Junctions, Traps, &c. equally low.

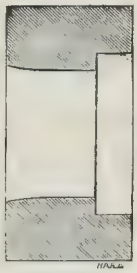
These pipes being made by powerful steam machinery, and of unusual thickness, are capable of sustaining double the pressure of ordinary stoneware pipes; and their durability is beyond a doubt, as unglazed pottery, well burnt, is often discovered in a perfect state after being under ground for many centuries.

DELIVERED FOR CASH WITHIN TEN MILES OF THE WORKS, OR AT ANY STATION ON THE SOUTH-WESTERN RAILWAY AND ITS BRANCHES WITHIN FORTY MILES OF KINGSTON, CARRIAGE FREE, IF IN QUANTITIES OF NOT LESS THAN 300 PIPES.



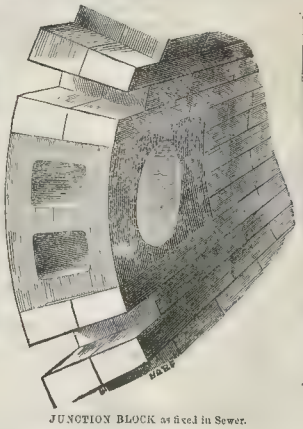
LOOKER'S improved Border Tiles and Coping, Bricks, Land Drain-pipes, Drain-paving, and all kinds of Hooping Tiles, Garden, Kale, Rhubarb, Chimney-pots, &c. &c.

N.B. Bricks, Tiles, and Pipes made to any pattern.

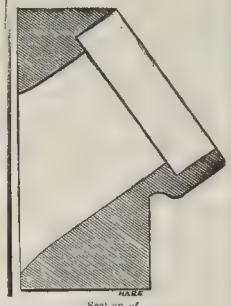


HENRY DOULTON AND CO.'S
PATENT SEWER JUNCTION BLOCKS AND INVERT BLOCKS,
IN GLAZED STONE WARE,
HIGH-STREET, LAMBETH, LONDON.

The connection between pipe drains and sewers, and brick sewers, is made perfect and secure by the use of DOULTON'S PATENT JUNCTION BLOCKS. Each block is made to correspond in thickness with the sides of the brick sewer, so as to build or bond in with the brickwork; the inner surface is made to correspond with the internal figure of the sewer. Each block has a socket, either within its thickness or just protruding beyond it, to receive the end of a pipe. They are made to receive pipes, entering either straight or obliquely. When fixed, they form part of the sewer, they cannot be improperly placed, and a certain and proper fall is secured at the point where the junction is made.

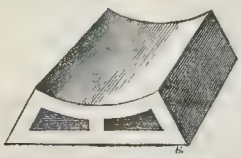


THE PATENT JUNCTION BLOCKS MAY BE FITTED WITH METAL FLAP-TRAPS IF REQUIRED.



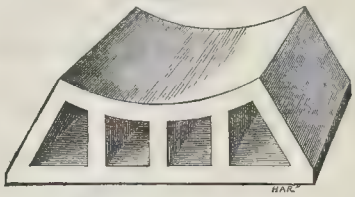
Egg-shape Sewer, with
DOULTON'S PATENT JUNCTION AND INVERT BLOCKS.

Section of
STRAIGHT JUNCTION
BLOCK.



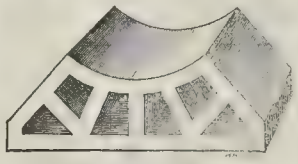
JUNCTION BLOCK as fixed in Sewer.

Section of
OBLIQUE JUNCTION BLOCK.



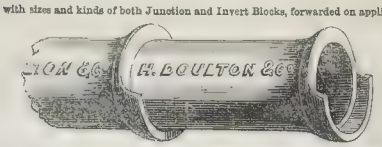
DOULTON'S INVERT BLOCKS, in stone ware, form a glazed, even, and imperishable surface for the bottoms of brick sewers, and also a sure foundation for the structure. They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the main sewers in many provincial towns, and in all cases have been highly approved by the engineers, both for the facilities they offer in the construction of sewers, and for their subsequent action in permitting an easy and uninterrupted flow of the sewage matter. They offer the means for carrying off all superfluous water while the sewer is in course of construction, and when required give a channel for land drainage independent of the sewage.

No. 1.



Radius of Invert 9" for 18" Circular Sewer, or 3 ft. 9in. by 2 ft. 6 in. Egg-shape. 4½ in. work.

No. 6.



Radius of Invert 15" for large Egg-shape Sewer. 9 in. work.

No. 5.

Radius of Invert 9" for 3ft. 9 in. by 2ft. 6 in. 6 in. work.

A full description, with sizes and kinds of both Junction and Invert Blocks, forwarded on application, per post.

DOULTON'S HALF SOCKET DRAIN PIPES,
By the use of which, Pipes may be removed, the Drain examined, and Junctions inserted without injury to the tubes. The same price as ordinary Socket Pipes.
For list of Agents, see last week's "Builder." Drawings, with prices, forwarded on application.

TO SANITARY COMMISSIONERS, SURVEYORS, ARCHITECTS, BRASSFOUNDERS, PLUMBERS, BUILDERS, ENGINEERS, &c.

JENNINGS'S PATENT DRAIN-PIPES.

ALL WHO USE THESE PIPES

Will have the satisfaction of knowing that their Drains can be easily examined, or a junction introduced, without disturbing the invert or general Drain.

A LIST OF AGENTS IN ALL THE PRINCIPAL TOWNS WILL BE SHORTLY PUBLISHED.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.

ARE FREE FROM ALL COMPLICATION—NO WIRES OR CRANKS.

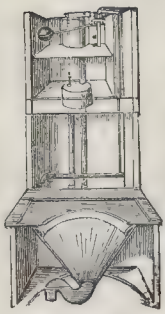
ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

ARCHITECTS FURNISHED WITH REFERENCES OF THE HIGHEST ORDER.

Particulars of JENNINGS'S DRAIN-PIPES, WATER CLOSETS URINALS, LAVATORIES, SLUICE VALVES, FIRE-LOCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are enclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.



Superior Glazed Stoneware Pipes, Bends, Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849

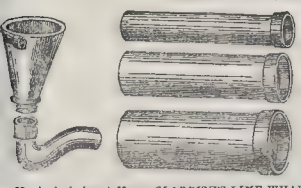
GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

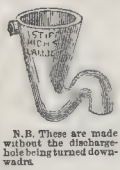
Royal Arsenal, Woolwich, June 24, 1852

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.



This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.



JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1761.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted, while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

N.B. These are made without the discharge-hole being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City road Wharf, City Basin; Cook-hearn, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 33, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free, on application.

HENRY MILLICHAMP, Son-in-Law and Successor to THOMAS BULLOCK,

MANUFACTURER OF

GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY,

COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.

Watercloset Pan with Syphon Trap connected, price 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2 FEET LENGTHS.

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

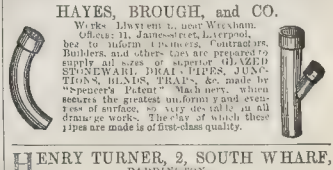
DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

PATTEN'S PATENT HIGH-PRESSURE

WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER CLOSETS patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Prices for Closet and Apparatus complete, from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 29, Old Fish-street, near St Paul's, London.

ISAAC PARRY'S POTTERIES, Copperas-



Lane, Church-street, Deptford, Kent, begs to invite the attention of Contractors, Builders, and Wholesale Dealers to his extensive assortment of articles in the GLAZED STONEWARE, for sanitary and other purposes; likewise Red Drain-pipes, Chimney-pots, &c. The only manufactory of the kind in the neighbourhood.

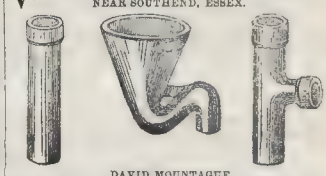
HAYES, BROUGH, and CO.

Works—Llwyn-y-n, near Wrexham.

Offices: 11, James-street, Liverpool,

beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

HENRY TURNER, 2, SOUTH WHARF, PADDINGTON,

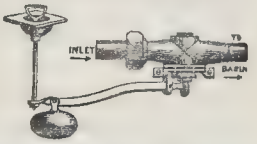


5s. Traps, 2s. 6d. 6s.

Manufacturer of Closet Basins and Traps, yellow outsides, with white insides. These are warranted to be the most durable earthenware now manufactured.—A list of shapes and prices sent free, on application. A large stock of Flag Basins of every variety.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.



DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES in accordance with the rules established by the Commissioners of Sewers, Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falcon-wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

LAMBERT'S SELF-CLOSING

LAVATORY AND CLOSET-VALVE

Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet; they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,

THOS LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

STONE PIPES.—E. and W. STURGE are

enabled to offer PIPES at very low prices for cash, with every variety. Paving, sinks, steps, sills, and coping, &c. &c. Country orders promptly attended to.—E. and W. STURGE, Bridge Wharf, City-road.

MANUFACTURERS of GLAZED

STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers, White Fire Clay, Facing Bricks, &c. &c. Agents, CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85,

Upper Whitecross-street, St Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Conville's Registered Multi-Valve Closet." This water-closet is the most complete and effective apparatus for the purpose, and for using without the least waste of water, &c. &c. From its combination, possibility, facility, &c. &c. it is recommended.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

The property comprises a very desirable FREEHOLD CEMENT MILL and MANUFACTORY, complete, drawing two pairs of stones with wind power or steam-power might be added with advantage; together with two kilns, about 12 feet deep, storeroom for 200 casks of cement, opening house, two-stall stable, cart house, two cottages, with small gardens in front, all adjoining and contiguous to the sea for landing, &c. which will be offered to PUBLIC AUCTION, in one lot, by

MR. LEAR, subject to such conditions of sale as will be then and there produced, at the CLAREMONT HOTEL, at Bognor Sussex, on THURSDAY, the 7th day of DECEMBER, 1854, at TWO o'clock p.m. For a view and further particulars, apply on the Premises, to Mr. STANDEN, the proprietor, Weststreet, Bognor; or at the Offices of Mr. LEAR, Auctioneer, General Valuer, Land and Timber Surveyor, and Estate Agent, Arundel and Littlehampton, and at 70, Cannon-street, City, London.

TO ARCHITECTS, BUILDERS, MASONS, AND OTHERS.—Second Portion of the valuable Stock of an old-established Firm in the Marble Trade discolving Partnership.

MESSRS. EVERSFIELD and HORNE beg to announce that they will SELL by AUCTION, on the PREMISES, South row, New-road, St. Pancras, on TUESDAY and WEDNESDAY, the 28th and 29th of NOVEMBER, at TEN for ELEVEN each day, the valuable CONTENTS of the SHOW-ROOMS, comprising an unrivalled selection of 200 chimney-pieces of the most admired marbles, including many of most richly sculptured statuary of elegant design, a variety of a more massive character, in black and coloured marbles, for dining-halls and every variety of plain and elegant design for ordinary apartments; also many highly-finished table tops, monuments, vases, baths, pedestals, and numerous other items. May be viewed on the Saturday and Monday previous; and catalogues had, on the Premises; and of the Auctioneers, 40, Parliament-street, or Coal-Exchange.

SUTTON, SURREY.—Ninety-six Acres of Freehold Land, in an elevated and picturesque part of the county, and about a mile and a half from the Red Hill Station.

MESSRS. BLAKE are directed to SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, on TUESDAY, DECEMBER 12th, at TWELVE o'clock, in One Lot, a valuable FREEHOLD ESTATE, known as Hill Farm, Sutton, Surrey, consisting of 96 acres of land, through which a forty-feet road is now being formed, which will afford communication to the railway on the back, and give to the estate an important building character. The land abounds with excellent brick earth, and offers to the speculator the means of immediately carrying out extensive and lucrative operations, as possession will be given (without the usual valuation on the completion of the purchase.—Particulars, with plans, may be had at the Inns at Sutton, Epsom, Reigate, and Kingston; at Garraway's Coffee-house; of Messrs. PARKE, Solicitors, 63, Lincoln's-inn-fields; and of Messrs. BLAKE, Croydon.

NOTICE of POSTPONEMENT of MAHOGANY and OTHER SALES, at LIVERPOOL, from the 22nd and 23rd NOVEMBER, to 29th and 30th NOVEMBER, 1854.—The AUCTION SALES of Baltic and American Wainscot, and Mahogany, and other Foreign Woods advertised for sale on WEDNESDAY and THURSDAY, the 22nd and 23rd instant, are POSTPONED until the following days, viz.:—WEDNESDAY, the 29th NOVEMBER, for the Whitewood, and THURSDAY morning, the 30th NOVEMBER, for the Furniture Woods. The necessity for this postponement has arisen from the excell nt character and quality of the wood just landed, rendering it needful, in justice to both buyers and importers, that more time should be given for distribution of catalogues and examination of the cargoes.—The catalogues may be had on and after this day.—SATURDAY, the 18th instant, on application to EDWARD CHALONER, Broker, 6, East-side Queen's-dock, Liverpool.

Valuable Building Plots, Walworth, contiguous to the Turnpike gate, in the Camberwell Hast road.

W. and C. PUGH will LET by AUCTION, at the ELEPHANT and CASTLE TAVERN, NEWINGTON BUTTS, on TUESDAY, DECEMBER 26th, 1854, at TWELVE o'clock, by direction of the Board of Governors and Guardians of St. Mary, Newington, at the highest annual rent that may be bid, for a term of seventy-eight years from 25th December, 1854, THREE eligible PLOTS of BUILDING LAND, close to the Turnpike gate, in the Walworth-road, enjoined by well-built first-class property of recent erection, and having omnibus conveyance to every part of London. Lot 1. A Plot of Land on the north side of Arthur-street, as delineated in the accompanying plan, having a frontage of about 30 feet 8 in. by a depth of about 50 feet 6 in.—to be let to the bidder of the highest annual rent. Upon this lot two houses are to be built by the intended lessee. Lot 2. The adjoining Plot delineated on the plan, of corresponding frontage and depth. Upon this lot two houses are to be built by the intended lessee. Lot 3. The adjoining Plot, having a corresponding frontage and depth as delineated on the plan. Upon this lot the intended lessee is to be compellable to build one house, and is to let at first or to erect one other house if he think fit, and can obtain the sanction of the Metropolitan Commission of Sewers, to build over the sewer shown in the plan.—May be viewed till the sale, and particulars and conditions of letting had of H. and P. Cheesman, Esqrs. Solicitors, Charlotte-Rents; of H. Davis, Esq. Surveyor, Trinity-square, Southwark; at the Elephant and Castle Tavern; and of the Auctioneers, Messrs. W. and C. Pugh, 6, Blackmanstreet, Southwark.

Auction Rooms, corner of Stephen's-green, Mile-end-road.

MR. MOORE will SELL by AUCTION, at his ROOMS, as above, on MONDAY next, the 27th inst. at TWELVE, in lots, to suit the trade and private buyers, about 700 pieces of modern PAPER-HANGINGS; also 12 cwt. of WHITE-LEAD, dry and ground colours, oils and varnishes, fifteen crates of crown glass, lead pumps, glazed sashes and frames, garden-frames, metal garden-lights, brushes, a few shop-fixtures, and other articles. On view morning of sale, and catalogues had at the Auctioneer's Offices, Mile-end-road.

Fifth Sale of the Building Materials to clear the ground for Battersea Park.

MR. W. R. GLASIER is honoured with instructions from the Commissioners of her Majesty's Works and Public Buildings, to SELL by AUCTION, on the PREMISES, on THURSDAY, NOVEMBER 30, at TWELVE for ONE, the FITTINGS of nine newly-erected fourth-rate HOUSES, Carlton-terrace, Lower Wandsworth-road, comprising capital sashes and frames, doors, chimney-pieces and hearths, register and other stoves, about 25,000 pantiles, Portland stone in blocks and landings, granite curb and blocks, lead, zinc, &c. and a quantity of useful loose materials.—May be viewed the day prior and morning of sale, and catalogues had at the Office of Works, 12, Whitehall-place; of James Pasmore, Esq. 7, Whitehall-yard; of the Clerk of the Works, West Lodge, Battersea-park; at Garraway's; and the Offices of the Auctioneer, 41, Charing-cross.

ADVERTISEMENTS.

BOARD of TRADE, DEPARTMENT of SCIENCE and ART.—AID TO PUBLIC SCHOOLS IN OBTAINING EXAMPLES FOR ART INSTRUCTION.—The Lords of the Committee of Privy Council for Trade having resolved to furnish examples to schools in accordance with the plan adopted by the Committee of Privy Council for Education, and to discontinue the practice of keeping a stock of such articles at the Department, Notice is hereby given, that on and after the 1st of JANUARY next, examples will not be supplied directly from the Department of Science and Art as at present, but through Schools of Art in the provinces. Forms of application for the same, and further information may be obtained at the Offices, Marlborough House, Pall-mall, London.

Marlborough House, 5th Nov., 1854.

THE ARCHITECTURAL EXHIBITION, Suffolk-street Galleries.—All DRAWINGS, &c. and everything intended for the department of manufactures, must be sent before the 5th of DECEMBER, and the Committee would be glad if as much as possible were sent by the 1st, in order to give more time for the preparation of the catalogue.

Subscribers who have not yet sent their names, should do so before the 5th, or they will not appear in the first edition of the catalogue: and those who have not paid their subscription for the current year, are requested to do so on the 5th of DECEMBER, when the Exhibition will be open for private view, as the Secretaries will then attend.

The Committee desire to put as much detailed information as possible in the catalogue, and invite exhibitors to furnish remarks as to date, materials, cost, dimensions, and general features of importance.

The Exhibition will be open to the public on the 11th of DECEMBER.

CONTRACTS.

RAINHILL, Liverpool.—To BUILDERS and OTHERS. Persons desirous to TENDER for the ERECTION of a NEW CHAPEL, for the County Asylum, at Rainhill, near Liverpool, may see the plans, &c. and receive all necessary information, at the Office of the Architect, Mr. H. P. HOM, 48, Basinghall-street, Liverpool, on and after MONDAY, 4th DECEMBER next. Tenders to be delivered as above, on or before 4 o'clock, TUESDAY 9th, 1854, seal'd, and endorsed "Tender for Rainhill Asylum Chapel." Sufficient sureties will be the direction of the Committee, be required for the due performance of the contract. The committee do not bind themselves to accept the lowest Tender.

CONTRACTS.

BRIDGNORTH BOARD of HEALTH.—To CONTRACTORS, PIPE MAKERS, and OTHERS.—The Town Council of Bridgnorth give notice, that they are prepared to receive TENDERS from persons willing to contract for the following, being Contracts Nos. 1 and 2, for the DRAINAGE of part of their district, viz.:—

CONTRACT No. 1.—For the supply of Glazed Stoneware Sewer and Drain Pipes, Junctions &c.

CONTRACT No. 2.—For laying Sewer and Drain Pipes, and for making and completing about 1,450 feet of 18 inch Brick Sewer.

The specifications and conditions of contract of either of the above may be obtained upon payment of 5s. and drawings, plans, and sections respectively, on application at the Offices of JAMES PILBROW, Esq. C.E. Tottenham, Middlesex (Engineer to the said Board), or RICHARD TAYLOR, Esq. Surveyor, Bridgnorth. Sealed Tenders, properly endorsed, and addressed to the Local Board of Health, Bridgnorth, must be sent on or before THURSDAY, the 7th day of DECEMBER next.

By order of the Board,
J. J. SMITH, Clerk.

Bridgnorth, Nov. 13, 1854.

CHESHUNT BURIAL BOARD.—To BUILDERS and CONTRACTORS.—Persons desirous of CONTRACTING for the ERECTION of TWO CHAPELS, ENTRANCE-LODGE, THE RESIDENCE, IRON RAILING, &c. on the new Burial-ground for this parish, also for Forming the Roads, Paths, Drains, Fencings, &c. may inspect the plans and specifications of the same at the Office of the Architect, Messrs. JAMES COE and SON, 1, Carpenter's-buildings, London-wall, London, of whom further information may be obtained. Tenders, sealed and indorsed "Burial-ground Tenders," to be sent to me on or before TWELVE o'clock on THURSDAY, the 7th day of DECEMBER next. The Board do not bind themselves to accept the lowest or any other Tender.

By order of the Board,
JAMES DEATH, Clerk.

Cheshunt, Nov. 18, 1854.

FURNESS RAILWAY.—The Directors are prepared to receive TENDERS for the WIDENING of their RAILWAY between Crook and Lindal Stations, being about two hundred and eight in length, including the enlargement, open cutting of the canal Lindal Branch, about 50 chains in length. Plans, sections, and specification and form of Tender may be obtained by application at the Offices of Messrs. McCLEAN and STILLMAN, the Company's Engineers, 27, Great George-street, Westminster; or at the Company's Offices, Barrow, Ulverstone, Lancashire, after TUESDAY, the 21st NOVEMBER next. Sealed Tenders to be forwarded, addressed to the Secretary, before the 9th DECEMBER, 1854. The Directors do not bind themselves to accept the lowest Tender in order.

JAMES RAMSDEN, Secretary.

Barrow, Nov. 13th, 1854.

EXTENSIVE PREMISES in the CITY of LONDON.—The Trustees of Parish Estates, of and being the Trustees of St Botolph Without Aldersgate, will MEET in the Vestry-room of the Parish Church, on FRIDAY, the 8th day of DECEMBER next, at SIX o'clock in the evening, to receive TENDERS for taking on LEASE those spacious PREMISES, situate on the west side of Aldersgate-street, at present used as a WORKHOUSE, by the Guardians of the Last Lords, for the term of May next, any day (Sundays excepted) from NINE to ELEVEN o'clock. Plans of the property may be seen, and further particulars obtained, at the Office of Mr. BLYTH, Architect and Surveyor, 113, Aldersgate-street.

TO ENGINEERS AND BOILER MAKERS

THE CROYDON LOCAL BOARD of HEALTH are desirous of receiving TENDERS for MANUFACTURING and FIXING an ADDITIONAL CORNISH STEAM-BOILER, 24 feet in length, 5 feet 6 inches in diameter, proved to pressure of 150 pounds to the inch. A specification may be seen at my office, or forwarded on my obtaining, at the rate of 6d. Mr THOMAS COX, the Surveyor to the Local Board, the Town hall, Croydon.—Tenders to be sent to me on or before TUESDAY, the 12th DECEMBER next.

By order of the Board,
HENRY RICHARDS, Clerk.

Croydon, November 28, 1854.

CONTRACTS for WORKS.—The Directors of the Scottish Central Railway are prepared to receive TENDERS for the ERECTION of BUILDINGS at GENERAL TERMINUS, Perth; consisting of Board and Manager's rooms and offices for the officials of the Scottish Midland Junction Railway, according to plans and specifications prepared by Messrs. A. and A. HILTON, Architects, at whose Office the plans may be found. Tenders to be added with the Secretary by the 15th DECEMBER next. The Directors do not bind themselves to accept the lowest offer.—By order,

JOHN A. JAMIESON, Secretary.

Specifications may be obtained on application at the Engineer's Office, Paddington. The Tenders are to be delivered at the Secretary's Office, as before, on or before WEDNESDAY, the 6th DECEMBER next. The Directors do not bind themselves to accept the lowest Tender.

24th November, 1854.

CONTRACTS.

TO BUILDERS.

Royal Engineer Office, Portsmouth, Nov. 16, 1854.

TENDERS will be received by the Honourable Board of Ordnance, at their Office, Pall-mall, London, on MONDAY, the 4th DECEMBER, 1854, from such persons as may be willing to undertake the CONSTRUCTION of a GLACIS in REAR of the BATTERY at LITTLEHAMPTON. The plans, specification, and conditions of contract for the above work may be seen, and every information obtained, any day (Sundays excepted), on and after the 2nd instant, on application to Mr. CHILTON, Clerk of Works, Royal Engineer Office, Middleton, Portsmouth. Tenders to be endorsed "Tender for the Construction of a Glacis at Littlehampton Battery, in the county of Sussex."

NOTICE to GAS COMPANIES and GAS-FITTERS ORDNANCE CONTRACT.

Office of Ordnance, Dublin, 18th November, 1854.

The principal Officers of her Majesty's Ordnance hereby give notice, that they will receive Proposals for the following CONTRACT, viz.: SUPPLYING GAS; also for PROVIDING and FIXING the necessary PIPES and other FITTINGS in Portobello and Royal Barracks, Dublin. Persons desirous of TENDERING for the same will receive every information on application at the Royal Engineer's Office, Lower Castle-yard, Dublin; as also at the said Barracks, on and after the 23rd instant, when the terms of contract, and the mode of ascertaining the value of the same, which depends will be read when the specifications are returned unstamped. The pipes and fittings to be examined by Ordnance Inspectors before the acceptance of the Tender; and the supply of gas to be for three years. Less (as will be stated) to Tender for the supply and fixing of the pipes and other fittings, and for the supply of the gas; or, for supplying the gas only, without tendering for the supply and fixing of the pipes and fittings. The letter of Tender to be sealed and indorsed under cover to "The Secretary to the Board of Ordnance, Pall-mall, London," as to be received on or before the 15th day of DECEMBER, 1854, and to be marked on the outside, "Tender for Supply of Gas, for Gas Fittings" (as the case may be), "at the Barracks, in Dublin."

THE Charlton Burial Board are prepared to receive TENDERS for the ERECTION of a DWARF PLINTH WALL, IRON PALISADING, and ENTRANCE GATES, for the western boundary of the new burial-ground at Charlton, near Dover. The plans and specification may be seen at the Office of the Architect, Mr. SAMUEL HEWITT, Montague-st., Southwark. Tenders to be sent to E. L. BURNETT, Esq. Clerk to the Board, on or before SATURDAY, the 16th day of DECEMBER next, by or FOUR o'clock. The Board do not pledge themselves to accept the lowest or any Tender.

Dec. 1st, 1854. E. L. BURNETT, Clerk.

CHARCOAL.—The CROYDON LOCAL BOARD of HEALTH are desirous of receiving TENDERS for the SUPPLY of PEAT-CHARCOAL, suitable for deodorizing sewage matter, delivered at the North end of the railway. The quantity required will be about 40 tons per month. Any information required by the Board may be obtained upon application to Mr THOMAS COX, the Surveyor to the Board, at his office, Townshall, Croydon. By order of the Board,

HENRY RICHARDS, Clerk.

Croydon, November 28, 1854.

TO CONTRACTORS AND OTHERS.

THE Local Board of Health of Watford, Herts, are prepared to receive TENDERS from persons willing to undertake PAVING, LAYING, or FIXING the HOUSE CONNECTIONS and SERVICES, WATER-CLOSETS, &c. with the requisite drain and water supply to the said district, with all materials and apparatus required, as well as Labour, in the Contract No. 5. Further particulars of which may be obtained by application to Mr. SLOPER, Surveyor to the Board, Clerk to the Board, or to JAMES PILBROW, C.E. Tottenham, Engineer to the Board, at whose Office the plans may be deposited, from either of whom specifications and conditions of Contract may be obtained, by payment of 5s. each. Tenders must be sent to me on or before THURSDAY, the 7th day of DECEMBER next, endorsed "Tender for House-services," and addressed to the Local Board of Health, Watford, Herts.—By order of the Board,

Watford, Nov. 22, 1854. JOHN SEDGWICK, Clerk.

DONCASTER CEMETERY.—To Builders. Persons desirous of giving in TENDERS for the several WORKS required in the Erection of the Cemetery Chapels, and Lodge, and Entrance Gateway, for the Commissioners under the Doncaster Cemetery Act, may see the plans and specifications at the Office of Mr. R. J. JOHNSON, the Architect, 31, Deansgate, Newcastle-upon-Tyne, from MONDAY, the 4th to MONDAY, the 11th, and at Mr. ALEXANDER'S office, in St. George-gate, Doncaster, from TUESDAY, the 12th, to TUESDAY, the 19th DECEMBER, 1854. The Tenders are to be sent in on or before SATURDAY, the 2nd DECEMBER next, and sealed "Tender for Cemetery Buildings," under cover, addressed to T. B. MASON, Clerk to the Commissioners.

Town Clerk's Office, Doncaster, Nov. 21, 1854.

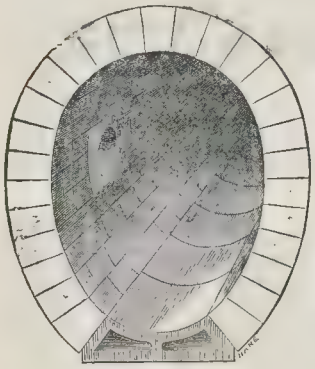
*** Plans and estimates furnished.

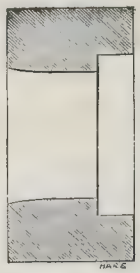
HENRY DOULTON AND CO.'S



PATENT SEWER JUNCTION BLOCKS AND INVERT BLOCKS,

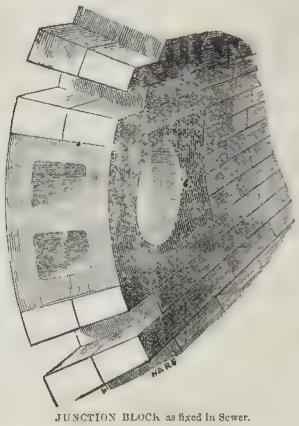
IN GLAZED STONE WARE,

HIGH-STREET, LAMBETH, LONDON.

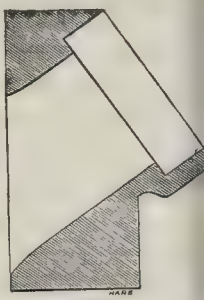


The connection between pipe drains and sewers, and brick sewers, is made perfect and secure by the use of DOULTON'S PATENT JUNCTION BLOCKS. Each block is made to correspond in th... lines with the sides of the brick sewer so as to build or bond in with the brick work; the inner surface is made to correspond with the internal figure of the sewer. Each block has a socket, either within its thickness or just protruding beyond it, to receive the end of a pipe. They are made to receive pipes, entering either straight or obliquely. When fixed they form part of the sewer, the... cannot be improperly placed, and a certain and proper fall is secured at the point where the junction is made.

THE PATENT JUNCTION BLOCKS MAY BE FITTED WITH METAL FLAP-TRAPS IF REQUIRED.

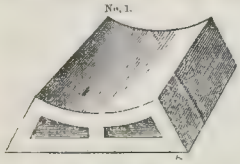


Egg-shape Sewer, 9 in.



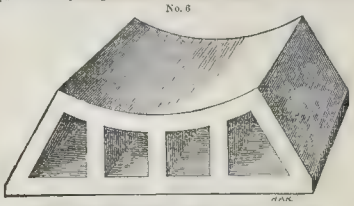
DOULTON'S PATENT JUNCTION AND INVERT BLOCKS.

Section of STRAIGHT JUNCTION BLOCK



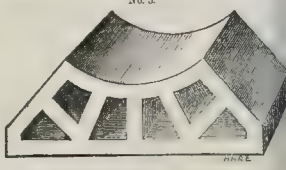
JUNCTION BLOCK as fixed in Sewer.

Section of OBLIQUE JUNCTION BLOCK.



DOULTON'S INVERT BLOCKS, in stone ware, form a glazed, even, and impushable surface for the bottoms of brick sewers, and also a sure foundation for the structure. They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the main sewers in many provincial towns, and in all cases have been highly approved by the engineers, both for the facilities they offer in the construction of sewers, and for the free subsequent action to permit of an easy and uninterrupted flow of the sewage matter. They offer the means for carrying off any superfluous water while the sewer is in course of construction, and which required give a channel for land drainage independent of the sewage.

No. 1.



Radius of Invert 9" for 18" Circular Sewer, or 3 ft. 9in. by 2 ft. 6 in. Egg-shape. ½ in work.

No. 6

Radius of Invert 15" for large Egg-shape Sewer. 9 in work.

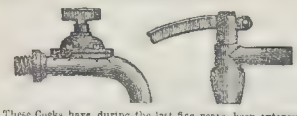
No. 5.

Radius of Invert 9" for 3ft. 9 in. by 2ft. 6 in 6 in work.

A full description, with sizes and kinds of both Junction and Invert Blocks, forwarded on application, per post.

DOULTON'S HALF SOCKET DRAIN PIPES,

BY THE USE OF WHICH, PIPES MAY BE REMOVED, THE DRAIN EXAMINED, AND JUNCTIONS INSERTED WITHOUT INJURY TO THE TUBES.



THE SAME PRICE AS ORDINARY SOCKET PIPES.

For list of Agents, see "Builder" of November 18. Drawings, with prices, forwarded on application.

PRIZE MEDAL, CLASS 21.

HIGH-PRESSURE VALVE COCKS.—

LAMBERT'S PATENT

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under a continuous high pressure, varying from 100 to 350 feet; their efficiency and durability is by experience established.

The Inventor in Ballcrative is simple and certain in its action and is cheaper than the common Cocks now in use.

Enamelled iron, wrought, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON,

Brass and Iron Founders Short-street, New-cut, Lambeth.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the use of the high-pressure principle in all towns, WARNER'S Closet, and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Cresoen's, Jewin-street, London

GUTTA PERCHA TUBING.—

May be shaved for years, without injury, and is therefore valuable for conveying water, chemicals &c. It is peculiarly suitable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected as the lead of winter or drought of summer like metal or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 2lbs on the square inch, without bursting. The smaller sizes may be had in coil feet, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for mounting machines in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. THE GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road London.

SMOKE PREVENTION. — (OFFICE of

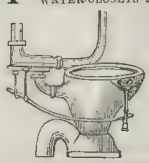
REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—SOURSE and CO having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

SWISS DRAWING INSTRUMENTS,

equal in quality to the very best London made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Thavies-Inn, Holborn (between 1 and 2 p.m.), or to Mr. H. B. BARLOW, Office for Patents, Day Exchange, Manchester

QUANTITIES, Measurements, Dilapidation

Surveys, Building Accounts, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and unremitting attention to any business of this nature, commercial or legal, at moderate charges, on application to Mr. ANDERSON, offices, 62, St. Martin's-lane and Acton-hill.



PAPER-HANGINGS.—The CHEAPEST

HOUSE in London for every description of PAPER-HANGINGS is OXFORD WHOLESALE WAREHOUSE, 22 GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Upholsterers, and large consumers will do well to visit this establishment

PATTEN'S PATENT HIGH-PRESSURE

WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, crank, wire, lead trap, &c. Any number of Closets can be supplied from one main

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Prices for Closet and Apparatus complete from 22s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 2

TO BUILDERS AND OTHERS

DRAIN-PIPES, JUNCTIONS, PANS

TRAPS, &c. at very low prices. E. & W. STURGE Bridge Wharf, City-road. Paving, Sinks, &c. Dairies, counters and ladies-slates. A list of prices sent free on application

HENRY TURNER, 2, SOUTH WHARF

PADDINGTON,

8s. Traps, 24 6d. 8s.

Manufacturer of Closet Basins and Traps, yellow outsides, white insides. These are warranted to be the most durable earthenware now manufactured. A list of shapes and prices sent free, on application. A large stock of Plug Basins of every variety

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying out or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

COTTAM, JUN. AND CO.

(Five minutes' walk from the Great Northern and North-Western Railways and Dock Junction Railway).

IRONFOUNDERS, SMITHS, &c. &c.

BUILDERS, CARPENTERS, AND OTHERS REQUIRING CASTINGS IN IRON, WILL FIND EVERY ATTENTION GIVEN TO THEIR ORDERS AS TO QUALITY AND PUNCTUALITY.

Estimates given on application for Iron-work of every description. Careful and experienced Foremen sent to measure and receive orders.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS

FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark, and numerous Churches, Chapels, &c.
Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.
DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

FLAVEL'S PRIZE KITCHENER.

These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.

BENHAM AND SONS,
19, Wigmore-street, London;
and at the Crystal Palace, Sydenham.

DR. ARNOTT'S new OPEN SMOKELESS FIREGRATE having been brought to full perfection, may now be seen in daily operation at EDWARDS and SONS', 64, Palace-street, Pimlico. By this grate a smoky chimney is prevented, the chimney sweeping is lessened, and a saving of at least the entire per cent is effected in the consumption of coal. The principle can now be carried out with complete success to late coverages, and not at present at stoves. Old grates are altered to the principle. Prospectus sent on application.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and second hand from fire are effectually prevented by this grate, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145 Regent-street, London.

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT—Plain, from 19s. to 42s.; Ornamental from 31. 6l. to 50 guineas, for warming halls, passages, greenhouses, water closets, shops, store-rooms, and all places requiring artificial warmth. To be seen in use at the sole Proprietor's, 8, SASH, Ironmonger, &c. 253, Oxford-street, and at the City Depôt, 119, Newgate-street, London. PATENT PREPARED FUEL for the stoves, 2s. 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and Italian irons with perfect cleanliness, for twelve hours, with one penny worth of coke or cinders. Price 12s.

*** Prospectuses, with drawings and report, forwarded free.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 373, Holborn.

HOT WATER APPARATUS, adapted for Horticultural and every other description of Buildings; improved Boilers, requiring no brickwork; WARM AIR Apparatus, &c.—Apply to S. S. TAYLER, Engineer, Battersea.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the store and fender department of Deane, Dray, and Co.'s establishment, where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and Co., (opening to the Monument) London-bridge. Established A.D. 17 0.

KITCHEN RANGES! — BROWN and GREEN'S celebrated RANGE is a certain Cure for a Smoky Chimney.—Manufactory, Luton, Beds.

STOVES for CHURCHES, CHAPELS, HALLS, &c. The one, two, three, and four cylinder Patent SUSPENSION STOVES are the most Healthy, Economical, and Powerful.—BROWN and GREEN, Patentees, Luton.

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CHIMNEY CAPS, and improved CONICAL IRON BOILERS and Ironmongers and Hot-water Sadlers, call their wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple and efficacious method of warming hot-houses and pine pits. Hot Water From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A 200,000 cubic feet room warmed in hot air only, at 80 degrees Fahrenheit, in 8 minutes 30 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEAVE'S PATENT CALORIFERE. The constant supply of fresh air carries out instantaneously, by a new well-improved process, all damp or vitiated air, that makes it very healthy for churches, schools, theatres, hospitals, manufactories, clubs, houses of any size, laundries, and green houses. The Calorifere has been adopted by His Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Apply, personally, to T. BOILEAVE, French Engineer, 55, King William-street, City.

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At the new Weeks' establishment, in operation without smoke or steam, can be seen daily in full operation, boilers, tanks, &c. of every size and weight, at the small expense per day of 1d. and upwards. This achievement in heating by hot water is unprecedented.

NORTH BRITISH CAST and WROUGHT IRON OFFICE, No. 18, King William-street, Charing-cross, is opened, through which all Builders can be supplied with castings direct from the Founders in Scotland, and wrought goods from the works near Glasgow, at the manufacturer's prices, as the following list will testify:—

ITALIAN and GALWAY MARBLE QUARRIES. Depôt, Whitehall-wharf, Parliament-street.—MR. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade, &c. that he has just landed in the St. Katherine's Docks, ex *Robert* and *Betty*, from Leghorn, 80 blocks of MARBLE, consisting of large open statuary, suitable for sculptors; Sienna, vein statuary, grounds, &c. Also, at its depôt may be found blocks of marble, consisting of open statuary, vein, Sienna, Black and Gold, Giallo Siena, and St. Ann's, and 25 different coloured marbles. A large stock of sawn slabs of every description of marble

MARBLE SLABS.—MARBLE and STONE SAWING MILLS, 8, NORTH WHARF ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally, their extensive assortment of Sienna, Sicilian, and statuary marbles, in slab and 11 cks. at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal quarries, per vessels in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST STATUARIES at the LOWEST PRICES.

Just arrived, per the *Betty*, from Italy, the cargo of the *Young Tom*, 150 Blocks of Marble, and 12,000 feet of Sawn Slab, Mortars, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for sale on commission.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sienna, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 5, Clarence, Millbank, to the new offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.

Mr J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. Wm. Hood ROBARTS solicits the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE WORKS by PATENT MACHINERY, Commercial-road, Pimlico, London. THOMAS JACKSON begs to draw the attention of the public to the most extensive stock of Marble Chimney-Pieces in the Metropolis; consisting of a selection of upwards of two hundred, and manufactured by steam power from the finest Italian and other marble, and with that careful attention to the details and finish so necessary in good marble work. The Stock consists of elegant Drawing-Room Chimney-Pieces in Statuary Marble; bold, massive Chimney-Pieces, in Black, Black and Gold, Bardilla, Sienna, Verd Antique, Brocatella, Dove, St. Ann's, and Serpentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and in all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BUILDERS, &c. &c.—Take notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY. A Vein Marble Box Chimney-piece, only 2l. 2s. A good-size Vein Marble Box Chimney-piece, with cars and bases on plinths fitted up in the best style, only 3l. 12s. Their patent machinery enables them to execute Marble Floor at 2s. 6d. per foot super, and every variety of Marble work at reduced prices. Their Show Rooms contain the largest Stock of Chimney-pieces in England.—Address, WESTMINSTER MARBLE COMPANY, EARL-STREET, MILLBANK.

MONUMENTS! MONUMENTS! — For POLISHED GRANITE MONUMENTS, apply to G. H. CLARK, Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall
London Agents—TREGELLAS and TAYLOR, 3, Pinner's-court, Old Broad-street, Manager.—JAS. J. TRATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS,
QUARRYMEN AND STONE-MERCHANTS.
BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Whitmg Manufacturers and Marblemasons, and Wholesale Dealers in Hearth and Bath Stone, that they can be supplied in quantities from three tons and upwards as with the above, delivered at the South-Eastern Railway Goods Depôt, Bricklayers' Arms Station, Old Kent-road, at the current price. Terms, samples, and other information may be obtained at the Office of the Wharf above

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones in hooks and ashlar of specified dimensions and fine-scappled; also random and coursed rubble. It readily worked to a good face and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining. For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe

CAEN and AUBIGNY STONE.—P. POUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 346, High-street, Southwark, near the Townhall.

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Lourd, Berdham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bridd, Portland, Yorkshire, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.

N.B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

TO CEMENT MANUFACTURERS &c.
A QUANTITY of PORTLAND STONE CHIPPINGS to be DISPOSED OF. Also, a quantity of ANSTON STONE CHIPPINGS.—Apply to Mr. CLARKE, 7 and 8, Cannon-street, City.

BRAMLEY-FALL STONE and LARGE LANDINGS. Mrs. ANN HUSLER can supply any quantity of BRAMLEY-FALL STONE, large landings, flaxs, steps, sills, cop-ings, sinks, &c. &c. at the lowest wholesale prices. Norice.—No charge made for supplying to dimensions.—Apply for price, &c to S. TRICKETT, Stone Wharf, Isle of Dogs.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Harebill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades Quoins, Tombs, Fonts, &c. at the new premises. Whitehall Wharf, Cannon-row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley-street, and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 39 and 40, Upper Belgrave-place, Pimlico.

TO STONE MERCHANTS AND CONTRACTORS.
FREE-STONE QUARRIES TO BE LET on lease, situated on the east coast of Scotland. The quarries have been long worked, and are among the principal ones in the north of Scotland. They are now in first-rate working order. The stone is well known, and commands an extensive sale in this country and abroad. There is no land carriage, and ships of a heavy draught can load at the quarry pier.—For specimens and particulars, apply to Mr. H. SMITH, 28, Southampton-buildings, Chancery-lane, London, before November 30.

FINDON QUARRIES, on the Cromarty Forth, Scotland, TO BE LET.—These well-known and extensive Quarries will be let on Lease from January next, for such a number of years as may be agreed on. They afford an unlimited supply of a valuable and ornamental freestone, suitable for all building and engineering purposes, which has been extensively used both at home and abroad. There is a good local trade, and the Great North of Scotland Railway, now in course of construction, is in the vicinity of the quarries. No land carriage, and ships of heavy draught can load at the quarry pier. The whole is in perfect working order.—For particulars and terms apply to Mr H. SMITH, Southampton-buildings, London; or to the Proprietor, L. M. MACKENZIE, Esq. Balnadiy Dingwall, Rosshire, N.B.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully submits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and LEAD-BOW DEALS, MAHOGANY, &c. &c.:—

Pine Planks, 12 ft. 3 in. by 11 in.	from 4s.	0d. each.
Spruce Deals, 12 ft. 3 in. by 9 in.	„ 2s.	9d. „
Yellow ditto, 12 ft. 3 in. by 9 in.	„ 3s.	9d. „
Honduras Mahogany	„	7d. per foot.
Spanish ditto	„	8d. „
Wainscot ditto	„	9d. „
Spruce Fallow Lathwood	„ 10s.	6d. per 120.
Venetian Blind Laths	„ 8s.	per bundle.

Veneers and cut stuff of every description at equally low prices. Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ½ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY respectfully begs to inform the Building Public, that all Baltic Goods are dearer and American Sprnce and Pine are cheaper.

He asks special attention to the following, which are now on sale:—

2,000 Pieces of Timber.
20,000 Planks, Deals, and Battens.
30,000 Prepared Floor Boards, of all lengths and sizes.
5,000 Rough Boards.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.

N.B. The extensive Saw-mills are now in operation.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage a ready bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent upon his list prices for his Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

By Her Majesty's Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers. For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 42, Robert-street, Chelsea, adjoining the King's-road Saw-mills.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had at the Factory, 34, Jamesstreet, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

MOULDINGS by MACHINERY at REDUCED PRICES.—ARCHBUTT and ATKINSON beg to inform their customers that the 20 per cent. advance heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices. St. Pancras Saw Mills, Cambridge-street, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the necessary materials. Three sizes of the stone. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman-square, London.

THE SOCIETY for IMPROVING the CONDITION of the LABOURING CLASSES, No. 21, Exeter-hall.

THE DWELLINGS of the LABOURING CLASSES, their Arrangement and Construction, with a Description, Plans, &c. of the Model Houses belonging to the Society. Numerous Designs for Dwellings adapted to Towns as well as to Agricultural and Manufacturing Districts, and an Appendix, containing H.R.H. Prince Albert's Exhibition Model Houses, Hyde-park, 1851. The Model Cottages, &c. built by the Windsor Royal Society.

By HENRY ROBERTS, Esq. F.S.A.
Third Edition, enlarged. Cloth, 4s.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEELand STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

IRON ROOFS, Wrought-iron GIRDERS, Garder Bridges, Railway and Builders' Wrought-iron Work, Gasholders Tanks, and Boilers,
CHARLES WALKER and SONS,
Midland Iron Works, Tipton, Staffordshire.
Office, Little Sutton-street, London.

THE PATENT GALVANIZED IRON.
TUPPER and CARR,
Owners of Crawford's Patents, and Successors to
THE GALVANIZED IRON COMPANY,
Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.
An allowance to the Trade.
GALVANIZING WORKS,
REGENT'S CANAL DOCK, LIMEHOUSE;
BROAD-STREET and BERKLEY STREET, BIRMINGHAM.
LONDON OFFICE, 3, MANSION-HOUSE PLACE.

PATENT GALVANIZED IRON.
(IMPROVED PROCESS.)
JOHN SYMONDS and CO.
WORKS, GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.
Roofs fixed complete

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-bason, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water-pipes; Hooping, Castings, Furnace-pans, Baths, Buckets, &c. whole-sale retail and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, schools, boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 19, Fenchurch-street, City.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.
G. HOWLETT, by appointment to the Board of Trade, Newington Zinc and Galvanized Iron Works, 2, Surrey-place, next the Elephant and Castle, Newington, Roofs, flats, railway stations, dockyard, and engine sheds, covered with zinc galvanized iron or plumber zinc, on the most improved principle, and on the lowest terms. Church lights, vanes, and every description of work, executed to drawings, &c.; half round and O. G. gutters, rain water pipes, dowells, &c.; kept in stock; 4-inch O. G. gutter any pattern, fixed 4d. per foot within ten miles.

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.

Improved Self-acting Cottage Ranges, with Large Oven and Boiler, 30 32 34 37 inch, 28s. 30s. 32s. 35s.
Best Self-acting Ranges, with Oven and Back Boiler, Bright Wrought Bars

Cast Gutters—4 inch, 11d. per yard.			
O G Gutters	30	32	34 inch.
	1s. 4d.	1s. 6d.	1s. 8d. per yard
Best Cut Clasp and Rose	1½	2	2½ 3 inch, and larger.
	19s.	15s. 6d.	18s 6d. 17s. 16s per cwt.
Cut Bilbo Heads, 15s. 6d. per cwt. Cast Lath, 13s.			
1 inch Cut Lath, 19s.			
	3	4	5 6 inch.
Patent Line	44d.	6d.	7d 9d 1s. per knot.

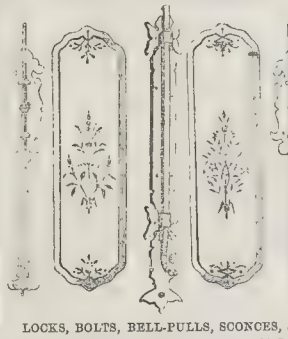
6-inch Rd. Ward Mortise, with best Furniture and Patent Spindles, 3s. 6d. each. Light Elliptic and Register Metal, 14s. per cwt.
Dr. Arnott's Ventilators, 4s 6d. each
An extensive stock of bar, rod, hoop, and sheet iron
Brick Moulds kept in stock. Any size made to order.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simple city and compactness of their machines over those now in use which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for exportation or otherwise

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico. All Works of Art in the various Metals executed as the above Foundry.

JOHN FINCH, Ironfounder, Priory-street Works, Dudley, Wholesale Manufacturer of Fenders, Fire-Irons, Dovetail Joints for Iron Bedsteads, Garden-Seats, Flower-Stands, &c. &c.

THOMAS EDINGTON (lately senior partner of the Phœnix Iron Works, Glasgow), Iron Merchant, Contractor, Agent for Patents, General Commission Agent, Inspector of Railway Bars and Castings, 17, Gordon-street, Glasgow. Agent on commission for the purchase of Scotch Pig-Iron, Railway Bars, Bar-Iron, Castings; and for the sale of English Boiler and Ship Plates, Bar-Iron, Angle and Rivet Iron, Anchors, Tinned Plates, Chains, Cables, Nails, Steel, &c. &c.



MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,
A SUBSTITUTE FOR SHEET-LEAD FOR
ROOFING, RIDGES, GUTTERS, FLOORING,
AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.
This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the fitness of Zinc with the Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.
Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.
For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.
The Size of the Sheets is 7 feet by 2 feet 8 inches.

No. 11 Gauge weighs about	18	oz.	per foot super.	
No. 12	"	"	"	20 oz. do. do.
No. 13	"	"	"	24 oz. do. do.
No. 14	"	"	"	26 oz. do. do.

For further particulars apply to
MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,
DOWGATE DOCK, UPPER THAMES STREET, LONDON.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Cast-iron Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus, (Gas works erected complete.) And manufacturers of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

HART AND SON,
IRONMONGERS AND MANUFACTURERS OF PITT'S PATENT SPINDLED DOOR FURNITURE.

LOCKS, BOLTS, BELL-PULLS, SCONCES, &c.
53, 54, & 55, WYCH-STREET, and 91, DRURY-LANE, London.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, &c.; and the new registered Venetian Ventilator, so much admired, &c. 8s. 6d. each.
J. H. BOOBBYER (late STURGH and BOOBBYER), established nearly 50 years, for the supply of Goods from the best Manufactories, at the lowest prices.
14, Stanhope street, Clare-market, London.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.
ANDREW CLARK and COMPANY, PLUMBERS,
THE BEAR GARDEN LEAD WORKS, SOUTHWARK,
Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of
UNITING LEAD TO LEAD WITHOUT SOLDER.
Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.
PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

CHUBB'S LOCKS & FIREPROOF SAFES.
INEFFECTUAL ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND SOUTH WESTERN RAILWAY, LIVERPOOL.
"London and North Western Railway Company,
" Liverpool, May 17, 1853
"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which com, largely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door. I am, gentlemen, your obedient servant, "GEORGE PALMER.
"Messrs. Chubb and Son."
FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.
"8, Great Vine-street, May 3, 1853.
"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY.
" Superintendent C Division of Police.
"Messrs. Chubb and Son."
CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.
Complete Illustrated Lists, with prices and sizes, will be sent on application.
CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.
IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses, Hotels, and Offices, require no flue, create no dust, and are safe from all risk of fire.
Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S
IMPROVED AIR WARMER
is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.
Prospectuses and Estimates may be obtained on application to
SYLVESTER and CO.
Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's. JONES and BLAXTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade that they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Candlesticks, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.
BAKERS' OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stoves, Ranges, &c. always in stock.

FOUNDRY AND IRON WORKS,
68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.
GLOVER, BROS.,
Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental
Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.
A large stock of Rain-water Pipes, Plain and O G Gutters, Air-bricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.
Plain and Ornamental Vases 20 per cent. cheaper than Terra-cotta.
Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes and Strong Rooms, Tanks and Boilers, and every description of ironwork to specification, and the work executed with every attention to quality and despatch.
GLOVERS' IRONWORKS,
168, DRURY-LANE, and CHARLES STREET.

LONDON and NORTH-WESTERN RAILWAY.—The Directors of the London and North-Western Company are prepared to receive OFFERS for a few small-sized LOCOMOTIVE ENGINES, which they have now on sale. The engines have 14-inch cylinders, four wheels coupled and uncoupled, 5 feet and 5 feet 6 inches diameter, copper fire-boxes, brass tubes and boilers, and their machinery is in fair working order.—The engines may be seen, on application to Mr. M'CONNELL, Locomotive Superintendent, at Wolverton Station.—By order, CHARLES E. STEWART, secretary.
Euston Station, Nov. 17, 1854.

FOR SALE, a PILE-ENGINE, complete, in good condition, price £35; a Set of Pumps, complete, consisting of three barrels 18 inches diameter, 2 feet 10 inches strike, six iron pipes, 6 feet long, each 8 inches diameter; Two Cranks, with provision for four pumps, if required; One Crank, with cogwheel; Eight Lumber Blocks, with brass bushes; Two Sets of Connecting Rods; Eight Rollers for Connecting Rods; the whole complete, in good condition, price 20l. Seven Framed Principals, 31 feet span, and good as new, price 3l. each.—Apply to JAMS and PRICE, Contractors, Cardiff.

CHEAP GAS-FITTING WAREHOUSE.—The Trade supplied with every description of GAS CHANDELIERS, Hall Lamps, Pendants, Pillars, Brackets, Iron and Brass Tube, Tin and Composition Pipe, &c. &c. at J. JEAL'S 30 and 31, Oldsa reet, near St. Luke's Church, London.
P.S. As large and choice an assortment as any house in London.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES,
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

CAUTION.

Whereas, certain parties are endeavouring to deceive the Public with worthless imitations of

CHAPPUIS'S PATENT DAYLIGHT REFLECTORS,

Representing themselves as from the Manufactory, 14, ST. MARY-AXE, in every case of such misrepresentation, infringers will be dealt with according to law.

This day is Published, Price 3s. 6d. cloth lettered,

ORR'S CIRCLE OF THE SCIENCES,

VOL. II.

BEING THE MATHEMATICAL SERIES.

INCLUDING:—

SIMILE ARITHMETIC, ALGEBRA, AND ELEMENTS OF EUCLID.
By J. R. YOUNG, late Professor of Mathematics, Queen's College, Belfast.

PLANE AND SPHERICAL TRIGONOMETRY, SERIES, LOGARITHMS, AND MENSURATION.
By the Rev. J. F. TWEEDALE, M.A. Professor of Mathematics, Sandhurst.

AND

PRACTICAL GEOMETRY.
By ALEXANDER JAMIESON, Esq., Civil Engineer.

Also, uniformly bound, Price 3s. 6d. THE FIRST VOLUME,

CONTAINING:

THE PRINCIPLES OF PHYSIOLOGY; STRUCTURE OF THE SKELETON AND TEETH; AND VARIETIES OF THE HUMAN SPECIES. WITH AN INTRODUCTORY TREATISE ON THE NATURE, CONNECTION, AND USES OF THE GREAT DEPARTMENTS OF HUMAN KNOWLEDGE.
By Professor OWEN, Dr. Latham, and Dr. Buchanan.

LONDON: HOULSTON AND STONEMAN, PATERNOSTER-ROW;
WM. S. ORR AND CO. AMEN CORNER.

KELLY'S PRACTICAL BUILDERS' PRICE-BOOK, or, a Guide to the Valuation of all kinds of Artificers' Work; with the Modern Practice of Measuring, and an Abstract of the New Building Act for regulating the Construction of Buildings. Revised and corrected. A New Tabulation upon the present Value of Materials and Labour. As also for the Architect of eminence, as stated by several experienced Surveyors. Illustrated with Seventy-three Wood Engravings and numerous Woodcuts. Royal 8vo, Price 8s. neatly bound.

London: published by T. KELLY, Paternoster-row; SIMPKIN and MARSHALL; and may be had of all Booksellers.

Of whom may be had, New Editions, in Quires, of the following Practical Architectural Works:

1. PETER NICHOLSON'S PRACTICAL CARPENTRY, JOINERY, and CABINET-MAKING. Revised by TREDGOLD; being a new and complete System of Lines, for the Use of Workmen; forming a complete Mechanical and Mathematical Practical Treatise, &c. &c.; and a description of the various materials employed. Ten Parts at 2s. 6d.; or, bound in 2 volumes upwards of Ninety Steel Plates, and numerous Woodcuts.

2. PETER NICHOLSON'S PRACTICAL MASONRY, BRICKLAYING, and PLASTERING (revised by TREDGOLD), both plain and ornamental; containing a new and complete system of lines for Mechanical practice, for Workmen; the Formation of Mortars, Cements, Concrete, to which is added a variety of new designs for Arches, Jambs, Tombs, Gravestones for Cemeteries, &c. &c.; and a description of the various materials employed. Ten Parts at 2s. 6d.; or, bound in 2 volumes upwards of Ninety Steel Plates, and numerous Woodcuts.

3. TREDGOLD and NICHOLSON'S Theoretical and Practical Treatise on the FIVE ORDERS of ARCHITECTURE, containing plain and simple Rules for Drawing and Executing them in the purest style; including an historical Description of the Architecture illustrated by upwards of One Hundred steel Engravings, executed by Artists of first-rate talent, including numerous Diagrams, &c. Twelve parts at 3s.; or in boards, 3s.

4. DESIGNS for COTTAGE and VILLA ARCHITECTURE; containing Plans, Elevations, Sections, Perspective Views, and Details for the Erection of Cottages and Villas in the Gothic and Italian styles; engraved on steel, with one Plate for Building, and the estimated Cost of each Edifice. Twelve parts at 2s.; or in boards, 30s.

5. DESIGNS for PUBLIC BUILDINGS, consisting of Plans, Elevations, Sections, Perspective Views, and Details of Churches, Chapels, Schools, Almshouses, Gas Works, Markets, and other Buildings for public purposes. By S. H. BROOKS, Architect. Twenty-one engraved on steel. Ten Parts at 3s. or 25 boards.

6. THE HOUSE DECORATOR and PAINTER'S GUIDE; containing a series of Designs for Decorating Apartments with plain and rich in the various styles of Architecture. By W. ADAM, Upholsterer, House Decorator, to her Majesty. Ten Parts, at 3s.; or in boards, 32s.

7. THE HOUSE PAINTER, or DECORATOR'S COMPANION; containing a complete Treatise on the Art of House Painting, Graining and Marbling; including the Origin of Colour, the Laws of Harmonious Colouring, the Manufacture of Pigments, the Various Kinds, &c. By W. MORGAN and W. SALTER, Painters to the Queen Dowager. With coloured Specimens of Painting and Graining and Marbling. Ten Parts, at 3s. or in boards, 32s.

THE ENGINEERS' and MECHANICS' ENCYCLOPÆDIA, a new and enlarged edition, comprehending Practical Illustrations of the Machinery and Processes employed in every Department of Manufacture. By the British Engineer. Illustrated by upwards of 200 Wood Engravings. By HENRY ADAM, Civil Engineer, &c. The rapid progress of Mechanical Science has developed many of the principles of facts since the last publication, in 1836, of the Encyclopædia, which the Inventions and Discoveries recently made have rendered necessary. The Publisher, therefore, at the request of such who have consulted the work, has undertaken a new edition, for, as the value of such was tested by experiment, a description was accordingly prepared. By the election of new subjects, and a careful revision of old ones, has been rendered a new and systematic work, so that it may be received as full and faithful exposure of the existing state of Engineering and Mechanical science. The whole of the Practical Matter will be found in the two volumes, comprised in two Large 8vo. volumes, cloth, lettered, price 1l.

In course of publication, in 12mo. price 3s. each,

A SERIES of SCIENTIFIC MANUALS.
By the Rev. JOSEPH ALEXANDER GALBRAITH, M.A. Fellow of Caius College, and Erasmus Smith's Professor of Natural and Experimental Philosophy in the University of Dublin; and the Rev. SAMUEL HAUGHTON, M.A. Fellow of Trinity College, and Professor of Geology in the University of Dublin.

Already published,

*** The Prospectuses may be had of Messrs. LONGMAN and Co. and grats of all B. Sellers.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In Two Parts, price 1s. each; or in 1 vol. price 2s. 6d. cloth,

SELECTIONS from the Rev. SYDNEY SMITH'S WRITINGS. Parts III. and IV. Forming Nos. 71 and 72 of the "Traveller's Library."

*** The Selections from Sydney Smith's Writings, in 2 vols 2s. 6d. each cloth; or in Four Parts, at 1s. each.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND CHEAPER EDITION.
The Third Edition, in 1 vol. price 21s. with numerous Engravings,

GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical: Illustrated with more than 1,000 Engravings on Wood, by A. BRANDON, from Drawings by J. S. GWILT. With a Supplement on Gothic Architecture.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Second Edition, enlarged, in 8vo. price 5s. cd.

THE CHOICE and COOKERY of FISH.
A Practical Treatise. By PISCATOR.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, in 8vo. with numerous Woodcuts, price 1s.

PEREIRA'S ELEMENTS of MATERIA MEDICA and THERAPEUTICS. A new edition of the Third Volume.

Edited by A. S. TAYLOR, M.D. & G. O. REES, M.D. &c.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

A new edition, in 2 vols. 8vo. with Six Maps, price 30s.

M'CULLOCH'S GEOGRAPHICAL, STATISTICAL, and HISTORICAL DICTIONARY of the WORLD.

*** The present is an improved edition, with additional information, made necessary by late changes. The articles Australia, Russia, and Turkey, with others of less importance, have been entirely written for this edition; and the whole has been carefully revised. Engravings of the first time with the names of numerous places in the East of Europe, essentially important great empires of which in this edition the description has been entirely rewritten.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

BY AUTHORITY OF THE REGISTRAR-GENERAL.

Just published, price 5s. 6d.

THE CENSUS of GREAT BRITAIN in 1851; comprising an Account of the Numbers and Distribution of the People, the Places, Conjugal Condition, Occupations and Birthplace, with Results of the Inquiries as to Deaths, and the Houses of Public Institutions, and an Appendix. Brought Down, and Condensed Expressly from the Official Reports and Tables.

Extract from Lord Harrowby's inaugural address at the General Meeting of the British Association at Liverpool, on Wednesday, Sept. 20, 1854. "I know that the Census Returns, and especially one of the greatest monuments that have ever been presented to a nation, as a record of its own constituent elements and condition, compiled and commented on with skill at industry and moral diligence, and impartiality, be looked upon by the people of England as the great volume of the country was of its surface."—*Morning Chronicle.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Just published, for 1855, the Forty-sixth Edition of

SKYRING'S BUILDERS' PRICES, calculated from the market price of materials and labour; containing a Diary and Daily Remembrancer, and Weekly Time Account, copious Abstract of Metropolitan Buildings Act, with the Modifications of the same, and a variety of new and useful information.

SIMPKIN and MARSHALL, Stationers-court, London, and may be had of all Booksellers.

In 1 vol. containing upwards of 40 plates. Price 5s.

DESIGNS, &c. for VILLAS.
By GEO. JOHN RHODES, Architect, Author of "Remarks on the Purchase of Leasehold Property."

Now ready.

London: J. R. HALE, 6, Tavistock-row, Covent-garden, or by post, from the Author, 12, Lincoln's-inn-fields Chambers.

This day, price 4s. the 33rd edition of

LAXTON'S BUILDERS' PRICE-BOOK for 1855, containing the Prices and Memoranda, together with the Whole of the Building Act, and Abstract of the Lighting Act.

By FREDERICK W. LAXTON, F.S.A. Barrister-at-law, and HENRY LAXTON, Architect.

Published at the office of the Civil Engineer and Architect's Journal, 10 Arundel-street, Strand, and to be had of all Booksellers.

Now ready, price Five Shillings, Third Edition of Part III. of a

TREATISE on INDUSTRIAL INVESTMENT and EMIGRATION, being Suggestions for the Future Disposal and Improvement of Copyhold, Life, Leasehold, and Church Property, by the Application of the Life Assurance Enfranchisement and Freehold Land Societies, and a Mathematical Appendix, by

ARTHUR SCRATCHLEY, M.A. F.R.A.S.
Actuary of the Westminster Life Assurance Society, & Parliament-street, Westminster.

London: FREEHOLD SCRIBLERS' INSTITUTE, 24, Pall mall, and CHARLES MITCHELL, 12, Red Lion-court, Fleet-street.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series, Enlarged, price 3s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VII. for October, just published.

GEO. ROUTLEDGE and CO. Farringdon-street; and R. SPENCER, 314, High Holborn.

Athenæum-chambers, December 2, 1854.

MR. MURRAY'S
LIST FOR DECEMBER.

1. THE ENGLISHWOMAN in RUSSIA; or, Impressions of the Life and Society of the Russians at Home. Woodcuts. Post 8vo.

2. MEMORIALS of CANTERBURY. The Landing of Augustine. The Murder of Becket. Becket's Shrine—The Black Prince. By Rev. A. P. STANLEY. Woodcuts. 8vo.

3. HANDBOOK for YOUNG PAINTERS. By C. R. LESLIE, R.A. Illustrations. Post 8vo.

4. HISTORY of the ENGLISH POOR-LAW, in connection with the Condition of the People. By Sir GEORGE NICHOLLS. 2 vols. 8vo.

5. A SCHOOL HISTORY of ROME. By HENRY G. LIDDELL, M.A. Head Master of Westminster School. Woodcuts. 10s.

6. ATHENS AND ATTICA; Notes of a Tour. By Rev. C. WORDSWORTH, D.D. Third Edition. Woodcuts. Crown 8vo.

7. POLYNESIAN MYTHOLOGY, and Traditions of the New Zealand Race. By Sir GEORGE GREY, late Governor of New Zealand. Woodcuts. Post 8vo.

8. THE ART OF TRAVEL; or Shifts and Contrivances available in Wild Countries. By FRANCIS GALTON. Woodcuts. Post 8vo.

9. BIOGRAPHICAL DICTIONARY of ITALIAN PAINTERS; a Handbook to the Picture Galleries of Italy. Edited by Rev. R. WORDSWORTH. Post 8vo.

10. LETTERS on TURKEY. Describing the Empire and its Inhabitants—Osmanlis, Greeks, Armenians, &c. By M. A. URBICHI. 2 vols post 8vo.

11. A NEW LATIN-ENGLISH DICTIONARY. By Dr. WM. SMITH. One Volume. Medium 8vo.

12. A SMALLER LATIN-ENGLISH DICTIONARY. By Dr. WM. SMITH. Crown 8vo.

13. THE MONASTERY AND THE MOUNTAIN CHURCH. By the Author of "Sunbeams through the Mist." Woodcuts. 10s.6d.

14. HANDBOOK FOR TRAVELLERS IN SPAIN. By RICHARD FORD. Third Edition, entirely revised. Map. 2 vols. Post 8vo.

15. JOHNSON'S LIVES OF THE ENGLISH POETS. Edited, with Notes, by PETER CUNNINGHAM, F.S.A. Vol. I. 8vo.

16. KNOWLEDGE IS POWER; a View of the Productive Forces of Modern Society, and the Results of Labour, Capital, and Skill. By CHARLES KNIGHT. Woodcuts. 1 cap. 8vo.

17. A TREATISE on the SCIENCE of GUNNERY. By Sir HOWARD DOUGLAS. Fourth and entirely revised Edition. Woodcuts. 8vo.

18. THE LIFE and MISCELLANEOUS WORKS of DR. THOMAS YOUNG. Edited by Dean PEACOCK. Plates. 3 vols 8vo.

19. THE ORIGIN and PROGRESS of the MECHANICAL INVENTIONS of JAMES WATT, illustrated by his Correspondence with his Friends. By J. P. MUIRHEAD, M.A. 3 vols. 8vo.

20. REJECTED ADDRESSES. By JAMES and HORACE SMITH. A New Edition. Fcp. 8vo. 1s. ("Murray's Railway Reading.")

21. NOTES FROM LIFE. By HENRY TAYLOR. Fourth Edition. Fcp. 8vo. ("Murray's Railway Reading.")

22. THE OFFICIAL HANDBOOK; being An Historical Account of the Duties and Powers of the Principal Authorities of the United Kingdom. An entirely New Edition. Post 8vo.

23. LORD HERVEY'S MEMOIRS of the REIGN of GEORGE II. Edited by Mr. CROKER. New Edition, Portrait. 2 vols. 8vo.

24. HISTORY of SPANISH LITERATURE. By GEORGE TICKNOR. New Edition. 3 vols. 8vo.

25. THE LION-HUNTER IN SOUTH AFRICA. By R. GORDON CUMMING. Fourth Edition. Woodcuts. 2 vols. Post 8vo.

26. HUNGARY AND TRANSYLVANIA. Their Scenes, Political, and Economical Condition. By JOHN PAGET. Third Edition. Woodcuts. 2 vols. 8vo.

JOHN MURRAY, Albemarle-street.

The Builder.

SATURDAY, DECEMBER 2, 1854.

MR. RUSKIN delivered the second of his series of lectures at the Architectural Museum, on Decorative Colour as applicable to Architectural and other purposes, on Saturday, the 25th ult. We have displaced some other matter to give a full report of it in our present number. The subject of his lecture was the general principle of outline, and the points which it was the purpose of Mr. Ruskin to illustrate, as stated in the syllabus, were,—"Wherein dignity of outline consists—Probability that many persons are possessed of outline talent who are incapable of drawing, in the full sense of the term—and Natural objects, how to be studied with a view to skill in illumination."

He commenced by observing that as it was probable there were many persons present who had not attended the previous lecture, it would be necessary for him to repeat what he had then said, viz. that he had come there to tell working people plain things in a plain way, and that he must be pardoned, therefore, if his so-called lecture—which, however, was not really a lecture, but a talk—was less entertaining than it would perhaps otherwise be. The business of that morning would be to ascertain, as far as possible, the real nature and merits of outline. First, however, it was necessary to agree upon the important point of what that which was generally called outline really was. The first thing they knew about it was, that it was something that did not exist in nature. There was no such thing as outline in nature, and for this simple reason, that every object, whether placed near to or at a distance from the eye, had something which could not be clearly appreciated or described. On looking at a tree,—at first sight you would think you saw its form clearly and sharply defined against the sky, but try and count the leaves and you found that what appeared to be an outline was but a mere mist of dots, expressible by no lines or series of lines you could lay down. Go further still, and examine a forest of trees, and you would find that if the single tree had no outline, still less had the aggregate of trees of which the forest was composed, anything like outline. The grey mountain ridge appeared at first sight to form a distinct line against the background of the sky: examine it more closely, and the apparent outline resolves itself into the verdure of countless blades of grass and mosses, which no pen can trace—no line describe. The mountains, the forests, the trees, or the castle sheltered beneath their shade, had then no outline: there were innumerable blades of grass, numberless leaves, and hairs and fibres in infinite number, but nothing that could be accurately expressed by a line; and it was the same with everything in nature that had any organic structure,—there was something which the eye recognised, but nothing that it could accurately define or the hand trace; nothing that could be expressed by human skill or human art. When a man by the exercise of great ingenuity succeeded in making an ugly thing like the specimen in his hand (showing the frame of a drawing), even that was not an outline,—it was like a line traced against a back-ground; but if they attempted to describe any objects in nature by means of a black line, they put down something that there was not. What, then, was an outline? It was not a fact,—it was simply the assertion of a fact, namely, that if an outline were well drawn, within the breadth of the lines, whatever it might be, the termination of the thing took place. The line might be thick, or it might be thin, but the end of the thing represented was within it, and if it were pure and perfect outline, each side of the line would be true to the contour of the thing intended to be represented. Take, for instance, a round ball. If you attempted to draw an outline of it, and that outline were correct, it did not matter how thick or how thin the line was. It would be true to the contour of the ball. The real surface and contour would fall between the two sides of the outline were it truly drawn. But, if by way of giving effect, any part of the outline were darkened or thickened more than another, then they would have an utter fallacy,—one of its outside lines must necessarily be wrong,—and the eye, instantly embarrassed, did not know which it was to follow,—it lost itself, and did not know how to go right. They knew how much people had been of late in the habit of publishing outlines which depended for half of what was called the effect, on being thicker on the side away from the light than on the other side. It was very curious how they could have fallen into such a habit, for nothing could be more absurd; but he apprehended the main reason was, that when people were drawing things at all spiritedly, they had a tendency to add pieces of shadow on the side farthest away from the light. Here was an instance (exhibiting a drawing of a leaf of the kind alluded to), and here was a true outline (exhibiting another drawing). Outline might indeed, if judiciously shaded, be made to convey increased expression and effect; but what he wished to impress upon them was, that in drawing outline they should draw it correctly. If they drew shadows, they should draw freely. But before they began, let them understand what they were going to draw. No great draughtsman who understood his business ever thickened his outline on the side away from the light; for, as a general thing, outline was most visible on the side next the light; and, though the real object was to get pure outline in all cases, the thorough master of his craft would, if he thickened at all, be apt to thicken the line turned towards the light. He would show them some instances of this. Take an example of a man whom they would admit to have been a master of his craft—Raffaelle. Here was an etching of the head of St. Katherine done with a pen. The only dark side of the outline, as they would observe, was next to the light. Towards the opposite side the line vanished almost into nothing, whilst under the nose and round the eyes the shadows were marked as in the leaf which he had just exhibited. Here was another specimen, one of Albert Durer's. He was a man, too, who knew his business. Here was a woodcut by that master (exhibiting it). It was coarse bold stuff, it was true. It was not cut as they cut now, and perhaps so much the better. They could see plainly on what side the light came there. The shadows were all perfectly and freely drawn, and they would see that when the object of Albert Durer was to draw outline, he stuck to outline, and that when he did thicken his line, it was next the light. Such was the practice of Raffaelle and Albert Durer. But here, perhaps, was a better specimen still (exhibiting another of Albert Durer's). They could not tell on which side the light was, for it was clear and pure outline only. If they looked at the clouds presented in this example, they would see that they were the most aërial things imaginable, but that where there were dark lines, they were all turned towards the light. Then there was another man who knew his business—Turner (an etching of Turner's was here produced). This was done by Turner, with the point of a fork, he believed. The effect was beautiful. All these were first-rate specimens of outline. There was yet another specimen, executed by a noble fellow, a German—who had done some greater things than any other artist of the present day. He was not so good as Albert Durer, but he was mighty in his way, and ought to be universally known; and the woodcuts of Death the Avenger, and Death the Fiend, were worthy of being known to the whole civilized world. He was glad to be able to make them acquainted with this example, for there was in it the effect of a sunset expressed with almost unexampled power, and in the sleeve of the principal figure, which was outlined with the most perfect accuracy, the strongest lines were those which came against the light. Outline, then, was the production of certain effects in a certain way. It was opposed to light and shadow in this respect, that light and shadow altered, but outline, the statement of material form, did not alter. Many persons had the gift of seeing and producing effects in light and shadow, which did not exist in outline; while others had the gift of perceiving and expressing the contour of a thing in outline. They were aware that many people, before the invention of photography, gained their bread by cutting black paper portraits. He had always been struck by the marvellous gift which had enabled these persons with a pair of scissors to cut out instantaneously and with the greatest accuracy the profile of a human face. Again, they knew how many people were enabled, with marvellous accuracy, to portray features, and even expression,—and this gift was frequent in children,—in outline upon paper. But these persons stopped short, partly from want of opportunity, and more frequently from a failing of character,—that was, they had not the disposition to go into the nicer subtleties of light and shade, not only because they were subtleties, and uncertain in their results, but because there was a peculiar delicacy in light and shade, the expression of which required enormous study and practice. Even to appreciate this delicacy and softness required a peculiar sympathy almost an effeminacy, of mind; and those who loved it most, and followed it most,—those who attained the greatest eminence in expressing it,—had often been led into sensuality. To some extent sensuality was, though not necessarily so, the result of that peculiar state of mind, as in Corregio, who, though he had painted some of the most sublime of sacred subjects, had, in many of his works, displayed the grossest sensuality—sensuality of which any man ought to be ashamed. He was not in this saying anything against light and shadow; but there was this difference between it and outline, that the love of outline was a pure love of truth, and assuredly it was better for those who possessed the gift of outline and had not the time, or the opportunity, or the mind to pursue light and shadow, to cultivate the gift they possessed, than to endeavour to produce effects which they would never be capable of expressing. Whether or not there was a peculiar character in these people, he did not know; but assuredly it would be better that they should be able to express themselves accurately in pure outline than to follow after effects which they could not realize. With outline it was possible to unite to a certain extent pure colour or pure shadow. Instinctively this might be done. In the Raffaelle sketch which he had exhibited, there was a certain degree of light and shade added to the outline, but when both shadow and colour were added, then a mighty question was opened. Colour varied with every phase—with every turn in the contour of a subject. And if in addition to colour it were desired to express light and shade in its true and subtle connection with colour, a whole lifetime must be devoted to it. Painting was very much like music. A musician for whom he had great respect, who was present

at the previous meeting, and from whom he had learned all he knew of the art, Mr. Hullah, had spoken of the difficulty of teaching people to sing and to play, and especially of the skill which was required in the management of an orchestra. There was great similarity between the two arts, painting and music, in this respect. Drawing in outline correctly, corresponded very much with plain clear speaking. Drawing in outline with colour, corresponded with clear articulation in singing. If to outline they added light and shade, they arrived at something corresponding to clear articulation, coupled with playing upon an instrument. But if upon true outline they gave light and shadow, and true colour in their due proportions, that was like the skilful management of the full orchestra. There were not many who could do that. Persons who, commenting on what he had said on the art of illumination, and not understanding the requirements of a great painter, but supposing that from the mere ornamentation of a page, or the clear drawing of an outline, they could go on to imitate the truths of nature in light and shade, and colour, were mistaken as to the views which he had expressed. He had shown that the art of illumination was distinct from that of true painting, and had produced examples from missals, showing the falling off in that art, after it had attained its culminating point in the thirteenth century, and attributing its decline to the attempt to introduce more and more light and shadow. Here was a specimen of this (exhibiting a page fully illuminated, containing fruit, scarlet strawberries, flowers, and other things). Had this been put into his hand by the artist, he would have said to him, "You are not going to be an ornamental painter any more, then? you are going to be a painter of fruit: if you want to paint fruit, that is the way to do it [showing a pear painted in water-colours]: unless you can paint fruit as well as that I will have nothing to do with you, and to do that you must paint for six hours every day for forty years." This was first-rate fruit painting by W. Hunt, of the Old Water-colour Society. It was a glorious thing to be able to paint like that, and yet it was but a single pear; and there were half-a-dozen scarlet strawberries in every page of the missal; and yet the one was bad painting, while the other was all but perfection. These later missals were full of faults and incongruities, arising from the attempt to produce paintings when the writers should have limited themselves to ornaments. It would have been far better if they had confined themselves to what they could do well, instead of attempting great things to which they were unequal. He had been subjected to criticism because he had expressed an opinion more favourable to the works of the thirteenth century than those of a later period. What he had spoken of was the fall of art, as respected missal painting, and he had shown, from the causes which he had stated, that the art had from that period continued to decline. It had gone on falling, becoming worse and worse until the time of Julio Clovio, which was the worst of all. He did not mean to say that a painter should not illuminate a book or paint a wall, but it must be when he was at rest. But because a great painter might have painted a magnificent picture on the wall of a palace, we must not expect to have all our rooms painted by great artists, nor could we expect generally to have good paintings in our books. If we had, the attention would be carried away from the work of the author to the work of the artist, and he had no idea of having books that would not be read. What he wished was, to endeavour, by introducing appropriate decoration, to make books more attractive, and not to fill libraries with works so highly decorated that the owners were afraid to touch them. His object in introducing illuminations into books was not to lead the mind away from the text, but to enforce it.

Whilst upon this subject, he would notice some remarks which had appeared in last week's *Builder*. It was said in an article signed "Illuminator," that he had shown illustrations of letters surrounded and mixed up with so many ornaments and forms as to render them illegible. He was afraid that many of the specimens which he had exhibited were to some extent illegible; but that was only because we were not used to them. Probably there were not many persons present who could read Greek or Hebrew; and to them the text of a book in either of these languages would be equally illegible; but that was only because they were unacquainted with the Greek and Hebrew alphabets. If they were to study Greek and Hebrew, the letters would no longer be strange; and so when they became accustomed to illuminated lettering it would be read with facility. He had never recommended that every letter or every initial letter should be illuminated, but that the illumination should be appropriately introduced, to illustrate not to obscure the text. There were many present who probably could not read black letter. Here was (exhibiting it) a black letter manuscript of 1290. It was plain enough to those who were accustomed to it, although to many it would be perfectly illegible. Of all persons he was the last who ought to be charged with desiring to introduce illegibility, for he had published his opinions upon the subject. He had said in his "Seven Lamps," — "Place them, therefore [inscriptions] where they will be read, and there only; and let them be plainly written—not turned upside-down, nor wrong end first. It is an ill sacrifice to beauty to make that illegible whose only merit is in its sense. Write the Commandments on the church walls where they may be plainly seen, but do not put a dash and a tail to every letter, and remember that you are an architect, not a writing-master." His opinions in this respect, therefore, ought not to have been mistaken. If they wanted to see writing perfectly illegible, he would recommend them to go and look at the inscriptions in the Houses of Parliament. Passing from that subject, what he desired to impress upon them was to endeavour to express themselves clearly and legibly in outline; but above all, truly. The first thing to be done was to understand the difference between a true outline and a false one; and this led him back to the Parisian MS. to which he had previously referred. He was glad that he had been led back to this subject, for he had been told that it had been said of him in a newspaper,—he himself never looked at these things, for if he read everything that was said against him, he should have no time for anything else,—but a friend of his had told him that the *Morning Chronicle* had accused him of knowingly misrepresenting the circumstance of the teaching of Alfred,—that he had said it was the stepmother of the Saxon king, a French princess, instead of his own mother, who was an English woman, who induced him to learn to read by exhibiting to him a beautifully illuminated French missal, and promising it as the reward of his success. Now, he would give this advice to all who heard him, and especially to young persons,—let them never suspect a man of wilful misrepresentation until they had *proof* that he had said what he knew to be incorrect. If they did so, they not only insulted the person, but they insulted themselves, irreparably. People were often led into misrepresentations and sophistries in the eagerness of argument; but he did not believe, and none but those who were in the habit of misrepresenting could believe, that people would deliberately state a fact one way when they knew it to be another. As it happened, in this case he could have no motive for misrepresentation. He did not care a straw whether it was a French princess or an English princess who was the means of teaching Alfred. That was not his affair, but Sharon Turner's, whose book he had quoted, and whom he considered an authority on the point. But that in the illuminated works of the thirteenth century, France stood pre-eminent, any person acquainted with the subject must be aware. Whenever he entered a museum, or examined any collection of old illuminated writing, if he saw any specimens which were first-rate, he always said they were French: if he saw any MSS. second-rate in character, but still showing great intellectual power, but not wrought up with great refinement, he concluded that it was probably English work: if other specimens showed some intellectual power, but at the same time a great clinging to precedent, then he set them down as German; and if they were irretrievably coarse, he concluded they were Dutch. What was true with regard to MSS. was true also with respect to sculpture and architectural decoration. The best specimen we had of the Gothic architecture of that century was Lincoln Cathedral, and the next was that of Wells. The specimens of sculpture from Lincoln Cathedral so justly brought forward by Mr. Cockerell, were probably the finest examples of the kind that could be found in the country. But although they exhibited great boldness of outline and vigour of invention, they were by no means equal to the architectural sculpture of the French cathedrals of the same period: they were not equal tot he compositions at Rheims, Amiens, and especially at Notre Dame. [Mr. Ruskin here handed round some beautiful calotype views of the sculptured arches and columns of the French and English cathedrals of the thirteenth century, evidencing the superiority of the former in point of refinement]. The fact, too, was proved by Dante. Dante spoke also of England, but not as equally distinguished in art as France. He represented the people of England as remarkable for qualities of a more simple character,—

"Behold the king of simple life and plain,
Harry of England."

And he characterized them as a people distinguished by force of character, veracity, and simplicity, but not celebrated for great pre-eminence in the arts. He would now revert to the subject of illuminated letters. Here was a page of an illuminated missal hymn (exhibiting it), written in the year 1290, for the nuns of the monastery of Beauprè. It was very beautifully executed, and in a free style. He wished them to look at the little figure at the foot of the page, of an archer shooting at a bird with an arrow. The outline, notwithstanding its minuteness, was most accurately drawn, and evidently by a man who had thought it worth while to study the art he practised. He had made an enlargement of the little scarlet figure, and it would be seen from that, that although the writer did not perhaps know much of anatomy, he had taken care to study an archer drawing a bow before he drew the outline. It was quite evident that the artist knew something of the manner of drawing the bow, and desired to represent it accurately. Let them compare this outline with the base outline, which he would now exhibit (producing it), by a man who did not care to know anything about drawing a bow before he began to trace his outlines. The arrow was altogether out of proportion—it was almost as long as the man. The stags appeared as if waiting to be shot, their horns looking so much like the branches of the trees under which they stood, that it was scarcely possible to distinguish one from the other. There was not a line in the whole composition that was not false, and yet this was a correct copy of one of the most celebrated works of Claude Lorraine, a drawing in the possession of the Duke of Devonshire.

Mr. Ruskin then exhibited a Parisian MS. of the time of St. Louis, which he said was one of the best specimens in his possession. It was full of animals, figures, and ornaments. He particularly pointed out a white bird, too small to be appreciated without the aid of a glass, but of which he exhibited an enlarged copy, calling attention to the humorous expression of self-satisfaction in the bird's eye, the ease of its position, and other merits. The whole MS. he observed, was full of figures equally ingenious, and equally beautiful.

In many of the examples of the early illuminated writings, was to be found much of humour, almost amounting to wit; and the lesson to be deduced from them was, that humour, as far as it was expressible by art, were best expressed by a few free lines quickly and easily drawn: for nothing was so disgusting as laboured humour, whether in words or painting. Hogarth had humour, but much more than humour: his pictures were not to be laughed at, they easily made him serious the whole day after: they were bitter agonising satire.

The gift of humour was peculiar to Englishmen. They could often express it in a few lines, and although he would not have this humour so conspicuous in books as to interfere with the text, yet it would be delightful if people, when dealing with books, could

have the power of expressing the humour and wit which arises in their mind, illustrative of the text. That was one thing to which outline drawing might be applied. Another was the grotesque. It was not mere humour that was expressed in a grotesque. A grotesque was often the expression of truths in a small compass. The grotesque was as available in poetry as in painting. The poet and the painter, be it remembered, were essentially the same. He would give them a definition of the poet and the painter together, which they would remember, though it was a hissing one. The poet or the painter was a man who concentrated sermons into sights. If they could not do this they deserved not the name of poet or painter. A few strokes from the pen or the pencil should convey to the mind in a moment what it would take an hour to describe. Supposing he was to attempt to describe the vice of gluttony, it would take him a long time to bring before them the hardness of heart, the degradation of intellect, and all the evils which resulted from it. But Spenser did this in twenty-seven lines in a grotesque. The Red Cross Knight in the course of his chivalry is led unhappily to the House of Pride. The poet there displays to him the Seven Mortal Sins, one of whom, Gluttony, is thus described :—

"And by his side rode loathsome Gluttony,
Deformed creature on a filthy swine;
His belly was upblown with luxury,
And eke with fatness swollen were his eyne;
And like a crane his neck was long and fine
With which he swallowed up excessive feast.
* * * *
In green vine leaves he was right fitly clad;
For other clothes he could not wear for heat;
And on his head an ivy garland had,
From under which fast trickled down the sweat:
Still as he rode, he somewhat still did eat,
And in his hand did bear a bowsing can,
Of which he supped so oft, that in his seat
His drunken corse he scarce upholden can.
Full of diseases was his carcass blue,
And a dry dropsy through his flesh did flow."

Here evils, which would take a long sermon to work out, were described in not twenty-seven lines, as he had said, but in sixteen, and were fixed in the memory in such a way as not to be forgotten. Take another example from the same poet,—his description of Avarice :—

"And greedy Avarice by him did ride
Upon a camel loaden all with gold;
Two iron coffers hung on either side,
With precious metal full as they might hold,
And in his lap a heap of coin he told;
* * * * *
And threadbare coat and cobbled shoes he ware;
He scarce good morsel all his life did taste,
But lost from back and belly still did spare,
To fill his bags and riches to compare."

In both these cases, and throughout the greater parts of Spenser and of Dante, it would be observed how strongly the evil to be avoided was impressed upon the mind, by being brought prominently before the *vision*. This could be done to some extent in outline, but not in finished painting. The painter could not represent in detail the long crane's neck of the glutton, nor place the disgusting wretch upon the swine's back. By means, however, of a few roughly and freely drawn outlines, something like a representation could be given of such personages. The grotesque was much used in the Middle Ages, and it was a means of conveying truths to the mind which we had ignorantly passed over. Again, how could spiritual beings be so fitly represented as by outline. To portray spiritual existences with success on the canvas had ever been one of the greatest problems in art, but a solution of the difficulty could be found in the judicious use of outline, nor was it necessary to study anatomy and muscles in order to paint either an angel or a demon. A man of first-rate merit and ability (Stodhart), but, unfortunately, trammelled by academic rules, had been selected to illustrate Milton, and, among other subjects, to delineate Satan. Look at the result. (Mr. Ruskin here exhibited an engraving from the work referred to.) The only idea which the painter had formed of his hero was that he was an extremely muscular man, with a remarkably handsome calf to his leg, and handsome tight-fitting shoes, to protect his feet from the "burning marl;" and his steel armour is made to bend in and out, in order to show the development of his muscles. Was there ever such an absurdity? Could anybody think for a moment that that was a spirit? But when abstract outline was combined with beautiful colour, the main effects were obtained. The imagination took them up, and suggested to itself something noble which could be conveyed by no other means. Take another illustration. (Mr. Ruskin here exhibited two leaves from illuminated MSS. representing the story of St. John the Baptist.) One, he said, was the initial letter of a hymn, and the object was to bring the story prominently before the eye of the reader or the singer to stimulate him to the performance of his duty—to tell all that could be told in the space of a single leaf. It would be seen how the same subject was treated at different periods. The one showed a St. John, seated in a meadow, reading a book, with a lamb by his side—a charming little picture, most elaborately finished;—the other a St. John of an earlier date and of rougher execution. The object of each work was to illustrate the principal events in the life of the forerunner of the Messiah; but in the case of the less laboured work of the earlier period, the story was told by an outlined figure walking upon the kingly head of Herod and the wondering upturned head of Herodias. In one hand the saint bore the representation, not of the mere ordinary lamb, but of the Lamb of God; while with the other, he pointed to the sacred object of his mission. A calm and holy serenity beamed around the features of the martyr, and though walking in triumph upon the heads, he still appeared divinely unconscious of the fallen and prostrate condition of his murderers. There was a peculiar expression, too, in the face of Herodias. She appeared to be too much astonished to be in pain. "I thought I had his head in a charger—it is not so!—he has mine, at his feet for ever and ever." Now which of these illuminations told the story in the best manner, the man in the meadow with the book and the lamb, or the more vigorous and poetic treatment of the subject by the artist of the thirteenth century? So much for the recommendation of outline. He now came to the more practical question of how to acquire it. In the letter published in the *Builder*, one of his pupils objected that he had referred to them for help in carrying out his idea. The help he had asked was that they should inform him at what price such ornamentation of walls and books and shop-fronts as he had suggested could be executed. If he went to an artist and asked him for how much he could paint a picture 2 feet by 2 feet 6 inches, he should think it strange if he received for answer that it was not a practical question. All he wanted from the workmen was to know at what price the work could be done, and what he wanted to tell the workmen was, how to do the work. Than this there was nothing more easy and simple. To those who had the gift and the liking, and those who had the gift would have the liking, he would say, Take a blunt pen, and common ink, and draw with it everything, every figure, that came in their way, observing, however, these two important points, that no line was ever to be drawn loosely, without a meaning or a use, and that every characteristic shade or local colour or stains that might be useful when they came to fill up with colour, were to be carefully noted. As in the bird he had exhibited, the pupil of the eye must be observed and marked, and also the black legs. Everything must be noted that could be useful in filling up with pure colour afterwards. If they drew a lion and a leopard, the leopard must especially be marked as a *spotted* creature. In everything they did they must note the local, not the accidental, colour. After observing that the specimens which he had produced would remain at the museum for the inspection of those who felt an interest in the subject and desired to follow the study, Mr. Ruskin concluded by stating that the whole of his remarks had been dictated by a desire to impress upon his audience the *practicable* nature of his suggestions. He had frequently heard himself called a visionary and an unpractical man. Nothing could be more erroneous. His whole life had been devoted to bringing people down from idealisms and fancies to practical truths. He felt certain that if all who had heard him would acquire the habit of drawing everything that came before them, and which they saw with their own eyes, they would soon attain a power which would make them infinitely happy and honoured by all whose esteem they valued, make them capable of doing a vast amount of good, give them the power of communing with nature, and implant in them a reverence for Him who made both nature and their hearts.

Sir,—In your report of the "First Lecture on Decorative Colour," at the Architectural Museum, I observe that Mr. Ruskin finds fault with a line of Cary's translation of Dante's "Purgatory"—

("Which they of Paris call the limner's skill")

on the ground that "the word which in the original is '*alluminare*' does not mean the limner's art, but the art of the illuminator."

Perhaps you will permit me to say a word in defence of Cary, and suggest that, so far from being wrong, "limner" is the most appropriate word that could have been used. Any reader bearing in mind the etymology of the word, would understand it in this passage to mean "illuminator." That Cary himself meant it so, is clearly proved by a note at the foot of the page from which the line is quoted,—

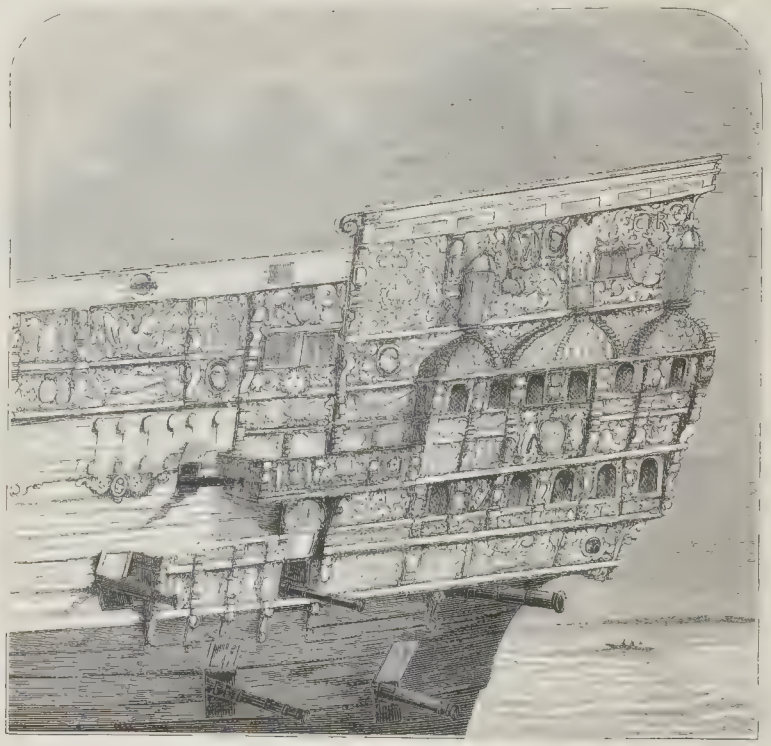
* "*Oderigi*—the *illuminator* or miniature-painter, a friend of Giotto and Dante."

Perhaps Mr. Ruskin had forgotten that—

"*Limner* (N.S.) is corrupted from '*enlumineur*,' a decorator of books with initial pictures."—*Johnson's Dictionary*.

I cannot conclude without noticing what I must call unfairness in Mr. Ruskin's lecture of to-day—at the first part of which I was present. In answering the attacks that have been made on the illegibility of the characters he wishes to revive, he defended himself somewhat as follows :—

"Black letter is not really illegible: it is only that we are not accustomed to it. Greek would probably be illegible to the greater part of this assembly, but that does not make it really so. The fact is, *no* kind of character is really illegible. If you wish to see real illegibility, go to the Houses of Parliament and look at the inscriptions there!"



The last sentence served its apparent purpose, and raised a laugh and some applause, but when seen in print, it becomes very evident that if not retracted, it completely upsets his defence. He must allow to others the indulgence which he claims for his own views

Cambridge. M. A.

A FEW WORDS ON SHIPS AND SHIP-CARVING.

It is to be regretted that, while the scientific skill of the present age has produced a wonderful improvement in the models and workmanship of both our warlike and mercantile vessels, we have lost, to a considerable extent, the artistic features which were so remarkable in the ships of former times, and even the last portion of carving preserved in our ships (the figure-head) is not of a style of art proportionate to the cost of the fine vessels which throng our ports; it is evident that, although the skill of the English shipbuilders is unrivalled, we are far behind some of our foreign neighbours in the design and execution of the ornamental part. We think this subject is worthy of the consideration of the Russells, Mares, and others of our shipbuilders, who have vessels in progress of the value of from 100,000*l.* to 200,000*l.* It is a pity that such noble works should be marred by the sculpture of the head and prominent part: surely it would be worthy of the cost to employ artists of the very highest reputation to model, and the best carvers to execute, the figure-heads of ships of such cost. From the time of Henry VIII. and for some centuries afterwards, the carving of ships afforded a large amount of employment to numbers of workmen. The carvings on the Dutch vessels were of great beauty, as may be seen by an examination of the pictures of Vandervelt. Many causes have contributed to stop the demand for both turning and carving: the spinning-wheel, which afforded employment for numbers, has gone out of use: about the year 1653, Long-lane, Smithfield, was almost entirely occupied by turners and carvers of soft woods: carved door-posts, shop signs, &c. have also become matters of the past.

Mythologists attribute the invention of ships to Dædalus, and pretend that the wings he invented to save himself with the labyrinth of Crete, were nothing but sails, which he first gave to vessels, and with which he eluded the vigilance and pursuit of Minos. Others give the honour to Janus, on the credit of some ancient Greek and Latin coins, on one

CARVED SHIP, TIME OF KING CHARLES I.

side of which is represented his double face, and on the reverse a ship.

Among the most celebrated ships of antiquity is that of Ptolemy Philopater, which is said to have been 280 cubits long, 38 cubits broad, and 48 high: it carried 4,000 rowers, 400 sailors, and 3,000 soldiers—in all, 7,400.

That which the same prince made to sail on the Nile, we are told, was also of large proportions. Yet these ships were nothing in comparison with Hiero's ship, built under the direction of Archimedes, on the structure of which Moschian wrote a whole volume. There was wood enough employed in it to make sixty galleys. It had all the variety of apartments of a palace—banqueting-rooms, galleries, gardens, fish-ponds, stables, mills, baths, a temple of Venus, &c. It was encompassed with an iron rampart and eight towers, with walls and bulwarks, furnished with machines of war, particularly one, which threw a stone of 300 pounds, or a dart 12 cubits long, the space of half-a-mile.

The first ships, for whatever uses they were destined, were, we are told, nearly all of the same form. A primitive example of an ancient vessel is preserved in the court-yard of the British Museum, and is nothing more than the stem of a large tree, hollowed out.

It was as late as B.C. 261, before the Romans had seriously determined on building a fleet of ships-of-war; and when this resolution was formed, so ignorant were they in all that concerned naval architecture, that the thing would not have been very speedily accomplished but by an accident. A Carthaginian galley being on a cruise off the coast of Italy, and venturing too near the shore, she grounded, and stuck fast. The Romans, availing themselves of this accident, seized the vessel before the crew had time to get her off; and it was on the model of this galley that their first fleet of ships-of-war were constructed. The Roman ships-of-war were long in proportion to their breadth, and received different names, according to the number of tiers of oars they were calculated to employ.

The chief parts of which the ancient ships consisted were—the belly, the prow, and the stern.

In some ships there is mention made of two prows, as also two sterns, such as Danaus's ship, adorned by Minerva, when he fled from Egypt. It was usual to beautify the prow with gold and various sorts of paint and colours. In the primitive times red was commonly used,—whence Homer's ships were generally dignified by the title of *red-faced:* the blue, or sky colour, was frequently made use of: nor were they barely varnished over with these colours, but were also very often annealed with wax, melted in the fire. In these colours the various forms of gods, animals, and plants were drawn. The hind-deck, or poop, was also ornamented with helmets, animals, triumphal wreaths, &c.: sometimes a little mast was erected whence to hang ribbons of different colours, which served as a flag and weather-cock: the whole fabric being completed, the larger portion was covered with pitch. Lastly, the ship being bedecked with garlands and flowers, the mariners also adorned with crowns, she was launched into the sea amid great rejoicings and acclamations; and being purified by a priest with a lighted torch, an egg, and brimstone, or after some other fashion, was consecrated to the god whose image she bore.*

The Danish vessels of war were richly ornamented with gold and other objects of great value. The keels which until lately had been used on the river Tyne for many centuries, are said to have been of the same model as those of the rapacious northmen. These were clumsy-looking vessels, round at each end, and rather flat-bottomed, having a mast and single square-sail.

In the twelfth century, the British ships of the largest size were called "dromones,"—of which kind was the famous Saracen ship captured by Richard I. near the port of Acre. This ship must have been of great magnitude; for, according to Matthew Paris, it contained no fewer than 1,500 men. The dromones being too lofty to use oars, had three masts, with appropriate yards and sails; but we are told that their motion through the water was very slow.

The fleet of Richard I. of England, when he weighed anchor for the Holy War, from Messina, in Sicily, where he passed the winter A.D. 1190-1, is said to have consisted of 13 dromones or ships of the largest size; 250 ships of second-rate; 53 galleys, and a vast number of barques and other vessels used as transports.

Edward III.'s fleet before Calais in 1347, consisted of 738 ships, carrying 14,956 mariners, being an average of only about 20 in each ship; 15 ships and 495 mariners from Bayonne, being 30 to each ship; 7 ships and 184 men from Spain; 1 from Ireland, carrying 25 men; 14 from Flanders, with 133 men, scarcely 10 to each ship; one from Guelderland, with 24 mariners. Fifteen of these were called the King's own ships, and were manned by 419 mariners.

It would thus be seen that the British vessels of that period were of a small size. About the middle of the fifteenth century, ships of larger proportions began to be constructed. William Canning, the eminent merchant, who was five times mayor of Bristol, A.D. 1474, having forfeited the king's peace, was condemned to pay 300 marks—in lieu of which sum, Edward VI.

* It was customary, until the last few years, to deck the whale-ships on leaving the Tyne with garlands and ribbons, which were provided by the wives, sisters, and sweethearts of the sailors. If the voyage was safely and prosperously performed, the garlands were taken amid rejoicings, and hung in the church.

took of him 2,470 tons of shipping, amongst which there were one ship of 900 tons burden, one of 500 tons, and one of 400 tons. In 1506, *James IV. of Scotland*, built a large ship, which was lost on her way to France. In the fleet fitted out by Henry VIII. there was one ship, the *Regent*, of 1,000 tons. The *Henri Grace Dieu* was of a still larger size, and said to have been the first vessel which accomplished a voyage round the world.

At the present time, when so much attention is directed to naval affairs, it may not be without interest to give the following particulars of our navy of former days, and which in 1575 consisted of only 24 ships, and the number of merchant-ships belonging to England amounted to no more than 135 vessels of above 100 tons, and 656 between 40 and 100 tons. At Queen Elizabeth's death, in 1603, there were not above 4 merchant-ships of 400 tons each. The largest of Queen Elizabeth's ships of war was 1,000 tons, and carried 340 men and 40 guns, and the smallest 600 tons, carrying 150 men and 30 guns.

The account given by Sir William Monsen, about the time of the death of Queen Elizabeth, is as follows:—

2 ships of	1,000	tons, carrying each	500	men.
3 „	900	„ „	500	„
			400	„
3 „	800	„ „	400	„
			350	„
2 „	700	„ „	400	„
			350	„
4 „	600	„ „	300	„
4 „	500	„ „	250	„
2 „	400	„ „	200	„
	350	„ „	160	„
10 „	200	„ „	100	„

9 smaller vessels; 39 in the whole.

In 1610 (time of James I.) a ship called *The Prince* was built, carrying 64 guns, and of 1,400 tons burden, being the largest which until then had been constructed; and before the civil war broke out Charles I. caused to be built one called *The Sovereign of the Seas*, which carried about 106 guns, small and great: her length was 128 feet, and her breadth 48 feet: the stern of this ship is shown in the engraving.

The great ships of Henry VIII.'s reign, which were richly carved, are well known to us by engravings, and undoubtedly the more early English vessels were ornamented in a style comparative with the display of carving to be found in the churches and elsewhere. As may be seen by the adjoining wood-cut, the large ship of Charles I.'s time was most elaborately carved, the work of bold and peculiar design, indeed the decoration of a vessel such as this required vigorous and manly work: there are but few examples of this description of carving left: except the giants in the Guildhall, which are, therefore, valuable as examples of an almost lost art.

Gog and Magog, which are really masterly examples of carving, were carefully examined by Mr. Smith, the antiquary, who says, "It having been reported that these figures were of pasteboard, I obtained permission to examine them. They are of wood, and hollow. I stood upright in the body of one of them. They are composed of pieces of fir, and I am informed are the production of a ship-carver. It is also reported that they were presented to the City by the Stationers' Company, which, if true, might have given rise to the report of their being made of paper."

That giants for pageants were formerly made of pasteboard and other materials is beyond doubt, for in Strutt's "Sports and Pastimes" we find the following entry respecting the giants for Chester, made after the restoration of Charles II.:—"For arsnick, to put into the paste to save the giants from being eaten by the rats, one shilling and four pence."

In 1815, in consequence of the alteration and repair of Guildhall, the figure called Gog (the one with the staff and ball) was taken down, and with difficulty moved by twenty men to a shed in a corner, prepared for its safety until the west end should be finished. Mr. Smith examined the figure and says, "It measures 14 feet 6 inches in height; from the upper leaf of laurels to the lower point of the beard, 5 feet 3 inches: the nose is 9 inches, the opening of the eyelids, 1½ inch; around the shoulders, about 4 feet 8 inches; the arm, from the wrist to the elbow, 2 feet 5½ inches; 2 feet from the wrist to the top of the second finger."

The decline of ship-carving, and, in fact, of all descriptions of decorative art, was most rapid during the long wars of George III.'s reign: at the commencement of that epoch there were not less than 300 ship-carvers below London-bridge: and in 1810 Smith says, "there are absolutely now not more than fourteen, including three masters."

Speaking of an old carved house in London, the same authority says, after remarking on the indecency of some of the carvings of the Middle Ages, that, "fortunately for the Londoners, about the year 1764, when the city was regularly paved (York-street, St. James's-square, was the first street paved in this manner) and lighted according to the present mode, they were ordered to be taken down, together with the projecting signs, barbers' poles, &c. at which time *also the doors of the houses of London were numbered*." Before this excellent regulation took place, artists and printsellers were obliged to put up signs and colour their doors differently from their neighbours, as will be seen by the following instances, copied from their publications.—Thomas Cockrill, at the Three Leggs and Bible, in the Poultry, 1701; W. Herbert, at the Golden Globe, on London-bridge; J. Simon, against Cross-lane, in Long-acre; A. Brown, at the Blue Balcony, in Little Queen-street; afterwards at the Blue Balcony, Holborn-bridge, the house which the famous Salmon had before occupied; E. Cooper, at the Three Pidgeons, in Bedford-street; Barnard Lintatt, at the Cross Keys, between the two Temple-gates, in Fleet-street; Phil. Overton, against St. Dunstan's Church; John Boydell, at the Unicorn, the corner of Queen-street, Cheapside; J. Smith, at the Lion and Crown, in Russell-street, Covent-garden; afterwards at the Golden Head, in Bloomsbury-square; James M. Ardell, at the Golden Head, in Covent-garden; Robert Strange, at the Golden Head, in Henrietta-street, Covent-garden. Probably *Hogarth* started the sign of the golden head amongst artists, for Nichols, in his second edition of "Biographical Anecdotes of William Hogarth," says: "Hogarth made an essay in sculpture. He wanted a sign to distinguish his house in Leicester-fields, and thinking nothing more proper than the Golden Head, he, out of a mass of cork made up of several thicknesses compacted together, carved a head of Vandyck, which he gilt and placed over his door. It is long since decayed, and was succeeded by a head in plaster, which has also perished; and is supplied by a head of Sir Isaac Newton (lately taken down). Hogarth also modelled another resemblance of Vandyck in clay, which is likewise destroyed." Carving arrived at a great state of perfection in England, chiefly owing to the examples of Grinling Gibbons, the most eminent of our carvers in wood, who is supposed to be of Dutch parents. He was born in Spur-alley, in the Strand, and lived afterwards in Belle Sauvage-court, Ludgate-hill, where, it is said, he carved a pot of flowers, which shook surprisingly with the motion of the coaches that passed by. He lived afterwards in considerable poverty at Deptford, where he was found by Evelyn, under circumstances already mentioned in the *Builder*. On receiving from Charles II. an appointment in the Board of Works, he was employed in the chapel at Windsor. His carved work here is done in lime-tree, representing pelicans, doves, palm-trees, and other allusions to Scripture history, with other ornaments. At Windsor, too, he carved the beautiful pedestal in marble for the equestrian statue of Charles II. It is stated that the beautifully-finished statue of James II. at Whitehall is the work of Gibbons. He also made a tomb for Baptist Noel, Viscount Camden, in the church of Exton, in Rutlandshire, which cost 1,000*l.* The same workman executed the wooden throne at Canterbury Cathedral, and the foliage in the choir of St. Paul's. At Burleigh are many examples of Gibbons's carving in picture-frames, chimney-pieces, door-cases, &c. At Chatsworth, amongst other choice specimens of the artist's work, is a pen over a closet door, not distinguishable from a real feather. When Gibbons had finished his works at this place, he presented the duke with a carving of a point cravat, a woodcock, and a medal. He died August 3rd, 1721, at his house, in Bow-street, Covent-garden.

About the same year that Gibbons died, Nicholas Collett was born. This clever carver lived until 1804. He executed the carving of Queen Anne's state-carriage, and it is probable that to him we are indebted for the best of the decorated doors in Ormond-street, Queen-square. William Collins, the inseparable companion of Gainsborough, the painter, was an excellent modeller and carver.

Smith, in his "London Antiquities," says—"Samuel Monette, a native of Paris, now living in London, claims the highest encomiums I can possibly bestow: his art is principally confined to flowers, and when I say that Grinling Gibbons was a mouse to him, I shall not utter too much; his carvings in wood are so light and playful, that they may be blown away." This artist designed the pulpits of St. Paul's Cathedral, St. Paul's, Covent-garden, St. Margaret's, Westminster, &c. Smith also speaks well of the carving of Burns, famous for carving wheat-sheafs; one of these wheat-sheafs still remains in a shop in the Strand, not far from the Electric Telegraph Station. During the last few years, a revival has taken place in the art of wood-carving, and many beautiful examples have been produced.

The object of these few notes is to direct attention to the condition of our ship-carving, which fails rather in design than execution, with a hope that it may be the means of stirring up a proper rivalry in this department of the art, as well as in others.

PROVINCIAL NEWS.

Spalding.—The consecration of the new Cemetery and Mortuary Chapel here took place on Wednesday in last week.

Cleethorpes.—The owners and occupiers of property in Cleethorpes, lately met for the purpose of carrying out an efficient system of drainage for the parish. Messrs. Maughan and Fowler, of Louth, are the surveyors, and it is estimated that the cost will be about 1,000*l.*; to be borrowed from the Consolidated Fund, and repaid by instalments in thirty years.

Stony Stratford.—The new Church at Denshanger, consecrated on 26th October, is an Early English edifice, having at the west end a large and unusual gable turret, carried on a recessed arch, with massive buttress abutments, and containing three bells. The building consists of a nave, chancel, and one aisle on the north side, with an open timbered porch on the south. The east window is a triple lancet. The general face of the walls is of the local stone, and the dressings are of Bath stone. The north aisle is separated from the nave by an arcade of four arches, with circular pillars. The interior arrangement consists entirely of open sittings. The floor is of red and black Staffordshire tiles. The design was furnished by Mr. Ferrey, and the contractor was Mr. Hailey, of Stony Stratford. The amount af the original contract was 1,777*l.* and the money collected, including grants from the Incorporated and Diocesan Societies, nearly 2,000*l.*; in addition to which there have been presents made of bells, altar cloth, font, service books, &c. amounting to 147*l.* But the purchase of land, law expenses, consecration fees, and extra charges, have caused the expenditure to exceed the receipts by upwards of 300*l.* The payment of the deficiency, however, has been guaranteed.

Oxford.—The arrangements for converting the western avenue of the market here into a corn-exchange are now complete. The Market Committee are to make the necessary alterations in the western avenue of the market for a corn-exchange, out of the funds of the market. An extension of the original plan has been determined on. The green-market facing Market-street, and 30 feet by 30 feet in extent, is to be covered in and included in the corn-market, which will then form the three sides of a quadrangle, composed of the green-market, the western avenue, and the avenue leading from

the latter, at the south end, into the market. The row of butchers' stalls, on the east of the western avenue, will remain occupied by the butchers as at present. There will be five entrances to the new exchange.—the grand entrance from Market-street, an entrance at the east of the green-market, a third from the market into the southern avenue of the exchange, and two entrances from the Cross Inn and the Roebuck into the western avenue. The Exchange will be open on 1st January next.

Banbury.—The new Gas-works at Banbury, according to the local *Guardian*, are now in operation. There are ten retorts in use, 4 feet longer than those at the old works, and others are being prepared. The company has had erected a new gasometer, manufactured by Mr. Jones, of London, at the new works, four times the size of the old gasometer, and capable of containing about 60,000 cubic feet of gas. When in full operation, the new works will be reinforced by the old gasometer, which proved inefficient for the supply of the greatly increased quantity of gas now required for this flourishing town. Neithrop was partially lighted, for the first time, on Saturday evening in last week.

Worcester.—Mr. Hawkesley, in his report to the City Council Committee recommends a plan of Drainage and Sewerage, to be carried into the Blockhouse culvert, and to cost 16,000*l.*; or to continue the latter so as to carry the whole sewage into the Severn, below the weir at Diglis, instead of above as at present, at an additional cost of 4,000*l.* Mr. Hawkesley proposes to supply the city with water from the Severn, drawing it from a point at or near to the mouth of Barbourne brook, at a cost of 21,000*l.* He states, that should the Teme water be preferred, as being less tainted with organic matter, the expense of supplying the city would be increased by 2,600*l.* The committee requested Mr. Hawkesley to confer with Mr. Fowler, the engineer-in-chief of the Oxford, Worcester, and Wolverhampton Railway Company, with whom there is a proposed negotiation as to the water supply.

Cardiff.—In St. John's Church, an altar-piece, executed in zinc, in the illuminated style, has been fixed. It has been presented as a gift by the Rev. J. M. Traherne.

Aberystwith.—On a requisition numerously signed to the mayor, a public meeting has been held, as required by the Improvement Act, to consider and decide upon the propriety of borrowing a sufficient sum to purchase the gas-works here, or to erect new works, and place them on the same footing as the water-works, so that the profits may be applied towards reducing the rates of the town. The local commissioners unanimously decided upon adopting this plan. The meeting, according to a local paper, was attended by the most influential and extensive gas consumers of the town, and a resolution, accordant with the purpose of the meeting, was unanimously agreed to. At this meeting it was stated, that while the price of gas in different towns averages from 4s. 6d to 6s. the price at Aberystwith has been 10s. and the company propose to advance the charge for each street lamp, 7s. 6d. beyond the price already charged.

Liverpool.—The foundation-stone of schools, in connexion with St. Thomas's Church, in Upper Frederick-street, of this town, was laid on 21st ult. by Mr. Alderman Thompson. The building will accommodate 200 boys and girls and 60 infants of both sexes. The design is plain Italian, to be executed in brick, with stone dressings. Mr. J. Hanson is the architect, and Mr. Alexander Rule is the contractor. The total cost, including site, is expected to be under 1,500*l.*

Preston.—A short time ago the Building Committee of the corporation instructed Mr. Hill, of Leeds, architect (who obtained the first prize for his designs for the re-erection of the Town-hall buildings), to prepare new plans, the execution of which would involve a considerably less outlay than his more elaborate scheme. Accordingly, Mr. Hill attended a meeting of the committee on Wednesday in week before last, as reported by the local *Guardian*, and submitted a series of designs to their inspection. In reference to one of these, it was resolved "that the new design, No. 1, appears to meet the requirements of the council, and is to be preferred to the other plans considered by the committee." This design contemplates the erection of a structure surrounded by shops, &c. on the site of the present Town-hall and adjacent buildings, at a cost of 16,900*l.* (rather more than one-half the amount of the estimate attached to the prize plans). The expense of rebuilding the old part only is estimated at 9,500*l.* and the loss in rebuilding at twice is put down at 1,700*l.* Particulars of the design have been furnished as follows:—The exterior to be of stone, and the whole to be cellared and vaulted,—part bonded and part for occupation with shops. A clock-tower at the corner of Cheapside and Fishergate, 130 feet high. On the ground-floor, shops. A Mezzanine story to be appropriated to the shops. First-floor (principal approach from Fishergate, with another approach from the market-place),—council-chamber, 49 feet by 35 feet, with mayor's parlour and committee-rooms adjoining; free library, 50 feet by 35 feet; adjoining room, 17 feet by 17 feet; Dr. Shepherd's library, 40 feet by 16 feet; news-room, 40 feet by 24 feet, and town clerk's offices. Second-floor: museum, 50 feet by 35 feet, above the free library; offices and premises to let. It would cost 60*l.* or 70*l.* additional to provide a museum room over the free library, that being an alteration of the design, in which it was proposed to make the library very lofty. After affording accommodation for a museum, the library would still be about 32 feet high. By this plan, Fishergate would still be of the width of 47 feet at the narrowest part, and the Old Shambles also wider.

Hadfield (*Glossop*).—The funds for building church schools at Hadfield, to serve also as a licensed place of worship, are said to be such as to warrant the commencement of the building as early in the ensuing spring as weather will permit. The Duke of Norfolk has given, in fee, 1,600 square yards of land for a site.

Burneston.—The parish church of Burneston, in Yorkshire, has been restored under Mr. Cory, of Durham, architect. The east window occupies the entire east end of the church. It is a memorial to the late Duke of Cleveland, whose widow has been at the expense of this restoration. It consists of five chief openings below the tracery: these contain in their upper parts canopies of very lofty tabernacle work, interspersed with various figures, as finials, of the Virgin and Infant Jesus, Angels, with emblems of the Passion of our Lord, &c. Beneath these are displayed the five principal subjects. In the centre is Mary meeting our Lord after the resurrection: on each side of these are the chief acts of mercy and charity,—"I was hungry," "naked," "sick," &c. These are on pedestals, and encompassed by borders. The tracery of the window consists of numerous apertures containing angels in choir, with musical instruments and varied costume. The artist was Warrington, of London. All the other windows of this church were painted by Mr. Barnet, of York.

Bedale.—The church of Bedale, in Yorkshire, is now under restoration.

Well.—In another Yorkshire church, that of Well, there are restorations also going on. The gallery, pews, &c. which encumbered it have been removed, and new stained windows inserted. These restorations are being carried out (without the aid of an architect) at the cost of the family of Milbank, of Thorpe.

THE METROPOLITAN CATTLE-MARKET, COPENHAGEN-FIELDS.

The Metropolitan Cattle-market, which has been constructed in Copenhagen-fields, Islington, under the direction of Mr. J. B. Bunning, the City Architect, is fast approaching to such a state of completion, as will admit of its being opened for use. The works are of a very extensive nature, and are executed in a manner creditable to all concerned. Our view will explain the general arrangement.

The site of the market proper is an equal-sided rectangle, having a fall from the west corner (the left-hand side of our view), to the south, east, and north corners, and includes an area of about fifteen acres, of which one acre is appropriated to the pig-market, and an equal area to the calf-market. The banking-houses, twelve in number, are placed in the centre of the market, and out of the centre of these will rise a lofty clock-tower, which is just now beginning to show itself above the roofs of the banking-houses. The Electric Telegraph Company will have a station in the building.

Accommodation is provided in the market for 34,980 sheep, in 1,749 pens, (with a reserved space for considerable extension), and 13,232 feet of rail for the tying of 6,616 bullocks. The pig and calf markets are placed on the west side of the quadrangle (to the left of the tower in the view), affording accommodation for 1,425 calves, and 900 pigs, and raised sufficiently high to allow of the pigs and calves walking from the level of their respective standings into the carts. Roofs, supported on iron columns, and projecting so as to shelter the carts which may be standing in the road passing from north to south, are being placed over these markets.

Water-posts are fixed about 27 yards apart, and by means of a leather hose and jet, will afford facilities for thoroughly cleansing the market and lairs.

North of the market (at the top of our view), two taverns, "The Queen's Arms," and "The City's Arms," are erected, between which will be placed a fountain. Northwards of the taverns and fountain will be a building intended for the annual cattle show, which, when not used for that purpose, will afford ample standing for butchers' carts. It may be useful, however, to say, to remove an erroneous impression abroad, that no arrangement has yet been made as to the removal of the show from Baker-street.

West of the market (on the left-hand side of the view, in front of the pig and calf markets), lairage is provided for 8,160 sheep, on an area of 6a. 0r. 3p. rather more than half of which is covered. Water and racks for hay are placed in each lair.

South of the market, lairage is provided for 3,000 bullocks, on an area of 8a. 0r. 11p. provision being made for supply of water and hay to each bullock. At the north and south ends of these lairs four depôts for hay are provided. East of these lairs (on the right of the view in the foreground) some private slaughter-houses are built, and on the west-side two public slaughter-houses, in which 600 bullocks can be killed weekly. South of the public slaughter-houses a meat-market is being constructed. Ample space, it will be seen, for the future extension of the public and private slaughter-houses is provided.

A public-house is placed at each corner of the market, and these are named "The Lion," "The Lamb," "The Black Bull," and "The White Horse." The public-house, "The Butchers' Arms," stands at the south-west corner of the New-road from Caledonian-road to Maiden-lane (the extreme point of view on the left hand), for the accommodation of the slaughtermen. Maiden-lane is the road which is seen passing obliquely from this point to the top of the engraving. On the south side of the New-road, a cattle-station will be formed in connection with the North-London Railway. This is indicated in the front of the view at the left-hand corner. On the right-hand side is seen the Great Northern Railway, which there enters a tunnel. Just above this it is proposed to place the Hide and Skin market, as shown in the view, but this is not yet commenced. Houses have grown up around the market, but these are omitted, for the sake of clearness. The cost of the works now going on will be about 300,000*l.* Mr. John Willson (Southwark) and Mr. John Jay are the contractors for the buildings. Messrs. Kennard, of Thames-street, are executing the ironwork, of which there is an immense quantity. The corrugated iron is supplied by Mr. Walker. Mr. Chadwick is the contractor for roads and paving, to the extent of about 60,000*l.* The requirement of *fifteen acres* of granite pitching rather disturbed the market.

Mr. Bunning is seeking to make the new market complete in every part, and we have no doubt that we shall be able, when the works can be inspected in detail, to report his entire success. Mr. H. Lowman Taylor is the chairman of the committee to whom the supervision has been intrusted.

THE METROPOLITAN CATTLE-MARKET, COPENHAGEN-FIELDS.—Mr. J. B. Bunning, F.S.A. Architect.

NEW CEMETERY FOR THE PARISH OF PADDINGTON.

The Burial Board for the parish of Paddington having purchased 25 acres of land in the Willesden-road, for the purpose of a parochial cemetery, resolved that three architects should be requested to send in competition designs for laying out the ground, and for erecting the chapels, lodges, &c. thereon. A premium of thirty guineas was offered for the selected design, and twenty guineas for each set of drawings not accepted. The competing architects were,—Messrs. Barnett and Birch, Messrs. Francis, and Mr. Thomas Little. Ultimately the designs submitted by Mr. Thomas Little were selected and approved of by the Burial Board, and are to be carried into execution forthwith under his direction.

SALE OF MR. OWEN JONES'S WORKS.

To the attentive observer of men and things, it is of course manifest that the vast extension which has of late years taken place in illustrated literature, and more especially in that department of it in which the aid of colour is enlisted, cannot fail to produce great and lasting changes in the public taste. Most decidedly do we agree with Professor Donaldson that, in the pursuit of non-essentials, the enthusiastic and even capacious mind is often tempted to lose the essentials of art; but at the same time we should regret that the abuse of opportunities should be urged as an argument against anything which facilitates our successfully availing ourselves of these opportunities. The danger to the student is, that archæology, polychromy, the pursuit of physical science, theoretic æsthetics, or any of the cognate studies of an architect, should engross too much of his time and attention. It is evidently good for him that he should be well and at the same time quickly informed on such subjects, and it is manifest that whatever gives him the greatest amount of information in least time, and with least fatigue, is likely to do him most good, and is at the same time likely to leave him most at liberty to devote himself to those deeper essentials of his art to which the learned professor has alluded. No mode of education is so complete, facile, and rapid, as that which mainly addresses itself to the eye; and hence it is, that we constantly recognise the great benefit which from day to day, and from year to year, accrues to architecture as a fine art, from the publication of works such as those upon which Mr. Owen Jones has laboured so earnestly, honourably, and successfully.

It may appear a work of supererogation to recall to the memory of his brother professional men the sacrifices which the publisher of the "Alhambra," "The Illuminated Books of the Middle Ages," the "Egypt," and the reprint of "D'Agincourt's History of Art by its Monuments," must have made to enrich his country's literature with such noble works. Upon the first-named especially we would dwell, since it is now many years since it was first published, and much of the "young blood" of the day has risen into distinction since its appearance gave the signal for the introduction of those very liberal and Catholic ideas upon the subject of the union of form and colour, which are fast finding favour in the minds of the public generally, and on which the successful employment of the youthful energy of the profession will most probably be concentrated for much of the remainder of the century at least. Recognizing, as we clearly do, the educational influence Mr. Owen Jones's works have had upon the public, as well as upon the body of architects generally, we little doubt that the demand for his publications, which has probably originated with the latter, has extended, and will yet extend, widely to the former. We feel it, therefore, a duty to assist in making known that Mr. Hodgson, of Fleet-street, announces that he will sell for Mr. Jones, on the 11th of December, and four following days, all the "remainders" of his publications, including no less than 165 copies of the "Alhambra," alone.

While it is to be regretted that so large a proportion of the original edition of a work so costly to produce should still remain upon its author's hands, the public is to be congratulated upon the amount of good which is likely to be done by the diffusion of so many copies of a work on which, to quote from the very monument it illustrates, "we have only to look attentively, to reap the benefits of a commentary on decoration." The provincial schools of art and public libraries ought not to let this opportunity pass by unimproved.

DONCASTER CEMETERY COMPETITION.

On the 13th ult. the commissioners met in the council-chamber of the Town-hall, for the purpose of "receiving designs, ground-plans, elevations, and detailed estimates for the laying out as a cemetery or burial-ground, the land selected for the site, containing about 7½ acres, and for erecting thereon two chapels apart from each other, with lodge and entrance gates. The whole cost not to exceed 1,600*l*." The drawings, after undergoing examination, were ultimately reduced to two, viz. "L'Espérance" and "Industry." According to a local paper, the cost settled the question. On opening the private note, it was found that the successful architect was Mr. R. J. Johnson, of Newcastle-upon-Tyne.

On the production of the accepted plans, a discussion took place as to the probable cost of the erections. The design for the chapels is simple. The chapels are divided by a spire 70 feet high. They are to be built of stone. The plan for laying out the ground is by Mr. Appleby. Complaints have been made on the subject of the award of the commissioners. It is asserted that it was clearly understood, that there were to be "two chapels apart from each other," and that the question was distinctly put, and the answer was in the affirmative.

PROVINCIAL SCHOOLS OF PRACTICAL ART.

Worcester.—The third annual meeting of this prosperous school, was held at the Music hall, Worcester, on Monday evening before last, when abundant evidence was given that the Worcester public view its advantages with increased favour and appreciation, as not much less than 900 persons assembled to take part in or to witness the proceedings of the evening. Lord Ward took the chair, and among those present were the Mayor and Sheriff of the City, the Dean of the Cathedral, Sir F. H. Lechmere, and many other influential gentlemen. The report congratulated the meeting on the prosperous career of the school. Sixteen medals had been awarded to it by the Government authorities, at the general competition in London, so that the Worcester School took rank as second amongst the provincial schools in point of progress or merit, a result which the report attributed in no small degree to the exertions of Mr. Kyd, the master. Lord Ward distributed the prizes, and addressed the meeting, as did also Sir C. Hastings, the Rev. J. Pearson, and other gentlemen. The aid contributed by Government during the past year amounted to about 160*l*.

Chester.—The second annual exhibition of the works executed by the students in this school, to be exhibited in London in competition for the Government medals, took place in the Central School, at the Mechanics' Institution, on 16th ult. The drawings consist of linear geometry, mechanical and machine drawing, and details of architecture, linear perspective, free-hand drawing from ornamental copies, and free-hand outline from ornamental casts, shading in chalks from copies, shading from models and objects, the human figure in outline, flowers drawn from copies and nature, in outline and colours, and ornament painted from copies. The school, according to the local *Chronicle*, is extending its benefits very considerably. Mr. Davidson, it adds, to whom (as teacher), the praise is chiefly due for the forwardness and progression of the students, has at present about twelve hundred individuals under his tuition in this city. The exhibition was visited by a large number of people, and the feeling of satisfaction in the display is said to have been general.

Swansea.—The second exhibition of the Swansea School of Art, took place on Friday and Saturday in week before last, at the Old Town-hall, which has been appropriated to the purposes of the institution. Not a few among the visitors, it is said, were intelligent members of the working class, who appeared to look with interest upon the sketches exhibited. The progress made by the pupils under the tuition of Mr. Hamerton, according to a local paper, is highly creditable to that gentleman. By far the larger portion of the collection consisted of drawings made in the evening class at the local Central School, and attended chiefly by the working classes; but in addition to these there were selections showing the progress of the following schools in connection with the Central School, viz.—the Swansea Grammar School, Normal College, Mr. Colston's, and the British School, Goat-street; and also a display of drawing in figure and landscape, by ladies and gentlemen of Neath, where Mr. Hamerton holds a private class. On the whole, the exhibition is said to have been gratifying and encouraging, and it is hoped that a more extended share of public patronage will be henceforth bestowed upon this school.

THE TIMBER TRADE AND THE WAR.

In the *Builder* of the 18th ult. hopes were held out that builders would be enabled to profit by the immense influx of timber from North America; and it was intimated that this influx had very singularly arisen through the war. The consignees have as strangely found a ready and profitable market for some of their timber, and also for the ships chartered to this country.

Government, we are informed, last week bought up all they could get, and chartered vessels in the river having cargoes of timber, to proceed with it instantly for the East.

Major-General Sir F. Smith is now preparing wooden huts for our army in the Crimea. Each hut is to contain room for twenty-five men, and will be twenty-eight feet long by 16 feet wide; 6 feet high at the sides, and 11 feet at the ridge. Each hut will be fitted up with a stove to warm it, and for cooking the men's provisions. The sides, ends, and roofs will be weatherboarded on substantial framework, and in addition a coat of asphalted felt will be laid on the roof. A thousand of these huts will be on their way to the Crimea this week. The huts for the officers are similarly constructed. The fuel for the fires is unfortunately at present unobtainable in the vicinity of Sebastopol, and will all have to be landed from transports.

THEATRES AND SCENERY.

The Royal Albert Amphitheatre, late "The Garrick." — The site of the once favourite resort of the east-end playgoers, the Garrick Theatre, which it will be recollected was, during the year 1846, burned to the ground, has, within the last few months, been taken by a theatrical speculator, Mr. Levy, who has erected a new theatre upon the precise spot where the old one stood, and which will be opened at Christmas. The original theatre was built in 1830, by Mr. Conquest, and in honour of its standing close upon the site of one where David Garrick had once played, his name was given to it. At the time of its destruction, it was jointly the property of Messrs. Gomersal and Conquest: since that period, until the present, no one has had the temerity to speculate in another building. The present theatre is built upon the model of Astley's, excepting that the ring for equestrian performances will be beneath the stage, which, after the performance upon it, is to be, by mechanical appliances, raised to the ceiling, leaving an arena of 40 feet in diameter, quite clear for the scenes of equitation. The house, which has been built with modern improvements, will hold about 2,000 spectators. There are six private boxes and two upon the stage which will *not* go up to the ceiling. The stage is 40 feet square, with entrances for horses and actors from Goodman's-fields, at the rear of the theatre. The house will be lit by a large centre glass chandelier, and five smaller ones round the boxes. The decorations are in white and gold, with equestrian medallions round the boxes, which are lined with maroon-coloured embossed velvet and damask. The architect is Mr. Lavender; the builder,

Mr. Harmer. The stage has been constructed by Messrs. Harrison and Ellis; the decorations are by Messrs. Aglio; and the scenery by Mr. G. D. Gibbs and Mr. H. Henry.

There has been considerable activity in the theatres during the past month, although mostly in the shape of short pieces not requiring much scenic decoration. At *The Haymarket*, two very charming scenes were painted for Mr. S. Lover's drama,—"The Sentinel of the Alma," The piece itself being partly burlesque, and partly natural, and the matters burlesqued being too serious for such treatment, failed; but it is to be hoped that the scenes in question may be otherwise brought in. The drawing-room scene, provided for Mr. Bayle Bernard's charming little comedy,—"The Balance of Comfort," is very elegantly caparisoned; but we should scarcely recommend the colours employed on the walls, blue and yellow, to the persevering correspondent who is just now "shelling" us with letters to know how he may colour his cornices, and what curtains he may put in his drawing-room. All lovers of the drama will hail with pleasure the re-appearance of Mr. Buckstone, with humour and energy undiminished. As "actor, manager, and author, too," he has won, as he deserves, the regard of the public.

The Adelphi.—Two or three capital farces have been produced, in which Mr. and Mrs. Keeley, and Mr. Rogers, keep the house in a roar. Mr. Webster and Madame Celeste, too, have now returned, so that we may look for some pieces of heavier calibre.

STONE AND IRON.

Not very long ago we drew attention to the effect which had been produced on the stone curb of the park-wall in Knightsbridge, by the iron standards of the railing, and mentioned that masons were then repairing the damage. Looking at the railing again the other day, we found that between Hyde-park-corner and the houses westwards, pieces of the stone have already been forced out again in no less than twelve places by the expansion and oxidation of the metal. We would suggest to those who have the control of the works to bring a little science to bear upon the point before they repair the curb again. It offers a useful lesson, but its periodical repetition would probably be too expensive to be desirable.

MODERN CARPETS AND PAPERINGS.

In these days of reformed taste I am astonished to see in a weekly periodical the following description of the Queen's apartments at Hull:—

"The Queen's apartments in the Station Hotel have been furnished in the most sumptuous and elegant style." Here comes a description of the paper of the drawing-room and the carpets of the same, the gaudiness and glare of which must be most sickening to so quiet and tasteful a person as our gracious sovereign. The description continues:—"The hearth-rug is a perfect picture, and is one of the finest specimens of that description of carpet-work, which has of late been brought to such perfection, especially in the West Riding. At each corner is a thistle encircled with gold and heather-blooms. The centre device is a splendidly executed monarch of the glen, *erect* on herbage peculiar to the mountains of Scotland. The ground of the hearth-rug is royal tartan, and adorned with national emblems, such as the bagpipes, cap, dirk, kilt," &c.

"The royal bed-room is hung with a delicate paper of green and silver, and the carpets for this and the ante-room are of a rich crimson ground, with bouquets of flowers, thrown into *bold relief by the admirable taste of the designer*."

Now, sir, the very fact of the hearth-rug being a "perfect picture," is sufficient to show that it is in a marvellously improper place, inasmuch as the fire is the great centre of the room, round which all the inmates gather, and therefore this "perfect picture" must be more trodden under foot than any other portion of the room. Can the fire produce comfortable feelings,—is it possible that it can have any effect upon a lover of art,—whilst he is thus ruthlessly trampling upon such "perfect pictures?" Is it within the range of possibilities that we can positively stand on level ground and preserve our equilibrium, whilst in bold relief a monarch of the glen "stands erect on herbage," &c. with his antlered head protruding and interfering with our feet and legs? Is a splendidly-executed work of art, in fact a perfect picture, the most fit thing to place in our way, thrusting itself upon our attention when we go to our fireplace to enjoy quietness and find repose?

The Royal bed-room also enjoys the same advantages of the refined taste of the upholsterer. We are told that the carpet of that and the ante-room is of a crimson ground, and is covered with bouquets of flowers thrown into bold relief. Now flowers may very beautifully once in a lifetime be strewn beneath the feet of a bride returning from her nuptials; but far gone indeed must be the affections of one who requires such a repetition of a perpetual bouquet of the same flowers. Here too is *bold relief!*

What can be the meaning of our manufacturers, who try to make every material they manufacture an imitation of what it really is not,—whose highest ambition seems to be, to do their best to make an article of use appear monstrously inconvenient?

Surely, sir, it is time these absurdities were put an end to. Let us have tasteful and comfortable carpets by all means; but, if we want representations of animals, let us have them on our walls, and let them not do their best to trip us up. Whilst the Government are doing all in their power to show house furnishers and manufacturers what good taste is, and have also taken the trouble to point out the bad, it cannot well escape the observation of her Majesty, that types of all the glaring articles in her Hull apartments are suspended (like stoats and birds of prey in the country, on the walls of Marlborough-House, in a room appropriately nicknamed "The Chamber of Horrors."

A Marlborough-House Student.

THE BUILDERS' BENEVOLENT INSTITUTION.

On Thursday a special general meeting of the subscribers to this charity was held at the London Tavern, the president, Mr. W. Lee, M.P. in the chair.

The report stated that during the past year two elections of pensioners had taken place, when eight candidates had been added to the list, making the total now upon the funds, twenty-four. The sum paid for pensions since the commencement of the institution amounts to upwards of 1,570*l*. The directors had, from the subscriptions of the past year, added 700*l*. to the funded stock, and the total amount now invested was 4,350*l*.

The Chairman, in opening the proceedings, stated that they had met together on the present occasion for the purpose of electing three persons from a list of thirteen candidates. He was sorry that the state of the funds would only allow so small a number to be elected, but he trusted that the directors would speedily have the means placed at their disposal to enable them to announce an early election, when more might be elected to the benefits of so excellent a charity. He trusted that those gentlemen connected with the different building trades who had hitherto refrained from coming forward to support this institution would now do so; and he felt confident that as its benevolent and praiseworthy objects became more and more known, it would meet with a greater amount of support.

The election was then proceeded with, and the meeting separated.

PROCEEDINGS UNDER BUILDINGS ACT.

RUINOUS BUILDINGS.

At the Bail Court the other day, Mr. Huddlestone, *ex parte* the overseers of Saffron-hill, moved for a rule in the nature of a *mandamus* calling on Mr. Corrie, one of the magistrates for the metropolitan district, to issue his warrant against Mrs. Sarah Woodward to levy 58*l*. 6*s*. 2*d*. under the Metropolitan Buildings Act, 7th and 8th Victoria, chap 84. By the 40th, 41st, and 42nd sections of the Act, if a building become in a dangerous or ruinous state, the surveyor is to make complaint to the official referee, who is to give notice to the owner of the building to hoard it round and repair it, or, if necessary, pull it down; and if he refuse or neglect to do this, the overseers of the parish are compellable to do it on notice from the official referee. That was done in the present case by notice to the overseers of Saffron-hill, who were compelled to pull down a certain house in the parish in the occupation of a Mr. Paleman, which became ruinous owing to an accidental fire. Mrs. Woodward was, it appeared, the assignee of the lessor and entitled to the rents, but three years of the lease were unexpired; and the question was whether, under the words of the Act, she was the "owner of the building entitled to the immediate possession thereof;" for, if she was, the overseers were entitled to recover from her the expenses they were put to in pulling down the house. The case had come on before Mr. Corrie, and he gave it as his opinion that, as she was not entitled to the immediate possession of the premises, she did not come within the Act, and refused to issue his warrant against her to enforce the payment of the expenses the parish officers had been put to in pulling down the house.

Mr. Justice Crompton said that he agreed with Mr. Corrie in the opinion he had given, and declined to interfere. There was an outstanding lease for three years, and there could be no difference between that and a case where the lease was for ninety-nine years with a mere ground-rent. It could not be said Mrs. Woodward was the owner entitled to the immediate possession of the building.—Rule refused.

THE OXFORD MUSEUM DESIGNS.

In the *Builder*, p. 606, *ante*, I was astonished at reading that "the Vice-Chancellor has announced that the six undermentioned designs have been selected to be submitted to professional judges, according to the statement of requirements of the museum delegates furnished to competing architects." On turning to these "requirements" I find, on p. 7—"N.B. *The delegacy is not empowered to entertain any plans of which the estimated cost exceeds* 30,000*l*. And in order to secure this condition being fairly complied with, *no plan will be selected which has not been submitted* to the scrutiny of competent professional judges, not interested in the competition. And no material alteration will be allowed to be made in any plan after it has been sent in, for the purpose of conforming with this provision."

Have the delegates then deviated from their own proposals? and is this competition to be another specimen of how committees can break through their own arrangements? Had I thought so, after reading the very fair terms offered, I should certainly not have wasted my time in complying with them, and thus ensuring myself

An unsuccessful Competitor.

*** Our correspondent is surely a little too fast: no plan has yet been definitely *selected*. We insert his letter, however, as a reminder for the delegacy. We shall be much surprised if fitting buildings to the extent required by the University are obtained for the sum specified.

AVOIDANCE OF SMOKE.

INSTITUTION OF CIVIL ENGINEERS.

At a meeting on November 21st, Mr. James Simpson, president, in the chair, the discussion was renewed on Mr. Woodcock's paper "On the Means of Avoiding Smoke from Boiler Furnaces." In the course of it, the use of heated air was practically contended for, because, when the air was admitted at a low temperature, there was a certain amount of loss from the chilling effect of the stream or film of air, before it mingled with the gases; whereas this effect was not perceived when the air was admitted at a certain temperature. The system of supplying air at a very elevated temperature under gas-retorts, had been very advantageously employed for many years, in conjunction with the hollow bridge originally introduced by Mr. Farey, the father of the late Mr. John Farey. In corroboration of these views, it was stated that on board one of the *Citizen* steam-boats on the Thames, by a free admission of air only, through a series of parallel wire-gauze screens in the fire-door, so as to distribute it in minute jets, the exhibition of opaque smoke had been prevented, whilst a saving of fuel was effected, without any loss of speed or any extra labour to the stoker. A hollow bridge was also used, and a blast-pipe being extended from the base of the funnel, and opening into the bridge, further beneficial effect had been produced.

A model was exhibited of a hollow cast-iron bridge-plate, with a series of vertical ribs, so arranged as to form tubes, leading up from the ash-pit to the apex of the bridge; where the air mingled with the heated gases and passed away in flame. The currents of air up these bridge-tubes preserved the iron from destruction, by carrying off the caloric, and it became heated in its upward course.

The introduction of cold air was advocated on the ground that a mass of air once broken up into films, or minute jets, would not again unite, but that each particle would pursue its independent course until it combined with the heated gases; therefore, the

system of admission by the perforated fire-door, so as to pass over the incandescent fuel, had been so strongly advocated.

It was urged that mechanical or other means should be adopted for regulating the proportion of oxygen according to the state of incandescence of the fuel on the bars. This, it was contended, was virtually accomplished through the side tubes of Mr. Woodcock's apparatus, as it had been shown that the velocity of the passage of air through the tubes was exactly in proportion with the demand for oxygen by the fuel.

The question of the applicability of most of the systems of preventing the exhibition of opaque smoke was shown to depend, to a great extent, on the area of the fire-grate and the size of the boiler; for, if both were restricted, so as to demand an excessively rapid draught, there could not be a sufficient mingling of the gases to insure perfect combustion.

PRINTS.

"Luther. Melancthon, Pomeranus, and Cruciger, Translating the Bible, 1532," just now published by Messrs. Gambart and Co. (Berners-street) will interest a large number of persons. It is engraved by Mr. Simmons in mezzotinto, from the picture painted by M. Labouchere; and it describes the almost daily consultations which the great reformer held with his learned and industrious associates, during the time he was engaged in translating the Bible. The varied character of the men is well marked by the painter, and the engraver has performed his part of the task ably.——The same publisher has issued an excellent chromo-lithograph, "The Highland Spring," a girl giving a fisher-boy water, after a drawing by Mr. Frederick Tayler. It is admirably executed by Messrs. Hanhart, from fourteen stones.——Messrs. P. and D. Colnaghi have added to their very interesting series of war prints already referred to by us, "French Troops making Fascines, Bomarsund, August 10," which is drawn and lithographed by Mr. E. T. Dolby; "The Town and Harbour of Balaklava," from a drawing executed on the spot by Lieutenant Montague O'Reilly; and "The Siege of Sevastopol," from a sketch taken from the new Thirty-two Pounder Battery, above the left attack picquet, on the 22nd October, 1854, by Captain M. A. Biddulph, R.A. This sketch is executed in very good style by Messrs. Day and Son.

Notices of Books.

A Commonplace Book of Thoughts, Memories, and Fancies, Original and Selected. By Mrs. Jameson. London: Longman, Brown, Green, and Longmans. 1854.

When Mrs. Jameson's volumes on Shakspeare's Women, and on Sacred and Legendary Art (which, with others, grew out of notes of thought and extracts from books jotted down during many years), had been completed, a number of remarks, memoranda, and fragments remained, and these the author, following the wishes of friends, has thrown together to form the book now before us. And very glad we are that this decision was come to, for a more suggestive and charming magazine of materials for thought we have not looked into for some time. All who love art know what Mrs. Jameson has done in that respect, and are thankful to her for it. To an elegant and discriminating mind she unites an amount of knowledge possessed but by few; and while truly feminine in thought and feeling possesses masculine energy and vigour. As an author, in which capacity alone we know her, Mrs. Jameson is an honour to her sex and her country.

The "Commonplace Book" is divided into two parts, the first referring to Ethics and Character, the second to Literature and Art. The second part contains a fragment on sculpture, and suggests some subjects fitted for artistic treatment which will reward the attention of our sculptors. In the course of it, reference is made to the circumstance that Shakspeare represents Hermione as a *coloured* statue. Paulina will not suffer it to be touched because "the colour is not yet dry." Again,—

> "The ruddiness upon her lip is wet,
> You'll mar it if you kiss it,—stain your own
> With oily painting."

There is one subject suggested which we especially hope to see carried out,—Lord Byron's Myrrha, who, "with her Ionian element is susceptible of the purest classical treatment. She should hold a torch, but not with the air of a Mænad, nor of a Thais about to fire Persepolis. The sentiment should be deeper and quieter."

> "Dost thou think
> A Greek girl dare not do for love that which
> An Indian widow does for custom?"

The book is nicely printed, and a host of quaint little woodcuts and etchings serve to separate the subjects.

The Naval Officer's Manual, for every Grade in her Majesty's Ships. By Captain W. N. Glascock, R.N. Third edition. London: Parker, Furnivall, and Parker, Whitehall. 1854.

This third edition of an excellent standard work is issued under circumstances which induce us specially to notice it, although a majority of our readers may not feel any particular interest in its details. The able author, whose name in other departments of literature is well known, is now deceased, and the present work has been re-issued under the editorship of Mr. Joseph Allen, of the Royal Hospital, Greenwich (conductor of the *Navy List*), for behoof of Mrs. Glascock, the author's widow. The issue is well timed; and even to a landsman, with no other interest in our noble navy than a national one, the work will be found to be both interesting and curious, as revealing the whole line of duties and of conduct proper to all the various officers on board a Queen's ship, from the "middie" upwards to the admiral himself. It is written in a popular and attractive style, with not a little of sailors' anecdote interspersed; and the present edition contains one new feature of importance to which special allusion must be made,—namely, a chapter on the steam-engine, kindly contributed by Mr. R. Roughton, of the Woolwich Dockyard, and embracing the course of studies pursued there, in the inculcation of which Mr. Roughton has for some time been successfully engaged, and which is particularly recommended to all executive officers of the Navy as an essentially practical treatise.

By a more economical typographical arrangement, the work has been confined to a single volume, though thus enlarged and otherwise improved, and is now sold at a smaller price than heretofore.

Miscellanea.

The Free Library Movement in Preston.—A public meeting, in furtherance of the establishment of a free public library in this town, was convened in the lecture theatre of the Institution for the Diffusion of Knowledge, Avenham, at noon on Thursday before last. There was a large and influential gathering, including a number of ladies. The mayor of Preston presided, and amongst the occupants of the platform were Lord Stanley, Mr. Heywood, M.P., and other gentlemen interested in the object of the meeting. Lord Stanley addressed the audience, and concluded by moving a resolution in favour of the formation of a free library, which with other appropriate resolutions was unanimously passed, and a committee appointed. It is proposed to get 500 working men to subscribe 1*l.* each, allowing them twelve months in which to pay the money by weekly or monthly instalments, as they might think proper. In consequence of the present depression, the mills will not be canvassed until a more favourable opportunity. As soon as 3,000*l.* shall be subscribed, the Town Council are to be requested to poll the burgesses on the question according to the Act. Subscriptions were announced at the meeting to the amount of 850*l.*

Stained-glass Windows.—A window has been put up in Spelsbury Church, Oxfordshire, by Messrs. Gibbs, of London. It was executed for the Viscountess Dowager Dillon, in memory of her late husband. It is a five-light window, depicting events in the life of our Lord. There is a passion-flower background, and the family arms at the bottom. The same artists have also just put up an east window in Pocklington Church, Yorkshire, for the Hon. Captain Duncombe, of Kilnwick Percy, Yorkshire. The church has just been repaired. The whole of the chancel has been rebuilt by Captain Duncombe.

Pillar Post-Offices.—Whilst the Londoners are talking of these accommodations, says a Liverpool paper, our active postmaster is erecting one for the inhabitants of Prince's-park, at the junction of Croxteth-road with Lodge-lane. The structure consists of a hollow cast-iron pillar, having the usual letter-slit on one side, with a small door on another, through which the letter-box will be inserted and removed. This pillar is to be surmounted by a gas-lamp. The whole apparatus is from Mr. Bennett's foundry, Sir Thomas's buildings.

"Architect and Horse-doctor."—Being a constant subscriber to your publication, I was somewhat surprised, on seeing an article in the number of Nov. 18, headed "Architect and Horse-doctor." I beg to inform you that fourteen years of my life have been exclusively devoted to the business of architect, surveyor, and builder, having been articled to a first-rate country firm, and *employée* in a first-rate London one. The death of an only brother induced me to divert my attention from architecture. I accordingly entered the Royal College of Veterinary Surgeons, obtained my diploma, and have since been in practice. My time, in the summer months and a few country, is not sufficiently employed; and having four sons, I did not consider I was disgracing myself or the profession in again resuming my former business, and thus affording an opportunity of bringing up my children. Neither is there anything unprecedented in my practising the two professions. It requires as good an education to become a veterinary surgeon as an architect and builder. There are those who cannot learn one business,—thanks, I can two. We find on record many instances of men who have not been brought up to the profession becoming eminent architects, builders, and engineers. The late Mr. Rudyard, builder of the Eddystone Lighthouse, kept a silk-mercer's shop on Ludgate-hill; James Smeaton, who erected the next Eddystone Lighthouse (after the former had been destroyed by fire), studied as an attorney, but disliking the law, he commenced business as a mathematical instrument maker; James Brindley was a wheelwright, but became eminent as an engineer: in 1759 he constructed a canal over the river Irwell for the Duke of Bridgwater; the present Sir Joseph Paxton was gardener to the late Samuel Smith, esq. Walton Wood Hall, Herts, and became architect to the Exhibition building of 1851, and also the Crystal Palace, Sydenham. There are not wanting in this neighbourhood examples to show that building is at a low ebb: houses may be found that have settled in all directions. I could show you one erected about twenty years since, the front door of which has not been opened for years. I have seen the walls of buildings bulged and shored up when scarcely above the ground. We have a new roof on our Corn Exchange (Ely), which has not been completed more than four months, shored up to prevent its falling: it is a fine specimen of construction and mechanical bearing. You may see a gin-shop entrance to a clergyman's house, *in fine proportion, and beautifully harmonizing with the rest of the building*. I have completed several works, all of which stand alone, without crack or settlement. I think, Mr. Editor, I have now shown sufficient to satisfy you and the public that I shall not disgrace, but may assist in raising, our reputation as architects and builders.—The Advertiser.

Institution of Civil Engineers of Ireland.—At the annual meeting of this institution for the election of office-bearers, &c. it was stated in the report that the balance in favour of the institution was 91*l.* odd, and that the amount of funds in the 3½ per cent. Government Stock had been increased since last report, and now amounted to 364*l.* odd. The library had been supplied with daily papers and other periodicals as well as professional papers and publications. We regret to find it stated that the attendance of members and production of papers during the last year has not been so large as usual; but now that the rooms have been fitted up and opened for the use and convenience of members, and that all the transactions are printed and distributed to the members and associates entitled to receive them, the council anticipate a better attendance and greater interest in the well-being of the institution, than during last session, and a consequent advancement of its important objects.

Builders' Clerks.—I was much pleased to read, in your influential journal, a letter from a builder's clerk, respecting the remuneration of that very useful body. There is not a body of men for talent and ability worse paid than they are. In some instances they are required to attend business from six o'clock in the morning until seven at night; others from half-past eight or nine until the same time in the evening; and mostly for less pay than a mechanic's hire. Some time since a Provident Society was established for their benefit, but as those for whose benefit the society was established did not come forward to assist the promoters, the society was dissolved.—A. J. C.

Prevention of Smoke in Paris.—An order has been issued in Paris by the prefect of police, that within six months all proprietors of steam-engines, are either to consume their smoke or burn coke.

The Vacant Space at St. Paul's.—The outline of some building is making its appearance in wooden erections on the vacant space left at the opening of the new street out of St. Paul's Churchyard eastward. We point attention to the circumstance, in order that due consideration may be given to it ere it be too late.

Mr. Monti, Sculptor.—From a statement in the Court of Bankruptcy, in the case of Mr. Raffaelle Monti, the sculptor, it appears that a sum of 15,866*l.* is due to unsecured creditors, and 731*l.* to those holding security. There is due to the bankrupt from the Crystal Palace Company a sum of 5,043*l.* (he having already received 13,650*l.* on account of 18,693*l.*) There are works of art, held by creditors as security, valued at 1,793*l.*; ditto, at studios, 3,600*l.*; value of plant, studios, &c. 1,500*l.*; furniture, 300*l.*; debtors, 700*l.* The bankrupt has an unfinished contract with the Crystal Palace Company to a large amount, but it is estimated that a sum of 6,000*l.* will be required to complete it. Among the articles thus contracted for, and not completed, are, the fountains for the basin in the north-east transept (these have been delivered, but the marble and copper work remains to be completed); thirty-six fountains to cascades, consisting of boys carrying tazzas, to be executed in galvano-plaster; four fountains to the end of cascades, consisting of three boys, three swans, three festoons, three masks, and two tazzas each, to be executed in galvano-plaster, and delivered by the 14th of May, for 1,390*l.*; two statues to represent Mercury and Fortune, for the top of templets to cascade, 500*l.* to be completed by the same date; forty-eight tazzas in Sicilian marble, 1,780*l.*; 190 ditto, for 3,651*l.* The following have been executed and delivered:—184 tazzas, executed in plaster, at 2*l.* 10s. each; fifty-four vases, at 10*l.* each; four river fountains—Thames, Nile, Ganges, and Amazon—executed in cement, 120*l.* each; four ocean fountains—Atlantic, Pacific, Arctic, and Indian—executed in cement, 120*l.* each; eight statues in cement, for fountains in terrace gardens—Hope, Joy, Friendship, Love, Modesty, Valour, Vigilance, and Prudence—for 720*l.* (all delivered, except Hope and Joy, which are completed ready for delivery). The bankrupt attributes his failure to his having undertaken contracts at a figure at which he is now unable to carry them out, owing to the enhanced price of labour and materials; also to the partial failure of a process by which he sought to produce the galvano-plaster casts.

The Iron Trade.—The Birmingham correspondent of the *Times*, of date 25th ult. says,—"The iron trade of South Staffordshire, which for some weeks past has, in a great degree, owing to a falling off in American demands and the commercial derangements of that country, exhibited symptoms of weakness, is unquestionably at the present time in far from a satisfactory condition; and a general reduction in the prices of the manufactured articles is anticipated. We stated last week that a system of under-selling prevailed, and that, with the exception of a few of the leading firms, makers were selling at the rate of 20s. per ton lower than fixed upon at the last quarterly meetings. ["Under-selling" is the rule then, and over-selling the exception, since it is practised only by "a few."] This statement has been subsequently confirmed by evidence within our own knowledge; and this morning the *Birmingham Journal*, in an article from a writer intimately acquainted with every movement and detail of the iron trade, establishes the downward tendency of prices." The journal referred to states that many of the mills and forges are now only partially at work. Some few blast-furnaces are being blown out. Generally speaking, however, the works may be said to be all more or less in operation, though not in full operation, and the present state of the trade must be considered one of suspense. A large accumulation of stock, especially of pigs, must take place before they can be much reduced. "It is difficult," adds the writer, "to anticipate the future prospects of the trade during the next few months: probably a declared reduction of 1*l.* *if not of 2l.* per ton will take place. If the latter should be agreed to, we have no doubt that it would produce an extended demand, and if financial and other general contingencies should not interfere injuriously) restore it to a comparatively healthy state." It will merely remit the high-price fever, it is to be feared, for a brief interval, as usual; but, at all events, it is more rational to extend the slack demand by a return to moderate prices than to check and destroy it by unavailable efforts to force prices beyond their legitimate level.—Mr. James Nasmyth, of Patricroft, near Manchester, the ingenious inventor of the steam-hammer (which, by the way, he proposes to put to important use in the war now raging), has recently patented an improved operation in iron manufacture, by subjecting the molten metal in the puddling or refining furnace to the action of a current of steam, introduced at its lowest portion, diffusing upwards, and thus mechanically agitating the liquid metal, and exposing fresh surface to the oxygen of the furnace atmosphere, which chemically combines with the carbon and sulphur contained in the iron, and deprives it of these impurities. The hydrogen set free is thus in a state to combine with any excess of sulphur, whether present in the iron, or as a product of the combustion of the fuel.

Patent Window-Fixings.—For convenience of cleaning, painting, &c. without disfiguring or removing the beading, window-sashes may now be readily lifted out and in, by means of Gribbon's patent window-fixings, which consist simply of a couple of hinges, so made, that when applied to one side by cutting the parting bead-groove above and below the pully, and inserting one at each end, the part so hinged can be pressed inwards so as to allow the sash to sink deeper into the side frame, and so come clear out at the opposite side, when, of course, it can be at once removed altogether from the frame, particularly if the cords be hung by knots slipping into sash-cord holders, such as Mr. Gribbon also recommends, instead of being nailed as usual to the sash. By means of a set of Gribbon's window-fixings, which cost only three shillings, many a life might be saved, and much danger and other inconvenience avoided. Mr. Gribbon is a Dublin architect, but we believe his patent window-fixings are obtainable in London as well as Dublin.

Rock-drilling.—Mr. E. G. Durham, of Portland, United States, has taken out a patent for a drill, in which the lifter is brought into contact with a horizontal plate on the drill-rod, causing it to incline slightly during the upward motion of the bar, and to bite and impinge upon it, and hold it firmly, until it is raised to the position required. As the lifter escapes, the plate again assumes the horizontal position, quits its hold, and falls with the drill. There is also connected with the apparatus a friction plate, by the action of which the bar is raised completely out of the drill hole, and by increasing or decreasing the friction of this plate, the force and rapidity of the action of the bar is accelerated or diminished, according as circumstances may require.

The Wellington College.—It has been decided to accept the offer made by Mr. R. Gibson, of a site near Wokingham, for the intended college. Mr. Gibson gives 12 acres gratuitously to the governors, and allows them to purchase 100 additional, at the low price of 10*l.* an acre. The site immediately adjoins the Reigate and Reading branch of the South-Eastern Railway, and is about 2 miles from the Military College of Sandhurst. It stands on high and dry ground, though abundantly supplied with excellent water, on a hill sloping to the south and west, sheltered on the north and east by fir plantations, about 9 miles from Windsor, and fronting Strathfieldsaye, which is visible in the distance. The total sum subscribed has been somewhat more than 110,000*l.* The governors have lent on mortgage 80,000*l.* the interest of which, at 4 per cent. is the very lowest sum at which they conceive it possible to carry into effect the objects of the trust. The sum of 25,000*l.* therefore, at the outside, is all that is available for the purchase of land, the erection of a suitable building, with masters' houses, fencing, and all other incidental expenses. Subscriptions continue to be received by all bankers, either specially for the building fund, or generally to the purposes of the institution. No time is to be lost in commencing the work, although the sum devoted to the building is, as yet at least, very small.

Ragged Churches: Hollow Walls.—I look for the leading article in the *Builder* with the same craving as for the leaders in the *Times*, and the profession ought to be proud of them, for you give them a *halo* they would otherwise lack. You have hit the nail on the head, by stating the necessity for "ragged churches:" for years I have endeavoured to draw the serious attention of our various ecclesiastical boards to the fact of the non-attendance of those of the most importance to attend, viz. the lame and halt, requiring the physician, not the hale and hearty. In pursuance of which, experience proved that in the various "temporary churches" put up by myself in the metropolis, a considerable moiety of the congregations were of the class who are afraid, or do not feel themselves at ease, in our new mediæval churches. Last year I placed at Redhill, Reigate, Surrey, a suitable building, well adapted to meet the necessary requirements in any locality. The walls of this church are constructed of hollow bricks, each 18 inches long, 9 inches wide, 4 inches thick, saddle-backed, of great strength, fire-clay kiln-burnt, durable as terra cotta, impervious to moisture, appearance good, so as to require no covering; the pier bricks 12 inches thick, with slots to receive the hollow bricks: pier bricks are also made 27 inches high. Churches can be provided with this material at 30s. per sitting. Redhill church contains 500 sittings, exclusive of gallery at west end, for forty to fifty children; cost 750*l.* The nave we fitted with pews, add 63*l.*; warmed by hot water, add 100*l.* I write this from St. George's-hill, near Weybridge station, at Dr. Southwood Smith's, a villa residence I have just completed, walls principally constructed with hollow bricks. I conceive there are great advantages attending the use of this material, particularly for lodging-houses for the masses.

Peter Thompson.

Yorkshire Architectural Society.—A committee meeting of this society was held at York on 16th ult. The treasurer stated that the society had been unable to make any further grants in aid of church restoration; and it was resolved that an appeal ought to be made to the county of York for funds in aid of the society's general objects, and especially for the judicious restoration of churches. This resolution it was proposed should be laid before a general meeting of the society, at which the Archbishop, as patron, should be requested to preside. The attention of the committee was then called to an application made to the Diocesan Court of Ripon, for a faculty, authorizing the pulling down of the old chancel of Spofforth church, and replacing the same by one of lesser dimensions, and of different architectural character. A memorial to the Chancellor of the Diocesan Court, deprecating the destruction of the existing chancel, and praying him to withhold the legal authority for such a desecration, was accordingly adopted.

The late Mr. N. J. Cottingham.—Amongst those who perished in the ill-fated *Arctic*, was Mr. Nockalls Johnson Cottingham, architect, son of the late Mr. L. N. Cottingham. Mr. Nockalls Cottingham had considerable artistic ability and good knowledge of Gothic architecture: he had shown skill in designing for stained glass; and the cast of his carved screen for the Hereford Cathedral in the Great Exhibition of 1851, will be remembered by many of our readers. "Nothing of the dead unless it is good," is a generous maxim, and shall not be departed from on this occasion. He was on his way to New York, to begin a fresh life, when he unfortunately perished at the early age of thirty-one.

Presence of Mind.—Michael Butler, engineer at Dalkey quarry, while engaged in attending to the machinery, slipped, and fell forward on the cogs, his left arm being driven into the teeth. Seeing the nature of his position, he threw himself backwards and to one side, to allow, as he said, his arm to be smashed off, but to save his life, which he effected.

North of England Art Union.—A meeting of gentlemen favourable to the formation of an Art Union for the county of York was held at the Court-House, Leeds, on Wednesday in last week, the mayor presiding. It was resolved that a memorial be presented to the Board of Trade, praying the Board to authorise the formation of a Yorkshire Art Union. Such a memorial, according to the *Leeds Intelligencer*, is now in course of signature.

The New Commission of Metropolitan Sewers.—On Wednesday last (the 29th ult.), the members of the new Commission of Sewers assembled at Greek-street, Soho, all being present with one exception. The chairman delivered an introductory address as to what had been done by the late commission. Some of the members wished it to be understood that, although they might not oppose all the schemes adopted by the late commissioners, they did not consider themselves bound by them. After some other preliminary procedure, the meeting separated.

Glasgow Cathedral.—Some improvements in Glasgow Cathedral are projected. Among others, the partition which separates the choir from the nave is to be removed. But—will it be believed?—it is to be re-erected. The propriety of this being questioned in the town-council, the matter was remitted to the magistrates to decide, after consulting Mr. Burn, of London, acting for the Office of Works. The result was as follows:—The Rev. Principal, without adducing any substantial reasons, insisted on its re-erection; and as Mr. Burn gave it as his opinion that the cathedral would look quite as well with as without the said partition, the principal's wish was agreed to, and the partition is to be re-erected, to perpetuate the disfiguration of the building! What would be said or done, were it proposed to erect a partition over the organ-screen in Westminster Abbey? Would the inhabitants of London permit such a gross violation of good taste?—F. A. I. S.

TENDERS

For a new chapel, Brentford. Mr. Searle, architect:—

Messrs. Tarrant	£2,427	0	0

[ADVERTISEMENT.]

GREAT FIRE AT MANCHESTER.

"Manchester, Sheffield, and Lincolnshire Railway.
Manchester, Nov. 28, 1854.

"Dear Sirs,—I have the pleasure to inform you, that the large Fireproof Safe we purchased from you about six weeks since, for our cashier's office, was exposed to the hottest part of the fire which unfortunately took place at these offices on Saturday last, and I am happy to say that all its contents, consisting of valuable books, bank-notes, and other documents, escaped without the slightest injury.

"I am, dear Sirs, yours truly,
"EDWD. ROSS, Secretary.

"To Messrs. Chubb & Son, 57, St. Paul's Churchyard, London."

TO CORRESPONDENTS.

"A Subscriber," Rotherhithe (were we to meddle in private disputes on *ex parte* statements we should simply mislead).—"F. W." "Mons. J." "J. G." (thanks: we do not desire to enervate it). "T. J." "*Books and Addresses.*"—We have not time to point out books or find addresses.

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor;" all other communications should be addressed to the EDITOR, and not to the Publisher.

ADVERTISEMENTS.

TO SURVEYORS' AND BUILDERS' CLERKS.

AN experienced CLERK WANTED in the office of a London builder. None need apply who have not been accustomed "to take out quantities, make estimates, and measure up extensive works." Address, stating salary required, to E. B. Office of "The Builder."

A CLERK in a BUILDER'S OFFICE.—WANTED, a Young Man, who has been engaged in a similar capacity, and well understands the duties required.—Address, with full particulars, stating age, salary, and reference to last employer, to Y. Z. care of Mr. Beard, Leopard Coffee house, Wellington-street, Borough.

MARBLE TRADE.—WANTED, a steady Man well acquainted with the practical departments of the marble trade, to act as FOREMAN. It is not necessary he should be a working marble mason, provided he can calculate work for setting out work, so that the employer will explain the situation he wishes to be located in, to keep order over the hands under his charge. Apply by letter to T. H. J., Earl-street, Westminster.

TO PARENTS AND GUARDIANS.

TWO ARCHITECTS, in partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply by letter, to A. B. 16, Water-o'-place, Ireland-street.

WATER-WORKS MANAGER.—WANTED by the Wolverhampton Water-works Company, a general MANAGER. He must be competent with accounts and a skilful superintendent of the plumbing work and pipe laying, and to take charge of the stores. His duties will also consist of those of secretary. Salary 200*l.* a year. Security to the amount of 500*l.* will be required. None need apply who are not fully acquainted with the above duties. Applications, with testimonials to be sent, addressed to the Secretary, on or before the 9th DECEMBER next. WILLIAM THORNE, Secretary.
November, 1854.

WANTED, in a Stone-ware and Drain-pipe Business of long standing, an experienced person, of middle age, good address, and of thorough business habits, as TRAVELLING AGENT. One accustomed to forming or having an extensive acquaintance with surveyors and builders throughout the country would be preferred. A liberal salary will be given to a thoroughly qualified person; and none need apply who cannot produce satisfactory references.—Address, by letter, to A. B. care of J. A. Rose, esq. Salisbury street, Strand.

TO PLUMBERS AND PAINTERS

WANTED, an experienced good Plumber, who is capable of doing the three branches. He must be of steady habits to fulfil the situation; of industry and perseverance, it will be very remunerative.—Each application to be addressed by letter, post-paid, stating references, to A. B. at Mr Brown's, Hand-and-Spur, Aldersgate-street, St Saviour's, Southwark.

N.B. Security required.

TO BUILDERS' CLERKS.

WANTED, by a Firm in London, a respectable Young Man in the above capacity. He must be a plain draughtsman, and write a good hand. Address, stating age and salary required, to D. H. Office of "The Builder."

TO CARPENTERS AND CABINET-MAKERS.

WANTED to APPRENTICE, a YOUTH, in-doors, to either of the above trades. A moderate premium will be given. Address, stating terms, to F. J. W. Mr. Eyre's, Baker, Aldersgate, Stoke Newington.

WANTED by the Advertiser, who is a thoroughly practical man, a RE-ENGAGEMENT as SHOP or GENERAL FOREMAN. He is well acquainted with the several branches of the building trade, can take out quantities, measure up work, and is well versed in accounts and book-keeping and the general routine of a builder's office.—References as to ability and decision of character.—Address to C. B. care of Mr. Bartin, New Canal, Salisbury.

TO SAW MILL PROPRIETORS OR BUILDERS.

WANTED, a SITUATION as SAW-SHARPENER or BENCHMAN, or FRAME-WORKER. Has four years' good character. No objection to town or country.—Direct, C. Z. No. 5. North-street, Hilson-grove, Marylebone.

DESIGNS PREPARED for SHOP FRONTS, INTERIOR FITTINGS, and GENERAL ARCHITECTURAL ARRANGEMENTS, by Mr. JOHN DWYER, 11, Great Marlborough-street.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 150, Westminster-bridge-road, Lambeth, near Astley's Theatre, begs to call attention to his stock of INSTRUMENTS, manufactured by superior workmen. The public will find no establishment in which every variety for all its of similar quality and cheapness can be had. Rules, scales, tapes, &c. charged equally low. A detailed list of prices will be sent gratis, if required, on receipt of a post-paid stamp.

PATENT SANITARY GAS SHADES.—These shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the offensive and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices. Wall shades and globes of every variety of form are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTHOUSE, Crispin-street, Spitalfields, London.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of flooring is extensively used in Switzerland and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 4*s.* per foot super, together with every particular, can be seen and its application, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion-House; or of Messrs. ARROWSMITH and Co. 38, New Bond street.

FORD and WEST, Artists, Lithographers, Engravers, and Printers, 4, Hatton-garden, London, execute in the best manner at moderate prices, with punctuality and despatch, Views of Estates, Views of Churches, or other buildings, Shipping, Maps, Plans, Circulars, Show Cards, in gold and colours, Portraits; objects of Natural History; Chromo Lithography, &c.

A MANUFACTURER wishes to treat with a Builder for the ERECTION of a FACTORY, to a given plan, and in a certain locality, to be named. The advertiser would take the premises on lease, and would be glad of purchasing them before the expiration of his tenancy; or is open to take a factory already built, if suitable.—Address, A. B. 5, Priory villas, Canonbury-park.

WANTED to PURCHASE, some good SECOND-HAND SCAFFOLDING.—Address, pre-paid, full particulars, A. B. 15, Brunswick-road, Upper Holloway.

TO ENGINEERS, MILL-OWNERS, CONTRACTORS, AND BUILDERS.

AUGUSTUS SMITH, Auctioneer, Valuer, &c. 235, Blackfriars-road, two doors from Holland street, having had seventeen years' practice in the selling and valuing of all kinds of engines, machinery, lathes, mechanical and engineering tools, plants, &c. respectfully solicits a share of patronage in the above line. The most satisfactory references given if required, and all accounts settled the day after delivery; also a free register kept of all engines, boilers, and machinery for sale by private contract.

AMERICAN OILSTONES, very superior in quality to the Turkey oilstone, a new and invaluable discovery, for giving, with ease and rapidity, a perfect and sharp edge to those tools used by carvers, carpenters, dissenters, turners, engineers, &c. &c. 7*s.* per lb. of various shapes and sizes, at 105, Newgate-street, London.

LOANS.—Persons desirous of obtaining ADVANCES, from 50*l.* to 2*m.* upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Office, 17, New Bridge-street, Blackfriars. Rules, 2*d.* each copy, or 1*s.* per post.
CHARLES JAMES TILTON, Resident Secretary.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Paints completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The great set curtion is recommended to avoid any spurious compounds that might be offered at cheap rates as Pure Oxide of Zinc. If any adulteration can be taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of preparation or by mixing with the oxide certain substances calculated to give it increased weight it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with it on.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and Co.; when ground and dry, by Messrs. T. B. MORLEY and Co.; and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City. JAY, JACK and BRABY, Wholesale and Retail Agents, 5, Tottenham-court, New-road, and 80, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 1, 2, 3, 5, 7, 14, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isle of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 73, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, rendered the cheapest White Paint.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Covering one effects a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imitation of the genuine article may be detected, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK LONDON PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield opposite the London Docks, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well-known hard stuccoes dry quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman Farina (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, their resin, re-in colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties, that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Mundic Masters also, and dealers in Plaster, Paris White, Mastic, Hair, Lime, Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones. Cement Chimney-tops, ditto Vases, Ridging &c. Paints, Stucco, &c. Marble Merchants and Importers of Portolano.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD and CO have much pleasure in informing customers of this valuable Cement, that they have, by means of a recent discovery, patented by Mr. ASPDIN much improved the quality of the Cement made at any previous price.

Engineers and others are requested to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD and CO beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-Fell, near Newcastle; at Messrs. Bevan's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in oil.

Zinc Paint being unchangeable as to colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class Decorative and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully enamelled on Stone, or as a other substitute for which White Lead is used; it is harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to the Trade, Friends, and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable. Orders received at Great Scotland-yard, and at the Works.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others engaged in the building trade, to the superior qualities of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf walls, docks &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington, and at the Works, Stockton fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction generally expressed by Engineers, Architects, and Contractors, of the above is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS, STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

DAMP WALLS.—STENT'S COMPOSITION for PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been covered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s. 6d. Prepared only by W. J. STENT, Warminster. London Agents, Messrs. J. and H. WALLIS, 60, Longacre. Agent for Ireland—Mr S. BOYD, 16, Mary-street, Dublin.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil cloth coverings; for entrance halls, passages, verandahs conservatories, &c.

MAW and CO. send, free of expense, their pattern and price book, with designs, to any given spaces and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical and Alhambre Mosaics, manufactured by the encaustic printer, and extreme durability. Slabs and Tiles for fire places and Hearths, Comes for Grates, Door Furniture, White Glazed and Ornamental Tiles for Bath Rooms, and Kitchen Ranges, may be had in great variety at their Warehouse, 9, Albion-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE is REMOVED to No 21, WHARF, Macclesfield-street North, City road Basin. Secondly, that the trade term, "Terro-Metallic," is the exclusive right of the Proprietor; and, thirdly, that the "Reasons of Peake Junior," page 30 of the Great Exhibition, mark the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 25s. at WARD'S OLD-ESTABLISHED HONDURAN WHARF, BANKSIDE, London. Builders, Engineers, Gas Companies, and others, supplied with every sort of country Bricks and Tiles on the lowest Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Pneumatic perforated Tiles (real Dutch Clinkers), River sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

BLUE BRICKS.—TO BE SOLD, a quantity of VITRIFIED BLUE STAFFORDSHIRE BRICKS; to be seen at Bellmont-wharf, Kingsland-road. Prices 40s. of all other description of Terra-cotta, Blue Stocks, Sussex Fire Bricks, &c. to be had by applying to Mr J. UNWIN, 59, Nelson-square, Blackfriars-road, London.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Slippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY MILLS and PRICE (Successors to Mr. Benjamin Gough), 37, Newington Crescent, Newington-butts.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address Mr. WM. WEBB, Brick-fields, Stoke Newington.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD's Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brick fields, Granze walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality, constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

GREAT NORTHERN WHARF, York-road, King's cross (WHITE BRICK and TILE DEPOT, L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants beg to inform builders, contractors, and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place, white cutters, seconds and paviors; cinkers, rubbers, and stocks, plain and paving tiles, 9in. and 13in., white and red paving tiles, blue, red, and white ornamental tiles of the most recherché patterns; stourbridge, Welsh, and Yorkshire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewerpipes, bends, junctions, and syphons; close-grate and trap, terracotta chimney tops, trusses, brackets, vases, tomb tiles and patera of the most improved patterns. Architects designs covered to with accuracy and despatch. Lump and ground grey stone lime, chalk lime for plastering, blue lias lump and ground lime, Roman, Portland, and lias cements, coarse and fine plaster, laths and hair.

N.B. 3,000 bundles of prime Gothenburg laths are now on sale at the above wharf, price 20s. per load.

The Dissolving Views maintain their old reputation, with Scenes of the War, School-hall, &c. The Oxyhydrogen Microscope as usual. Open on Saturdays Evenings, with the American Entertainment and Mr. Wand's Band.—Admission, 1s.; Stalls, 2s. and 3s.; Schools and Children, under ten years of age, half-price.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

ering universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 5 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate. May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

GLASS.

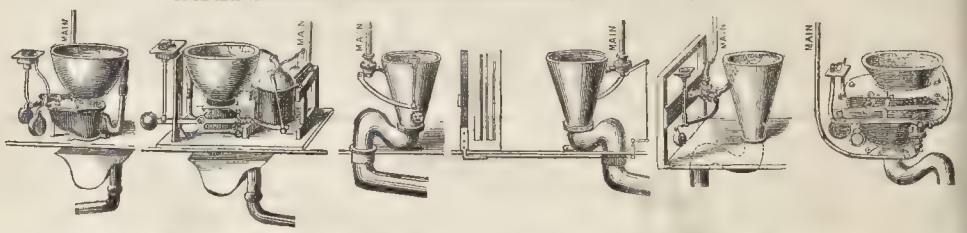
M. B. and Co. having an intimate knowledge of, as well as a practical acquaintance with, this peculiar business, can manufacture cheaper than any other house. They invite especial attention to their

DRAB HOPPER BASIN AND TRAP, AT 7s. 6d. EACH,

Delivered in any part of the kingdom;

AND WHERE LARGE QUANTITIES ARE REQUIRED, A LIBERAL DISCOUNT IS ALLOWED.



Orders for White, Drab, Marbled, Blue Printed, Enamelled, and Gilt Goods attended to on the shortest notice.

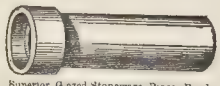
LONDON DEPOT—18 WHARF, CITY-BASIN;
FLINT AND STONE MILLS, FRAMPTON COTTERELL;
AND THE SANITARY POTTERY NAILSEA (Late Couthupes and Co.)

J. TYLOR AND SONS'

PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON

No. 1. No. 2 No. 4. No. 5. No. 6. No. 3.



THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

No. 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 4l. 4s.
No. 2.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET, WITH PATENT SERVICE-BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after use to any desired height. With Blue Basin, sunk opal handle, 5l. 10s.
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 3l. 12s. 6d. With Blue Basin and sunk opal handle, 3l. 3s.
No. 4.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast-iron trap, 1l. 13s. Enamelled Iron Trap, extra, 4s. 6d.
No. 5.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelled Iron Hopper, cast-iron trap, and door-action, 1l. 13s. Extra for Enamelled Iron Trap, 4s. 6d. This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2l. 2s. Enamelled Iron Trap, 4s. 6d. extra.
No. 6.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE STOOL-VALVE. This Valve is particularly short in its action. 4-inch Valve, with sunk handle, 14s. 6d.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.
J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGARD, Engineer.

Royal Arsenal, Woolwich, June 24, 1849.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

SUPERIOR GLAZED STONEWARE

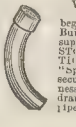
DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipe and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Rosher and Co.'s Wharfs, Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin. J. C. Hilton's, Crown and Horse-shoe Wharf, No. 8, Upper Thames-street.—C. Richardson's, South Wharf, Paddington.—G. Frith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith. J. Corbett's Depôt, Britton-street, Chelsea; and at the Pottery.



TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85,

Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "MCCONNEL'S Registered Model Water closet." This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From the construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above

HAYES, BROUGH, and CO.

Works: Llwyncelyn, near Wrexham.
Offices: 11, James-street, Liverpool,

beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

AGRICULTURAL LAND DRAIN-PIPES

of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO Great Northern Wharf, York-road, King's-cross.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES

FREEMAN ROE'S Patent Sluice-valve can be repaired without being removed from the main. All sizes, from 2 inches to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 79, Strand, and Upper Marsh, Lambeth.

MILL-WALL POTTERY (near Scott Russell's).

Messrs. WILLCOX and CO invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

ISAAC PARRY'S POTTERIES, Copperas-lane, Church-street, Deptford, Kent,

beg to call the attention of Contractors, Builders, and Wholesale Dealers to his extensive assortment of articles in the GLAZED STONEWARE for sanitary and other purposes; likewise Red Drain-pipes, Chimney-pots, &c. The only manufactory of the kind in the neighbourhood.

AIR-TIGHT SHOW-CASES. — GREENWOOD'S Patent India-rubber strips fitted to old or new cases, render them perfectly air tight; also fitted round doors, &c. to keep out cold, dust, and draft. New cases made on this principle at a reduced cost.—JOHN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS,

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12 in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 33s. per doz. painted.
Ditto .... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 15 in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

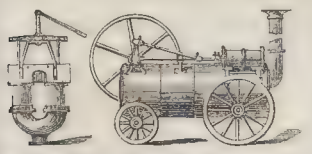
BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS

Patent Pump.....£1 12 0
Patent Pump, with 15 feet of lead pipe attached, and bolts and nuts ready for fixing..... 2 12 0
Larger sizes if required.

The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.



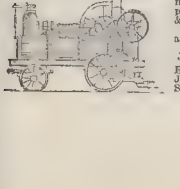
May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey Side).



BUILDERS, Contractors, Engineers, Brewers, Paper-makers, Chemists, Brick makers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids hot or cold raised or forced, will find it greatly to their interest to use GWYNNE and CO.'S PATENTED PUMPS. For Economy, Efficiency, Durability, Simplicity, and Power they stand unequalled. Pumps may be had on hire, and every information obtained by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

TO CONTRACTORS.

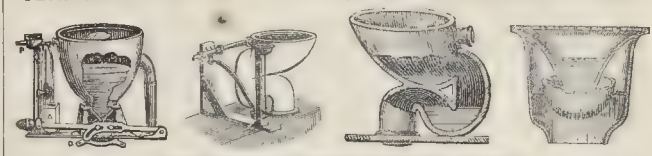
PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS', Engineers and Portable Engine Makers, 13, Blackfriars-road. These engines have been successfully employed for years.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland street, Southwark, London.

JENNINGS'S PATENT DRAIN-PIPES.



THE IMPROVEMENT IN DRAIN-PIPES ABOVE SHOWN REMOVES ALL OBJECTIONS TO PIPE-DRAINAGE.

A Sewer, or Drain, formed with these Pipes, can be examined at any point, or Junction introduced, by simply removing one of the Saddle-pieces; and this can be done without interfering with, or stopping the flow of sewage.

The favour with which these Pipes have been received by Engineers, and all interested in sanitary progress, and the large and important works in which they are now being used, is a PROOF THAT SOME ALTERATION WAS NECESSARY TO THE PERFECTION OF PIPE-DRAINAGE.

These Pipes are now being largely described by Professor HOSKING, Sir JOSEPH PAXTON, and Colonel JEBB, for the New Prison, Chatham; by the BOARD of ORDNANCE; by W. TITE, Esq. at the Necropolis Station of the South-Western Railway; and upwards of FIVE MILES have just been described to be used in the Town of Halstead, Essex, by E. GOTTO, Esq. C.E.; and by many other Engineers and Architects, whose patronage is a proof that the invention possesses merit.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.

ARE FREE FROM ALL COMPLICATION.—NO WIRES OR CRANKS.

ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

ARCHITECTS FURNISHED WITH REFERENCES OF THE HIGHEST ORDER.

Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET;

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset: they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:—
Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;
Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;
Where a large stock is always kept on hand.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

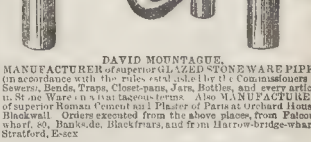
N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock-head, Bermondsey, Denver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 38, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free on application.



FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c. JAMES LYNE HANCOCK'S VULCANIZED INDIA-RUBBER TUBING is now manufactured especially for the above purposes, and is of greater flexibility than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the mouth of water-works or to tanks or water-butts, of high elevations. WATERING HOSE fitted up with brass joints, branches, stop-cocks, roses, and jets complete. Vulcanized India-rubber suction-pipes for pumps, any length or size, to order; HOSE, for brewers' use, fire-engines, &c. VULCANIZED INDIA-RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India-rubber tubing and cord for the joints of glass-doors, sashes, frames, &c.—Prices and every information may be had on application at the Manufactory, Goswell-mews, Goswell-road, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Bricklayers upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS. The ware is owned by all to be of the best manufacture, by the carefully adjusting combined with cleanness, will be found to meet the approbation of consumers.—Sole Agents, L. B. PEARSE and CO. Great Northern-wharf, York-road, King's-cross.

SALES BY AUCTION.

Truly Valuable and Extensive Sale of Navy Oak, Elm, Ash, and other Timber, with Lop, Top, and bark, standing on the Woolhampton and Brimpton Estates, about seven miles from Newbury, Berks, within a short distance of the Kennet and Avon Canal and Reading Railway Station.

MR. ALEXANDER DAVIS is honoured with instructions from the Right Hon. Lord Viscount Falmouth to SELL by AUCTION, at the FALMOUTH ARMS INN, Woolhampton, on FRIDAY, DECEMBER 8th, 1854, at TWO o'clock in the afternoon, about 5 or 600 large Navy Oak, Ash, and large Elm, 40 Alder, 50 Beech, 10 Chesnut, 21 Sycamore, 5 Hornbeam, and 150 Cherry Trees standing on the above estates. Catalogues, with full particulars, reservations, and conditions of sale, may be had fourteen days previous to the sale of Mr. Thomas Reynolds, Brimpton, at Garraway's Coffee-house, 3, Change-alley, Cornhill, London; Christopher Hotel, Eton; George Hotel, Reading; Globe Inn, Andover, Rose and Thistle Abingdon; Bear Hotels, Hungerford and Maidenhead; Place of Sale; and of the Auctioneer, Land and Timber Surveyor, &c., Market-place, Newbury, Berks.

TO AN ENTERPRISING PERSON IN THE BUILDING TRADE.—A most eligible opportunity is now offered in the following property, and where a very lucrative business is being carried on in the manufacturing of the Roman Cement, being well situated near the Sea, at Bognor, in the County of Sussex, thereby possessing very great advantages in locality, and having part of the material on the spot for manufacturing the article. The property comprises a very desirable PATENT HOLD CEMENT MILL and MANUFACTORY, complete, drawne two pairs of stones with wind-power (a steam engine might be added with advantage); together with two kilns, about 12 feet deep, storeroom for 200 casks of cement, covering house, two-stalled stable, cart-house, two cottages, with small gardens in front, all adjoining, and in front close to the sea, for landing &c. which will be offered to PUBLIC AUCTION, in one lot, by

MR. LEAR, subject to such conditions of sale as will be then and there produced, at the CLARENMONT HOTEL, at Bognor, Sussex, on THURSDAY, the 7th day of DECEMBER, 1854, at TWO o'clock p.m.—For a view and further particulars, apply to Mr STANDEN, the proprietor, Weststreet, Bognor; or to the Auctioneer, Mr. Lear, Auctioneer, General Valuer, Land and Timber Surveyor, and Estate Agent, Arundel and Littlehampton, and at 74, Cannon-street, City, London.

BUTTON, SURREY. Ninety-six Acres of Freehold Land, in an elevated and picturesque part of the county, and about a mile and a half from the Railway Station.

MESSRS. BLAKE are directed to SELL by AUCTION, at GARRAWAY'S COFFEE-HOUSE, Change-alley, on TUESDAY, DECEMBER 12th, at TWELVE o'clock, in One Lot, a valuable FREEHOLD ESTATE, known as Hill Farm, Satton, Surrey, consisting of 96 acres of arable, through which a forty-feet road is now being formed, which will afford communication to the above highroads, and give to the estate an important building character. The land is down in excellent heart, and offers to the speculator the means of immediately carrying out extensive and lucrative operations, as possession will be given without the intervention of the completion of the purchase.—Particulars, with plans, may be had at the Inns at Sutton, Epsom, Reigate, and Kingston; at Garraway's Coffee-house; of Messrs. Parke, Solicitors, 63, Lincoln's-inn-fields; and of Messrs Blake, Croydon.

Valuable Building Plots, Walworth, contiguous to the Turnpike and Omnibus Road, in the powerful Rich Soil.

W. and C. PUGH will LET by AUCTION, at the ELEPHANT AND CASTLE TAVERN, NEWINGTON BUTTS, on TUESDAY, DECEMBER 5th, 1854, at TWELVE o'clock, by direction of the Board of Governors and Guardians of St. Mary Somerset, in the Parish of Wandsworth, Surrey, that may be bid, for a term of seventy-eight years from 25th December, 1854, THREE eligible PLOTS of BUILDING LAND, close to the Turnpike, in the Walworth-road, every one of the well-built first-class property of recent erection, and having omnibus conveyance to every part of London. Lot 1. A Plot of Land on the north side of Arthur-street, as delineated in the accompanying plan, having a frontage of about 30 feet 8 in. by a depth of about 59 feet 6 in.—To be let to the bidder of the highest annual rent, upon which two houses are to be built by the intended lessee. Lot 2. The adjoining Plot delineated on the plan, of corresponding frontage and depth. Upon this lot two houses are to be built. Lot 3. Adjoining Plot 2, having a corresponding frontage and depth as delineated on the plan. Upon this lot the intended lessee is to be compellable to build one house; and to be at liberty to erect one other house if he think fit, and can obtain the sanction of the Metropolitan Commission of Sewers to build over the sewer shown in the plan. May be viewed till the sale; terms, charges, and conditions of letting had of H. and F. Crosier, Esqrs. Solicitors, Newington Butts; of H. H. Jones, Esq. Surveyor, Trinity-square, Southwark; at the Elephant and Castle; and of the Auctioneers, Messrs. Wm. and C. Pugh, 6, Blackman street, Southwark.

FARRINGDON STREET EXTENSION. Building Materials of thirty Houses.

PULLEN and SON have the honour to announce that they will SELL by AUCTION, on the PREMISES, on WEDNESDAY, DECEMBER 13th, and following day, at TWELVE, by order of the Improvements Committee of the Corporation of the City of London, all the valuable BUILDING MATERIALS of about thirty houses, stable, fine, and extensive Premises, fronting the Holborn, Skinner-street, and Shoe-lane, Cobham, Compter, and about 1,000 feet of sound stock bricks; several tons of lead, large quantity of flooring boards, oak joists, deal timber, iron sash and floor, sashes, doors, and fittings, slating, flooring, &c. York and Portland paving, wrought house gates and stable fittings, cast-iron pans and plant of a melter, capital 6-feet stone rubber, with iron bed, stoves, ranges, cisterns, and numerous fixings and fittings. May be viewed two days previous, and catalogues had at the Architect's Office, Guildhall, and of Pullen and Son, 5, Furnival's, Inplegate

CROYDON, SURREY.—Fourteen Plots of Freehold Building Land

MESSRS. PRICKETT and SON will SELL by AUCTION, at the GREYHOUND, Croydon, on SATURDAY, DECEMBER 9th, at TWO, FOURTEEN valuable PLOTS of FREEHOLD BUILDING LAND, in convenient situations on the High-street, Croydon, admirably adapted for the erection of shops. Also plots with frontages upon a proposed new road leading out of the High-street, Croydon, and where there is a great demand for small houses.—Plans, with particulars, may shortly be obtained at the Greyhound, Croydon; of Messrs Smith, Stenning, and Chart, Solicitors, 5, Basinghall-street, City; and of Messrs. Prickett and Son, Auctioneers and Valuers, 14, Southampton-buildings, Chancery-lane, and Highgate, Middlesex.

TO BUILDERS, CARPENTERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, 22, Union-street, Somers-town, on MONDAY, DEC. 4, at ELEVEN precisely, TWELVE, on account of the number of lots, the capital well-seasoned STOCK; comprising 1,000 white, yellow, and spruce PLANKS, DEALS, and BATTENS; also about 1,000 rail spars of prepared flooring, 6-feet boards American ash, mahogany, dry white pine, and Baltic spruce panels, in any quantity, &c. May be viewed the Saturday prior, and morning of sale, when catalogues may be had at Auction Offices, Cardington-street, Hampstead-road, near the Euston Station.

COMMERCIAL ROAD, LAMBETH.—The uncleared Lots of the Stock of Timber, &c. of Mr. JOHN CRANFORD, retired.

MR. W. R. GLASIER will SELL by AUCTION, at the BRUNSWICK SAW-MILLS, Brunswick-street, Stamford-street, on MONDAY, DECEMBER 11, at TWELVE for ONE o'clock, the UNCLEARED LOTS from the sale of the above valuable STOCK, comprising about 1,000 square pieces of teak, different thicknesses, planks, battens, and a quantity of deals, &c. May be viewed the day prior and morning of sale, and catalogues had at the Place of Sale, at Garraway's, and of the Auctioneer, 21, Charing-cross.

Architectural, Decorative, Scientific, and Illustrated Books

SOUTHGATE and BARRETT will SELL by AUCTION, at 22, FLEET-STREET, on THURSDAY next, DECEMBER 7, and two following days, at ONE precisely, a valuable and important collection of BOOKS, including a consignment from the Continent, comprising numerous copies of Letarouilly's Edifices of Modern Rome, 2 vols. atlas folio; Normand's Buildings of Modern Paris, 2 vols.; Durand's Remarkable Ancient and Modern Buildings, atlas folio; Spanzin's Programme, or Recapitulation of the Lessons of a Course on Construction, 4 vols. with folio plates; Fischer's Art of Smelting and Manufacture of Iron, 3 vols. with folio plates; Peclet's Treatise on Heat and Ventilation, 2 vols.; Combes's Treatise on the Working of Mines, 4 vols.; Professor Espy's Art of Carpentry, 3 vols.; Blunet's Art of Building, 3 vols.; Gruner's Fresco Decorations and Stuccoes of Churches and Palaces in Italy; Richardson's Studies, from Old English Mansions, 4 vols.; Nash's Mansions, 4 vols.; Pugin's and Wyatt's Industrial Arts of the Nineteenth century, 2 vols.; Divers Works of Early Masters on Ecclesiastical Decoration, 2 vols.; Shaw's Dresses and Decorations of the Middle Ages, 2 vols.; Hughes's New Portfolio of Sketches; and a large variety of others of a similar character.—Catalogues will be forwarded on application

TO EMIGRANTS, BUILDERS, RAILWAY CONTRACTORS SHIP CARPENTERS, MERCHANTS, AND OTHERS.

JOHN S. ISAAC, Manufacturer of PATENT COMPOSITION BOARDS for RAILWAY and other CARRIAGE PANELS cut and sold portable boxes, joinery, pressed boards, sign boards, ship cabins, roofs, &c. These boards are waterproof, will bear immense pressure, one fourth of an inch thick, and are the cheapest article known of the same substance, will never crack or split with the greatest heat or pressure. They are especially recommended to emigrants, being lighter and more durable than any other article, and when in use to be quite as perfectly dry (proof) and 1s. per square foot, according to thickness, in boards of various sizes, 5 feet 2 by 2 feet 2, and others. Specimens may be seen, at Messrs. ALDRIDGE and Co's, Piccadilly; Mr. J. E. RICHARDS, Wholesale Stationer, St. Martin's-court, Leicester-square; Mr. JAMES, 11, Sherborne-lane, London; and of the Patentee, J. S. ISAAC, Maidstone, Kent.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Lease. Money advanced to respectable parties. Apply to Messrs. LONG, Architects and Surveyors, 6, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

FREEHOLD BUILDING LAND, with brick-earth, Islington.—TO BE SOLD or LET, in one or more lots, about twenty-three acres of land between the Upper Holloway and Hornsey roads, within 2½ miles from the Angel, in a most eligible situation, and containing brick-earth of excellent quality.—Apply to Mr. PEACHEY, 17, Salisbury-square, Fleet-street

FREEHOLD BUILDING LAND for SALE, or TO BE LET, on lease. Several excellent front ages, in the most improving neighbourhoods, namely, at Kilburn, London side of the toll gate; East Mousley, near the Hampton Court Station; at Ash, Surrey, adjoining the military camp, within a mile of two railway stations. Also at Reading, Berks, Reigate, Surrey, Stratford, Essex, and Shoreby Hatch, Middlesex. Apply to Mr. WALLIS, Umbrella Warehouse, 108, Strand.

HARROW-ON-THE-HILL.—LAND TO LET, on building leases, for ninety-nine years. Apply to Dr. GARDINER, 31, Brunswick-street, Cavendish-square, London; or Mr. J. WALDRON, Builder, Harrow.

HARROW-ON-THE-HILL.—TO BE SOLD, in one or several plots, valuable FREEHOLD BUILDING GROUND, lately let on lease, very delightfully situate near the Kings Head Hotel, and close to the High-street, commanding extensive views; suitable for villas of moderate size, with good road and sewers, and a constant supply of water from the artesian well. Gas is now in progress. The advantage of sending goods by the Harrow Station, which is only one mile distant, on the North-Western Railway Company of a free first-class ticket to London for eleven years to any person building a house of the annual value of £20. Apply to Mr. W. WINKLIA, Auctioneer, Harrow.

SOUTHGATE, Middlesex.—For SALE, by Private Contract, a piece of FREEHOLD LAND, containing about 2½ acres, slightly adapted for the erection of a lavern, private residence and grounds, or other building purposes; also, four Freehold Ground, likewise adapted for building, and contiguous thereto, one to three acres each. Apply (if paid to H. G. GODDEN, Esq. 6, Gray's Inn-place, Gray's Inn, London.

BUILDING-GROUND, BRIGHTON.—TO BE LET, a very eligible FRONTAGE for THREE or FOUR HOUSES in Broad-street, immediately contiguous to the Mesnes-parade and Chapel, where houses are much in requisition.—Full particulars and terms may be obtained of Messrs. LOCKWOOD, Surveyors, No. 44, Upper Baker-street, London.

ABOUT TWO or more ACRES of well-drained FREEHOLD LAND required in the neighbourhood of London, for the erection of a public charity. Persons having such property to dispose of are requested to state locality, site, frontage, most distance, and price, to J. D. Messrs. Alfred Davis and Co's, 2, Hand-court, Holborn.

TO BUILDERS, COMMISSION AGENTS, TIMBER MERCHANTS, and OTHERS, requiring large premises, and in a conspicuous spot.—TO BE LET, at Nottinghill High-street, facing that fine sweep of newly-erected shops, known as Peter Robinson's Terrace, and at Kensington-park, a BUILDER'S YARD, SHOPS, STABLES, &c. The proprietor will either let or sell the above premises on terms as follows: Rent or lease, seven, fourteen, or twenty-one years, 50l. This is an undeniable concern, and might be rendered doubly so by a little ingenious contrivance.—For further particulars, apply to Mr. LESINGHAM, House Agent, &c. 4, Clarendon-road, Notting-hill.

OXFORD-STREET, near Regent-street.—About a quarter of an acre of vacant GROUND, having the principal entrance from Oxford street, TO BE LET, on building lease, affording an unprecedented opportunity for the erection of a public office, concert-rooms, bazaar, galleries, a religious or scientific hall, or any other buildings requiring a spacious area with an approach from a great westend thoroughfare.—Full particulars will be given upon personal application only, to Messrs. RUSHWORTH and JARVIS, Surveyors and Auctioneers, Saville-row, Regent-street.

LAND adapted for METROPOLITAN PAROCHIAL CEMETERIES. Sewers Office, Guildhall, 24th October, 1854. The Commissioners of Sewers of the City of London, acting as the Burial Board for that City, have about 100 ACRES of valuable FREEHOLD LAND, which they are desirous of SELLING to any parish or parishes for the purpose of a CEMETERY, it being peculiarly adapted for such purpose. The land is situate in the parish of Little Ilford. The Eastern Counties Railway runs close by it, and I may by arrangement run direct into it. It is also directly accessible by the high road from London and from Wanstead, and is about a quarter of a mile west of Ilford. The cemetery for the City of London is formed on the adjoining portion, and the said Commissioners will sell the land in question, subject to the restrictions that no building is to be erected on it except for agricultural purposes or the purposes of a cemetery. The land-tax is redeemed. Plans of the property may be inspected at the Office of the Surveyor to the Commissioners, at No. 14, Old Jewry chambers, where further particulars may be known, or of the undersigned.

JOSEPH DAW, Principal Clerk.

KENT—CHISLEHURST.—TO BE LET, on Building Leases, in this delightful, healthy, and much-frequented village, to range with pleasant walks and drives, THREE PLOTS of FREEHOLD LAND, together about six acres in one or more lots, most picturesquely situate, with extensive views to the south, and a few minutes' walk from the Churches of England and Rome. Water excellent and provided, drainage good, and five miles from the rail, with daily coaches to and fro. Also, valuable FREEHOLD LAND, ready for Cottages, at Chislehurst hill, near the ticket-ground.—Apply to GEORGE H. BASKCOMB, Esq. Chislehurst; or R. P. BROWN, Esq. 30, Clement's-lane, and Greenwich.

TO SMALL CAPITALISTS.

TO BE SOLD, FOUR PLOTS of FREEHOLD BUILDING GROUND; one at Hook, near Kingston, 250 feet by 47 feet 3 inches; one at Bushey, Herts, 180 feet by 90 feet 6 inches; one at Merton, Surrey, 107 feet by 33 feet; and one at Clapham Station, 150 feet by 29 feet, for the sum of 200l.—Apply to J. IVISON, 1, Bowl-regent street, Kennington-common

BISHOPSGATE WORKHOUSE, Dunning's-alley.—TO BE LET or SOLD, capital FREEHOLD BUILDINGS and YARDS, suitable for a builder or manufacturer. The buildings are four stories high, with gas, lifts and pulleys, and in good repair. For further particulars apply to Mr. SMART, No. 28, Sun-street, Bishopsgate; or to Mr. MEREDITH, No. 7, Great Winchester-street, Broad-street. Frontage, 137 feet; average depth, 77 feet

BUILDING LAND TO LET, at Burgess-hill, Brighton Railway. Brick-earth on the estate. To be let or sold in one lot, about six acres. Rothill, Bright on Railway; Streatham Hill, near the intended station on the Crystal Palace Railway; Holloway and Horn eye-road; Garret-lane, near Allfarthing-lane, Wandsworth; Wandsworth-common, near the station on the South-Western line; Dulwich-lane, on the direct road from the West-end to the Crystal Palace; Deptford-creek, Bridge-road, Deptford.—For further particulars apply to Messrs. LANSON and SON, Laurence Pountney-lane

TO IRONMONGERS.

TO BE LET, a SHOP, presenting an unusually fine opening for the above trade, with its allied branches; the want of such a shop being felt in the neighbourhood. Apply to CARTER and ELLIS, Hornsey-road.

TO JOINERS.

TO BE SOLD, CARCASES of several FOURTH-RATE HOUSES, and payment for the same taken in labour, or labour and material in finishing the joiners' work of other houses. Apply by letter to Mr DYER, 8, Stafford-street, Lisson-grove, Marylebone.

TO ENGINEERS, SMITHS, AND OTHERS.

TO BE LET, a small FACTORY, with engine and boiler, screw-cutting lathe, punching and shearing, power press, &c. in full work, and to be sold by including benches, vices, &c.—Apply to AUGUSTUS SMITH, Engineer, Auctioneer and Valuer, 236, Blackfriars road, near the bridge.

FACTORIES, WAREHOUSES, &c.—GROUND for FACTORIES, WAREHOUSES, capacious VAULTS, &c. with convenient approaches, and ample space for light and air, TO BE LET, in the NEW ROAD, near Finsbury-square. Factories and warehouses will be erected for parties requiring the same, on equitable terms, or at a rental.—Apply to HORACE JONES, Architect, 16, Funival's-inn.

STOKE-NEWINGTON.—To BUILDERS and OTHERS. TO BE LET or SOLD, a large BUILDER'S and CARPENTER'S SHOP, YARD, and STABLES. Rent, 65l. per annum. Or, for Sale, term ninety years, peppercorn rent, price moderate. Apply to Mr. HOLCOMBE, 3, Oldham-place, Bagnigge-wells-road, near Exmouth-street.

LONDON: Printed by CHARLES WYMAN, of 13, Hunter-street, Brunswick-square, in the Parish of St. George, Bloomsbury, Printer, at the Printing-office of COX (Brothers) and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "The Builder," York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, December 2, 1854.

A. G. HARRIS, Secretary.

Offices, 18, Southampton-street, Bloomsbury, Dec 1, 1854.

BOARD of TRADE, DEPARTMENT of SCIENCE and ART—AID TO PUBLIC SCHOOLS IN OBTAINING EXAMPLES FOR ART INSTRUCTION.—The Lords of the Committee of Privy Council for Trade having resolved to furnish examples to schools in accordance with the plan adopted by the Committee of Privy Council for Education, and to discontinue the practice of keeping a stock of such articles at the Department, Notice is hereby given, that on and after the 1st of JANUARY, 1855, examples will not be supplied directly from the Department of Science and Art as at present, but through agents in London and the provinces. Forms of application for aid, and further information may be obtained at the Offices, Marlborough House, Pall-mall, London.

Marlborough House, 30th Nov. 1854.

ARCHITECTURAL ASSOCIATION.—At the next Ordinary Meeting, December 13th, a Paper will be read by Mr. W. Young. "On the Seven Cares of Architectural Practice."

The Class of Design will meet December 22nd. Subject for Sketch, "A Sideboard."

ARTHUR CATES, T. W. GOODMAN, } Hon. Secs.

Lyon's-inn Hall, Strand

LYNN WORKHOUSE.—EXTENSION of LIME and ALTERATIONS in INSTRUCTIONS.—Architects who have received the plan and instructions dated 13th November may receive amended plan and instructions, dated 1st December, on application to me.

Lynn, Dec. 1, 1854. JOHN JAMES COULTON, Clerk.

COMPETITIONS.

TO ARCHITECTS.

TOXTETH PARK (near Liverpool) GENERAL CEMETERY.—Parties willing to submit PLANS and DESIGNS for FENCING, LAYING OUT, and DRAINING the intended PUBLIC CEMETERY in Toxteth-Park, and for TWO SEPARATE CHAPELS to be erected thereon, together with a suitable LODGE and ENTRANCE-GATES, in accordance with the Acts of Parliament relating thereto, are requested to send such Plans and Designs, with an estimate of the probable cost thereof, not exceeding in the whole the sum of 5,000*l.* to me, the undersigned Clerk to the Burial Board, on or before the 20th day of DECEMBER instant. A premium of 25*l.* will be paid for the Plan and Design, which shall, in the opinion of the Board, be considered the best, and be also well adapted for the purpose, and a premium of 10*l.* for the second best. On payment of which premiums the Board are to be entitled to the Plans and Designs; but are not by such selections to be in any way bound to employ the parties furnishing the same. The Plans and Designs to be marked with a motto, and a sealed letter, containing the author's name and address, must accompany each Plan and Design.—A Plan of the Ground (which is about Thirty Statute Acres) of extent can be seen, and any other information obtained, if required, may be had on application to me.

JOHN ROWLAND, Clerk to the Burial Board.

Public Office, Toxteth-park, Liverpool, Dec. 1, 1854.

COMPETITIONS.

TO ARCHITECTS.

THE COLCHESTER BURIAL BOARD are prepared to receive DESIGNS, PLANS, and DRAWINGS, comprising ground plans, sections, and elevations, with ESTIMATES, for TWO CEMETERY CHAPELS, RECEPTACLE-HOUSE, LODGE, and ENTRANCE-GATE, on their intended burying-ground, containing about 16 acres, and for FENCING the same on the eastern side. The buildings to be of an inexpensive character, and such as may consist with a due regard to the extent of the ground and the requirements of the population. The Board will not pledge themselves to employ the party whose Design shall be approved; but in the event of his not being employed, he shall be paid the premium of twenty guineas for his Designs, &c. which shall be the property of the Board. A plan of the ground may be seen, and any further information obtained, at my office. The Designs are to be sent free of expense, under seal, without the author's name; but with a motto, on or before the 1st day of JANUARY next, addressed to me, the undersigned, marked "Colchester Burial Ground." A sealed letter, containing real name and address should accompany each Design, which will be opened after selection made, and those not approved will be returned. No Designs, &c with the author's name upon it, or with perspective drawings, will be received. By order,

PHILIP SMITH SPARLING, Clerk to the Board.

5, Abbeygate-street, Colchester, 4th December, 1854.

TO ARCHITECTS AND OTHERS.

THE BRADFORD BURIAL BOARD are open to receive from architects and others (free of cost) DESIGNS for an ENTRANCE LODGE, TWO CHAPELS, and other necessary buildings for a final ground. Such designs to be sent to the Clerk's Offices in Bradford, on or before the 11th day of DECEMBER. By order of the Board,

WILLIAM TIMBRELL, Clerk.

Bradford, Wilts, Nov 20, 1854.

N.B. The Meetings of the Board are held at the Vestry-room, in Bradford, every Tuesday fortnightly, at Eleven o'clock in the forenoon. The next meeting will be on Tuesday, the 12th December.

CONTRACTS.

NOTICE to GAS COMPANIES and GAS-FITTERS—ORDNANCE CONTRACT.

Office of Ordnance, Dublin, 18th November, 1854.

The principal Officers of her Majesty's Ordnance hereby give notice, that they will receive Proposals for the following CONTRACT, viz.: SUPPLYING GAS; also for PROVIDING and FIXING the necessary PIPES and other FITTINGS at Portobello and Royal Barracks, Dublin. Persons desirous of TENDERING for the same will receive every information on application at the Royal Engineer's Office, Lower Castle-yard, Dublin; as also at the above Barracks; and obtain specifications, with the terms of contract, upon making a deposit of 1*l.* for the same, which deposit will be repaid when the specifications are returned uninjured. The pipes and fittings to be completed within six months after the acceptance of the Tender; and the supply of gas to be for three years. Persons will be at liberty to Tender for the supply and fixing of the pipes and other additions, without reference to the supply of the gas; or, for supplying the gas only, without tendering for the supply and fixing of the pipes and fittings. The letter of Tender to be sealed and transmitted under cover to "The Secretary to the Board of Ordnance, Pall-mall, London," so as to be received on or before the 15th day of DECEMBER, 1854, and to be marked on the outside, "Tender for Supply of Gas," or, "Gas Fittings" (as the case may be), "at the Barracks, in Dublin."

SHIPLEY LOCAL BOARD of HEALTH.

WATERWORKS CONTRACT, No. 1.—To IRON-FOUNDERS. The Local Board hereby give notice, that they are prepared to receive TENDERS for the MANUFACTURE and SUPPLY of certain CAST-IRON SOCKET PIPES and other CASTINGS. The drawings and specification as may be inspected, and forms of Tender obtained at the office of Mr J. McLANDSBOROUGH, Land Engineer, 24, Sunderland-street, Bradford, on and after the 4th DECEMBER.—Sealed Tenders must be delivered to the undersigned, on or before SATURDAY, the 30th day of DECEMBER, 1854. The Local Board do not bind themselves to accept the lowest or any Tender.

JO. THOMPSON, Clerk to the said Local Board.

Bradford, Nov 30, 1854.

TO BUILDERS.

THE TRUSTEES of the POOR of the PARISH of ST. LEONARD, SHOREDITCH, will meet in the Vestry-room at Shoreditch Church, on MONDAY, the 18th day of DECEMBER instant, at SIX o'clock in the evening, to receive TENDERS for the ERECTION of WORKSHOPS, on land at the back of the workhouse, in Kingsland-road. The plans and specifications may be seen at the Offices of Mr KNIGHTLEY, Architect, 28, Cannon-street, City. The contractor must (if required) enter into a bond, with such sureties and for such amount as may be deemed necessary, for the due performance of his contract, and such bond will be prepared by the clerk to the trustees at the expense of the trustees. The tenders must be sealed, and persons offering to contract must attend at the church at the time of meeting. The trustees do not pledge themselves to accept the lowest or any Tender.

Dated the 5th December, 1854.

HENRY EDWARDS, Clerk to the said Trustees.

FURNESS RAILWAY.—The Directors are prepared to receive TENDERS for the WIDENING of their RAILWAY between Ormskirk and Lindal stations, being about 15½ lineal miles in length, including the enlargement or opening cutting of the present Lindal tunnel, about 561 lineal yards in length. Plans, sections, with specification and form of Tender, may be obtained on application at the offices of Messrs. MacLEAN and STILEMAN, the Company's Engineers, 12, Great George-street, Westminster; or at the Company's Office, Barrow, Ulverston, Lancashire, after TUESDAY, the 28th NOVEMBER next. Sealed Tenders to be forwarded, addressed to the Secretary, on or before the 9th DECEMBER, 1854. The Directors do not bind themselves to accept the lowest Tender. By order,

JAMES RAMSDEN, Secretary.

Barrow, Nov. 13th, 1854.

CONTRACTS.

PADDINGTON.—To BUILDERS.—The Guardians of the Poor of Paddington are ready to receive TENDERS for the EXECUTION of extensive ALTERATIONS and ADDITIONS to their WORKHOUSE, in accordance with plans, specifications, &c. which may be seen at the Office of the Architect, Mr PARMINTER, No. 103, Saint Martin's-lane. Tenders may be sent in to the Board-room, at the Workhouse, until TWELVE o'clock at noon, of WEDNESDAY, the 27th DECEMBER instant, after which no Tender will be received. The party whose Tender shall be accepted will be required, at his own expense, to enter into a contract and bond, with two sufficient sureties for its due performance. The Guardians do not pledge themselves to accept the lowest or any Tender.

By order of the Board of Guardians,

CHAS. BROWN, Jun. Clerk.

Paddington Workhouse, Harrow-road, Dec 4, 1854

TO BUILDING CONTRACTORS AND OTHERS.

HUNTINGDONSHIRE MILITIA STOREHOUSE.—Her Majesty's Justices of the Peace for the County of Huntingdon intend CONTRACTING with some Person for ERECTING, at Huntingdon, a BUILDING to contain the Militia Arms and Stores, with Sergeants' Quarters, under the provisions of the Act passed in the 17th and 18th years of the reign of her present Majesty, intituled "An Act to amend the Laws relating to the Militia in England and Wales," according to the plans and drawings prepared by Mr. ROBERT HUTCHINSON, Architect, and which, with the particulars and specifications can be seen after WEDNESDAY, the 6th day of DECEMBER instant, at his office, in Huntingdon. Any persons desirous of contracting for the said work must send in sealed Tenders for the due performance of contract, directed to the Clerk of the Peace, and endorsed "Tender for Building Militia Storehouse," not later than FRIDAY, the 29th of DECEMBER instant, which Tenders will be opened by the Magistrates at their General Quarter Sessions of the Peace, to be held at Huntingdon, on MONDAY, the 1st of JANUARY next; but the Magistrates do not pledge themselves to accept the lowest or any of the Tenders.

Dated this 1st of December, 1854.

B. A. GREENE, Clerk of the Peace.

CONTRACTS for WORKS.—The Directors of the Scottish Central Railway are prepared to receive TENDERS for the ERECTION of BUILDINGS at GENERAL TERMINUS, Perth; consisting of board and manager's rooms, and offices for the traffic-bills of the Scottish Midland Junction Railway, according to plans and specifications prepared by Messrs. A. and A. HUTTON, Architects, at whose office the plans may be seen. Tenders to be lodged with the Secretary by the 15th DECEMBER next. The Directors do not bind themselves to accept the lowest offer.—By order,

JOHN A. JAMIESON, Secretary.

Perth, November 23, 1854.

TO BUILDERS.

TENDERS are required for the ERECTION of a DWELLING-HOUSE, at Eltham, in Kent. The drawings and specification may be seen at Messrs. BRANDON and RITCHIES Offices, 11, Beaufort-buildings, Strand, on and after MONDAY, the 11th inst. The Tenders are to be delivered in at the above Offices on FRIDAY, the 22nd DECEMBER, at TWELVE o'clock. The proprietor does not bind himself to accept the lowest or any Tender.

NORTH-EASTERN RAILWAY. — The Directors of the North-Eastern Railway Company are prepared to receive TENDERS for the undermentioned ARTICLES, in such quantities as they may require, from the 1st JAN. to the 30th of JUNE, 1855, delivered at the Company's Stores-houses at Newcastle, Gateshead, York, Leeds, or Hull. Payments for each month's delivery at the end of three months, or cash, deducting discount.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,
65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.
MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingdom selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of statuary, Veined, Sienna, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, three feet of Vauxhall-bridge.

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the Marble Trade strictly on his own account. Mr. Thompson being no longer his agent.
Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

ITALIAN and GALWAY MARBLE QUARRIES, Depôt, Whitehall-wharf, Parliament-street.—Mr. FRANKLIN, proprietor of the above quarries, begs to inform the gentlemen connected with the marble trade, that he has just landed in the st. Katherine's Docks, ex *Roberto* and *Betty*, from Leghorn, 61 blocks of MARBLE, consisting of large open statuary, suitable for sculpture, Sicilian vein statuary, second, dove, Bardilla, &c. Also at his depôt may be found 100 blocks of marble, consisting of open statuary, vein, Sicilian, black and gold, Galway black, and St. Ann's, and 23 different coloured marbles. A large stock of sawn slabs of every description of marble.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium, FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.
Just arrived, per *Roberto*, *Ythen*, *Betty*, *Natalia*, and *Harfordsea*, 100 Blocks of Marble, and 12,000 feet of Sawn Slab, Mantles, Vases, &c. Yorkshire and Portland Stone, Timber Deals, Floors, &c. for Sale on consignment. The Marble Wharf, Thames-bank, Pimlico, adjourning Vauxhall bridge.

TO BUILDERS, MASONS, AND OTHERS.

THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Ann's, statuary, serpentine, York and Paramé paving, Portland, Hareheil, Park Spring, and other stone, in blocks, slabs, landings, and headstones. Yorkshire paving, granite curb, &c. All goods carefully packed and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

MARKET-WHARF, REGENT'S-PARK-BASIN.—WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agent.—TREGELLES and TAYLOR, 3, Pinner's-court Old Broad-street, Manager.—JAS. J. BATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge

BANGOR WHARF, King's-road-bridge, Camden-town.—STRINGFIELD and COOPER, late W. Rawlins, beg to call the attention of Builders and others to their Stock of Bangor slates, laths, plaster, Roman, Portland, and keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

BATH STONE OF BEST QUALITY.

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Potternewton, Newton, Hareheil, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hareheil Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Building Manufacturers and Warehousemen, and Wholesale Dealers in Hearth- and Burr Stone, that they can be supplied in quantities from three tons and upwards with the above, delivered at the South-Eastern Railway Goods Depôt, Bricklayers' Arms Station, Old Kent-road, at the current price. Terms, samples, and other information may be obtained at the Office of the Wharf above.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones in blocks and ashlar of specified dimensions and fine scappled; also random and coursed rubble. It is easily worked to a good face and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe

CAEN and AUBIGNY STONE.—P. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts: Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 245, High street, Southwark, near the Townhall

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and B. m. Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also to vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.
N.B. Heavy goods landed, truckaged, or carted with despatch, and at moderate charges.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in the most durable material. A large Stock kept of Mantel-pieces, Hearthstones, Quoins, Tombs, Fonts, &c. at the new premises.
Whitehall Wharf, Cannon-row, Westminster.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FRLEMAN, Millbank-street, also by Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 30 and 40, Upper Belgrave-place, Pimlico. Patronised by Her Majesty, Prince Albert, the nobility, architects of eminence, and honoured with the Medal of the Society of Arts, and the Prize Medal of the Great Exhibition

FINDON QUARRIES, on the Cromarty Firth, Scotland, TO BE LET.—These well-known and extensive Quarries will be Let on Lease from January next, for such a number of years as may be agreed on. They afford an unlimited supply of a valuable and ornamental freestone, suitable for all building and engineering purposes, which has been extensively used both at home and abroad. There is a good local trade, and the line of the Scotsman Railway, now in course of construction, is in the vicinity of the quarries. No land carriage, and shipping of heavy draught can load at the quarry pier. The whole is in perfect working order.—For particulars and terms apply to Mr. H. SMITH, Southampton-buildings, London; or to the Proprietor L. M. MACKENZIE, Esq. Balmail-by-Dingwall, Rossshire, N.B.

DESIGNS PREPARED for SHOP FRONTS, INTERIOR FITTINGS, and GENERAL ARCHITECTURAL ARRANGEMENTS, by Mr. JOHN DWYER, 11, Great Marlborough-street

TO EMIGRANTS, BUILDERS, RAILWAY CONTRACTORS, SHIP CARPENTERS, MERCHANTS, AND OTHERS.

JOHN S. ISAAC, Manufacturer of PATENT COMPOSITION BOARDS for RAILWAY and other CARRIAGE PANELS and roofs, portable houses, printers' pressing-boards, sign boards, ship cabins, roofs, &c. These boards are waterproof, will bear immense pressure, one-fourth of an inch thick, and are the strongest article known of the same substance, will never crack or split with the greatest heat or pressure. They are especially recommended to emigrants, being lighter and more durable than any other article, and when made into houses are perfectly dry. Price 5d. and 8d. per square foot, according to thickness, in boards of various sizes, 5 feet 2 by 2 feet 8, and others. Specimens may be seen at Messrs SWAINE and CO.'s, 15a, Piccadilly; Mr. J. E. RICHARDS, Wholesale Stationer, St. Martin's-court, Leicester-square; Mr. JAMESS, 11, Sherborne-lane, London; and of the Patentee, J. S. ISAAC, Maidstone, Kent.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

HE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

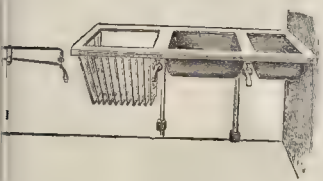
ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.



The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original projectors of the above arrangement of MANGER RACK and WATER-TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention secured by patent, which includes an entirely new method of attaching the halter ball and ring, giving to the horse greater freedom, and being noiseless in operation, add much to its comfort whilst feeding and convenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are cleanly in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Movable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

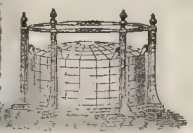
An Improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers Slaughter Houses, &c &c. It is so formed that no trap plate will pass any matter the top grating will let through, and therefore is not liable to stoppages and well adapted to Stables and stable-yards, for saving the best part of Liquid Manure.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings

WATERWORKS FOR THE SUPPLY OF TOWNS,

WITH BUILDINGS, STEAM-ENGINES, PUMPS, MAINS, SERVICES, &c.

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

PROTECTION FROM LIGHTNING.

In many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has had the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS & FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

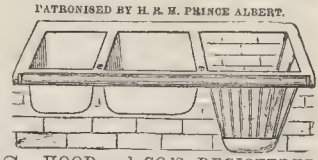
AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet pure Lead, and the other pure Zinc; it therefore combines the Stiffness of Zinc with the Durable Qualities of Lead. The Lead of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than Lead material

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 8 inches.



No. 11	Gauge weighs about	18	oz.	per foot	super.
No. 13	"	"	20	oz.	do. do.
No. 13	"	"	23	oz.	do. do.
No. 14	"	"	26	oz.	do. do.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE

Messrs. Rylands and Sons' Books, Papers, and Bank-notes preserved in one of CHUBB'S SAFES, after fourteen hours' exposure to intense heat

COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"GENTLEMEN,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late offices in New High-street, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 1st of March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March; the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edge.

"You are at liberty to make what use of this communication you may think proper.

"We are, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements: Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Complete Illustrated Lists, with prices and sizes, will be sent on application to

CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester, and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

This improved system of fire-proof construction has been most extensively adopted, and its application has been extended to nearly EVERY DESCRIPTION OF BUILDING, whether public or private.

The system combines ECONOMY, with great simplicity of construction, perfect security from fire, increased durability, and many other important advantages.

The floors and roofs are formed by a combination of joists of wrought or rolled iron with concrete; so constructed that each floor becomes in effect a beam of artificial stone, with ribs of iron; the structure possessing great strength and rigidity, and forming a fire-proof foundation adapted to receive a finished surface, either of the ordinary flooring-boards, or of cement, asphalte, tiles, slate, or other material.

Some of the largest and most important buildings in the kingdom are now in course of erection upon this principle, which is recommended to the notice of all who are interested in building, both as superseding the necessity for cast-iron girders and brick arches, and as bringing the great desideratum of fire-proof construction, even for ordinary dwelling-houses and domestic buildings, within the reach of every one.

Further information may be obtained of the Proprietor of the patent, Mr. BARRETT, 12, York buildings, Adelphi.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c &c.

—The Trade supplied on the best terms with House Bells, Zinc Tube, and Copper Wire, the Pendant, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Cornice-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE,

established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker-street, Portman-square.

THE PATENT GALVANIZED IRON.
TUPPER and CARR,
Owners of Crawford's Patents, and Successors to
THE GALVANIZED IRON COMPANY,
Supply Patent Galvanized Sheets, plain or corrugated, for roofing, &c. Water or Gas Pipes, Castings, Wire of all gauges, Guttering, Hooping, &c. Wholesale, retail, and for export.
An allowance to the Trade.
GALVANIZING WORKS,
REGENT'S CANAL DOCK, LIMEHOUSE;
BROAD-STREET and BERKLEY-STREET, BIRMINGHAM
LONDON OFFICE, 3, MANSION-HOUSE PLACE.

PATENT GALVANIZED IRON.
(IMPROVED PROCESS.)
JOHN SYMONDS and CO.
WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.
GALVANIZED SHEET-IRON and WIRE of every description, superior in all respects to that produced by any other process, THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.
Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c.
Roofs fixed complete.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PEEL and STEDALL'S,
Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.
The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

IRON ROOFS, Wrought-iron GIRDERS,
Girder Bridges, Railway and Builders' Wrought-iron Work, Gasholders, Tanks, and Boilers.
CHARLES WALKER and SONS,
Midland Iron Works, Tipton, Staffordshire.
Office, Little Sutton-street, London.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-basin, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water-pipes; Hooping, Castings, Furnace-pans, Baths, Buckets, &c., wholesale, retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbed Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to the Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, cleanliness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Mill's-all, London.
Offices: 12, Fenchurch-street, City.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.
G. HOWLETT, by appointment to the Board of Trade, Newington Zinc and Galvanized Iron Works, 2, Surrey-place, next the Elephant and Castle, Newington, Roofs, flats, railway stations, dockyard, and engine sheds, covered with zinc galvanized iron or plumbed zinc, on the most improved principle, and on the lowest terms. Church lights, vanes, and every description of work, executed to drawings, &c.; half round and O. G. gutters, rain water-pipes, Cowell's flues, &c., kept in stock; 4-inch O. G. gutter (any pattern), fixed complete, 6d. per foot within ten miles.

THE IMPROVED CHIMNEY-COWL
MANUFACTURED OF MOREWOOD AND ROGERS'S PATENT GALVANIZED TINNED IRON, JAPANNED STONE COLOUR.
Combines a perfect and ready action, with facility of sweeping and freedom from noise; and the working parts being wholly contained in the Dome Top, impervious to Smoke or Weather, it is not liable to become out of repair, and effectually prevents the annoyance experienced in gusty weather, or where the Chimney is subject to the Eddies produced by a higher building. A Lithographed Drawing and Description can be had of
A. WHYTOCK, Manufacturer, 494, NEW OXFORD-STREET,
Where Prices and Particulars may also be obtained on application.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON —House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 96, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

A SAVING of TIME and MATERIALS, with Solidity of Building.
HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving piles, circular-saws, pumps, &c. 46, Albert-street, Manchester.
TESTIMONIAL
From the Trustees of the Birkenhead Docks.
"Engineer's Office, Dock-yard, Birkenhead,
"Nathan Gough, esq. 31st July, 1851.
"Sir,—I have much pleasure in informing you that the three-horse engine which you have placed in the caisson for pumping, answers its purpose admirably, doing its work much better than seventy men could accomplish. From its portability and lightness, it is peculiarly adapted for such a purpose.
"I am, Sir, your obedient servant,
"JAS. ADERNETHY."

CUNDY'S PATENT PURE WARM-AIR STOVES. The only Pedestal Stove which gained a Prize Medal (Class 476) at the Great Exhibition in 1851. Especially adapted for warming with great economy churches, chapels, schools, entrance-halls, and libraries. Can be purchased only at the manufactory of CUTLER and SONS, Ironfounders, &c. 16, Great Queen-street, Long-acre, where a large stock is always ready for immediate delivery. Price 6l. 6s., 9l. 9s. and 15l. 15s.

WARMING by HOT WATER.—J. WEEKS and CO. KING'S-ROAD, CHELSEA, HOT WATER APPARATUS MANUFACTORY, whilst respectfully soliciting the attention of architects, builders, &c. to their superior apparatus for warming churches, mansions, halls, offices, and public buildings, by the circulation of hot water in pipes, beg to call particular attention to the scientific statement in the "Builder" of Jan. 14, 1854, which fully bears out the able address of the Rev. H. J. Bigge's delivered at a meeting of the Architectural Society wherein Mr. Bigge shows that heating by hot water is truly the only effective system applicable for warming churches and other large buildings. It is free from all objections, is economical in its working, and produces perfect ventilation with a uniform comfortable warmth throughout the largest buildings.—Messrs. JOHN WEEKS and CO. will guarantee their Hot Water Apparatus for thirty years at 5 per cent.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-grates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircase galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economise the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application.—COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

TO ARCHITECTS, TIMBER MERCHANTS, AND BRICK MANUFACTURERS.
THE best and quickest drying of the wood bricks and houses, is obtained by the BOILESVE'S PATENT CALORIFERE, evaporating in twenty-four hours about 8,000 lbs. of water, without altering the finest forms or injuring the quality of the most delicate articles. The Calorifere works by hot air only without any machinery or power. Small room is required; no repair necessary for many years. A great deal of fuel, large stores, or wharfs are saved, and rent thereby considerably reduced by the use of the above valuable stove. It is in operation at Wood-pavior Company's Works, Pimlico; at Mr. Mackenzie's, Architect, 6, Victoria-street, Westminster; Vogan, Son, and Raymond, Deptford; and several maltsters, millers, and manufacturers in London and country.—Apply, per post, to T. BOILESVE, Engineer for French Flour Mills, Turbines, &c. 55, King William-street, City.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection may now be seen in daily operation at F. EDWARDS and SON'S, 2, Ponton-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot-air pedestal stoves. Old grates are altered to this principle.—Prospectus sent on application.

ROYAL POLYTECHNIC GAS FIRE BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

THE ONLY STOVE WITHOUT a FLUE JOYCE'S PATENT—Plain, from 18s. to 42s.; Ornamented from 31s. 6d. to 16 guineas—for warming halls, passages, greenhouses, water-closets, shops, store-rooms, and all places requiring artificial warmth. To be seen in use at the sole Proprietor's S. NASH, Ironmonger, &c. 333, Oxford street, and at the Guard Depôt, 119, Newgate-street, London. PATENT PREPARED FUEL for the stoves, 2s. 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat or Italian irons, with perfect cleanliness, for twelve hours, with one pennyworth of coke or cinders. Price 12s.
** Prospectuses, with drawings and report, forwarded free.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the regular stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 272, Holborn.

ECONOMIC COOKING-STOVE. DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained drawings with prices, or forwarded free by post.—DEANE, DRAY, and CO. opening to the Monument). London-bridge. Established A.D. 1700.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is in no way affected by sulphurous or any other impure or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. Many adulterations has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, which then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark In Hull, by Messrs. BELL, SPENCE, and CO.; when ground and dry, by Messrs. B. MORLEY and CO., and by the Company's Grinding Agents in London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; JACK and BRADY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 1, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting ships, warehouses, dwelling-houses, &c. in Leith, by Messrs. R. ANDERSON and CO. Timber-bush. DRY OXIDES and PAINTS, in kegs of 14, 28, and 56 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK.—LONDON.—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes are quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. —CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes. Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement, that requires no colouring.—Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements (read at the Institute of Civil Engineers), to be obtained from the makers. JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Plastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Firebricks, Grindstones, Cement Chimney-tops, dito Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portezolano

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne, at Messrs. Rowland's Wharf, Hollis-street, Blackfriars, Kings'and Basin, and Limehouse; or from their Agent, Mr HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland-yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

6, South Wharf, Paddington.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by Mr. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. Manufacturers of Portland, Roman, and Bath Cement. Works, situate near Bridgewater, on the Bristol and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgwater, July 26th, 1854.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applied to.—Orders received at Great Scotland-yard, and at the Works.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 16, South Wharf, Paddington, and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground render it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above, is its best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars, Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Stocks, lime, and old bricks, lby rubbish delivered per barge, in any quantity, alongside the Thames.

DAMP WALLS.—STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED or DAMP WALLS for PAPERING is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be prepared for 2s 6d. Prepared only by W. J. STENT, Warminster. London Agents Messrs. Land and WALLIS, 24, Oxford-street. Agent for Ireland Mr. S. BOYD, 46, Mary-street, Dublin.

MAW'S ENCAUSTIC TILE PAVEMENTS a highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO. respectfully forward their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietor, and, thirdly, that the "ERRORS OF THE TERMS," page 281, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 35s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Maltnuz and Corn-drying perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

WHITE SUFFOLK and RED FACING BRICKS
COWLEY, KENTISH, and ESSEX BRICKS,
Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.
KENTISH RAG-STONE of the FINEST QUALITY.
MILLS and PRICE (successors to Mr. Benjamin Gough), 8, ADELAIDE-PLACE, LONDON-BRIDGE.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newingtod crescent, Newington butts, will, from MONDAY, the 11th inst. be carried on at 8, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half washed Stocks, and Place Bricks, also on sale These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Horton Brick-fields, Grange-walk, near the Rosemary Branch, Horton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Kent Grey Stocks, of superior quality. Also, White Suffolk and Red Facing Bricks.—Apply to Mr. W ALLAWAY, 4, Catherine-court, Tower-hill

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 32s. to London-bridge or Newington; beyond that distance, moderate charge cartage. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pipes, one half the price of those made at White sand, nearly silver, in field or by barge; founders' sand and loam; good coloured gravel Address, B. PARKS, Lewisham Brickfields.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address, Mr. WM. WEBB, Brick-fields, Stoke Newington.

BRICKS.—A large Quantity of hard-burnt RED BRICKS, of excellent colour and shape, are now on SALE, at the Brentwood Brick and Tile Works Cash, price 35s. per 1,000, at which price they will be delivered into the carts or railway trucks, at the Goods' Station, which adjoins the works. Malms, Stocks, Seconds, Place, &c. at low prices.—Apply to Mr. LEVETT, Brick and Tile Works, Brentwood, Essex.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE. TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and effective machine may be seen (by order only) in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be barked up in ranks before leaving the machine, which is entirely self acting, consequently requires only the labour of feeding and carrying off.

Applications either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. OATES, Turnstor and Patentee, Lichfield.

TO BRICK AND TILE MAKERS.

OWEN WILLIAMS and CO. beg to call the attention of Manufacturers to their PATENT TUBULAR ROOFING TILES, by which a perfectly cool and ventilated roof is obtained; they require less timber for their support than slates, are far more sightly, and much cheaper than any other covering. By aid of the perforations the shape is preserved (although the size is 18 inches by 9 inches), and burnt better. An inspection of roofs up will fully bear out the above.—For full particulars and to treat for Manufacturing Licenses for Counties, Divisions, or Districts not already disposed of, apply to OWEN WILLIAMS and CO. Trascine Slab Manufactory, Grand Junction Wharf, Northampton.

IMPERIAL LIFE INSURANCE COMPANY, 1, OLD BROAD-STREET, LONDON. Instituted in 1820.

SAMUEL HIBBERT, Esq. Chairman.
WILLIAM R. ROBINSON, Esq. Deputy-Chairman.

The SCALE of PREMIUMS adopted by this Office will be found of a very moderate character, but at the same time quite adequate to the risk incurred.

FOUR-FIFTHS, or 80 per cent. of the profits, are assigned to policies every fifth year, and may be applied to increase the sum insured, to an immediate payment in cash, or to the reduction and ultimate extinction of future premiums.

ONE-THIRD of the premium on insurances of 500l. and upwards, for the whole term of life, may remain as a debt upon the policy, to be paid off at convenience; or the Directors will lend sums of 50l. and upwards, on the security of policies effected with this Company for the whole term of life, when they have acquired an adequate value.

SECURITY. Those who effect insurances with this Company are protected by its subscribed capital of 750,000l. of which nearly 140,000l. is invested, from the risk incurred by members of Mutual Societies.

The satisfactory financial condition of the Company, exclusive of the subscribed and invested capital, will be seen by the following statement:—

On the 31st October, 1853, the sums assured, including bonus added, amounted to	£2,500,000
The premium fund to more than	800,000
And the annual income from the same sources, to	100,000

Insurances, without participation in profits, may be effected at reduced rates. SAMUEL INGALL, Actuary.

PELICAN LIFE INSURANCE COMPANY, established in 1797.
70, Lombard-street, City, and 57, Charing cross, Westminster.

DIRECTORS.

Robert Gurney Barclay, esq.
William Cotton, esq. F.R.S.
Jas. A. Gordon, M.D. F.R.S.
Henry Grace, esq.
Kirkman D. Hodgson, esq.
Thomas Hodgson, esq
The Company offers—
Complete Security—
Moderate Rates of Premium with Participation in Profits—
Low Rates without Profits.
Henry Lancelot Holland, esq.
J. Petty Muspratt, esq.
C. Hampden Turner, esq. F.R.S.
Matthew Whitting, esq

LONDON: LONGMAN, BROWN, GREEN, AND LONGMANS.

ELECTRIC TELEGRAPH.

By DR. LARDNER. Now complete.

A Series of Popular Tracts on the Electric Telegraph is just completed in "Lardner's Museum of Science and Art." The Tracts embrace an account of the Telegraph from its invention to the present time, clearly describing the different instruments and their modes of working. The series also contains full accounts of the English and Foreign Lines of Telegraph, of the Submarine Cables, Tariffs, &c. &c. and is illustrated by very numerous Engravings on Wood. Price of each Number, One Penny.

Vols. I. to IV. each 1s. 6d.

LARDNER'S MUSEUM of SCIENCE and ART. A Miscellany of Instructive and Amusing Tracts on the Physical Sciences, and on their Application to the Use of Life. Illustrated by Engravings on Wood.

Volume I. price 1s. 6d. in handsome boards, containing—

PART I. price 5d.—1. The Planets, are they Inhabited Globes?
2. Weather Prognostics.
3. The Planets. Chapter II.
4. Popular Fallacies in Questions of Physical Science.
PART II. price 5d.—5. Latitudes and Longitudes.
6. The Planets. Chapter III.
7. Lunar Influences.
8. Meteoric Stones and Shooting Stars. Chapter I.
PART III. price 6d.—9. Railway Accidents. Chapter I.
10. The Planets. Chapter IV.
11. Meteoric Stones and Shooting Stars. Chapter II.
12. Railway Accidents. Chapter II.
13. Light.

Volume II. price 1s. 6d. containing—

PART IV. price 5d.—14. Common Things. Air.
15. Locomotion in the United States. Chapter I.
16. Cometary Influences. Chapter I.
17. Locomotion in the United States. Chapter II.
PART V. price 5d.—18. Common Things. Water.
19. The Potter's Art. Chapter I.
20. Locomotion in the United States. Chapter III..
21. The Potter's Art. Chapter II.
PART VI. price 5d.—22. Common Things. Fire.
23. The Potter's Art. Chapter III.
24. Cometary Influences. Chapter II.
25. The Potter's Art. Chapter IV.
26. Do. do. Chapter V.

Volume III. price 1s. 6d. containing—

PART VII. price 5d.—27. Locomotion and Transport, their Influence and Progress. Chapter I.
28. The Moon.
29. Common Things. The Earth.
30. Locomotion and Transport, their Influence and Progress. Chapter II.
PART VIII. price 6d.—31. Electric Telegraph. Chapter I.
32. Terrestrial Heat. Chapter I.
33. Electric Telegraph. Chapter II.
34. The Sun.
PART IX. price 6d.—35. Electric Telegraph. Chapter III.
36. Terrestrial Heat. Chapter II.
37. Electric Telegraph. Chapter IV.
38. Do. do. Chapter V.
39. Do. do. Chapter VI.

Volume IV. price 1s. 6d. containing—

PART X. price 5d.—40. Earthquakes and Volcanoes. Chapter I.
41. Electric Telegraph. Chapter VII.
42. Do. do. Chapter VIII.
43. Do. do. Chapter IX.
PART XI. price 6d.—44. Barometer, Safety Lamp, and Whitworth's Micrometric Apparatus.
45. Electric Telegraph. Chapter X.
46. Earthquakes and Volcanoes. Chapter II.
47. Electric Telegraph. Chapter XI.

"'Dr. Lardner's Museum,' one of the few works of the kind which can be recommended as at once popular and accurate."—*Sir D. and Brewster.*

"This series, besides affording popular but sound instruction on scientific subjects, with which the humblest man in the country ought to be acquainted, also undertakes that teaching of 'Common Things' which Lord Ashburton and every well-wisher of his kind are anxious to promote. Many thousand copies of this serviceable publication have been printed, in the belief and hope that the desire for instruction and improvement widely prevails; and we have no fear that such enlightened faith will meet with disappointment."—*The Times*, Feb. 8, 1854.

"This serial, which will form quarterly eighteenpenny volumes, is, we are disposed to think, the best literary investment of a penny a week now extant."—*Examiner.*

"A cheap and interesting publication, alike informing and attractive. The papers combine subjects of importance with great scientific knowledge, considerable inductive powers, and a popular style of treatment."—*Spectator.*

*** The Work is continued in Weekly Numbers, at 1d.; in Monthly Parts, at 5d.; and Quarterly Volumes, at 1s. 6d. in Ornamental Boards.

LONDON: WALTON and MABERLY,
28, UPPER GOWER-STREET, and 27, IVY-LANE, PATERNOSTER-ROW.

The Builder.

SATURDAY, DECEMBER 9, 1854.

SOME large works are in progress at the Commercial Docks and Timber Ponds, in Rotherhithe, with the view of affording accommodation equal to the increasing demands for space, and to improve the facilities for trade.

The district north and south of the Thames, from the Tower to Blackwall, is the most remarkable portion of this every where wonderful London. Here have been formed for the reception, discharge, and loading of vessels, on the north, St. Katherine's Docks, the London Docks, the West-India Docks, the East-India Docks, the Victoria Docks; and on the south, the Grand Surrey Docks and the Commercial Docks, which comprise hundreds of acres of water, surrounded by miles of walls, and sheltering thousands of ships: here have been spent, not simply thousands, but millions of pounds, and all this has been effected in the present century, which has but half expired. As we have often urged, England is but a young country yet, and is only just now beginning to move: we are only now beginning to read, beginning to be musical, beginning to love art, beginning to trade in earnest. The increase within the last few years in the trade of the United Kingdom is perfectly marvellous, and this increase is going on with accelerating force. Take two or three facts, made evident by Parliamentary papers, in proof of this. In the year ending January 5, 1853, the declared value of the principal articles of British and Irish produce and manufactures exported was 71,375,066*l.* while in the year ending January 5, 1854, it was 77,357,306*l.* In the year ending January 5, 1853, 29,884 ships engaged in foreign trade, with tonnage of 6,730,169, "entered inwards," and 31,745 ships "cleared outwards;" while in the year ending on the same day, in 1854, the number of ships entering inwards was 35,303, with tonnage of 7,797,550, and there were 34,517 ships cleared outwards, representing 7,583,611 tons burden. In 1848 there were but 24,893 ships cleared outwards, with tonnage of 5,051,237. Further, while the value of the produce and manufactures of the United Kingdom exported into all the colonies was in 1851, 4,807,356*l.*—in 1853 it reached the amazing sum of 14,506,532*l.* Of the trade to the port of London alone no one can obtain a commensurate idea by any better mode than a visit to the docks.

Before there were any docks, an East Indiaman of 800 tons was not usually delivered of her cargo in less than *a month*, and then the goods had to be taken in lighters from Blackwall nearly to London-bridge.* For the delivery of a ship of 350 tons, not sixty years ago, eight days were necessary in summer and fourteen in winter: now, a ship of 500 tons may be discharged without any difficulty in two or three days.

The Commercial Dock, to which we are about more specially to refer, dates its origin from an earlier period than we have spoken of, but was then of a very circumscribed nature. As early as 1660, perhaps earlier, there was in Rotherhithe what was called the Howland Great Wet Dock, measuring 1,070 feet from east to west, and 500 feet at the widest end from north to south. There is an old engraved view of the dock in the Company's board-room, which shows that it had a double row of trees on each side to protect the vessels from the wind. It belonged to Mrs. Howland, of Streatham, and then became, by marriage, part of the domains of the Russell family, with whom it remained until it was made a public dock for the port of London,—the *first* public mercantile dock. It was afterwards expressly laid out for the reception of whalers: buildings were erected for the boiling of blubber, and it was called "The Greenland Dock." About 1820, this trade fell off, and finally left the kingdom altogether. Previously to this, namely, in 1807, the timber trade having greatly increased, the dock changed hands, and in 1809 was opened as "The Commercial Dock." The first Act of Parliament was obtained by the Company in 1810, and between that time and 1842, various additions were made, and a number of warehouses and granaries were erected.* Some of these granaries, it may be useful to note, are built wholly of pine timber, and are still quite sound, although one of them, of Canadian pine, has been up thirty-three years.

In 1846, the company purchased the extensive ship-yard and premises near to the docks, belonging to the late Mr. E. G. Barnard, covering a space of about eight acres. One half of this property was immediately appropriated to the storing of deals, and has been so used until the present time: the other portion, having a river frontage, was temporarily let, but is now being wharfed, and made fit for occupation by the company. It may be expected, from its position, that this ground will prove of considerable value. The wood trade of the port of London greatly increasing, extensions became necessary. The number of ships which entered the Commercial Docks in 1844 (the largest by far up to that time), was 891, of 199,519 tons burden; and in 1853, the number had increased to 920 ships, of 247,392 tons. This shows not only the increase in the company's business, but the continued increase in the size of vessels, the average of 1853 being 270 tons, and of 1844, 224 tons. Even this does not exhibit fully the increase in size of *wood-laden* vessels, which, taken alone, would show a much larger proportion, especially in the current year 1854, when American-built vessels have arrived (with wood from the Colonies), of a tonnage varying from 600 to 1,600 tons.

In 1851 the company commenced, and in 1852 opened, an additional timber-pond, to the extent of seven acres, which is capable of storing 2,800 loads of timber, if floated singly in the water; but of late years it has been found needful to *stack* timber in the water, on account of the large importations, by which means the quantity may be doubled, and, in some cases, trebled.

In 1851 the company obtained fresh powers from Parliament to extend and improve their dock, under which powers they purchased the (adjoining) East Country Dock, for the sum of 40,000*l.*; and they have also purchased a considerable quantity of land, &c. contiguous to the docks;—a portion of which situate to the southward of the docks is now intersected by a railway from the main dock to the Deptford Branch of the London, Brighton, and South Coast Railway, connecting the docks with the various stations on that line. This railway communication ought not only to prove in time exceedingly beneficial to the company, but to assist in relieving the traffic of the metropolis.

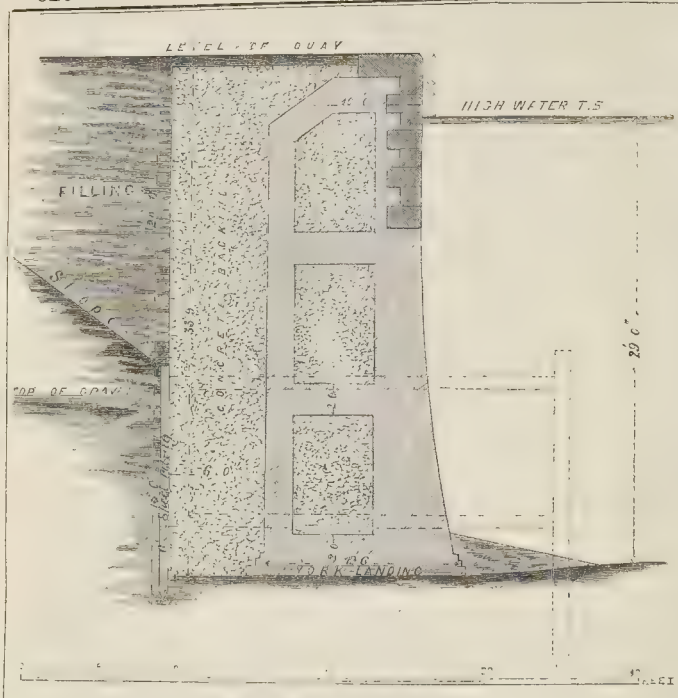
The new works are being performed by Mr. Kelk in a very substantial and excellent manner, under the supervision of Messrs. Walker, Burges, and Cooper, the engineers, and Mr. Robert Garrett, the resident engineer.

The new entrance-lock from the river will be 27 feet in depth, 48 feet in width, and 220 feet in length. The basin is 810 feet long, 313 feet wide, and 29 feet deep. The communication lock between the new dock and the original dock is to be 25 feet in depth, 48 feet in width, and 190 feet in length.

The cost of the works already in progress, including purchases of property, will be about 250,000*l.*; but the Act of 1851 gives still further power for the raising of capital for additional works. Part of the scheme is to make a new entrance to the Thames, at the north-western extremity of the docks, so as to facilitate the transit, and get as near to the City as possible. The whole area of the docks is 140 acres, of which about 70 acres are water.

To illustrate the construction of the new dock, we append a section of the side wall, which shows, too, the pile sheathing put in to keep up the earth during the excavation, and the concrete backing 6 feet thick. The wall, which is 12 feet 6 inches wide at the bottom, and 10 feet at the top, has in its height three coffers of concrete, each 8 feet high, and 5 feet wide. These are in lengths of 12 feet, and between them are vertical division walls, 3 feet 9 inches in thickness. The proportion in which the concrete for the coffers is mixed, is seven of gravel to one of lime. The "backing" consists of ten of gravel to one of lime. It is mixed dry, and thrown into water, or "washed in," as it is termed, and sets very hard, notwithstanding the smallness of the quantity of lime. In carrying up the brickwork, a bond of iron hooping, thickly crossed, is laid in, every 2 feet 6 inches in height. The walls have a granite coping 4 feet wide and 15 inches thick. Granite is also used for the piers against which the lock-gates shut (tooled fair to make a water-tight joint), and to receive the pointing cills: the rest of the stone used is Bramley Fall. The gates (the largest 30 feet high), are wholly of oak, with the exception of the bottom rail, which is of elm. These, together with the bridges and ironwork, are being executed by Messrs. Butler, of Leeds. The iron segment plates, 26 feet long, on which the gates open, are in one piece. A patent sluice, which requires little force to raise it, and the arrangement of the emptying and filling culverts, deserve attention.

There is a pair of capital plunge-pumps at work, the plungers weighing three tons each, which are put in motion by a 30-horse power-engine, and can throw about 2,000 gallons per minute. It is expected that the dock will be ready for use at the end of next February. The bottom of the new lock, we may mention, is 9 feet below low water.*



Ascending one of the granaries, and gaining a bird's-eye view of the Commercial Docks, the truth of the statements recently made in our pages as to the large quantity of timber now in hand, is confirmed by the appearance of this important establishment; and the spectator is not surprised, when he is told that it contains at this time 2,000,000 pieces of deals, and 35,000 loads of timber! The East and West India Docks, probably, contain an equal quantity. Of other materials, too, there are large deposits. The applications for space for *tar*, most of it, by the way, smuggled from Russia (so effectual is a blockade), are larger than have been known for years.

When seen from this elevated position, the property of the Grand Surrey Canal Company, which immediately adjoins the Commercial, westward, comes into view. What difficulties there may be in the way of a junction between the two companies,—how mutual jealousies may interfere,—it is not for us to say; but looked

* "London," by Charles Knight.

* "Historical Notice of the Commercial Docks," drawn up [illegible] by Mr. N. Gould, for his brother directors.

* The Company is managed by a Board of ten directors, consisting at the present time of Mr. Henry James Prescott, chairman; Mr. Alexander Sim, deputy-chairman; and Messrs. J. W. Beanquet, E. Brandt, R. Carter, J. Dewson, N. Gould, J. Masterman, M.P., D. T. Morgan, J. Nix, P. Rolt, M. P., T. F. Wilson. Engineers, Messrs. Walker, Burges, and Cooper. Mr. W. White is the superintendent of wood-measurement; Mr. C. Lawson, dock-[illegible]

SECTION OF DOCK WALL.

at with the eyes of one unconnected with either Company, it would seem that a noble whole would be produced, and all parties be benefited, were this union to be brought about. The new dock of the Commercial Company, made to communicate with the canal, would give admittance to the largest vessels, and the exit which belongs to the Canal Company, being much nearer to London, would be an advantage to the whole undertaking. The cost would be small, as much of the land belongs to the two companies, though, at present, not made available. For fresh timber-ponds very little excavation would be needed, the level being many feet below high water. During the higher part of the flow and ebb, the canal might be made *tidal*, assisting materially in economising the moving of timber. In a sanitary point of view, too, much good might be effected by turning a marshy, malarious locality into sound land and water. This junction, as it seems to us, would lead to such very advantageous results to all parties, that we venture to commend it to their serious consideration, and with this suggestion we take our leave of the Commercial Docks and Timber Ponds.

HARMONIC LAW IN ARCHITECTURAL DESIGN.

THE ROYAL INSTITUTE OF BRITISH ARCHITECTS.

At the first ordinary meeting for the current session, held on the 13th of November, Mr. George Mair in the chair, a paper, by Mr. D. R. Hay, was read, on "The application of the harmonic law of nature in the orthography of architectural design;" illustrated by "a Gothic elevation, similar to that of the east end of Lincoln cathedral."

In this communication Mr. Hay endeavoured to show how the harmonic law, described and applied by him to the front elevation of the Parthenon at Athens, in a former paper reported in our pages, might be similarly applied and made to operate in the construction of a Gothic elevation; his object being a further attempt to prove that there really does exist a mathematical law coinciding with the harmony always found in nature: and that this law can be applied to impart orthographic beauty to architectural structures of any order or style. He explained numerically the nature of the law of harmonic ratio,—a law which is found operating in the force of gravity; in the planetary movements; in heat, light, electricity, and chemical affinity; in the forms of animals and plants; and in the perceptions of the human mind.

The first numerical rule is, that any number, to be harmonic, must either be one of the four first multiples of 1—viz. 2, 3, 5, and 7—or a multiple of one of these simple numbers. This rule is based upon the simple fact, that the three first numerals, 1, 2, 3, embody all the principles of harmony, and it is by their simplest modes of union that the above four governing elements are produced.

The second rule is, that for the practical application of these harmonic numbers, they must be formed into a series of scales, arranged in such a manner that the most simple be made to form the primary or governing elements.

The third rule is, that, in employing these numbers as divisors, the parts of whatever is divided must be integral parts.

The simple elementary figures which may be combined in an architectural design are—

The square, and its curvilinear figure, the circle.

The oblong rectangle, and its curvilinear figure, the ellipse.

The isosceles triangle, and its curvilinear figure, the composite ellipse.

The basis of his theory being that the eye estimates proportion not by distance, but by angular direction, it follows that each of these figures is governed in its individual proportions by a particular angle, and that their harmonic combination in architecture is likewise governed by angles. This being the case, there must be a fundamental angle, to which all other angles so employed should harmonically relate as an integral part. It would require a number of diagrams to make Mr. Hay's views clear, even if we could do it then, and we will not attempt to go any farther. His illustration did not seem to be thought very conclusive.

Mr. Papworth, Fellow, said, it could hardly be conceived that the end of a church was designed in the first place, and that the whole plan should then be made subservient to that one front.

In the course of the paper the writer said, it can scarcely be doubted that there were some such practically useful secrets amongst the Freemasons, or early Gothic architects; for we find in all the venerable remains of their art which exist in this country symmetrical elegance of form pervading the general design—harmonious proportion amongst all the parts—beautiful geometrical arrangements throughout all the tracery—as well as in the elegantly symmetrised, foliated decorations, which belong to that style of architecture. But it is at the same time worthy of remark that whenever they diverged from architecture to sculpture and painting, and attempted to represent the human figure, or even any of the lower animals, their productions are uniformly such as to convince us that in this country these arts were in a most degraded state of barbarism; the figures are grossly disproportioned, and often much distorted in their attitudes; the subjects they represent are paltry in composition and puerile in conception; while their representations of animals and chimeras are whimsically absurd. It would therefore appear that architecture, as a fine art, must have been preserved by some peculiar influence from partaking of the barbarism so apparent in the sister arts of that period.

As might have been expected, these remarks on Mediæval sculpture did not escape comment. Mr. C. H. Smith, visitor, objected strongly to that part of the paper. Flaxman had always expressed the highest admiration of those works, and the cathedrals of Salisbury, Worcester, and Lincoln, with Henry VII.'s Chapel, furnished ample proof that Mr. Hay was either not a competent authority on this subject, or had not sufficiently studied it. These works, moreover, were chiefly by English artists. The monument in Westminster Abbey to a youthful daughter of Edward III. was, it appeared, submitted to competition. The names of five competitors were mentioned in the chronicles, and one of them, who was evidently an Englishman, came up from Gloucester to explain his design, and was allowed a sum of money for his travelling expenses.

Dr. R. Dickson, visitor, and Mr. C. C. Nelson, hon. sec. spoke to the same effect.

At a meeting held on Monday, the 27th ult. Mr. Penrose, in the chair, the paper read was,—"On the Architectural Splendour of the City of Beejapore," by Mr. James Fergusson, to which we shall refer hereafter.

Mr. Cockerell, Fellow, introduced the subject of the testimonial to the late Mr. Elmes, and proceeded to point out some of the most remarkable features of St. George's-hall, at Liverpool, in which he showed, by a comparison of the vaulted ceilings of Diocletian's and Caracalla's baths, that Mr. Elmes had exceeded the Romans, that he had equalled the greatest efforts of the art in modern Europe, and had surpassed every architectural production of this country in the present century. Mr. Elmes might be called a meteor in the architectural world. At the age of twenty-three, he obtained the premium for St. George's-hall; at twenty-four, that for the assize courts; at twenty-five, he incorporated the two, and carried out the structure in the main during the eight remaining years of his brief, but brilliant life, which terminated at the age of thirty-four, in Jamaica. After stating some particulars of his engagement with the corporation, which have been already set forth in our pages, Mr. Cockerell made a strong appeal in favour of the fund.

RUMFORD MEDAL.—At the anniversary meeting of the Royal Society, on 30th ult. the Rumford medal was presented to Dr. Arnott, "for the successful construction of the smokeless fire-grate, and other valuable improvements in the application of heat to the warming and ventilation of apartments."

THE CATTLE-SHOW, AT BAKER-STREET BAZAAR.

THE cattle show has been drawing its thousands, as usual. It is always an exhibition of great interest, and on the present occasion it seemed to be more so even than usual. Everything is so exaggerated there, and approaches so nearly to the caricature, that it takes us some time to get grave and steady. Mammoth oxen, distended cows, poor pigs who can't see out of their eyes (made into bladders of lard before their time), and hugely swollen turnips meet the eye on all sides, and suggest a pantomime. Go upstairs, and you find yourself amongst machines murderously arranged for cutting and tearing poor mother earth. There is a "drag rake," which looks like half the skeleton of some metallic monster laid sideways; and some of the spades seem to have been left in the ground all night and to have run to seed. That little box there, with the loud-sounding title of "The Noiseless Lion Machine," will enable you to make your own sausages; and to be careless of the fact that "kittens are in." There is a glass churn that you may see how the milk turns into butter, and a patent spring shaft carriage, which would carry the whole of that bevy of merry, giggling, rosy-faced country girls, though there are nine of them, if they would but sit still—but they won't. When looked at seriously, however, it becomes evident that science and skill have now come in seriously to the aid of agriculture, and every lover of his country may rejoice. The portable and fixed steam engines are a very important feature in the exhibition,—perhaps the most important. The lever plough got attention through its makers' names, Messrs. Plenty and Pain—an odd conjunction, unless *Pain* is French. In our own more special line, Coulson's mortising, tenoning, and boring machine, Eaton's jack, wherewith one man may easily raise three tons, Barton's stable-fittings, Busby's prize cart, and Clayton's brick-making machine, claim notice.

CHRIST'S HOSPITAL.

BASED on a plan of singular munificence, this institution stands pre-eminent amongst colleges and schools. Essentially alumnar, she nurtures, clothes, and educates a standing complement of 1,000 pupils gratuitously. The children, being taken in hand at a tender age (none under seven, nor over ten years), are rudimentally trained under nurses and primary masters in the country establishment at Hertford, whence they are drafted to the school in the city, on becoming more matured in regimen.

The objects of this charity are, or are supposed to be, the children of decayed tradesmen, or persons of respectability, in reduced circumstances, if not orphans. At a suitable age they are prepared to be apprenticed, placed in profession or calling, to which they are suited, or, if talented and advanced in classical studies, there are exhibitions in the universities, and even church livings, to which they may have preferment in due course.

What other school, what college performs the like, or which of the alumni amongst our universities is so entitled to the filial love and gratitude of their scholars? At sixteen years the boys are considered educated. Perhaps the ordinary age of entrance is at eight years; therefore 1,000 youths are launched into life, either into the learned professions, arts, sciences, or commerce, every eight years.

First founded by Edward VI. through the preaching of Latimer, a charter of incorporation was granted by that monarch in 1553, when the Corporation of London was received at the Royal Palace, and afterwards in 1577, an ordinance issued from the Corporation, headed "Offley, Maior," for the government of Christe Hospital.

Together with St. Bartholomew's Hospital, this institution shared considerably in the spoils of the dissolved monasteries; and the City of London had, for motives best known to Henry VIII. and his minister Cromwell, partaken largely of the vast wealth then so dexterously acquired, at the expense of the Grey Friars of London. The citizens, maiors, and aldermen of these primitive times (when they *were magnates*) gave large donations. We find Sir Richard Whittington amongst the first.

Sir W. Chester, knight and alderman, built a wall between Christ's and St. Bartholomew's Hospitals. John Calthope, citizen, arched over the Fleet Ditch, at his own expense, from Aldersgate to Newgate, the principal entrance having then been in Little Britain (where the iron gate now stands), into that portion yet called the Ditch.

But the most munificent of all gifts was a donation by Lady Mary Ramsay, widow of Sir Thomas Ramsay, knight, Lord Mayor 1577, of estates producing a rental of 5,000*l.* a year (these estates are in Essex and Surrey), besides two ecclesiastical benefices "of good value."

Exclusive of this, the donations and legacies between 1550 and 1600 amounted to 1,828*l.* 9s. 8d. (an enormous sum in those days); and in 1550, when the school was first originated in design, the citizens contributed 2,476*l.* In 1682, Sir Robert Clayton, knight and alderman, built most part of the erection of the hospital,—the former hall having suffered much by the fire of 1666: the cost then exceeding 5,000*l.*—equal to 40,000*l.* of our present money.

Pepys's "Diary" sets down the donations given by governors from 1600 to 1650 at 35,157*l.* 0s. 6d.; and from 1650 to 1700, at 75,150*l.* 8s. 5d.

Sir John Moore had the writing-school rebuilt in 1684, at a cost proposed by him to be 3,000*l.* but which exceeded that amount by 2,300*l.* more! William Garway bequeathed five farms near Arundel, in Sussex, producing at that time (1770) 1,800*l.* per annum. John Fawke, Esq. left estates in Essex to maintain eight boys (of whom, two of Barking); and Thomas Guy, the pious founder of the hospital (in 1724), left a perpetual annuity of 400*l.* James St. Arnaud, of St. George the Martyr, Queen-square, devised 8,000*l.*! These were of the principal donations, and all by citizens or their connections; added to which, the Corporation of London granted a lease from the City to the Governors of Christ's Hospital of the whole site and foundation, from 12th July, 1629, at 20s. a year until A.D. 1691; and again, in 1780, by a seasonable bequest, John Smith, Esq. completed the new grammar-school, the old one, built with materials saved from the fire of 1666, having fallen into decay and dry rot.

Such were the rise and progress of this great elementary school. The site, nearly a parallelogram, occupies about 4½ acres. It lay wholly insulated until recently, when houses on the south front, to Newgate-street, were abated (about 1824), to give an opening for the splendid Gothic Hall, since erected by the architect, Mr. Shaw; this line is about 500 feet long: on the west it was bounded by the old prison, the Compter; on the north by Bartholomew's Hospital with walls equally lofty; and on the east by the narrow ancient street called Ditch-lane. Along this close a neatly-planted garden ranges for some 150 or 200 feet, called the "Treasurer's Garden;" and it appears that this functionary is also provided with stabling (not long re-constructed) within the precincts: the latter expense and misappropriation might, however, have been effected before omnibus locomotion became prevalent. Primarily connected with the City, raised by her merchant princes, the subsisting corporate connection and dependence is easily understood; but the patronage of the school pertains still to the corporation, in the same ratio that it existed in the days of Sir Robert Clayton: the Lord Mayor for the year has two, the president two, the treasurer two, every alderman one annually, and to twelve common councilmen a proportion, which leaves to the other governors only one presentation in three or four years! The ordinary governors, of which there are now about 450, are admitted by ballot, on payment of 400*l.*; but aldermen are admitted *ex officio*, and it is understood that they contribute 200*l.* each. Moreover, in default of candidate governors, the privilege of nomination is reserved for the aldermen to elect governors at the same moderate entrance-fee: thus the corporation possesses one-third of the whole patronage.

There is not amongst public institutions, whether chartered or voluntary, or founded on pious bequests, one other in the United Kingdom that is better managed; nor is there one which, in its operation, not even excepting the public hospitals, confers a greater amount of cumulative good upon the community. There are, it is true, objections, and valid objections, to various of the details of regimen as derived from monastic times, and which remain unchanged. A minor one is the hideous, ungainly, inconvenient livery of the boys, wrapped in antiquated vestments, too hot for summer, and because the same in winter, too cold for that season; the yellow worsteds and clouted shoes, the bare head, productive of sore eyes and deafness in many cases—what can be more grotesque or inconsistent with modern usage? Preserve the frock and belt if you like, but abolish the breeches, and give trousers and freedom to the limbs; and above all, cover the head, at least in winter.

This is, however, but a matter of form,—the reform that is most to be desired would be a total removal of the truly admirable institution from the City, where the four acres and half, with buildings, are worth at *least* 50,000*l.* an acre, or 250,000*l.* to some of the land in possession of the hospital,—somewhere outside the suburbs,—say, distant at least six miles from the present centre.

The hospital has lands at Finchley, and also at Shooter's-hill, well situated for a new foundation,—and there a structure might be raised, in a position favourable to the health and corporeal development of the pupils,—as well as more protective of the moral tendencies of their education.

In Newgate-street, hemmed about with courts and purlieus, the boys, on emerging from control, are too apt to seek intercourse in vicinal places ill-suited to juvenile training.

It has been a biding cause of objection, that contagious sickness is too often brought into the school through this circumstance; and that the infirmary (a building disproportionably large to the foundation) is too often crowded, owing simply to the proximity of the City. A situation like Finchley, or on some of the farm lands in Surrey, Essex, or Kent, having ample scope for manly exercise, would check these evils; besides, that the juvenile establishment now at Hertford might be there in juxta-position, and under one surveillance.

Next to a prison,—close to an hospital,—a stone's-throw from Smithfield, but worst of all surrounded by public-houses, and lastly, in the din of city traffic, no location could be worse for a great school.

These are points discussed by many, and observed by all: they are given by one who has no interest in the concern, and who, having inquired into the details of management in the school, is bound to express his obligations to all connected with the establishment, for the openness and candour with which they showed and explained everything.

If there be any errors in that management as to education, they are sure to be reformed with the times; and blind adherence to monastic habits, and persistence in maintaining the friars' ground of antiquity (then perhaps, suburban, and suited to the object), is a fatuity that cannot be long upheld, since the civic authorities, themselves, are no longer denizens of the city, they too having their suburban villas; whilst by the change the funds would be increased, the patronage enlarged, and the school itself, with its princely revenue, might become a college inferior to no other seat of learning.

QUONDAM.

THE ROYAL ACADEMY MEDALS.—The annual distribution of medals amongst the students in the fine arts is about to take place. Much disappointment amongst the candidates was experienced on the occasion of the late lecture, at finding their drawings covered over—a proceeding never before adopted, and which has given rise to much conjecture as to the cause. One correspondent asserts that some of the competitors have not conformed to the strict requirements of the Academy regulations, and that influence in high quarters will be made to cover the shortcomings. It is to be hoped that the council will satisfy themselves that the respective pretensions of the candidates are founded in truth.

BRICKWORK IN GOTHIC ARCHITECTURE.

At a meeting of the Oxford Architectural Society last week, Mr. J. H. Parker made some observations on the application of brickwork to Gothic architecture. According to the local *Herald*, he began by observing that the Gothic was, of all other styles, that which could most readily adapt itself to any material. Our ancestors built of stone where they could get it of granite in the granite districts, such as the south of Devon, parts of Wales and Brittany — in flint and chalk in those parts of the country where they are most easily to be obtained—and in brick in the clay districts. The great point which he would lay stress upon was that they made use of that material which was the *cheapest*.

An apparent contradiction, he said, occurred in the Fen country of Lincolnshire, where, amidst abundance of clay, and no stone, some of our finest stone buildings have been erected, but on examination it will be found that there is no inconsistency in this with the general theory. The stone they employed was Caen stone, which was placed on board the vessel close to the quarries, floated down the river on which Caen is situated, across the sea, and then up one of the numerous navigable streams which are found in that part of the country; so that Caen stone became to them, by the avoiding the expense of land carriage, the cheapest material almost that they could get.

He would go on to observe that brick was used in all ages, in all countries. It was needless to refer to the Roman buildings, in which, as his audience must be aware, tile (only another name for brick or burnt clay) was the chief element of construction. After the time of the Romans there was a lull in the history of building, and during the interval few buildings of any importance were erected. He could only mention Saint Clement's at Rome, and Brixworth and Saint Nicholas's, Leicester, in England.

After the revival, which took place in the eleventh century, was built the splendid Cathedral of St. Mark, at Venice, the fabric of which is of brick, covered with marble on the outside and mosaic on the inside;—in England, of the same period, St. Alban's Abbey and Colchester Castle

Of the twelfth century, the only example he could call to mind at the moment was St. Botolph's Priory, at Colchester, but he had no doubt many others might be mentioned. In France, at this period, we have curious specimens of brickwork—where the brick or tile is inserted with the stonework as ornament,—*e.g.* at Lyons, Vienna, and Le Puy (Numerous drawings of these were exhibited, to which Mr. Parker drew attention; as also throughout his address);—in Belgium, the ruins of S. Bavon, at Ghent; in Italy, S. Stephano and S. George, at Rome; Torcello and Murano, at Venice; at Constantinople, S. Theotoki.

Of the thirteenth century, in England, occur the fine examples of Little Wenham Hall, Suffolk, and Coggeshall, Essex; in France, numerous examples, to the drawings of which he begged to call attention; in Germany, S. Ausgar, at Bremen, and the Dom, at Cammin; in Italy, houses and palaces at Padua, Verona, and Mantua,—the church of S. Francis, at Assisi, and the campanili of S. Benedetto.

In the fourteenth century he had no example to notice in England. In France he would particularly mention the Cathedral of Alby, whose vault he believed to be of the largest span of any in Europe, being 88 feet wide by 90 feet high, and this was built entirely of brick, as also the tower of the same Cathedral, which was upwards of 200 feet high, and whose massive base has admitted of a chapel being dug out of it without injuring the stability of the fabric above. He also referred to other French examples;—in Germany, the Cathedral at Ulm; Churches at Pranzlau and Wismar; houses at Griefwald, and at Stralsund, Lubeck, and Auslau;—in Italy, the houses at Parma, the Doria Palace at Genoa, St. Bernardino at Verona; elegant details at Piacenza, the church of S. Petronio at Bologna; and at Venice the churches of the Frari and S. Giovanni.

In the fifteenth and sixteenth centuries there was an abundance of examples in England of moulded brick, chiefly of the time of Henry VIII. as Tattershall and Thornton Abbey, in Lincolnshire; Eton College, Buckinghamshire; Great Badham, Sandon, Layer Marney, and Ingalton, in Essex; Hurst-pierpoint, in Sussex; and several colleges at Cambridge; in France, numerous examples; in Holland, nearly all the churches, including such fine specimens as Rotterdam Delft and Leyden; in Germany, the church at Wismar, the town-halls at Hanover, Breslau, and Lubeck,—houses at Rostock and Brandenburg; in Spain, the palace of the Alhambra, with its very rich ornament of moulded brick; in Italy the campanile of S. Paulo, at Venice, and numerous houses. With regard to the brick ornament at Venice of this period, it should be observed that they adopt patterns identical with those which we have been accustomed to consider as belonging exclusively to the twelfth and thirteenth centuries. Before he concluded, he begged to impress upon the members of the society and their friends who were present that evening, that some of the finest Gothic buildings in Europe were built of brick.

Mr. Sewell then made some remarks on the advantages of employing brick, and especially moulded or ornamental brick. He knew that it was open to a very grave objection from the liability to the constant repetition of the same form, which would be contrary to the true principle of Gothic architecture; but in some cases, such as the mouldings of an arch, or a series of arches, or such details where uniformity and exact copy were needful, he approved highly of its introduction. At this moment he was employing it to some extent in his new buildings at Radley, and he found it to answer exceedingly well. He also spoke in high terms of Mr. Grimsley's qualifications, not only for the perfection to which he had brought his machinery for the manufacture of tile and brick, but also for the talent which he displayed as a sculptor. He had just had a series of heads made in tile, for which, if he had had them carved in stone, he would have had to pay at least fourteen guineas each. Mr. Grimsley had produced them in his hard-burnt clay, which is equally durable with stone, for three guineas, and there were no two alike. He also observed that the irregularity of outline, which was so constantly complained of as an objection to the use of burnt clay, he considered to be of no disadvantage: he would even go so far as to say that he believed that our artists of old expressly avoided the straight formal lines, and that the irregular outline afforded beauty to the work. As to the philosophy of this, however, he had not time or opportunity to enter into it on the present occasion.

MODE OF EFFECTING IMPROVEMENTS IN PARIS.

The committee appointed by the council of the Society of Arts, to consider and report on this subject, held their first meeting on Tuesday, the 21st ult. Present: H. T. Hope, esq. in the chair; Mr. J. B. Bunning; Mr. E. Chadwick, C.B.; Mr. H. Cole, C.B.; Mr. Lewis Cubitt; Mr. G. Godwin; Sir Hector Greig, K.C.M.; Mr. S. Redgrave; Mr. Tite, F.R.S.; &c.

Mr. Cole stated the object of the appointment of the committee, and the members present proceeded to arrange the course of proceedings to be adopted. It was said that in carrying out the improvements in Paris there was not only no loss, but that profit actually accrued; whilst, on the contrary, in London, it was admitted by all the members of the committee, such improvements are always calculated to entail a loss of *one-third their cost.*

It was the general opinion of the committee that this heavy cost was due, in a great measure, to the very costly and inefficient modes of procedure in this country for the compulsorily obtaining possession of houses, lands, &c. for the purpose of public improvements; and numerous instances were cited exemplifying the results of the English system. The committee considered it to be most desirable to obtain, in the first instance, authentic data as to how these matters are managed in France, and with what results as to cost, &c. with a view, if such results should appear favourable, to ascertain how far the French system, or any portion of it, consistently with the habits of the people of this country, could be introduced into our system.

It was urged that great costs were entailed by the option which the "Lands' Clauses Act" gave of jury or *reference*; and a recent reference was mentioned touching some property at Harwich, which lasted twenty days, and must have cost 100*l.* a day.

The committee instructed the secretary to enter into communication with the municipal authorities in Paris, to endeavour to obtain from them particulars as to the mode of procedure for compulsorily obtaining possession of property for public improvements, with such details as to the practical working of the system there, in reference to the cost of making them, as will enable a comparison to be made between that and the system in operation here.

CHURCH-BUILDING NEWS.

Lincoln.—The Roman Catholic Chapel in Silver-street, after being considerably altered, has been reopened for divine worship. The body is a nave, with a semicircular apse at the north end. On the gospel side is an aisle with three arches, running down part of the east side of the nave, and this part of the building also contains the sacristy, with a gallery above. On the west side of the nave there are schools for boys and girls, the approach being from the nave; and from the schools there is an opening into a second apse. The front of the building has a porch flanked with stone columns and capitals, and above there is a window with small lights, and the point is surmounted by a cross. The style of the building is Romanesque. The roof is an open stained one. The altar stands in the apse beneath a semidome, and the arch is flanked by stone columns. Messrs. T. S. Nickoll and T. Willson, of London, were the architects, and Mr. W. Kirk, of Lincoln, was the builder.

Ingrave (*Essex*).—This church, built about 100 years since by the then Lord Petre,—a most wretched specimen of the age,—is about to be rearranged, under the direction of Mr. Joseph Clarke. The strange arrangement of pews in parallel steps, and the fabric generally, will be modernized more in bearing with the better spirit of the time. The works will be carried out by Mr. J. Hammond.

Headcorn (*Kent*).—The long-delayed work of repair at Headcorn Church, Kent, is now likely very soon to be in progress, under the direction of the above-named architect. The decay of years has led to his ordering shores to be put up to support the roofs; and, after much disappointment, the vicar has raised a considerable sum towards the cost contemplated.

South Stoneham.—The ancient church of South Stoneham, situated in a rural parish near Southampton, has, by the exertions of the vicar, been repaired, repewed, and enlarged, and was on 23rd ult. re-opened. By the late alterations, says the *Hampshire Advertiser*, besides removing the barbarously constructed gallery and lofty pews, by which the principal features of the church were mutilated and disfigured, a south transept has been added, affording additional accommodation; and the many interesting but mutilated monuments have been carefully restored. Three churches have been erected within the last few years in the same parish, through the instrumentality of the vicar. The restorations of the mother church have been executed by Mr. Burt, of Portswood, builder, from the designs and under the superintendence of Mr. G. Guillaume, of Southampton, architect. There are still 200*l.* deficient in the restoration fund.

Longdon upon-Tern (*Shropshire*).—On 12th ult. this church was re-opened, after additions and improvements constituting almost a rebuilding. The chancel, the porch, and the roof are entirely new. The portions of the old walls left standing (not more than 20 feet on each side) have been considerably raised, and 20 feet have been added to the length of the nave. The interior arrangements, fittings, and decorations are also entirely new. The whole has been done at a cost of about 700*l.* exclusive of

gifts. The east and west windows of stained glass are from the manufactory of Mr. Evans, of Shrewsbury. The chancel floor, of rich encaustic tiles, is the gift of Mr. H. Minton. The aisles and porch floor, of highly ornamental tiles, is from the works of Mr. T. Boultbee, of Chatwell, in this county. This is a new description of tile, according to the *Staffordshire Advertiser*, which states that this is the first church in which it has been extensively used.

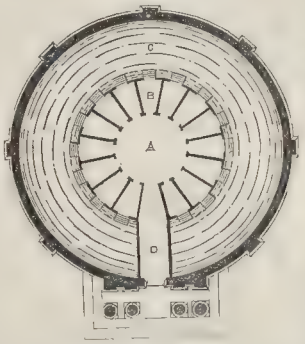
Stafford.—The authorities of St Mary's Church, Stafford, object to the disfigurement of the walls of their church, which has been recently restored, by the introduction of monuments; and in a recent instance, it has been determined by the bar on the Oxford circuit to place the bust of the late Mr. Justice Talfourd in the Crown Court of that town.

Eccleshall (Staffordshire).—The re-opening of the district church of Croxton, in this parish, took place on the 23rd ult. It has been entirely rebuilt, and consists of nave with north and south aisle, covered with open timber-roof in one span; also, a chancel, terminating with an apse, and a children's aisle, at the end of north aisle. The style of building is plain decorated. The porch is of English oak, on a stone basement. The windows of the aisles are glazed with ornamental quarries, and the chancel windows with Venetian glass in circular panes. The floors of the chancel and communion are paved with Minton's encaustic tiles. The pulpit and lectern are of Bath stone, carved. The works have been executed by Messrs. Espley, of Eccleshall, from the designs of Mr. Ewan Christian.

Barnsley.—On Tuesday before last, the corner-stone of the new Congregational Church in Regent-street, of this town, was laid by Mr. J. Shaw, brother of the founder of the building, who, according to the record placed under the stone, contributes one-half of the cost, the English Congregational Building Society giving a grant of 500*l.* and the remaining portion being raised by voluntary offerings. The estimated cost of the building, exclusive of the ground and of professional charges, was 3,978*l.* 1s. 6d. the freehold plot of land having been purchased for 735*l.* The digging for the foundation was begun on 28th September last, and the first stone was laid by the workmen on 16th Oct.

Chapel-Allerton.—The improvements in Chapel-Allerton church, which have been in progress for several months, being now nearly completed, it will be re-opened on 10th instant. The tower has been erected at the sole expense of Mr. W. W. Brown, who also contributed the bells, clock, star-window, new wall, and palisades surrounding the churchyard. The improvements in the interior of the church have been made by the congregation at large. The underdrawn ceiling has been removed, and the roof thrown open and ornamented with tracery and mouldings. Stained glass windows have been substituted for the former plain ones. The whole of the improvements have been made under the direction of Messrs. Perkins and Backhouse, architects.

Boston.—The first stone of the General Cemetery Chapel here, open to all, irrespective of religious creed or opinion, was laid on Monday, by the mayor. The ministers of different religious denominations in the town took part in the services.



Grimsby.—A meeting of the local authorities here, was held in the Town-hall, on 17th ult. for the purpose of opening tenders for the erection of a chapel-lodge, and other buildings connected with the new cemetery; also for enclosure thereof by a brick-wall, with iron palisading, and the laying out of the grounds as per plans of Messrs. Maughan and Fowler. The lowest tender for the completion of the whole works was that of Mr. William Hollingworth, of Grimsby: there were eight others, the highest of which was Mr. Johnson, of Laceby. Mr. Hollingworth's tender was 1,897*l.* 18s. 4½d. Mr. Johnson's was 2,377*l.* 17s. The works are to be commenced forthwith.

Tanfield (Gateshead).—Through the liberality of Mr. John Eden, of Beamish-park, according to the *Gateshead Observer*, a tower has recently been erected in Tanfield Church, at an expense of 300*l.*

A PLAN FOR A SWIMMING-BATH.

In the arrangement of swimming-baths, all that I have heard of have been made on one principle, viz. that of occupying a certain area or space of greater or less dimensions, and square, oblong, oval, or circular in shape, as caprice or local circumstances may prevail, with a suite of dressing-boxes, arranged wholly or partly round the space so occupied with water.

Under such circumstances, every person using the bath sees every one similarly employed, and is seen by every one. There is no doubt but that many persons, from a feeling of delicacy, which is entitled to respect, shrink from using the bath under such circumstances. I have endeavoured to meet this objection in the annexed plan, which, with the accompanying references, will explain itself:—

A. Waiting-room.
B. Space occupied by dressing-boxes, having each steps into *c*, the bath.
C. Swimming-bath.
D. Entrance with bridge over the swimming-bath.

Hot and shower-baths, &c. proposed over B.

Advantages supposed to exist:—1st. Privacy in the use of the swimming-bath. 2nd. Increased area for swimming, with a less supply of water.

M.

THE LATE CAPT. MANBY.

Capt. George William Manby, well known as the inventor of several kinds of apparatus for saving lives in cases of shipwreck, died the week before last, at his residence, Pedestal House, Southtown, near Great Yarmouth. Capt. Manby was born at Hilgay, in Norfolk, November 28, 1765, and was consequently in his 90th year. At an early age he entered the army, and having acquired the rank of captain, he was appointed, in 1803, master of the barracks at Great Yarmouth. In this situation he was accustomed to hear of shipwrecks; and, like other persons, he regarded them at first as irremediable calamities. In February, 1807, he witnessed, however, the loss of the *Snipe* gun-brig, and saw sixty-seven persons perish in quick succession, within sixty yards of the beach; and this distressing scene, and the other disasters produced by the gale, which raged on the occasion,—after which 117 dead bodies were picked up on a line of coast of not more than thirty miles,—made such a strong impression upon him, that he was induced to set his inventive faculties to work, and to try and devise some means of affording relief on the recurrence of a similar catastrophe. At first he thought of throwing a line to a stranded vessel from a balista, but he found that such a machine would be unwieldy, and unfitted for the purpose. It then occurred to him that a piece of ordnance might be employed with advantage; and a successful experiment which he had made in 1783, when he threw a line from a small mortar over a church, convinced him that the idea was practicable. Having succeeded in obtaining from the Board of Ordnance the use of a small mortar, he began a series of trials, but at first he encountered considerable difficulties. The great problem to be solved was, how to connect the shot with the rope in a secure manner. Chains of every kind broke on the discharge, but at length stout strips of raw hide, platted closely, were found to answer the purpose. Repeated trials, during every kind of weather, increased Capt. Manby's confidence in the excellence of his plan, and, on the 12th of February, 1808, an opportunity occurred for proving its utility. The brig *Elizabeth*, of Plymouth, appeared in a position of imminent danger, about 150 yards from the beach. The crew had lashed themselves to the rigging, and the waves fiercely agitated by a heavy gale from the N.E. broke rudely over them, and threatened every minute to hurry them into eternity. In this apparently hopeless state of affairs, Capt. Manby brought his apparatus to work: a line was thrown over the ship: a boat was hauled off by it; and the crew, consisting of seven men, were brought safely to land. It must have been a proud moment to the gallant captain, when the master stated to him that "benumbed by cold, and exhausted by fatigue, he and his men had been ready to sink under their apparently inevitable fate, but that when the rope was unexpectly thrown on board, they felt as if a new life had been given them, and instantly became collected, and able to exert themselves for their own preservation." In the course of the winter, which was one of some severity, Capt. Manby rescued the crews of several vessels; and in 1810, Mr. Curwen, M.P. brought his services before the notice of the House of Commons. A select committee was appointed to consider the subject, and an investigation was made into the extent and character of previous inventions for the same object. In 1792, Lieut. Bell, of the Artillery, had laid before the Society of Arts a plan for throwing a rope on shore, by means of a shell from a mortar, on board the vessel in distress; and 50 guineas were awarded him, after some experiments at Woolwich. Some of Lieut. Bell's friends considered that the invention was entitled to parliamentary notice, but in many respects it was open to objection, and it would be generally impossible to use a mortar from a ship *in extremis*. The committee reported so favourably of Capt. Manby and his exertions, that a handsome grant was made to him out of the national exchequer, and he was employed to report upon the dangerous parts of the eastern coast from Yarmouth to the Frith of Forth. Having concluded his task, he recommended that mortars constructed on his principle should be stationed along the coast; and in 1814 the House of Commons petitioned the Prince Regent, that the suggestion might be carried into effect. It was so far attended to, that in the course of two years the apparatus was ordered for fifty-nine stations. At this period of our national history there was, comparatively speaking, a lamentable indifference as to the fate of the brave mariners who sailed along our shores. There was a latent reproach in the poet's lines,—

> "Ye gentlemen of England, who live at home at ease,
> Oh, little do ye think of the dangers of the seas;"

and Capt. Manby used his utmost exertions to remove it. A bounty of 15*l.* was given by the Government to every man who was lucky enough to capture a smuggler, but the salvage of human lives went officially unrewarded; and with the view of correcting the anomaly, associations for the preservation of life from shipwreck were established in the district and throughout the kingdom. In 1823 a second committee of the House of Commons was appointed to consider the subject; and a fresh grant to Capt. Manby marked their appreciation of his various exertions. The gallant captain was not indeed of one idea: he did not rest contented with one triumph; but was continually pressing forward to the attainment of a new success. To obtain a momentary view of a vessel on a dark night, he devised an apparatus for throwing up balls filled with stars to explode at a certain height from the ground; and he also suggested the use of shells filled with a burning composition, to enable a crew to discern the flight of a rope projected to them. He was incidentally induced to direct his attention to the manufacture of ropes; and with the view of correcting mildew and rot, he advised the disuse of vegetable mucilage, and the immersion of all new ropes in a solution of sugar of lead and alum in equal parts. Life-

boats also attracted his notice, and he made various suggestions for their improvement. Even when he became considerably advanced in years, the ardour of his youth remained unimpaired; and having invented a new kind of harpoon, he actually made a journey to the northern seas in order to test its efficiency. For these and other worthy services he received at various times 7,000*l.* out of the national exchequer; and as the benefits of his inventions were not limited to any nation, but were of universal application, the thanks of almost all the potentates of Europe were conveyed to him. As a contemporary of Nelson, he felt a deep interest in the life and actions of that distinguished man; and he has left behind him a considerable collection of original letters, autographs, and other relics of the Norfolk hero. War has its glories, peace its honours; and it must have been a consoling thought to the gallant old philanthropist, that his various inventions had been the means of saving upwards of 1,000 lives, while they are still in useful operation. Simple and unostentatious in his habits, he courted not in his latter days the approbation of the world, but the poor of the locality will miss his considerate charity, especially in the dreary season on which we are now entering. He was, in short, an honour to his generation, and his loss ought to be deplored as well by those who live at home at ease as by those that go down to the sea in ships, and occupy their lives on the great waters.

"LIMNER" AND ILLUMINATION.

I do not usually answer objections to my written statements, otherwise I should waste my life in idle controversy; but as what I say to the workmen at the Architectural Museum is necessarily brief, and in its words, though not in its substance, unconsidered, I will answer, if you will permit me, any questions or cavils which you may think worthy of admission into your columns on the subject of these lectures.

I do not know if the Cambridge correspondent, whose letter you inserted last week, is more zealous for the honour of Carey, or anxious to detect me in a mistake. If the former, he will find, if he take the trouble to look at the note in the 264th page of the second volume of the "Stones of Venice," that Carey's reputation is not likely to suffer at my hands. But the translation, in the instance quoted, is inadmissible. It does not matter in the least whence the word "limner" is derived. I did not know, when I found fault with it, that it was a corruption of "illuminator," but I knew perfectly that it did not, in the existing state of the English language, *mean* "illuminator." No one talks of "limning a missal," or of a "limned missal." The word is now universally understood as signifying a painter or draughtsman in the ordinary sense, and cannot be accepted as a *translation* of the phrase of which it is a *corruption.**

Touching the last clause of the letter, I should have thought that a master of arts of Cambridge might have had wit enough to comprehend that characters may be illegible by being far off, as well as by being ill-shaped; and that it is not less difficult to read what is too small to be seen, than what is too strange to be understood. The inscriptions on the Houses of Parliament are illegible, not because they are in black letter, but because, like all the rest of the work on that, I suppose the most effeminate and effectless heap of stones ever raised by man, they are utterly unfit for their position.

J. Ruskin.

OXFORD MUSEUM COMPETITION.

It is understood that nothing positive can be known of the result of the museum competition before the 11th. Mr. Hardwick has reported that neither of the designs selected can be erected for the stipulated sum, and the delegacy have to go to congregation for further powers; the consent of the Hebdomadel Council must also be obtained.

"Nisi Dominus, &c." and "Fiat Justitia ruat cœlum" appear the favourites.

The delegacy are bound to do justice to those architects who adhered to the stipulations. A competitor objects that the perspective views of the candidate signing "Fiat Justitia, &c." were *coloured*, contrary to the stipulations.

* We are disposed to think Mr. Ruskin will find, on looking farther, that the word limner still has its old meaning, and that Carey is right. In Craig's excellent "Technological and Etymological Dictionary, of 1852," the word stands,—"Limner (enlumineur, Fr., a painter; one who decorates books with initial pictures."—Ed.

THE TOMB OF QUEEN ELEANOR AND PART OF THE SHRINE OF HENRY V. IN WESTMINSTER ABBEY.

Beautiful as are the various aisles, chapels, and other portions of the Abbey Church of Westminster, there is perhaps no other part which combines such picturesque appearance, variety of well distributed ornament, and effect of light and shadow, as the shrine of Henry V. shown in the engraving. We have before noticed this fine architectural monument to a great king. Most visitors are struck by the excellence of the carving, both in design and execution. The figures, which are carried along the screen, in niches, have a considerable resemblance to each other, and are mostly habited in long gowns, fastened by a buckled belt, and reaching to the feet, with a cloak over them: others represent ecclesiastics; and several of them have books. The coronation, in a square compartment, is supposed by Gough to represent the coronation of Henry V. in this church, by Thomas Arundel, Archbishop of Canterbury, and Henry Beaufort, the king's uncle. The canopies over the coronation, and nine small figures, are surmounted by devices of the swan and antelope alternately. The large cornices under the figures are likewise ornamented with swans and antelopes, collared and chained to a tree, on which is a flaming cresset light. Henry V. is said to have used this badge "by the reason of his dissolute life in the tyme of his father's raigne, when, after the death of the sayd king, his father, he was anoynted and crowned monarch of this realme, betooke unto him for his badge or cognizance, a cresset light burnynge, shewinge thereby that, altho his virtuous and good parts had been formerly obscured, and lay as a dead cole, wanting light to kindle it, by reason of tender years and evill company, that notwithstanding he beinge now come to his perfecte years and riper understanding, had shaken off his evill councellers, and, being now come to his highe and imperial throne, that his virtues which before had laine dead, should now, by his righteous raigne, shine as the light cresset, which is no ordinary light, meaning also that he should be a light and guide to his people to follow him in all honour and virtue."

On the top of Henry's Chapel were formerly deposited the ragged regiment, as it was called by those who exhibited the curiosities of the Abbey. The regiment consisted of wooden effigies (clothed in the costume of the time), of several kings, queens, and other important persons, who have been buried here. These effigies were in former times borne in the funeral processions of the great, and served to remind the spectators of the living appearance of those about to be committed to the dust. We are told that this regiment, which is particularly curious as examples of costume, is still preserved in some dark and secluded corner. There is now in this place several models of churches, one of which is the model constructed by Sir Christopher Wren, in the reign of Queen Anne, of his proposed alteration of the Abbey Church, by erecting an elevated spire in the central tower. We believe that the other models are those of St. Mary's and St. Clement's in the Strand, St. Paul's, Covent-garden, and St. John's, Westminster. Here are also, it is said, some models by Roubiliac, together with some other matters of interest: we see no reason why these should be shut up from the the public; or if the exhibition of them would detain the vergers too long, why not send them to the Architectural Museum?

In an article in the *Builder*, Vol. XI. No. 561, with which we gave an engraving of the iron work at the entrance of the tomb of Henry V. we referred to the extreme beauty of that which surmounts the north side of the tomb of Queen Eleanor.

J. Crull, a Fellow of the Royal Society, who wrote an account of the antiquities of Westminster Abbey, "adorned with draughts of the tombs, curiously engraven," published in 1711, speaking of the tomb of Queen Eleanor, says, "It is a very neat tomb, standing more to the north-east than that of her royal husband, beyond that of King Henry III. which stands betwixt these monuments. The pedestal is composed only of freestone and grey marble, whereon are engraven the arms of England, Castile, Leon, and Pontois, in Ponthieu. On the back side there appears (to be seen in the area or passage), a sepulchre painted thereon, with divers monks at their prayers round about it, all *in plano*; but her image most curiously done in brass, gilt with gold; her hair dishevelled, and falling very handsomely about her shoulders; on her head a crown, under a fine canopy, supported by two cherubims, all of brass gilt, half encompassed, viz. on the left side, with the screen of iron wrought through in various figures and shapes, are things well worthy the attention of the curious spectator or reader."

We quote the above because the armorial bearings on the tomb and the painting have now become almost invisible.

Queen Eleanor, whose name is so beautifully enshrined in English history, was the only daughter of Ferdinand III. king of Castile and Leon. She was married to Edward while Prince of Wales, who went in person into Castile to treat of and consummate the match. She bore to King Edward, among other children, Edward II. She died, and was entombed here Dec. 17, 1219.

The iron-work was taken down some years ago; and, if we mistake not, it was sold as old iron, but on some remonstrance being made, was repurchased by the chapter. The public may thank the Rev. Dr. Buckland, dean of Westminster, that it is now in its old position. For some time it lay in the Blaize Chapel, amongst the iron-work of different tombs. A portion of the iron-work of Henry V.'s tomb was stowed away in a large chest which brought the remains of Major André to England. The iron-work shown in our view, is, perhaps, the finest specimen of early iron-work in this country. It is wrought-iron, rivetted, and was made by Thomas de Leghton, smith, at Leighton Buzzard, in Bedfordshire, about 1292, in which year he was paid 13*l.* equal to at least 180*l.* of modern currency. The fact of so large a sum having been paid, has led to the question whether the small work remaining is the whole of the screen originally constructed, and to a suspicion that the screen was formerly to the plinth of the tomb; for as the tomb itself was painted and otherwise elaborately decorated, there would be as much or more reason for protecting it as for screening the effigy, which is so high above the aisle or ambulatory. A writer in the *Athenæum*, at the time it was refixed, said,—"The character of the work itself suggests some reflections. We have here a dated specimen of foliated screen-work. The time at which it was executed is early—in what is architecturally termed the Decorated Period—yet the details are thoroughly those of the Early English style, resembling, indeed, in some points, the Norman; as, for instance, the masks of animals' heads, in which several of the main stanchions terminate. Among these, the heads of the boar, ape, dog, &c. may be particularly remarked. It is true that we may suppose these peculiarities to have arisen from the fact, that workers in iron were likely to have been slower in adopting new fashions than workers of stone; but this is not very probable, seeing how widely the taste for ornamental work prevailed in the thirteenth century. We think it possible that old styles were copied then, just as they are copied now. At any rate, those purists in architectural history who date transitions within half an hour of half a century, would do well to give some attention to this screen." The stone-work of the queen's tomb was constructed by Master Richard de Crundale, mason, who began the Charing-cross. William Sprot and John de Ware, founders, of London, supplied the metal for casting the effigy of the queen, which lies in placid beauty on the tomb. The effigy was modelled in wax, and cast by William Torell, a goldsmith, probably an Englishman. Above the effigy was originally a canopy of wood, made by Thomas de Hockington, carpenter. This canopy was painted by Master Walter de Durham, painter, who also executed the paintings on the side of the tomb.

THE TOMB OF QUEEN ELEANOR AND PART OF THE SHRINE OF HENRY V. IN WESTMINSTER ABBEY.

METROPOLITAN IMPROVEMENTS.

AMONGST other works now in progress for improving the sanitary condition of the metropolis and its thoroughfares, may be mentioned the closing of six streets in Westminster, for the purpose of effecting an efficient drainage, viz. Delahay-street and mews, Charles-street, Duke-street, and Gardner's-lane. The narrowness of these streets, and the fear of disturbing the foundations of the houses, have caused the principal sewerage works to be carried out by tunnelling; a rather difficult task in the streets of London, the many pipes intersecting proving most formidable and annoying obstructions to the sewer moles.

The great line of communication with the Eastern Counties, Long-lane, has been again closed, after the formation of the monster sewer from Finsbury to the Fleet, in Farringdon-street. The earth having subsided under the temporary roadway, Long-lane is now undergoing a substantial repavement. Although this sewer was on an extensive scale, not a single accident occurred; but since the ground has settled, the premises of Messrs. Weerings, bookbinders, in Long-lane, have sunk so much as to render it necessary to take down the front

An extensive clearage is being effected in the line of Victoria-street, from Farringdon-street to Clerkenwell, comprising Ouslow-street, Vine-street, Saffron-hill, Coweross, &c.—a merciful demolition! which will leave the whole line completely open; and when the roadway is perfected, it will be thrown open so as to communicate direct from the city to the station of the Great Northern Railway, King's-cross. Those who have been driven out should be considered.

An extensive sewerage is being formed in Stamford-street, blocking for the time the communication between the South Western Railway and the city.

In Basinghall-street, several extensive buildings intercepting the passage to Coleman-street, are being demolished, and it is proposed to open a communication from Moorgate-street to Gresham-street and the General Post-office, which will much diminish the almost impassable traffic in Cheapside.

For a considerable time the paviors have blocked up a most important section of the East End, the road from Whitechapel church to Mile-end Gate. The tortuous windings which carriages endure through the delay in opening this piece of street, entail loss of time, danger, and increased distance.

ON METROPOLITAN RATING.

A RECENT leading article in the *Times* directed public attention to this subject; and the intimate acquaintance with such a municipal anomaly, which must be had by many of your readers, will render it suggestive enough. The leader in question terminates with these remarkably consolatory words:—"As to reform, we will speak of that humbly, and with bated breath. Perhaps, however, it will come at last, and all the better for coming at last, about A.D. 2000; so we will content ourselves with leaving on record this picture of the metropolis for the use of posterity. The pear is not ripe yet. We only hope it will not be rotten before it is ripe."

Is not the protest somewhat analagous to the tantalizingly tempting, if so doubtful and Hesperides-like fruit, left as it is on the fugitive page of a daily paper? If, however, the editor of the *Times* were to adopt your plan in reprinting your sanitary articles* in a separate volume, and reproduced the articles on municipal and sanitary questions of the last quarter of a century, published in a tangible form, it would confer a boon upon the public at large, and be the means of obtaining a more permanent and extended attention to a very important subject.

We are now almost exclusively engaged with one great question; but when the present war is happily terminated, whether one or five years hence, we shall be blest with a redundance of capital and time to warrant the grappling with this social question.

So happily do we appear situate at the present day, that no medium can be found for political agitation: the last great question of the day has proved a bugbear, and appears to cease to exist for want of its name—"protection." Practically, we appear contented with any party, so that it is the most capable. "Corn" was made the vehicle of much and prolonged political agitation: might not "municipal rating" be equally so? and the agitator would be in a happier position than the ancient mechanician, who, in a moment of enthusiasm, wished for the fulcrum to move the world. Here, at any rate, is the fulcrum ready for the lever, which, when properly combined, might be instrumental in moving that metropolitan world of "patient endurance."

The various subjects are so numerous that would fall within the scope of any general measure for the reform and generalising of "metropolitan rating," that it is hardly possible to refer to them in a letter. The following may be mentioned as directly or indirectly affected;—the construction and regulation of buildings; the paving of our streets; drainage, water and gas supply, now frequently antagonistic to the very existence of our thoroughfares; bridges, their construction and regulation, seven of which we possess, and three alone we can use, with all sorts of projects for new ones, before we have tried the effect of opening and forming avenues to those existing,* with a river traffic so enormous as amply to pay for commodious permanent structures, for embankation and debarcation, at present managed, or rather mismanaged, by almost irresponsible bodies of men; schemes for embanking and purifying the said river, without end, borrowed from the genius of Martin and enthusiasm of Trench, who agitated the question and himself a quarter of a century back,† with a foreign export tonnage that in the last century quadrupled itself, and an import which quintupled, both of which have during the last half-century made even greater strides; but we are, notwithstanding, blessed with the same amount of dock accommodation as when the crowded St. Katharine's Docks were finished a quarter of a century back. The last may hardly come within the category, except as illustrative of how individuals have swamped general measures.

PROVINCIAL NEWS.

Spilsby.—Through the liberality of Lord Willoughby de Eresby, a new corn-exchange has been erected here. Its opening last week was commemorated by a public dinner.

Chelmsford.—The local *Chronicle* reports the laying of the chief stone of Sir Anthony Browne's new almshouses, or rather the modern, enlarged, and extended asylum for the poor around South Weald, about being raised on the foundation which he provided in connection with the Brentwood Grammar School 300 years ago. The stone was laid on Tuesday in last week by Lady Sophia Tower. The patron and wardens have selected a picturesque and healthy spot, on the hill just beyond the church towards Brook-street, commanding a view up to the distant Thames. The buildings have been in progress for the last three months, and are now in a state of great forwardness, some of them being roofed in. They consist of a chapel and ten almshouses, the various buildings being so arranged as to be gradated according to the fall of the ground. The chapel, which forms the centre feature of the group, is in the Early Decorated style, lighted with three lights in the east and west. The roof is diagonally framed, and the interior arrangements are to be open, on the plan of subsellæ, with returns. The almshouses have projecting roofs all along the south and west fronts, so as to form a continuous covered walk; and the interior of each contains a keeping-room, bed-room, kitchen, scullery, and other requisites for convenience and comfort. The materials with which the whole is built are of red brick relieved with black, and the windows and door-frames are all of Caen stone. At the lower part there is a conduit on an octagon plan after the ancient type, for the supply of water to all the houses. The architect is Mr. Teulon, and the contractor Mr. Hammond, of Warley-common. The whole cost will be about 1,800*l.*

Chatham.—The system of forced labour by convicts, which was formerly carried out at Chatham dockyard, having been abolished, and in lieu thereof the present plan of free-paid labour introduced, the Government, some time back, decided on reverting to the previous plan of employing convicts in Chatham dockyard. Arrangements were accordingly made for erecting convict-prisons on a large scale near the dockyard. The site selected was a piece of several acres at the rear of the dockyard. The contract for the whole of the works was taken by Messrs. Piper, and early in May last the undertaking was commenced. The pile of buildings is now hastening towards completion. The building is T shaped, the main building with its lateral springing from the centre being several hundred feet in length. This shape is similar to the prison at Portsmouth, which is said to possess advantages over buildings constructed differently. The building consists of basement-floors and three stories above, and when completed will accommodate about 2,000 persons, each in a separate cell. The flooring of each cell is of slate, and the partitions and ceilings are of grooved iron. Each cell is 8 feet in length and 4 feet in width, and a plan of ventilation has been introduced into each cell which will be under the control of the prisoner. A portion of the prison being built on arches, these receptacles serve for store and warehouses. A walled passage will communicate from the dockyard to the prison. Some distance from the main building are the punishment-cells, to which access from the prison will be obtained by an underground tunnel. The building is to be heated by means of flues running the whole length of the centre: these flues are 3 feet wide. Each cell will be lighted with gas. Workshops on a large scale are being erected. There is also a chapel, hospital, and cooking-house with steam-machinery. A large bathing-pond, exercise-yards, and the several offices connected with so large an establishment, will also be built. The whole of the sewerage runs direct into the river. Houses for a large number of warders will also be built. The whole will be surrounded by a brick wall 18 feet high, extending to the length of little less than two miles.

Margate.—The new landing-pier has of late progressed rapidly, and the whole of the piles, with but one or two exceptions, are driven, so that the upper works can be proceeded with without delay. In a few more months this project will be completed.

Dover.—A dinner was given in the reservoir at the Castle-hill here, on Tuesday before last, to celebrate the completion of one great portion of the drainage and waterworks of the town under the Health of Towns Act. The reservoir is 108 feet long, 62 feet in width, and contains fifteen groined arches. It is capable of holding 500,000 gallons of water; and 2,000,000 of bricks were used in its construction together with the necessary buildings attached.

Tipton.—A sanitary committee formed some time since in this town having petitioned for the application of the General Public Health Act to the parish, Mr. Ranger has been sent down as inspector, to make inquiries as to the expediency of acceding to the prayer of the petition.

Macclesfield.—The governors of the free grammar-school in this town have decided on erecting new school-buildings. The present ones being in a very dilapidated state, it is intended to pull them down and offer the site for sale, the new buildings to be erected on a commanding situation at the back of the present ones, in a field called the school-field. The proposed buildings have been designed by Mr. F. Bellhouse, of the firm of Messrs. D. Bellhouse and Sons, Manchester, who have entered into a contract to execute the same for about 3,000*l.* They comprise, a main school-room, 45 feet by 30 feet; three class-rooms, 18 feet by 15 feet each; two porches, and hat and cloak rooms; a house for the second master, containing two parlours, kitchen, two cellars, and four bed rooms; a lodge, with sitting-room, bed-room, kitchen, and cellar; and an entrance gateway, with stone gate-piers and iron-gates, together with the requisite yards and conveniences. The style of the new buildings is Gothic, of very plain character, with high-pitched roofs and lofty octagonal chimney-shafts. The walling is to be executed in hammer-dressed stone from the neighbourhood, backed with brickwork. The estimates include the whole of the school and house fixtures and finishings, and the whole is

expected to be completed by the end of next year (1855). Messrs. Cawley and Firth, surveyors, of Macclesfield, have been appointed clerks of the works.

Leeds.—The trustees of the Leeds Infirmary, according to the *Leeds Intelligencer*, have consented to the temporary erection of the statue of the Duke of Wellington, by Baron Marochetti, in the Infirmary Gardens, the committee to remove it at their own expense on the request of the trustees. The statue will be erected as soon as forwarded by the artist, which will be at an early period. The permanent site at present contemplated is in front of the new Town Hall, when that building is completed.

Manchester.—At the conclusion of a lecture lately delivered at Ancoats, by Mr. Turner, on behalf of the Manchester and Salford Sanitary Association, Alderman Neild adverted to the proposed establishment of public baths and washhouses for Manchester and Salford, and stated that Government had promised to grant a charter of incorporation to the society about to be formed for that purpose, and that several influential persons were disposed to subscribe liberally to the object.

THE TOMBS IN WESTMINSTER ABBEY.

A remark in the letter of your correspondent, "M. H." has revived in my mind an impression which I have several times intended to communicate to you, in the hope that I might have an opportunity of submitting it to your readers. The observation I have alluded to, relates to the tomb of the Countess Aveline, and is as follows:—"I would observe that this tomb, though eminently beautiful, is small, and simple in its details, and that a comparatively small amount would be required for its effectual restoration, for which there are ample existing authorities, without the necessity for the restorer's exercising his own invention, and thus rendering it questionable."

Now, to use the words of this writer, I am of opinion that *all* restorations are "questionable," and I think the proposed restoration of the royal tombs is an act of violence to some of our dearest associations. As a matter of necessity, or for any practical purpose, such a restoration is uncalled for. The oft-advanced justification for so-called restoration of churches, viz. that they must be rendered available for the services of our religion, is altogether wanting in this instance. It is a mere question of taste, and must be undisguisedly regarded in that light only. And let me ask what pleasure will a spic-and-span, tinselly-looking tomb give to the man who now loves to wander dreamily through the grey aisles of that glorious abbey? Will it carry him back three or four hundred years? Will the scenes and events in which its occupant was an actor "come like shadows at the call of memory?" Will he unconsciously forget the present, and live for an instant in the romance of the past? I answer, *No.* On the contrary, his feelings will be shocked,—the effect on his mind will be like that of a distressing discord on the ear. Instead of the memorial of ages gone by, he will see the garish craftiwork of yesterday; and the dim vision of a sainted king will vanish while he criticises the skill of a modern architect. That the royal tombs have been sacrilegiously injured and grossly neglected, is apparent to every one who visits the Abbey; but the interest about them is as great as if they were more perfect, or perhaps greater. They are in a manner consecrated by age, and they possess a charm which no amount of gilding, or enamel, or piecing of stone-work can give them. Let them, therefore be preserved *as they are*, and if it be thought desirable, let models be made, which may be deposited in the British or in the Architectural Museum. Upon these models, experiments may be tried, and conjectural restorations indulged in with impunity; but a process of this nature applied to the originals themselves would be neither more nor less than a national calamity. F. S. A.

COFFER DAMS.

INSTITUTION OF CIVIL ENGINEERS.

On November 28th the paper read was "A Description of the Coffer-dams used in laying the Lines of Water-pipes from Twickenham to Richmond, crossing the River Thames," by Mr George James Munday.

When the Southwark and Vauxhall, and the West Middlesex water companies united for the purpose of laying two parallel lines of pipes of 36 inches diameter from Hampton-wick, 19½ miles by the river, above London-bridge, to the existing pumping engines, and filtering beds, &c. at Battersea and at Hammersmith, it was necessary to lay the pipes (to which two lines of 21 inches diameter were added at this portion) across the river Thames between the Twickenham and the Richmond shores, at a short distance below Richmond-bridge. The span of the river in the diagonal direction, necessary for the pipes, was about 463 feet, and the pipes being required by the Navigation Committee to be laid at a depth, in the centre, of 16 feet below Trinity datum, or about 9 feet below the ordinary level of the bottom of the river, and to provide at the same time for the navigation being unimpeded, it was necessary to employ coffer-dams. This part of the work was entrusted by Mr. Aird, the contractor, to Mr. Munday, who was required to submit his plans for the approval of the engineers. Immediately below the spot for crossing was an island, dividing the river into two arms of unequal width, the smaller, on the Twickenham shore, not being navigable. The ordinary difference of level between Trinity datum and low water was about 6½ feet, but great variation arose from floods, &c. and the utmost depth observed during the course of the work was about 12 feet. It was decided to lay the pipes in three lengths, commencing from the Twickenham shore. The space in plan for an oval-shaped coffer-dam was first dredged over; for the first dam 185 feet, the second 136 feet, and the third 175 feet in length, all being of the same width of 40 feet at the centre, with the sides so curved that all the timber and iron work could be made to serve for the construction of the three dams successively. After driving whole timber main piles 6 feet apart, and bolting on two half timber walling pieces (in height), half timber guide sheeting piles were driven, to correspond with the main piles, and two tiers of outside wallings were fixed, and the spaces filled in with half timber sheeting piles. The bed of the river, which consisted of a bed of shingly gravel and sand from 4 feet to 6 feet thick, overlying a tenacious clay, was then dredged down to the clay outside the piling: puddle was filled in against the piles up to 1 foot above low water; the gravel excavated from the second length being piled upon the puddle of the first length *seriatim*, in order to form a backing. The joints of the piles were then caulked with oakum from without. Braces and chain-ties were applied inside: fender piles were driven to protect the dam; and the trench for receiving the pipes was excavated; the dam being drained by one of Gwynne's centrifugal pumps, worked by engine power. When the three lines of pipes had been laid nearly along the first dam, the curved end of the second dam was commenced within it, making secure the timbers above and upon the pipes: the construction of the second dam then proceeded like that of the first, from which the piles were drawn to be used over again. The same process was followed with the third dam; and the whole was successfully accomplished, without any serious casualty, between the 20th of April, 1853, and the 20th of June, 1854.

STEALING A BUCKET OF WATER.

"Aquarius," a correspondent of the *Coventry Herald*, writes to that paper, saying,—"On Saturday last I visited the Justice-room at the ancient pile of buildings called St. Mary's Hall. I was completely disgusted with what appeared to me a most tyrannical act. Four poor persons were summoned for stealing water. In one case, of a young man who by his dialect was not a native of this city, the policeman charged him with stealing a bucket of water. The defendant said he was a stranger: his uncle was ill; lived in Palmerlane: he paid him a visit, and said, 'Uncle, can I do anything for you?' His uncle replied, 'Yes, fetch me a pail of water.' The kind-hearted nephew went. A policeman, who was in a corner, like a spider watching a fly, pounced upon his victim, and summoned him for stealing water. Another was a poor woman who had a mother sick: she had to be at her work at the factory, had a key for a public tap, but if she had gone for the key, she would have been too late for her work. There were three other cases of a similar nature." We can conceive the indignation of outraged justice with which an upright policeman would urge that such criminals at the bar be convicted and punished for dishonesty so glaring and disreputable. We can also conceive the quiet and satirical simulation of such indignation with which one scarcely so upright, but with a somewhat more expanded idea of his onerous duties, should feel himself compelled to drag the malefactors into the awful presence of *justice*. To which of these two categories the Coventry policeman belonged we can hardly guess; but the county magistrates before whom they were brought left no mistake as to their sentiments. Instead of allowing themselves to be the instruments of bringing justice into contempt by convictions in such cases, they "quietly vacated their seats." Justice stood abashed for once in presence of its own victims. Had the Coventry corporation been brought before these magistrates on a charge of failing to provide a sufficient supply of public fountains, and so covertly inciting the lieges to steal, and fostering and encouraging dishonest practices amongst them, there would have been more sense and not less justice in the charge. As it is, if the Coventry corporation really imagine that they are forwarding the ends of justice, and exciting a respect for it in the minds of the community, by allowing or compelling their police to act as they do in this instance, they are greatly mistaken. Were it possible to appropriate the air which the poor inhabitants breathe, doubtless Coventry corporations would regard it as sinful and punishable to "steal a bucketful" of it. Exceedingly upright as they may conceive themselves to be, it is they, as we have said, who are the heinous sinners, in not supplying the poor, and, indeed, all who require it, with water freely, and in thus betraying them into so-called theft, and hence into policemen's contaminating fangs.

TAKING SEBASTOPOL BY CONTRACT.

Many a sober earnest truth is spoken half in jest. It is sometimes the best and most hopeful way of offering new or startling suggestions to the public notice. In such cases there is, of course, always more of earnest than of jest in the suggestion, but the thoughtless laugh goes with the jester, and not against him, and the public mind, on reflection, thus purposely excited, is then led naturally to think *it* has discovered that, *after all*, the suggestion was, in sober truth, a good one. Many of the *Builder's* jests have been turned into earnest in this very way. The proposal to take Sebastopol by contract, however, we do not mean to claim for the *Builder;* but we promptly adopted it. The Government have now in earnest acted so far on the hint, and have actually contracted with Messrs. Peto, Brassey, and Co. for a corps of navvies to cut and lay railways from Balaklava to the trenches, and do any other work in their way connected with the siege. The navvies were not "loth" to do so: on the contrary, they flocked to the contractors at the very first summons, and, by all accounts, not only were the latter supplied with the requisite corps in course of one forenoon, but they might have had a second quite as readily. Had the Government in the outset advertised for contractors to pull down and carry away the materials of Forts Constantine, Alexander, and all the other bristling teeth of Sebastopol, in all probability just such floating batteries as they are merely now themselves preparing would not only have been proposed and contracted for by some of our enterprising engineers, but by this time the "building materials" of the forts in question would have been "carted away." War-ships are intended to compete in fair fight with war-ships only, and not with stone batteries; yet the only war-ships which really "went in" to their work on 17th October, though only half manned and half gunned, so mauled Fort Constantine, in that single attack, that Prince Mentschikoff reported it to his master as seriously damaged; and this, too, while the particular ships alluded to were *not* seriously damaged, or were less so than those that could not or did not go in so close to the forts. As for the navvies, they cannot be regarded, any more than the floating batteries, in the light of a reproach to our war forces. The noble armies of the allies are engaged in fighting Russian armies—are engaged, in fact, in a general campaign, rather than in a mere siege, which does not exist, and never did exist, in the strict sense of the term; and the rough works requisite by land at Sebastopol, are better suited to the experience and the strength of navvies than of troops, just as the demolition of the forts by sea is better suited to the floating iron batteries, than to the wooden navies of the allies. The dread of these floating batteries, we do believe, has already far more surprised and appalled the Czar, and contributed to the alleged vanquishment of his obstinacy as to "the four points" of the allies, than ever our war ships can have done. Pity a few of these batteries could not be at once despatched to Sebastopol: even a single one might do the whole business; for what need would *it* have to care for all the peppering of all the forts together, till they could no longer stand its broadsides? Steam guns ought to have a fair trial along with the floating batteries; and we hope to see Mr. Nasmyth's steam-hammer forthwith hard at work on wrought-iron ordnance, so as to double or triple our field artillery power, by comparison with its present cumbrous weight of cast-iron. The resistive power of earthworks, as pointed out by Mr. Fergusson, and long since done justice to in the *Builder*, has been singularly established at Sebastopol. Stone fortifications are shown to be far inferior as defensive works, however strong. While the allies have destroyed both forts and walls, they have not destroyed a single Russian earthwork by means of their powerful cannon. It is cheering, however, to learn that they have taken possession of two of them, although they could not be destroyed.

Charlton Burial Ground.—The list of tenders submitted to the Charlton Burial Board, for the formation of a burial-ground near Woolwich, Kent, ranged from 727*l.* (Campbell), gradually down to 400*l.* 12s. 5d. (Clements)

Notices of Books.

Theatres and other Remains in Crete, from a MS. History of Candia by Onorio Belli, in 1586. By EDWARD FALKENER. London: Trübner and Co. 1854.

So few of the architects of the present day occupy themselves in the study of classic art and literature, that those who do so are entitled to the greatest consideration. With many of the young minds of the day, the old Greeks are "humbugs," and Vitruvius a myth. Prominent amongst the few who labour to prevent the spread of such unwise feelings, is Mr. Edward Falkener, who sedulously pursues the ancient paths, and, with learning, discrimination, and taste, sets forth their pleasant places, and illuminates the dark corners. He has our cordial applause, and deserves the thanks of all who appreciate the refinements of art, and the elegancies of scholarship.

The memoir before us is "a supplement to the Museum of Classical Antiquities," and contains some interesting particulars of the architectural remains in Crete, as they were seen in 1586, with plans of the theatres and other buildings. Onorio Belli was a physician, descended from a family of artists, who lived in the Island for some years, and as late as 1596. He died in 1604. He has been accused of restoring the plans "according to the custom of those times," that is, in the manner practised by Palladio, who restored all such parts for which he considered he had any authority, and which were wanted in order to complete the plan. He cannot be wholly acquitted of the charge; but Mr. Falkener is inclined to believe that, "though the plans are restored so as to give as complete an idea as possible of the original arrangement, yet that no part is so represented without the authority either of existing constructions" or other presumptive evidence. There is one very noticeable peculiarity in the plans:—"In three of these theatres we have one row, and in that of Lyctus three rows, of thirteen cells, for the harmonic vases: and, lest we should imagine that these vases are conjectural, we are distinctly told that the cells are clearly visible. On the plan of the large theatre at Gortyna appear these words:—'Haveva tredici vasi di rame posti nelle sue celle che si vedono benissimo:' and Belli adds that the common people call them ovens,—while in the description of that of Lyctus, he says of the brazen vases, that almost all the cells are still visible. It will be seen that the number here shown (thirteen), is that given by Vitruvius, and therefore the examples before us are of the highest interest as confirming the statement of the father of architecture relative to these evidences of the exquisite delicacy of perception of the ancient Greeks."

Introductory Text-Book of Geology. By DAVID PAGE, F.G.S. W. Blackwood and Sons, Edinburgh and London. 1854.

WE some time since reprobated certain attempts to simplify and popularize the principles of geology which must have led to a completely false idea of the foundations on which that useful science rests. In the present little work for beginners, we are glad to find that such attempts are expressly and wisely avoided. And even in point of simplicity itself, we do not see that anything is lost, while a strictly accurate and scientific view of the first principles and general facts of the science is clearly given.

Geology, as many of our readers well know, and as all of them ought to know, is a science not only of speculative but of practical interest, not only to the miner and the agriculturist, but to the engineer, the architect, the builder, and even the brickmaker and the quarrier. To those who may not have hitherto appreciated the force of this fact, the following brief remarks by Mr. Page may be useful:—

"Deriving, as we do, all our metallic and mineral stores from the crust of the earth, it is of vast utility to be able to distinguish correctly between mineral substances, to determine in what positions they occur, and to say with certainty where they are, or are not, to be found. Again, the engineer, in tunnelling through hills, in cutting canals, excavating harbours, sinking wells and the like, must, to do his work securely and with certainty, base in a great measure his calculations on the nature of the rocky materials to be passed through—a fact he can only obtain by geological deduction. The architect, also, in selecting his material, by attending to the formation and texture of the rock, and observing how it has been affected by the weather in the cliffs and ravines, may often avoid the use of a wasting and worthless building stone; while his knowledge of geological succession will enable him to detect in different localities the same material. . . . The artist and landscape-gardener may also reap substantial benefit from a study of the leading facts of the science; and though such a knowledge, of itself, will make neither artists nor landscape-gardeners, it will often prevent them from committing unpardonable outrages on the landscapes of nature.

To acquire a knowledge of the science sufficient for the purposes indicated in the preceding paragraph, is not a very difficult task. The objects of research are scattered everywhere around us. Not a quarry by the wayside, not a railway-cutting through which we are carried, not a mountain-glen up which we climb, nor a sea-cliff under which we wander, but furnishes, when duly observed, important lessons in geology."

VARIORUM.

"A Practical Treatise on the Choice and Cookery of Fish," by Piscator, and published by Messrs. Longman and Co. here first presents itself. How we happen to have become an authority in cookery-bookery we do not very well know; but certain it is that our occasional remarks on this subject have had a wide circulation and acceptance. Good cookery is one of the things to be desired for the poor, and even the middle classes. Fish is one of the most abundant and most palatable kinds of food of which any class can partake, and it is particularly adapted to the pockets, as well as the stomachs, of the poorer classes, from the cheapness which is concomitant with its abundance, and which ought to be still more so than it is, considering the extensions and ramifications of our railway system, of which due advantage in this respect is not yet taken: immense quantities of excellent fish, instead of being scattered throughout our towns for the benefit of the inhabitants, are still spread over the land on the sea coasts as mere manure. More of our enterprising fishmongers are here wanted than are yet at work on our railways, although we do believe that a good deal is now being done, or on the way to it; and the volume under notice, which contains much more of useful information on the special subject of fish than we have elsewhere seen collected into one focus, cannot but be very useful as an adjunct to such enterprise. There are fishes here pointed out as excellent food, *when rightly cooked*, which heretofore have only been looked upon as fit for manure. By the way, we have here a word to say on the subject of Yarmouth bloaters, which we have looked in vain for some one else to say. Why should so staple an article of food for the poor be always "cured," or prepared for packing, and for keeping as well as for sale, with all the intestinal integuments still in them? It is on this account that bloaters so seldom get into the hands of the poorer classes sweet and fresh. Much mischief we fear is done to health by the strong taint contributed in this way to the Yarmouth bloater. In Scotland, which is a poorer country than England, there is no such thing as herrings or any other fish "cured" with all the inside in them: it is invariably extracted, all but the roe or milt. Doubtless the price might be somewhat increased by the adoption of this act of mere ordinary cleanliness, but herrings in Scotland are to be had cheap enough, although gutted; and, indeed, this is also the case in England itself with regard to salted herrings, if we mistake not. Bloaters ungutted ought to be regarded as food unfit for human use, at least except when newly prepared.——"The Cholera in Berwick-street" (Hope and Co. Great Marlborough-street), is a tract by the senior curate of St. Luke's, Berwick-street, who is well and personally acquainted with the district, and has taken much trouble in ascertaining the statistics of this local outbreak of the pestilence. "Sad need of a free circulation of air," is one of the most important inferences which the rev. inquirer adduces; but he does not overlook the great and mysterious epidemical cause, which ruled the time and the occasion of the sudden outbreak. "What that was," he remarks, "it is to be hoped that those who have knowledge of such matters will endeavour to ascertain. The writer," he adds, "believes that we shall not be discharging our duty, either before our fellow-men or the all-wise Ruler of the universe, unless we make the most strenuous exertions for this purpose." The author, we observe, appears not to be acquainted with our own inquiries on the subject of this special outbreak. The tract contains some touching details, from personal knowledge, of the kind and noble sympathy of neighbours among the poor sufferers at Berwick-street and its neighbourhood. Blessings on their good, kind, self-sacrificing hearts!——Mr. James J. Scott, of the Middle Temple, Barrister-at-law, has published, through Messrs. Knight and Co. of Fleet-street, several very useful little pamphlets, on sanitary subjects. One of these is "The Public Health Act, 1854," with Abstract and Commentary, explaining the changes effected in the Act of 1848. Another is on "Cemetery Construction and Regulation," and contains the Instructions issued by the Home Secretary to guide burial boards in providing cemeteries, with the Home-office Regulations for conducting interments in burial grounds, and an Introduction and Index. A third is the "Burial Acts;" a third edition, revised and enlarged, and which contains the Acts of 1852-3-4, with the incorporated clauses from the Cemeteries Clauses Act of 1847, &c. &c. and the Home-office Instructions and Regulations for providing Cemeteries and conducting Interments, together with an explanatory analytical abstract of all these statutes, directions as to choice of sites and planting, estimates of works, &c. &c. and a copious Index.

Miscellanea.

RESTORATION OF LLANDAFF CATHEDRAL.—A diocesan meeting was held at Newport for the promotion of this object on Tuesday in week before last, and was well attended. The bishop of the diocese took the chair, and in his address stated that during the last fourteen years, the sum of 7,113*l.* had been expended upon the cathedral. This expenditure had already had the effect of restoring the western chapel or presbytery, and had covered a portion of the nave, including the four eastern naves, the masonry and stonework being such as had not been exhibited for many centuries. The underpinning the arches, and the erection of external buttresses, were matters of necessity; but that had been accomplished, he might say, with a degree not only of beauty, but also of stability which had never been possessed before. The funds, unfortunately, had not been sufficient to allow of anything being done to the internal part of the cathedral. The dean and chapter possessed a fund for repairs which amounted only to 32*l.* a year. That they devoted to the restoration; and in addition, had, within the last fourteen years, contributed 1,769*l.* 18*s.* out of the 6,275*l.* expended. Since 1834, the individual members of the body had subscribed no less than 2,040*l.*; while the remainder of the diocese had subscribed but 4,235*l.* Under these circumstances, he presumed the dean and chapter might fairly be considered to have done their duty. Over the platform at the meeting were several drawings, exhibiting the restorations already done, and those in contemplation. We are glad to say that the object of the meeting has been successful, subscriptions amounting to about 400*l.* having been announced at the close of the proceedings. We trust the remainder of the requisite funds (in all 2,000*l.*) will soon be obtained.

A ROAD FROM EAST TO WEST OF LONDON.—May I suggest a "Metropolitan Improvement" which I believe is now absolutely required to accommodate the vast increasing traffic of the metropolis? viz. a street to be formed in as straight a line as possible from the western end of Old-street to the north-eastern corner of Lincoln's-Inn-Fields, with a branch from the southern end of the "Fields" to the wide part of the Strand opposite St. Clement's church. Then you would have a main thoroughfare—almost a direct line—from Shoreditch church to Oxford-street, Piccadilly, Hyde Park-corner, and the Strand, relieving the already overcrowded streets of the city, through which the traffic now slowly drags its long and tedious course,—affording a direct communication from the north-eastern to the western districts, and causing a considerable saving in distance. This route presents unusual facilities for carrying out, as it would intersect several wide thoroughfares, so that each portion of the new street as finished would be complete in itself, and could be immediately opened for traffic, added to which, the property through which it would pass, is of a very poor description.

H. H.

Landlord and Tenant. Detention of Bricks.—In an action (Lowe *v.* Bagshaw, brought before the Birmingham County Court, and reported in the local *Journal*, plaintiff is a carpenter, and defendant a baker. The action was to recover 10*l.* value of bricks illegally obtained, as alleged, by defendant from plaintiff. It had been proved that the former had taken premises of the latter. Just previous to a quarter's occupancy a dispute arose as to the erection by Mr. Lowe of a workshop on the premises, and it ended in the building being taken down; but 7,000 bricks used in its erection were left on the premises after Mr. Lowe had given up the key to Mr. Bagshaw. Refusing to give up these bricks, a claim for a quarter's rent existing, the action was brought. The judge was of opinion that defendant had no right to detain the bricks under the circumstances, and gave plaintiff a verdict for the sum claimed, 10*l.*

Strike of Northern Shipwrights.—The strike of shipwrights, at first confined to Sunderland, now extends, in a greater or less degree, to most of the ports along the north-east coast, and there seems little prospect at present of a termination to it. All hands on the Tyne are off, with a few exceptions, as at Howdon. At Hartlepool, notice of reduction of wages was given by the masters, but in one or two instances withdrawn. At Blyth there has been no change. On the Wear, five or six yards are at work at the old wages of 6*s.* a day; but there are only a few men at each. The total number of men idle at the several ports is said to be about 1,870.

Ingall's Train-signals.—As our readers know, we have long and often pointed out that it was of little use inventing or suggesting signals between passengers and guards, till some means of personal communication with the carriages and passengers was provided for the guard. Mr. Ingall's signals are based on this principle. Passengers, by means of them, would have power to attract the guard's attention by throwing up a signal from the carriage-roof, while also exciting notice by means of an air-whistle worked by a piston attached to a carriage-wheel. A gangway and rail along the tops of the carriages, joined between each carriage by means of cocoa-matting, and so forming a continued path, would be provided for the guard, who would pass along it to the carriage whence the signal was thrown up, and where he could ascertain the precise occasion or necessity for arresting the train or otherwise, and then communicate with the driver by means of a second whistle. The chief objection to this mode of management would be the peril in which the guard would be placed while on the proposed gangway. There are but too many railway-bridges without enough of headway to admit of the guard walking along such a gangway on the top of a train.

The New Commission of Metropolitan Sewers.—A Special Court was held on Tuesday last, when a long discussion ensued on the great main drainage, and Mr Rowe's scheme was brought forward. Sir J. V. Shelley then gave notice of the following motion for next court day:—"That the whole question of the main drainage of the metropolis be not taken into consideration until the various plans, recently proposed, or which may in the meantime be laid before the commission for such drainage, be brought before the Court, and that due time for deliberation on such plans be given."

Fires.—This is a season likely to be notable for great fires in London, as well as elsewhere. During the last few weeks there have been several very large fires, which burned with unusual fury; and amongst the last, we regret to remark that of the premises of Mr. George Heath, builder, of Bishopsgate-Without, while three streets were in a blaze at one and the same time; and that of the Whittington Club building, once the Crown and Anchor Tavern, in the Strand.

Clerks' Lodging-houses.—I would suggest the erection of a substantial club-house for clerks (single men or widowers) erected, say, for instance, on the present unsightly unoccupied piece of waste ground in the York-road (belonging to the South-Western Railway), where a commodious range of buildings might be formed, with a large recreation-ground in centre for athletic exercises; the general features of building to consist of sitting-rooms and dormitories, dining rooms, coffee-rooms, library, music, bath, and smoking-rooms, with all necessary offices for cooking and general attendance, under the supervision of a managing directory of proprietors and residents, which might easily be combined in one co-operative company of proprietors, a majority of whom might be respectable clerks.—W. A.

*** On this subject we have received a pile of letters, serving to show the existence of a strongly-felt want. Some of the writers offer their own houses to a circle of say eight or ten, known to one another; but with these we cannot meddle. An architect wants to know why the site of Farringdon market is not appropriated for this and similar purposes.

The Iron Trade.—The preliminary meeting of the trade will be on the 28th; "but, as usual," remarks the Birmingham correspondent of the *Times*, "parties have already anticipated the resolution which in all probability will then be adopted. It is the opinion of some that the reduction will not stop at 10*l.*; but the great difficulty which presents itself is as to the mode in which a reduction of the wages of the men is to be effected, for this by some is contemplated. Men are not abundant, are well off, and never better able to stand against a reduction. It is to be hoped, however, that the condition of the iron trade will not necessitate such a course. Materials, ironstone, and coal continue both scarce and dear. Stocks of pig iron are low."

St. Nicholas Church, Durham: Competition.—The dilapidated condition of this edifice led to the appointment, some few months ago, of a committee to undertake its complete restoration. They have accordingly collected a considerable sum by voluntary contributions, which it is hoped will be raised to the requisite amount by the assistance of a small rate on the parish. The committee also advertised in the *Builder* for designs in competition by architects, in reply to which five designs were submitted, and, after consideration, that by Messrs. Middleton and Pritchett, of Darlington, has been selected.

The Cholera at Nottingham.—Cholera still lingers in some of our midland and western towns. At Nottingham it has broken out in an alarming manner within the last week. Still, however, it maintains its old character and its associations with dirty and close unventilated neighbourhoods. The locality at Nottingham where it has now appeared is almost where it broke out in 1832,—in a confined yard close to Narrow-*marsh*, one of the poorest and dirtiest districts of the town, where drainage is most imperfect, houses closely pent up together, and the population dense and crowded. The state of things there, too, in respect to cleanliness, is more like that of old London in the plague period than any thing else.

The Space near St. Paul's.—The Committee of the Institute of Architects have published some letters showing, what had before been made public, that Lord Palmerston stated, in reply to the suggestion that the continuance of the coal-duty for one year beyond the time fixed for its expiry would supply the necessary funds to supply the loss caused by not building on the land, that the Commissioners of the Treasury "are of opinion that Parliament would not be willing to extend the existing coal-duty, or any part of it, longer than the existing Acts of Parliament provide. It also appears to their lordships that the proposed improvements near St. Paul's are matters peculiarly for the consideration and decision of the corporation of the city of London, whose revenues are large, and not of the Government." By whatever means, it is most desirable that the space should be kept open for ever.

Royal Hibernian Academy, Dublin.—The annual exhibition of this institution, which has been for some time open to the public, contains this year a limited but select collection of pictures, among which we recognize some previously exhibited. The general objects of attraction appear to be,—"Christ prophesying the Destruction of Jerusalem," by Begas; "Pantaleone in Sicily," and "The Pier at Ostend during a Storm," both by Achenbach, and all the property of the Prince of Prussia. Mr. McManus, A.R.H.A. exhibits a colossal picture entitled "Introduction of Christianity into Ireland." "The Wreck of the Blanche Nef," a large picture by Woolnoth, also attracts attention. There is *one* solitary architectural view exhibited this year, and that consists of a perspective of the newly-erected hotel and terminal offices at Galway, designed by Mr. J. Mulvany. The drawing might have been better.

Great Australian Project.—Advices from South Australia, received by the last mail, describe an extraordinary proposal which has been transmitted to the Home Government, for the construction of a railway 1,000 miles in length, to connect the three colonies of South Australia, Victoria, and Sydney. The plan, as detailed by Sir Henry Young, the Governor of South Australia, is that the necessary capital, which is estimated at 10,000,000*l.* should be raised by loan, the interest to be provided for by votes of the three colonies, and guaranteed by the Imperial Government; and that the lands for ten miles on both sides of the line, amounting to 12,800,000 acres, should be placed under the administration of commissioners, with a view of being gradually realised, one-half of their proceeds to be applied to redeem the loan, and the other half for introducing labour. The route to be followed would be chiefly along the valley of the Murray, with a branch from Swan-hill to Melbourne; and the work, it is thought, could be carried on at the rate of 200 miles per annum, and thus be completed in five years. But even this proposal is moderate, compared with another which Sir H. Young also forwards as submitted to him by Mr. Justice Boothby. In addition to the same railway, the judge would construct enormous docks at each great terminus, Sydney, Melbourne, and Adelaide, capable of accommodating the largest ocean steamers, and, instead of 10,000,000*l.* he proposes a capital of 21,000,000*l.*

Engineers' Tenders.—Advertisements recently appeared, inviting tenders for certain steam-engines for the Ryde Waterworks; drawings, &c. to be seen at the office of the company's engineers, Messrs. Easton and Amos. Amongst others, I took the trouble to procure the specification, &c. and sent in my tender. Not hearing from the clerk of the commissioners, I concluded my tender was not accepted; and on inquiry, was not surprised to find that the successful competitors were Messrs. Easton and Amos. I wish the favour of your opinion whether it is just that the same parties should act as consulting and manufacturing engineers to a company. If it is thought wise that no member of the House of Commons should be allowed to take a government contract, it strikes me that it would be more straightforward for consulting engineers not to tender for the execution of their own designs. In any case, I think it due to those who take the trouble to estimate for work, that the name of the successful competitor, and his price, should be intimated to them.

Jack of one Trade.

Lightning Conductors.—In a late number "Fulmen" suggests the insulation of lightning conductors by means of gutta percha: the experience of many years has shown us that no insulator whatever is needed. Let it be borne in mind that the affinity of electricity for copper is far greater than for any other metal, and it becomes evident that the electric fluid in its transmission to the earth will not leave a solid copper conducting rod for any other substance, if the rod be of sufficient size, and so arranged as to afford the greatest facility for the downward passage of the current. Theory would point to this conclusion, and a somewhat extensive practical acquaintance with the subject enables us fully to endorse the theory.

GREAT FIRE AT MANCHESTER.

"Manchester, Sheffield, and Lincolnshire Railway.
Manchester, Nov. 28, 1854.

"Dear Sirs,—I have the pleasure to inform you, that the large Fireproof Safe we purchased from you about six weeks since, for our cashier's office, was exposed to the hottest part of the fire which unfortunately took place at these offices on Saturday last, and I am happy to say that all its contents, consisting of valuable books, bank-notes, and other documents, escaped without the slightest injury.

"I am, dear Sirs, yours truly,
"Edwd. Ross, Secretary.

"To Messrs. Chubb & Son, 57, St. Paul's Churchyard, London."

TENDERS

For erecting a Public-house, at Putney, for Messrs. Wood and Co.; Mr. George Morgan, architect. The quantities supplied by Mr. Richard Yeldham:—

Hopkins and Roberts	£1,290	0	0
Howlinson and McClymont	1,273	0	0
King and Co.	1,255	0	0
Harrison	1,170	0	0
James Edser	1,149	0	0
Coils and Co.	1,122	0	0
Cleaver and Co.	1,089	0	0
Adamson and Sons	1,049	0	0
Case (accepted)	1,017	0	0

For four Warehouses in St. Paul's Churchyard, for Mr Louis Nathan; Mr. D. A. Cobbett, architect. Quantities supplied by Mr. E. L. Curtis:—

Coleman	£21,400	0	0
Haynes and Eyre	20,625	0	0
Ashby and Son	20,575	0	0
Gammon	20,169	0	0
Ashby and Horner	20,100	0	0
Lock and Nesham	18,920	0	0
Hayward and Nixon	18,450	0	0
Myers	17,625	0	0
Jay	15,400	0	0

For building a Printing-office in Suffolk-lane, for Mr. James Truscott. Quantities supplied by Messrs. Rawlings:—

Thirsk	£6,025	0	0
Lawrence and Sons	5,470	0	0
Brown and Co.	5,256	0	0
Harmer (accepted)	5,145	0	0

HINTS on VILLAGE ARCHITECTURE; being a Selection of Designs for Schools, Cottages, and Parsonage Houses, adapted for rural districts, with Plans, Elevations, and Estimates. Dedicated, by permission, to Thomas Poynder, esq.

By HENRY WEAVER, Architect and Estate Agent, author of "Hints on Cottage Architecture."

Subscribers' names are requested to be forwarded to the Author, Reversbrook House, Calne, Wilts; or to his publisher, Mr HENRY POPE, 2?, Budge-row, Cannon-street, London, of whom may be had

A third edition, just published, price 12s. of

HINTS on COTTAGE ARCHITECTURE; being a selection of Designs for Labourers' Cottages, singly, in pairs, and in groups, with Plans, Elevations, and Estimates. Corrected to the present prices.

London: HENRY POPE, 99 Budge-row, Cannon-street; and all Booksellers.

On THURSDAY, the 14th of DECEMBER, will be published, price Threepence, or Stamped for Post, Fourpence,

THE SEVEN POOR TRAVELLERS, being the CHRISTMAS NUMBER of HOUSEHOLD WORDS, conducted by CHARLES DICKENS, and containing the amount of one regular number and a half.

Office, 16, Wellington-street North, Strand; and sold by all Booksellers and Newsvenders.

On the 1st November was published, price 3s. 6d.

PUNCH'S POCKET-BOOK for 1855, with a Coloured Frontispiece on Steel, by JOHN LEECH; "A Prize Baby Show—Mater Familias rewarding a Successful Candidate," and numerous Wood Engravings, by JOHN LEECH and JOHN TENNIEL.

PUNCH OFFICE, 85, Fleet street.

This day is Published, Price 3s. 6d. cloth lettered,

ORR'S CIRCLE OF THE SCIENCES,

VOL. II.

BEING THE MATHEMATICAL SERIES.

INCLUDING—

SIMPLE ARITHMETIC, ALGEBRA, AND ELEMENTS OF EUCLID.
By J. R. YOUNG, late Professor of Mathematics, Queen's College, Belfast.

PLANE AND SPHERICAL TRIGONOMETRY, SERIES, LOGARITHMS, AND MENSURATION.
By the Rev. J. F. TWISDEN, M.A. Professor of Mathematics, Sandhurst.

AND

PRACTICAL GEOMETRY.
By ALEXANDER JARDINE, Esq. Civil Engineer.

Also, uniformly bound, Price 3s. 6d. THE FIRST VOLUME,

CONTAINING:—

THE PRINCIPLES OF PHYSIOLOGY; STRUCTURE OF THE SKELETON AND TEETH; AND VARIETIES OF THE HUMAN SPECIES. WITH AN INTRODUCTORY TREATISE ON THE NATURE, CONNECTION, AND USES OF THE GREAT DEPARTMENTS OF HUMAN KNOWLEDGE.
By Professor OWEN, Dr Latham, and Dr. Bendyshe.

LONDON: HOULSTON AND STONEMAN, PATERNOSTER-ROW;
WM. S. ORR AND CO. AMEN CORNER.

This day is published, price 1s.; post free, 1s. 6d.

THE WAR ALMANACK for 1855, and Naval and Military Year Book, containing Memoirs of General and Flag Officers, Services of Staff Officers, Chronology of the War, the Baltic and Black Sea Fleets, Stations of her Majesty's Ships, Distribution of the Army and Militia, Lord Raglan's Despatches, Obituary, &c. &c. with fourteen engravings.
London: H. G. CLARKE and CO. 252, Strand, and sold every where.

On the 18th December will be published, price 3d. or Stamped, 4d.

PUNCH'S ALMANACK FOR 1855.

ILLUSTRATED BY JOHN LEECH AND JOHN TENNIEL.

OFFICE, 85, FLEET-STREET.

PRACTICAL MECHANIC'S JOURNAL.

Part 81, December, price 1s.—Illustrations: Large folio plate of Messrs. Scott, Sinclair, and Co's New Screw Propellers, and 50 Wood Engravings. Contents: Royal Society—American Notes by our Own Correspondent. Boring Arbor, Steam Cock, Tool Block, Locomotive Performance, Railway Ventilation. Educational Exhibition, Report of Committee on Art. Davidson's Floating Breakwater—Messrs. Scott and Sinclair's New Screw Propellers. Illustrated Specifications of Recent Patents. Portable Wooden Bedsteads, Brown; Knife Cleaners, Halliard; Railway Timber Truck, Easie; Centrifugal Cloth-drying Machine, Johnson; Ornamentation of Pottery and Glass, Bale and Lucas; Medicinal Gas Administrator, Barth; Envelope, Astop; Washing Machine, Patterson; Steam Washer, Johnson.—Reviews of New Books—Proceedings of Societies—Monthly Notes—Lists of all New Patents. Hebert, 26, Cheapside. Editor's Offices, Offices for Patents, 47, Lincoln's-inn-fields.

THE FREEMASONS' QUARTERLY MAGAZINE. New Series, Enlarged, price 2s. 6d. A Specimen Number will be sent on receipt of six postage-stamps (the cost of postage). No. VII. for October, just published

GEO. ROUTLEDGE and CO. Farringdon-street; and
R. SPENCER, 314, High Holborn.

EMPLOYMENT OFFERED.—"THE LABOUR LIST and UNIVERSAL GAZETTE of EMPLOYMENT," published next TUESDAY morning, will contain 2,000 Situations to the unemployed, or to those who are ambitious of improvement. The situations are of all kinds, and in every part of the kingdom—Architects, Surveyors, Builders, Managers, &c &c. Salaries from 10s. to 500l. per annum.

One Number of "The Labour List" offers as many situations as twenty successive numbers of the Times newspaper.

London: HOULSTON and STONEMAN, 65 Paternoster-row; and all Book-sellers. Price 2d.

A SUPPLEMENT, GRATIS, with the WEEKLY DISPATCH, EVERY WEEK UNTIL FURTHER NOTICE. The unexampled interest which attaches to every incident connected with the operations of the Allied Armies in the East, has determined the Proprietors of the WEEKLY DISPATCH to devote a greater space to the intelligence from the seat of war than the ordinary limits of this the largest newspaper published could possibly afford; and, with the view of giving the amplest details, they have resolved upon the issue of a Series of Supplement Gratis, which will include every particular of interest connected with the Siege and decision of the contest at Sebastopol, and will be continued whenever demanded by the progress of the Campaign. By the publication of these Supplements the portion of the Paper usually devoted to incidents of domestic and political importance will be reserved intact, and the engrossing subject of the War will receive the fullest and most varied illustration. A Supplement will be published on Sunday next (Gratis), and on every succeeding week until further notice.—Orders may be given to all Newsvenders in town and country, and to the publisher, at the *Dispatch* Office, 139, Fleet-street, London.

TO BUILDERS' CLERKS.

A GENTLEMAN, having a large estate of houses, is in WANT of a CLERK (of middle age), to take charge of the books, and to assist in superintending the building and repairing. The situation would be constant to a competent person.—Apply, by letter, to JEREMIAH LONG, Esq. Union-street, Hackney road.

ARTICLED PUPIL.—WANTED, in the Office of an Architect and Land Agent, about twenty miles from London, an ARTICLED CLERK, who will have good opportunities for perfecting himself in every branch of the profession. A premium will be required.—For further particulars, address, R. D. Post-office, Reigate

PORTSEA GAS COMPANY.—WANTED, for the above company, a person of active habits and intelligence, as an INSPECTOR of LIGHTS, and who is capable of testing the qualities of the meters, which he will be required to do every quarter; he must also be conversant with pipe and service laying, and be able to test the purity and illuminating power of the gas, and assist generally in the office and offices of the company. A preference will be given to one conversant with accounts. Salary, 120l per annum, with a residence at the office, rates and taxes free. Application, with testimonials, to be sent to the Chairman of the Portsea Island Gas Company, 61, St. Thomas-street, Portsmouth.

December 4, 1854.

TO PARENTS AND GUARDIANS

TWO ARCHITECTS, in partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply by letter, to A. B. 16, Waterloo-place, Regent-street.

WANTED, a Person, who has a knowledge of the building business, to wait upon the trade, in London and its vicinity, to SOLICIT ORDERS for ANCASTER STONE. None need apply but those who have a practical knowledge of working the colite, and are fully competent to answer the questions of an architect.—Address Mr. JOHN WILSON, Builder, Grantham.

WANTED, by a Carpenter and Joiner, a middle-aged married MAN, with no family, to do the repairs of a gentleman's estate, or factory, or to take the management of a small business, in town, or a few miles from town. Has been in London fifteen years. Good reference can be given.—Address to A. B. C. 44, Exmouth-street, Clerkenwell, London.

WANTED, by an Architect and Surveyor, an ASSISTANT in the office. He will not be required as draughtsman, but must be capable of taking out quantities measuring up works, and must have a practical knowledge of the use of the level. Apply by letter, prepaid, stating salary, &c. to S. P. Post office, Stourbridge.

TO BUILDERS AND PAINTERS.

WANTED, by a Young Man, who fully understands his business, a constant SITUATION as Painter and Glazier, and can do Paperhanging if required. Wages not so much an object as a permanent situation.—Direct to G. G. No. 3a, Hermes-street, Pentonville.

TO BUILDERS.

WANTED, by a Young Man, a RE-ENGAGEMENT as CLERK in a BUILDER'S OFFICE. He is thoroughly acquainted with the duties of the same.—Address, A. B. 37, Spring-street, Hyde-park.

TO CARPENTERS.

WANTED, to APPRENTICE a YOUTH, 16 years of age, to the above line, where he will have a good opportunity of learning his trade.—Address, with particulars, and if in or out-door, to R. SPARROW, 34, Newington-causeway, Borough.

TO BUILDERS.

WANTED, by a fully-qualified Measurer, Estimator, and thorough Builder's Accountant, an ENGAGEMENT. Has had great experience in taking off quantities and measuring up extras.—Address, H. R. H. Post-office, Mount-street, Lambeth.

WANTED, a SITUATION for a Youth, in a SURVEYOR'S or BUILDER'S Office; he can write a good hand and square dimensions.—Address H. H. care of Mr. Simpson, No. 4, Caithorpe place, Gray's-inn-road.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS

The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 18-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

BENJAMIN FOWLER'S ENGINE-PUMP MANUFACTORY, Whitefriars-street, Fleet-street, London

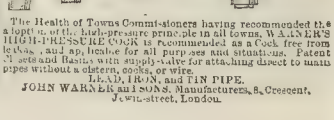
TO BUILDERS AND PLUMBERS.

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps made on the old plan.

Beer and Water Engines for raising fluids from a depth not exceeding 33 feet; also, Garden Engines constructed on the same principle.

JOHN WARNER & SONS, 8, Crescent, Jewin-street, London, Manufacturers and Patentees.



FOR SALE, a PILE-ENGINE, complete, in good condition, price £21; a Set of Pumps, complete, consisting of three barrels 12 inches diameter, 3 feet 10 inches stroke, six iron pipes, 6 feet long, each 8 inches diameter; Two Cranks, with provision for four pumps, if required, One Crank, with cogwheel; Eight Plumber Blocks, with brass bushes; Two sets of Connecting Rods; Eight Holders for Connecting Rods; the whole complete, in good condition, price 30l. Seven Framed Principals, 31 feet span, and good as new, price 3l. each.—Apply to JAMES and PRICE, Contractors, Carliff.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other House in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Cocks and Basins with supply valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

ding universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PA ENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of comm on Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and others where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country—an extensive assortment of specimens and patterns commencing at 4s per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 9, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 59, New Bond-street.

ASPHALTE.—GERVASE FOOTTIT Trinidad Asphalte Works, Rotherhithe, established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 3½ per ton Importer of Trinidad Asphalte.

Shipping Depôt, Devon Tavern Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed. Apply to JOHN PILKINGTON, FOLIOSCALS, BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention. WILLIAM PIGGOTT, 115, Fore-street City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

GREAT REDUCTION of PRICES.—I SAMUEL PETNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.—

Pine Planks, 12 ft. 3 in. by 11 in.	from 4s.	0d. each.
Spruce Deals, 12 ft. 3 in. by 9 in.	„ 2s.	9d. „
Yellow ditto, 12 ft. 3 in. by 9 in.	„ 3s.	9d. „
Honduras Mahogany	„	7d. per foot.
Spanish ditto	„	8d „
Wainscot ditto	„	9d. „
Spruce Paling Laths		10s. 6d. per 120.
Venetian Blind Laths		8s. per bundle.

Veneers and cut stuff of every description at equally low prices. Borough-road, South-wark, and Elm-street, Grey's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, begs to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ½ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c. Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY respectfully begs to inform the Building Public, that all Baltic Goods are dearer and American spruce and Pine are cheaper.

He asks special attention to the following, which are now on sale:—

2,000 Pieces of Timber.
20,000 Planks, Deals, and Battens.
30,000 Prepared Floor Boards, of all lengths and sizes.
5,000 Rough Boards.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.

N.B. The extensive Saw-mills are now in operation.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff, Slating, Battens, Paving, Laths, Oak Planks, Sash Sills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

TO FANCY-WOOD MERCHANTS.

VENEER CUTTING-MACHINE (by knife only), by which process double the number of veneers can be produced more than by the ordinary method. For specimens of work and particulars of price, apply to J. CHACK, Sole Patentee, Veneer Cutting Works, 4a, Robert-street (adjoining the King's-road Saw-mills), Chelsea.

WALNUT-TREE TO BE SOLD, felled in March, 1854, 5 feet through, and containing about seven or eight loads of timber in all.—Apply to Mr. RUMBALL, Land Agent, St. Alban's, Herts.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent upon his list prices for Mouldings. A large stock of dry flooring at low prices.—Southwark bridge Wharf, Bankside.

MOULDINGS by MACHINERY at REDUCED PRICES.—ARCHBUTT and ATKINSON beg to inform their customers that the 20 per cent advance heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices.—St. Pancras Saw Mills, Cambridge-street, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H for drawing on wood.	F F light and shading.
H H H for architectural use.	F for general use.
H H for engineering.	B black for shading.
H for sketching.	B B ditto ditto.
H B hard and black for drawing.	B B B ditto ditto.
	B B B B ditto ditto.
M medium	

Sold by all the principal Stationers in town or country.

DRAFT ROUND DOORS and WINDOWS PREVENTED, by using GREENWOOD'S PATENT INDIA-RUBBER STOPS, the neatest and most effectual plan ever invented for the purpose. They are made in oval, waisted, and mahogany mouldings, to fit round the panel linings. The door closes against the India-rubber, and makes them perfectly air-tight. Glass Cases made on this principle, at a reduced cost.

JOHN GREENWOOD, Patentee, 19, Arthur-street West, London-bridge.

TO BUILDERS, DECORATORS, AND OTHERS.

A YOUNG MAN is desirous of a RE-ENGAGEMENT as FOREMAN. Is thoroughly acquainted with the Trade in general, viz. writing, gilding, graining, plain and ornamental decoration, and can have five years' unexceptionable reference.—Address, A. B. care of Messrs. Brown and Standfast, Newspaper Agents, Little George-street, Westminster.

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, who understands perspective, and is capable of preparing finished drawings, &c. &c., is desirous of an ENGAGEMENT.—Address H. B. Office of "The Builder."

TO BUILDERS, IRONMONGERS, AND GASFITTERS.

A GOOD SMITH and FITTER desires a RE-ENGAGEMENT. Is a competent locksmith, bell-hanger, and good general hand.—Address, A. B 26, William street, Park-road, Holloway.

TO CARPENTERS, BUILDERS, &c.

TO BE DISPOSED OF, in consequence of the declining health of the Proprietor, an excellent JOBBING BUSINESS, established above fifty years, in a central part of the metropolis, near the waterside, and in the City of London, employing upon an average about forty men. There are capacious workshops, counting-house, timber-yard, saw-mill, stabling, &c., well adapted for a fine rate business requiring accommodation for a large staff of men.—Apply to Messrs. HAMMOND and ELLOART, Estate Agents, &c. 28, Chancery-lane.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

TO BE SOLD, in consequence of the recent death of the proprietor, an old-established PLUMBER'S BUSINESS, successfully conducted on the same premises, which are situate near to Regent-street, for upwards of thirty years, and possessing the patronage of upwards of 100 good and respectable customers at the present time. The terms required scarcely exceed the ascertained value of the stock and fixtures, which are not heavy.—All further particulars may be had on personal application to Messrs. PETTIFER and SON, 48, Brewer-street, Golden square, between the hours of TEN and TWELVE in the Morning, and FIVE and EIGHT in the Evening.

COLLIERY FOR SALE.—A Right of Mining under 300 Acres of Land, has been granted for a term of 21 years; the land is situated in the County of Flint, and the Colliery has been opened, and Machinery erected, at a cost of upwards of £5000. The Mold Railway runs close to it, and a siding from the Railway has been laid in for this Colliery, which has supplied, and is still forwarding Coals in considerable quantities to Chester, Birkenhead, and Liverpool, amongst other places; it is thus situated in the midst of good markets, with railway accommodation. The owners are advised that to render the Colliery as effective as it should be, a considerable capital should be expended in works and additional machinery, and they have therefore determined to sell the same. For particulars apply to Messrs. PYRRELL, PAINE, and LAYTON, Guildhall-yard, London.

TO IRONMONGERS.—TO BE LET, a SHOP, presenting an unusually fine opening for the above trade, with fitted bracket shelves, the want of such a shop being felt in the neighbourhood. Apply to CARTER and ELLIS, Hornsey-road.

FOUNDRY, DOCKHEAD.—TO BE LET, extensive PREMISES, known as Mars Foundry, situate in the Folly, comprising a foreman's dwelling, with pattern shop adjoining, foundry, about 80 feet by 45 feet, small yard, shed, and stable.—For full particulars, apply to Mr. ELLIS, Auctioneer, 130, Minories, City.

ARCHITECTURAL PARTNERSHIP.—An Architect in practice in one of the home counties, whose income from his profession averages £900 per annum during the six years he has been a principal, is desirous of entering into PARTNERSHIP with an old established London architect. For a share of a good practice, the advertiser offers his connection, his active services (being capable, if necessary, of taking the entire management), and to pay a bonus not exceeding £1,000. He has been regularly articled, as an architect, and understands his profession both practically and as a fine art. Principals only treated with, and all communications will be considered strictly confidential.—Address, M. L. B. A. Messrs. Job, Brothers, and Co. Wholesale Stationers, Cannon-street West, London.

PARTNERSHIP.—To ENGINEERS and OTHERS.—An opportunity occurs for a respectable, industrious young man, with about £300, to join the most thoroughly understand his business) upon the advertiser. There are several patented articles manufactured.—Address, S. T. Miss Watling's, 469, Strand.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 2, Travistock, Holborn (between 1 and 3 p.m.), or to Mr. H. B. BARLOW, Office for Patents, Duckenfield Extension, Manchester.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services in Tinting Backgrounds, Landscapes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS 32, Albany-street, Regent's-park.

WILLIAM BARRATT, LANDSCAPE GARDENER WAKEFIELD.
*** Plans and estimates furnished.

GLASS PAPER and GLUE.—Important to CABINET MAKERS.—F. J. DAVIS celebrated extra large Glass Paper, 1st per ream; Cox's finest Scotch glue, 57s per ton, 60s. per cwt.; finest Imperial Glue, 53s. per ton, 56s. per cwt.; best London Glue, 48s. per ton, 50s. per cwt. Russian, German, and Gelatine Glues, in great variety. Wholesale and Retail, 6 and 7, New Inn-yard, Curtain-road, Shoreditch, London.—Country orders executed on receipt of a post-office order, payable as above.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—Mr CREE and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke, as fortaken, boiler, and coppice of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

DUBLIN AGENT.—Patentees and Others would be well represented by an extensive party of standing, who has room for samples.—Address, with particulars, A. 18, D'Olier-street, Dublin.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.—Builders having works to execute south west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman square, London.

THE ARCHITECTURAL and CIVIL ENGINEERING CLASSES, 24, Guilford-street, Russell-square, are OPEN for the reception of pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, squares, &c. and instruction in architectural and civil engineering, drawing and colouring, making finished and working drawings, preparing specifications, taking out quantities, estimating, &c. &c.—For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. at the Offices.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter received from Mr C. Hacker, surveyor to the Duke of Bedford.—"Office of Works, Woburn-park, Jan. 16, 1852.—In answer to your inquiries respecting the Gutta Percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years, we have adopted it largely, both on account of being cheaper than lead, much easier fixed and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for jointing tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps. The Gutta Percha Company, Patentees, 18 Wharf-road, City-road, London.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost than has heretofore been accomplished.

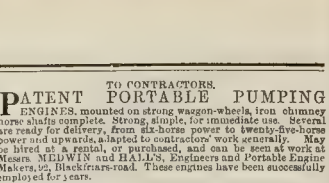
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, equally as true.

TUNED BY MACHINERY.

Stocked and wheels ready for hanging. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers and hanged on a new system, which gives a superior tone and facility for ringing.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM ENGINES, from four to twelve-horse power, always ready to fetch in hire. For the work of month, for pumping, sawing, piledriving, raising materials, &c. &c.



Contracts taken for pumping any quantity of water.

JAMES BURTON and SONS, Engineers and Contractors, John's place, Holland-street, Southwark, London.

BUILDERS, Contractors, Engineers, Ironmasters, Colliers, Millwrights, Brickmakers, Chemists, Bricklayers, Well-sinkers, Excavators, Plumbers, and others, requiring water or other liquids hot or cold raised or forced, will find it greatly to their interest to use GWYNNE and CO.'S PATENTED PUMPS. For Economy, Efficiency, and Power, they stand unequalled. Pumps may be had on hire, and every information obtained by applying at GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Essex-street, Strand.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MELWIN and HALLS, Engineers and Portable Engine Makers, &c. Blackfriars-road. These engines have been successfully employed for years.

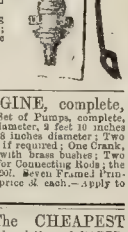
N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto ..... 48s. per doz. galvanized.

Upper Ground-street, Blackfriars Bridge, Surrey Side.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS



The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.

This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.

A large stock of Wrought Pumps, from 3-inch single to double 12-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at

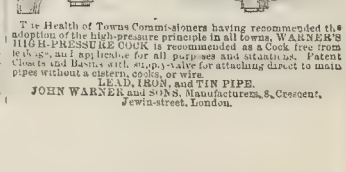
BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London

TO BUILDERS AND PLUMBERS

The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP, which is recommended for the simplicity of its construction, and the ease with which it works.

By the introduction of the vibrating standard, the cumbrous carriage and expensive stays and cradles are unnecessary, rendering the price considerably less than pumps made on the old plan.

Deep and Water Engines for raising fluids from a depth not exceeding 32 feet; also, Garden Engines constructed on the same principle.



JOHN WARNER & SONS,
8, Crescent, Jewin-street, London.
Manufacturers and Patentees.

FOR SALE, a PILE-ENGINE, complete, in good condition, price 23l.; a Set of Pumps, complete, consisting of three barrels 12 inches diameter, 3 feet 10 inches stroke, six iron pipes, 6 feet long, each 8 inches diameter; Two Cranks, with provision for four pumps, if required; One Crank, with fly-wheel; Eight Wood Pump Blocks, with brass bushes; Two Sets of Connecting Rods; Eight Rollers for Connecting Rods; the whole complete, in good condition, price 90l. Seven Framed Principals, 45 feet span, and 6 feet rise, price 3l. each.—Apply to JAMS and PRICE, Contractors, Cardiff.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is CROSSE'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where parties can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

since universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, bubbles are unnecessary, and, when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 8 by 8 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate. May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to
Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

DRAFT ROUND DOORS and WINDOWS PREVENTED, by using GREENWOOD'S PATENT INDIA-RUBBER STOPS, the neatest and most effectual plan ever invented for the purpose. They are made in deal, wainscot, and mahogany mouldings, to fit round the plain linings of door closes against the India rubber, and makes them perfectly air-tight. Glass Cases made on this principle, at a reduced cost.
JOHN GREENWOOD, factotum, 10, Arthur-street West, London-bridge.

TO BUILDERS, DECORATORS, AND OTHERS.

A YOUNG MAN is desirous of a RE-ENGAGEMENT as FOREMAN. Is thoroughly acquainted with the Trade in general, viz writing, gilding, graining, plain and ornamental decoration, and can have five years' unexceptionable reference.—Address, A. B. care of Messrs. Brown and Standfast, Newspaper Agents, Little George-street, Westminster.

TO ARCHITECTS.

A GOOD DRAUGHTSMAN, who understands perspective, and is capable of preparing finished drawings, de aile, &c. is desirous of an ENGAGEMENT. Address H. B. Office of "The Builder."

TO BUILDERS, IRONMONGERS, AND GASFITTERS.

A GOOD SMITH and FITTER desires a RE-ENGAGEMENT. Is a competent locksmith, bellhanger, and good general hand.—Address, A. B 20, William street, Park-road, Holloway.

TO CARPENTERS, BUILDERS, &c.

TO BE DISPOSED OF, in consequence of the declining health of the Proprietor, an excellent JOBBING BUSINESS, established above fifty years, in a central part of the metropolis, near the Waterside, and in the City of London, employing upon an average about forty men. There are capacious workshops, counting-house, timber-yard, saw mill, shedding, &c well adapted for a first rate business; spring accommodation for a large staff of men.—Apply to Messrs HAMMOND and ELLOART, Estate Agents, &c. 28, Chancery lane.

TO PLUMBERS, PAINTERS, AND GLAZIERS.

TO BE SOLD, in consequence of the recent death of the proprietor, an old-established PLUMBER'S BUSINESS, successfully carried on for the same many years, which are situate near to Regent-street, for upwards of thirty years, and possessing the patronage of upwards of by good and l Lon ade customers at the present time. The terms required scarcely exceed the ascertained value of the stock and fixtures, which are not heavy. All further particulars may be had on personal application to Messrs PEVETTT and SON, 3, Brewer-street, Golden-square, between the hours of TEN and TWELVE in the Morning, and FIVE and EIGHT in the Evening.

COLLIERY FOR SALE.—A Right of Mining under 300 Acres of Land, has been granted for a term of 21 years; the land is situated in the County of Flint, and the Colliery has been opened, and Machinery erected, at a cost of upwards of 2,000 The Mold Railway runs close to it; and a siding from the Railway has been laid in for this Colliery, which has supplied, and will for many years supply Coals in considerable quantities to Chester, Birkenhead, and Holyhead, amongst other places; it is thus situated in the midst of good markets, with railway accommodation. The owner being advised that to render the Colliery as effective as it should be, a considerable capital should be expended in works and additional machinery, and they have therefore determined to sell the same. For particulars, apply to Messrs. TYRRELL, PAINE, and LAYTON, Guild hall-yard, London.

TO IRONMONGERS.—TO BE LET, a SHOP, presenting an unusually fine opening for the above trade, with its allied branches; the want of such a shop being felt in the neighbourhood.—Apply to CARTER and ELLIS, Hornsey-road.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

It is universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs: its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

HENRY PASK, Baker-street, Clerkenwell, Sash, Shop Front and Door Maker to the Trade,

begs to inform his customers and the public generally that he intends carrying on the business as usual, and solicits a continuance of their favours, which shall meet with his prompt attention.

N.B. By inclosing a postage stamp a full list of prices may be had by return of post.

TO ALL THAT IT MAY CONCERN.—150 1¼ inch and 1¼ inch Four-panel DOORS for SALE. Five of 1¼-inch, 6 feet 7 inches by 2 feet 7 inches; ditto, 1¼-inch 6 feet 6 inches by 2 feet 6 inches. Price of 1¼ inch, 7s.; ditto, 1¼-inch, 6s. each.—Apply to JAMES TUBBY, Builder, Liverpool House, Liverpool-road, Islington. Terms, cash.

TO BE SOLD, a PAIR of SPANISH MAHOGANY DOORS, 7 feet high, 25 in. wide; glass 20 in. by 42; hinges and mortise-lock.—Apply 2, Fish-street-hill.

WANTED, about 20 feet run of MAHOGANY COUNTER, 3 feet 3 in. wide, with framed front 3 feet 6 in. high. Also Sash Partitions, glazed with large squares, and an Entrance Lobby about 5 feet 6 in. square.—Address, A. B. 234, High Holborn.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9½.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 3s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and prices commencing at 1s. per foot superficial, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 2, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond street.

ASPHALTE.—GERVASE FOOTTIT Trinidad Asphalte Works, Rotherhithe; established 1834. Every description of Flooring laid with the above durable material in the best manner. Asphalte for Railway Arches, 30s per ton Importer of Trinidad Asphalte.

Shipping Depôt, Devon Haytor Wharf, Rotherhithe.

G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above low price, and the work guaranteed.—Apply to JOHN PILKINGTON, POLONCEAU'S BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 14, FISH-STREET-HILL.—N.B. Country Agents, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.

TARPAULINS for COVERING ROOFS during Repairs, SCAFFOLD CORD and every description of RUBLINGS by Builders upon the lowest terms. Marquees and temporary Awnings on sale or to hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 124, Fore-street City. Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

GREAT REDUCTION OF PRICES.—SAMUEL PUTNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.:—

Pine Planks, 12 ft. 3 in. by 11 in.	from 4s.	6d. each.
Spruce Deals, 12 ft. 3 in. by 9 in.	" 3s.	9d. "
Yellow ditto, 12 ft. 3 in. by 9 in.	" 3s.	9d. "
Honduras Mahogany	"	7d. per foot.
Scantling ditto	"	8d. "
Wainscot ditto	"	8d. "
Spruce Paving Laths	10s. 6d.	per 120.
Venetian Blind Laths	8s.	per bundle.

Veneers and cut stuff of every description at equally low prices. Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¾ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY respectfully begs to inform the Building Public, that all Baltic Goods are dearer and American Spruce and Pine are cheaper.

He asks special attention to the following, which are now on sale:—

2,000 Pieces of Timber.
20,000 Planks, Deals, and Battens.
30,000 Prepared Floor Boards, of all lengths and sizes.
5,000 Rough Boards.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.

N.B. The extensive Saw-mills are now in operation.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Cills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

TO FANCY-WOOD MERCHANTS.

VENEER CUTTING-MACHINE (by knife only), by which process double the number of veneers can be produced more than by the ordinary method.—For specimens of work and particulars of price, apply to J. CHACE, Sole Patentee, Veneer Cutting Works, 4, Robert-street, adjoining the King's-road Saw-mills, Chelsea.

WALNUT-TREE TO BE SOLD, felled in March, 1854, 5 feet through, and containing about seven or eight loads of timber in all.—Apply to Mr. RUMBALL, Land Agent, St. Alban's, Herts.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 27, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

MOULDINGS by MACHINERY at REDUCED PRICES.—ARCHBUTT and ATKINSON beg to inform their customers that the 20 per cent. advance heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices.—St. Pancras Saw Mills, Cambridge-street, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Steam Cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 9th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

TO DRAUGHTSMEN AND CIVIL ENGINEERS.

H. MORRELL, BLACK LEAD PENCIL MANUFACTURER, No. 149, Fleet-street, London.

These Pencils are prepared in various degrees of hardness and shades.

H H H H	for drawing on wood.	F F	light and shading.
H H H	for architectural use.	F	for general use.
H H	for engineering.	B	black for shading.
H	for sketching.	B B	ditto ditto.
H B	hard and black for drawing.	B B B	ditto ditto.
		B B B B	ditto ditto.
M	medium.		

Sold by all the principal Stationers in town or country.

DRAFT ROUND DOORS and WINDOWS PREVENTED, by using GREENWOOD'S PATENT INDIA-RUBBER STOPS the neatest and most effectual (in ever invented for the purpose. They are made in teak, wainscot, and mahogany mouldings, to fit round the jamb linings. The door closes against the India-rubber, and makes them perfectly air tight. Glass Cases made on this principle, at a reduced cost.

JOHN GREENWOOD, factotum, 10, Arthur-street West, London-bridge.

DOULTON AND CO.'S

SINKS, URINALS, &c. IN PATENT GLAZED STONE WARE,

HIGH-STREET, LAMBETH, LONDON.

DOULTON and CO.'s Sinks and Urinals are manufactured in a new kind of Stone Ware of high glaze, and uniform colour; they will withstand the action of the most powerful acids, and are made very strong to bear rough usage.

Fig. 1. Straight Sink, large size, 2 ft. 7 in. long ..... 8s. each. Straight Sink, small size, 2 ft. 2 in. long ..... 6s. each.

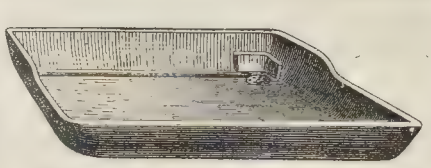

Fig. 2. Angular Sink, large size, 2 ft. 6 in. long ..... 8s. each. Angular Sink, smaller size, 2 ft. 4 in. long ..... 7s. 6d.

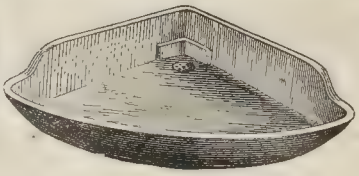

Fig. 3. URINAL WITH FLAT BACK. 1 ft. 3 in. long ..... 4s. 6d. each.

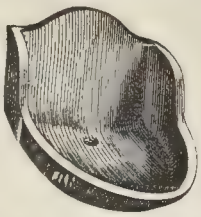

Fig. 4. ANGULAR URINALS. Large size, 1 ft. 11 in. long ..... 7s. each. Middle size, 1 ft. 7 in. long ..... 5s. each. Small size, 1 ft. 3 in. long ..... 3s. 6d. each.

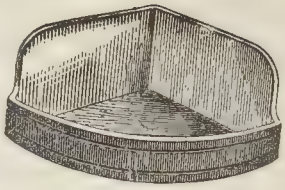

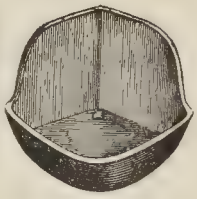

Fig. 5. ANGULAR URINAL. 1 ft. 3 in. long ..... 4s. 6d. each.

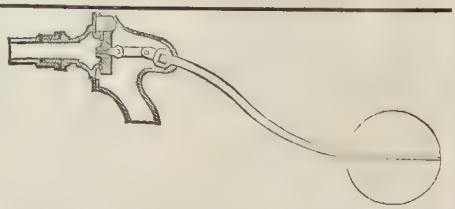
DOULTON AND CO.'S CLOSET PANS AND TRAPS, IN ENAMELLED STONE WARE, WHITE INSIDE, 7s. 6d.



DOULTON'S HALF SOCKET DRAIN PIPES,

BY THE USE OF WHICH, PIPES MAY BE REMOVED, THE DRAIN EXAMINED, AND JUNCTIONS INSERTED WITHOUT INJURY TO THE TUBES. THE SAME PRICE AS ORDINARY SOCKET PIPES.

For list of Agents, see "Builder" of November 18. Drawings, with prices, forwarded on application.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections of fittings such as spindles, slides, and cylinder fittings, so fatal to Ball-valves generally. They are perfectly quiet in action, and cannot by any means stick fast, there being no point of friction from fittings in their construction. They are so arranged as to accumulate the power of closing against the column of water whenmost required, and are warranted to stand any known pressure of water

	½ inch.	¾ inch.	1 inch.	1¼ inch.	1½ inch.
Complete with Balls:—Plain shank	5s.	6s.	6s. 6d.	7s. 6d.	12s. 6d. each.
" " Screw ferrule	6s.	6s. 6d.	7s. 6d.	8s. 6d.	14s. 6d. each.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B. Architects are respectfully informed that these are correct prices for inserting in specifications.

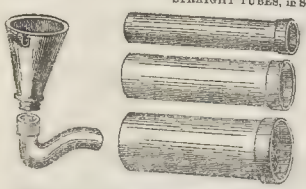
J. TYLOR AND SONS, WARWICK-LANE, NEWGATE-STREET, LONDON.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS, TRAPS, &c. at the

NEAR POOLE, DORSET;

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to THE AGENTS:—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;



Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;

Where a large stock is always kept on hand.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1731.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an Assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required, as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge; City-road Wharf, City Basin; J. TURNER, 2, South Wharf, Praed-street, Paddington; COLWILL, Brothers, 33, Brydges-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street

Drawings and List of Prices will be forwarded free, on application.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

FREEMAN ROE'S Patent Sluice-valve can be repaired without being removed from the main. All sizes, from 3 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

WATER-CLOSET and PLUG BASINS.—To PLUMBERS and BUILDERS.—C. and F. NICKLIN, Stone, Staffordshire, beg to call the attention of the trade to a quantity of Closet and Plug Basins, which they are enabled to offer at the following Reduced Prices:—Oval (printed), for Pan-Closets, 3s. 6d.; Conical, 4s.; Hopper (printed), 5s. 6d.; Bramah White, 2s. 6d.; Plug-basins, from 9d. each, nett.

TO BUILDERS AND OTHERS.

DRAIN-PIPES, JUNCTIONS, PANS, TRAPS, &c. at very low prices.—E. & W. STURGE, Bridge Wharf, City-road. Paving, Sinks, &c. Duchess, countess, and ladies slates. A list of prices sent free on application.

VENTILATION.—PURE AIR.

Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 198, Blackfriars road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

AMERICAN OILSTONES, very superior in quality to the Turkey oilstone; a new and invaluable discovery, for giving, with ease and rapidity, a perfect and sharp edge to those tools used by carvers, carpenters, die-sinkers, engravers, engineers, &c. &c.—To be had of various shapes and sizes, at 103, Newgate-street, London.

&c. &c.

JENNINGS PATENT DRAIN-PIPES.

THE IMPROVEMENT IN DRAIN-PIPES ABOVE SHOWN REMOVES ALL OBJECTIONS TO PIPE-DRAINAGE.

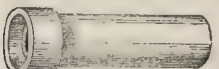
A Sewer, or Drain, formed with these Pipes, can be examined at any point, or Junction introduced, by simply removing one of the Saddle-pieces; and this can be done without interfering with, or stopping the flow of sewage.

The favour with which these Pipes have been received by Engineers, and all interested in sanitary progress, and the large and important works in which they are now being used, is a PROOF THAT SOME ALTERATION WAS NECESSARY TO THE PERFECTION OF PIPE-DRAINAGE.

These Pipes are now being largely described by Professor HOSKING, Sir JOSEPH PAXTON, and Colonel JEBB, for the New Prison, Chatham; by the BOARD of ORDNANCE; by W. TITE, Esq. at the Necropolis Station of the South-Western Railway; and upwards of FIVE MILES have just been described to be used in the Town of Halstead, Essex, by E. GOTTO, Esq C.E.; and by many other Engineers and Architects, whose patronage is a proof that the invention possesses merit.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.

ARE FREE FROM ALL COMPLICATION—NO WIRES OR CRANKS.



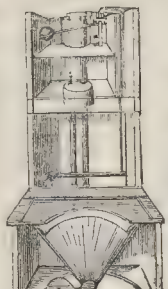
ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

ARCHITECTS FURNISHED WITH REFERENCES OF THE HIGHEST ORDER.

Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

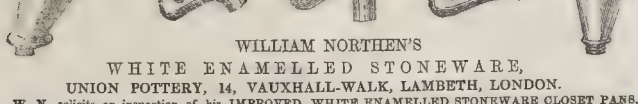


Superior Glazed Stoneware Pipes, Bends Junctions, Traps, &c. Hoppers and other Pans, with best White Glaze inside.

Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

IMPORTANT TESTIMONIALS
TO THE EFFICIENT WORKING OF
STEPHEN GREEN'S
PATENT SYPHON FLUSHING BASIN,
AND
SELF-ACTING CLOSET CONNECTIONS.



Oxford, November, 1849.

GENTLEMEN, Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.
HENRY J. UNDERWOOD, Architect.
R. S. HOGGAN, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.
I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

This effective article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

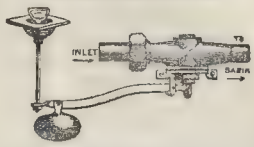
SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

HENRY MILLICHAMP, Manufacturer of GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.

65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY, COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap, 7s. 6d. each.

A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2-FEET LENGTHS.

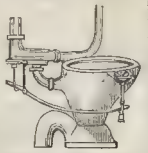


Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.

LAMBERT'S SELF-CLOSING LAVATORY AND CLOSET-VALVE



Is adapted for high or low pressure, and for any kind of BASIN. Many hundreds are in use under continuous pressure of 100 to 200 feet, they are found to be exceedingly durable, and are cheaper than common cocks. Manufactured solely by the Patentees,
THOS. LAMBERT and SON,
Brass Founders and Engineers,
Corner of Short-street, New Cut, Lambeth.

MANUFACTURERS of GLAZED STONEWARE PIPES, Bends, Junctions, &c.; also FIRE BRICKS, Vitrified Blue Bricks as used by her Majesty's Commissioners of Sewers. White Fire Clay, Paving Bricks, &c. &c. Agents,—CHARLES RICHARDSON, No. 6, South Wharf, Paddington, London.

PATTEN'S PATENT HIGH-PRESSURE WATER CLOSETS and WATER REGULATORS, manufactured upon an improved principle, fitted complete with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

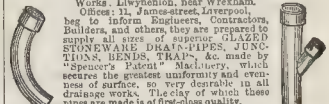
Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals. Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish-street, near St. Paul's, London.

HENRY TURNER, 2, SOUTH WHARF, PADDINGTON,

5s. Trap, 2s 6d. 5s.

Manufacturer of Closet Basins and Traps, yellow outsides, with white insides. These are warranted to be the most durable earthenware now manufactured.—A list of shapes and prices sent free, on application. A large stock of Plug Basins of every variety.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.



HAYWARD TYLER and CO. No. 85,

Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Connel's Registered Model Water closet."—This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

HAYES, BROUGH, and CO.

Works, Llwynenion, near Wrexham.
Offices: 11, James-street, Liverpool,

beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,
MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, Jars, Bottles, and every article in Stone Ware on advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Falconwharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London. Particulars forwarded on application.

ISAAC PARRY'S POTTERIES, Copperas-lane, Church-street, Deptford, Kent, begs to invite the attention of Contractors, Builders, and Wholesale Dealers to his extensive assortment of articles in the GLAZED STONEWARE, for sanitary and other purposes; likewise Red Drain-pipes, Chimney-pots, &c. The only manufactory of the kind in the neighbourhood.

SALES BY AUCTION.

TO BUILDERS, CARPENTERS, AND OTHERS.

MR. LEREW will SELL by AUCTION, on the PREMISES, 42, Union-street, Somers-town, on MONDAY, DEC. 11, at ELEVEN for TWELVE, on account of the number of lots, the capital well-seasoned STOCK; comprising 1,000 white, yellow, and spruce PLANKS, DEALS, and BATTENS, dry cut stuff, several squares of prepared flooring, 3,000 feet of quartering, scaffolding, ladders, barrows, 2,000 feet of 1½ in. elm boards, American ash, mahogany, dry wide pine, oak and fir stile, spruce mantuas, ironmongery, &c.—May be viewed the Saturday prior, and morning of sale, when catalogues may be had—Auction Offices, Cardington-street, Hampstead-road, near the Euston Station.

BUILDING-GROUND, BRIGHTON.—TO BE LET, a very eligible FRONTAGE for THREE or FOUR HOUSES in Broad-street, immediately contiguous to the Marine-parade and Chain-pier, where houses are much in requisition.—Full particulars and terms may be obtained of Messrs. LOCKWOOD, Surveyors, No. 34, Upper Baker-street, London.

OXFORD-STREET, near Regent-street.—About a quarter of an acre of vacant GROUND, having the principal entrance from Oxford-street, TO BE LET, on building lease offering an unprecedented opportunity for the erection of a public edifice, panorama rooms, bazaar, galleries, a religious or scientific hall, or any other buildings requiring a spacious area with an approach from a great west-end thoroughfare.—Full particulars will be given upon personal application only, to Messrs. RUSHWORTH and JARVIS, Surveyors and Auctioneers, Saville row, Regent-street.

FACTORIES, WAREHOUSES, &c.—GROUND for FACTORIES, WAREHOUSES, capacious VAULTS, &c. with convenient approaches, and ample space for light and air, TO BE LET, in the NEW-ROAD, near Fitzroy-square. Factories and warehouses will be erected for parties requiring the same, on equitable terms, or at a rental.—Apply to HORACE JONES, Architect, 16, Furnival's-inn.

LYDSTEP HAVEN, PEMBROKESHIRE.—TO CAPITALISTS, BUILDERS, and OTHERS.—A rare and first-rate BUILDING INVESTMENT, TO BE LET, for a long term of years, or on lives from Michaelmas next, about SEVEN ACRES of LAND, replete with lime and building stone, and other advantages, rendering the erection of houses of comparatively trifling expense, and of a character quite in keeping with the requirements of the times. Lydstep Haven is situate in a most romantic bay, within half an hour's drive of Tenby, which popular watering-place now overflows with visitors. This most advantageous building investment is equal to freehold, and picturesquely slopes down to the beautiful beach, whose shore is admirably adapted for sea bathing. The rocks of Lydstep are bold and romantic. The heights of the island of Caldy present magnificent and beautiful features of interest from Lydstep Haven, whose climate is the same as that of Tenby. Greenhouse plants without shelter, thrive and blossom throughout the year. The steamers plying between Bristol, Tenby, and Ireland, offer cheap, swift, and pleasure modes of transit to and from this charming bay, whilst the South Wales Railway completes Lydstep Haven as one of the most desirable and easily-reached localities for bathing in the principality. For terms and every information apply to WALTER AUGUSTUS HOLCOMBE, Esq. Solicitor, 30, Chancery lane, London.

TO CAPITALISTS, BUILDERS, AND BRICKMAKERS.

TO BE LET, a valuable BRICKFIELD, containing fine brick earth. The steam-engine and machinery for making bricks to be taken at a valuation, and the ground a rent-charge of 80l. per annum. It is situate about five miles from London-bridge, and near to extensive estates, on which buildings are being rapidly erected.—For further particulars apply to Messrs. WIRE and CHILD, Solicitors, 9, St. Swithin's-lane, City.

A THOUSAND YEARS.—MONEY LENT. BUILDING LAND TO BE LET, for the above term. Ground-rent moderate. Charges moderate. Advances liberal.—Apply to Mr. WILLIAM ELLISON, Architect and Surveyor, 15, Stainsby-road, Limehouse

TO BUILDERS AND OTHERS.

SEVERAL PLOTS of FREEHOLD LAND in Hammersmith, TO BE LET, on building lease, for the erection of fourth-rate Houses and Cottages.—For plans and particulars, apply to Messrs. BARNETT and BIRCH, 3, Verulam-buildings, Gray's-inn.

DALSTON, Richmond-road.—270 feet frontage in the above road, and 150 feet in depth, TO BE SOLD, very cheap, at a peppercorn rent, for ninety-three years, direct from the freeholder. The return frontage in a public road may be used for fourth-rate houses if desired.—Apply, W. W. Queen Eleanor, London-lane, Hackney.

TO BRICKMAKERS AND BUILDERS.

A FEW ACRES of FREEHOLD LAND, containing superior red and white earth, situated in a locality where there is a good opening. TO BE SOLD on advantageous terms.—Apply to Mr. HENRY WOOLNOUGH, Architect, Ipswich, Suffolk.

TO BRICKMAKERS.

FOUR or EIGHT ACRES of valuable BRICK EARTH at Hammersmith, TO BE LET, on royalty.—For terms apply to Messrs. BARNETT and BIRCH, 3, Verulam-buildings, Gray's-inn.

TO BRICKMAKERS, BUILDERS, AND OTHERS.

TO BE LET, a snug BRICKFIELD, with first quality brick earth, in full working order, capable of making 2,000,000 of bricks per annum, and more if wished, situate next the main road, a short distance of the marble arch.—Apply to Mr LOVELL, Foreman, on the field, opposite the Seven Stars public-house, New road, Shepherd's-bush. To save trouble, for lease and implements, nearly new, for working the field, 250l.

VALUABLE BUILDING LAND TO BE LET, adjoining the New City Cattle-market, Islington, with an eligible site for a tavern and extensive mews.—For plans and particulars, apply to Mr. THOS. BURTON, Surveyor, 1, Charlotte-row, Mansion-house.

TO ENGINEERS, SMITHS, AND OTHERS.

TO BE LET, a small FACTORY, with engine and boiler, screw-cutting lathe, punching and shearing press, three fires, with fan and tools complete: including house-rent, &c.—Apply to AUGUSTUS SMITH, Engineering Auctioneer and Valuer, 295, Blackfriars-road, near the bridge.

TO ENGINEERS, MILL-OWNERS, CONTRACTORS, AND OTHERS.

AUGUSTUS SMITH, Auctioneer, Valuer, &c 295, Blackfriars-road, two doors from Holland street, having had seventeen years' practice in the selling and valuing of all kinds of engines, machinery, tools, mechanical and engineering tools, plants, &c. respectfully solicits a share of patronage in the above line. The most satisfactory references given if required, and all accounts settled the day after delivery. Sales free; registry kept of all engines, boilers, and machinery for sale by private contract.

LONDON: Printed by CHARLES WYMAN, of 74, Hunter-street, Brunswick-square, in the parish of St. George, Bloomsbury, Printer, at the Printing office of COX (brothers) and WYMAN, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-Fields; and published by the said CHARLES WYMAN, at the Office of "THE BUILDER," 1, York-street, in the Parish of St. Paul, Covent Garden, all in the County of Middlesex.—Saturday, December 9, 1854.

BOARD of TRADE, DEPARTMENT of SCIENCE and ART.—AID TO PUBLIC SCHOOLS IN OBTAINING EXAMPLES FOR ART INSTRUCTION. The Lords of the Committee of Privy Council for Trade having been led to furnish examples to schools in accordance with the plan adopted by the Committee of Privy Council for Education, and to discontinue the practice of keeping a stock of such articles at the Department, No. 37, Gwyder-house, Upper Bedford-place, Russell-square, hereby give notice that on and after the 26th of JANUARY, 1855, examples will not be supplied as heretofore from the Department of Science and Art as at present, but through agents in London and the provinces. Forms of application for aid, and further information may be obtained at the Offices, Marlborough House, Pall-mall, London.

Marlborough House, 7th Nov. 1854.

IF MR. FRANCIS SHARAN, who in the years 1846 and 1847 was the steward and bailiff of a gentleman, in the North Riding of Yorkshire, will communicate with that gentleman, he will be conferring a favour, and may render him great service. December, 1854.

COMPETITIONS.

TO ARCHITECTS.

TOXTETH PARK (near Liverpool) GENERAL CEMETERY.—Parties willing to submit PLANS and DESIGNS for FENCING, LAYING OUT, and DRAINING the intended PUBLIC CEMETERY in Toxteth-Park, and for TWO SEPARATE CHAPELS to be erected thereon, together with a suitable LODGE and ENTRANCE-GATES, in accordance with the Acts of Parliament relating thereto, are requested to send such Plans and Designs, with an estimate of the probable cost thereof, not exceeding in the whole the sum of £5000 to me, the undersigned Clerk to the Burial Board, on or before the 20th day of DECEMBER instant.—A premium of £30 will be paid for the Plan and Design, which shall, in the opinion of the Board, be considered the best, and be also well adapted for the purpose, and a premium of £10 for the second best. On payment of which premiums the Board are to be entitled to the Plans and Designs; but are not by such selections to be in any way bound to employ the parties furnishing the same.—The Plans and Designs to be marked with a motto, and a sealed letter, containing the author's name and address, must accompany each Plan and Design.—A Plan of the Ground (which is about Thirty Statute Acres in extent) can be seen; and any other information connected therewith, may be had on application.

JOHN ROWLAND, Clerk to the Burial Board.

Public Office, Toxteth-park, Liverpool, Dec. 1, 1854.

TO ARCHITECTS AND OTHERS.

A PEOPLE'S INSTITUTE having been established in Belper, the Provisional Committee are anxious to receive PLANS and SPECIFICATIONS for a BUILDING, capable of holding 1000 persons, with rooms and reading-room, lecture-hall, suitable for a library, for classes, &c. The plans must be sent in not later than the 12th of JANUARY, 1855, addressed to the Honorary Secretary. The Committee will pay for the plan chosen, and return the others, free, to their respective authors. Particulars as to the sum to be given for the plan, and the size of the building, may be had on application to the Rev. REES L. LLOYD, Belper, Derbyshire, Hon. Sec.

COMPETITIONS.

TO ARCHITECTS AND OTHERS

NOTICE is hereby given, that the BURIAL BOARD for the parish of ST. NICHOLAS, HARWICH, are prepared to receive DESIGNS, PLANS, and ESTIMATES for PERMANENTLY ENCLOSING the LAND selected for the BURIAL GROUND for that parish, which is, at present about four acres, for ERECTING thereon a KEEPER'S LODGE, or HOUSE, and a RECEIVING HOUSE, with the usual Out-offices, and for laying out and planting such land. The Board will not be bound to accept any design, plan, and estimate, or to employ the person, if any, whose design, plan, and estimate shall be adopted, but will pay such person a premium of five guineas, and his design, plan and estimate shall then become the property of the Board. A plan of the land can be seen, and further information may be obtained at my Office. All designs, plans, and estimates are to be delivered at my Office, under cover, and addressed and endorsed, "Designs, &c. for St. Nicholas, Harwich, Burial Ground," on or before the 23rd day of JANUARY next.

EDWARD CHAPMAN, Clerk to the Board.

Harwich, December 11, 1854.

TO LANDSCAPE GARDENERS, ARCHITECTS, AND SURVEYORS

THE Committee of the COVENTRY FREEHOLD MUTUAL LAND SOCIETY, invite parties to submit PLANS and DESIGNS drawn to a scale of 30 feet to an inch, for FENCING and LAYING OUT their Estate, at Stoke, near this city, in a manner suitable for the erection of Villa and other residences. A premium of 20l. will be paid for the Design which shall be selected and adopted by the Society; and a premium of 5l. will be paid for the Design, which, in the opinion of the Committee, shall be entitled thereto as a second prize. On payment of the premiums the Sheets or Designs are to be entered to the Designs selected, but are not to be considered as having any bound or liable to employ the parties furnishing them. A Plan of the Estate, which is to be hired into 40 lots, may be seen at my office; and a lithographed copy will be forwarded to any party applying for it, to Mr. M. H. Hilditch, Land Surveyor, Coventry, or to me. The Designs to be forwarded to me, free of charge, under a letter or motto, with a sealed letter to correspond, on or before THURSDAY, the 1st day of FEBRUARY next; and in the meantime any further information may be obtained on application to Mr. BROWN or to me.

HENRY J. DAVIS, Solicitor to the Society.

Hay lane, Coventry, Dec. 13, 1854.

TO ARCHITECTS

THE COLCHESTER BURIAL BOARD are prepared to receive DESIGNS, PLANS, and DRAWINGS, comprising general plans, sections, and elevations with ESTIMATES, for TWO CEMETERY CHAPELS, RECEPTACLE HOUSE, LODGE, and ENTRANCE GATES, on their intended New Cemetery, containing about 20 acres, and for FENCING the same on the eastern side. The buildings to be of an inexpensive character, and such as may consist with a due regard to the extent of the ground and the requirements of the locality. The Board will not guarantee themselves to employ the party whose Design shall be approved; but in the event of him being employed, he shall be paid the premium of twenty guineas for his Designs, &c. which shall be the property of the Board. A plan of the ground may be seen, and any further information obtained at my office. The Designs are to be sent free of expense, under seal, without the author's name; but with a motto, on or before the 1st day of JANUARY next, addressed to me, the undersigned, marked "Colchester Burial Ground." A sealed letter, containing real name and address of such company each Design, which will be opened after selection made, and those not approved will be returned. No Designs are with the author's name upon them, with respective drawings will be received.—By order.

PHILIP SMITH SPARLING, Clerk to the Board

5, Abbeygate-street, Colchester, 4th December, 1854.

CONTRACTS.

PADDINGTON.—To BUILDERS.—The Guardians of the Poor of Paddington are ready to receive TENDERS for the EXECUTION of expensive ALTERATIONS and ADDITIONS to their WORKHOUSE, in accordance with plans, specifications, to which may be seen at the Office of the Architect, Mr. FARMINER, No. 10, Sand Martin-place, Tenders may be sent in to the Guardians, at the Workhouse, by TWELVE o'clock at noon, of WEDNESDAY, the 27th DECEMBER instant, after which no Tender will be received. The party whose Tender shall be accepted will be required at his own expense, to enter into a contract and bond, with two sufficient sureties for its due performance. The Guardians do not pledge themselves to accept the lowest or any Tender.

By order of the Board of Guardians,

CHAS. BROWN, Jun. Clerk.

Paddington Workhouse, Harrow road, Dec 6, 1854

NOTICE to BUILDERS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before the 18th day of JANUARY, 1855, from Persons desirous of CONTRACTING with the Honorable Board of Ordnance for the following WORKS at DOVER CASTLE, viz. FITTING UP the CANADIAN CASEMATE BARRACKS, including the Construction of Ablution Rooms, Privies, and Urinals, and the Improvement of the Ventilation Shafts. Plans and specifications of the works may be seen, and forms of Tender obtained, at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 20th DECEMBER, 1854, to the 15th JANUARY, 1855, Sundays excepted. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of 1,000l. for the due performance of the contract. Tenders for the above works to be addressed to the "Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London," and enclosed "Tender for Works at Dover Castle."

N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, December 13, 1854.

CONTRACTS.

NOTICE to GAS COMPANIES and GAS-FITTERS.—ORDNANCE CONTRACT.

Office of Ordnance, Dublin, 11th December, 1854.

With reference to the advertisement dated 18th November, 1854, the principal Officers of her Majesty's Ordnance hereby give notice, that the date for receiving TENDERS for SUPPLYING GAS; also for PROVIDING and FIXING the necessary "PIPES and other FITTINGS of Portobello and Royal Barracks, Dublin," has been EXTENDED from the 15th day of DECEMBER to the 30th DECEMBER, 1854. Persons desirous of TENDERING for the same will receive every information on application at the Royal Engineer's Office, Lower Castle-yard, Dublin; as also at the above Barracks, and plans, specifications, with the terms of contract, open each day at Dublin for the same, which Tenders will be required when the specifications are returned and marked. The pipes and fittings to be complete uniform as may be satisfactory to the acceptance of the Tender; and the supply of gas to be for three years. Persons will have a liberty to Tender for the supply and fixing of the pipes and other fittings, without reference to the supply of the gas, or, for supply of the gas only, without reference to the supply and fixing of the pipes and fittings. Tenders are to be addressed to the Secretary to the Board of Ordnance, Pall-mall, London, and to be received on or before the 30th day of DECEMBER, 1854, at 12 o'clock at noon, and are to be marked on the outside, "Tender for supply of Gas," or "Gas Fittings" (as the case may be), "at the Barracks, in Dublin."

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Notice is hereby given, that sealed TENDERS will be received by the Right Honourable Lord Panmure, on THURSDAY, the 28th DECEMBER, 1854, to be delivered before TEN o'clock, a.m. for the EXACTORS' WORK required in the CONSTRUCTION of a REDOUBT at Prosser's-gate, Isle of Wight. Drawings and details of contract for the above, may be seen, and forms and conditions of contract may be obtained on and after Monday next, and after MONDAY, the 18th inst. on application to Mr. HAWKEN, Clerk of Works, Royal Engineer Office, Mill Dam, Portsmouth. Tenders to be sealed and endorsed, "Tender for Excavators' Work, Freshwater, Isle of Wight."

Royal Engineer Office, Portsmouth, 12th December, 1854.

TO BUILDING CONTRACTORS AND OTHERS

HUNTINGDONSHIRE MILITIA STOREHOUSE.—Her Majesty's Justices of the Peace for the County of Huntingdon intend CONTRACTING with some Person for the ERECTION of a BUILDING for the use of the Militia Arms, Stores, with Sergeants' Quarters, and other provisions, with Act passed in the 42nd and 43rd years of the reign of Her present Majesty, intituled "An Act to amend the Laws relating to the Militia in England and Wales," according to the Plans and drawings prepared by Mr. ROBERT JOHNSON (which may be seen at the said Justices' Meeting-room, on Monday next, between the hours of TWELVE and FOUR o'clock), and Specifications to be prepared by the said Mr. JOHNSON for the same, which are to be delivered sealed to the Trustees for the purpose of contract, directed to the Clerk of the Peace, and endorsed "Tender for Huntingdonshire Militia Stores," on or before TWELVE o'clock at noon of THURSDAY, the 28th DECEMBER instant, when Tenders will be opened by the Magistrates at their General Quarter Sessions of the Peace, to be holden at the Shire Hall, in the Borough of Huntingdon, on the 1st of JANUARY next; but the Magistrates do not pledge themselves to accept the lowest or any of the Tenders.

Dated this 1st day of December, 1854.

B. A. GREENE, Clerk of the Peace.

SHIPLEY LOCAL BOARD of HEALTH.—WATERWORKS CONTRACT, No. 1.—TENDERS.—The Local Board hereby give notice that they are prepared to receive TENDERS for the MANUFACTURE and SUPPLY of certain CAST IRON SOCKET PIPES and other CASTINGS, in drawings and specifications, which may be seen at the Surveyor's Office, at the Office of the Board, Bolton Bridge, Otley, Engineer to the Waterworks, Bradford, and at the Office of Messrs. Sharp, Brothers, and Co. Manufacturers, Keighley, on or before SATURDAY, the 16th day of DECEMBER, 1854. The Local Board do not pledge themselves to accept the lowest or any Tender.

Jos. THOMPSON, Clerk to the said Local Board

Bradford, Nov. 30, 1854.

LONDON, BRIGHTON, and SOUTH-COAST RAILWAY.—The Directors are prepared to receive TENDERS for the supply and delivery of the following quantities of PERMANENT WAY MATERIALS:—

Rails	1,000 Tons.
Fish Plates	120 "
Bolts and Nuts	25 "
Chair spikes	4 "
Oak Sleepers	500 "

The specifications and forms of Tender may be obtained on application to the Storekeeper, Mr. WM. WALKER, at the Brighton Terminus, and Tenders must be delivered at the same signed, not later than WEDNESDAY, the 20th instant.

FREDERICK SLIGHT, Secretary

London-bridge, December 11, 1854.

BOSTON CORN EXCHANGE and ATHENÆUM.—To BUILDERS and CONTRACTORS.—The Directors of the Boston Corn Exchange and Athenæum Company are prepared to CONTRACT for the ERECTION in Boston (Lincolnshire) of a CORN EXCHANGE, ACHENÆUM, and other buildings connected therewith, according to certain plans, drawings, and specifications which will be open for inspection at the office of the Clerks to the Company, in Hub-street, Boston, between the hours of NINE and FIVE o'clock, any day from MONDAY, the 4th day of DECEMBER inst. to TUESDAY, the 2nd of JANUARY next, inclusive, where, or of the Architects, Messrs. BELLAMY and HARDY, Lincoln, any further information may be obtained. Sealed Tenders for the execution of the work, endorsed "Tender for Corn Exchange, &c." are to be sent to the Office of the Clerks, in Boston, on or before the 2nd day of JANUARY next. The Directors do not bind themselves to accept the lowest or any Tender, and security to the satisfaction of the Directors will be required for the due performance of the contract.

STANILAND and CHAPMAN, Clerks to the Directors.

Boston, Dec. 6, 1854.

[For remainder of Contracts see next page.

CONTRACTS.

TO IRONFOUNDERS AND GASOMETER MAKERS.

THE BURY GAS-LIGHT and COKE COMPANY are prepared to receive TENDERS for the MAKING, ERECTING, and COMPLETING a GASHOLDER, 90 feet diameter, and 30 feet deep at their works, Pilsh, near Bolton. Plans and specifications to be seen on application to the Manager, Mr JOHN WOOLSTENHOLME. Tenders to be sent in on or before the 15th day of JANUARY, 1855.

TO BRICK AND TILE MAKERS.

WANTED, TENDERS for the MAKING of a large quantity of HOUSE TILES, BRICKS, DRAINING PIPES, &c., of first-rate quality at the Heworth Shore Brick Works. For further information apply to J. S. FORSTER, 102 High street, Gateshead.

LAMBETH BURIAL BOARD.—To ROAD-MAKERS and Others.—Notice is hereby given, that all persons willing to CONTRACT for MAKING and COMPLETING certain CARRIAGE ROADS and FOOTPATHS, leading to and all round a New Lambeth Burial Ground at Tooting, in the county of Surrey, may inspect the plans, sections, and specification, and other particulars, upon application to Mr. C. M. BARKER, at the Vestry-hall, Kennington-green, any day between the hours of TEN and FOUR. Tenders for the same on or before the hour of TEN on TUESDAY, the 23rd day of JANUARY, 1855, addressed to the Lambeth Burial Board, "Tender for Making Roads." By order of the Board

Dec 13, 1854. C. M. BARKER, Clerk

CLARK and HUNT'S IRONMONGERY, STOVE, and METAL WAREHOUSE, 159, Shoreditch.

Improved Self acting Cottage Ranges, with Large Oven and Boiler,

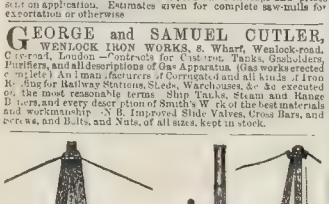
Dr. Arnott's Ventilators, 4s 6d each

An extensive stock of bar, rod iron, and sheet iron

Brick Moulds kept in stock. Any size made to order.

TO IRONMONGERS AND THE TRADE GENERALLY.



D. HULETT and CO. Manufacturers of GAS CHANDELIERS, HALL LANTERNS, GLASS LUSTRES, &c. &c. A large assortment of the newest designs always on show—every article marked in plain figures. Patentees and manufacturers of the Mercurial Fire Regulator. Complete pattern-book and price list, 10s.—Extend 56, High Holborn.

TO IRONMONGERS, BUILDERS, &c.

PATENT WROUGHT-IRON WELDED TUBE for GAS; galvanized to the former; high-pressure Cocks, &c. Manufacturers of Dr. Arnott's improved ventilators.—HULETT and CO. 56, High Holborn.

SAW-MILL MANUFACTORY, Chelsea, London.—WORSSAM and CO. invite the attention of all concerned in sawing, planing, and moulding wood to the simplicity and compactness of their machines over those now in use, which are both cumbersome and expensive. Drawings and prices sent on application. Estimates given for complete saw-mills for execution or otherwise.

GEORGE and SAMUEL CUTLER, WENLOCK IRON WORKS, 8, Wharf, Wenlock-road, City-road, London.—Contracts for Gasholders, Tanks, Gasholders, Purifiers, and all descriptions of Gas Apparatus (Gas works erected complete). An immense assortment of Corrugated and all kinds of Iron Roofing for Railway Stations, Sheds, Warehouses, &c. &c. executed on the most reasonable terms. Ship Tanks, Steam and Range Boilers, and every description of Smith's Work of the best materials and workmanship.—N.B. Improved Slide Valves, Cross Bars, and Screws, and Bolts, and Nuts, of all sizes, kept in stock.

A SAVING of TIME and MATERIALS, with Solidity of Building.

HENRY GOUGH'S PATENT PORTABLE STEAM ENGINES of two, three, four, and six horse power, for grinding mortar, raising building materials, driving pugs, circular-saws, pumps, &c. 46, Albert-street, Manchester.

TESTIMONIAL.

From the Trustees of the Birkenhead Docks

"Engineer's Office, Dock-yard, Birkenhead,

"Nathan Gough, esq. 21st July, 1851

"Sir,—I have much pleasure in informing you that the three-horse engine which I have placed in the caisson for pumping, answers its purpose admirably, and gives its work much better than I expected. From its portability and lightness it is peculiarly adapted for such a purpose.

"I am, Sir, your obedient servant,

"JAS. ABERNETHY."

THE STATUE FOUNDRY and BRONZE WORKS, Lower Belgrave-place, Pimlico. All Works of Art in the various Metals executed at the above Foundry.

CANNON IRON FOUNDRY, 80, Goswell-street, St. Luke's. JONES and BLAKTON, having made great additions to their STOCK of PATTERNS, beg to inform the Trade they can now supply them with Plain and Ornamental Iron Columns, Girders, Railings, Gates, Iron Coping, Balconies, Window Guards, Verandahs, Ornamental Staircase Panels, Iron Staircases, Tomb Enclosures, Trellis Panelling, Lamp and other Brackets, Cantilevers, Newel Bars, Water Closet Work, Area Gratings, Fly and other Wheels, Wheel Plates, &c.

BAKER'S OVEN WORK, Forge Backs and Troughs, Rain Water Pipes and Gutters, Sash Weights, Furnace Bars, Stove-Ranges, &c. always in stock.

FOUNDRY AND IRON WORKS, 68, DRURY-LANE, and CHARLES-STREET, DRURY-LANE.

GLOVER, BROS.,

Solicit the attention of the Trade to their extensive Stock of PATTERNS for CASTINGS of EVERY DESCRIPTION, either structural or ornamental.

Patterns of Girders, Columns, Balconies, Railing, Ornamental Carriage and Park Gates, Lamp and Street Posts, Tanks, Pipes, Wheels, Pinions, Lathes, and Steam-engines; Range and Hot-plate Metal. An improved Soot Door, adapted for internal work.

A large stock of Rain-water Pipes, Plain and O G Gutters, Airbricks, Sash Weights, Air-tight Sewer Grates, Stable Fittings, Hurdles, &c.

Plain and Ornamental Vases 20 per cent cheaper than Terra-cotta

Estimates given for Iron Buildings, Wrought-iron Roofing, Greenhouses, Staircases, Wrought-iron Girders, Fireproof Doors, Book-safes an Hating Rooms, Tanks and Boilers, and every description of ironwork in superfection, and the work executed with every attention to quality at lid speath

GLOVERS IRONWORKS,

68, DRURY-LANE, and CHARLES STREET.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingd m selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depot of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall bridge

TO THE MARBLE TRADE.

MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account, Mr Thompson having no longer his agent

Mr. J. Fabbricotti hopes that the trade will continue to favour him as hitherto, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.

N B The well known qualities of Mr. Fabbricotti's marble are celebrated through out all Italy, England, and America

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD PADDINGTON. The proprietors of the above mills beg to direct the attention of the building public generally their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium. FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.

Just arrived, per *Robert Thom, Bates, Bell*, and *Wilberforce*, 150 Blocks of Marble, and 12,000 feet of Sawn Slab, Mantels, Vases, &c. Yorkshire and Portland stone, Timber Deals, Floors, &c. for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, which is everything will be charged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c. cut on the shortest notice. Country orders promptly attended to.

MARBLE WORKS by PATENT

THOMAS JAMES JONES, Commercial road, Pimlico, London

Manufacturer of Chimney-Pieces and Sanitary Marble (solid, massive Chimney-Pieces, in Black, Black and Gold, Brocatella, Sienna, Verd Antique, Brocatella, Dove, St Ann's, and Serentine Marble, suitable for Dining-Rooms, Libraries, Vestibules, and Entrance-Halls; and a great variety of others in Veined, San Juan, Emperor's Red and Amber Marble, for Boudoirs, Breakfast-Rooms, best and secondary Bed-Rooms, &c.; also, Monuments, Tombs, Tablets, and Pedestals for Busts and Statues, and Slabs for Cabinet Work, &c.; the whole executed from the most classical designs, and to all the varieties of the finest Italian and British Marble, at the lowest remunerative prices.

BUILDERS, &c. &c.—Take Notice of the extraordinary Reduction made in the price of marble work at the WESTMINSTER MARBLE FACTORY.—A Vein Marble Box Chimney-piece, only 25s. A good-sized Vein Marble Box Chimney-piece, with carved bases on plinths fitted up in the best style, only 1l 12s. Their patent machinery enables them to execute Marble Floor at 2s 6d. per foot super. and every variety of Marble work at reduced prices. Their Show Rooms contain the largest Stock of Chimney pieces in England.—Address, WESTMINSTER MARBLE COMPANY, EARL-STREET, MILLBANK

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.

London Agents TREGELLES and TAYLOR, 3, Pinners-court, Old Broad street. Manager—JAS. J. PEARTHAN, Liskeard.

This Granite is selected for the New Westminster Bridge.

GRANITE.—S. SNOOK, Salesman for a newly-opened quarry, invites attention to the stock of Curb and other STONE, now at the wharf, Globe-bridge, Globe-road, Mile-end. Specimens of monuments, gate-posts, troughs, &c. on view, and orders received and estimates given.

MONUMENTS! MONUMENTS!—For POLISHED GRANITE MONUMENTS, apply to G. H. CLARK, Granite Agent, Devon Haytor Wharf, Rotherhithe, London.

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of every description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cannon row, Westminster

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform White'ne Manufacturers and Warehousemen, and Wholesale Dealers in Hearth and Burr Stone, that they can be supplied in quantities from three tons and upwards with the above, delivered at the South-Eastern Railway Goods Depôt, Bricklayers' Arms Station, Old Kent-road, at the current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom

N B. Heavy goods landed, transhipped, or carted with despatch, and at moderate charges.

CAEN and AUBIGNY STONE.—J. P. FOUCARD, Stone Merchant and Quarryman, Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts—Granite Wharf, East Greenwich; Lett's Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall

BLUE LIAS STONE.—Messrs. HUTCHINSON and FREAN respectfully inform Engineers and Builders that they have prepared to deliver BLUE LIAS STONE free on board at Lyme and Charmouth, Dorset in any quantities, at 4s per ton; and CHARMENNEY STONE, at 6s. and 8s. per ton. The value of this excellent Hydraulic Mortar may be estimated by the Government having probably let its exportation north of Dunkirk.

BATH STONE OF BEST QUALITY

RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS.

BATH.

List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, J. P. Farnley, Newton, Harehill, Bath, Caen, and other Block Stone; York Paving, Landings, Steps, Slabs, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Pitching, all at the very lowest prices.

N.B. Estimates given for Masons' Work.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, various Lunatic Asylums, the Ordnance Works, Model Prison, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire, Herefordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also by Messrs. Sharpe, Tooley street; and at Messrs Braby's, Belvidere-road, where terms may be obtained.

MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended to supply themselves from the Manufactory, 39 and 40, Upper Belgrave-place, Pimlico.

THE INDURATED STONE COMPANY is now prepared to GRANT LICENCES for counties or other limits, on reasonable terms.

By the Company's process any soft stone, otherwise useless, may be cheaply converted into a perfect and impervious building stone, applicable to plain or ornamental masonry of any kind, as well as to paving, stables, tanks, baths, scullery, and stable fittings, and other purposes to which slate, marble, Yorkshire, and other hard stones are applied.

Parties intending to apply for licences are invited to send specimens of their local stone, and castings of clay or loam simply dried, to the Company's offices, 5, St. Swithin's lane, London, to be practically considered, to prove the efficacy of the process.

FINDON QUARRIES, on the Cromarty Forth, Scotland, TO BE LET.—These well-known and extensive Quarries will be let on lease from January next, for such a number of years as may be agreed on. They afford an unlimited supply of a valuable and ornamental freestone, suitable for all building and engineering purposes, which has been extensively used both at home and abroad. There is a good local trade, and the Great North of Scotland Railway, now in course of construction, is in the vicinity of the quarries. No land carriage, and ships of heavy draught can load at the quarry-face. The whole is in perfect working order.—For particulars and terms apply to Mr. H. SMITH, Southampton-buildings, London; or to the Proprietor L. M. MACKENZIE, Esq. Balnald-by-Dingwall, Rossshire, N.B.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH. Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carts. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Laths, Concrete, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 12, Fore-street, City. Manufactory, by appointment, to her Majesty's Honourable Board of Ordnance.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1s per foot super. together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 30, New Bond-street.

SOLID SWISS PARQUETS.—1,000 feet of the above SOLID FLOORS (just arrived) are now offered for SALE, for the inspection of Foreign and Colonial contractors, decorators, commission agents, &c. as is particularly called to the above floors, which will be sold for exportation much under the very moderate prices. The woods and workmanship employed in those panels not being adapted to the English climate, the sellers will not take the responsibility of laying them in England, nor will they be answerable for any faults or defects that may occur if used in England, however, they confidently recommend them for any climate of equal temperature to that of their manufacture.—For particulars apply by letter to the Office of the London Parquetry, 8, Whitefriars-street.

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.

The long duration of these roofs without repair, their neat appearance, and the economy of materials employed as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original professors of the above arrangement of MANGER, RACK and WATER TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved, have added all the latest improvements to their invention, secured by patent, which includes another new method of attaching the halter ball and ring, giving to the horse greater freedom, and being no close projection, and no metal to its comfort when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and ardure, are cleanly in appearance, durable, and impervious to odour, manufactured PLAIN, GALVANIZED, or ENAMELLED.

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on Show.

Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY-STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle; they are not likely to get out of order, should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.

An improved CAST IRON TRAP strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the trap plate will pass any matter that may be in a trap, it will let through and therefore is not liable to stop pipes and will admit to Stables and Stall yards, for saving the best part of Liquid Manure.

FLAVEL'S PRIZE KITCHENER.

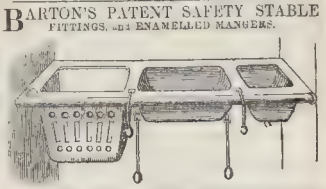
These Ranges are strongly recommended for their simplicity of construction and their economy and cleanliness in use.

The top forms a Hot-plate, and the open fire removes many of the objections which are felt to close Ranges.

They are made in all sizes, from 3 feet to 18 feet in width, suitable for large or small establishments.

They are admirably adapted for the Cure of Smoky Chimneys.

LONDON AGENCY REMOVED TO WIGMORE-STREET, FROM 92, JERMYN-STREET, PICCADILLY.



BENHAM AND SONS,
19, Wigmore-street, London;
and at the Crystal Palace, Sydenham.

WARMING and VENTILATING.—

COTTAM and HALLEN, 2, Winsley-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 4,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses &c. can with confidence recommend their system, which, by the many improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, &c. can also be constructed entirely of iron or wood, and of cast and wood combined. Estimates upon application to COTTAM and HALLEN, Engineers and Ironfounders, 2, Winsley-street, Oxford-street.

BARTON'S PATENT SAFETY STABLE

FITTINGS, and ENAMELLED MANGERS.

The only Patented Invention of this description constructed so as to prevent consequential waste of Hay and Corn, together with all the known improvements.

STABLE FITTINGS, FORTY SHILLINGS PER SET, to fill up the whole width of Stalls, and can be had enamelled or galvanized. Every description of Mangers, Hacks, and Stable Furniture in stock, Iron Hurdles, Gates, Fencing, &c.

Manufacturer of Kite's Patent Noiseless Cast-iron Smoke-curing Chimney Cans. Show-room Baker-street, Portman-square. Price-lists and Illustrated Catalogues forwarded on receipt of two postage-stamps.

JAMES BARTON, Ironfounder, &c. 370, Oxford-street, a few doors east of the Pantheon.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE

having been brought to full perfection, may now be seen in daily operation at EDWARDS and SONS', 49, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air pedestal stoves. Old grates are altered to this principle. Prospectus sent on application.

ROYAL POLYTECHNIC GAS FIRE.

BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 147, Regent-street, London.

THE ONLY STOVE WITHOUT a FLUE.

JOYCE'S PATENT—Plain, from 12s. to 43s.; Ornamental from 31s. 6d. to 5l. to be guinea for warming halls, passages, greenhouses, watercloset shops, show-rooms, and all places requiring artificial warmth. To be seen in use at the sole Proprietor's, S. NASH, Ironmonger, &c. 253, Oxford-street, and at the Old Italian Irons, with perfect cleanliness, for twelve hours, with one pennyworth of coke or cinders. Price 12s.

*** Prospectuses, with drawings and report, forwarded free.

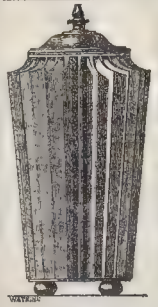
THE SMOKE-CONSUMING STOVE,

invented by Dr ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 11, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved circular Valve, a perfect system of Ventilation.—Manufactured by D and E. BAILEY, 279, Holborn.

ECONOMIC COOKING-STOVE.—

DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opposite to the Monument, London-bridge. Established A.D. 1700.

STOVES for CHURCHES, CHAPELS, HALLS, &c.—



The one, two, three, and four-cylinder Patent SUSPENSION STOVES are the most Healthy, Economical, and Powerful.—BROWN and GREEN, Patentees, Luton.

KITCHEN RANGES! — BROWN and GREEN'S celebrated FLAME

is the best and most economical, and is a certain Cure for a Smoky Chimney.—Manufactory, Luton, Beds. Wholesale Agents—R. W. KENNARD and CO. 67, Upper Thames-street.

HEATING by HOT WATER.—JOHN

WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 8s. 8d. This is a movement in heating by hot water is unprecedented

SYLVESTER'S

HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.

Any number of these Stoves may be heated from one boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S
IMPROVED AIR WARMER

is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to

SYLVESTER and CO.
Engineers, and Manufacturers of Heating Apparatus, 16, Great Russell-street, Bloomsbury.

STEPHENSON and PEILL, 61, Gracechurch-

street, London, and 17, New Park-street, Southwark, Manufacturers of COPPER CYLINDRICAL and improved CONICAL IRON BOILERS, and Conservatory and Hot-house Builders, either in wood or iron, respectfully call the attention of the nobility, gentry, and nurserymen to their simple but effectious method of warming horticultural and other buildings by Hot Water. From the extensive works they have executed, references of the highest respectability can be given, and full particulars furnished on application.

CALORIFERE.—Gold Medal, Paris Exhibition, 1849.—A

300,000 cubic feet room warmed by hot air only, at 85 degrees Fahrenheit, in burning 30 lbs. of coal per hour. The most complete safety against fire, the healthiest and most powerful ventilation, without any machinery, are obtained by BOILEAU'S PATENT CALORIFERE. The constant supply of fresh air carries off instantaneously, by a new well-improved process, all damp whatever, and the makest very desirable for churches, schools, theatres, hospitals manufactories, cloths, houses, dairy, size, laundries, and green-houses. The apparatus has been adopted by His Grace the Duke of Bedford, at Woburn Abbey, by several architects, and it may be seen in operation in many places in London and country. Apply, post-paid, to T. BOILEAU, French Engineer, 36, King William-street, City.

INDIA-RUBBER.—

THOMAS HANCOCK, Manufacturer of every description of India-rubber goods, begs to call the attention of Engineers, Builders, and others, to the following articles, which he has brought into use, and which are now in extensive operation:—

Hancock's Patent Elastic Compound Valves, for Steam, Water, Air, Gas, &c.

Hancock's Patent Elastic Compound Packing, for Steam, Water, Air, Gas, &c.

Hancock's Patent Elastic Compound Hose, for Steam, Water, Air, Gas, &c.

Hancock's Patent Elastic Compound Buffers, for Railway Carriages, Waggons, &c.

Hancock's Patent Elastic Compound Springs, for Railway Carriages, Waggons, &c.

Hancock's Patent Elastic Compound Bands, for Machinery, &c.

Hancock's Patent Elastic Compound Cushions, for Railway Carriages, Waggons, &c.

Hancock's Patent Elastic Compound Rollers, for Machinery, &c.

Hancock's Patent Elastic Compound Cloth, for Machinery, &c.

Hancock's Patent Elastic Compound Tubing, for Machinery, &c.

Hancock's Patent Elastic Compound Sheeting, for Machinery, &c.

Hancock's Patent Elastic Compound Joints, for Machinery, &c.

Hancock's Patent Elastic Compound Washers, for Machinery, &c.

Hancock's Patent Elastic Compound Rings, for Machinery, &c.

Hancock's Patent Elastic Compound Cords, for Machinery, &c.

Hancock's Patent Elastic Compound Mats, for Machinery, &c.

Hancock's Patent Elastic Compound Floor-cloth, for Machinery, &c.

Hancock's Patent Elastic Compound Blocks, for Machinery, &c.

Hancock's Patent Elastic Compound Wheels, for Machinery, &c.

Hancock's Patent Elastic Compound Pulleys, for Machinery, &c.

Hancock's Patent Elastic Compound Pumps, for Machinery, &c.

Hancock's Patent Elastic Compound Valves, for Machinery, &c.

Hancock's Patent Elastic Compound Packing, for Machinery, &c.

Hancock's Patent Elastic Compound Hose, for Machinery, &c.

Hancock's Patent Elastic Compound Buffers, for Machinery, &c.

Hancock's Patent Elastic Compound Springs, for Machinery, &c.

Hancock's Patent Elastic Compound Bands, for Machinery, &c.

Hancock's Patent Elastic Compound Cushions, for Machinery

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS. DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

PROTECTION FROM LIGHTNING.

The many instances which have recently occurred of injury to Churches and other buildings by Lightning, render it very important that a perfect protection should be secured.

BENHAMS AND FROUD,

SUCCESSORS TO R. AND E. KEPP,

Have for many years devoted attention to the MANUFACTURE and fixing of SOLID COPPER LIGHTNING CONDUCTORS. They beg to draw the attention of Architects, Builders and others, to the plan they adopt, which has met the approval of some of the most eminent scientific men.

Numerous Churches, Public Buildings, and Mansions can be referred to where Conductors which BENHAMS and FROUD have fixed may be seen.

ESTIMATES FURNISHED, AND COMPETENT WORKMEN SENT TO ANY PART OF TOWN OR COUNTRY.

40, 41, AND 42, CHANDOS-STREET, CHARING-CROSS.

NORTH BRITISH IRON OFFICE, 18, King William-street, Strand.—The present prices of Castings the same as advertised in this paper on the 2nd instant. Manager, Mr Russell.

RAIN-WATER PIPES.—O-G and Half-round Gutters, Sash Weights, Railway Bars, Air Bricks, &c. J. JONES, Iron Merchant, Iron-bridge Wharf, No. 6, Bankside, has the largest stock in London of the above and other castings, of the very best quality. Also cast-iron pipes for gas, water, or drainage; bends, tees, &c.; flange and hot-water pipes, with all the usual connections; lamp-posts and retorts, stable fittings, pig-troughs, &c. &c.

J. JONES, IRON MERCHANT, IRON-BRIDGE WHARF, No. 6, BANKSIDE, LONDON, near the Southwark Iron Bridge.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER,

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 63, Bridge-road, Lambeth, where a great variety are always on view for church, park, rail, ale, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at most rate prices. None genuine unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axle-trees, sugar-mills, &c.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinet-makers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Watling-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.

P.S. Steam Engines and Machinery contracted for.

TO BELL-HANGERS, GAS-FITTERS, IRONMONGERS, &c. &c.—The Trade supplied on the best terms with House Bells, Zinc, Tube, and Copper Wire, Gas Pendants, Brackets, and Joints of all descriptions for Gas-fitting, in Brass and Iron; Tin, Composition, Iron and Brass Tubing, Corner-poles, Rings and Lacquered Case Tube for Picture Rods, Desk Rails, &c. &c.

Superior Rolled Brass for Engravers, Castings in Fine and Common Brass, Gun Metal, &c. at

RICHARD EVERED'S, Brass and Bell Foundry and Metal Warehouses, Nos. 10, 11, and 12, Charles-street, Long-acre, London.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that complete for fixing, at one shilling the foot.

R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.

OFFICES.—Gateshead-on-Tyne.

CHUBB'S LOCKS & FIREPROOF SAFES.

INSPECTING ATTEMPT UPON THE STRONG ROOM OF THE LONDON AND NORTH-WESTERN RAILWAY, LIVERPOOL.

"London and North-Western Railway Company,
"Liverpool, May 17, 1853

"Gentlemen,—I have much pleasure in bearing testimony to the efficiency of the iron door and locks of your make, which secure the strong room at this office, and which completely baffled the efforts of one or more burglars to get at the money chest on the night of Tuesday last, although it is evident that considerable force was used to break open the door.—I am, gentlemen, your obedient servant, "GEORGE PALMER.

"Messrs Chubb and Son."

FROM MR. OTWAY, SUPERINTENDENT OF POLICE, C DIVISION.

"8, Great Vine-street, May 3, 1853.

"Gentlemen,—I have the pleasure to inform you, that having one of your locks on the street door of my house prevented my being robbed last night. The thief tried to open it, but not succeeding, has so damaged it that I have sent it to you for inspection, and shall feel obliged if you will have it repaired.—I am, gentlemen, your obedient servant, "C. OTWAY,

"Superintendent C Division of Police.

"Messrs. Chubb and Son."

CHUBB'S LOCKS, with all the recent improvements: Cash, Deed, and Paper Boxes, of all sizes; Fireproof Safes and Chests; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock.

Complete Illustrated Lists, with prices and sizes, will be sent on application.

CHUBB and SON, 16, MARKET-STREET, MANCHESTER; 57, St. Paul's Churchyard, London; 28, Lord-street, Liverpool; and Horsley-fields, Wolverhampton.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURCH and BOOBBYER), established nearly 30 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

TO BUILDERS, CARPENTERS, CABINET-MAKERS, &c.

JOHN DALE, 18 and 19, Chiswell-street, Finsbury-square, respectfully invites the above Trade to the inspection of his immense stock of Ironmongery, which cannot be surpassed in variety, quality, and cheapness by any house in London.

Elliptic Stoves, double backs, 33s.; ditto, single backs, 24s. each.
Register Stoves, 5½d. 6½d. 7d. 8d. and 9d. per inch.

3-feet self-acting ditto, ditto, 36s. each.
Air Bricks, 4s. per doz.
Best Town Glue, 56s. Ditto, Scotch, 64s. per cwt.
Best Patent Sash Line.

1	2	3	4	5	6
4s. 6d.	5s.	6s.	7s. 6d.	8s. 6d.	11s. per gross.

And every material required in the building, bell hanging, upholstery, and brass-foundry trades on the most reasonable terms.
List of Prices had on application at the Warehouse, or by letter prepaid.

TO BUILDERS, CARPENTERS, UPHOLSTERERS, SMITHS, BELLHANGERS, and the Trade in general.

IRONMONGERY WAREHOUSE, established for the exclusive supply of the above trades, at wholesale prices.—JOHN YOUNG, Birmingham and Wolverhampton Agent and Factor, 18, Blandford-street, Manchester-square, London, running out of Baker street, Portman square.

TUPPER and CARR'S (Craufurd's) PATENT GALVANIZED IRON, for roofs, flats, cisterns, gas tubing, gutters, pipes, fencing, &c. To be obtained only at Tupper and Carr's Warehouse, Regent's Canal Dock, Limehouse, London; or Berkley-street, Birmingham. Sheets, bars, rods, hoops, nails, rivets, screws, wire, and manufactured articles, pails, coal-scoops, baths, pumps, &c. always in stock. N.B. An allowance to the trade.—Please address all letters to TUPPER and CARR'S Chief Office, 3, Mansion-house-place, City, London.

PATENT GALVANIZED IRON, (IMPROVED PROCESS,) JOHN SYMONDS and CO. WORKS.—GLASS-HOUSE YARD, opposite the principal Entrance to the London Docks.

GALVANIZED SHEET IRON and WIRE of every description, superior in all respects to that produced by any other process. THE TOUGHNESS AND MALLEABILITY of the Iron being preserved.

Estimates given for IRON ROOFS, Corrugated Sheds, Houses, Telegraph-Wire, Submarine Cables, WIRE-ROPE, Fencing, &c. Roofs fixed complete.

BUILDERS, Contractors, Carpenters, and others are invited to inspect the stock of NAILS, TOOLS, BRASS, AND GENERAL IRONMONGERY at PELL and STEDALL'S,

Nos. 5 and 6, BROAD-STREET, BLOOMSBURY.

The prices will be found the lowest, and the stock one of the largest in the trade. A price list sent on application.

IRON ROOFS, Wrought-iron GIRDERS, Girder Bridges, Railway and Builders' Wrought-iron Work, Gasholders, Tanks, and Boilers.
CHARLES WALKER and SONS,
Midland Iron Works, Tipton, Staffordshire.
Office, Little Sutton-street, London.

GALVANIZING WORKS.—SKAIFE'S PATENT GALVANIZED IRON (Superior Process).—Works at the Regent's-canal-basin, Commercial-road, Limehouse, London.—J. SKAIFE supplies this Metal in every form, viz. Sheets, plain and corrugated, of all sizes and gauges; Wire of every gauge, and Wire Netting of all descriptions; Guttering, Rain-water, Screwed Gas and Water-pipes; Hooping, Castings, Furnace-pans, Baths, Buckets, &c. wholesale, retail, and for export. Every description of Ship's Ironwork Galvanized; Deck-spikes, nails, &c. kept ready Galvanized. Estimates and drawings given for roofs and buildings fixed complete.—J. SKAIFE is also Agent for Morewood and Rogers's Patent Galvanized Tinned Iron, both flat and corrugated; also for Morewood and Rogers's Patent Galvanized Tinned Iron Tiles, for exportation; and Plumbic Zinc. Portable Emigrants' Houses and Substantial Stores supplied at moderate prices, and on the shortest notice. An allowance to the Trade.

SAMUEL HEMMING'S PATENT much approved PORTABLE BUILDING and ROOFING MANUFACTORY, REMOVED from BRISTOL to BOW, near London, close to Bow Railway Station.—A large variety of buildings always on view, churches, chapels, shooting boxes, lodges, bazaars, ornamental villas, dwelling-houses, farm buildings, and fire-proof stores. Also, railway stations, trucks, and carriages made to any plan on the shortest notice.

JACKSON and COOK, Ironfounders and Manufacturers of CORRUGATED and GALVANIZED IRON ROOFS and BUILDINGS, beg to call the attention of Architects, Builders, and others, requiring roofing, to the superiority of iron as manufactured by them for that purpose, in point of lightness, durability, cheapness of construction, and being fire-proof. Drawings and estimates furnished.
Island Foundry and Ironworks, Millwall, London.
Offices: 12, Fenchurch-street, City.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

G. HOWLETT, by appointment to the Board of Trade, Newington Zinc and Galvanized Iron Works, 2 Surrey-place, next the Elephant and Castle, Newington. STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Sise-lane, London.

THOMAS EDINGTON (lately senior partner of the Phœnix Iron Works, Glasgow), Iron Merchant, Contractor, Agent for Patents, General Commission Agent, Inspector of Railway Bars and Castings, 17, Gordon-street, Glasgow. Agent on commission for the purchase of Scotch Pig Iron, Railway Bars, Bar-Iron, Castings; and for the sale of English Boiler and Ship Plates, Bar-Iron, Angle and Rivet Iron, Anchors, Tinned Plates, Chains, Cables, Nails, Steel, &c. &c.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

eing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, blinds are unnecessary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c. for which purposes it is supplied in squares of all sizes, from 3 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS ROBINSON AND SON,

PATENTEES FOR THE MANUFACTURE OF

WOOD MOULDINGS AND OTHER JOINERS' WORK BY MACHINERY,

BEG TO CALL THE ATTENTION OF THE BUILDING TRADE AND THE PUBLIC TO THE DIFFERENT ARTICLES THEY MANUFACTURE, ALL OF WHICH WILL BE FOUND GREATLY SUPERIOR TO ANY OF THE SAME DESCRIPTION MADE BY HAND LABOUR.

SHIPPERS SUPPLIED ON LIBERAL TERMS. PATTERN-BOOKS AND PRICES SUPPLIED ON APPLICATION.

WORKS—ROCHDALE, near MANCHESTER. LONDON WAREHOUSE, 20, VINE-STREET, WATERLOO-ROAD, LAMBETH.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish-Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE.

87, BISHOPSGATE-STREET WITHOUT, LONDON.

SEYSSEL ASPHALTE COMPANY,

STANGATE, NEAR WESTMINSTER-BRIDGE, LONDON.

ESTABLISHED 1838.

CLARIDGE'S PATENT.—Frequent complaints having been made by ARCHITECTS and others of the failure of certain works supposed to have been done by this Company (but which in fact were executed with spurious materials), a list of works executed with the

GENUINE SEYSSEL ASPHALTE

is kept at the Office, that it may be at any time ascertained whether any work in which a failure has taken place was executed by this Company.

J. FARRELL, Secretary.

N.B. THE EXCLUSIVE SUPPLY OF ASPHALTE from the Mines of Pyrimont Seyssel being conceded to this Company, the Directors particularly recommend Architects, Builders, and others (for the purpose of securing the use of the genuine article) to insert in their specifications

"PYRIMONT SEYSSEL ASPHALTE, CLARIDGE'S PATENT,"

and not merely "Asphalte," or "Bitumen," as in many cases where these terms have been used, gas tar, and other worthless and offensive compositions have been introduced.

1853.

GENUINE SEYSSEL ASPHALTE.

ORSI AND ARMANI.

THE EXCLUSIVE SUPPLY OF SEYSSEL ASPHALTE (FRANGY)

DIRECT FROM THE MINES.

REDUCTION IN THE PRICE FOR VARIOUS WORKS FIFTEEN PER CENT.

AND THE

WORK GUARANTEED FOR THREE YEARS.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

PATENT METALLIC LAVA.

A printed List of the important Works for Flooring, Roofing, Covering of Arches, &c. &c. executed from 1848 to 1852, with this Material, may be obtained at the Office of

ORSI AND ARMANI.

THEIR PATENT METALLIC LAVA IS FIFTEEN PER CENT. CHEAPER

THAN THE GENUINE SEYSSEL ASPHALTE OF MESSRS. O. AND A.

OR THIRTY PER CENT. LOWER THAN ANY OTHER MATERIAL CALLED BITUMEN OR ASPHALTE.

Offices, No. 6, Guildhall Chambers, Basinghall-street, City.

CHEAP, LIGHT, AND DURABLE ROOFING.

CROGGON'S PATENT ASPHALTE ROOFING FELT, has been extensively used and pronounced efficient, and particularly applicable for warm climates.

1st. It is a non-conductor.—2nd. It is portable, being packed in rolls, and not liable to damage in carriage.—3rd. It effects a saving of half the timber usually required.—4th. It can be easily applied by any unpractised person.—5th. From its lightness, weighing only about 49 lbs. to the square of 100 feet, the cost of carriage is small.—6th. Under slate, metal, or tiles, it is a most effective non-conductor

INODOROUS FELT, for damp walls and for damp floors, under carpets and door cloths. Price ONE PENNY per Square Foot.

CROGGON and CO.'s PATENT FELTED SHEATHING, for Covering Ships' Bottoms, &c. and

DRY HAIR FELT, for Covering Steam Boilers, Pipes, &c., preventing the radiation of Heat, saving 25 per cent. of Fuel and deadening Sound.

Samples, testimonials, and full instructions, on application to CROGGON and CO. 9, DOWGATE-HILL, LONDON.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH PLATE, silvered and for glazing, of unrivalled quality and finish; ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 113, OXFORD-STREET.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 398, Oxford street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Hartley's Patent Rough Plate Tiles from 8s. per dozen.

Perforated Rough Plate and Sheet Ventilating Glass, 1s. 6d. per foot.

Flashed Ruby, 1s.; Ground Sheet, 3½d.; Enamelled, 8d. per foot.

Crown or Sheet Squares, in 100 feet boxes, 2d. per foot.

Sashes Primed and Glazed, 3d. per foot.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

GOOD FOREIGN SHEET-GLASS, in cases of 200 feet each; average size, 40 by 30, at 32s. 36s. and 40s. per case; ground ditto, 7½d. per foot; crown and sheet squares, in 100 feet boxes, from 14 by 10 to 22 by 14, 3d. per foot; ¼-inch rough British plate tiles, 11s. per dozen; also, crown and sheet glass, in crates; British and patent plate, fluted and stained glass, glass slates, &c. Sheet lead, pipe, white lead, oils, turpentine, colours, &c.—G FARMILOE and SON, 118, St. John-street, West Smithfield, London.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO SQUARE.

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass now manufactured at WHOLESALE PRICES.

WHOLESALE BRITISH and FOREIGN WINDOW-GLASS WAREHOUSE, established upwards of Sixty Years.—ROBERT METTAM begs to call the attention of Builders and the Trade in general, to his present prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description now manufactured. Extra size Sheet Glass of all qualities and substances for Shop Fronts. Estimates and Price Lists forwarded post-free, on application at the Warehouse, 30, Princes-street, Leicester-square, London.

FOREIGN WINDOW GLASS.—The cheapest House for the above is W. HICKSON'S, 55, Long-acre, in cases of 200 feet, 32s., 36s. and 39s.; 40hs. 28s. and 30s.; sheet, in boxes, from 14 by 10, and 15d. per foot; ground glass, in cases, at 3d. and sheets at 7½d. per foot, for cash only.

JONET and DE DORLODOT, Glass Works, Couillet, Belgium; Sole Agents, L. de DORLODOT and CO. Manufacturers and Importers of every description of Coloured, Sheet, Fancy, and Ornamental Window Glass. Warehouse, 2, Old Trinity House, Water-lane, City.—respectfully invite the attention of artists in glass, painters, and others, to their extensive and varied assortment of Antique, Rough, Cathedral, and other Coloured Glasses, suitable for staining and church purposes, which they have always in hand, in sizes from 9 by 30 to 45 by 30. Warranted to stand the fire, samples of which may be had on application.

REVOLVING SAFETY WOOD and IRON SHUTTERS.—SNOXELL, Patentee, 96, Regent-street, and at his Steam-works, 126, Old-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. References can be given to gentlemen whose mansions are fitted herewith, and numerous large establishments, where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

J. FISHER, 70, YORK-ROAD, LAMBETH, Builder and Manufacturing Joiner. 1½ and 1¾ four-panel doors from 8s. each; 1¾ sashes and frames from 7s. per foot; 2 inch ditto from 8d. Windows fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for, according to design.—A List of Prices sent on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Shop-fronts, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

AIR-TIGHT SHOW-CASES. — GREENWOOD'S Patent India-rubber Stops, fitted to old or new cases, render them perfectly air-tight; also fitted round doors, &c. to keep out cold, dust, and draft. New glass cases made on this principle at a reduced cost.—JOHN GREENWOOD, Patentee, 10, Arthur-street West, London-bridge.

THE BUILDER.

PAPIER MACHE AND CARTON PIERRE ENRICHMENTS MANUFACTORY,

49 & 50, RATHBONE-PLACE.

GEORGE JACKSON AND SONS

Beg to call the attention of Architects, Builders, Decorators, and others, to their large assortment of ENRICHMENTS of every style, executed in the highest class of art. Price lists for ceilings of every variety of design, from the Elizabethan, or Jacobean, to the Louis XIV. in which are to be seen the most elaborate and most beautiful characters, viz. as follows:—Friezes, centres, trusses, tables, window cornices, screens, cornices, and the whole range of accompaniments to receptions rooms of the first class as well as more select.

The world-wide and rapid enlargement of premises enable GEORGE JACKSON and SONS to announce the execution of works of the above description in these advantageous materials at a cost considerably below any known method, while for quality, relief, and finish, they flatter themselves they stand unrivalled.

DESIGNS MADE FOR ANY WORKS.

PAPIER MACHE AND CARTON PIERRE WORKS, 49 & 50, RATHBONE-PLACE, LONDON.

Just published, a large Quarto Work of their ENRICHMENTS, with dimensions for reference and price.

Now ready, in demy 4to. with numerous Engravings and Woodcuts, price 1l. 11s. 6d. bound in cloth, the Second Edition, considerably enlarged, of

A PRACTICAL TREATISE on the MANUFACTURE and DISTRIBUTION of COAL GAS, its Introduction and Progressive Development. Illustrated by Engravings from Working Drawings, with General Estimates.

By SAMUEL CLEGG, Jun. M. Inst. C.E. F.G.S.
London: JOHN WEALE, 59, High Holborn.

ILLUSTRATED LONDON NEWS.—The year 1854 holds fair to be one of the most important and eventful of modern history. On the 8th of JANUARY, 1855, will be issued the first number of the Fifth Volume of the ILLUSTRATED LONDON NEWS, and not merely a new volume, but of a New Year—each volume being perfect and complete in itself—containing, for the time, a faithful record, pictorial and descriptive, of all events of interest in any part of the world. To that limited portion of the public who do not subscribe to the Journal, it may be stated, that no period could be selected more opportune for commencing the whole expense being but Twenty-six Shillings per annum, exclusive of double numbers, which are issued in rare cases only, when it would be impossible to crowd the important events and Engravings into a single number; for this small sum the Subscriber will receive twenty-four large pages—seventy-two Engravings of the most interesting incidents carefully selected from the News of the Week, interspersed with a variety of charming Articles on the chief topics of the day.

The ILLUSTRATED LONDON NEWS has by its immortal and consistent advocacy of the welfare of the Public, secured for itself a political influence scarcely second to any Newspaper in the Empire, and respectfully solicits, from the public, a continuance of the support it has received in all beneficial measures proposed and adopted by the English Parliament.

Foreign politics will ever command the attention which ought to be devoted to so important a feature of a newspaper. On the question of the Russian War, during the year 1854, ONE THOUSAND ENGRAVINGS appeared in the ILLUSTRATED LONDON NEWS. Extensive arrangements, calculated to improve this popular Journal, at heavy expense, in this, will greatly enrich its Literary, Scientific, and other attainments, have been made, and will, thus combine on, thus paper the greatest talent of the day.

The ILLUSTRATED LONDON NEWS has been established thirteen years, during which period it has received a greater degree of encouragement and approbation than any Journal ever published. This is proved by the returns of stamps issued from time to time by order of Parliament. The stamps supplied for the first six months of 1854 were upwards of 27,000,000 sheets, showing a WEEKLY CIRCULATION of ONE HUNDRED AND THIRTY THOUSAND COPIES.

Terms for payment in advance: Half-year, 13s. 6d.; Year, 26s.

All of the volumes of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, in paper or cloth. Covers for binding the volumes, 2s. 6d. each.

All numbers may be sent free by post to any part of the Kingdom and the Colonies.

Give an order for six months, to ensure all the gratuitous prints and supplements being delivered by the Country Newsman.

The ILLUSTRATED LONDON NEWS is published in London every Saturday. Stamped, to go free by post, Sixpence per copy.

Office, 198, Strand, London.

A SUPPLEMENT, GRATIS, with the WEEKLY DISPATCH, EVERY WEEK UNTIL FURTHER NOTICE. The unrivalled interest which attaches to every incident connected with the operations of the Allied Armies in the East, has determined the Proprietors of the WEEKLY DISPATCH to devote a greater space to the intelligence from the seat of war than the ordinary limits of this, the largest newspaper published, could possibly afford; and, with the view of giving their amplest details they have resolved upon the issue of a Series of Supplements Gratis, which will include every particular of interest connected with the Siege and Events on the contested Sebastopol, and will be continued whenever demanded by the progress of the Campaign. By the publication of these Supplements the portion of the Paper usually devoted to Incidents of domestic and foreign importance will be reserved intact, and the engrossing subject of the War will receive the fullest and most varied illustration. A Supplement will be published on Sunday next (Gratis), and on every succeeding week until further notice.—Orders may be given to all Newsvendors in town and country; and to the publisher, at the *Dispatch* Office, 139, Fleet-street, London.

THE FREEMASONS' QUARTERLY MAGAZINE. New series. Enlarged, price 2s. 6d. A specimen Number will be sent on receipt of six postage-stamps the cost of postage. No. VII. for October, just published.

GEO. ROUTLEDGE and Co. Farringdon-street; and
R. SPENCER, 314, High Holborn.

This day is published price Threepence, or Stamped for Post, Fourpence.

THE SEVEN POOR TRAVELLERS, being the CHRISTMAS NUMBER of HOUSEHOLD WORDS, conducted by CHARLES DICKENS, and containing the amount of one regular number and a half.

Office, 16, Wellington-street North, Strand; and sold by all Booksellers and Newsvenders.

This Day is published, in a handsome folio volume, price 18s.

PICTURES of LIFE and CHARACTER, containing upwards of 360 Wood Engravings, from the COLLECTION of Mr. PUNCH.

By JOHN LEECH.

BRADBURY and EVANS, 11, Bouverie-street.

On the 15th December will be published, price 8d. or Stamped 1d.

PUNCH'S ALMANACK for 1855. Illustrated by JOHN LEECH and JOHN TENNIEL.

Office, 85, Fleet-street.

In the press, and shortly to be published, subscribers, 21s. non-subscribers, 30s.

HINTS on VILLAGE ARCHITECTURE; being a Selection of Designs for Schools, Cottages, and Parsonage Houses, adapted for rural districts, with Plans, Elevations, and Estimates. Dedicated, by permission, to Thomas Poynder, Esq.

By HENRY WEAVER, Architect and Estate Agent, author of "Hints on Cottage Architecture."

Subscribers names and addresses forwarded to the Author, Beversbrook House, Calne, Wilts; or to his publisher, Mr. HENRY POPE, 29, Budge-row, Cannon-street, London, of whom may be had

A third edition, just published, price 1s. 6d.

HINTS on COTTAGE ARCHITECTURE; being a selection of Designs for Labourers' Cottages, singly, in pairs, and in groups, with Plans, Elevations, and Estimates. Corrected to the present prices.

London: HENRY POPE, 32, Budge-row, Cannon-street; and by order of all Booksellers.

Just published, price 2s. 6d. boards, post prepaid 3s. the Third Edition revised and enlarged, of

THE BURIAL ACTS, 1852, 1853, 1854: being the Metropolitan Burials Act, 1852; the Burials (beyond the Metropolis) Act, 1853; and the Burials (beyond the Metropolis Amendment Act, 1854; with the Incorporated Clauses from Cemeteries Clauses Act, 1847, etc. etc. The Instructions and Regulations of the Home Office for providing Cemeteries and conducting Interments, and an Explanatory Analytical Abstract of all these Statutes; with Directions for the Constitution of Burial Boards, the Choice of Sites, and Formation and Planting of Burial Grounds, with Estimates for Works, etc. etc.; an Copious Index.

By JAMES J. SCOTT, of the Middle Temple, Barrister-at-Law

London: KNIGHT and COMPANY, 90, Fleet-street. Publishers by Authority to the Poor Law Board and the General Board of Health.

Price 1d. sewed

CEMETERY CONSTRUCTION and REGULATION.—Instructions issued by the Secretary of State for the Home Department to enable Burial Boards in providing Cemeteries; also the Home Office Regulations for conducting Interments in Burial Grounds; with Introduction and Index.

By JAMES J. SCOTT, of the Middle Temple, Barrister-at-Law.

London: KNIGHT and COMPANY, 90, Fleet-street. Publishers by Authority to the General Board of Health and the Poor-law Board.

BOOKS and FORMS REQUIRED under the BURIALS ACTS, 1852, 1853, 1854, published by KNIGHT and COMPANY, 90, Fleet-street, London:—

Notice of Vestry Meeting to consider the providing of a Burial Ground	Per dozen each, 1s. or 1 dozen each, by post, prepaid, 4s. 6d.
Transmitting Copy of Resolution of Vestry to provide Burial Ground to Secretary of State	
Requisition to convene Meeting to provide Burial Ground	
Minute Book, Foolscap, with Index	£1 5 0
Ledger ditto ditto	1 5 0
Letter Book ditto ditto	0 16 0
Cash Book ditto ditto	0 16 0
Book for Entry of Copies of Contracts made by Burial Board, each	1 1 0
Book for Entry of Fees Received and Paid for Burials, &c. 1l. 5s.; smaller ditto	0 16 0
Register of Graves, 1l. 5s.; smaller ditto	0 16 0
Register of Purchased Graves, 1l. 5s.; smaller ditto	1 1 0
Register of Burials (in the Act directed, 5000 Names, 3l. 3s.; ditto, 4,000 ditto, 2l. 12s. 6d.; ditto, 3,000 ditto, 2l. 2s.; ditto, 2,000 ditto, 1l. 11s. 6d.; ditto, 1,000 ditto, 1l. 1s.	

* * The Register of Burials may be had of any size to order, and the Name of the Burial Board printed in where required without extra charge. It may also be had on Vellum or Parchment.

Index Book to Register of Burials, each	0 16 0
Certificates of Burial, in books of 100 Certificates	0 5 0
Contract and Bond for Works	0 1 0
Requisition to convene Adjourned, or Extraordinary Meeting of Members, per quire	0 2 6
Notice of Ordinary, Adjourned, or Extraordinary Meeting of Members, per quire	0 2 6
Notice of Members of Burial Board or Overseers of the Poor to pay Contribution from Poor-rates, with Counterpart, in books, each	0 5 0

Yearly Statement of Auditors, per one

The other Forms required under the several Burial Acts are in preparation, and may be obtained on application to KNIGHT and COMPANY, as many of the Books can be finished in a few hours, calf, etc. to order.

Seals of Burial Boards prepared in Steel, with Ivory Handles, of the very best workmanship, of which specimens may be had, post free, on application.

Plans of Burial Grounds Drawn and Lithographed to order.

Table of Fees charged in Burial Grounds, printed and framed to order.

Epiglo since Press, with Die and Counterpart, complete

London: KNIGHT and COMPANY, 90, Fleet-street, Publishers by Authority to the Poor Law Board and the General Board of Health.

Lately published, price 2s. 6d.

A LECTURE on RESPIRATION.

By THOMAS HOPLEY.

"This ably-written essay is intended to form the sixth of a series of plain and simple lectures on the education of man, written with a view to delivery in London, but now separately published as a timely contribution to the sanitary exhortations addressed to the middle and upper classes, which the late advent of the plague to our metropolis renders so advisable at the present moment."—*Builder*

"The object is to promote the physical, intellectual, and moral elevation of the masses (society)."—*Sheffield Free Press.*

"Generally well adapted to its purpose."—*Lancet.*

"Every inhabitant of every large city should be acquainted with its contents."—*Critic.*

"Ought to be read and circulated by hundreds of thousands."—*Leicester Journal.*

"Should be read by all who have a due regard to health."—*Cambridge Independent.*

"Should circulate as widely as the air." *Gateshead Observer.*

"Prolific by startling."—*N. B. Daily Mail*

"None can peruse its perusal without being convinced of the absolute necessity that exists for a radical change being effected in the ventilation of our cities and the erection of our dwellings."—*Paisley Journal.*

"We say that the lecture should not only be read, but its theory reduced to practice. Every sanitary committee should act upon the hints thrown out; every man who has influence should bring it to bear upon those with whom he is connected."—*Ipswich Express.*

"If each, then, from the highest downwards, would make this a question of immediate personal happiness, we should soon have such a force of public opinion as would not allow a badly-framed locality or ill-ventilated house to remain in the kingdom."—*British Army Despatch.*

London: JOHN CHURCHILL, New Burlington-street

ILLUSTRATED WORK ON AUSTRALIA.

This day, oblong 4to. price 21s. fancy cloth gilt,

THE AUSTRALIAN KEEPSAKE; containing thirty-eight beautiful plates and vignettes on steel of Landscape Scenery of New South Wales.

London: R. SANDS and SON, 9, Southampton-street, Pentonville; SANDS and KENNY, Sydney and Melbourne; and all Booksellers.

On the 30th inst. in 16mo. price One Shilling,

VOYAGES and DISCOVERIES in the ARCTIC REGIONS, from the Sixteenth Century to the Return of Dr. Rae in October last.

Edited by E. MAYNE,

Forming Part 73 of the "Traveller's Library."

London: LONGMAN, BROWN, GREEN, and LONGMANS.

Second Edition, with Additions, in 3 vols. post 8vo. price 31s. 6d.

AUTOBIOGRAPHY of B. R. HAYDON, Historical Painter. Edited, and continued to his death from his own Journals.

By TOM TAYLOR, M.A. of the Inner Temple, Esq.

"It is difficult to say in which sense the work before us possesses the greater interest, whether as a contribution to the critical history of art in England, during the first half of this century, or as an Illustration of both moral truths, enforced by a terrible conclusion. In either point of view its value can hardly be overrated. The artist and the moralist may alike pore over its pages, and learn from it lessons at once stern and profound. The editor has performed his difficult and delicate task in a manner which has won the highest credit."—*John Bull.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND CHEAPER EDITION.

The Third Edition, in 8vo. price Two Guineas,

GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical. Illustrated with more than 1,600 Engravings on Wood, by JOSEPH BRANSTON, from Drawings by J. S. GWILT. With a Supplement on Gothic Architecture.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

ACTON'S COOKERY BOOK.

The Fourteenth Edition, in fcp. 8vo. price 7s. 6d.

ELIZA ACTON'S MODERN COOKERY reduced to a System of Easy Practice: with Directions for Carving.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In square crown 8vo. with Portrait and Vignette, price One Guinea, cloth; or 30s. bound in calf by Hayday,

MR. MACAULAY'S CRITICAL and HISTORICAL ESSAYS contributed to the Edinburgh Review, complete in One Volume. Also, a LIBRARY EDITION, in 3 vols. 8vo. 36s.; another in 3 vols. fcp. 8vo. 21s. and the PEOPLE'S EDITION, 2 vols. crown 8vo. 8s.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In square crown 8vo. 21s. cloth, or 36s. in morocco, by Hayday,

THOMSON'S SEASONS. Edited by BOLTON CORNEY. With about Eighty Engravings on Wood from Designs by Members of the Etching Club.

THE TREASURY of NATURAL HISTORY.

THE HISTORICAL TREASURY.

THE BIOGRAPHICAL TREASURY.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

The Builder.

SATURDAY, DECEMBER 16, 1854.

WE may hope that the foundation for a permanent ARCHITECTURAL EXHIBITION in London has now been laid, and that year by year the superstructure will increase in importance, and in the consideration of the public. Every living man, and woman, is interested in the advancement of architectural taste and skill: every man, and woman, is affected in one way or another by the buildings amidst which they are placed; and all should therefore aid in obtaining a good annual exhibition of architectural works, as a means of progress, if it be only to the extent of paying their shilling at the door of the gallery. After many failures, the committee have secured Exhibition-rooms for a term of years, namely, the Galleries of the Society of British Artists, in Suffolk-street. This has been done at some personal risk, of course, but they look with confidence to the public and the profession to support them in what they consider to be an absolutely necessary step. We should be very unwilling to give up even the half-room in the Royal Academy appropriated to architectural drawings: it is there that, for some time to come yet, a large majority of the public will get the only notion they would be willing to get of what is being done by the architects and builders of our day. Hundreds, if not thousands, are led to spend a few minutes in the architectural room at the Academy, who, at present, would not take the trouble to visit a collection of architectural drawings solely, still less to pay a shilling for doing so. We should be very sorry, therefore, as well as for other reasons, to see the connection of the Royal Academy with architecture lessened; and it is most desirable that no feeling of antagonism should grow up. We do not want one set of architects holding to the Academy and another set supporting the Architectural Exhibition, but all equally determined on doing their best in both quarters.

The merest glance round the exhibition now opened, which consists of 330 frames or strainers (some of them containing several drawings) and twenty-one sets of specimens in the Department for Materials, will suffice to show that the additional exhibition is required; and there is no doubt that now the matter is understood, and through longer notice being given, the fact will be made still more evident next year. At present it is right to say the best possible feeling exists: we are simply guarding against what might arise. Although the Academician architects do not appear on the present occasion, one of the six brass doors designed by Mr. Cockerell for St. George's Hall, Liverpool, is exhibited (4), with the concurrence, of course, of the professor, by his right-hand man, Mr. Goodchild. Mr. Tite sends his composition of the works of Inigo Jones (137), and Mr. Scott shows the south-eastern chapel of Doncaster church (99), now being rebuilt at the cost of Mr. Forman, — a nice piece of Decorated work. Mr. P'Anson, Mr. E. B. Lamb, Mr. W. P. Griffith, Mr. Habershon, Mr. Fergusson, Mr. Ashpitel, Mr. J. B. Watson, Mr. Joseph Clarke, Mr. Digweed, Messrs Deane and Bailey, Mr. Phipson, Mr. Truefitt, Mr. James Murray, Mr. Allom, Mr. Papworth, Mr. Dollman, Mr. E. W. Tarn, Messrs. Prichard and Seddon, and many others whose names are known to our readers, are amongst the exhibitors. The Rev. J. L. Petit sends some of his architectural sketches; and there is a good sprinkling of excellent photographs by Mr. Francis Bedford, Mr. W. Russell Sedgefield, Mr. E. Roberts, and others. Photography will greatly subserve architects.

A desire to turn brick to good account is observable in several of the drawings; and the designs for dwelling-houses of some by the younger men (those by Mr. Charles Gray, for example), show the right feeling, and if we mistake not, prefigure an advance.

We shall be able to go more into detail hereafter, and in the meanwhile recommend all our readers to show their good will by *visiting* the Exhibition.

MR. RUSKIN'S THIRD LECTURE AT THE ARCHITECTURAL MUSEUM.

GENERAL PRINCIPLES OF COLOUR.

ON Saturday, the 9th, Mr. Ruskin delivered the third and last of his series of lectures on "Decorative Colour, as applicable to Architectural and other purposes," at the Architectural Museum, Canon-row, Westminster. The special points of the lecture were, "The general principles of colour; dignity of pure colour; whereon its power depends; the colours which are the basis of illumination are blue, purple, and scarlet, with gold; peculiar power of crimson; value of green, white, and black, and modes of their necessary introduction; refinements of intermediate hues in delicate work; review of subject."

The speaker commenced his remarks by broadly stating that the subject upon which he was about to address his audience, was one upon which neither he himself nor anybody else could tell anything, which would be of the least value, beyond what every person present could find out for himself, by the exercise of that noble faculty which taught Falstaff to run away,—he meant "instinct." Under the circumstances in which Falstaff was placed, to run away was undoubtedly the best thing which he could do. By "instinct," however, he did not wish to be understood as implying that by which an animal performed acts like to those of men, but that peculiar faculty by which all creatures did particularly that which it was their function to do, as the bee built its combs. In the construction of those hexagonal combs philosophers had discovered certain rules, which they had expressed in mathematical and logical formulæ. But although the bee constructed his cells in such a manner as most successfully to economise the consumption of wax, yet he was perfectly ignorant of the laws of numerical series, by which the principles upon which he acted could be explained and illustrated by the philosopher. The bee did not know, and did not want to know, these rules: he built his cells by a higher and a nobler teaching. Neither did higher animals ever do any great thing but by instinct. Did the brave and gallant soldiers in the Crimea act upon any other than instinct as they stood by their death-dealing guns? Did they entertain for a moment the question of the expediency of their running away? Far from it. Running away was not in them—they were animated solely by the instinct of courage. Ask a man of honour why he told the truth, or why he was not in the habit of telling lies. His reply would be, that it was not in him to act other than truthfully. Ask the man of compassion why he picked up the ragged boy from the gutter, who had been run over in the street, and his answer would be that he could not help doing it; it was his instinct to do so. He could, in fact, be no other than a compassionate man. And this was especially the case in the arts. If we went to any noble colourist, to any real man of talent, and asked him why he did such or such a thing, his answer would be, "I don't know. I do it because it appears to me to look well." The other day he was seated by the side of one of the greatest living colourists, Mr. Hunt; and, in reply to a question put to him as to why he put on a certain colour, he said "he did not know, he *was just aiming at it*." Mr. Ruskin had had frequent opportunities of conversing with Turner, but had never heard him utter a single rule of colour, though he had frequently heard him, like all great men, talk of "trying" to do a thing. This was ever the language of great genius. A man of no talent, a bad colourist, would be ready to give you mathematical reasons for every colour he put on the canvas. Mulready was another great colourist, and he had once asked him whether he had any principles or rules of colour. The reply of the colourist was, "Know what you have to do, and do it;" but he could not tell by what rules he was to know what to do to a certain thing. The same thing prevailed in poetry. The master poets, who wrote the best verses, could not tell their way of doing it. Tennyson was, in his opinion, the leading master of versification at the present day, and he knew of no rules to guide him. An intimate friend of the poet set himself one day to find out all the rules of Tennyson's versification, and collected together, from his verses, an immense number of laws and examples. "Look here," said he, "what wonderful laws you observe." "It's all true," replied the poet: "I do observe them, but I never knew it." Take again the case of music. Haydn was one of the greatest of geniuses, as well as an ardent lover of true harmony. An admirable German work, containing the lives of Haydn and other composers, gave a striking instance of the perfect independence of mind and freedom from fetters of rule which characterised this fine composer: checked in his youth by masters, this rare person had yet "taken science out of his own heart,—he had found it there, had remarked the feelings which passed within his own breast, and he acted upon its suggestions and native promptings." When in London, a young lord called upon Haydn, and sought his instruction. In the course of the interview the young man pointed out to the composer a number of faults and departures from the established rules of harmony, which he had marked in one of his overtures. He inquired the cause of these errors, and why such a note had been used, when a different one would have been the more correct. Haydn replied, that he had done so because it had a good effect, and pleased his taste. The Englishman disapproved of the alterations, when Haydn told him to play the passages as he would wish them to be altered, and see which would produce the best effect. After a great deal of argument on each side, the great composer becoming perfectly impatient, said, "My lord, you have the goodness to give me lessons, and I do not deserve the honour of receiving them from you," and bowed him out of the room. He was anxious to get his hearers entirely quit of the notion of supposing that they could do nothing without "rule." We were told as a rule that there were three primary colours,—red, blue, and yellow,—and that these primaries should occur in every composition; that these three colours always existed in a ray of light in the proportions of 8, 5, and 3, and that in these proportions they neutralised each other, and produced white light: then, said the scientific gentleman, "Because these colours occur in a ray of light, you should always put them into your colour compositions in just such a manner as that each colour may be neutralised by its neighbour." How absurd was all this! Were there not also acids and alkalies in chemistry which neutralised each other? and would it not be equally reasonable for a man to say to his cook, "Whenever you squeeze a lemon on my veal, put a pinch of magnesia with it, in order that the alkali may neutralise the acid?" There, said the lecturer—producing at the same time an orange—is as fine a yellow as you can have. If the scientific man were asked what colours should be introduced with it in a composition, he would reply, "Well, eight of red, and five of blue." But what said Nature? She gave neither red nor blue, but, placing the orange in the midst of bright green-leaves, enabled you to look on one of the most beautiful objects in existence—an orange-grove. Look, too, at the beautiful little sky-blue flowers of the gentian. Did nature give that eight of blue, five of red, and a touch of yellow? No such thing. There were the green grass, the white lilies of the valley, and the grey rock, but not a touch of red or yellow, yet that flower always looked beautiful. Some fine specimens of water-colour drawings of Turner and others were exhibited, for the purpose of show-

ing that beautiful effects might be obtained without adherence to these arbitrary rules, and could often only be obtained by defiance of them: and the lesson which the lecturer deduced from these examples, as well as from a careful study of the finest works of the old masters, was, that a close observance of these laws would most assuredly lead the scholar in a wrong direction.

But not only were these laws calculated to lead people wrong, but they would make those who followed them immoderately conceited. The lecturer said that he was talking the other day to a man who, of all others, had, perhaps, been the most successful in pursuing these laws of colour, and in the course of conversation, the lawgiver said, "Well, I find, upon the whole, that there is no harmony except between red and green." That was very odd. Mr. Ruskin replied, for his impression was, that Titian, and some others who knew something of the matter, had used red and blue. "No," said the philosopher, "it will not do. Titian is all wrong." On asking him whether there was any picture in the Academy which came up to his views of harmony in colour, the philosopher said that he had been carefully through the whole collection, and had only found one picture which was painted on scientific principles. That picture the lecturer had seen; he would not mention its name; but it was one of the chief daubs in the collection of the Academy. The worst of all this intermeddling of science was, that not only the artist derived no help from it, but it prevented science from doing the work which really came within its own province. Science could not give the artist the colours which it told him to use. We had no crimsons or scarlets which would stand; but (producing an illuminated MS.) there were pieces of scarlet which had stood upon that page for more than 500 years, and still remained perfectly bright. On the best modes of using gold, and preparing colours, which was the work of the scientific man, no attempt was made to help the colourist.

But if not by science, how was skill in colouring to be obtained? Only by instinct. Man was a being differing from the lower animals, in having two kinds of instinct, one which aimed at higher, and the other at baser ends, and he had also his noble reason to enable him to find out which of his acts would elevate the one or depress the other. The most efficient mode by which a knowledge of colour could be obtained by the artist was by casting all rules behind his back, and trusting to his own instincts when in a calm and healthy state. Watch for everything, look carefully for everything in nature which was beautiful. Whenever any combination of colours, or a colour particularly beautiful was found, note it carefully. If this kind of work be enjoyed and continued in, depend upon it, the student would soon begin to invent, and having put down two or three colours, others would soon suggest themselves as necessary. Pass not a single thing, however small or despised, for no colour was so contemptible but that it might furnish some hint, and there was no hour of the day in which something might not be learned. Fettered by rules, all these opportunities of gaining knowledge would be lost to the student. He was most anxious, in any remarks which he had made, that he should not be understood as depreciating the value of any of those ably illustrated works of Mr. Owen Jones and others who had studied the subject of the laws of colour—a subject, in the abstract, of great interest. All he meant to convey was, that these rules would never teach any one to colour, and the artist who submitted himself to the law of these three primaries was lost for ever.

In connection with colouring there were, however, three necessities which should never be lost sight of by the student. They were the necessity of gradation, of subtlety, and of surprise; and these it would be found were most sedulously and carefully acknowledged by the most successful of colourists, whether ancient or modern. No colour was really valuable until it was gradated. The great beauty of colour consisted in a sort of twilight melancholy,—a dying away; no colour was in fact of use till it appeared to be dying. Colour might be gradated by passing into other colours, or by becoming paler or darker. Instances of subtle gradation of colour were shown in the flowers of the scarlet cactus, and in some of the beautiful water-colour drawings of Turner. This same law was pre-eminently to be found among the illuminated works of the thirteenth century, where white lines or dots were most judiciously and effectively introduced for the purpose of gradating colours. A second and not less important point always observed by the successful colourist was the excessive delicacy to which he strove to bring all the hues he laid on, whether the working was large or small. When a person had coloured rightly, a grain more or a grain less would injure the whole. This delicacy was carried to such an extent by Paul Veronese that in one of his largest pictures, now in Paris, a small white hair upon the paw of a cat playing with a vase in the foreground was essential to the completeness of the picture. Another striking instance of this extreme delicacy was to be seen in a plum, painted by the greatest of living fruit-painters, Mr. Hunt, where a minute spot of scarlet was plainly seen upon the surface, and produced a most pleasing and agreeable effect to the eye. It was this extreme delicacy of all good colour, and the care which was taken in its application even to architectural decoration, that rendered fruitless and unsuccessful all attempts to restore, or to represent the old decorations upon any architectural works of the past centuries. We know nothing of what colours were employed by the Egyptians, or by any of the ancient decorators. We had found a bit of red in one place and a powder of blue or yellow upon some other, and we know nothing more. There were nearly twenty different reds now known to us; which one did the Egyptians use? Most certainly not that one which was now employed to represent the revived monuments of that age and country. Till they knew this, they could not restore the rudest monument of past ages. Until we knew absolutely and certainly what colours they used,—till, in fact, we could call the men up from the dead, we had no right to touch what they had left behind.

Another important law to be always kept in mind was that of the law of surprise. This law in colour was one of the chief sources of pleasure,—just as in music, the change to one note, when another was expected, formed the principal cause of the delight experienced in listening to the finest works of the composers. To the works of the old masters this "law of surprise" was uniformly acted upon, and the painters appear to have set themselves certain laws, and then suddenly to have transgressed them in the most playful and effective manner. An instance of this was shown in an illuminated MS. On one side was a number of heads within ovals, following each other regularly, when suddenly towards the close of the series, an irregularly-minded angel clapped his wing over his head, outside the oval. In another part a disobedient leaf suddenly appeared out of the ordinary and expected line, and all who saw the change could not but feel thankful to the unruly leaf for the excellent effect it had produced.

Passing from the laws affecting the management of colour, he proceeded to point out what colours ought to be used. The best lesson in colour to which he could point was a sunset. The clouds were *scarlet, golden, purple, white, grey*, but not *crimson*, except in stormy weather. Crimson was a colour which rarely occurred,—when it did, almost always giving the idea of a bloody hue—and it was curious to notice how, in the cacti and some other flowers, the purple, passing from scarlet, rarely, if ever, touched crimson. But one, at least, of the most beautiful of flowers in nature was crimson, viz. the rose, and the blush on the cheek was the most beautiful of colours, but the crimson which they displayed was always associated with the idea of life. There were undoubtedly cases in which crimson could be used with the greatest success, and one of the finest windows which he had ever seen was one at the western end of Chartres cathedral, of the twelfth century, upon which "gouts" of blood appeared to have been dropped. Nothing could exceed the richness and beauty of this window beneath the gorgeous rays of the sunset. Blues, whites, scarlets, yellows, and greys were all colours of the clouds—of heaven; fixed green and a particular kind of ashy buff were the colours of earth. All that was calculated to attract the mind in this peculiar art of illumination was to be found in the colours of heaven. The golden, scarlet, white, russet, purple, and grey colours all kept to the sky; the greens and the buffs to earth. There was, too, a sort of blueish green in the sky; and, as a general rule, greens should be always tinted and tempered with blue. The earthy, ashy, buff colour of earth—the ugliest of all colours—was pre-eminently the one used in this boasted nineteenth century. Some attempts of a most praiseworthy nature were being made to improve the colour of the ordinary tiles for architectural purposes, and a manufacturer of those tiles had covered the whole front of his house with them, where they would have had a most excellent effect, had he not, with the worst possible taste, made the ground of the whole of them this ugliest of all colours. The purple was a colour to which great importance was attached by the ancients. The old Greek purple was unquestionably not of a scarlet hue, but a deep and sombre colour. In the Odyssey, Menelaus, in his interview with the sea-king Proteus, when told of the assassination of Agamemnon, is represented as going away sad. Homer says his mind became *purple*. Many persons would suppose it meant "crimsoned" over with blood. But this was not the meaning intended to be conveyed; for in one part of the Iliad, he describes the sinking and darkness which came over a dying soldier's eyes, as he faints with his wound, and death comes to him as "purple death." The words are weak as given by Pope:—

"Down sinks the priest, the purple hand of death
Closed his dim eyes, and fate suppressed his breath."

But there were other passages where this purple was referred to, which proved that it could have had nothing of the scarlet about it—that was a description of the sea. When dark brown clouds pass over the blue Mediterranean, they give a dark, leaden-like purple to the waters as they lie motionless. Homer thus describes the sea when in this state:—

"As when old Ocean's silent surface sleeps,
The waves just heaving on the purple deeps,
While yet the expected tempest hangs on high,
Weighs down the clouds, and blackens all the sky."

There could be no question but that the purple here referred to was a dark leaden colour. The same epithet of "purple" has been applied by Homer to the face of oxen, and they certainly had not scarlet faces; but they had a peculiar russet passing into blue, which could frequently be seen in their dark foreheads. When Achilles went to the sea to seek his mother Thetis, Homer says that the sea appeared to him of this dark strange bloody purple. The ideal of blood among the Greeks was that of a dark, rich colour. Homer said of Menelaus, when wounded by Pandarus, that his blood distilled down his thigh, as when a Tyrian girl stained the ivory. Reverting to the strange manner in which in nature the purple gradated into scarlet, without touching the crimson, Mr. Ruskin urged upon the student of illumination the propriety of not using the sacred colour, crimson, without extreme caution.

Passing from that colour itself, the lecturer next called attention to the necessity of a careful study of the abstract lines which were to enclose it, instancing the noble and graceful curves which were to be met with in many of the illuminated letters of the thirteenth century. As instances of such, he exhibited an enlarged drawing of a small letter from one of the missals, the curves in which were of the most graceful character, and could only be drawn by the most skilful hand. Having pointed out the grace and beauty of the original, Mr. Ruskin produced, amid the laughter of his audience, the same graceful design vulgarised by the use of combined mathematical curves, and showed, by adding a few strokes, that this vulgarisation was, in fact, the form of an Ionic capital. Mr. Ruskin intimated that he had placed in the adjoining room, under the care of Mr. Allen, to whom he confessed himself deeply indebted for the very valuable assistance he had rendered him, several examples of this class of curves, taken from MSS. which they might glance at now and then,

and expressed his readiness to attend at the Museum upon stated days, to look over any examples which might be brought to him, in order, as far as he was able, to help the student forward in his work. It was grievous to think how large an amount of power was lying dormant at this time of the world, because bound down and darkened by the absurd scientificalities which it was the fashion of the day to promulgate and insist upon as indispensable. A day or two since a person who had attended his previous lectures, had sent him some books of sketches, stating that he had been in the habit of illuminating, not for profit, but merely because he found it satisfied his mind. These books were filled with the most marvellous sketches and most felicitous ideas. Among the various sketches, he had found one which was a perfectly new thought, even on the subject of "The Lord's Supper," a theme which had exhausted the genius of some of the finest painters of ancient and modern time. "And when they had sung a hymn, they went up to the Mount of Olives." The sketch represents the group of the disciples singing the hymn — a most beautiful and charming subject for the painter. A few days since he had set some boys to work to produce some specimens of illuminated letters; they had been most successful in their work, and the lecturer exhibited the results of their labours in two large initial letters for the "Kyrie Eleison." There was, therefore, none of that insuperable difficulty about the use of ornamental letters which some persons had imagined, and he was most anxious to impress upon those of his audience who might be engaged in the execution of ornamental designs, and lettering on walls and shop-fronts, how easily and with what success they might introduce initial letters of this description. It was surprising to see the dexterity and skill with which many of these writers could strike the curves of the letters they were painting. It was a most marvellous power, one which could only be attained by constant and long practice, but he was anxious to see this sleight of hand turned to greater advantage, and used to more effect. They might depend upon it, that if they once introduced these ornamental letters, they would achieve for themselves a vast amount of success, and carry the public along with them to an extent of which they could at present form no adequate opinion.

There were two points about the art of illumination which, in closing, he desired to refer to —they were the uniform attention which was paid to purity of colour, and the vast power of the grotesque which could be advantageously employed by those who were in the habit of using the art. An examination of the works of the old illuminators, would show in the most striking manner the great attention which they always paid to purity of colour. Between the good colourist and the layer on of paint, there was the widest possible difference. The Dutch excelled in the art of laying on paint, but their work was far different from that careful system of colouring adapted by the illuminators of the thirteenth century. Observe how carefully, and with what exquisite taste, the small lines and dots of white are introduced in order to produce harmonious effects where the immediate contrast of strong or bright colours would offend the eye. In some of the smaller work of these illuminated missals, the white was introduced in such small quantities as to be only visible by the aid of a microscope. Some specimens illustrative, in a high degree, of the great care and labour bestowed in this respect, were handed to the audience. In the works of the old masters of painting, the holiest subjects were always depicted in the most powerful and purest of colours; as the subjects lowered in character, they gradually lost their dignity of colour, until they came to the lowest character of all in colour—the works of Salvator Rosa, which were nothing more than mere drabs and browns.

The second highly important consideration in connection with this art was that to which he had alluded on a previous occasion, viz. the vast powers of grotesque which it afforded. This power of the grotesque was one which ought not to be overlooked by the people of this country, for most undoubtedly the faculty belonged peculiarly to the northern nations. Carlyle, to whom he (the lecturer) owed more than to any other living writer, in his "Hero Worship," thus referred to the exercise of this power. "It is strange," said he, "after our beautiful Apollo statues, and clear, smiling mythuses, to come down upon the Norse gods 'brewing ale,' to hold their feast with the seaJotun, sending out Thor to get the cauldron for them in the Jotun country. Thor, after many adventures, clapping the pot on his head like a huge hat, and walking off with it, quite lost in it, the ears of the pot reaching down to his heels! A kind of vacant hugeness, large, awkward gianthood, characterizes that Norse system; enormous force, as yet altogether untutored, stalking helpless with large uncertain strides. Consider only their primary mythus of the creation! The gods having got their giant Ymer slain—a giant made by 'warm wind,' and much confused work, out of the conflict of frost and fire—determined on constructing a world with him. His blood made the sea, his flesh was the land, the rocks his bones—'good geology that!'—of his eyebrows they formed Asgard, their god's dwelling; his skull was the great blue vault of immensity, and the brains of it became the clouds. What a hyper-Brobdignagian business! Untamed thought, great, giant-like, enormous, to be turned in due time into the compact greatness, not giant-like, but godlike, and stronger than gianthood, of the Shakspeares, the Goethes! Spiritually, as well as bodily, these men are our progenitors." The works of Albert Durer, and the great German artist to whom allusion had been made in the previous lectures, were also full of this power of the grotesque. The plates of "Death the Avenger," and "Death the Friend," were the most remarkable modern instances of the grotesque in its peculiar *moral* power he knew. In the one Death appears suddenly as a masquer in a masked ball at Paris; and, although the subject was similar to that which had been previously treated by Dr. Young, he did not think that the German artist was indebted to Dr. Young for the idea. Dr. Young was remarkable for this power.

> "'Twas in the circle of the gay I stood,
> Death would have entered, nature pushed him back."

Now mark the grotesque,—

> "Supported by a doctor of renown,
> His point he gained:—
> Then artfully dismissed
> The sage; for Death designed to be concealed,
> He gave an old vivacious usurer
> His meagre aspect and his naked bones;
> In gratitude for plumping up his prey,
> A pamper'd spendthrift, whose fantastic air,
> Well-fashioned figure, and cockaded brows,
> He took in change, and underneath the pride
> Of costly linen, tuck'd his filthy shroud.
> His crooked bow he straightened to a cane;
> And hid his deadly shafts in Myra's eyes."

The other plate, "Death the Friend," showed the grotesque in its gentler power of teaching. The old sexton sat at the window of the church tower; the summer evening was falling—Death had come for him, his ghostly horse waiting in the clouds; and tolled for him at once the vesper, and the passing bell, while a little bird in the window-sill sings his vespers as the good man dies. The whole is full of that poetry and that feeling which were so characteristic of the thirteenth century art, of the period when Walter, the Minnesinger, left this charge in his testament, "Let the birds be fed daily on my grave."

I TRUST you will allow me to offer a few remarks on Mr. Ruskin's contemptuous reply to my letter. I have made them as short as possible, as my aversion to idle controversy is as great as his own.

1. Every word that is spoken to workmen in the way of instruction is of importance. Hence, words as well as substance, should be carefully considered, in addressing workmen for the first time on a branch of art in which it is proposed to instruct them.

2. I confidently leave it to the decision of your readers, whether the term "cavil," which Mr. Ruskin applies to my remarks, is more suited to my defence of "limner," or to his objection to it.

3. Mr. Ruskin's mistakes are not more a subject of anxiety to me than those of any other lecturer on art; I simply saw that he might inadvertently mislead others in his ignorance of the fact, that the strict meaning of "limner" is illuminator, and that at any rate it might fairly be used in that sense in a translation of a mediæval poem. Carey's reputation is certainly not likely to suffer by Mr. Ruskin's unsupported dictum.

4. With regard to the two kinds of illegibility which Mr. Ruskin points out, and which he might perhaps specify as—

1. Illegibility by cause of strangeness,—
2. Illegibility by cause of distance,—

I must confess that I have not wit enough to see any connection between the two; nor can I see that in defending black letter from the charge of "illegibility by cause of strangeness," there was any reason for alluding at all to "illegibility by cause of distance," unless his purpose was, as I supposed, publicly to ridicule the labour and thought of a living artist.

M. A.

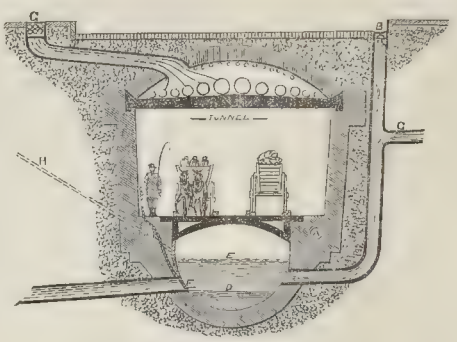
I DEEPLY regret that Mr. Ruskin should have written, and that you should have admitted, the inconsiderate and unprovoked attack upon Sir Charles Barry, which appeared in your last number; and, as a member of the committee of the Architectural Museum, I feel bound to express publicly the regret I feel, and which I am sure will be felt by every member of our committee, that such an affront to one of our trustees, and the father of one of our own body, should have arisen from the discussion of lectures given within our walls, highly valuable as I consider these lectures to be.

Sir Charles will not forget, I dare say, that this attack comes from the same pen with a still more violent one against our lost Pugin,—a page in "The Stones of Venice," which I can never open upon without grief, and which in my copy I long since endeavoured to comfort myself by putting *into mourning*. Pugin, whom I can never cease to look upon as one of the greatest lights of our age, and as the man from whom Mr. Ruskin has learned most of his best ideas on architecture, is there designated by him as "*one of the smallest possible or conceivable architects!*" Mr. Ruskin's maxim is perhaps, "fight neither with small nor great, save only with the king;" so that Sir Charles Barry and Pugin are his selected victims: *par nobile fratrum!*

VINDEX.

NEW PATENTS FOR IMPROVEMENTS IN CEMENTS.

MR. H. J. D. SCOTT, of Woolwich, has received a patent for the following object,—the obtaining of more perfect chemical action than heretofore between the constituents of artificial cement during their calcination, and thereby to improve its qualities as to colour, plasticity, or tenacity, for moulding purposes, and durability in waterworks. He takes lime, and adds thereto any siliceous compound readily attainable, such as river mud or clay, in proportions dependent on the natural cement or hydraulic lime it is intended to imitate; 35 cwt. of lime and 30 cwt. of the siliceous compound giving good results for ordinary purposes. These substances are to be reduced either with or without the assistance of water to an impalpable powder, and mixed intimately together. This compound is then placed in iron moulds, and submitted to hydraulic or other pressure, sufficiently powerful to give solidity to the compound. The cakes thus obtained are removed to a kiln, and subjected to calcination after the ordinary manner of burning cements; the degree of heat to which the cakes are subjected being regulated according to the nature and relative amounts of the constituent substances, but using considerably less fuel, as the lime constituent is present in the state of quick lime instead of carbonate. After calcination, the cakes are reduced to a powder, which may then be packed in barrels ready for the market. The patentee states, that by manufacturing cement in this manner he finds that the chemical change effected during the calcination of the constituents of the cement is more complete and uniform than when the ordinary method is employed. The improvement is due, in his opinion, to the close proximity of the constituent particles produced by the hydraulic or other pressure. In some cases he finds it convenient to add the lime constituent to the siliceous earth in the state of chalk, and to effect the conversion of the chalk into lime by driving off its carbonic acid during the operation of calcining the mixed materials solidified by pressure. When this plan of operating is adopted the temperature of the kiln must be greater, and the calcination of longer duration, than is required in the process described above; in other words, it must be equal to that at present employed for burning the natural cements



of similar composition. The proportions of ingredients preferred by the patentee are from 60 to 65 cwt. of chalk to 30 cwt. of clay, or other siliceous compounds. The claim made is for "The employment of hydraulic or other mechanical pressure in the manner and for the purpose set forth."

Emile Dupont, of Boulogne-sur-Mer, has patented "Improvements in the manufacture of certain cements." These improvements are stated in the specification to have reference to a cement which the patentee calls Boulogne-sur-Mer Natural Portland Cement, the same being of analogous composition to the English artificial Portland cement, of which lime and clay are the constituents. The artificial Portland cement is formed by mixing suitable quantities of chalk and clay, which require long and expensive treatment to obtain the proper amalgamation of the lime and clay elements, by the reduction of them to a liquid state, and the decantation of the materials. But the natural cement which we are now about to describe is said to be formed from a marl or limestone, or from a mixture of marls or limestones, naturally containing a proportion of the requisite ingredients in a condition which admits of their being readily united by simple processes. For this purpose various soils are selected by the patentee, but especially those in the lower strata of the chalk formation—limestones or marls of a homogeneous texture, containing from 19 to 22 per cent. of clay. This clay ought to contain the smallest possible quantity of sand; not more, at all events, than one-twentieth part of its weight. The proportions of silica and alumina which enter into its composition may vary without detriment. In localities where limestones are not to be found containing the requisite proportion of clay, their place may be supplied by employing a mixture of limestones or marls having different clayey bases, which, when united, will contain the requisite proportions. These matters being already combined with a considerable proportion of clay, their simple juxtaposition and trituration with water, to reduce them to a pasty state, is sufficient to produce perfect amalgamation by a simple process, without the necessity of having recourse to those required in the preparation of the ordinary Portland cement already mentioned. The trituration may be effected in vertical mills, but where mixed marls are used, the patentee prefers horizontal mills, similar to those employed in grinding corn; enough water being added to facilitate the exit of the paste in a state sufficiently firm to be formed immediately into bricks, which must be dried preparatory to the baking. Limekilns or pottery kilns may be used for this process. The paste should be exposed for several hours to a good white heat, slowly got up; the temperature required being considerably higher than that needed for lime, and still more for ordinary cements. By the means described a product is obtained which, according to the patentee, presents the following characteristics:—The baked matter is sensibly shrunk without losing its primitive form, it is, as it were, corned, and presents an appearance like that of fretted lime; it has acquired a blackish, or greenish-grey tinge, and its fracture is granular. From this product it is indispensable to remove by a careful picking all the parts which are not sufficiently baked, and which, if present in the mass, would infallibly make the quality deteriorate. The bricks of baked masses are then pulverised by the ordinary methods, and converted into a natural cement, which is of an iron-grey colour, and always uniform in quality; being equal, at the same time, to the best English artificial cement, while the processes by which it is obtained are considerably more economical.

Another improvement has reference to the manufacture of Portland cement (or that which is formed from chalk and clay separately), by employing in the trituration of its materials, the horizontal mills already mentioned, instead of the vertical mills hitherto in use, less effectually according to the statement of the patentee. The precise nature of the improvements claimed, is defined by the patentee under three heads:—"First, the formation of a cement, which he calls the Boulogne sur-Mer Natural Portland Cement, obtained from natural marls, or limestones, employed singly, or in combinations; secondly, the employment of horizontal mills for grinding the materials employed in forming the said cement in those cases where it is obtained from a combination of marls or limestones, or where obtained from single marls or limestones, of a texture not sufficiently homogeneous; thirdly, the employment of the said horizontal mills in the manufacture of the ordinary artificial Portland cement, from chalk and clay, separately obtained.

Mr. Benjamin Fullwood, chemist, Bermondsey, has patented "Improvements in Cements." The patentee's purpose is thus stated:—The invention consists in manufacturing cement by calcining together chalk or other native carbonate of lime and oxymuriate of lime, or any other chloride or chlorines, or muriate of soda, or any other muriate or muriatic acid; the object being to dissipate the carbonic acid gas contained in the chalk or carbonate of lime, and to replace it to some extent by chlorine or oxymuriatic gas. The quality of the cement thus produced may be modified by mixing with it native or manufactured oxide of zinc, or other cementitious or colouring matters, in the proportion of about one part by measure to seven of the cement, or in other suitable proportion. The process is to be carried out in the following manner:—a kiln, somewhat similar to a lime-kiln, is to be employed, but having a wide orifice at top to facilitate the dispersion of the evolved carbonic acid gas: about 1½ cwt. of coal, coke, or other fuel, is first laid at the bottom of the kiln, and above it is laid about one ton of chalk, or other native carbonate of lime; above this, in a powdered state, is placed 1½ cwt. of either of the chlorides or muriates already named; another layer of fuel and one of the above materials are alternately deposited until the kiln is charged. The fire is then kindled, and the charge is allowed to calcine in the common manner adopted for burning limestone. The materials, when sufficiently calcined, are drawn from the kiln, ground, sifted, and packed for use.

A variation of the process is by dissolving in water the soluble chloride or muriate, and immersing the chalk or other native carbonate therein, so as to cause it to become saturated with the solution before placing it in the kiln. The oxide of zinc, or other cementitious or colouring matter referred to, as fit for mixing with the cement produced as before described, may either be so mixed with it after calcination, or it may be mixed beforehand, and calcined with it according as their properties are more or less volatile. The patentee does not confine himself to the exact proportion stated, but considers them the most useful for ordinary cases. He claims as his improvement the manufacture of cement by calcining with coal, coke, breese, or other like fuel,—chalk or other carbonate of lime, and a metallic earth, or alkaline, chloride, or muriate, or chlorine, or muriatic acid, with or without the admixture of oxide of zinc, or other cementitious or colouring matter, before or after calcination.

SANITARY SUBWAYS.

SANITARY SUBWAYS.

The proposal to form a subway for the drainage, water-supply and gas, has been made more than once at long intervals, and then allowed to rest. The last proposition to this effect is one by Mr. W. Austin, of whose drain-pipes and other inventions we have before now spoken. The annexed diagram will explain his intentions.

The projector proposes to run his large drains from streets into sewers constructed at a considerable depth on each side of the river (beneath the shores), between high and low water mark; to convey the soil to the extreme parts of London, to be pumped up into reservoirs, for the purpose of manure, or discharged into the river below the influence of the tide, beyond Barking-creek. Over the sewer of streets is a strong, continued stage of iron and wood, upon which runs a railway and tramway, with a footway on each side. Over these are iron girders, to carry the main pipes for gas, water, &c.: these girders are placed at sufficient distances apart to suit the lengths of the pipes. A brick arch spans the whole. The spandrils and crown of arch, filled in with concrete, receive the paving. An eye and horizontal shaft is formed through the arch to footways, fronting each house, for the service pipes to pass on to the supply pipes, laid in an opening trunk running lengthways and level with paths. The electric wires are suspended to the soffit of the arch. The sewer and tunnel are proposed to be ventilated by coke fires and shafts, and iron man-hole traps are to be placed at intervals in the crown of the arch.

THE GUILDHALL OF LONDON.

The state of our Guildhall has often appeared to me a sad disgrace to the chief city of the world, especially when we look at Venice, and most of the cities of north Italy and Flanders. Just ten years ago in company with the immortal Turner, and artists still with us, and not unknown to the present Lord Mayor, this subject was debated; that art in all its branches, sculpture, painting, and architecture, had been more encouraged under the patronage of great commercial cities than any other; and it was observed, that if ever Mr. Moon became Lord Mayor, London might, though late, share the same honour. The auspicious year has come. There is still Guildhall with its hideous roof and blank walls, and unworthy front; and there *now are men* amongst us who could do the

work, and love it too. I trust the opportunity may not be lost: let us have a tower and spire at the end of King-street to rival Brussels, and let the vacant wall spaces of the hall receive frescoes commemorating some of the great deeds of former days of our good citizens: *there* they would be *near* enough to the eye to be seen; and there is no public building in London so thronged with passers-by. Many an idle apprentice, too, might take encouragement for good therefrom, and ere long prove a worthy son of London, and benefactor of mankind. "NON NOBIS."

THE OXFORD MUSEUMS COMPETITION.

THE design marked "Nisi Dominus, &c." has been chosen, and a delegacy appointed to see it carried out, if it can be done for a sum not exceeding 30,000*l.* The envelope containing the motto had not been opened in time for our impression, but it is understood that the design is by Messrs. Deane and Woodward, of Cork. The other designs which it is *said* are to receive prizes are "Fiat Justitia," "A. Z." and "Cross-compasses." The question of whether either of the designs marked "Fiat Justitia" and "Nisi Dominus" be selected, was only carried by four, in a house of 132.

This is all gossip: nothing is known officially beyond the fact of "Nisi Dominus" being the chosen plan, but the envelopes will have been opened and the prizes awarded by the time our number reaches the public.

OUR BRIDGES.

THAT which has often and long since been treated by the *Builder*, the insufficiency of bridgeway across the Thames, has at last become a serious topic of discussion amongst all interests of the metropolis. The frequent interruptions, permanent retardation, and occasional paralysis, of commerce by these ducts have forced all classes of trade into consultation for the remedy of so great a grievance. Many new and amusing expedients are recommended,—to establish ferries above and the tunnel beneath the stream; to throw out flying galleries on cantelevers for London-bridge; erect new piers and additional suspension causeways to Hungerford; and, pending the erection of new bridges, in order to ease the concentric flow of population and traffic, to acquire at once the rather eccentric aisance by Vauxhall, and the yet remoter realization of Battersea pier-dams!

It has been shown that the most central bridge, the soundest, the easiest of access by level roads, and the most useful, as intermediate between the busy and crowded haunts of trade, is all but deserted because of the toll; and all agree that while traffic increases, two years must elapse, or more probably three, before any single new structure can be completed. In such case, what is to become of the trade of London during the interval? Blackfriars is crippled and on crutches—Westminster paralyzed and palsied!

Suppose the possible contingency of a summary defection of three or four piers at Westminster in one swoop—an intense frost and sudden thaw might do it—and this might befal a stronger and more modern structure, even although in tottering old age we may confide in the bridge that has so often carried us over: in such case, then, what resource is there but to buy the arched or suspended erections now held and tolled by companies? To rent the toll-bridges would, if it could be done, give temporary ease, but at least two new ones are indispensable.

In ordinary cases of exigency, such as the flooding of a lake, the usual mode adopted for letting off accumulated water is to cut one main channel in that position which is most obvious for an outflow. In the tide of population, as incessant and uncontrollable as the floods from heaven, a similar course should be adopted. There can be no doubt as to the point of pressure: Waterloo-bridge at once stands out most conspicuously as the main artery, conducting, not only from the central metropolis of the Surrey side, but to and from the great southern railway terminus.

Comparison has been made most aptly by a correspondent of the *Builder* between the profusion of majestic bridges (majestic for the inferior Seine) and *gracieuse* quays of Paris, and the niggardly, if not neglectful, stint of both in London. The wealth and munificence of either capital cannot be gauged by any such circumstances. In Paris the *state assumes the offices of municipality:* in London, private enterprise has for the most part built bridges, as it has also consolidated railroads. It is, however, time to profit a little by the examples of our enlightened neighbours and allies in a particular so vitally affecting the commerce of London and of the nation. "Q."

PHOTOGRAPHY.

WE have had before us for some time a series of Views in Gloucestershire, photographed by Mr. Joseph Cundall,* and several in Hastings, by the same photographer, most of them extraordinary specimens of this extraordinary art. It is not possible to go beyond some of them in excellence. Our more immediate object in mentioning them is, to point out the value of the process for many engineering and architectural purposes. The Gloucestershire series, for example, were made for the engineer of a particular project, and were laid before a committee of the House of Commons, who were thus made as well acquainted with the line of country to be passed through, as if they had themselves travelled it. Should any of our readers need assistance of this sort, they cannot do better than consult Mr. Cundall.

The first part of "Photographic Delineations of the Scenery, Architecture, and Antiquities of Great Britain and Ireland," by Mr. Russell Sedgfield, has just now appeared,† and it promises to be an important work. This part contains the fine Norman Tower and the Abbey-gate, at Bury St. Edmunds; the north transept of Norwich cathedral, and part of the cloisters of the edifice; and the west front of Benham Priory, Norwich. About eight parts are to be issued each year.——The Photographic Society have recommenced their meetings. We are looking on, and may have something to say thereanent.

BLACKFRIARS BRIDGE.

AT a Court of the Common Council, on the 7th, the Bridge-house Committee brought up a report, wherein they said,—"We have fully and carefully considered the whole subject, and are of opinion that instead of taking down and rebuilding Blackfriars-bridge, the bridge should be repaired by substituting, in lieu of the present timber centreing, wrought-iron ribs, to be placed under the centre arch and the one adjoining, as recommended by the report of Messrs. Walker, Burges, and Cooper."

The following amendment was put and carried:—"That the report be referred back to the committee, with instructions to take the necessary steps for causing to be taken down and rebuilt the defective pier, and such portions of the two arches resting upon it as may be considered necessary."

MONT BLANC.—With a vivacity and freshness as great as when he first told the story of Mont Blanc, now several years ago, Mr. Albert Smith (Albert *Durer*, shall we call him?) is again, at the Egyptian Hall, amusing and edifying the public, who still go in crowds to listen to him, and be pleased. On the present occasion he takes them to Switzerland by way of Holland, and shows them a number of new views, charmingly painted by Mr. Beverley, including Amsterdam, on the Rokin Canal, looking towards the site of the Old Bourse; the Village of Broek; the High Street of Berne, with the clock-tower; the Pass of the Gemmi; the Hut lately erected on the Grands of Mulets; Lyons; and the Place de la Concorde, Paris (a glittering scene); besides a Panorama of the Rhine, painted by M. Groppius, of Berlin—to which he sings a witty, sharp-shooting account of the chief objects of interest that line the banks and stud the waters of the green river. In the midst of his pleasant singing and sketches of character—some of the latter not quite so strong as others—Mr. Smith manages to introduce both knowledge and wisdom, and to some extent instructs while he altogether amuses. The entertainment is so materially changed, that all who have been must go again.

THE OPENING FOR ST. PAUL'S.

WHILE so much interest is being manifested for the preservation of the open space now unoccupied at the east end of St. Paul's Church-yard, I am induced to offer the following suggestion, believing that it would obviate the difficulty now experienced in effecting that object—at least, to a considerable extent.

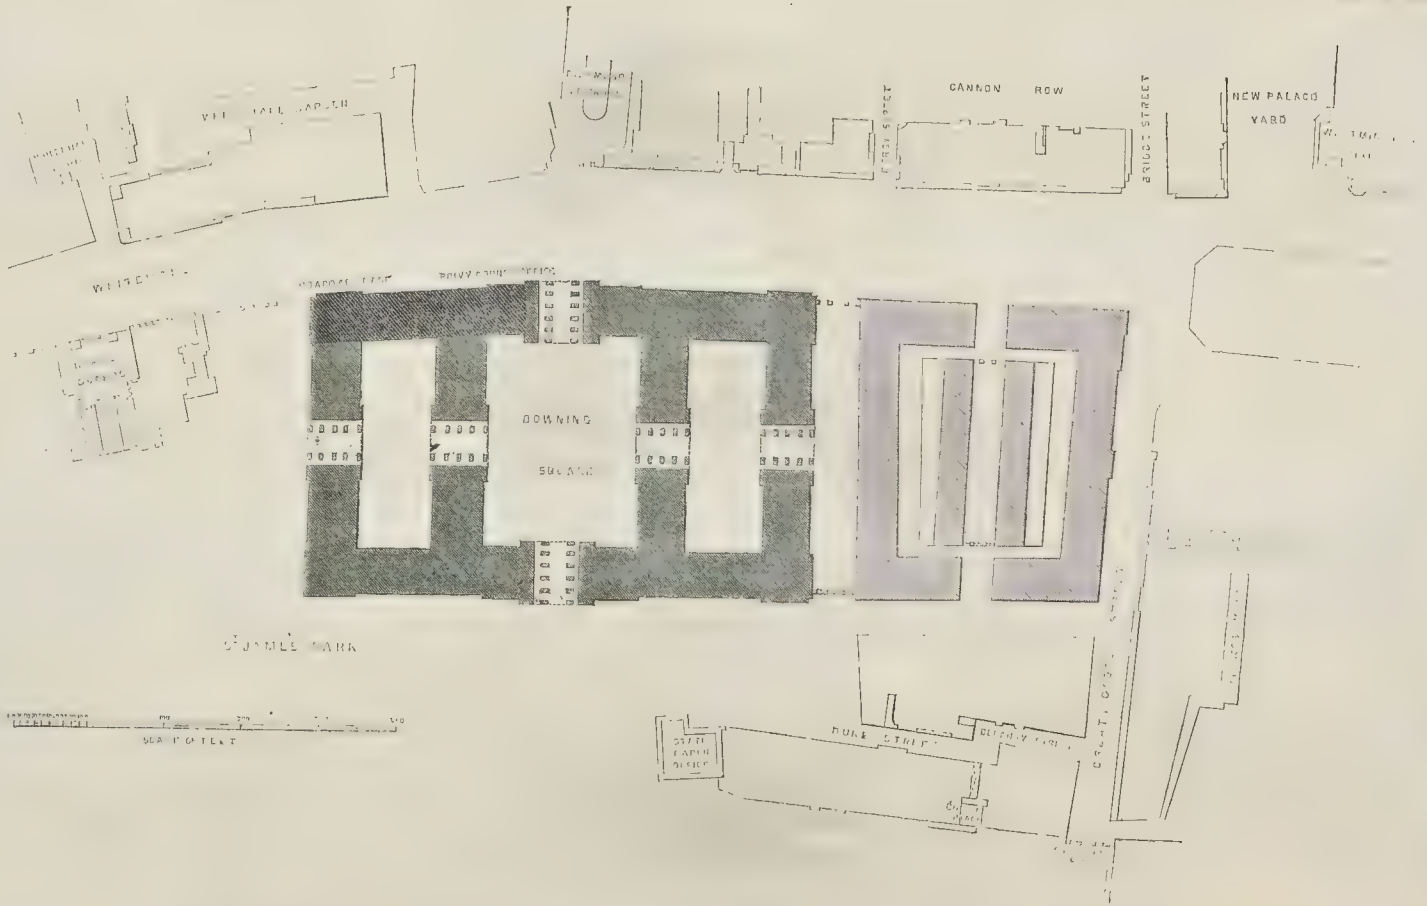
What I would propose is, that the committee who have charge of the improvements, should purchase the three houses in Old Change, between Cannon-street and Watling-street, and now facing St. Paul's Church-yard, pull them down, and to the site so obtained, throw in the now useless roadway in front of them.

I would then propose to draw a convex curved line from the north-west corner of Cannon-street to the west front of the warehouse attached to St. Paul's School, and add to the above site the corner of the now vacant ground cut off by this line. From these three sources a building site would be obtained at least as large, if not larger, than the triangular piece of ground in dispute, which is valued at 60,000*l.*

The expense of obtaining this would be the price of the three houses in Old Change. I have no data from which to value these correctly; but, assuming the opposite side of the street to be built up again, which it certainly will be, if some such arrangement as this is not hit upon, I fancy they would be dear at 15,000*l.*; but say 20,000*l.* to be safe, it results that the committee could effect for 20,000*l.* what it is now proposed to obtain at the sacrifice of 60,000*l.*

This, however, is taking the worst view of the case, for the piece of ground I now propose should be occupied, is so much more compact than the acute angled triangle at present available, and possesses a frontage so much more commanding, that, assuming the superficial extent to be the same, it would be more valuable to the extent of 10,000*l.* or 12,000*l.* at least.

Indeed, if I am not very much mistaken, the improvement might, with good management, be effected for a very small sum—say 10,000*l.* or 12,000*l.* which I am sure the Common Council would not grudge, though they may fairly hesitate when called upon to sacrifice 60,000*l.* for the object.



JAMES FERGUSSON.

A DESIGN FOR THE GOVERNMENT OFFICES.

THE particulars given by us of the design for the erection of an extensive pile of buildings for Government offices in and near Downing street, submitted to Sir W. Molesworth by Mr. Tarring, having excited attention, and the importance of the subject being generally felt, we have stepped somewhat out of our usual course, and have engraved an illustration of the design. As we have already said, the proposition contemplates the removal of the buildings between the Horse Guards and Great George-street, Westminster, as far as Charles-street, and the block of houses between King-street and Parliament-street. The site of Dover House, it is suggested, should form a public entrance into St. James's-park.

The building now occupied by the Council Office and Board of Trade is seen to form one wing of the façade towards Whitehall: a similar wing would extend from about Fludyer-street to Charles-street, the two being connected by a lofty centre, with arched entrance. The whole frontage would be about 700 feet. On the north side facing the Horse Guards, and the south side facing Charles street, the buildings are carried down into the park, to a distance of 400 feet, and have in each front a centre and arched entrance. The front in the park looking westwards and the front in Whitehall are alike, and the whole would form an oblong pile of building, 700 feet by 400 feet, with four façades.

The interior, it will be seen by the plan, is divided into three squares by two rows of buildings running parallel with the north and south sides, connected by archways. The cost has been estimated at nearly 700,000*l.* We mentioned that the Government are now paying nearly 20,000*l.* a year for rent and repairs of disconnected and inconvenient buildings, but we are told that the sum is at least 25,000*l.* a year. It may be well to state, as a feature in the Design, that a great portion of it could be carried into effect without at all disturbing the offices now occupied by the Government in the locality.

PLAN FOR PROPOSED GOVERNMENT OFFICES, DOWNING-STREET, LONDON.

A DESIGN FOR THE GOVERNMENT OFFICES: THE PARK FRONT.—Mr. John Tarring, Architect.

PROVINCIAL NEWS.

Kettering.—The east end of Kettering Church has recently had a new window of stained glass put up, in the Perpendicular style, representing our Saviour as the good shepherd, and angelic figures united by wreaths and garlands of flowers. It was executed by Messrs. Webb and Nixon, of Kettering, who have ornamented five other windows in the south aisle. It is in contemplation to fit up the north aisle in a similar manner.

Reading.—The market-place façade of the Corn Exchange is now completed, with the exception of the clock, which is to be illuminated. It is regretted that the corporation did not provide for a better entrance. The exchange itself is also progressing with rapidity, and, about the end of January, the corn business will be transferred from the market-place to the new building.

Henley-on-Thames.—The parish church of this town was reopened on the 1st inst. after having been repaired and restored. The cost incurred amounts to about 5,000*l.* On the north side a new aisle has been added, the church now having four aisles: all the galleries have been removed, as have also all the old-fashioned pews: one gallery has been erected over the western entrance, the space beneath forming a lobby to the chief door. The seats are all open, and are of solid oak. The roof is almost entirely new, and the restoration of the clerestory of the nave, which was before hidden and partly destroyed, constitutes a new feature. Two new windows, of stained glass, have been inserted, one at each end of the nave. The one over the altar represents Christ blessing his apostles immediately before his ascension. The roof of the chancel is of carved oak, and the nave portion coloured with devices. The floor is laid with encaustic tiles, charged with designs. The communion-table is of cedar of Lebanon, carved. Around the walls and heads of arches are texts from scripture, evangelical emblems, &c. in illuminated style. The plaster partition which enclosed the tower has been removed, and the arches, coloured and gilded, thrown into the church, beneath which the monuments and tablets, formerly in the church, and attached to the walls, are collected and placed. The pulpit is of carved oak, as are also the reading-desk and lectern. The church is fitted up for gas. The warming is effected by hot-water pipes. The contractor for the whole of the works was Mr. R. Owthwaite, of Henley; the architect, Mr. Ferrey.

Tiverton.—The parochial schools here, erected by means of a Government grant of 630*l.* and by donations of rather more than 1,000*l.* were formally opened on Monday week by the Bishop of Bath and Wells. Mr. C. E. Davis was the architect; Mr. Treasure, of Bath, the builder; and Mr. Hamlen, of Clifton, the carpenter.

Sheffield.—Plans have been prepared by Messrs. Weightman, Hadfield, and Goldie for erecting a new Exchange News-room, with central telegraph-office, at the east end of the Shambles here. The plan is to carry an upper story over that end. The entrance will be at the corner of King-street and the Haymarket. At the corner of the Fruit-market and Haymarket will be a telegraph-office. The upper story will contain a room, 57 feet long by 30 feet wide, and at the end of it a private telegraph-office and bed-rooms for the clerks of the telegraph.

Doncaster.—The external restoration of Christ Church, Doncaster, has been completed by Messrs. Anelay, builders. The pinnacles and finials, as well as other parts of masonry injured by the heavy gales of last year, have been repaired. The internal arrangements have been finished. The subscriptions for the required purposes amounted to 267*l.* 7*s.*

Manchester.—From want of accommodation at the Mechanics' Institution, Cooper-street, arrangements have been in progress for the erection of a new building, of an extensive and important character so far as regards this class of institutions; and owing to the spirited manner in which the canvass for subscriptions has been carried on, a sum of 5,600*l.* has been raised. A plot of land has been purchased for the new institution, with frontage to David-street on the west, Major-street on the north, Abingdon-street on the east, and Hart-street on the south. It is nearly quadrangular in form, and the plot contains 900 square yards, which is about 200 more than the area occupied by the existing building. It is intended shortly to commence the erection of the institution, and Mr. J. E. Gregan, of this town, architect, has prepared plans for that purpose. The building is to be five stories high (including basement), and the principal front will be towards David-street. It is to be constructed of fine stock brick, with polished Yorkshire stone dressings. On the basement story, the windows of which will be half their height above the ground, there will be five class-rooms or lofty cellars, and also warming apparatus to heat the rooms above. On the ground floor there will be a news-room, reading-room, library-room, and board-room, the entrance being from the centre of the David-street front, a spacious vestibule being approached by several steps, ascending to the first floor. On the second story there will be for female pupils a large class-room, 65 feet long by 21 feet 6 inches wide. Besides smaller rooms, in this story is situated the principal hall. It extends the entire length of the site from Major-street to Hart-street. This hall is 76 feet long, 40 feet wide, and 28 feet high. The central part of the fourth story is occupied by the upper portion of the hall, whose altitude is equal to that of two stories. In the front there is a class-room for girls, adjoining which is a cloak-room. On the Abingdon-street side there are two rooms for the resident porter, and the staircase which leads to the top story. In the fifth story there will be a class-room, fronting towards David-street, the same dimensions as the one on the fourth story; a room parallel to Major-street, 65 feet long, by 21 feet 6 inches wide; a third on the Hart-street side, 40 feet by 24 feet; and a fourth on the side next Abingdon street, 32 feet by 19 feet 6 inches; various intervening spaces being applied as conveniences. The building will be in the Italian style of architecture. The contractor is Mr. George Harrop, of Hulme.——The question of a new town hall for Manchester has been mooted, and a hint thrown out that it will be desirable to append suitable courts for the holding of assizes here. A site, somewhat objectionable it is said, has also been hinted at. The amalgamation or fusion of the borough of Salford with the city of Manchester, for borough and sanitary purposes, has also been suggested. Strenuous efforts, we hear, will be made, jointly by the corporations of Manchester and Salford, to obtain, as speedily as possible, an additional communication between the city and the borough, by the erection of a bridge over the Irwell, near the railway bridge in Water-street. There is hope that an Act of Parliament will not be needed, and that the improvement will be effected at a very much smaller cost than has hitherto appeared possible.

Oldham.—The foundation-stone of a new grammar-school, to be erected at Greenacres, was laid on Saturday week.

Accrington.—Public buildings, to be called the Accrington Peel Institution, are to be erected here by a company, to whom the money (about 1,000*l.*), collected for a memorial to the late Sir Robert Peel, has been handed over. The buildings are proposed to accommodate the local Mechanical Institution at a nominal rent, besides providing for public meetings, balls, concerts, &c. The building, according to the local *Guardian*, is proposed to be erected in Blackburn-street. It will occupy the space between Union-street and Foundry-street, with the principal front forming the line of Piccadilly. This front will consist of a centre and wings, the centre forming a covered arcade or carriage-drive. The arcade will have three bold deeply-recessed archways, 10 feet wide each. The arcade occupying the centre of the principal front also forms the base of a portico of eight Corinthian columns, supporting entablature and pediment. The wings of the principal front and the two side fronts to Union-street and Foundry-street will be pierced on each side with three arched window openings. The stone for the entire building will be from a neighbouring quarry, of a very durable character, it is said, and light, agreeable colour, that for the principal fronts being specially selected for the purpose: the whole will be finely polished, as the stone admits of a superior finish in this style of work. The interior arrangement of the building will consist—on the ground story of entrance-hall (24 feet square), vestibule, principal staircase, 25 feet wide; on the right of the entrance-hall will be a small lecture-room, 45 feet by 26 feet; committee and class-rooms on the left, a public news-room, 48 feet by 18 feet, and reading-room, 32 feet by 25 feet. Accommodation will also be provided for the post-office. A dwelling-house and large cooking and refreshment-rooms are also provided at the back of the principal staircase, over which are the resident's apartments and a subscription billiard-room. The first, or principal floor, will be devoted entirely to a large public hall or assembly-room, 120 feet long, 45 feet wide, and 26 feet high, having at one end a retiring-room, over which is a gallery for orchestral purposes. The walls of the room will be decorated with panelled pilasters, having enrichments of fruit and flowers in high relief. A bold modillion cornice and enriched frieze runs round the entire room, from which springs a coved and panelled ceiling, with large circular central panel, inclosing perforated flowers and other enrichments. The building throughout will be heated with hot air, and provision made in all rooms for ventilation. The style of architecture adopted throughout is of the modern Italian school, from the designs of Mr. J. Green, architect, Portsmouth, near Todmorden, under whose superintendence the works are to be executed. Mr. R. Smith, of Burnley, is the contractor for the masons' work, and Mr. James Hindle, of Accrington, for the carpenter and joiners' department. The total cost of the building, exclusive of land, will be about 7,500*l.*

Sunderland.—The Dock Company have given notice of their intention to apply for powers to raise capital for the extension of their dock, by the construction of graving docks, slipways, &c. for the convenience and accommodation of the large class of vessels now built in the Wear. During a late storm two of the coffer dams of the dock works were broken by the force of the sea, and in the new works of the dock extension there was upwards of 14 feet of water. But there is now in operation a large syphon and a chain pump, worked by a steam-engine, employed in throwing the water out of the dock, and it is expected to be cleared entirely in a short period, when the excavation will again be proceeded with.

Newcastle-upon-Tyne.—The public works in the counties of Northumberland and Durham, for which notices have been given for the ensuing session of Parliament, are unusually numerous and extensive. In Newcastle the plans and sections of Mr. Dobson's project for taking the opportunity afforded by the late destructive fire to substitute for the old and narrow chares of the quay new and spacious streets, and for forming a broad and lengthened quay from the Swirl to the Ouseburn, have been duly lithographed and deposited; as also those of Mr. Brooks' plan for removing Tyne-bridge higher up, and so, by means of a swing-bridge, to open up the navigation of the upper portion of the river, which hitherto has not been accessible to the shipping, owing to the lowness and narrowness of the arches of the present structure.

Gateshead.—Mr. Hall, the town surveyor, has elaborated and completed *his* plan for eliciting "good out of evil," and the necessary power will be obtained next session for the construction of a new quay, and offices and stores, on the site and in the neighbourhood of the memorable "Bertram's warehouses."

Glasgow.—A range of buildings are to be erected in Irongate-street, for the City of Glasgow Bank, and other purposes, having a frontage of 312 feet. The style is described as mixed old Scotch and Flemish; and the building will include a tower at the angle, next Nelson-street. Mr. Rochead is the architect: the Messrs. Taylor will be the builders.

Panmure House (Arbroath).—In order to form some idea of Panmure House as it now appears, says the *Arbroath Guide*, persons who have a remembrance of the former venerable building must imagine it completely encased in the new. In the interior the old building has been turned to good account. The huge ball-room still remains; and, in consequence of the windows being modernised, may be said to be enlarged.

The principal old oaken staircase and balustrade —the latter formed of carved oaken pillars— still remain, and other relics of old Panmure House are not wanting. Everything that can conduce to comfort and luxury is here seen united. Suites of commodious sitting-rooms, bed-rooms, dressing-rooms, and bath-rooms are found on each successive floor. By means of machinery, dinner is to be conveyed to the dining-room; while by some sort of crane process descending through a wooden case, running the entire height of the building, and in its centre, similar in construction to the elevators used in factories, and extending from the ground-floor to the different floors above, all necessary articles, such as fuel, &c. may be conveyed [servants as well?] to the different apartments, from the lower to the upper parts of the building. The library roof, as well as the roofs of a number of the larger sitting-rooms—more especially the drawing-rooms and dining-rooms—are remarkable for their cornices and ornamental work, some of which was executed very many years ago. The flights of stairs connecting the different floors are spiral, as in old castellated buildings, but devoid of abruptness. The front view of the range of buildings must extend to at least from 400 to 500 feet. Instead of the principal entrance being, as formerly, to the west, it is now to the east, fronting Arbroath. Two new lodges have been erected at the termination of the wide approach and carriage-road proceeding eastward. Mr. Bryce, of Edinburgh, is the architect.

THE ROYAL ACADEMY MEDALS.

Silver medals were awarded to Mr. Edwin Frederick Hall, for the best painting from the life, in the life school; Mr. Henry Harrison Martin, for the best painting from the living draped model, Mr. Henry Garland, for the best drawing from the life; Mr. John Adams, for the best model from the life; Mr. Henry W. Banks Davis, for a model from the life; Mr. Benjamin C. Norton, for the best drawing from the antique; Mr. A. J. Barrett, for the best model from the antique; Mr. Charles Lock Eastlake, for the best architectural drawing, of the south front of Burlington House; Mr. Edgar Philip Brock, for the best perspective drawing in outline; Mr. Henry Banks Davis, for the best drawing in Sciography.

AUCTIONEERS AND BUILDERS.

In the Lambeth County Court, an action was lately brought by Mr Cox, house-agent and auctioneer, against the widow of a builder named Ellis, under circumstances of some importance to the trades concerned. It appeared that the plaintiff had been an auctioneer for six years, and had invented a new mode of carrying on the auction department. Instead of charging the wonted commission, he made a smaller charge, conditionally, that as regarded estates or other property intrusted to his auction, and which might be bought in, and afterwards sold at auction by another agent, without a written withdrawal being given to him by the vendor, he (Cox) was to be entitled to one-third of the commission to the amount realised at the sale. The plaintiff now alleged, that the defendant had sold her property without such written notice being given him, and he claimed 39*l.* 0s. 6d. for commission, registration fees, and other incidental expenses.

Defendant's solicitor stated that his client's husband, who carried on an extensive business as a builder, died, leaving his property mortgaged. Mrs. Ellis wishing to release it, and to liquidate some building claims, she employed the plaintiff to dispose of it at Garraway's, and it was ultimately bought in. The day after the auction Mrs. Ellis paid plaintiff 6*l.* 2s. 6d. for expenses incurred, and for his agency, and plaintiff gave the defendant a receipt in full of all demands; at the same time distinctly telling the plaintiff, he should have nothing more to do with the disposal of the property. In February, the property was sold by Mr. Wilkinson for 1,500*l.* which, coming to plaintiff's ears, he made at once the present demand. Defendant's solicitor commented upon the way in which the plaintiff made out his claim; and upon evidence being given to the purport of his defence, the jury returned a verdict for the defendant.

Cross-legged Effigies.—Mr. Boutell's paper on brasses, as reported by you in page 578, affirms that cross-legged effigies have never been found on the continent of Europe in any single instance. In your volume for 1853, page 2, there is mention made of some effigies in that attitude in Galicia.—Beta.

PORTABLE STEAM TRAVELLING CRANE.

At the Birmingham Institution of Mechanical Engineers, a very interesting paper was lately read by Mr. W. Fairbairn, of Manchester, descriptive of a newly-invented steam travelling crane, the construction of Messrs. Dunn, Hattersley, and Co. of that city. The advantages proposed by the new crane were, that the steam-power travels with the traversing carriage, and does not require any longitudinal shafts or bearings, the machine closely resembling the general appearance of the ordinary travelling cranes, commonly used by masons and contractors. The longitudinal way, transverse carriage, and crab, are arranged in the ordinary manner; while the steam-engine and boiler, with the driving gear, are supported on a platform at one extremity of the transverse carriage, being fixed to it, and travelling with it in a longitudinal direction whenever so required. The steam travelling crane which formed the subject of the paper was designed for the contractors for the Grand Trunk Railway of Canada, Messrs. Peto, Brassey, and Betts, and intended to be employed in the construction of the works of that railway, and is, in effect, a new application of the portable steam-engine. A pair of small direct-acting horizontal high-pressure steam-engines are secured to the main timbers of the traversing carriage, the boiler being constructed for burning wood, the cheapest and most abundant Canadian fuel. The tubes are made of solid copper, without seam or joint, so that the acid from the wood should not corrode them. The engine and boiler, with the driving gear, are protected from the weather by a cabin, constructed of light framework, and covered with a corrugated iron roof, so as to render the machinery complete. It was stated at the meeting that the cost of the whole was 550*l.* including the engine and boiler, but exclusive of the timber-work for the frame of the traveller platform and shed over the engine, which were not sent out, and would be supplied in Canada. The estimated expense of the entire could not exceed 650*l.* The crane was intended for lifting 10 tons, and moving that weight in any position: it would, however, take more.

Notices of Books.

VARIORUM.

"The British Almanac of the Society for the Diffusion of Useful Knowledge for 1855" (Knight and Co. 90, Fleet-street), appears, as usual, in company with its "Companion," which contains the ordinary amount of interesting matter connected with current topics; such as articles on the sanitary state of town dwellings; the occupations of the people; the census of the United States, 1850; abstracts of new Acts of Parliament and of other Parliamentary documents and proceedings; and on architecture and public improvements. The last of these is more particularly devoted to street improvements and general progress, and it is illustrated with engraved sketches of the interior of St. George's Hall, Liverpool; St. Olave's Grammar School, Horsley-down; Balmoral Castle; and a plan of the new Metropolitan Cattle Market.——A pamphlet on "The Late Payment of Weekly Wages, considered in connection with Sunday Trading in London," by "A Layman," has been sent us by Mr. Rivington, of Waterloo-place, London. It contains some strong evidence in favour of payment of wages on the Fridays, and at farthest, on the Saturday forenoons, instead of the late Saturday system still so prevalent. It appears that almost uniformly the early payment of weekly wages has worked exceedingly well, and without leading to the least irregularity of attendance on the Saturdays. A number of instances are quoted in evidence, collected from private information, kindly contributed by such firms as Messrs. Spottiswode, Hansard, and others. Messrs. Cox (Bros.) and Wyman, the Printers to the East India Company, say that having now for a considerable period adopted the system of paying wages on the Friday evening, it gives them much gratification to be able to state that even in extreme or exceptional cases a ready willingness and a prompt attendance on the part of those in their employment have uniformly been observed, so that they seem to have a settled feeling in favour of the Friday payments, which are esteemed as an advantage by the employed. It must be admitted, certainly, that the conduct of so high a class of employés as compositors forms no criterion as to that of the working classes generally; but it has been found that early payments, with very few exceptions, have been thankfully received, and have not been abused, by any class of our industrial population who may have had the good fortune to be employed by masters thus considerate as to their welfare. The example of Friday payments has been set by the Royal Family and the Government dockyard, Mint, arsenal, and other establishments, as well as by many influential firms, such as those we have alluded to; and we hope to see it soon very much extended, as pamphlets such as that now under notice are well adapted to assist in doing.——Some more shilling parts of Longman's "Travellers' Library" remain to be noticed since last we alluded to them. One of these comprises articles on Chesterfield and Selwyn, by Mr. A. Hayward, Q.C. reprinted from the *Edinburgh Review*. Other two are occupied with selections from the writings of the Rev. Sydney Smith; and two more with "Nordufari; or, Rambles in Iceland," by Pliny Miles.

ROYAL GALLERY OF ART.

We have already mentioned the permission considerately, deservedly, and graciously accorded to Mr. S. C. Hall, by her Majesty and the Prince Consort, to issue engravings of the pictures by ancient and modern masters, in their private collections at Windsor Castle, Buckingham Palace, and Osborne House, a permission intended as a mark of favour and an advantage. The times are not propitious for such an undertaking: men's minds are occupied with the war, and their resources are lessened by its calls. We hope, nevertheless, that the strong claims which the work has to the attention of the public will be sufficient to overcome the disadvantages of the moment, and serve to secure a proper return for the immense outlay and amount of labour necessary for its due accomplishment.

The first part has been published,* and contains "The Virgin Mother," by Dyce, engraved by T. Vernon; "Mount St. Michael," by Stanfield, engraved by R. Wallis; and "The Duchess of Devonshire," by Sir J. Reynolds, engraved by P. Lightfoot; besides a title-page, and an elegant dedication, designed by W. H. Rogers.

The first is our favourite, and is of itself worth the whole cost of the part. The head of the infant, full of thoughtful compassion, is especially striking.

The work commends itself to public patronage on several grounds, but on none more strongly than these,—that it is likely to serve the interests of art, that it promises to be fully worth the money it will cost, and that Mr. Hall deserves well of the art-loving public.

Miscellanea.

STOREY'S GATE.

'Tis well the Gate is down!
Who was this Storey, that his long-lost name
Should be inscribed upon the roll of fame,
And after ages of oblivion claim
A posthumous renown?
Came he of gentle blood, or humble birth?
Plebeian was he, or patrician?
Was he in trade? or did he till the earth?
Was he a parson, or physician?
Perhaps he fill'd some office in the State!
But was he ever known as Whig or Tory?
All seems a blank. Tho' *Storey* had a *gate*,
'Tis plain his *gate* will never have a *story*.

Cecil Harbottle.

[Our good friend Cecil Harbottle has sacrificed his historical knowledge to the point of his epigram; for we are sure he knows as well as anybody that Edward Storey, who gave his name to the gate, was keeper of the volary to Charles II. which volary or aviary was so large that the birds could fly about in it].—*From "Notes and Queries."*

Architects and Builders.—Sir: No wonder people allow builders to furnish them with plans, for it is almost impossible to confine an architect to a sum; and if an employer knows nothing about building, he is certain to have a more costly thing than he intended. I lately asked a first-rate architect, an honest man, for a design for a very plain house, to cost 2,000*l.* sending him a ground-plan drawn out. He sends me in return a plan utterly unlike mine, and which to carry out honestly and plainly would cost more than 3,000*l.* nearly 4,000*l.* As long as architects act thus they must expect that people will employ builders, who find their own plan and price with it, particularly as few people are born builders.

A Builder.

* Messrs. P. and D. Colnaghi and Co. Pall-mall East; Thomas Agnew and Sons, Manchester.

OXFORD ARCHITECTURAL SOCIETY.—At a meeting on Wednesday in last week, Mr. Street read a paper upon the ancient buildings of Lubeck. They are all executed in red brick, and are remarkable for their number and grand size, and for the number of remains of ancient church furniture, &c. which they contain. The *tout ensemble* of the city is striking, owing to the number of towers, spires, and turrets rising above the picturesque outline of the old houses. One of the most interesting buildings appears to be St. Katherine's Church, in which there still remain several vestments, linen, altar cloths, and the like of the twelfth, thirteenth, and fourteenth centuries, besides a vast number of painted toypticks. Lubeck is rich in rood screens, roods, and lofts, and in metal parclose screens, but the next interesting feature is that everything inside and out was built with red brick, with very slight and occasional use only of stone. Mr. Street dwelt at some length on this, and showed that these brick buildings, taken in conjunction with the still finer brickwork of the north of Italy, defined very distinctly the extent to which brick and terra cotta were ever admissible in good architecture. Bricks used for mouldings were always effective; but wherever they had been used for traceries or carvings, it was quite curious (as it was, too, very instructive) to see how they demoralized the whole work. He pleaded for the use of red brick inside as well as outside, all the old brick buildings both in Germany and Italy having invariably been so constructed.

THE SOCIETY OF ANTIQUARIES, NEWCASTLE-UPON-TYNE.—The monthly meeting of this society was held on Wednesday before last. The donations on the table were numerous and valuable. The chairman, Mr. W. Kell, on the part of Mr. Martin Dunn, of Gateshead, presented to the society one of the stall-ends of the ancient church of Merrington, near Ferry-hill, restored three or four years ago (Mr. Dunn being contractor for the joiner-work). Dr. Bruce exhibited two or three large pine cones, such, he said, as he had often seen in houses of the common people in Italy. They were used as "fire lighters;" and nuts were extracted from them, the kernels of which were used as food. These cones were figured on Roman monuments existing in our own country, on the line of the wall. They were also sculptured in the hands of king-priests on the ancient Assyrian temple and palace sculptures—one hand holding a basket, and the other a cone. Mr. Layard had suggested that the cone was used as an emblem of fire. The Rev. James Raine, jun. read a paper on John Lord Lumley, of Lumley Castle, Durham, who flourished in the reigns of Henry VIII. Edward VII. Mary, Elizabeth, and James. The subject of this paper was John, son of George Lumley, executed at Tyburn as an insurrectionary leader.

ELECTRIC SIGNALS ON RAILWAYS. Some experiments have lately been made of a new system of electric signals at the Paris station of the Northern Railway. An apparatus having the words "train" and "*tout est bien*" is placed at each station. An indication or hand is placed on this apparatus, and is attracted by electro-magnetic power in one or the other direction. Outside each station is placed a pedal with a spring adjusted, so that each wheel of the train presses on the spring, establishing a contact which gives a movement to the apparatus through galvanic action, and produces the following effects:—1st. A ring of a bell at the next station announces that the train is advancing; and an indication to the preceding station signals "*la voie est libre*," unless the hand points towards the word "train," when it communicates to an indicator on the locomotive, the signal "*arrêtez*;" but as soon as the indicator at the station shows "*la voie est libre*," by reversing a handle, the engine-driver receives the signal "*tout est bien*."

NEW WESTMINSTER-BRIDGE. — The submerged portions of the works of this bridge are now being carried on with energy, whenever the low state of the tide allows of it; and even during the night, when the tide is favourable, the men are at work, without any means being provided to give them the necessary light to carry on their operations. I would remind the persons who are connected with the undertaking, that during the time that some public works were being executed in Paris, not long ago, the workmen were compelled to work all night. Two stages were erected, one at each end of the works, and opposite to each other, with large lanterns of weather-boarding at the top, and open on the side, towards the works. At some considerable elevation within these the electric-light was employed, combined with very powerful reflectors, and the result was completely successful, the whole works being rendered as light as day. Now, it is particularly desirable, for the *safety* of the men employed on Westminster-bridge, to have as much light as possible. The above may be erected at a very small cost, and would materially expedite the construction of the bridge. It might, if quite successful, be used afterwards for lighting the bridge. C.

IRON HOUSE FOR AUSTRALIA.—Messrs. W. and P. M'Lellan, of Glasgow, have just completed a mansion for Mr. Westgarth, the mayor of Melbourne. We learn from the *Glasgow Commonwealth*, that the house is one story high, with a 14 feet ceiling. The ground-plan is an oblong square of 70 feet by 30, with a projection of 30 feet by 20, having a large bow to the front, which forms a drawing-room of the entire size, with twelve windows. The main entrance to the building is at the left corner of the front, leading into a vestibule, a lobby, and a square hall in the centre of the house, whence there are doors leading to a dining-room 22 feet by 16, three bed-rooms, two dressing-rooms, pantry, bath-room, with water and other closets. The kitchen will be built behind the house, outside, as is usual in all warm climates, and is reached by a lobby from the central hall. The walls are formed of cast-iron plates, varying from ⅛ to ¼ inch thick. The whole, when completed, will cost about 2,000*l.* exclusive of freight and fitting up at Melbourne.

CARDIFF.—Mr. David Mausel, of this town, according to the local *Guardian*, has been commissioned by Mr. W. Thomas, who resides in the Court-house, at Merthyr, to work up some old oak timbers found there into furniture for the Court-house. The carvings are said to belong to the Elizabethan period, to which the house itself (now being repaired, and its wood carvings and arches restored) is said also to belong.——The rising prosperity of Cardiff appears from some statistics in Jenkins's history of the town and castle, lately published. In 1831, the population was 6,187, whereas in 1851 it was 18,351. To these enumerations it has swelled up from 1,018 in 1801. The town contains 117 streets and 56 courts, and the number of inhabited houses in 1853 was 3,485. The increasing prosperity of the two town parishes has also extended its influence to the adjoining parishes on the east and west sides. On the east, numerous villas have recently been erected, rapidly uniting the village of Roath with the town; while, on the west, the small hamlet of Canton, distant one mile, which, within the last seven years, consisted of only a few poor cottages, comprises 167 houses, a church and schools being in course of erection for its rapidly-increasing population. A large plot of ground has also been taken by a building society, and the ground laid out for numerous streets, thus forming a connecting link between the town of Cardiff and the ancient city of Llandaff. The Bute Docks, the Glamorganshire Canal, the South Wales and Taff Vale Railways, and branches of the latter to each side of the docks all tend greatly to enhance the prosperity and importance of Cardiff.

SANITARY PROGRESS OF MACCLESFIELD.—The second year's report of the Local Board of Health and Improvement Committee, shows a notable and instructive sanitary progress, in obvious connection with the various improvements in sewering streets, inspecting lodging-houses, &c. which the Board have carried out. In the seven years ending September, 1848, the rate of mortality in the borough was 33 per thousand. In the five years since 1848, and ending September, 1853, before the works of the Board were fairly in operation, the mortality was 29 per thousand. During the last year, since the extensive works referred to have been completed, the mortality was 25 per thousand. If these facts were taken alone, they might be considered as of little value; but certain streets in the borough were shown, up to 1848, to possess a frightful rate of mortality. These are the streets which the Board have sewered and paved; and taking the last year as compared with the five preceding years, the decrease in the rate of mortality stands thus:—

Wood-street	60	per cent.	less deaths.
Nixon's-yard.....	42	,,	,,
Watercrotes	40	,,	,,
Wellington-street	34	,,	,,
Water-street	12	,,	,,

Wood-street was the first, and Wellington-street and Water-street were the last streets completed. For each death, it is proved from correct data, there are 28 cases of sickness; so that it will be seen how large a number of cases of sickness must have been prevented, with all their attendant loss and suffering; but, in order to prove the fact, the Board ascertained that, according to the relief-books of the Board of Guardians, the number of cases of sickness relieved and attended by the Union Surgeon have been 24 per cent. less in Wood-street during the last year, and in Nixon's-yard, Water-street, and Wellington-street, 29 per cent. less; whilst in Silk-street, Cotton-street, Charlotte-street, and a few others not paved or sewered, there has not been any decrease at all. Besides promoting health, it is found that the natural spirits thus infused have induced a positive decrease in the use of stimulating liquors, as we long since pointed out would be the case. Crime also has hence greatly diminished in the same districts, as shown by the police records.

A MILL AND CHIMNEY STACK BLOWN DOWN AT HALIFAX.—At Brow-bridge, near Greetland, a mill, in the course of erection, was demolished on Sunday week during a severe storm of wind and rain. The building was situate on the side of a hill. The front of it was five stories in height and the back six. Its length was about 50 yards, and breadth 14 yards. The outer walls were finished, and a portion of the timber-work of the roof. The floor joists were all laid, but not boarded; and, of course, none of the machinery had been fixed. The wind had blown with great violence from the north-west, and that side of the mill was at length blown down. In its fall the stones and timbers came in contact with the wall on the other side, which was consequently forced down. Both the ends are still standing, but in a very shattered state, and the greatest part will have to be taken down. The amount of damage, it is thought, will be near 2,000*l.* At Stainland, a woollen mill chimney, 50 yards high, was blown down, leaving but a few yards standing. The chimney fell into a field, and a great portion became embedded in the earth.

SOCIETY FOR PROMOTING PUBLIC IMPROVEMENTS IN LEEDS.—On Wednesday evening before last Mr. Mechi, of London, read a paper "On the Application of Town Sewage to Agricultural Fertilization," before a numerous and respectable meeting, in the Philosophical Hall, Leeds, convened by the Committee of the Society for Promoting Public Improvements there. The chair was taken by Sir George Goodman, M.P. In course of his paper, Mr. Mechi said that if they were agreed that it was desirable to economise their town sewage by applying it, the carrying it out practically was a mere simple engineering question, offering very few difficulties. Perhaps the best known was the process of liquifying the solid contents of sewers; but he had found no difficulty on the subject, and in his great tank deal houses on the solid manure from a large number of bullocks, sheep and pigs, as well as all the sewage of the house, were made to pass through a jet or tube whose aperture would barely admit his forefinger. Agitation and solution, especially with the help of a jet of air, affected all substances more or less quickly, and most likely he (Mr. Mechi) would not be long in decaying; but the solid excreta were instantly liquified, and might even safely fall on the land in a shower, and sink deeply into the subsoil of drained land. He said particularly drained land, because, unless the soils were naturally or artificially under-drained, their system of irrigation could not be carried out with advantage. At the conclusion of the paper some discussion ensued, and the whole proceedings were summed up by Mr J. G. Marshall, who expressed his sense of the favour conferred upon them by Mr. Mechi, who, he said, had shown them that there was a solid and economic foundation for his plan in the application of sewage. The discussion had shown that the difficulties arose almost entirely from want of proper sanitary arrangements, such as an abundant supply of water and water-closets. Of the latter, by all accounts, there is scarcely such a thing at all as yet in Leeds. A vote of thanks was given to Mr. Mechi.

ENGLISH ARCHITECTS AND FRENCH COMPETITION. —The English architects have now an opportunity of distinguishing themselves in *Belle France*; for an appeal has been made to the talents of architects of all countries to send in plans for the future cathedral of Notre Dame de la Treille, at Lille. We are told that the style of the edifice is to be that of the end of the thirteenth century. The expense is not to exceed three millions of francs. The successful competitor will receive 10,000 francs and the appointment of architect for carrying out the works, with a liberal salary. The second approved design will have 4,000 francs, and the third 2,000 francs.

NOTICES of intended application to Parliament, in the ensuing session, have been given by various railway companies for 131 new railway Bills; and in compliance with the standing orders of Parliament, plans and sections of proposed new lines of railway and other works in connection therewith have been deposited in respect of ninety-nine of these Bills.

COMPETITION. NEW CHAPEL AT HACKNEY.—In reply to an advertisement in the *Builder*, between forty and fifty sets of plans were sent in, averaging about six sheets to each set, and thus making a total of about 250 sheets to examine, independent of the descriptions which were to accompany each set; and yet within a week from the day on which the plans were sent in, the so-called decision was arrived at; and an advertisement appeared on the following Saturday, requesting gentlemen (with one exception) to apply for their drawings on the Monday and Tuesday after. Now, impossible, as it appears to be, that so many plans can have been more than glanced at, even supposing they received that honour! within the time above mentioned, it is nothing compared to the fact, that there was a set already cut and dried, which it was determined should over-ride all the rest. TREBOR.

Great Northern Railway Schools.—Doncaster has extensive and commodious schools for the children of the workmen employed on the Great Northern Railway, capable of accommodating 500 scholars. The schools, three in number, for boys girls, and infants, contain each an area of nearly 1,100 square feet, and are provided with suitable class-rooms and every other convenience. The rooms are heated with hot water. This part of the arrangement was placed under the management of Mr. Johnson, the superintendent of the locomotive department. The plans were, we believe, gratuitously presented by Mr. H. Goddard, of Lincoln. The builders were Messrs. Lister and Son.

The People's College, Sheffield: Lecture.—Mr. R. Monckton Milnes, M.P. delivered a lecture on Wednesday evening in last week, at the Cutlers'-hall here, before the students and friends of the People's College. Mr. Milnes said he had selected "The Moral Uses of the Study of History," as a subject suitable both to them and himself. It was a subject inexhaustible in its character, extending from the Bible to the newspaper, and afforded an object of complete interest to the most capable student and the most superficial observer. He had chosen it also because it was one to which their attention might naturally be very much directed in the time of a war of this country which was likely to be important in its effects upon future generations. The lecture was made a very interesting one by the turn which Russian aggression gave it in reference to past time. In a subsequent address, Mr. Milnes alluded to the circumstances under which the People's College had grown up. The feeling of independence, he said, on which this college was based inspired him with the deepest respect. He could hardly hope that it would be easy of imitation, but he was sure of this, that they had hit the nail upon the head as to the reason why such institutions as this commanded universal respect and regard, while many other institutions, equally good in their objects, equally honourable in their intentions, and founded with equal zeal, had not succeeded in inspiring the same feelings. He believed it was the independence connected with this institution that had been invaluable to it, and if that spirit would only infuse itself more into other institutions, and there were less dependence upon the patronage of great men and names, and more trust in themselves, the great names and everything else would follow in due time. Therefore, he said, trust to yourselves, and do not care whether I or anybody else come to lecture. Remember that it is yourselves founded this college; that it is upon your own exertions, your own self-denial, your own resolution, that it must solely depend.

Society of Arts.—Paper by Mr. Mechi.—The paper read on the 6th inst. was "On British Agriculture, with some Account of his own Operations at Tiptree Hall Farm," by Mr. I. J. Mechi. This is the fourth annual statement of the result of his experience which Mr. Mechi has laid before the Society. The balance-sheet was said to be highly satisfactory and remunerative, showing an advantage in rent and profit of about 750*l.* on 170 acres. Mr. Mechi attached much importance to the application of our town sewage to agricultural fructifications. Among the coming improvements in agriculture was that of cultivation by steam. On public grounds he had expended some money in the construction of Mr. Romaine's machine. It had, however, only been partially successful: there was too much velocity and too little steam. The act of raising the soil must evidently be by a slow motion. Enough was shown to prove that it would soon be the order of the day, particularly as the Royal Agricultural Society of England had lately very properly offered a premium of 200*l.* for such a machine. Amongst the evidences of enlightenment and improvement of the present day was the introduction of covered homesteads or farmyards. Live stock, however, he considered, were necessary evils—mere manufacturers of manure, and unattended with any direct profit. An animated discussion followed the reading of the paper. The chief points of the debate were on the relative merits of solid and liquid manure, and on the application of them to agriculture. It was thought that the great bulk of town sewage would prove an obstacle to its extended use, and that as much of the land of England, especially in the western parts of the country, was already so far saturated with water that it was difficult of drainage, it would be injudicious to increase the amount of water by using liquid manure; but surely there is here an over-estimate of the influence of the requisite quantities of liquid manure. On the other hand, it was asserted that liquid manure was especially useful in the summer and in seasons of drought; that it must be borne in mind that in the case of town sewage, at least, it was already in a liquid form; that to reduce it to the solid form must involve a considerable expenditure; and that, after all, it might be necessary to apply it in a liquid state.

Iron.—A Glasgow correspondent states that the means of turning out castings of every description there have been greatly increased during the last two years, as nine new ironfoundries have been built during that time, and only four taken down. The number of foundries now in good repair and full working order in Glasgow are 51, and in the West of Scotland also in Glasgow are 51, and in the West of Scotland also in 51,—in all 102.——On Wednesday evening before last, at the Athenæum Rooms, Wolverhampton, and in connection with the institution, Mr. S. H. Blackwell delivered a lecture on "The Manufacture of Iron popularly considered." The audience was numerous, and listened to the lecture with attention throughout. Describing at length the geological characteristics and the chemical constituents of the ore, the lecturer traced its progress from the pit to the workshop, describing the processes it now undergoes, and contrasting them with those used in former times. In conclusion, he said that we could not too much admire the abundant stores of the "precious metal" which had been laid up for our use in the bowels of the earth. He used the term "precious metal" in reference to iron, advisedly; for he held that that metal was more valuable than the gold of California or Australia. With it, too, was stored up the coal necessary to enable man to strip it of its many masks and convert it to its many uses.——Mr. A. Robinson, of London, has taken out a patent for a compound of black lead (plumbago) and asphaltum, to be applied to bottoms and sides of vessels, in a fluid heated state, as a coating or paint. The asphaltum is heated to a fluid state in an iron kettle, then the plumbago, at the rate of 2 ozs. to the pound of asphalte, is stirred up with it until it thoroughly incorporates, when it is applied by brushes.——A large order for stoves for the Crimea (1,200) was given lately to the Falkirk Iron Works. Government also bought up the entire stock of heater stoves contained in the Carron Company's store in London.

Loysel's Patent Percolator.—For the extraction of colouring matters from dye-woods, medicinal matters from herbs, and the "spirit which cheers but not inebriates," from tea or coffee, a most ingenious apparatus is that of M. Loysel, C.E. the patentee of what we may call the great teapot of the Crystal Palace,—a teapot which would both astonish and puzzle the Chinese; yet the whole thing is very simple in principle, though somewhat varied in application. This principle is, rather odd to say, nearly one and the same with that so usefully applied to sewage manure by his Royal Highness Prince Albert, namely, upward percolation, under hydrostatic pressure. In this case, however, there is a twofold percolation, the first being upward and the last downward. Boiling water is made to descend through a pipe from a vase to which it is raised from a boiler connected with the machine, which is self-acting throughout almost the whole process. This water so conducted downwards through the pipe, is forced by its pressure to reascend through the powdered tea, coffee, herbs, or dye-woods, producing an infusion which again descends through the material infused, which thus acts as a filter to its own infusion, while yielding any remainder of its tinging or other virtue to the infusion itself, which then collects into proper receptacles, whence it is drawn off in the usual way. The apparatus, on a large scale, has no resemblance to either tea or coffee-pots, but on a small scale it has; and, indeed, it is in use, for economical purposes, even in teapots of ordinary calibre.

Tallow-melters' Boilers.—In your publication of the 25th of November, you state a great nuisance exists at a tallow-melter's establishment in "The Row." I am not aware of their method of melting. About forty years since, the then proprietor sent for me to fix his tallow and stuff pans on my plan, viz. to consume the nauseous vapours, which was done by passing them through the fire of the furnace, a very simple *plan*, and requires but little attention, and no nuisance was complained of till the then proprietor pulled down and rebuilt the melting place, without considering my method of consuming the nauseous effluvia. So complete is my plan, that one-third of the vapour is condensed into a harmless fluid by the cold passing over it in its passage to the cold air flue necessary for the furnace in a melting-house properly constructed, which should be air-tight, and have no connection with any other part of the building, except by a door, and over it a fan-light hung with pivot hinges, and that, if possible, at the extreme end of the place in which the melting-pans are fixed. When the doors, which should be folding, 4 feet 6 inches, are required to be opened, the fan-light should be shut, and all windows should be fixed, and the ceiling be lath-and-plastered, whether it be a separate building or *under another*. Each pan should have a separate flue, with a chimney shaft of proper height to each. If so, a person may be on the top, and not smell anything offensive, which was proved in a court of justice at Westminster some years ago.

A Reader from the Beginning.

New Railway Station at Dudley.—It is stated that the two Railway Companies who absorb the great portion of the traffic at Dudley, have at length arrived at an amicable arrangement, which will lead to the erection of a substantial, convenient, and permanent station, a result the public may congratulate themselves upon.

Cambridge Antiquarian Society.—On Dec. 4th, Mr. C. C. Babington, of St. John's College, read a paper, entitled, "An Account of the Excavations of Tumuli made by the Rev. J. J. Smith, at Bincombe, in Dorsetshire, in 1842, drawn up from his original Notes in the possession of the Society." An extended discussion then took place concerning the materials in existence for the formation of an Athenæ Cantabrigienses.

Stone and Iron.—The evil lately complained of relative to the destruction of stone curb near Hyde-park-corner, might be at once obviated by the adoption of "Hutchison's indurated stone," which being *impervious*, would prevent that rapid oxidation of the iron that always takes place whenever stone, however slightly porous, is used; besides which, the indurated stone could be supplied 25 per cent. cheaper than York or Portland stone. Your correspondent "A. W." could also have been supplied with a ledger, equal in durability to granite, at something like half the price —*verbum sap.*—N. E. S.

Recent Improvements in Ovens.—In an article on this subject in the November number of the *Dublin Monthly Journal of Industrial Progress*, is an account of M. Rolland's system of bread-baking, which was some time since made the subject of a highly laudatory report by a commission to the French Academy. The oven of M. Rolland is said to combine a number of advantages found isolated in the inventions of others. It is circular, with floor of cast-iron plates, covered with tiles, and is supported upon a vertical axis capable of moving in a collar and socket. The latter is moved up and down by a vice-screw, so as to increase or diminish the height of the oven space, according as the bread is in large or small loaves. By means of bevelled pinions the floor revolves at will. The oven is heated by a fireplace built in the masonry under the revolving floor. The smoke and heated air pass by vents and six cast-iron pipes radiating upon a slightly inclined flooring of tiles, and thus heats the floor of the oven. From these horizontal flues the smoke passes up through vertical flues, and thus heats the wall of the oven. These vertical flues discharge into an open space between the cast-iron roof of the oven and a second plate, which is covered with a thick layer of cinders or other non-conducting material, and from this space it passes off by a chimney. M. Rolland's oven is thus heated like a muffle, but without direct contact with the fire.

HACKNEY CHAPEL COMPETITION.

Above seventy designs were received by the Committee, the production of forty-five architects. Mr. Wm. Mumford, of Paddington, was the successful competitor.

TENDERS

For the chapels, principal entrance, porter's lodge, superintendent's house, roads and drains, &c. for the City of London Cemetery, at Ilford. Mr. W. Hayward, architect. Quantities supplied by R. L. Curtis:—

Wilson	£29,884	0	0
Rowland and Evans	26,300	0	0
Higgs	26,248	0	0
Myers	25,200	0	0
Diggles	22,620	0	0
Honeyman	20,444	0	0
Crorst, jun.	19,980	0	0
Hill (accepted)	19,450	0	0

For building two houses on the St. Margaret's Estate, Richmond. Mr. Morgan, architect:—

Colls and Co	£1,249	0	0
Greigh	1,230	0	0
Clever and Stanger	1,226	0	0
Hopkins and Roberts	1,196	0	0
Case	1,187	0	0
Todd	1,168	0	0
Howlisson and Co.	1,138	0	0
Harrison	1,105	0	0
Adamson and Son	1,073	0	0

NOTICE.—All communications respecting *advertisements* should be addressed to the "Publisher," and not to the "Editor:" all other communications should be addressed to the Editor, and not to the Publisher.

ADVERTISEMENTS.

On January 1, 1855,

CURIOSITIES of LONDON: exhibiting the most rare and remarkable objects of interest in the metropolis.

By JOHN TIMBS, F.S.A.

Editor of "Laconics," "Year-book of Facts," &c.

In a closely printed volume of 728 pages. Subscribers' names the price not to exceed 10s. received for the Author up until December 27, by Mr. BOGUE, Publisher, 86, Fleet-street.

Now completed, price One Shilling, forming Six Numbers of Orr's Circle of the Sciences,

STRUCTURAL and SYSTEMATIC BOTANY.

By EDWARD SMITH, M.D. LL.B. B.A. (Lond.); late Lecturer on Botany and Anatomy at the Charing-cross Hospital Medical School, London.

With numerous Microscopical and other Illustrations.

Also, price Twopence, No. 51,

CRYSTALLOGRAPHY and MINERALOGY. By Rev. W. MITCHELL and Professor TENANT.

London: HOULSTON and STONEMAN, 65, Paternoster row; and WM. S. ORR and CO. Amen-corner.

Now ready, price Five Shillings, Third Edition of Part III. of the TREATISE on INDUSTRIAL INVESTMENT and EMIGRATION, being Suggestions for the Enfranchisement and Improvement of Copyhold, Life, Leasehold, and Church Property, by the application of the life assurance principle, with Rules and tables for the formation of Copyhold Enfranchisement and Freehold Land Societies, and a Mathematical Appendix, by

ARTHUR SCRATCHLEY, M.A. F.R.A.S.

Actuary to the Western Life Assurance Society, 3, Parliament-street, Westminster.

London: FRIENDLY SOCIETIES' INSTITUTE, 23, Pall-mall, and CHARLES MITCHELL, 12, Red Lion-court, Fleet-street.

ARTICLED PUPIL.—WANTED, in the Office of an Architect and Land Agent, about twenty miles from London, an ARTICLED CLERK, who will have good opportunities for perfecting himself in every branch of the profession. A premium will be required. For further particulars, address, R. D. Post-office, Reigate.

TO CLERKS OF WORKS.

Buildings under the Honourable Board of Ordnance.

A CLERK of WORKS, is required to superintend the erection of the proposed improvements to the Government Small Arm Manufactory, at Enfield Lock, ten miles north east of London. Salary £100. per week, and employment guaranteed for one year. Application to be made immediately to "CAPTAIN COLLINS'N, Royal Engineers, Royal Arsenal, Woolwich.

R. E. Office, Woolwich, Dec. 13, 1854.

TO SURVEYORS AND BUILDERS' CLERKS.

AN experienced CLERK required in a Builder's office in London, competent to take charge of the books, accustomed to accounts, and able to take out quantities and make estimates.—None need apply who have not been similarly engaged.—Address, W. S. Office of "The Builder."

INDURATED STONE COMPANY.—WANTED, a Young Man, at the Works of the above Company, as CLERK and FOREMAN. He must be thoroughly acquainted with bookkeeping, a neat penman, and have a good practical knowledge of masonry and general matters connected with building. He will also be required to make working drawings for masons, and to measure stonework when executed. The hours will be the same as kept by the workmen. The most unexceptionable references as to character and ability will be required, and only recent testimonials received. Apply personally, or by letter, post-paid, to Mr. N. E. STEVENS, Architect, High-street, Tunbridge-wells.

SHOP FOREMAN WANTED.—Wanted, in a Builder's Shop in London, a WORKING FOREMAN, to take charge of the joiner's department. He must be a thorough practical man, and acquainted with the building trade in all its branches. Application, with age, references, and the wages expected, to be addressed to Y. Z. to be left at the Leopard Coffee-house, Wellington-street, Borough.

TO MASTER PLUMBERS, &c.

WANTED, by a respectable Young Man, a SITUATION as IMPROVER in the above line.—Direct to W. C. 47, James-street, Camberwell New-road, Kennington.

WANTED, by a firm in the Timber Trade, a TRAVELLER who thoroughly understands his business, and knows the London trade. Apply by letter, post-paid, stating where last employed, and salary required, to X. Y. Z. Garraway's Coffee House, Change-alley.

WANTED, an active, intelligent YOUNG MAN, to take the charge of a Retail Timber-yard. He must have a knowledge of the business, and be conversant with accounts. Unexceptionable character and security required.—Application, by letter only, pre-paid, to B. B. Office of "The Builder."

TO SURVEYORS AND BUILDERS' CLERKS.

WANTED, in the country, a young married Man as CLERK, to take charge of an office must be a good accountant, and competent to prepare finished working, and detail drawings, and must have experience in taking out quantities. The situation would be constant to a competent person. A liberal salary will be given. Good reference and security will be required. Apply by letter to W. E. 17, Royal Exchange, City.

WANTED, in the Country, to SUPERINTEND and MANAGE a SMALL FOUNDRY, a thoroughly practical and experienced WORKING MOULDER in all engine and general castings. Good references for ability and sobriety will be required. Apply by letter, stating particulars and where last engaged. Address, F. E. F. Office of "The Builder."

TO PAINTERS AND BUILDERS.

WANTED, by a Young Man, a Situation as House Painter, Plain Writer, and Grainer. Wages moderate.—Address, W. B. at Mr. Ash's, Grainer, &c. 32, Bear-lane, Blackfriars-road. No objection to the country.

TO BUILDERS.

WANTED, by a Young Man, a RE-ENGAGEMENT as CLERK in a BUILDER'S OFFICE. He is thoroughly acquainted with the same.—Address J. P. 36, St. John's-square, Clerkenwell.

TO THE IRON-TRADE, &c.

WANTED, by a respectable Married Man, a RE-ENGAGEMENT as TOWN TRAVELLER and COLLECTOR. Undeniable reference from the situations he is about leaving. Address M. L. M. 5, New Gloucester-street, Hoxton.

WANTED, by Two Practical Joiners, to ENGAGE any quantity of PIECE-WORK. Can have good references from respectable builders if required.—Address, A. Z 36, William-street North, Caledonian-road.

N.B. No objection to a few miles from town.

TO BUILDERS.

WANTED, by a Young Man, a RE-ENGAGEMENT as CLERK in a BUILDER'S OFFICE. He is thoroughly acquainted with the duties of the same.—Address, A. B. 17, Spring-street, Hyde-park.

TO BUILDERS, OR CARPENTERS AND JOINERS

WANTED to TURN OVER, an IN-DOOR APPRENTICE immediately, who has been six months at the bench in a jobbing-shop. Terms very liberal.—Address to J. KEMP, Jun. Market-place, Bromley, Kent; or to Mr. W. BRIGHT, Carpenter and Joiner, Chislehurst, Kent.

TO CARPENTERS AND BUILDERS.

WANTED, by a Young Man, aged 18, a SITUATION as IMPROVER in a CARPENTER and JOINER'S SHOP. Has been some time at the business, and will come for moderate wages.—For further particulars apply to D. B. C. 4, William-street, Hampstead-road.

TO BUILDERS AND CONTRACTORS.

WANTED, by a Young Man, aged 24, a SITUATION as CLERK in a Builder's Office. The most satisfactory references can be given.—Address by letter, to A. B. No. 4, James-place, Bath-street, City-road.

TO ARCHITECTS, &c.

AN Artistic Colourist, Draughtsman, and Designer, offers his services in the preparation of Perspective Views, with landscape and figures, also in general drawing, on moderate terms.—Address, A. Z. 31, Denbigh-street, Belgravia.

TO ARCHITECTS, &c.

THE Advertiser, who has been engaged many years in an office of first-rate Gothic practice, is desirous of a RE-ENGAGEMENT, or to prepare Designs, or working Drawings, &c. at his own residence. Address, T. C. City News Rooms, Cheapside.

THE Advertiser, who is competent to design plans, elevations, and perspectives in colour, measuring and levelling, is open to an ENGAGEMENT on moderate terms.—Address, X. Office of "The Builder."

TO PARENTS AND GUARDIANS.

TWO ARCHITECTS, in partnership, holding appointments, and having several public build ings in course of erection, have a VACANCY for a PUPIL. Apply by letter, to A. W. 16, Waterloo place, Regent-street.

TO BUILDERS.

THE Parents of a respectable Youth, 16 years of age, wish to APPRENTICE him for four years, to learn the Carpenting and Joining, in town or suburbs, where the work is done by master's labour. Address, Mr. COLES, 17, Vauxhall Bridge-road, Westminster.

TIMBER TRADE.—A party, well acquainted with the Timber trade, and with Saw and Planing Mills, is desirous of an ENGAGEMENT, in town or country or he would not object to a Junior Partnership, or to wholly take to a business. Address, Y. Z. 240, Oxford street.

A GOOD ARCHITECTURAL DRAUGHTSMAN and DESIGNER, well acquainted with English and Classic Architecture, and accustomed to the general routine of an architect's office, is desirous of meeting with an ENGAGEMENT in an ARCHITECT or SURVEYOR'S OFFICE, where, in consideration of his accepting a small salary the advertiser would have an opportunity of learning to measure artificers' work.—Address A. B. C. Office of "The Builder."

AN ARCHITECT'S CLERK, whose time is not fully occupied, offers his services to those requiring Architectural Designs or Drawings of any description.—Address H. Post-office, Newman-street, Oxford-street.

A STEADY, Industrious Young Man, of business habits, who has had six years' experience, wishes for a SITUATION in a Builder's or Architect's Office.—Address, ALPHA, Post-office, Hemingford-road, Barnsbury-park, Islington.

TO CARPENTERS AND JOINERS IN TOWN OR COUNTRY.

A YOUNG MAN, of steady habits, who has just left a practical firm, wants an ENGAGEMENT. Wages not of so much importance as constant employment. Address R. Stine Watchouse, 1, Queen's Head-court, Surrey.

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has had considerable experience, and understands Gothic architecture thoroughly, requires an ENGAGEMENT for two or three days per week. Is a quick draughtsman, and fully conversant with getting up fair and detail drawings, and well acquainted with perspective. Would be happy to call or take work at his own residence, on moderate terms.—Address, H. J. Office of "The Builder."

TO ARCHITECTS AND SURVEYORS.

A YOUNG MAN, who has been accustomed to conduct a business under the direction of a principal, is desirous of an ENGAGEMENT. He is a good draughtsman and colourist, has a knowledge of specifications and quantities, has had great practice in land surveying and levelling, of building estates, and railways, and is well acquainted with the London Building Act. Good references and testimonials. Terms moderate.—Address, A. D. Ponten's News Office, 9, Cannon-street.

TO ENGINEERS AND CONTRACTORS.

A CLERK of WORKS, well experienced in all the branches of building, is now about to complete his engagement at one of the first water companies in London, and will be open for a SITUATION similar, or otherwise, in town or country. Unexceptionable references from his employers. Address, J. H. H. Office of "The Builder."

TO ARCHITECTS.

AN ASSISTANT wishes for a SITUATION. Understands fair and working drawings, and general office business. Address, T. C. M. Office of "The Builder."

TO ARCHITECTS, CIVIL ENGINEERS, AND MANUFACTURERS.

A YOUNG MAN, aged 28, is desirous of an ENGAGEMENT, as MANAGER or FOREMAN of WORKS, having a thorough practical knowledge of the building branches, particularly brick-work and fire-arches. Is also competent to prepare plain and working drawings, measure, &c.—Address, L. R. Mr. Bradbury's, Stationer, High-street, Wandsworth.

TO BRASS FOUNDERS, GAS CONTRACTORS, METAL MERCHANTS

A RESPECTABLE YOUNG MAN, wishes a RE-ENGAGEMENT of a responsible or progressive nature, as CLERK, or otherwise. Is acquainted with Brass Founding generally, and the manufacture of Gas Fittings for wholesale supplies; used to the manufactory, and experienced as a buyer and salesman in the Apparatus and Metals for all purposes. Nine years' unexceptionable reference.—Address A. J. care of Mr. Coles, Newspaper Office, 39, Kingsgate-street, High Holborn.

A YOUNG MAN, aged 22, the son of a Builder, deceased, requires an ENGAGEMENT. Is a thorough correspondent, and well qualified for a builder's office.—Address, J. P. W. 17, St. Peter-street, Islington.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railways, which are adopted and are being applied to more than 3,000 miles of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.

ARCHITECTURAL PARTNERSHIP.—A Gentleman who has completed his articles, and since been in the office of a first-rate architect, is desirous of entering into PARTNERSHIP with an ARCHITECT and SURVEYOR of well-established practice. He wishes it to be considered in reduction of premium, that he is both willing and capable of taking all the hard work.—Unexceptionable references given and required. No objection to the country.—Address, SPES, care of Mr. Reed, 15, John-street, Great Portland-street, Oxford-street.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1¼ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Bills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

A CORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY respectfully begs to inform the Building Public, that all Baltic Goods are dearer and American Spruce and Pine are cheaper.

He asks special attention to the following, which are now on sale:—

2,000 Pieces of Timber
20,000 Planks, Deals, and Battens.
30,000 Prepared Floor Boards, of all lengths and sizes.
5000 Rough Boards.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current," for this month can be had on application.

N.B. The extensive Saw-mills are now in operation.

IMPROVEMENT in WOOD MOULDINGS: J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 3, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent upon his list prices for Mouldings.—A large stock of dry flooring at low prices. Southwark-bridge Wharf, Bankside.

MOULDINGS by MACHINERY at REDUCED PRICES. ARCHBUTT and ATKINSON beg to inform their customers that the 20 per cent advance hereto fore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices. St. Pancras Saw Mills, Cambridge-street, Old St. Pancras road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent on their mouldings (as advertised on the 8th of November last) is removed, from this date, consequently, the prices will be those inserted in the Mouldings List, as heretofore.

1st January, 1854.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.:—

Pine Planks, 12 ft. 3 in. by 11 in.	10s. 6d.	per piece.
Spruce Deals, 12 ft. 3 in. by 9 in.	2s. 9d.	each.
Yellow ditto, 12 ft. 3 in. by 9 in.	3s. 3d.	„
Honduras Mahogany	7d.	per foot.
Spanish ditto	8d.	„
Wainscot ditto	9d.	„
Spruce Paling Laths	10s. 6d.	per 120.
Venetian Blind Laths	8s.	per bundle.

Veneers and cut stuff of every description at equally low prices. Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers. For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer-cutting Works, 41, Robert-street, Chelsea, adjoining the King's-road Saw-mills.

STAINING DEAL TO IMITATE ALL KINDS of WOODS. It requires NO SIZING, and will stand the exposure to the weather. Price 6s. per gallon. Varnishes for W. NAYLOR'S Stains may be had of the Factory, 41, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TO THE CLERGY, AND TO ARCHITECTS, BUILDERS, &c.

STEPHENS'S WOOD STAINS as a SUBSTITUTE for PAINT, and at less than half the cost, and without the disagreeable smell and dangerous consequences of paint, well adapted for Churches, Chapels, Schools, or other public buildings, as well as private dwellings, giving the effect of Oak, Mahogany, or Satin Wood. They also imitate the Entrance Doors of the Crystal Palace of 1851, which were coloured with these stains, would not be struck with their less useful effect.—Prospectuses, giving full particulars, and specimens sent free to any part of the kingdom.

HENRY STEPHENS, 54, Stamford-street, London.

TO EMIGRANTS, BUILDERS, RAILWAY CONTRACTORS, SHIP CARPENTERS, MERCHANTS, AND OTHERS.

JOHN S. ISAAC, Manufacturer of PATENT COMPOSITION BOARDS for RAILWAY and other CARRIAGE PANELS cut to size, portable packing, printers' pressing-boards, sign-boards, ship cabins, roofs, &c. These boards are waterproof, will bear immense pressure, on fourth of an inch thick, and are the strongest article out of the sand substance, will never crack or split with the greatest heat or pressure. They are specially recommended to emigrants, being lighter and more durable than any other article, and when painted the houses are perfectly dry. Price 5d. and 8d. per square foot, according to thickness, in boards of various sizes, 8 feet 2 by 2 feet 9, and others. Specimens may be seen at Messrs. WAINE and CO.'s, 185, Piccadilly; Mr. J. E. RICHARDS, Wholesale Stationer, St. Martin's-court, Leicester-square; Mr. JAMES, 11, Sherborne-lane, London; and of the Patentee, J. S. ISAAC, Maidstone, Kent.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

THE BUILDER.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy resulting to the Company for Zinc paints becomes a very expensive result to the owner of the premises painted with it.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark. In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. J. B. MORLEY and CO.; and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William street, City. JACK and BRABY, Wholesale and Retail Agents, 9, Pottenham-court, New-road, and 60, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWRENCE and CO. of 49, North John street, Liverpool, who are also acknowledged Painters to the Company for Zinc paints, and undertake painting ships, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Trade-mark. Dry OXIDES and PAINTS. Terms of 2½, and 5 per cent. allowed to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of 64, Fetter-lane, Fleet-street, Stationers, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, profusely combined by its cost to the use of the artist, is now, by Hubbuck's Patent, rendered to the public at a low price.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These spurious mixtures contain no portion of the genuine ingredients, are baneful to health and worthless in use, whilst the inexpensive nature of these compounds is the proof of its use. It is evident, not alone by the dingy, gritty appearance, but also by the tedious way it flat sets, as these produce, when in oil, with the painter's pallet-knife. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON PATENT.

If not so marked, the reason may be inferred.

Every information can be had by circular to be had of THOMAS HUBBUCK and SON, Pump and Varnish Manufacturers, Upper East Smithfield, opposite the London Docks, London.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses.—These well known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days. CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian limes, cement, and all other Cements in use for building purposes, Nine Elms, London.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street Westminster; and Seel-street Liverpool.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not re-state in damp situations. See List of COMPARATIVE EXPERIMENTS on the strength and hardness of other Cements tested at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL—Light and Dark, equal to any made. Manufacturers also as dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Yorkshire Chimney-pots, Pitts' Vases, Keating's Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, GOLD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery, succeeded in greatly improving the quality of this Cement while at any increase in price.

Engineers and Architects are recommended to specify "Aspdin's Patent," for they can obtain ground Cement as fine as Flour of the same resembling it only in colour.

ASPDIN, GOLD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is sold at a really cheaper.

A report of experiments made to prove the extraordinary strength of their Portland Cement, may be had at their Office, New Wharf, Charles-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rogers's Wharfs, Hilton-street, Blackfriars, Liverpool; E. B. and S. Handcock, or from their Agent, Mr HENRY ROBINS, 5, B. Knutsford, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Millbank, Pimlico, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can supply such quantity as they may require, either at his Works, St. Andrew's Wharf, Barnard's Mews, Millbank-st., or Mill-Wharf, Scotland yard, Westminster. Manufacturer of Roman Lias, and Mastic Cements, English and French Plaster &c.

PORTLAND CEMENT.—6, South Wharf, Paddington. CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, feeling of uniform colour and quality in its deal ration never before attained in Portland Cement. It possesses extraordinary cementitious qualities, resists the action of frost and heat and is more durable than any other Cement. It does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the best cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle by the several characters of which alone it can be set forth. R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale un ler Brand, order in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. are ready to supply any quantity of Portland, Roman, and Bath Cement, from their works situate near Bridgewater on the Bristol and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity of result which is so desirable in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1854.

CEMENT.—ROMAN and PORTLAND CEMENT, and PLASTER of PARIS manufactured by C. J. HILPON, can be had on any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment on advantageous terms.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to their superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, in the great set-action, in which they cause the lime to heal for building in wet and damp situations, such as wharf walls, locks, &c. and for concrete foundations, is a sufficient recommendation for the adoption of the whole of the above description. It is also peculiarly adapted for stucco. Orders received by Messrs. Lucas and Aczels. BATH BROTHERS, 16, South Wharf, Paddington; and at the Works, Stockton fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete than coal any other lime or cement. The well-known for mortar without an equal for plaster, leaves a sweet surface. The satisfaction constantly expressed by Engineers, Architects and Contractors, of the above, in its first report, needless.

Gas, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SCONSES, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-relievi, &c. by J. M. BLASHFIELD, of Millwall, near the West India Docks Station, and 11 at No 9 Pratt-street, Pentinge mews with specimens and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court; the statues of Australia, Venus of Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, as are the Fountains at the Renaissance Court, and the roof of the Alhambra Court. The Pompeian roofs of Terra-cotta and Portland cement combined. Since the execution of these works J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be of the best manufacture, by the unparalleled quality, combined with cheapness will be found to meet the approbation of consumers. Sole Agents, L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the load or per barge. Stocks, lime and old bricks. Very rubbish delivered per barge, in any quantity, alongside the Thames.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their Parisbelle silicoloth coverings; for entrance halls, passages, verandahs, conservatories, &c.

MAW and Co. need, free of expense, their pattern and price book, with designs, to any given areas and estimates, free of expense

BENTHALL WORKS, BROSELEY, SALOP.

MINTON and CO.'S ENCAUSTIC and other PATENT TILES, for Churches, Entrance Halls, Conservatories, Balconies, &c; Antique, Geometrical, and Albano Mosaics, manufactures of a highly decorative character, and extreme durability. Slabs and Tiles for Fire places and Hearths. Coats of Grates, Door Furniture, White Glazed and Ornamental Tiles for Baths, Dairies, and Kitchen Ranges, may be had in great variety at their Warehouses, Altho-place, Blackfriars-bridge, London; and at their Manufactory, Stoke-upon-Trent, Staffordshire.

PEAKE'S TERRO-METALLIC TILES, PIPES &c.—N. B. re hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No 21, WHARF, Manchester-street North, City-road Basin. Secondly, that the trade-term, "Terro-Metallic," is the exclusive right of the Proprietor, and, thirdly, that the "Reviewer on pottery," page 50, of the Great Exhibition, rank the Manufactories known as "Longe," "The Fillerus," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 38s.; Cowley Stocks 35s. at WARD'S OLD ESTABLISHED HOSPITAL WHARF, BANKSIDE Lond.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and clay; Patent Malting and Corn-drying Tiles, real Dutch Clinkers, River sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 87, Regent-street.

TO BRICK AND TILE MAKERS.

OWEN WILLIAMS and CO. beg to call the attention of Manufacturers to their PATENT TUBULAR ROOFING TILES, by which a perfectly cool and ventilated roof is obtained; they require no lath extending from rafter to rafter, are far more sightly, and much cheaper than any other covering. By aid of the perforations the shape is preserved while each tile is 18 inches by 9 inches), and burnt better. An inspection of roofs up with fully four years' exposure to the full rot upon sand to treat for Manufacturing Licenses for Counties, Districts, or Districts not already disposed of, apply to OWEN WILLIAMS and CO. Traverse Slab Manufactory, Grand Junction Wharf, Northampton.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.

KENTISH RAGSTONE of the FINEST QUALITY.

MILLS and PRICE, successors to Mr. Benjamin Gouch, 5, ADELAIDE-PLACE, LONDON-BRIDGE.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Nicholas-street, Newington butts, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE. Dec. 8, 1854.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brick-fields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves

Malm Place, half-waisted Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply HENRY DODD and CO. at the Counting-house, Hoxton Brick-fields, Swanage Wall, near the Rosemary Branch, Hoxton.

N.B. Lumps about a ton and a half, taper at pleasure constantly on sale upon an assistable terms. Also a quantity of ballast containing any saline matter, is acknowledged to be preferable to river sand.

BRICKS.—Kent Grey Stocks, of superior quality. Also, White Suffolk and Red Facing Bricks.—Apply to Mr. W. ALLAWAY, 4, Catherine-court, Tower-hill.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 22s. t. Londonbridge or Newington; and that distance, no further charge cartage. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. per thousand, and grand paviors, about half the former dimensions; white and cream silver, in field or by barge; founders' sand and loam; good coloured gravel. Address, B. PARKS, Lewisham Brickfields.

BRICKS.—Yellow Malm Cutters, Seconds, Paviors, and Pickings of a very superior quality and colour. Address, Mr. WM. WEBB, Brick fields, Stoke Newington

BRICKS.—FOR SALE, about 70,000 hard STOCKS, selected for sewers, and a few thousand PAVING BRICKS suitable for ornamental building. Can be delivered at the Nine Elms Station, South-Western Railway. Apply to G. ALBERTON, Surbiton, Kingston.

TO BRICK MERCHANTS.

WANTED, 600,000 of BRICKS, delivered at Bow-creek. Send lowest price of stocks, place, &c. to WM WOOD, Esq. 30, Southampton-buildings, Chancery-lane, City.

PERFORATED and SOLID SUFFOLK BRICKS.—THOMAS FOX and BROTHERS beg to inform architects and builders that they keep in stock of their Perforated and Solid Suffolk Bricks at their Depôt, Devonshire-street Station, Eastern Counties Railway. They particularly desire an inspection of their Perforated White Facing Bricks which are allowed to be the best in the market. Samples forwarded and specimens of work shown on application at the Office, 47, Morpeth-street, Globe road, Mile-end.—Works, St. Bury, Suffolk

BRICK-MAKING EXTRAORDINARY!! BY GATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS

Messrs. GATES and INGRAM beg to announce that the above powerful and effective machine may be seen by order only in daily operation at the works of the Vauxhall's Hope Brick Company, near Birmingham.

The great advantages possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be taken up in ranks before leaving the machine, which requires only one man, consequently requires only the labour of feeding and carrying off.

Applications only are to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. P. GATES, Patentee and Patentee, Lichfield.

GREAT NORTHERN WHARF, York-road, King's-cross—WHITE BRICK and TILE DEPOT L. B. PEARSE and CO. Brick, Tile, Lime, and Cement Merchants beg to inform builders, contractors and the building trade generally, that they have now on sale at the above wharf, Cowley stocks, grizzles, and place; white cutters, seconds and paviors; cutters, rel cutters, and stocks; plain and pan tiles, 40s. 9in. and 18 in.; white and red paving Tiles, Tiles, red and white ornamental tiles, blue and red ornamental ridges; Stourbridge, Welsh, and Yorkshire fire-bricks, lumps, tiles, and clay; ornamental and other wall copings; Bangor and other slates; stoneware sewer-pipes, bends, junctions, and syphons; closet-pans and traps, terra-cotta chimney tops, trusses, brackets, vases, models and patterns of the most improved patterns. Architects' designs worked to with accuracy and despatch. Lump and ground grey stone lime, chalk lime for plastering, blue lias lump and ground lime, Roman, Portland, and lias cements, coarse and fine plaster, laths and hair.

N.B. 30,000 bundles of prime Gothenburg laths are now on sale at the above wharf, price 33s. per load.

GREAT NORTHERN RAILWAY.—L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross, beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that they can be supplied up in the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

N.B. Orders received overnight can be delivered by the early morning trains.

BRICKS.—A large Quantity of hard-burnt RED BRICKS, of excellent colour and shape, are now on SALE, at the Brick-field Brick and Tile Works, Chalk, price 25s. per 1,000, at which price they will be delivered into the carts or railway trucks, at the Goods' Station, which adjoins the works. Malmes, Stocks, Secrets, Pure, &c. at low prices. Apply to Mr LEVETT, Brick and Tile Works, Brentwood, Essex.

PATRON: H.R.H. PRINCE ALBERT

ROYAL POLYTECHNIC INSTITUTION.

Continued improvements, increased attractions, fresh decorations. Re-lighted as for the Patents of John Leslie, esq. Last Two Evenings of Mons. Signol's Residence. Romeo and Juliet on Tuesday Evening, the 16th inst. at Eight, and Macbeth on Thursday Evening, the 18th inst. at Eight, Monday Evening, the 15th inst. Lecture to the Industrial Classes on the Comparative Anatomy of the Ear, by G. Pilcher, esq. Lecture on Chemistry, by J. H. Pepper, esq. Lecture on Ninepin, by Mr Cooper, the artist and companion of Lieut. Holmes, illustrated by Panorama. Newstake to himself. Opening of the new Hall, with Lectures by Dr Bachhoffner, illustrated by the Hydr-Electric Microscope, the most successful electrical apparatus in the world. A new beautiful series of Forty-five Cosmoramic Views of Russia and the Costumes of the Inhabitants. The Dissolving Views maintain their old reputation, with Scenes of the West-Schatzpiel, &c. The Oxy-hydrogen Microscope as usual. The large Theatre is open on Saturday Evening, from Half past Seven till Ten, with Mr. Crawford's Vocal Illustrations of the Patriotic Songs of Scotland, the American Entertainment and Mr. Wand's Band.—Admission, 1s.; Stalls, 2s. and 3s.; Schools and Children, under ten years of age, half-price. A splendid Optical Diorama, with novel Phantasmagoria Effects, illustrating the Voyages of Sinbad the Sailor is in preparation, with various other novelties for Christmas.

LOANS.—Persons desirous of obtaining ADVANCES, from £10. to £50. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL DISCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge-street, Blackfriars. Rules, 6d. each; or, by the post, 1s. per post.
CHARLES JAMES THICKE, Resident Secretary.

HOUSEHOLDERS and GENERAL LIFE ASSURANCE COMPANY, 15 and 16, Adam-street, Adelphi.
Money received at interest at 5 per cent. per annum, payable in April and October.
Agents (with references) may apply.
R. HODSON, Secretary.

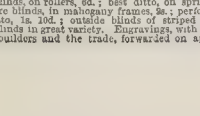
(Established in 1838.)
MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square.
W. S. YARDY, Manager.

INDISPUTABLE LIFE POLICY COMPANY.
72, Lombard-street, and 23, Connaught-terrace.
TRUSTEES.
Richard Malins, esq. Q.C. M.P. | Richard Spooner, esq. M.P.
James Fuller Maddox, esq. | John Campbell Renton, esq.
William Wigram, esq.
A reduction of 25 per cent. has been made in the premiums of all policies of five years' standing.
ALEX. ROBERTSON, Manager.

ASPHALTE.—GERVASE FOOTTIT
Trinidad Asphalte Works, Bothenhithe; established 1838. Every description of Flooring with the above durable material in the best manner. Asphalte for Railway Arches, 35s. per ton. Importer of Trinidad Asphalte.
Shipping Depôt, Down Hayton Wharf, Rotherhithe.
G. H. CLARK, Agent.

PAVING, 2s. 9d. per SQUARE YARD.—
Basements, Foot-walks, Malt-houses, Corn Stores, Floors of Warehouses, and every description of Pavement laid down at the above price, and 10 per cent. cheaper.—JOHN PILKINGTON, PORCELAIN BITUMEN PAVEMENT OFFICE, MONUMENT CHAMBERS, 16, FISH-STREET-HILL.—N.B. Country Seats, and Railway Engineers and Contractors, supplied with the best Bitumen for covering Bridges and Arches.



AMERICAN OILSTONES, very superior in quality to the Turkey oilstone; a new and invaluable discovery, for giving, with ease and rapidity, a perfect and sharp edge to those tools used by turners, carpenters, all smokers, engravers, engineers, &c. &c.—To be had of various shapes and sizes, at 105, Newgate-street, London.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—NORTHCROFT and CO. having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are receiving instructions for the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others.

MOORE'S PATENT LEVER VENTILATOR and PATENT RESPIRATOR, 8 Short Works, St. James's-walk, Clerkenwell, London, and the Furniture Court, Crystal Palace, Sydenham.

S. HARRISON, Manufacturer of Arnott's and VENETIAN VENTILATORS, 32, Stanhope-street, Clare-market.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 6s. 6d.
These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the occupancy, at which time a constant supply of fresh air is most required. HAYWARD, BROTHERS, sole Manufacturers, 146, Blackfriars-road, and 117, Union-street, Borough; and of all respectable ironmongers, builders, &c.

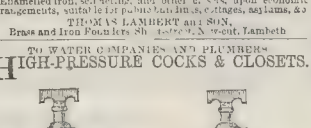
WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9d.; best holland blinds, on rollers, 6d.; best ditto, on spring rollers, 9d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and directions to builders and the trade, forwarded on application, post free.

ANY Person having a LEVEL, in good working order, may hear of a PURCHASER, by applying to A. W. Bennett's Newspaper Office, Upper Rosoman street, Pentonville.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, alone, two, three, and four gallons each, yielding 30, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements; are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with upwards of 30,000 gallons per item, may be obtained on application at the depôt, 71, Baker-street, Portman square, London.

FOR WATERING GARDENS, DISTRIBUTING LIQUID MANURE, &c.—JAMES LYNE HANCOCK'S VULCANIZED INDIA RUBBER TUBING is now manufactured specially for the above purposes, and is of greater flexibility than any other description of hose or tubing. It is also manufactured to resist great pressure, suitable for attaching to the mains of water works, or to lakes or watercourses, of high elevations. WATERING HOSE fitted up with brass ports, branches, stop-cocks, rases, and pots complete. Vulcanized India-rubber suction pipes for pumps any length or size, to order. HOSE for brewers' use, dressing rooms, &c. VULCANIZED INDIA RUBBER WASHERS for STEAM and WATER JOINTS, and VULCANIZED RUBBER in SHEETS of ANY SIZE and THICKNESS. Solid vulcanized India rubber tubing and cord for the purposes of glass doors, sashes, frames, &c.—Prices and every information may be had on application at the Manufactory Goswell-mews, Goswell-road, London.

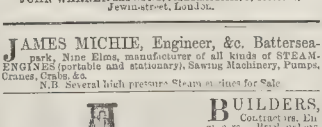
GUTTA PERCHA TUBING.—May be buried for years, without injury, and is therefore valuable for conveying water, chemicals, &c. It is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the freezing of water, or by dryness, heat, oil, or leather. Its strength is extraordinary; the small half-inch diameter tubing having resisted a pressure of 25 cwts. on the square inch, with no bursting. The smaller sizes may be had in coils, and the larger in 50 feet lengths. The joints are easily made. As a conductor of sound it is most valuable for passing messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.



JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS,

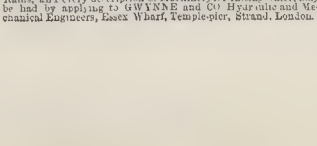
J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and less cost than has hereto been accomplished.
Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, truly in peal.
TUNED BY MACHINERY.
Stocked and wheels ready for hanging. Old Bells recast or taken in exchange.
MUSICAL HAND-BELLS cast to the Chromatic Scale, with improved clappers, and regged on a new system, which gives a superior tone and facility for ringing.

PRIZE MEDAL, CLASS 22.



HIGH-PRESSURE VALVE COCKS.—
LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 10 to 150 lbs. per square inch, their efficiency and durability is by experience established.
The Equilibrium Ball-valve is simple and certain in its action, and has a quadruple waste of Cocks and Valves in use.
Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public institutions, cottages, asylums, &c.
THOMAS LAMBERT and SON,
Brass and Iron Founders, Shot-makers, and Gun-cock Lambeth.



TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Joints and Bends with self-acting Valve for attaching direct to main pipes without a cistern, cocks, or wire.
LEAD, IRON, and TIN PIPE.
JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

JAMES MICHIE, Engineer, &c. Battersea-park, Nine Elms, manufacturer of all kinds of STEAM-ENGINES (portable and stationary), Sawing Machinery, Pumps, Cranes, Crabs, &c.
N.B. Several high pressure Steam-engines for Sale.

BUILDERS, Contractors, Engineers, Brickmakers, Well-sinkers, Plumbers, Brewers, Chemists, Paper-makers, Manufacturers, Proprietors of Coke, Cattle, Iron, or Rice Estates, Occupiers or Proprietors of Low Lands, Fens, Marshes, &c. and all persons requiring water or other liquids shut or cobb-raised or forced, will find it greatly to their advantage to use GWYNNE and CO'S PATENTED PUMPS, AS FOR ECONOMY, EFFICIENCY, DURABILITY, SIMPLICITY, AND POWER, THEY STAND UNEQUALLED. Water-wheels, Hydraulic Rams, and every description of Machinery for raising water, may be had by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Temple-pier, Strand, London.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT

CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

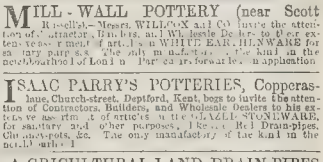
Patent Pump	£1 12 0
Patent Pump, with 10 feet of lead pipe attached, and bolts and nuts ready for fixing	2 12 0

Larger sizes if required.
The smaller sizes are also much used for supplying Hot, Forcing, and Plant Houses, from underground Water Tanks, and can be readily fixed in any situation.
May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,
JOHN WARNER AND SONS,
8, CRESCENT, JEWIN-STREET, LONDON.
Every description of Machinery for raising Water, Pure Engines, &c.
The usual allowance to the Trade.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber in Town.
The usual allowance to the trade.
PUMPS of SUPERIOR CONSTRUCTION tored perfectly true by improved machinery, in various plain and ornamental patterns, for gardens and market-places, roads, conservatories, liquid manure, slop, barge, brickmakers, contractors, gold-beaters, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks, and engines of various powers, for wells of any depth.
PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 18 in barrels, prepared for hau for steam power, ready for use on reasonable terms, at
BENJ. FOWLER'S, Hydraulic Engineer,
Hot-water, Steam, and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS,



Pumps in Wrought and Cast Iron and Brass, for Mines, machinery, and fitted in the best possible manner, suitable for excavators, roads, tin-smakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12 in. diameter, kept ready for use at reduced prices.
N.B. The above can be worked either by hand, horses, or machine power.
Iron Pails 38s. per doz. painted
Ditto ..... 48s. per doz. galvanized.
Upper Ground-street, Blackfriars Bridge, Surrey side.

STEAM PUMPING ENGINES.—
PATENT PORTABLE STEAM ENGINES, from four to twenty horse power, always ready to let on hire, by the week or month, for pumping, sinking, draining mines, &c. &c. Apply to
JAMES BURTON & SONS,
Engineers and Contractors,
James-street, Hyde Park-street, Southwick Park.

TO CONTRACTORS.

PATENT PORTABLE PUMPING ENGINES, mounted on strong waggons, with chimney horse shafts complete, 20 horse power, (combined) the several are ready for delivery, from each the power to work six horse power and upwards, adapted to the purpose of working mines by hitching on a rope or purchase, and have been sent out by Messrs. MERWIN and HALLS, Engineers and Portable Engine Makers, 22, Blackfriars-road. These engines have been successfully employed for years.

PORTABLE STEAM-ENGINES and PUMPS kept in stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge (Surrey side).

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILCOX and CO. have the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in the GLAZED STONEWARE, for sanitary and other purposes, Glazed Red Drain-pipes, Chimney-pots, &c. The only manufactory of the kind in the metropolis.

ISAAC PARRY'S POTTERIES, Copperas-lane, Church-street, Deptford, Kent, begs to invite the attention of Contractors, Builders, and Wholesale Dealers to his extensive assortment of articles in the GLAZED STONEWARE, for sanitary and other purposes, Glazed Red Drain-pipes, Chimney-pots, &c. The only manufactory of the kind in the metropolis.

AGRICULTURAL LAND DRAIN-PIPES of all sizes and in any quantity, may be had of L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross.

TO BUILDERS AND OTHERS.

DRAIN-PIPES, JUNCTIONS, PANS, TRAPS, &c. at very low prices.—E. & W. STURGE, Bridge Wharf, City-road. Paving, Sinks, &c. Duchess, countess, and ladies' slates. A list of prices sent free on application.

J. TYLOR AND SONS'

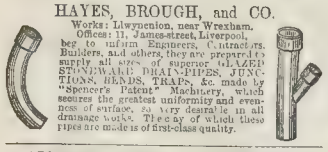
PATENT HIGH-PRESSURE CLOSETS, FOR THE MAIN SERVICE.

TO BE SEEN IN ACTION AT THE MANUFACTORY, WARWICK-LANE, NEWGATE-STREET, LONDON

No. 1. No. 2. No. 4. No. 5. No. 6. No. 3.

THE WHOLE OF THESE CLOSETS ARE SO ARRANGED THAT THE BASINS CANNOT BE LEFT WITHOUT WATER.

THEY ARE EQUALLY ADAPTED FOR FIXING FROM CISTERNS OR HIGH-PRESSURE MAINS, ARE WARRANTED TO STAND ANY KNOWN PRESSURE OF WATER, AND REQUIRE NO CRANKS, WIRES, OR CISTERN WORK, SO THAT ANY NUMBER CAN BE SUPPLIED FROM ONE SERVICE-PIPE.

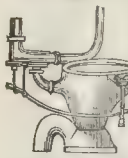


No. 1.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE-CLOSET. With Blue Basin, sunk opal handle, 2l. 4s.
No. 2.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE VALVE CLOSET, WITH PATENT SERVICE-BOX ATTACHED. This Closet is also particularly adapted for very low pressures, the water rising in the basin after all the other Closets have ceased. With Blue Basin, sunk opal handle, 2l. 10s.
No. 3.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE PAN CLOSET. With White Basin, flat brass handle, 3l. 12s. 6d. With Blue Basin and sunk opal handle, 3l. 3s.
No. 4.—J. TYLOR AND SONS' PATENT HIGH PRESSURE HOPPER CLOSET. With Enamelled Iron Hopper, sunk brass handle, and cast-iron trap, 1l. 13s. Enamelled Iron Trap, extra, 4s. 6d.
No. 5.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE HOPPER CLOSET, TO WORK FROM THE DOOR. With Enamelled Iron Hopper, cast iron trap, and 1-inch action, 1l. 13s. Extra for Enamelled Iron Trap, 4s. 6d. This Closet is particularly adapted for Public Buildings, for which purpose it is made with a larger Valve. With large Valve, Enamelled Iron Hopper and Door Action, 2l. 2s. Enamelled Iron Trap, 4s. 6d. extra.
No. 6.—J. TYLOR AND SONS' PATENT HIGH-PRESSURE STOOL VALVE. This Valve is particularly short in its action. ¾-inch Valve, with sunk handle, 14s. 6d.

ILLUSTRATED CATALOGUES TO BE HAD ON APPLICATION.

N.B.—ARCHITECTS ARE RESPECTFULLY INFORMED THAT THESE ARE CORRECT PRICES FOR INSERTING IN SPECIFICATIONS.

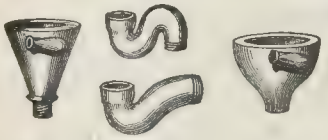
J. TYLOR AND SONS', WARWICK-LANE, NEWGATE-STREET, LONDON.



HAYES, BROUGH, and CO.

Works: Llwyncelyn, near Wrexham.
Offices: 11, James-street, Liverpool,
beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery, which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

PATTEN'S PATENT HIGH-PRESSURE



WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, lead trap, &c. Any number of Closets can be supplied from one main.

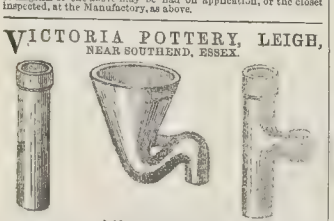
Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 23, Old Fish-street, near St. Paul's, London.

HENRY TURNER, 2, SOUTH WHARF,

PADDINGTON.

3s. Traps, 2s. 6d. 5s.

Manufacturer of Closet Basins and Traps, yellow outsides, with white insides. These are warranted to be the most durable earthenware now manufactured. A list of shapes and prices sent free, on application. A large stock of Plug Basins of every variety.



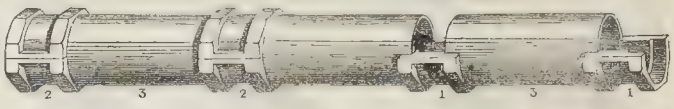
TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85,

Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Connel's Registered Model Water-closet." This water closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of external leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

VICTORIA POTTERY, LEIGH,

NEAR SOUTHEND, ESSEX.



DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pots, Jars, Bottles, and every article of superior Stoneware manufactured. Also MANUFACTURER of Blackwall Hall Patent Cement, Plaster of Paris at Orchard House, Blackwall Hall Depôt, and from the above places, from Factory, Stratford, Essex.

JENNINGS'S PATENT DRAIN-PIPES

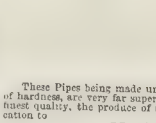
REMOVE THE OBJECTIONS TO PIPE-DRAINAGE.

A Sewer, or Drain, formed with these Pipes, can be examined at any point, without the slightest trouble.

JUNCTIONS CAN AT ANY TIME BE INTRODUCED BY REMOVING A PLAIN SADDLE, AND SUBSTITUTING A SADDLE HAVING A JUNCTION FORMED IN IT OF THE REQUIRED SIZE.

The OLD FASHIONED and HALF-SOCKET PIPES CANNOT BE EXAMINED without destroying or breaking the line of Drainage, thus obstructing the subsoil and impeding the flow of sewage. BY COMPARING the above illustration with illustrations of Half-Socket or other Pipes, THIS FACT WILL BE APPARENT.

JENNINGS'S PATENT DRAIN PIPES having been described by Engineers and Architects in many works, the Patentee would feel obliged if by Builders and Contractors sending their orders AS EARLY AS POSSIBLE, to ensure their delivery in time.



That some attention to Drain-Pipes was necessary is proved by GEORGE JENNINGS having at THIS TIME orders for TWELVE MILES of his PATENT DRAIN-PIPES of all sizes.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.

ARE FREE FROM ALL COMPLICATION.—NO WIRES OR CRANKS.

ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

Architects furnished with references of the highest order.

Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE-VALVES, FIRE-COCKS, GULLY-TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

SALT-GLAZED STONEWARE PIPES, BENDS, JUNCTIONS, CLOSET-PANS,

TRAPS, &c. at the

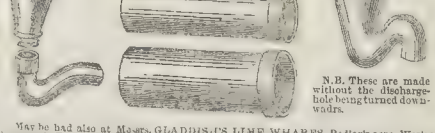
NEAR POOLE, DORSET;

These Pipes being made under immense pressure by patented machinery, and burnt by intense heat to an unusual degree of hardness, are very far superior to the best ware hitherto manufactured in Hants and Dorset; they are made of clay of the finest quality, the produce of the estate, and will bear comparison with any Pipes in the kingdom, and can be had upon application to

THE AGENTS:—

Mr. G. S. WHITTON, 17 and 18, Princes-street, Lambeth, London;

Mr. J. S. HUDSON, the Pottery, Bournemouth, Poole;



Where a large stock is always kept on hand.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES,

BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.

Water-Closet Pans, with Syphon Traps, 7s. 6d. each.

STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

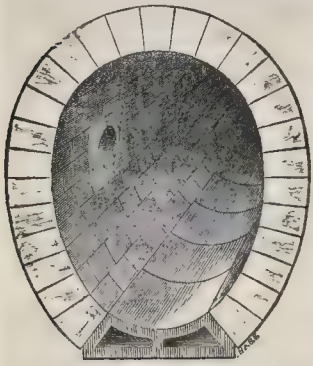
N.B. These are made without the discharge-hole being turned downwards.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.

Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

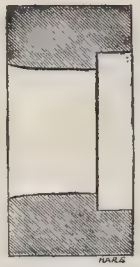
May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Deptford, Bermondsey; Denver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, Kingsland-road, Camden New Town. TURNER, 2 south Wharf, Praed-street, Paddington; COLWILL Brothers, 32, Bryanston-street, Covent Garden; and at EDWARD COCK'S, 94, Wardour-street, Oxford-street.

Drawings and List of Prices will be forwarded free on application



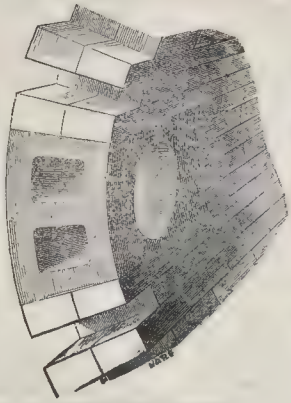
HENRY DOULTON AND CO.'S

PATENT SEWER JUNCTION BLOCKS AND INVERT BLOCKS,

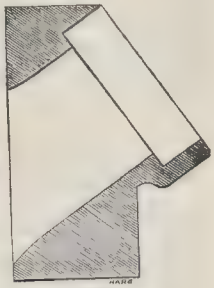


IN GLAZED STONE WARE,

The connection between pipe drains and sewers, and brick sewers, is made perfect and secure by the use of DOULTON'S PATENT JUNCTION BLOCKS. Each block is made to correspond in thickness with the series of the brick sewer, so as to build or bond in with the brickwork; the inner surface is made to correspond with the internal figure of the sewer. Each block has a socket, either within its thickness or just protruding beyond it, to receive the end of a pipe. They are made to receive pipes, entering either straight or obliquely. When fixed, they form part of the sewer, they cannot be improperly placed, and a certain and proper fall is secured at the point where the junction is made.

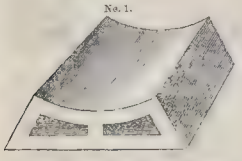


THE PATENT JUNCTION BLOCKS MAY BE FITTED WITH METAL FLAP-TRAPS IF REQUIRED.



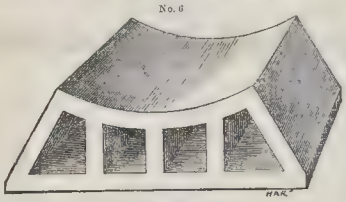
Egg-shape Sewer, with DOULTON'S PATENT JUNCTION AND INVERT BLOCKS

Section of STRAIGHT JUNCTION BLOCK.



JUNCTION BLOCK as fixed in Sewer

Section of OBLIQUE JUNCTION BLOCK.



DOULTON'S INVERT BLOCKS, in stone ware, form a glazed, even, and imperishable surface for the bottoms of brick sewers, and also a sure foundation for the structure. They have been used extensively by the Metropolitan and City Commissioners of Sewers, and for the main sewers in many provincial towns, and in all cases have been highly approved by the engineers, both for the facilities they offer in the construction of sewers, and for their subsequent action in permitting an even and uninterrupted flow of the sewage matter. They offer the means for carrying off all superfluous water while the sewer is in course of construction, and when required give a channel for land drainage independent of the sewage.

No. 1.

Radius of Invert 9" for 18" Circular Sewer, or 3 ft. 6 in. by 2 ft. 6 in. Egg-shape. 4½ in. work.

No. 6

Radius of Invert 15" for large Egg-shape Sewer. 9 in. work.

No. 7

Radius of Invert 9" for 3ft. 9 in. by 2ft. 6 in. 6 in. work.

A full description, with sizes and kinds of both Junction and Invert Blocks, forwarded on application, per post.

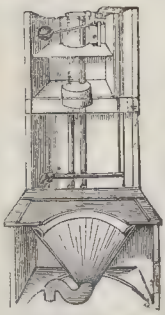
DOULTON AND CO.'S CLOSET PANS AND TRAPS, IN ENAMELLED STONE WARE, WHITE INSIDE, 7s. 6d.

DOULTON'S HALF SOCKET DRAIN PIPES,

BY THE USE OF WHICH, PIPES MAY BE REMOVED, THE DRAIN EXAMINED, AND JUNCTIONS INSERTED WITHOUT INJURY TO THE TUBES, THE SAME PRICE AS ORDINARY SOCKET PIPES.

For list of Agents, see "Builder" of November 18. Drawings, with prices, forwarded on application.

Superior Glazed Stoneware Pipes, Bends Junctions, Traps, &c. Hopper and other Pans, with best White Glaze inside.



Syphon Pan, with or without STEPHEN GREEN'S Patent Air-tight Valve.

Registered Flushing Basin,—the most effective Syphon-trap yet offered to the public.

STEPHEN GREEN, IMPERIAL POTTERIES, LAMBETH.

This effective Article has not any Crank or Wire to get out of order, and is all complete and ready for use, and may be seen in operation at STEPHEN GREEN'S Manufactory, Lambeth.

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1845.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

SUPERIOR GLAZED STONEWARE

DRAIN PIPES, invented and manufactured by
WILLIAM NORTHEN, UNION POTTERY, No. 14,
VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the dies being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and renders stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—

Roeber and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank.—Martin and Wood's Market Wharf, Regent's-park Basin.—J. C. Hilton's, Crown and Horse-shoe Wharf, No. 6, Upper Thames-street. C. Richardson's, South Wharf, Paddington. G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES, &c.

A DESIDERATUM in SLUICE-VALVES.

A FREEMAN ROE'S Patent Sluice-valve can be repaired without being removed from the main. All sizes for 2 inch to 9 inch. Patent Hydrants, Reflux Cocks, &c. and other Pumps, Hot-water Apparatus, Baths, &c. &c. are as made, and estimates given by FREEMAN ROE, Hydraulic, Sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

SALES BY AUCTION.

SUTTON, SURREY.—About six Acres of Freehold Land, in an elevated and picturesque part of the county, and about a mile and a half from the Sutton Station.

MESSRS. TO ENGINEERS, SMITHS, AND OTHERS.

TO BE LET, a small FACTORY, with engine and boiler screw cutting lathe, punching and shearing press, three vices, with fan and tools complete, including benches, screws, &c. Apply to Messrs. SMITH, Engineering Auctioneer and Valuer, 3, Blackfriars-road, near the bridge.

TO ENGINEERS, MILL OWNERS, CONTRACTORS, AND OTHERS.

AUGUSTUS SMITH, Auctioneer, Valuer, &c. 295, Blackfriars-road, two doors from Holland-street, having had seventeen years' practice in the selling and valuing of all kinds of engines, machinery, lathes, mechanical and engineering tools, plants, &c. respectfully solicits a share of patronage in the above line. The most satisfactory references can be required, and all accounts settled the day after delivery; also a free access kept of all engines, boilers, and machinery for sale by private contract.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, To BE LET, on Building Lease. Most liberal treatment to responsible builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

BUILDING-GROUND, BRIGHTON.—TO BE LET, a very eligible FRONTAGE for THREE or FOUR HOUSES in Broad street, immediately contiguous to the Marine parade and Chain pier, where houses are much in requisition. Full particulars and terms may be obtained of Messrs. LOCKWOOD, Surveyors, No. 4, Upper Baker-street, London.

TO CAPITALISTS, BUILDERS, AND BRICKMAKERS.

TO BE LET, a valuable BRICKFIELD, containing fine brick earth. The steam-engine and machinery for making bricks to be taken at a valuation, and the ground at a peppercorn rent. Premises situate about six miles from London-bridge, and in the neighbourhood of extensive estates, on which buildings are being rapidly carried.—For further particulars apply to Messrs. WIRE and CHILD, Solicitors, 9, St. Swithin's-lane, City.

VALUABLE BUILDING LAND TO BE LET, adjoining the New City Cattle-market, Islington, with an eligible site for a tavern, and extensive views. For plans and particulars, apply to Mr. THOS. BURTON, Surveyor, 3, Charlotte-row, Mansion-house.

GROUND, at CLERKENWELL, near Goswell-street road, 230 square yards, with six-roomed house and shed, well adapted for a manufacturer, builder, or some carpenter and large business. Lease sixteen years from Christmas, 1854. Rent £40 per annum; premium, thirty guineas. Apply to Mr. ALFRED COX, 68, New Broad-street, E.C.

RIVER-SIDE PREMISES TO BE LET, part of Lett's wharf, foot of Waterloo-bridge, Surrey side, a large brick building, 80 feet by 75 feet, iron roof; eight-room'd dwelling house, and counting-houses, part of a thirty and ten ton crane, weighing and housing dock. Apply to ROUTLEDGE and SON, on the Wharf.

TWENTY ACRES of excellent BRICK EARTH TO BE LET, for brickmaking, close to Lewisham and Blackheath stations, on the North Kent Railway. It is intersected by a new line of streets in building operations, by which two fine roads, already good, supply water. Apply personally any MONDAY or THURSDAY, between NINE and TWELVE o'clock, to Mr. H. NEWTON, No. 8, Lincoln-place, Hatton Garden.

BISHOPSGATE WORKHOUSE, Dunstan's-alley.—TO BE LET or SOLD, capital Freehold Buildings and Yards, suitable for any Builder or Manufacturer. The premises are of extensive build, with ample light and ventilation, and in good repair. For further particulars apply to Mr. SMARTT, No. 28, Sun-street, Bishopsgate, or of Mr. MERRIFIELD, No. 7, Great Winchester-street, Broad-street Buildings, 147 feet; average depth, 77 feet.

FREEHOLD and LEASEHOLD PROPERTY.—Parties having the above for disposal, may specify the same, subject to forwarding full particulars and plans to Messrs. BENNETT and KILLY, Builders, Auctioneers, Land and Estate Agents, Valuators, Surveyors, and Estate Agents, Pimlico.—Terms moderate.

TO BUILDERS AND OTHERS.

EXTENSIVE PREMISES TO BE LET, or the LEASE TO BE SOLD; containing large yard, with entrance gateway, workshops, sabling, and commodious dwelling-house, &c. complete. For particulars apply by letter, post paid, to A. B. at Messrs. Rider's, 61, Redcross-street, Borough.

TO BUILDERS AND OTHERS.

TO BE LET on LEASE, a capital DWELLING-HOUSE, with commodious carpenters' workshops, timber sheds, &c. in Lee-road, situate in Upper Camberwell, Peckham.—For plans, apply to Messrs. EDGAR EDWARDS, Architects, No. 17, Hunt-street, Bloomsbury; Mr. FIELD, No. 11, Upper Camden-place, Rosemary Branch-lane, Peckham; or on the Premises, which can be viewed on application.

DESIRABLE PLOTS of GROUND TO BE LET, for fourth rate houses, and CARCASES FOR SALE. Apply on the ground, Weller's-road, Kentish-town, or Lowndes's Slate Works, New-road, St. Pancras, or Mr. KELLY, 16, Gower-place, Euston-square.

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North Western Railway, and immediately adjacent to the Hampstead Junction Railway, about EIGHTEEN ACRES of COPYHOLD LAND, having a frontage to the West-end lane, of more than 800 feet. The Estate, which is beautifully situated, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks; and a specimen of the earth may be seen at the Offices of Messrs. WIGG, FOWNALL, and WIGG, 7, Bedford-row, where lithographed plans, and further particulars, may be obtained; or of R. B. ARMSTRONG, Esq. 8, Staple Inn.

TO CARPENTERS AND BUILDERS.

SEVERAL substantially-built CARCASES, with Garden walls and offices, in the Mallet-road, Kentish-town, TO BE LET or SOLD. Money advanced if required to build.—Enquire of Mr. CHARLES MARSHALL, Wedding-tou-street, Kentish-town.

CAPITAL SHOP and DWELLING-HOUSE, spacious YARD and ranges of WORKSHOPS, in an important thorough fare near Belgrave-square. To BE LET, together or separately. Messrs. MANSELL and ELLIOTT are instructed to Let, with early possession, a capital SHOP, with plate-glass front, highly decorated; dwelling-house, with four bedrooms, two drawing-rooms, spacious dining-room, counting house, and other offices, together with a spacious yard in the rear, with numerous lofty workshops, drying sheds, stabling, and other buildings, particularly adapted for a carpenter, cabinet maker, builder, or any other trade requiring extensive premises.—For particulars, apply to Messrs. MANSELL and ELLIOTT, Auctioneers, 124, Belgrave-square.

WANTED, to PURCHASE, or to RENT on a BUILDING LEASE, in the immediate neighbourhood of London, and on its north or west side, ONE or TWO ACRES of GROUND, on which to erect a dwelling-house. It must be on a dry, gravelly soil, in a sheltered situation, and the drainage and water supply of the immediate neighbourhood must be complete. The site of an old house, with trees of considerable growth, would be preferred.—Particulars as to situation, soil, and terms, to be addressed to T. H. WYATT, Esq. Architect, 77, Great Russell-street, London.

HOME COUNTIES and METROPOLITAN FREEHOLD LAND SOCIETY.—Office, 14, Chatham-place, Blackfriars. The Society has allotted one of the finest estates near London, and will shortly be in a position to announce other eligible freeholds for the selection of its members. Those members who have not yet got the convenience to the Woodgreen and Tottenham line, are invited to make immediate application for the Society's terms, which will be forwarded on receipt of two postage stamps. Late Assurances effected in nearly all the Offices by the same. Every information to be required, to whom the peculiar features of each Office will be explained, and much trouble saved Office hours, Nine to Eight.

TO SURVEYORS AND BUILDERS.

TO BE DISPOSED OF (with or without stock), in consequence of the death of the proprietor, a BUSINESS, established twenty-five years, in the above line, with one of the largest connexions in a populous and improving neighbourhood.—Apply, for particulars, to Mr. HENSLEY, Broadway, Worcestershire; or to Mr. FRENCH, 138, High-street, Cheltenham.

TO IRONMONGERS.

TO BE DISPOSED OF, by order of the Executors, the LEASE and GOODWILL of an old-established BUSINESS, in the heart of the City, the connexion being principally among builders and smiths. Amount required for stock, 600l. or about. Apply to Messrs. H. BROWN and T. A. ROBERTS, 22, Throgmorton-street.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, has on hand a large and very complete assortment of the above, which he offers to the attention of the public, being manufactured by himself, and warranted of the best workmanship. The prices will be found much lower than ever charged for articles of equally good quality. Rules, scales, tapes, &c. fancy drawing pens, prices, &c. A detailed price-list will be immediately forwarded, free, on application.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and sold at half the usual prices, by Messrs. BARLOW, 7, Hunter-street, Holborn (between 1 and 2 p.m.); or to Mr. H. B. BARLOW, Office for Patents, Dashwood-house, Ex hange, Manchester.

NOTICE to INVENTORS.—New Patent Law.—PATENT OFFICE, 4, Trafalgar-square, Charing-cross. The "Circular of Information," and plain instructions for the protection of inventions in the United Kingdom or foreign countries, may be had gratis, by applying personally, or by letter, pre paid, to Messrs. PRINCE and Co.

THE ARCHITECTURAL and CIVIL ENGINEERING CLASSES, 24, Guildford-street, Russell-square, are OPEN for the reception of pupils, at one guinea per quarter each, in the following subjects:—Geometry, mensuration, taking out quantities, estimating, &c.—For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. at the Offices.

NOTICE.—The DRAWINGS executed by the students during the past year, of the Architects, Builders, Civil Engineers, and Machinists' Drawing Classes, will be EXHIBITED in the CLASS-ROOMS of the establishment, 24, Guildford-street, Russell-square, on Thursday and Friday, the 14th instant, from TWELVE till NINE a.m. each day. The attention of all interested in drawing classes is solicited to the above exhibition, as affording an opportunity of ascertaining the class of drawing studied at this establishment.

T. J. HILL, Architect, Conductor of the Classes.

COMPETITION and other DRAWINGS. Coloured Lithographic Perspective Architectural Plans, on reasonable terms. Specimens produced.—Address, B. C. Stationers, 40, Theobald's-road, Bedford-row.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," begs to observe that he undertakes to make Sketches, Perspective Views, Interior, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to, in preparing designs lithographed in a superior manner.—Address, Mr. BOYS, 32, Albany-street, Regent's-park.

CLASSES for the Study of CONSTRUCTION, ARCHITECTURAL, MECHANICAL, and ORNAMENTAL DRAWING, are held at the ROYAL POLYTECHNIC INSTITUTION, every Monday and Thursday evening throughout the year. Charge to Members of the Institute, 2s. per quarter. To Non-Members, 5s. per quarter.

Master, Mr. T. E. KNIGHTLEY.

December 6th, 1854.

DESIGNS PREPARED for SHOP FRONTS, INTERIOR FITTINGS, and GENERAL ARCHITECTURAL ARRANGEMENTS, by Mr. JOHN DWYER, 11, Great Marlborough-street.

WILLIAM BARRATT, LANDSCAPE GARDENER, WAKEFIELD.

*** Plans and estimates furnished.

QUANTITIES, Measurements, Dilapidations, Surveys, Building Accounts, Land Surveys, &c.—Architects, Builders, or Employers, in town or any part of the country, requiring a practical and experienced SURVEYOR, would find prompt and unremitting attention to any business of this nature, combined with a most moderate charges, on application to Mr. A. ANDERSON, Offices, 12, St. Martin's-lane and Acton-hill.

London: Printed by Charles Wyman, of 13, Hunter-street, Brunswick-square, in the Parish of St George, Bloomsbury, Printer, at the Printing-office of Cox (Brothers and Wyman, 74 & 75, Great Queen-street, Lincoln's-inn-fields, in the parish of St. Giles-in-the-fields; and published by the said Charles Wyman, at the Office of "The Builder," 1, York-street, in the Parish of St. Paul, Covent-garden, and in the County of Middlesex.—Saturday, December 16, 1854.

BOARD of TRADE, DEPARTMENT of SCIENCE and ART.—AID TO PUBLIC SCHOOLS IN OBTAINING EXAMPLES FOR ART INSTRUCTION. The Lords of the Committee of Privy Council for Trade having resolved to furnish examples to schools in accordance with the plan adopted by the Committee of Privy Council for Education, and to discontinue the practice of keeping a stock of such articles at the Department, Notice is hereby given, that on and after the 1st of JANUARY, 1855, examples will not be supplied directly from the Department of Science and Art as at present, but through agents in London and the provinces. Forms of application for aid, and further information may be obtained at the Offices, Marlborough House, Pall-mall, London.
Marlborough House, 30th Nov. 1854.

THE MUSEUM of ORNAMENTAL ART, Marlborough-house, Pall-mall, will be OPENED, free daily, except Fridays, during the Christmas Holidays, from TUESDAY, the 26th of DECEMBER, to SATURDAY, the 6th JANUARY, both inclusive.

THE ANNUAL EXHIBITION at Gore-house, Kensington-gore, of the ELEMENTARY WORKS of STUDENTS in all the Schools of Art in connection with the Department of Science and Art, both local and metropolitan, will be opened to the public on and after FRIDAY, the 22nd of DECEMBER, Christmas day excepted. Admission, free, daily, from TEN to FOUR; and in the evening from SEVEN to NINE.

COMPETITIONS.

TO ARCHITECTS.

TOXTETH PARK (near Liverpool), GENERAL CEMETERY.—NOTICE.—The BURIAL BOARD of TOXTETH PARK, hereby give notice, that the time for receiving Plans and Designs for Enclosing, Laying Out, and Draining the proposed Public Cemetery, with the necessary buildings to be erected thereon, is EXTENDED to the 23rd day of JANUARY next.—By order of the Board,
J. ROWLAND, Clerk.
Public Office, Toxteth Park,
Dec. 14, 1854.

SHEFFIELD NEW SCHOOL OF ART.—NOTICE to ARCHITECTS.—All Designs for this School must be sent in SO AS TO BE RECEIVED BY THE HONORARY SECRETARY ON OR BEFORE THE 30th INSTANT. All designs received after that day will be considered ineligible for the competition, and will remain unopened.—By order of the Committee,
B. WIGHTMAN, Hon. Sec.
4th Dec. 1854.

TO ARCHITECTS AND OTHERS.

NOTICE is hereby given, that the BURIAL BOARD for the parish of ST. NICHOLAS, HARWICH, are prepared to receive DESIGNS, PLANS, and ESTIMATES for PERMANENTLY ENCLOSING the LAND selected for the BURIAL GROUND for that parish, which is, in extent, about four acres, for ERECTING thereon a KEEPER'S LODGE, or HOUSE, and a RECEIVING HOUSE, with the usual Out-offices, and for laying out and planting such land. The Board will not be bound to accept any design, plan, and estimate, or to employ the person, if any, whose design, plan, and estimate shall be adopted, but will pay such person a premium of five guineas, and his design, plan and estimate shall then become the property of the Board. A plan, of the land can be seen, and further information may be obtained at my Office. All designs, plans, and estimates are to be delivered at my office, under cover, and sealed and endorsed, "Designs, &c. for St. Nicholas, Harwich, Burial Ground," on or before the 2nd day of JANUARY next.
EDWARD CHAPMAN, Clerk to the Board.
Harwich, December 11, 1854.

COMPETITIONS.

TO LANDSCAPE GARDENERS, ARCHITECTS AND SURVEYORS.

THE Committee of the COVENTRY FREEHOLD MUTUAL LAND SOCIETY, invite parties to submit PLANS and DESIGNS (drawn to a scale of 30 feet to an inch) for FENCING and LAYING OUT their Estate, at Stoke, near the city, in a manner suitable for the erection of Villa and other residences. A premium of £20 will be paid for the Design which shall be selected and adopted by the Society; and a premium of £5 will be paid for the Design, which, in the opinion of the Committee, shall be entitled thereto as a second prize. On payment of the premiums the Society are to be entitled to the Designs selected, but are not to be considered as in any way bound or liable to employ the parties furnishing them. A Plan of the Land, which is to be divided into 56 lots, may be seen at my office; and a lithographed copy will be forwarded to any party applying for it, to Mr. M. H. BROWN, Land Surveyor, Coventry, or to me. The Designs to be forwarded to me, free of charge, under a letter or motto, with a sealed letter to correspond, on or before THURSDAY, the 1st day of FEBRUARY next; and in the meantime any further information may be obtained on application to Mr. BROWN, or to me.
HENRY I. DAVIS, Solicitor to the Society.
Hay Lane, Coventry, Dec. 13, 1854.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the Parishes of the Holy Trinity, Saint Peter, and All Saints, in DORCHESTER, in the county of Dorset, is desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground-plans, sections, and elevations, for LAYING OUT a NEW BURIAL-GROUND of four and a half acres (the plan of which can be seen in my office, in the High East-street, Dorchester), inclosing the Ground, Building a Lodge, with Entrance-Gates, and Building Two Chapels, one to be consecrated and one not. The party whose plans, &c. may be approved will, at the discretion of the Board, either have the superintendence of the works or be paid 1st 15s for the plans, designs and estimates, which must be delivered at my Office, free of expense, without the seals, names, but with a motto, on or before the 15th day of JANUARY, 1855. A sealed letter containing real name and address should accompany each design, which will be open after selection made, and Bond fide approved, will be returned.—By order,
HENRY LOCK, Clerk to the Board.
High East-street, Dorchester, Dec. 19, 1854.

CONTRACTS.

TO BUILDERS AND OTHERS.

NOTICE is hereby given, that Plans and Specifications for the RESTORATION of the PARISH CHURCH of COULSDON, near Croydon, in Surrey, may be inspected at the School-room, near the Church, Coulsdon, from the 28th day of DECEMBER instant to the 8th day of JANUARY inclusive. All persons desirous of entering into a CONTRACT for the carrying of the said works, must send in sealed Tenders, directed to the Rev. GEO. RANDOLPH, Coulsdon, Surrey (and marked outside "Tenders for Repairs"), on or before the 10th day of JANUARY next. The contractor will be required to enter into a bond, at his own expense, with two approved securities, for the due execution of the contract. The Committee do not bind themselves to accept the lowest or any Tender.

TO BUILDERS.

TENDERS are WANTED for certain ADDITIONS and ALTERATIONS, at Nos 2 and 3, GUNSTREET, Spitalfields, for the Committee of the Dolphin-court Ragged School.—The drawings may be seen at the Office of Mr. KERR, Architect, 41, Coleman-street, City.

SWANSEA LOCAL BOARD of HEALTH.
WATERWORKS.—To IRONFOUNDERS, PIPELAYERS, and OTHERS. The SWANSEA LOCAL BOARD are prepared to receive TENDERS from parties who may be willing to undertake either of the following CONTRACTS:—
CONTRACT, No. 1.—For the SUPPLY of about 50 TONS of CAST-IRON PIPES, and other CASTINGS.
CONTRACT, No. 2.—For EXCAVATING the GROUND, LAYING and JOINTING about 3,000 LINEAL YARDS of CAST-IRON MAINS, complete. Also for FIXING HYDRANTS, SLUICE VALVES, &c.
Specifications may be seen, and forms of Tenders, Schedules, &c. may be obtained (together with any further information required, on application at the Office of the Local Board, Swansea, or at the Offices of ROBERT RAWLINSON, C.E. 34, Parliament-street, Westminster. Sealed Tenders to be sent in to the Clerk of the Local Board, on or before the 8th day of JANUARY, 1855.
EDWARD STRICK, Clerk to the Board.
Swansea, Dec. 18, 1854.

TO IRONFOUNDERS.

PERSONS willing to CONTRACT to supply the city of Worcester Local Board of Health with about 900 YARDS of 9-INCH CAST-IRON SOCKET-PIPES, in 9 feet lengths, 48 pounds to the foot, to be delivered at the Worcester Station of the Oxford, Worcester, and Wolverhampton Railway, or the Lowesmoor Wharf, Worcester, on or before the 2d day of JANUARY next, are required to send in sealed Tenders, addressed to "The Water, Sewerage, and Streets Committee, Guildhall, Worcester," on or before the 28th DECEMBER instant.

SHIPLEY LOCAL BOARD of HEALTH.
WATERWORKS CONTRACT, No. 1.—To IRONFOUNDERS.—The Local Board hereby give notice, that they are prepared to receive TENDERS for the MANUFACTURE and SUPPLY of certain CAST IRON SOCKET PIPES and other CASTINGS. The drawings and specifications may be inspected, and forms of Tender obtained at the Office of Mr. J. McLANDSBOROUGH, Civil Engineer, 24, Queensgate, Bradford, on and after the 4th DECEMBER. Sealed Tenders must be delivered to the undersigned, on or before SATURDAY, the 30th day of DECEMBER, 1854. The Local Board do not bind themselves to accept the lowest or any Tender.
JO. THOMPSON, Clerk to the said Local Board.
Bradford, Nov. 30, 1854.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the Dover District hereby gives Notice, that sealed TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before the 18th day of JANUARY, 1855, from Persons desirous of CONTRACTING with the Honourable Board of Ordnance for the following WORKS at DOVER CASTLE, viz. FITTING UP the CLIFF CASEMATES as BARRACKS, including the Construction of Ablution Rooms, Privies, and Urinals, and the Improvement of the Ventilation Shafts. Plans and specifications of the works may be seen, and forms of Tender obtained, at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 28th DECEMBER, 1854, to the 13th JANUARY, 1855, Sundays excepted. The party whose Tender may be accepted for the works will be required to enter into a bond, with two eligible securities, jointly and separately, to be bound under a penalty of £200 for the due performance of the contract. Tenders for the above works to be addressed to the "Secretary to the Board of Ordnance, Ordnance Office, Pall-mall, London," and endorsed "Tender for Works at Dover Castle."
N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.
Royal Engineer Office, Dover, December 13, 1854.

NOTICE to GAS COMPANIES and GAS-FITTERS.—ORDNANCE CONTRACT.
Office of Ordnance, Dublin, 11th December, 1854.
With reference to the advertisement dated 18th November, 1854, the principal Officers of Her Majesty's Ordnance hereby give notice, that the date for receiving TENDERS for SUPPLYING GAS; also for PROVIDING and FIXING the necessary "PIPES and other FITTINGS at Portobello and Royal Barracks, Dublin," has been EXTENDED from the 15th day of DECEMBER to the 30th DECEMBER, 1854. Persons desirous of TENDERING for the same will receive every information on application at the Royal Engineer's Office, Lower Castle-yard, Dublin; as also at the above Barracks; and obtain specifications, with the terms of contract, upon making a deposit of £1 for the same, which £1 will be repaid when the specifications are returned unmutilated. The pipes and fittings to be completed within six months after the acceptance of the Tender; and the supply of gas to be for three years. Persons will be at liberty to Tender for the supply and fixing of the pipes and other fittings, without reference to the supply of the gas; or, for supplying the gas only, without tendering for the supply and fixing of the pipes and fittings. The letter of Tender to be sealed and transmitted under cover to "The Secretary to the Board of Ordnance, Pall-mall, London," so as to be received on or before the 30th day of DECEMBER, 1854, and to be marked on the outside, "Tender for Supply of Gas," or "Gas Fittings" (as the case may be), "at the Barracks, in Dublin."

NOTICE to BUILDERS.—ORDNANCE CONTRACT.—Notice is hereby given, that sealed TENDERS will be received by the Honourable Board of Ordnance, Pall-mall, London, on THURSDAY, the 28th DECEMBER, 1854, to be delivered before TEN o'clock, a.m. for the EXCAVATIONS WORK required in the CONSTRUCTION of a REDOUBT at Freshwater gate, Isle of Wight. Drawings and schedule of contract for the above, may be seen, and forms and conditions of contract obtained Christmas day excepted, on any day on and after MONDAY, the 18th inst. on application to Mr HAWKEN, Clerk of Works, Royal Engineer Office, Mill Pond, Portsmouth. Tenders to be enclosed, and endorsed, "Tender for Excavators' Work, &c, Freshwater, Isle of Wight."
Royal Engineer Office, Portsmouth, 12th December, 1854.

TO BUILDERS.

SEALED TENDERS for BUILDING BARRACKS and STABLES for Royal Artillery, to be erected at Devonport; with separate Tenders for the Asphalte Work, will be received at the Ordnance Office, Pall-mall, London, on or before MONDAY, the 8th JANUARY next, at Noon, addressed to the Secretary to the Board of Ordnance, and endorsed "Tender for Artillery Barracks, Devonport," on the left-hand corner of the envelope. The Royal Artillery Barracks comprise a building containing six officers' quarters and servants' rooms; a range of stables with harness-rooms, artillery-stores, ablution-rooms, with internal staircases, and sad lers' rooms over the whole range; infirmary stables and yard; forage-barn for hay, straw, and corn; forge, shoeing-shed, pharmacy, and cookin -house; guard-house and cells; cookery-room and washing-house; privies, drains, and sash pipes; enclosure-walls, gates, side-doors, roads, paths, and sash pipes; enclosure-walls, gates, side-doors, roads, paths, and sash pipes; enclosure-walls, gates, side-doors, roads, paths, and sash pipes; enclosure-walls, gates, side-doors, roads, paths, parades, drains.—Plans, terms, and conditions, with specifications, and additional items, may be seen, forms of Tender and all necessary information obtained, at the Royal Engineer Office, Devonport, between the hours of TEN and FOUR o'clock, from TUESDAY, the 19th inst. to SATURDAY, the 6th of JANUARY next, Sundays and Christmas-day excepted.
Royal Engineer Office, Devonport 14th Dec. 1854.

ORDNANCE SMALL ARM FACTORY, ENFIELD-LOCK.—With reference to the Advertisement in the "Builder" of the 16th inst. Notice is hereby given, that as the selection will be made from one of the Candidates who have already offered their services, NO FURTHER APPLICATIONS NEED BE MADE.
Royal Engineers' Office, Woolwich, December 20, 1854.

TO CONTRACTORS.

RYDE WATERWORKS. — The Commissioners of the town of Ryde hereby give notice, that they are prepared to receive TENDERS from competent persons who may be willing to undertake either of the following CONTRACTS:—
CONTRACT, No. 11.—For the SUPPLY of FURNACE WORK.
CONTRACT, No. 12.—For the SUPPLY of HYDRANTS and SLUICE COCKS.
Plans, specifications, and conditions can be seen at my office, at the Town-hall, Ryde; or at Messrs. EANTON and AMOSS, Grove, Southwark. Separate Tenders for each of the above to be sent to me, on or before the 31st instant. The Commissioners do not bind themselves to accept the lowest Tender.
By order of the Commissioners,
WILLIAM HENRY PULLEN, Clerk.

[For remainder of Contracts see next page.

CONTRACTS.

TO BUILDERS

TENDERS are required for the ERECTION of an HOTEL and STABLING for SIXTEEN HORSES, at the terminal station of the Caterham Railway, at Caterham, near Croydon. The drawings and a certain number of specifications may be seen at the office of Messrs. PHILLIPS and WITHALL, 2, Cook's-inn, Chancery-lane, to whom tenders are to be delivered on TUESDAY, 2nd of JANUARY, 1855.

CONTRACT for OAK PICTURE-FRAMES.—SEALED TENDERS are required to supply 500 Oak Picture Frames, Gas Lights, &c., for the Art of PEACE, 1855. Full particulars of size, &c., may be had at the Register's Office, Marlborough House, Pall-mall.
Department of Science and Art, 15th Dec., 1854.

TO BUILDERS AND MASTER MASONS.

THE General Iron Screw Collier Company are prepared to receive TENDERS for the construction of one or more BUILDERS of about 70 horse power each, the drawings and specifications of which may be seen here any time between the hours of TEN and FOUR.
ROBERT JOHN CLARKE, Secretary, 75, Cornhill.
December 30, 1854.

BOSTON CORN EXCHANGE and ATHENÆUM.—TO BUILDERS and CONTRACTORS. The Directors of the Boston Corn Exchange and Athenæum Company are desirous of CONTRACTING with BUILDERS in the erection of a CORN EXCHANGE, ATHENÆUM, and other BUILDINGS connected therewith, according to certain plans, drawings, and specifications, which will be open for inspection at the Board of the Corporation Company, in Red-lion-square, Boston, between the hours of NINE and FIVE o'clock on the following days, viz., on MONDAY, the 18th of DECEMBER next, to TUESDAY, the 2nd of JANUARY next, inclusive, when one of the Architects, Messrs. BELLAMY and HARDY, Lincoln, and further information may be obtained. Sealed Tenders, stating the lowest sum for which the Corn Exchange, &c., are to be erected, to be delivered at the Office of the Clerks, in Boston, on or before the 2nd day of JANUARY next. The Directors do not bind themselves to accept the lowest or any Tender, and reserve to themselves the right of rejecting any Tender which they may deem objectionable.
STAMFORD and CHAPMAN, Clerks to the Directors.
Boston, Dec. 6, 1854.

TO BRICKMAKERS, SCAVENGERS, AND OTHERS.

THE CROWN ESTATE PAVING COMMISSIONERS do hereby give notice, that they are ready to receive TENDERS from parties willing to enter into a CONTRACT for REMOVAL, during the ensuing spring of the 10th and 11th YEARS of the POST, DIRT, TIMBERS, and ASHES, from the several Premises which their Surveyor shall point out to them, and to deliver the same at such Wharves or Premises as they may require to be brought, within the Districts of Pimlico, Belgrave, and Eaton, as the Commissioners may from time to time direct. Tenders, according to such forms, sealed, addressed to the Crown Estate Paving Commissioners, and endorsed "Tender for Dust," are to be delivered TWO clear days (viz., on WEDNESDAY, the 3rd day of JANUARY next), at
FRANCIS ADAMS, Clerk to the Commissioners
1, Whitehall-place, Dec. 19, 1854.

TO ARCHITECTS, BUILDERS, &c.

THE Members of the Burial Board of Stowmarket are desirous of receiving PLANS, DESIGNS, and ESTIMATES for the following WORKS:—1. A NEW BURIAL GROUND of three acres, the plan and position of which can be seen at my office. 2. BUILDING a LODGE, with gates for one entrance. BUILDING. Two CHAPELS, each to be 40 feet long by 24 feet wide, with vestries, and to be placed at each end of the ground. Separate Tenders are required for the Lodge and Chapels, and the Board will not be bound to accept the lowest or any Tender. Plans, specifications, and estimates must be delivered to me on or before the 24th of JANUARY next. The Tenders will be opened by the Board at their meeting on WEDNESDAY, the 3rd day of JANUARY, 1855.
JOHN MARRIOTT, Clerk to the Board.
Stowmarket, 16th Dec., 1854.

TO BUILDERS, ENGINEERS, MACHINISTS, AND OTHERS.

WANTED, to purchase a NEW or SECOND-HAND SAWING-FRAME, with Saws and all appurtenances complete, for sawing three-inch deal. Address post-paid to C. at Mr. Bell's, Stationer's, Poultry, London.

DESTRUCTION of WAREHOUSES at MANCHESTER, by FIRE.—Messrs. Rylands and Sons' Bank, Papers, and Bank-note Property, in one of CHUBB'S SAFES, after fourteen hours' fire, uninjured.
COPY OF MESSRS. RYLANDS AND SONS' TESTIMONIAL.

"24, High-street, Manchester, March 6th, 1854.

"Messrs. Chubb and Son,

"Gentlemen,—We have great pleasure in communicating to you, that the large "Patent Fire-proof Safe" that we purchased from you 12 years ago, for our late premises, New Highstreet, has been the means of preserving our books, cash, notes, &c., enclosed therein, on the evening of the 23rd March, when our entire premises were destroyed by fire. The safe, after being subject to fourteen hours' intense heat, was unlocked on the morning of the 3rd of March, the locks all answered to their respective keys, and all the damage the contents received (water excepted) was that only some of the books were slightly singed at the edges.

"We remain, Gentlemen, yours respectfully,

"RYLANDS and SONS."

CHUBB'S LOCKS, with all the recent improvements; Cash, Deed, and Parcel Boxes, of all sizes; Prisoners' Safes, and Cells; Iron Doors and Frames for Strong Rooms; all fitted with the Detector Lock. Chubb's Illustrated Lists, with prices and sizes, may be had on application.

CHUBB and SON, 57, St. Paul's Church-yard, London; 28, Lord-street, Liverpool; 16, Market-street, Manchester, and Horsley-fields, Wolverhampton.

FIRE-PROOF CONSTRUCTION.—FOX and BARRETT'S PATENT.

The improved system of fire-proof construction has been most extensively adopted, and its application has been extended to the following DESCRIPTION OF BUILDING, whether public or private:

Fire-proof Warehouses, Offices, Dwelling-houses, Churches, Chapels, Schools, Hospitals, Asylums, Prisons, Bridges, Arches, Roofs, Floors, Partitions, Staircases, Fronts, Party-walls, Sheds, Stables, Coach-houses, Granaries, Barns, Farm-buildings, Cottages, Conservatories, Hot-houses, Pits, Frames, Lights, Tanks, Cisterns, Reservoirs, Culverts, Drains, Sewers, Gas-works, Water-works, Docks, Piers, Wharfs, Quays, Jetties, Embankments, Sea-walls, Groins, Breakwaters, Lighthouses, Beacons, Buoys, Viaducts, Railway-stations, Railway-bridges, Railway-arches, Railway-walls, Railway-fences, Railway-signals, Railway-carriages, Railway-wagons, Railway-trucks, Railway-platforms, Railway-sheds, Railway-tunnels, Railway-cuttings, Railway-embankments, Railway-drains, Railway-culverts, Railway-sleepers, Railway-chairs, Railway-keys, Railway-wedges, Railway-fastenings, Railway-switches, Railway-crossings, Railway-turntables, Railway-points, Railway-signals, Railway-gates, Railway-fences, Railway-bridges, Railway-arches, Railway-walls

TO ENGINEERS, ARCHITECTS, AND BUILDERS.

THE VIEILLE MONTAGNE ZINC MINING & MANUFACTURING COMPANY

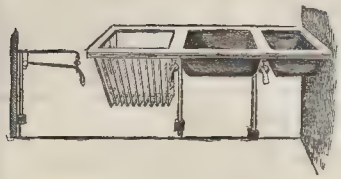
ARE NOW PREPARED TO

UNDERTAKE CONTRACTS, THROUGH THEIR AGENTS, FOR ZINC ROOFING OF ALL DESCRIPTIONS;

TOGETHER WITH, WHEN REQUIRED,

ALL THE NECESSARY TIMBER OR IRON FRAMEWORK, IN WHICH A GREAT SAVING IS EFFECTED BY THE LIGHTNESS OF THE METAL.

It possesses all the Advantages of Galvanised Iron, and is far more Durable and Cheaper, especially for large Spans.



The long duration of these roofs without repair, their neat appearance, and the economy of materials employed, as well as of area covered, render them most advantageous for dwelling-houses. Many roofs covered with zinc, especially on the continent, have remained since the first introduction of this metal till the present time without having required, or appearing likely to require, any repairs.

CERTIFICATES in proof of this from the FRENCH GOVERNMENT and other authentic sources CAN BE SEEN at the COMPANY'S OFFICES, where all information, Estimates, Drawings, or Prices, together with every assistance in laying on or otherwise, may be obtained on application to the Company's Surveyor, at

No. 12, MANCHESTER-BUILDINGS, WESTMINSTER.

COTTAM'S NEW PATENT FOR STABLE REQUISITES.

COTTAM AND HALLEN,

the original Projectors of the Iove arrangement of MANGER RACK and WATER TROUGH, AS ONE FIXTURE, which obtained the Great Exhibition Prize Medal, and universally approved of, have added all the latest improvements to their invention, secured by patent, which includes an entirely new method of attaching the gutter bull and rack, giving the horse greater freedom, and rendering it more easy to operate, and much to its comfort whilst feeding and at nevenience when at rest.

COTTAM'S ENAMELLED MANGERS

are constructed in the best possible manner, both as to form and utility, are clean in appearance, durable, and impervious to infection; manufactured PLAIN, GALVANIZED, or ENAMELLED

Improved Stable Guttering, with Moveable Safety Covers.

Loose Box Fittings, Harness-room Appendages, and every Article in Stable Furniture kept on show

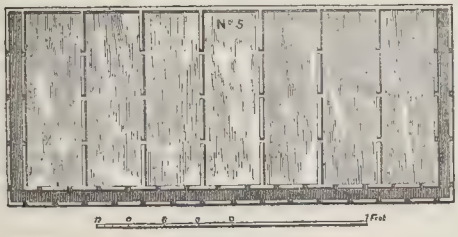
Descriptive Catalogues and Estimates on application to

COTTAM AND HALLEN, 2, WINSLEY STREET, OXFORD-STREET, LONDON.

IMPROVED PUMPS,

Of the best Workmanship and warranted.

The VALVES and SUCKERS of these Pumps are constructed upon an entire new and SIMPLE principle, they are not likely to get out of order; should they do so, can easily be repaired, as the Pump is so contrived that the valves can readily be got at.



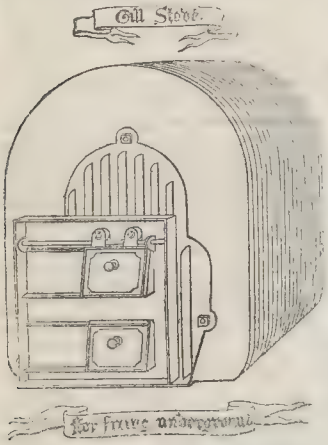
An Improved CAST IRON TRAP, strongly recommended by the Sanitary Commissioners, and suitable for Sugar Bakers, Slaughter Houses, &c. &c. It is so formed that the Trap plate will pass any matter the top grating will let through, and therefore not liable to stoppages and well adapted to Stables and Stable-yards, for saving the best part of Liquid Manure.

HAYWARD'S IMPROVED

COAL-HOLE PLATES.

ILLUMINATING GRATINGS.

PAVEMENT LIGHTS.



COAL-HOLE PLATES, with Wrought Eyes fitted; ILLUMINATING with Glass Lenses, 6s. each; Ditto, plain Iron, solid, 2s. 9d. each; Ventilating, 3s. each

N.B. The Flange A prevents them from shifting when trodden on or being forced up

ILLUMINATING AREA GRATINGS, thick Glass fitted, 5 or 10-inch openings of any length or number, at per foot super. 12s.

ILLUMINATING PAVEMENT LIGHTS, with Flange, as A, and Glass Lenses, 30s. each, 21 inches diameter.

HAYWARD (BROTHERS), MANUFACTURING IRONMONGERS, 196, BLACKFRIARS-ROAD.

STUART AND SMITH'S

PATENT GILL STOVE,

FOR

HEATING CHURCHES AND OTHER PUBLIC AND PRIVATE BUILDINGS.

The constant failures, and enormous expense, consequent upon the endless variety of experiments to warm buildings has left the public in doubt as to whether there exists any certain, economical, and safe mode of effecting that object or not.

STUART AND SMITH,

ROSCOE-PLACE, SHEFFIELD,

confidently assert, that the Air-Warmer they recommend, possesses the desired qualifications, and respectfully request Gentlemen interested in the question, to ascertain the fact from the actual working of the invention.

It has been fixed in the following, besides a great many other private and public buildings:—St. Stephen's, Longsight, Manchester; Grassendale Church, Aigburth, Liverpool; St. Ann's, Aigburth, Liverpool; North Wootton, near Lynn, Norfolk; St. Paul's, Alnwick, Northumberland; Bettesanger Church, Sandwich, Kent; St. Mary's, Pitsmoor, and Grimesthorpe, Sheffield; County Lunatic Asylum, Derby, &c. &c. &c.

Prospectuses, and every information, sent on application.

LOSH, WILSON, and BELL,
NEWCASTLE-ON-TYNE.
Manufacturers of Bar Iron, Railway Bars, Forge and Engine Work, Cast-iron Goods, and
STEWART'S PATENT CAST-IRON GAS and WATER PIPES.
Office, No. 7, Size-lane, London.

AUSTIN'S IMPERIAL
PATENT SASH and BLIND LINE,
can be obtained of all
ROPEMAKERS, IRONMONGERS, FACTORS, AND WHOLESALE HOUSES IN TOWN OR COUNTRY.
Established 1774

IRON ROOFS, Wrought iron GIRDERS,
Girder Bridges, Railway and Building Wrought iron Work, Gasholders, Tanks, and Boilers.

Midland Iron Works, Tipton, Staffordshire.
Office, Little Sutton-street, London

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE having been brought to full perfection, may now be seen in daily operation at F. EDWARDS and SONS', 42, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is require'd, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in kitchen ranges, and hot air pedestal stoves. Old grates are altered to this principle.—Prospectus sent on application.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DEFRIES'S PATENT.—The public is respectfully informed that arrangements have now been made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c. Smoke, dust, ashes, and accidents from fire are effectually prevented by its use, while it presents all the comfort and appearance of an open coal fire, securing, at the same time, perfect ventilation.—To be seen in action at DEFRIES'S Office, 145, Regent-street, London.

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT—Plain, from 12s. to 42s.; Ornamental from 31s. 6d. to 10 guineas—for warming halls, passages, greenhouses, water-closets, shops, store-rooms, and all places requiring artificial warmth. To be seen in use at the sole Proprietor's, S. NASH, Ironmonger, &c. 233, Oxford-street, and at the City Depôt, 119, Newgate-street, London. PATENT PREPARED FUEL for the stoves, 2s. 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and Italian irons, with perfect cleanliness, for twelve hours, with one pennyworth of coke or cinders. Price 12s.

*** Prospectuses, with drawings and report, forwarded free.

THE SMOKE-CONSUMING STOVE, invented by Dr ARNOTT, and explained by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion, economises fuel, requires much less attention than the register stoves in general use, and produces by the use of Dr. Arnott's improved Circular Valve, a perfect system of Ventilation.—Manufactured by D. and E. BAILEY, 272, Holborn

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING-STOVE to the notice of the public. It is cheap in first cost, simple in construction, easy of management, capable of doing a large amount of work with a comparatively small consumption of fuel, and is manufactured in sizes suitable for large or small families. In operation daily in the stove and fender department of Deane, Dray, and Co.'s establishment; where may also be obtained engravings with prices, or forwarded free by post.—DEANE, DRAY, and CO., opening to the Monument, London-bridge. Established A.D. 1700.

STOVES for CHURCHES, CHAPELS, HALLS, &c.—The one, two, three, and four-cylinder Patent SUSPENSION STOVES are the most Healthy, Economical, and Powerful. BROWN and GREEN, Patentees, Luton.

KITCHEN RANGES!—BROWN and GREEN'S celebrated RANGE is the best and most economical, and is a certain Cure for a Smoky Chimney. Manufactory, Luton, Beds. Wholesale Agents—R. W. KENNARD and CO. 67, Upper Thames-street.

HEATING by HOT WATER.—JOHN WEEKS and CO. King's-road, Chelsea, solicit the attention of architects, &c. &c. to their superior APPARATUS. At Messrs. Weeks' establishment, an apparatus with one boiler can be seen daily in full operation, heating buildings measuring 1,000 feet in length, at the small expense per day in fuel and labour of 3s. 3d. This achievement in heating by hot water is unprecedented.

HEATING by HOT WATER.—J. JONES, Iron Merchant, has always a great variety of CONICAL and SADDLE BOILERS in STOCK; also fire and furnace bars, ornamental and plain supply cisterns, double doors and frames, furnace-crates, soot-doors for the same, hot-water pipes, elbows, tees, syphons, throttle-valves, stop-cocks, flange and socket elbows, &c.; also, trough-pipes. Drawings and prices of the above, on application to J. JONES, Iron-bridge-wharf No. 6, Bankside, London, near the Southwark-iron-bridge.

WARMING and VENTILATING by HOT AIR, CHURCHES, HOSPITALS, TOWN HALLS, and other PUBLIC BUILDINGS.—J. BOILESVE, C.E. 55, King William-street, City of London, respectfully solicits the attention of the nobility, gentry, clergy, &c to the following testimonials, and begs to say he will attend personally any appointment:—

New Independent Chapel, Longsight, Manch-ster, January 10th, 1853.

SIR,—I am instructed by the building committee of the above chapel to order one of your No. 3 Calorifères, for heating and ventilating the school in connection therewith. As the sub-committee, upon examination of most of the public buildings, churches, and chapels in the town, find such general dissatisfaction with the existing apparatus, and their imperfect heating and ventilation, they have examined your Calorifère as in operation, and believe it best adapted to meet their wants. It is intended, should it prove successful, to apply another apparatus to the chapel. SAMUEL RIGBY, Secretary.

To J. Boilesve, esq.

New Independent Chapel, Longsight, Manchester, April 12th, 1854.

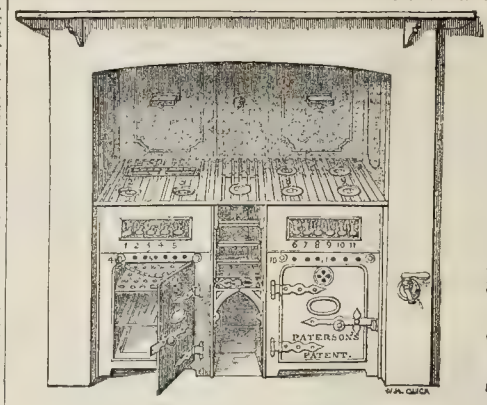
DEAR SIR,—I am authorised to inform you that the No. 4 Calorifère, erected to warm the Longsight Independent Chapel, is in every respect satisfactory to the committee and the congregation. Yours respectfully, ROBERT RUMNEY, Chairman.

To J. Boilesve, esq.

The Calorifère may be seen at the New Baptist Chapel, Camden-road, London.

WARMING and VENTILATING.—COTTAM and HALLEN, 2, Wimsey-street, Oxford-street, having had thirty years' experience, and having warmed by the circulation of hot water upwards of 1,000 buildings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, forcing-houses, &c. can with confidence recommend their system, which, by the various improvements they have made, has perfected the construction and economised the expense. Greenhouses, conservatories, verandahs constructed entirely of iron or wood, and of iron and wood combined. Estimates upon application. COTTAM and HALLEN, Engineers and Ironfounders, 2, Wimsley-street, Oxford-street.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses, Hotels, and Offices, require no Flue, create no Dust, and are safe from all risk of fire.



Any number of these Stoves may be heated from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER is the most powerful, salubrious, and economical Apparatus yet invented for Heating Churches, Chapels, Schools, and Public Rooms, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to SYLVESTER and CO. Engineers, and Manufacturers of Heating Apparatus, 96, Great Russell-street, Bloomsbury.

PATENT

PATERSON'S PATENT GAS COOKING APPARATUS.

May be seen by applying to the Patentee,

A. PATERSON,

53, VICTORIA-STREET

WESTMINSTER,

Of whom LICENSES may be had for making them.

On reference to the plate, it will be seen that roasting can be carried on in the open fire, if required; thereby rendering this apparatus the most compact and efficient of any that has yet been brought out.

THEY ARE MANUFACTURED BY

T. WALLER and CO.

Ratcliff Ironworks, Hose-lane, Ratcliff, near the Stepney Railway Station.

Where they may be seen in operation, and where prospectuses and every information concerning them may be obtained.

Also Manufacturers of every description of

GAS STOVES, BATHS, OPEN AND CLOSE KITCHEN RANGES, HOT WATER APPARATUS, METAL CONSERVATORIES, &c.

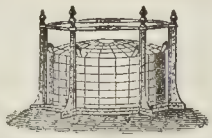
N.B. The Trade supplied with Iron Sash Bars, bent to any shape or design. See "The Builder" of Sept. 16.

STEVENS AND SON,

ENGINEERS,

IRON AND BRASS FOUNDERS AND MANUFACTURERS;

CONTRACTORS



FOR THE

ERECTION OR ALTERATION OF GAS-WORKS FROM TWENTY LIGHTS UPWARDS,

With Buildings, Mains, Meters, Service-Pipes, Lamp-Posts, Lamps, and Gasfittings,

Gas Stoves for Heating Churches, Chapels, Lecture Halls, and Public Buildings of all kinds; these have been recently fixed at New College, Oxford; St. George's Catholic Cathedral, Southwark; and numerous Churches, Chapels, &c.

Gas Cooking Stoves and Ranges on the most improved principles.

GAS-FITTING IN ALL ITS BRANCHES.

GAS CHANDELIERS OF ALL SIZES, IN BRASS OR IRON, FROM TWO TO TWO HUNDRED LIGHTS.

DEVICES FOR GAS ILLUMINATION.

IMPROVED REGISTERING TURNSTILES FOR TOLL-BRIDGES, EXHIBITIONS, PUBLIC GARDENS, BATHS AND WASHHOUSES, &c.

These Turnstiles have been selected for the Entrances of the Great Exhibition, New York.

PATENTEES OF THE SEMAPHORE RAILWAY SIGNAL.

Signals for communication between Guard and Engine Driver. Railway Stores and Lamps of every description.

DARLINGTON WORKS, 16 to 19, SOUTHWARK-BRIDGE ROAD, LONDON.

MOREWOOD & ROGERS'S PATENT PLUMBIC ZINC,

A SUBSTITUTE FOR SHEET-LEAD FOR

ROOFING, RIDGES, GUTTERS, FLOORING,

AND ALL OTHER PURPOSES TO WHICH SHEET-LEAD IS APPLICABLE.

This Metal consists of distinct layers of Lead and Zinc, perfectly united in the process of Manufacture, one side of each sheet being pure Lead, and the other pure Zinc; it therefore combines the Softness and Durable Qualities of Lead. The Lead side of the sheet being laid outward, effectually protects the Zinc below from those atmospheric influences which so rapidly cause its decay, whilst the Zinc so stiffens and supports the Lead as to make a sheet of Plumbic Zinc equal in strength to one of Lead of several times its thickness and weight.

Plumbic Zinc not requiring to be more than one-fourth or one-fifth as thick as Sheet-Lead, is consequently much cheaper than that material.

For covering Terraces, Flats, Floors, Stairs, Passages, &c. it is well suited, being like Lead to the tread, whilst the Zinc on the under side of the sheet prevents it from treading out of shape.

The Size of the Sheets is 7 feet by 2 feet 6 inches.

No. 11 Gauge weighs about	18	oz.	per foot	super.	
No. 12	20	oz.	do.	do.	
No. 13	23	oz.	do.	do.	
No. 14	26	oz.	do.	do.	

For further particulars apply to

MOREWOOD AND ROGERS, GALVANIZED TINNED IRON WAREHOUSE,

DOWGATE DOCK, UPPER THAMES STREET, LONDON.

WARMING LARGE BUILDINGS.—CUTLER and SONS respectfully state that they are prepared to CONTRACT for the ERECTION of their improved VENTILATING AIR-STOVES, for effectually and economically warming churches, &c. which they undertake in every instance to guarantee, as well as their durability.—A Stove may be seen in constant use at their warehouse, 16, Great Queen-street, Longacre.

HOT AIR, GAS, VESTA, JOYCE'S STOVES. STOVES for the economical and safe heating of halls, shops, warehouses, passages, basements, and the like, being at this season demanded, WILLIAM S. BURTON invites attention to his unrivalled assortment, adapted (one or the other) to every conceivable requirement, at prices from 10s. each to 30 guineas. His variety of register and other stoves is the largest in existence.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from all the various manufacturers all that is new and choice in Brackets, Pendants, and Chandeliers, adapted to offices, passages, and dwelling-rooms, as well as to have some designed expressly for him; these are now ON SHOW in one of his TEN LARGE ROOMS, and present, for novelty, variety, and purity of taste, an unequalled assortment. They are marked in plain figures, at prices proportionate with those which have tended to make his Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two light) to 8l.

WILLIAM S. BURTON has TEN LARGE SHOW-ROOMS devoted to the show of GENERAL FURNISHING IRONMONGERY (including cutlery, nickel silver, plated, and japanned wares, iron and brass bedsteads), so arranged and classified that purchasers may easily and at once make their selections.

Catalogues, with engravings, sent per post free. The money returned for every article not approved of.

39, OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN-STREET; and 4 and 5, PERRY'S-PLACE.

A PRIZE MEDAL for SUPERIOR LOCKS was awarded to J. H. BOOBBYER at the Great Exhibition of 1851, who invites the attention of Builders, &c. to his Stock of Ironmongery, Brass Foundry, Nails (wrought and cut), Copper and Zinc; Patent Locks of all descriptions; China, Glass, and Wood Furnitures of all kinds, with Patent Shifting Spindles; Dr. Arnott's Ventilator, 4s.; and the new registered Venetian Ventilator, so much admired, &c. 6s. 6d. each.

J. H. BOOBBYER (late STURGE and BOOBBYER), established nearly 200 years, for the supply of Goods from the best Manufactories, at the lowest prices.

14, Stanhope-street, Clare-market, London.

TUCKER and REEVE'S LOCKS afford absolute security at a moderate price.

"The novel and evidently effective principle of security on which these locks are constructed, places them at once in the foremost rank of such inventions; in the present state of the art, picking them would seem to be impracticable."—*Standard.*

Depôt: 181, FLEET-STREET; where also may be had PRICE'S FIREPROOF SAFES, &c.

TO MANUFACTURING CHEMISTS, PLUMBERS, BUILDERS, &c.

ANDREW CLARK and COMPANY, PLUMBERS,

THE BEAR GARDEN LEAD WORKS, SOUTHWARK,

Sole Manufacturers of Delbruck's Patent Autogenous Soldering Apparatus, invite the attention of Manufacturing Chemists to their Patent method of

UNITING LEAD TO LEAD WITHOUT SOLDER.

Leaden Chambers, or any leaden vessels, made or repaired by this process, making them complete, without the introduction of any foreign metal.

PLUMBERS and BUILDERS can be SUPPLIED with SHEET LEAD and PIPE, cut to any dimensions, and EXCHANGED for OLD LEAD, on the LOWEST TERMS.

PATRONISED BY H. R. H. PRINCE ALBERT.

S. HOOD and CO.'S REGISTERED STABLE-FITTINGS, with FRONT REVOLVING ROLLER, plain or enamelled.
Castings Warehouse, 81, Upper Thames-street.

COLLINGE'S PATENT HINGES.—Sole Manufacturers, CHARLES COLLINGE and CO. 63 and 63, Bridge-road, Lambeth, where a great variety are always on view for cmuren, park, railroad, coachhouse, and other gates and doors of large and small dimensions, a gate of a ton weight moving with these hinges as easily as a wicket. Ornamental hinges, with these hinges as easily as a wicket. Ornamental hinges, adapted for drawing-rooms, &c.; doors fitted with them may be removed and replaced in an instant. Rising and double-acting spring hinges, and superior gate fastenings, at moderate prices. None genu ne unless marked "Charles Collinge, Patent, Lambeth." Plain and ornamental cast and wrought iron-work, for building and other purposes. Engines, machinery, patent axletrees, sugar-mills, &c.

NEW PATENT MACHINE for MORTISING and TENONING HARD or SOFT WOOD, and BORING WOOD or IRON.—House and Coach Builders, Joiners, Cabinetmakers, and others, doing similar work, are invited to call at the Patentees, POWIS, JAMES, and Co. 26, Wating-street, City, and see in action this very simple, powerful, and expeditious machine, which is the only one yet brought out, for performing these three separate kinds of work by one machine; and as it is self-feeding, it does not require any skill or care in using like the older inventions introduced. It can either be worked by a boy, or made to go by steam power.
P.S. Steam Engines and Machinery contracted for.

NAILS and IRONMONGERY, from BIRMINGHAM direct.
Builders, Contractors, and Others, supplied with Nails, Iron, and Ironmongery of every description, at the
LOWEST BIRMINGHAM PRICES.
a complete LIST of which will be forwarded upon application.
FREDERICK BLYTH,
Nail Manufacturer and General Factor,
Regent-parade, BIRMINGHAM;
or at 16, Gresham-street, LONDON.

LIGHTNING CONDUCTORS.—R. S. NEWALL and CO. Patentees of the Copper Rope Lightning Conductor, beg to inform the nobility, clergy, &c. that they supply Lightning Conductors, with the point and all staples complete for fixing, at one shilling the foot.
R. S. NEWALL and CO.'s Patent Copper Rope Conductor is being used by architects, engineers, and scientific men in all parts of the world.
OFFICES.—Gateshead-on-Tyne.
139, Strand, London.
67, Hyde-park-street, Glasgow.
97, Dale-street, Manchester.

MARBLE.—Mr. J. FABBRICOTTI, of Carrara, Italy, Proprietor of Marble Quarries, and the only person in the United Kingd m selling Italian Marble the produce of his own quarries, begs to inform the gentlemen connected with the Marble Trade that he has established, in London, the most extensive Depôt of Statuary, Veined, Sicilian, Dove, and Black and Gold Marbles, at CARRARA WHARF, THAMES BANK, PIMLICO, the foot of Vauxhall-bridge.

TO THE MARBLE TRADE.
MR. J. FABBRICOTTI begs to inform the public that he has REMOVED from the office lately held by him at No. 8, Crescent-terrace, Millbank, to offices on his own premises, at Carrara Wharf, Thames Bank, Pimlico, where he continues to carry on the marble trade solely on his own account. Mr. Thompson being no longer his agent.
Mr. J. Fabbricotti hopes that the trade will continue to favour him as usual, as, being the absolute proprietor of the quarries at Carrara, he can supply at better advantage and quality than any one else.
N.B. The well-known qualities of Mr. Fabbricotti's marble are celebrated throughout all Italy, England, and America.

MARBLE SLABS.—MARBLE and STONE SAWING-MILLS, 8, NORTH WHARF-ROAD, PADDINGTON. The proprietors of the above mills beg to offer to masons and the building public generally their extensive assortment of vein, Sicilian, and statuary marble, in slab and block, at prices never before offered. JAMES SIMMONS, Manager.

MARBLE.—THOMPSON and HOLMES, Marble, Stone, and Timber Brokers, Contractors and Builders' Agents, beg to inform the gentlemen connected with the marble trade, that their stock of marbles is received direct from the principal Quarry owners in Italy and Belgium. FOR SALE, on COMMISSION ONLY, and that consequently they can supply the trade with the FINEST MARBLES at the LOWEST PRICES.
Just arrived, per *Roberto Ulvin, Betty, Nutshe*, and *Harberdina*, 1200 Blocks of Marble, and 12,000 feet of Sawn Mortars, &c. for Sale on consignment.—The Marble Wharf, Thames-bank, Pimlico, adjoining Vauxhall-bridge.

MARKET-WHARF, REGENT'S-PARK-BASIN, WEST-END DEPOT, for Yorkshire Paving, Portland and Derby Stone, Bangor Slates, Slabs, &c. Also Bricks, Lime, Cement, Plaster, Tiles, Laths, and Fire Goods. WOOD and ROBARTS invite the attention of Builders, Masons, and others, to their Stock as above, where everything will be stud offered, at the lowest prices. Headstones, Ledgers, Steps, Landcharged at the lowest prices. Headstones, Ledgers, Steps, Landings, &c cut on the shortest notice. Country orders promptly attended to

TO BUILDERS, MASONS, AND OTHERS.
THE largest STOCK in England of MARBLE in Blocks and Slabs, veined, Bardilla, dove, black, black and gold, Sienna, St. Anna, statuary, serpentine, verd antique, &c Portland, Hartell, Park spring, and other stone, in Blocks, slabs, landings, and headstones. Yorkshire paving, curb, &c All goods carefully marked and forwarded to any part of England. THOMAS JACKSON, Marble and Stone Sawing-Mills, Commercial-road, Pimlico, London.

GRANITE.—The Cheesewring Granite Company, Liskeard, Cornwall.
London Agents—TREGELLES and TAYLOR, 3, Pinner's-court, Old Broad-street. Managers—ARS. J. THATHAN, Liskeard.
This Granite is selected for the New Westminster-bridge

By Her Majesty's Royal Letters Patent.

SILICEOUS STONE.—ORNAMENTAL WORK of eve y description executed at LOW PRICES in this most durable material. A large Stock kept of Mantel-pieces, Balustrades, Quoins, Tombs, Fonts, &c. at the new premises, Whitehall Wharf, Cann n-row, Westminster.

GATES and GEORGE, GENERAL STONE MERCHANTS, Caen Wharf, Rotherhithe, beg to inform Whiting Manufacturers and Warehousemen, and Wholesale Dealers in Hearth and Burr Stone, that they can be supplied in quantities from three tons and upwards with the above, delivered at the South-Eastern Railway Goods Depôt, Bricklayers' Arms Station, Old Kent-road, at the current price Terms, samples, and other information may be obtained at the Office of the Wharf above.

GODSTONE STONE.—This desirable building stone can be supplied to London and its vicinity in any quantity by railway or water carriage at a price far below most other stones in blocks and ashlar of specified dimensions and fine scappled; also random and coursed rubble. It is easily worked to a good face and fine arris; is of beautiful colour and durable quality, as may be seen by the old buildings and churches in the neighbourhood of the quarries and counties adjoining.—For information and samples apply to GATES and GEORGE, General Stone Merchants, Caen Wharf, Rotherhithe

CAEN and AUBIGNY STONE.—GATES and GEORGE (late Luard, Beedham, & Co.), General Stone Merchants, Caen Wharf, Rotherhithe, are supplying the above and Bath, Portland, Yorkshire, Granite, and other stones from their depôt, at current prices by land and water carriage; also by vessel direct from the quarries, at moderate ship freight to any part of the United Kingdom.
N.B. Heavy goods landed, furnished, or carted with despatch, and at moderate charges.

CAEN and AUBIGNY STONE.—F. FOUCARD, Stone Merchant and Quarryman. Cargoes shipped to order from Caen to any port. Contracts taken for any quantities. Depôts—Granite Wharf, East Greenwich; Lett's Wharf, Waterloo-bridge. Offices: 246, High-street, Southwark, near the Townhall.

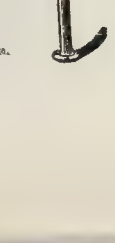
BLUE LIAS STONE.—Messrs. HUTCHINSON and FREAN respectfully inform Engineers and Builders, that they are prepared to deliver BLUE LIAS STONE free on board at Lyme and Charmouth, Dorset in any quantities, at 4s. per ton; and BLUE CEMENT STONE, at 6s. per ton from the value of this excellent Hydraulic Mortar may be estimated by the Government having prohibited its exportation north of Dunkirk.

BATH STONE OF BEST QUALITY.
RANDELL and SAUNDERS, QUARRYMEN AND STONE-MERCHANTS, BATH.
List of prices at the quarries and depots, also cost for transit to any part of the kingdom, furnished on application to Bath Stone Office, Corsham, Wilts

BANGOR WHARF, King's-road-bridge, Camden-town. STRINGFIELD and COOPER, late W. W. Rawling, beg to call the attention of Builders and others to their stock of Bangor slates, laths, plaster, Roman, Portland, and Keene's cement, blue lias, Dorking, and chalk lime, plasterers' hair, Yorkshire plain, pan, and ridge tiles, glazed sewer pipes, closet-pans, and traps, Welsh fire-bricks, gravel and shells for garden paths, ballast, sand, &c. Materials landed, wharfed, and carted.

NORTH-WESTERN STONE DEPOT, Hampstead-road Bridge, Camden-town.—W. ASPINALL begs to call the attention of Contractors, Builders, and Masons, to his Stock of Portland, Park Spring, Pottern eston, Newton, Red Mansfield, Darley, Yorkshire Paving, Curbing, York Paving, Landings, hill, Bath, Caen and other Block Stone; Sills, Lintels, Steps, Slabs, Steps, Sinks, Sills, &c.; Park Spring, Robin Hood, Hare-hill Landings and Slabs. Also, Aberdeen, Guernsey, and Haytor Granite Curb and Fitching, all at the very lowest prices.
N.B. Estimates given for Masons' Work.

VALENTIA SLATE SLABS.—The Valentia Slab Company invite attention to their Slabs now supplied, of very large dimensions and of superior quality. They have been used at the British Museum, National Gallery, Bethlem Hospital, Lunatic Asylums, the Ordnance Works, Model Prisons, Pentonville, and other Penitentiaries; Malting Floors in Bedfordshire and Hertfordshire, Breweries, the Race Stand at Brighton, Portsmouth Barracks, and are kept in stock in large quantities by Messrs. FREEMAN, Millbank-street; also Messrs. Sharpe, Tooley-street; and at Messrs. Braby's, Belvidere-road, where terms may be obtained.



MAGNUS'S ENAMELLED SLATE.—As miserable imitations of this much-admired material are being made, parties are recommended at to supply themselves from the Manufactory, 39 and 40, Upper Belgrave-place, Pimlico. Patronised by Her Majesty, Prince Albert, the nobility, architects of eminence, and honoured with the Medal of the Society of Arts, and the Prize Medal of the Great Exhibition.

TO SLATERS
A QUANTITY of SLATING required, and a CARCASE of a HOUSE given in payment for the same.—For particulars apply, by letter, to Mr DYE, 8, Stafford-street, Lisson-grove, Marylebone.

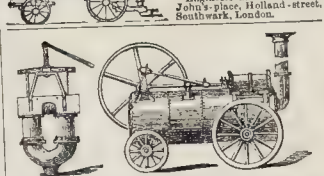
THE INDURATED STONE COMPANY is now prepared to GRANT LICENCES for counties or other limits, on reasonable terms.
By the Company's patent process any soft stone, otherwise useless, may be cheaply converted into a perfect and impervious building stone, applicable to plain or ornamental masonry of any kind, as well as to pavings, fittings, cisterns, vats, baths, sculptury, and stable fittings, and other purposes to which slate, marble, and other hard stones are applied.
Yorkshire and other hard stones are applied.
Parties intending to apply for licences are invited to send specimens of their stone, and castings of clay or loam simply dried, to the Company's offices, 15, St. Swithin's-lane, London, to be gratuitously indurated, to prove the efficacy of the process.

FINDON QUARRIES, on the Cromarty Forth, Scotland, TO BE LET.—These well-known and extensive Quarries will be let on Lease from January next, for such a number of years as may be agreed on. They afford an unlimited supply of a valuable and ornamental freestone, suitable for all building and engineering purposes, which has been extensively used both at home and abroad. There is a good local trade, and the Great North of Scotland Railway, now in course of construction, is in the vicinity of the quarries. No land carriage, and ships of heavy draught can load at the quarry pier. The whole is in perfect working order.—For particulars and terms apply to Mr H. SMITH, Southampton-buildings London; or to the Proprietor Mr. L. M. MACKENZIE, Esq Balnagall by Dingwall, Rossshire, N.B.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS,
Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.
PUMPS ON HIRE.
Pumps of any size, single or double barrel, up to double 12-in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.
Iron Pails 38s per doz. painted.
Ditto .... 48s per doz. galvanized.
Upper Ground-street, Blackfriars Bridge, Surrey Side.

FOWLER'S IMPROVED WROUGHT PUMPS for CONTRACTORS, BRICKMAKERS, EXCAVATORS, and OTHERS.
The attention of this house for more than fifty years past having been almost exclusively paid to the manufacture of every description of pump-work for every variety of purpose, attention is respectfully requested to their very superior Wrought Pumps, with plain or sliding telescope suction, galvanized and ungalvanized. A large stock of all sizes is kept ready to finish off to order, according to length required, at the shortest notice.
This description of Pump-work varying in almost every case, it is impossible to quote a general price, but the fullest particulars will be given on application.
A large stock of Wrought Pumps, from 3-inch single to double 18-inch barrel, is also kept on hire prepared for hand or steam power, on reasonable terms, at
BENJAMIN FOWLER'S
ENGINE-PUMP MANUFACTORY,
Whitefriars-street, Fleet-street, London.



TO BUILDERS AND PLUMBERS.
The attention of the Trade is called to JOHN WARNER & SONS' PATENT VIBRATING STANDARD PUMP,
which is recommended for the simplicity of its construction, and the ease with which it works.
By the introduction of the vibrating standard, the cumbrous carriage and expensive slings and guides are unnecessary, rendering the price considerably less than pumps on the old plan.
Beer and Water Engines for raising fluids from a depth not exceeding 28 feet; also, Garden Engines constructed on the same principle.
JOHN WARNER & SONS,
8, Crescent, Jewin-street, London,
Manufacturers and Patentees.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM-ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile driving, raising materials, &c. &c.
Contracts taken for pumping any quantity of water.
JAMES BURTON & SONS,
Engineers and Contractors,
John's-place, Holland-street, Southwark, London.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars-bridge Surrey Side.

TO CONTRACTORS.
PATENT PORTABLE PUMPING ENGINES, mounted on strong wagon-wheels, iron chimney horse shafts complete. Strong, simple, for immediate use. Several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALL'S, Engineers and Portable Engine Makers, 92, Blackfriars-road. These engines have been successfully employed for years.

STEAM-ENGINES, BOILER, and PUMPS for SALE.—Two 8-horse high-pressure Engines, complete; Three high pressure Boilers and Fittings, also Two Sets of 12-in Pumps, each set composed of three pumps, with gear. The above machinery will be sold together or separately.—For particulars, apply to Messrs. BURTON and SONS, Engineers, John's place, Holland-street, Southwark, London; or to Mr. KNOWLES, Engineer, Waterworks, Mainbridge, near Southampton.

FOR SALE, a PAIR of SIDE LEVER STEAM-ENGINES, of 12 horse-power each, made by an eminent London firm. They are nearly new, and well adapted for either marine or land engines. There are five boilers, and a quantity of gear work and shafting, which may be sold separately or together with the engines.—Apply to THOMAS HORN, Engineer, Millbank-row, Westminster.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—NOURSE and CO. having served British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace-builders, and others

VENTILATION.—PURE AIR.
Sheringham's Ventilator for the admission of pure air through an

EXTERNAL WALL.
With single pulley, from 6s each; with leading pulley, from 8s. 6d. These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required.—HAYWARD, BROTHERS, sole Manufacturers, 196, Blackfriars-road, and 117, Union-street, Borough, and of all respectable ironmongers, builders &c

AMERICAN OILSTONES, very superior in quality to the Turkey oilstone; a new and invaluable discovery, for giving, with ease and rapidity, a perfect and sharp edge to those tools used by carvers, carpenters, diesinkers, engravers, engineers, &c. &c. To be had of various shapes and sizes, at 19, Newgate-street, London.

GUTCH'S SCIENTIFIC POCKET-BOOK.

Now ready, price 4s. 6d. roan tuck,

THE LITERARY and SCIENTIFIC REGISTER and ALMANACK, for 1855; with an ample Collection of useful Statistical and Miscellaneous Tables. Dedicated, by special permission, to Prince Albert.

By J. W. G. GUTCH, M.R.S.L. F.L.S. Foreign Service Queen's Messenger

"As perfect a compendium of useful knowledge in connection with literature, science, and the arts, as it is necessary every body should have constantly near with it, is, in short, a little volume which will save the trouble of hunting through many for one of reference on any point of the work. To that limited portion of the public who do not subscribe to this periodical may be stated that the period until he sells the opportune for commencing the whole expense being at the rate of twenty-six Sovereigns per annum, exclusive of double issues, which are sure to occur on rare occasions, when it would be impossible to crowd the important events and illustrations of the season into one. For this small sum the Subscriber will receive twenty-four large Pages seventy-two Columns of the most interesting information, carefully selected from the News of the Week, interspersed with a variety of charming Articles on the chief topics of the day.

The ILLUSTRATED LONDON NEWS has, by its impartial and consistent advocacy of the welfare of the Public, secured for itself a position which no other Journal can hope to attain. Newspaper in support of the Government, or of the Opposition, as the exigencies of the moment may require, it has ever been found to keep the Independent Course it originally laid down for itself, and to which it has strictly adhered.

Foreign politics will ever command the attention which ought to be given to so important a feature of a newspaper. On the question of the Russian War during the year 1854, ONE THOUSAND ENGRAVINGS appeared in the ILLUSTRATED LONDON NEWS. Extensive arrangements, calculated to improve this popular Journal, and engross still more of the public attention, are made, and will this combine on thus paper the greatest talent of the day.

The ILLUSTRATED LONDON NEWS has been established thirteen years, during which period it has received a greater degree of encouragement and support than any Journal ever published. This is proved by the returns of stamps issued from time to time by order of Parliament. The stamps supplied for the first six months of 1854, the newspaper of 224 sheets, showing a WEEKLY CIRCULATION OF TWO HUNDRED AND THIRTY THOUSAND COPIES!

Terms (for payment in advance): Half-year, 13s. 6d.; Year, 26s., from the commencement to the present time, may now be had, in part or each Covers for binding the volumes, 2s. 6d. each

All numbers may be sent free by post to any part of the Kingdom and the Colonies.

Give an order for six months, to ensure all the gratuitous prints and supplements. Supplied by all Booksellers and Newsmen

The ILLUSTRATED LONDON NEWS is published in London every Saturday, stamped, to go free by post, Sixpence per copy.

Office, 198, Strand, London.

A SUPPLEMENT, GRATIS, with the WEEKLY DISPATCH, EVERY WEEK UNTIL FURTHER NOTICE.—The unexampled interest which attaches to every incident connected with the operations of the Allied Armies in the East, has determined the Proprietors of the WEEKLY DISPATCH to devote a greater space to the intelligence from the seat of war than the ordinary limits of this, the largest news per published, could possibly afford; and, with the view of giving the amplest details, they have resolved upon the publication of a Supplement, GRATIS, which will include every particular of interest connected with the siege and decision of the by the progress of the campaign. By the publication of these Supplements the portion of the Paper usually devoted to incidents of domestic and general importance will be reserved intact, and the news in connection with the war will receive the full extent and most varied illustration. A Supplement will be published on Sunday next, GRATIS, and on every succeeding week until further notice.—Orders may be given to all Newsmen here in town and country; and to the publisher, at the *Dispatch* Office, 139, Fleet street, London

TALBOT v. LAROCHE.—The JOURNAL of the PHOTOGRAPHIC SOCIETY of LONDON, No. 26, published this day, contains a full Report of the above Trial, in addition to the Proceedings of the last Meeting of the Photographic Society, Arrangements for the Exhibition, Original Papers, Correspondence, &c. as usual Price 3d.; or 4d. stamped for post.

DR. URE'S DICTIONARY of ARTS, MANUFACTURES and MINES: containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and entirely rewritten.

"These volumes of Dr. Ure's are chiefly of rational and practical character, written with so much accuracy and care that they may be safely relied on as authoritative, as indeed the former editions have been.—As well the arts and manufactures of Britain as of foreign countries receive due notice. The writer has throughout the true Baconian spirit of philosophy in his mind that the one object of promoting the best and most economical developments of the arts and manufactures; and has produced a work which altogether surpasses every other of its kind with which we are acquainted."—*Mechanics' Magazine.*

SIR ROGER DE COVERLEY. By "THE SPECTATOR."

With Notes and Illustrations by W. Henry Wills; and Twelve Wood Engravings by John Thompson, from Designs by Frederick Taylor

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 16mo. price 3s. 6d.; or in Three Parts, 1s. each

RUSSIA. By the MARQUIS DE CUSTINE. Translated from the French.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW WORK BY MRS. JAMESON.

In square crown 8vo. with Etchings and Woodcuts, price 18s.

A COMMON-PLACE BOOK of THOUGHTS, MEMORIES, and FANCIES, Original and Selected

By Mrs JAMESON, author of "Sacred and Legendary Art."

"A more suggestive and charming magazine of materials for thought we have not looked into for some time."—*Athenæum.*

"The work, which, like all Mrs Jameson's late productions, is rich in artistic beauty, quaint legend and woodcuts alike redolent of grace, is destined to extend still more widely the reputation of the authoress, as one who thinks deeply and writes wisely."—*Notes and Queries.*

London: LONGMAN, BROWN, GREEN, and LONGMANS.

LORD CARLISLE'S NEW WORK.

Fourth Edition, in 1 vol. post 8vo. pp. c. 10s 6d.

DIARY in TURKISH and GREEK WATERS

By the Right Hon. the EARL of CARLISLE.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcap. 8vo. with Woodcuts, price 7s. 6d.

PROFESSOR BRANDE'S LECTURES on the ARTS connected with ORGANIC CHEMISTRY, as APPLIED to MANUFACTURES, including Dyeing, Bleaching, Calico-printing, Sugar manufacture, Tanning, Preservation of Wood, Tanning, &c. delivered before the Members of the Royal Institution. Arranged, by permission, from the Lecturer's Notes, by J. SCOFFERN, M.B.

London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE EDINBURGH REVIEW, No. CCV.

Advertisements and Bills intended for insertion are requested to be forwarded to the Publishers on or before the 2nd of January, 1855.

London: LONGMAN and CO. 39, Paternoster-row.

THE QUARTERLY REVIEW.—ADVERTISEMENTS for the forthcoming Number must be forwarded to the Publisher by the 2nd, and BILLS for insertion by the 8th JANUARY.

JOHN MURRAY, Albemarle-street.

This day is published price 1½d. or Stamped for Post, Fourpence,

THE SEVEN POOR TRAVELLERS, being the CHRISTMAS NUMBER of HOUSEHOLD WORDS, conducted by CHARLES DICKENS, and containing the Second and Concluding Chapters of Part and Half.

Office, 16, Wellington-street North, Strand; and sold by all Booksellers and Newsvendors.

This Day is published, in a handsome folio volume, price 12s. containing upwards of 1,000 Wood Engravings,

PICTURES of LIFE and CHARACTER, from the COLLECTION of Mr. PUNCH.

By LEECH, JOHN LEECH.

BRADBURY and EVANS, 11, Bouverie-street.

Now ready, price 1d. or Stamped, 2d.

PUNCH'S ALMANACK for 1855. Illustrated by JOHN LEECH and JOHN TENNIEL.

Office, 85, Fleet-street.

On the 30th inst. will be published, price One Shilling, Part XVI. of

"THE NEWCOMES."

By W. M. THACKERAY.

With Illustrations by RICHARD DOYLE.

*** The first Volume is now complete, and may be had, bound in cloth, price 14s.

BRADBURY and EVANS, 11, Bouverie-street.

For Bankers, Architects, and Men of Science, price 18s.

THE GILBART PRIZE ESSAY.—"On the Adaptation of recent Inventions, collected at the Great Exhibition of 1851, to the Purposes of Practical Banking."

By GRANVILLE SHARP.

London: GROOMBRIDGE, 5, Paternoster-row.

ELEGANT GIFT-BOOKS.

THE SALAMANDRINE; or, Love and Immortality. By CHARLES MACKAY, LL.D. New Edition, with upwards of Fifty Illustrations, by JOHN GILBERT. Imp. 8vo. Enamelled boards, or cloth, gilt edges, price 21s.; morocco elegant, 31s. 6d.

THE LIFE of MARTIN LUTHER, the German Reformer. In Fifty Pictures. Handsomely bound in cloth, gilt, price 12s.; morocco, 21s.

NINEVEH and its PALACES. Illustrated with above Two Hundred Engravings, 8vo. cloth, gilt, 18s.; morocco elegant, 12s.

THE THREE COLONIES of AUSTRALIA.—With numerous authentic Engravings. Cloth, gilt, 9s.; morocco, elegant, 12s.

AN ILLUSTRATED LIFE of FIELD-MARSHAL the DUKE of WELLINGTON. Two Volumes 8vo. Cloth, gilt, 12s.; morocco elegant, 18s.

THE THREE PRESIDENCIES of INDIA; their Rise, Progress, and Present Condition. Profusely Illustrated 8vo. Cloth, gilt, 9s.; morocco elegant, 12s.

ALGERIA: The Topography and History, Political, Social, and Natural, of French Africa. Illustrated. 8vo. Cloth, gilt, 9s.; morocco elegant, 12s.

HANDBOOK of FOLIAGE and FOREGROUND PLANTS. Post 8vo. Cloth, 6s.; morocco, elegant, 12s.

JOHN BARNETT'S New Edition of WADE'S HANDBOOK for the HANDICAPPIST. Demy 4to. Neatly bound in cloth, with Engravings and Diagrams. Price 6s.

THE ILLUSTRATED NEW TESTAMENT (Authorised Version), with upwards of 120 Engravings, 8vo. Cloth gilt, 9s.

THE PARABLES of FRIEDRICH ADOLPH KRUMMACHER. Translated from the Eighth German Edition (the last revised by the Author). Embellished with Forty beautiful Drawings. Bound in cloth, gilt edges, 9s.; elegantly bound in morocco, 12s.

CILICIA and its GOVERNORS. Cloth gilt, 6s.; morocco, elegant, 12s.

ENGLISH FORESTS and FOREST TREES. Profusely Illustrated. 8vo. Cloth, gilt, 9s.; morocco, elegant, 12s.

THE MICROSCOPE; its History, Construction, and Application. Cloth, gilt, price 6s.

THE PRACTICAL FARMER. 8vo. Cloth, gilt, price 6s.

A HOLIDAY BOOK for CHRISTMAS and the NEW YEAR. Folio. In cloth, or ornamental binding, 1l. 1s.

London: H. INGRAM and Co. Milford House, Milford-lane, Strand

The Builder.

SATURDAY, DECEMBER 23, 1854.

ALTHOUGH it can hardly be said that the Architectural Exhibition this year gives full evidence of the efforts which are being made to raise the standard of our art, or even reflects—as such an exhibition should do—the results of the year, it is, as we said last week, both interesting and promising. The provincial architects have been sparing contributors, and we can learn comparatively little of the nature of the great change that is going on; and which has already given us many excellent buildings. Beginning with St. George's Hall, at Liverpool, it would be easy to note down omissions from the gallery, of works which might fairly be put forth as evidence of an improving position of our art. We hope that this object of representing the actual condition of architecture, will be attended to in future years, more effectually than was in the present case possible, and that the leading architects may be induced to see that their interest will be prejudiced by not exhibiting. If the maintenanceofthe undertaking is connected with general elevation of taste, the exhibition will be resorted to by the public, under the idea that what we have contemplated will there be found. We have already noticed in the columns of our contemporaries, opinions as to the present state of architecture, formed, as it would seem, solely from the drawings just now in the Suffolk-street Galleries; and, of course, erroneous.

We dwell upon that matter now, because—although we have seen much cause for regret at the little knowledge of the question shown by the criticism on the exhibition in certain organs—we can hardly be surprised that the attention of the ordinary observer should be more attracted to the circumstance of contradictory treatment of similar subjects by different designers, than to the fact that the chief public buildings erected during late years manifest a disposition to return to unity of practice in regard to what is generally designated *style*. It may appear paradoxical to some; but it will be obvious to those who have thought much on art, that there may be unity of *style* without the imposition of fetters on design. As lately shown in these columns, some of the styles which have owed most to precedent, afford the best examples of the exercise of the originative faculty. The unity of *style* does not interfere with that individuality of treatment which universally has been associated with the real value of each architect's work, and which is the defined form of the element of art in architecture

The error which we conceive has prevailed during some years past, has been that of pursuing opposite styles, for no apparent reason except that of catching the public eye. The form most recently dug up has been passed off as that which has been most recently designed. Thus, the public have lost all power of excitement, except with strong situations, and the architect has been himself dragged down from his capacity for perceiving and cultivating the true source of expression, by his habit of ministering to other desires, raised by an ill-directed taste. We are glad to detect evidences of alteration in this position of our profession. More, however, has to be done. The architect is still a mere follower of the lead of the public into each and every sort of channel. He puts himself, in this matter of style, completely into the hands of another,—the public client, who flies after this whimsey one day,—the opposite one the day after. More masculine and determined purpose, and something of self-denial, is what is now required from architects. Better any one defined course than the distraction of efforts through several channels.

The architect has to bring the public to a right perception of these questions. In the present collection, we find buildings of the same class in widely different styles. It would be too much to say that any of us have acquired the ability to pierce below the garniture, so as to reach the ART, in all of them. Several good designs for town-halls are in the Italian, or the classical columnar style: yet we have also designs conceived on the models of the Hôtel de Ville of the Netherlands. In another design—for a structure, apparently of the same public building class—we have all the finery of ultramarine and lake employed, to convey to the spectator some conception of polychromatic architecture, apparently formed on a combination of Saracenic models with those of Northern Italy. All these opposite courses cannot be desirable, since they lead to entire confusion of ideas in observers.

Were each architect to form his own opinion, and pursue his course, even though opposed to that of other architects, things would soon work into a proper channel. There have been periods in the history of art, during which have prevailed co-existent styles; but never before was there a period in which it was a *system* for the same architect to follow several. Mr. James Murray, of Coventry, is this year an instance of versatility, which, in his case, is remarkable, and, indeed, combined with no small power of design. The artist-like manner in which his sketches are got up, and his obvious facility in the use of perspective, however, convey that sort of impression which it is most difficult to refer universally to the true exciting causes. But we may especially allude to the plan and exterior and interior views of his corn exchange, now erecting at Coventry (233, 231, 239), as marked by good qualities of design. The plan is just that clever adaptation of a difficult site which often calls forth novel and happy effects. In the exterior, which is the best part of the building, the piers and openings are well designed, so as to get a large area of window surface, and yet to preserve general breadth. In the upper part of the front, in the centre, sculpture is effectively placed under an arch. In the Corn Exchange and Market, St. Alban's (236), by the same architect, there is similar evidence of skill; though it involves a difficult question for discussion, how an apparently intended central feature of a composition can be well combined with wings differing from each other.

Reverting to what we said of the general character of the exhibition,—to us, greater evidence of progress is afforded by the drawings of works in actual execution, than by the mere designs which give so much of the discordant character that has been perceived in the exhibition. At the same time, some of the latter works are very clever, and the Class of Design of the Architectural Association is obviously a valuable means of exercise in the art. Amongst the lot on strainers, numbered 280 to 283, the designs for a hall-screen and an entrance-door, by Mr. G. R. Clarke, are clever and suggestive. Elsewhere Mr. Horder's two designs for doorways (Nos. 135 and 138) have both novelty and beauty of effect. Some other members of the same association, in designs which might be pointed out, have given us what is perhaps too nearly the reflection of their travels in particular byeways of Europe. We see in these works some novelty and merit, but at the same time a tendency towards the same misconception in art, which has operated in other forms, and to which we have endeavoured to draw general notice.

We were, however, about to say that in the designs for works which have been, or which are to be executed, there appears to us evidence of definite direction in regard to character of design, such as does not appear to have been discovered by the writers of notices in some of the ordinary channels. As a style for general adoption, the Gothic architecture seems to have no longer complete hold. Even as to ecclesiastical architecture, the preponderance of designs for churches is hardly what we have witnessed in the small collection of works at the Royal Academy. Messrs. Prichard and Seddon, being the diocesan architects of Llandaff, should perhaps not be held accountable for solving the problem of appropriate character combined with design in church architecture, after the manner which we have deprecated, namely, by subordinating their powers of design to the dictates of others; for such course appears to have become the invariable one, and we should find more difficulty about the question of art in relation to churches, than in regard to any other class of buildings. Their designs for Tynant and Canton, and Tulse-hill churches, show, however, perception of the beauties and knowledge of the character of the style chosen. The plan and design for a bank, on the table, also has merit. Messrs. Deane and Bailey, in their church proposed to be erected in Kent (50), have boldly thrown off the Gothic style, and give us a low, wide interior, which would be stigmatised as a "preaching-room" by one class of authorities. It has a roof with tie-rods coloured blue, and its chief ecclesiastical character, which is not adequate, is given by the windows at the east end. The disposition, here manifested, to get rid of the intercepting columns of the ordinary churches, seems to be now constantly present wherever the design is made without regard to traditionary influences. A certain permanence of character should perhaps always be found in the architecture of religious observances: on the other hand, we observe that in the architecture of dissenting chapels, where its influence cannot prevail, the plan of the building is always designed with more immediate reference to the use than would be considered to be provided for by the plan of the old churches. Consequently, in interiors such as those of the "Design for the Baptist Chapel, Camden-town" (5), and that for "A Congregational Chapel" (101), by Messrs. Lander and Bedells, it has become common either to roof in one span, or to place iron columns instead of the ordinary piers and arches. Still, the new combination has seldom as yet, been well effected. In the present case, the heavy timber roof and galleries are not accordant with the light shafts. A better result might perhaps be effected by placing the columns at closer distances, or perhaps by substituting also an iron roof, even should these innovations cause the resemblance to the mediæval architecture to disappear altogether. We doubt whether the full difficulty of the question in structural architecture is perceived by some who have touched upon it. It is, how to overcome the want of that apparent stability which is associated with bulk and breadth of base.

Of the debt which, in spite of the trammels in which architects have been placed, we owe to the Gothic style, there is good evidence in some of the works more particularly alluded to in our last. Mr. Truefitt, in his designs for houses, as those numbered 163 and 172, and other works on the same screen, shows in very simple objects a facility of design not affected in the ordinary manner by knowledge of the characteristics of Gothic architecture. The same architect, also exhibits a full-sized perspective drawing, of a font of novel character, including a group of an angel and kneeling children. In some of Mr. Gray's designs for houses, as the villas for the Wilnoughby estate, Tottenham, there is a very similar character to that seen in the houses last mentioned: in others, there is an independent

and meritorious character of design. In the Waterloo-terrace, Regent's-park (21), with other merits, there is (assuming stone to be the material of the piers and lintels, or brestsummer) a better treatment of the shop-front than is general. In the Chandos-chambers, in the Adelphi (92), there is some novelty in the details of brick and stone work, in the use—to a moderate extent—of polychromy in brick-work and tiles with patterns, and in some well-designed ornament. Considering that there can be little idea of producing an effect with a view to commercial results, as in ordinary fronts, the work is an evidence of progress, and is creditable to whomsoever has to defray the cost. The common cemented front, with "dressings," the *ne plus ultra* of speculative builders, has been harped upon long enough.

Much that is interesting and novel will be found in the India Missionary churches, by the Rev. J. C. Petit and Mr. T. Hill. The plans in some cases have novelty,—one of the number being in general form triangular. The Byzantine model is adopted with wide porches, and roofs domed over in masonry. Some architectural innovations will be observed, dictated by recognised wants. In the shop-front in No. 38, where the lights are carried up two stories, with iron-work framing the ordinary brestsummer spaces being filled in with encaustic tiles—an effort to overcome the ordinary heavy effect of a brick superstructure is made. The third story, however, still is of brick. The idea is more completely carried out in a design, conceived in the same spirit, for "Shops now erecting at Maidstone" (251), by Messrs. Ashpitel and Whichcord. Here the whole of the superstructure is faced with tiles. Messrs. Deane and Bailey's designs (285, 287), each called "A Vague Notion for Street Architecture," are worth examination in reference to the attention there given to this question of the superincumbent weight over the shop-front.

Mr. J. W. Papworth has sent some good designs for the laying out of public pleasure-grounds (247). He advocates the "picturesque" system of landscape gardening, "as opposed to the attempts at 'botanical' arrangement, which have been adopted until recently." He also sends an elaborate set of working drawings for a chimneypiece (193, 194, 195), "one of a series of lessons in the manner of preparing working drawings and details;" to show the "consideration and labour involved" in the instructions for the execution for such objects. The subsidiary branch of architecture, decoration, and furniture, is not so well represented as next year we hope to see it. Mr. Dwyer's designs are chiefly adaptations of external elevations from modern French works; and the drawings (111 and 112), by Mr. C Stockdale, are views of interiors of existing residences.

From Mr. Thos. Allom's hand, we have a view of the Kensington Park Estate, Nottinghill (127), a good drawing, and his design for the east end of a choir (298), once at the Academy, which is almost too elaborate. Mr. Arthur Allom's design for "Metropolitan Baths," is again exhibited (296), and maintains its pre-eminence as a drawing. There is also much cleverness in the treatment of the design. The same architect has exhibited his design for a "National Institution of Fine Arts," in several drawings; and also an "Architectural Composition" (149), an excellent drawing, with variety of treatment in the several buildings, which are grouped along the banks of a river.

In the class of public buildings—not that to which we have considered it necessary to pay most direct attention, although it may be that which shows results not to be overlooked by the public—we find Mr. C. Brodrick, "Town-hall in course of erection at Leeds" (97), engraved by us some time back, and an interior view of the same building (20). There will be a fine arched ceiling, with bands, rising from coupled columns. Although so much has been lately written against the treatment of the interior of the Liverpool building, the hall at Leeds, thought not wanting in merit, will scarcely equal the other in effect. The merit of the Liverpool interior is due to its fine proportions, and the effect produced by the recesses at the sides.

There are several designs for the Preston Town-hall. Of the "premium design," by Mr. William Hill, we find two views (294, 299). These show different designs. Each has a tower somewhat resembling that proposed for the Leeds building. In the first design, the too salient columns should be modified. Mr. Lamb's design for the same building, which is well shown in a complete set of drawings (94 to 96), is perhaps the best of the designs exhibited. The plan is good, and conceived with an eye to effect, and the elevations are sufficiently varied, yet preserve the due homogeneity of rusticated Italian character. The interior view, we may say, is a clever adaptation from Piranesi. Messrs. Bidlake and Lovatt are amongst the other exhibitors of works in this class, and some of their designs—as that for the New Markets, Bury St. Edmund's (86)—are well adapted for the particular character of the structures. There are some designs for the West of England and South Wales District Bank. Mr. W. Hill's elevation for the building (33) is an Italian design, with good basement and window dressings. In a design for the interior of the same building, Messrs. Gabriel and Hirst have fallen into the error of coupling columns at the angles of a polygonal area, leaving the angles of the entablature hanging unsupported.—It is much to be regretted that the design numbered 55 should have got a place: its absurdities of foreground may impress themselves upon the recollection of some visitors to the exclusion of works of merit.

Generally, the exhibition is not so attractive in regard to mere execution of drawings, as the exhibitions at the Royal Academy used to be. We must hope that with the development of a new taste amongst the public, adventitious aids to effect will not be required, and the exhibition of plans, elevations, and sections should be steadily continued as a feature of the exhibition, if only to assist in informing the public as to the nature of these technicalities,—which they often look at without the slightest comprehension of them. Nevertheless, power of drawing must not be disregarded. Amongst the drawings we should mention some which have just come in, of Burlington House, and Mr. J. Drayton Wyatt's careful measured drawings of St. Michael's Church, Coventry. The model of a currant-blossom on a large scale, by Mr. W. P. Griffith (260), is suggestive.

The department for materials and manufactures is less important than might have been expected. There are specimens of Dr. Emile Bräun's artificial marble, of which we gave some particulars some time ago; and a capital from Athens, with what appear to be rather contradictory elements of style, is worthy of examination.

Looking at the whole collection, we think the present exhibition will contribute something towards what should be the great object of the professional architect,—the general elevation of public taste,—and we trust that next year the collection will be such that still more may be effected.

Shoreditch Workhouse.—Workshops are to be erected at the back of the Workhouse in the Kingsland-road, for the trustees of the parish of St. Leonard, Shoreditch, Mr. Knightley, architect; and twelve tenders have been received, ranging from that of Mr. Page, 740*l.* to that of Messrs. Wood and Sons, 508*l.*

ON THE ARCHITECTURAL SPLENDOUR OF THE CITY OF BEEJAPORE.*

It is, perhaps, unfortunate for me that the subjects on which I have on former occasions had the honour of addressing the Institute, have been either purely Oriental, or so connected with the far East, as to be beyond the usual range of an architect's studies, and that consequently they could not be expected to excite the same interest as the more familiar styles of the West.

On the present occasion the same objection still applies. The subject is again Indian, but the style is the Saracenic, which is more familiar to us from the buildings at Granada and Cairo, now tolerably well known to Europeans; and one of the buildings I shall have to describe is so remarkable, both for artistic and constructive excellence, that it must in future take rank among the principal buildings of the world, and no one will venture hereafter to write a treatise on Domes, without including the tomb of Muhammed of Beejapore, as one of the most remarkable specimens of its class.

Before proceeding further, I may as well mention that I have never myself been able to visit that city; and that it is one of the very few capitals of the East which I have not personally examined. Till lately this was a subject of bitter regret to me; though I now rather congratulate myself on the accident, for it was this omission that led me to urge my friend Colonel Sykes to try and procure such drawings as might, at least, make the dimensions and construction of its buildings intelligible. With that zeal for science for which he is so well known, and that energy which characterizes all he does, Colonel Sykes has far exceeded my requisition, and has procured from India by far the finest set of drawings that have ever come from that country, and which, as far as they go, leave nothing to be desired.

These drawings were made under the superintendence of Capt. Hart, of the Company's Engineers, principally by Mr. A. Cumming, an uncovenanted district revenue surveyor in the Company's service, with the aid of native assistants.

Before, however, describing the drawings, allow me to point out as succinctly as possible who the men were who erected these wonderful buildings. You will recollect that Mahmoud of Guznee's famous raid to Somnauth was the first great Mahomedan invasion of India: he, however, made no permanent settlement on our side of the Indus, and it was not till two centuries later that Kutub-u-Deen established himself at Delhi, in the year 1206: he was the actual founder of the Patan dynasty, which lasted for nearly three centuries. Towards the end of that period, like all Eastern dynasties, it tended to decay, and the remoter provinces were enabled to assert their independence, and establish themselves as separate sovereignties, first in Bengal, then in Goozerat; so that in course of time six separate kingdoms were established in the Deccan, or within the limits of what is now the Bombay presidency.

One of the last and least of these was Beejapore, which became independent in the year 1501, under Yusuf Khan, a son of Amurath II. of Anatolia. The first three or four kings did nothing very remarkable, and are buried at Gooke near Sholapore, but on the defeat of Ramraj, of Vyjanuggur, their successors became rich and powerful, and adorned the capital with the buildings illustrated in the drawings, during the century that elapsed between that event and the final subjection of the kingdom by the tyrant Aurungzebe, in 1685.

The following are the principal dates which it is requisite to bear in mind with reference to the present subject:—

			A.D.
Mahmoud of Guznee	...	...	997

The seventy-four drawings now sent home illustrate two tombs, those of Muhammed and Ibrahim, one mosque, one palace, one private residence, and one bowree or tank. You must not, however, suppose that these are all the buildings worth seeing in this remarkable city. There is no illustration of the walls of the citadel and town, the former 1½, the latter 6½ miles in extent, and with their bastions and gateways perhaps the most remarkable feature of the whole. There are no illustrations of the seven palaces within the citadel (one seven stories in height), which, as the residence of the kings, were the richest and most beautiful buildings; none of the other tombs, mosques, and palaces of the nobles, which crowd every part of the city, and would require at least two or three times the number of the present drawings to make them intelligible.

The most remarkable building is the Tomb of Muhammed.* It consists of a square apartment, measuring 135 feet each way. At the height of 57 feet from the floor line, it begins to contract by an arrangement of pendentives, as ingenious as beautiful, to a circular opening of 97 feet: on the platform over the pendentives is erected a dome, semi-elliptical in outline, but circular in plan, 124 feet in diameter, leaving a gallery more than 12 feet wide all round; the internal height of the dome is 175 feet, the exterior to the apex 198; the general thickness is about 10 feet; at the apex, however, it is nearly 18 feet; yet, if the tradition of the place can be depended upon, it was built wholly without centering.

The most ingenious and novel part of the construction of the dome is the mode in which the lateral thrust is counteracted. In the Pantheon, and in European domes generally, this is counterbalanced by a mass of masonry in the haunches, as is also the case in bridges. This mass, however, entirely destroys the outline, and is, to say the least of it, a very clumsy piece of masonry: here the object is accomplished by hanging the weight inside: the massive pendentives having a tendency to fall inwards act as ties, and effectually accomplish the object without the possibility of derangement to the structure, as from their arch form, they are perfectly stable in themselves.

The external ordinance of the building is as beautiful as the internal. At each angle there is an octagonal tower of eight stories, simple and bold in its proportions, and crowned by a dome of great elegance. The lower part of each face is plain and simple, pierced only with such openings as are requisite to admit air and light in that climate, and they are not a tenth of what would be required in ours.

At the height of 83 feet, a cornice projects to the extent of 12 feet, nearly double what the boldest European architect ever attempted; and above that an open gallery gives lightness and grace to the whole structure. Above the gallery is an ornamented band of fretwork, which is surmounted by a battlement of great beauty, relieved by eight smaller minarets, two on each face.

On comparing this with other domes, it will be seen that it is the first in area. It covers more ground clear of support than any dome or vaulted roof in the world, while it is of more difficult construction, being placed over a square hall instead of a circular drum. Considered, therefore, either as a mechanical or as an artistic form, it must rank among the first, if, in fact, it be not the most beautiful as well as the largest domical building yet erected in any part of the world.

TOMB OF IBRAHIM.*

The other tomb—that of Ibrahim—is much smaller than that just described, being only 116 feet square over all, and 114 in height to the top of the crescent, but it makes up in richness of detail and in elegance of design for this difference in dimension; and I am not sure that many would not prefer the Corinthian exuberance of this tomb to the Doric simplicity of its great rival.

In plan it consists of an internal apartment, 40 feet square by 35 feet high, covered by a stone ceiling flat in the centre, and slightly coved at the sides; a constructive problem almost as difficult as the great dome of Muhammed's tomb itself, but which has been most successfully accomplished. This apartment is surrounded by a double verandah, flat roofed throughout, and supported on square pillars, with bold and beautiful capitals. Though the walls of the central apartment are plain and unornamented, every part of the exterior is covered with the most elaborately carved ornaments, generally of Hindoo parentage, but interspersed with inscriptions from the Koran, so numerous, that it is said the whole of the sacred book is inscribed on the walls of the tomb. The windows, too, have pierced Arabic inscriptions for tracery, and the whole is coloured, gilt, and finished with a profusion of labour and intricacy of design, which puts the Alhambra and all Western buildings to shame, and can only be found in the far East.

Above the central apartment is one covered by a dome of beautiful proportions and design, though merely meant to occupy the space required to give the necessary height to the dome externally, which, combined with the minarets surrounding it, makes up a group of graceful objects as playful as anything in Gothic architecture, as beautiful in grouping, and far more elaborate in detail.

Attached to all these buildings are mosques and gateways, the former larger than the tombs themselves, and as beautiful in style; but of these we have, unfortunately, no drawings or details.

The next building is the Jumma Musjeed, or great mosque, the cathedral of the city. It consists of one great apartment, divided by five aisles in one direction and nine in the other into forty-five squares, nine of which are covered by the great central dome, 75 feet in diameter; the remaining thirty-six having each a small flat domical ceiling of great beauty. This building is 258 feet by 144; in front two wings project 188 feet, so as to enclose with the mosque three sides of a court-yard of those dimensions. It, no doubt, was intended to enclose the fourth also by a gateway worthy of the mosque and of its position in front of the building. Though commenced by one of the earlier kings of the dynasty, it was left unfinished when the race was overthrown by Aurungzebe. The architecture of the building is remarkable for the elegant simplicity of the details and the beautiful proportions of the parts; and though it has nothing so striking, for size and construction, as the Tomb of Muhammed, or so rich as that of Ibrahim, it may fairly rank as one of the best of the simple and pure style of architecture which so frequently characterizes the early mosques of the Mahomedans in India.

As I before mentioned, the only palace illustrated in the collection is the Ashar Moobaruck, situated just outside the ditch of the citadel. It consists of one block of building, 100 feet by 135. In front is a great verandah, 38 feet deep, supported by four wooden pillars; behind this are various walls and apartments, two stories in height. It cannot pretend to anything like the architectural splendour of the three buildings just described, but is an interesting illustration of the mode in which Indian architects employed wood in their construction. The difference of spacing, of construction, and detail, is everywhere apparent; but everything is as appropriate, and in good taste, as in the buildings of stone.

* The Ibrahim Rozah.

The building is now used as a relic shrine or temple, being said to contain two hairs of Mahomed's beard, and it is singularly interesting, as a means of comparison with the buildings of Persia; but on this it would not do to enter on this occasion.

The private dwelling* these drawings illustrate is, though small, not the least interesting or beautiful. Although only 24 feet square on the plan, and 50 feet in height, it must have cost more than the building last described. Every part of its walls, floors, and partitions, is built of stone, and some parts of it are carved with an elaborateness only to be found in India; still, as will be observed in the drawings, the architects were not afraid of plain surfaces, all the walling being entirely without ornament, which gives value to the more enriched details. We have no buildings in Europe which can compete with this. Such a one as Roslin Chapel, for instance, is coarse and plain in comparison; and except the shrines in the interior of our Gothic cathedrals, nothing is ornamented to the same extent; but they, of course, are comparatively small, and are objects of internal, not external architecture. Indeed, words can convey no adequate idea of such an edifice as this; but fortunately the drawings are so carefully and beautifully executed as to leave nothing to be desired in the way of explanation.

The story of this building is curious and characteristic. It is said that an astrologer persuaded the first Ibrahim, who was a weak prince, that the only way to escape a great impending misfortune was to give a large sum of money to the first man he should see on rising on a certain morning—meaning, of course, to be himself the man. The king, however, troubled with the idea of his destiny, rose earlier that morning than usual, and the first person he saw was the mether, or sweeper, who is always in India a man of the lowest caste, and who was performing his menial office at that early hour: he in consequence got the money, and employed it in building this gateway, which was to lead to a dwelling and mosque in the court-yard within. Only this part of the design was, however, completed; but enough has been done to show that, though his caste was low, his Hindoo blood led him to appreciate elegance with even more taste than his lordly masters, which he has done in the richest and most elegant specimen of architecture in even this wonderful city.

The remaining building† illustrated by these drawings is a bowree, or large tank, surrounded by stone steps, and with arches and gateways, a form of architecture peculiar to India, and interesting, as showing how any object may be made architecturally beautiful, whatever it may be. The present is neither so large nor so splendid as other specimens that might be selected. Its form and details, however, are as elegant as those of the other buildings of the city, and well worthy of a careful examination.

Such, then, are six of the buildings of Beejapore, selected out of the forty-one mentioned in the plan of the city; but even that does not include all, for the suburbs which are beyond its range contain both palaces, mosques, and tombs well worthy of attention; and although these six may be considered as the principal buildings, there are many others as rich and ornate; and although perhaps on a smaller scale, still, in the aggregate, as worthy of illustration; so that it would require many more drawings to make up a worthy representation of the architectural splendour of the city of Beejapore; and when you recollect that this is only a provincial city, once the capital of an ephemeral dynasty, which hardly existed independent for more than a century, you will easily understand that they do not exaggerate who speak in glowing terms of the wonders of the imperial cities of Agra and Delhi, and of the ruins still to be found in other

* The Mehturee Mahall.
† The Taj Bowree.

provincial capitals, and assert that there are architectural forms in India well worthy the attention of the architects of Europe.

A discussion ensued as to the mode adopted to resist the thrust of the dome on the Gol Goomuz, and Mr. Donaldson suggested that the form and substance of the dome were such as would ordinarily be deemed contrary to sound construction, and inquired whether there was not something in its internal construction (either timber or a highly adhesive mortar), to account for its holding together.

Mr. Fergusson said that was not the case. The dome was entirely of brick and mortar, and the common tradition of the place was, that it was built without centering of any kind, merely by the aid of a pillar in the centre, with a moving arm or guide-pole. He knew that small domes were thus erected in the East at the present day. The mass of masonry in the pendentives was probably equal in weight and mass to twice that of the whole quantity of brickwork in the dome, thus effectually resisting any thrust from what was in fact the smaller mass. The angles in some respects resembled fan-groining, and it would be observed that the dome stood, in fact, nearly within the inner side of the upright walls.

The Chairman, Mr. Penrose, observed that Col. Sykes was present, and would probably offer some remarks upon the subject. Perhaps he would be able to state whether the pendentives were corbelled inwards with horizontal joints, or with radiating joints, because the principle of the construction would depend very much on that point. The adoption of the arch principle with radiating joints, and with key-stones in the enormous open ring beneath the dome, would defeat the object, and help to press outwardly; whereas, if the mass were corbelled inwards with horizontal joints, an effectual power of sustaining the dome would be obtained.

Colonel Sykes, visitor, begged in the first place to disclaim a large portion of the praise bestowed upon him by Mr. Fergusson, in reference to the drawings before the meeting. He had simply been the means of their appearance in this country, and the gentleman through whose zeal and taste the work was accomplished was Mr. Pierce, the present commissioner in Scinde. He (Col. Sykes) had himself spent a week or ten days at Beejapore, in the year 1818, and examined the buildings represented with much interest and delight; but he did so only as an amateur, and was unable to answer the chairman's question. With respect to the use of timber, he observed that there might have been some employed in the Mehtaree Mahal, which was a private residence; but the other buildings were entirely of stone, excepting the great Goomuz, which was of bricks united by means of the celebrated chunam, which held them together with great tenacity. All the decorative work, carvings, windows, &c. were of stone enriched with patterns of the greatest variety and beauty, embracing indeed all kinds of forms except those representations of animated nature which were forbidden by the Mahommedan religion.

Mr. Cockerell concurred with Mr. Fergusson in admiring the curious, novel, and highly interesting mode of construction which he had explained in the Gol Goomuz, and the effect of which might be easily understood, as providing a platform on which the dome might safely rest, although the walls below were comparatively slight. Before, however, they, as architects, could profit much from the construction of this dome, it was necessary to have many further particulars, in order effectually to compare it with the works of our own quarter of the globe, and especially with the great work of Brunelleschi. The outline of those Oriental domes (differing as it did from that adopted by the great Italians), rendered them exceedingly interesting; and it would be very desirable, if possible, to pierce their walls, and ascertain whether they had any chain bonds or other similar contrivances, and, in short, to compare them minutely with the great dome of Brunelleschi. The latter (like the human dome, the skull), was a double construction, possessing solidity and thickness with comparatively little weight, whereas the dome now under discussion was solid throughout, rendering the weight enormous, and the structure much more difficult; although, at the same time, much less scientific. He hoped, therefore, that the comparison he suggested might be carried out. He begged to ask Mr. Fergusson whether he had found in these remains a school or ornamental art, such as might have arisen out of the school of the Arabs, who were so renowned for their beautiful geometrical combinations and exquisite taste.

Mr. Fergusson, in reply, observed that every nation which set out honestly to work out a problem in art, and to improve in every work on those which had gone before, had succeeded in producing a true and perfect school of art. It was thus with the Egyptians the Greeks and the Romans as well as in Gothic, Saracenic, and even in Mexican and Indian architecture. The Hindoos and Mahomedans when they began to build domes built small domes; these were successively enlarged and improved till they attained the perfection now described. And in the same manner with ornamental art: the most beautiful details in the most perfect of these works could be traced back for centuries in their gradual progress from rude or clumsy mouldings. And it was remarkable that the Mahommedans in India had engrafted upon their own Saracenic style many features and ornaments from Hindoo architecture. He proceeded to explain that the peculiarly obtuse angle at which the pendentives cut across the apartment had a great effect in reducing the outward thrust, which was not one-tenth so great as if they had been placed at an angle of 45 degrees. Moreover, the thrust was by this arrangement carried into the great pillars or minarets at the corners of the building; becoming practically *nil*. The dome was a solid mass of brickwork. There were many ruined domes in India, which had fallen down, and in all cases they had been solid masses, the tenacity of the materials precluding all danger, unless the foundations gave way. He had witnessed in India the construction of a vaulted apartment 200 feet long and 110 feet high, with a span of 58 feet, similar to our own Gothic vaults, the vault being 10 or 12 feet thick. This was effected by raising a rude scaffolding in the centre, and forming a mould of the intended vault in clay, upon which they threw in masses of concrete. The heat of the climate soon rendered this thoroughly dry, when the scaffolding was struck, and the vault remained as perfect as possible, and would probably last for centuries, although there was not a single moulded stone in its construction. Many vaults in India, constructed apparently in a similar way, had lasted four or five centuries, and therefore the tenacity of material in the great dome at Beejapore was less surprising.

Mr. Baker, Associate, suggested that it might be a question of bond. If the bonding of the brickwork were perfect, the thrust would be very well resisted. In this Mr. Fergusson concurred.

BITS FROM ABROAD.

The works in progress at the Louvre, in Paris, have exposed some subterranean constructions of considerable antiquity, and it is believed that Henri Quatre had an underground communication formed from the palace to the residence of the fair Gabrielle.——The *Place du Carrousel* has been levelled at a great cost. 45,000 *mètres* cube of earth have been removed, and 34,000 square *mètres* paved.——A medal, in honour of Marshal St. Arnaud, is being struck at the Palace Mint.——The building, specially intended for the fine arts in connection with the Universal Exhibition of 1855, is making considerable progress. According to the *Revue des Beaux Arts*, it comprises seven galleries of large proportions, with a *Salon* in the centre, forming a parallelogram 250 *mètres* long, and 150 *mètres* broad.——Artists are still largely employed for the Hôtel de Ville, Paris. A ceiling by Mr. Leon Cogniet, has been put up in the throne-room; and for the gallery of Henry IV. ten large pictures are being painted, representing choice views in the environs of the capital.——For the restoration of the Gothic tower of *St. Jacques la Boucherie*, 40,000*l.* including 10,000*l.* paid for the edifice itself, have already been voted by the municipality. It ought to be well done.——The new Gothic church of St. Clotilde, in the same city,—we gave a view of one of the doorways a few weeks ago,—was commenced in 1846. It was designed, and to a certain extent carried out by M. Gau, to whom M. Theodore Ballu succeeded. The façade has two towers, and stone spires, 69 *mètres* high. The total length of the church is 96 *mètres*, and its greatest width 38. The height of the nave and choir inside is 26 *mètres*. Many of the windows are filled with stained glass, and the front will be decorated with figures of saints and sculptured groups. The church will be completed in 1855.——The paintings in the chapel at Fontainebleau, by Fréminet, injured by time and carelessness, have been revived, under the direction of the Minister of State, M. Achille Fould, by M. Theodore Lejeune. The chapel was built about 1529; and it was in 1603 that Henry IV. led Fréminet to visit Paris, and commissioned him to decorate this edifice.——The Duke of Saxe Weimar is restoring the ancient castle of Wartzbourg, an edifice closely connected with the House of Saxe. The restorations include the apartment occupied by Elizabeth of Hungary, the hall of the Minnesingers, and the apartment where Luther worked on his translation of the Bible.——The biennial Exhibition at Nismes is not well spoken of.——The Baron Wappers is about to resign the office of Director of the Academy of Arts at Antwerp, and will be succeeded by M. de Keyser.

PROVINCIAL NEWS.

Lincoln.—St. Michael's New Church is being rapidly proceeded with. The walls of the nave and aisle are up to the square, and the joiners have commenced laying the plates for the roof. The masons are setting the chancel arch, which is rising about 12 feet above the wall plates. The south transept from the slope of the site upon which it is erected forms a buttress: it adds considerably to the number of the sittings. The porch is not at present being proceeded with, as it is in contemplation, if the necessary funds can be raised, to erect a tower over it, and do away with the sanctuary belfry. The church is in the Early English style, and will accommodate about 500 worshippers. Mr. Charles Ward, of Lincoln, is the builder.

Portsmouth.—At a recent meeting of the Dock Committee of the Town Council of Portsmouth, a plan for the formation of a repairing-dock was produced. The necessity, says the *Hampshire Advertiser*, was admitted, but it was urged that the corporation funds would not at present allow of so great an outlay. A report was, however, prepared, which recommended the formation of a Joint Stock Docks Company.

Birmingham.—It has been determined to erect a new theatre here in a central situation, and on an adequate scale. A "Mendelssohn Hall," too, it is said, is about to be erected in Broad-street, on land in close contiguity to Bingley Hall. Some modifications or limitations have been made in the plans, but the room, according to the local *Journal*, will be large enough for ordinary purposes.

Liverpool.—The new battery which has been erected by Messrs. Holme, under the direction of the Board of Ordnance, is now ready for the guns. Surprise has been expressed that the outer walls were not faced with granite, similar to the docks. The two turrets which flank the gateway, says the *Manchester Advertiser*, and the toy-like appearance of the whole erection, have been much criticised. Viewed from the river, it adds, the range of buildings forming the officers' quarters, and barracks for the men, have more the appearance of first-rate private residences than buildings intended to stand the fire of heavy ship-guns. A new road, called Battery-street, leads direct to it from Bootle-road.

Salford.—At a meeting of the general purposes committee of the Salford town-council, it was lately resolved to recommend the council to undertake the duty of fit and proper baths and washhouses for the use of the inhabitants of the borough, under the provisions of the Act now in force.

Preston.—The depôt and storehouse for the 3rd Regiment of the Duke of Lancaster's Own Militia, will be completed at the end of the present month, when the regiment will assemble for permanent duty, and take possession of their new quarters. The building has been erected under the superintendence of Messrs. Cawley and Radford, of Manchester. It is three stories in height, and contains quarters for fourteen sergeants and their families, together with rooms for the arms and accoutrements of the regiment, an orderly room, and office, guard-room, and prison-cells. The style is Tudor. The walls are crowned with a battlement and flanked by square bastions at the angles, so as to protect the sides in case of assault.

Doncaster.—The local *Gazette* states that the gross rateable value of the property in the township of Doncaster is 34,297*l.* 18s. 11d. and from this the rental of the whole would be something like 45,730*l.* being 11,433*l.* more than the overseer's valuation. The population, at present, would fall little short of 15,000*l.* The increase upon the last census is solely attributable to the new comers by the establishment of the Great Northern Railway Plant at Doncaster.

Uttoxeter.—The new town-hall and literary

institute of this town, lately inaugurated, is situated in the High-street, adjoining the Cross Keys Inn, and was designed by Mr. Thomas Fradgley, of Uttoxeter. It is plain and simple in appearance, whilst the accommodation it affords is complete. The front is in the form of letter E, through the principal projection of which is the main entrance, under a portico. The large room constitutes a hall adapted for all public occasions, as well as for magisterial purposes. This room is said to be 70 feet long, or thereabouts, 30 feet wide, and about 31 feet high. It is surrounded by a narrow gallery, the face of which is composed of an iron balustrade, bronzed, but to be heightened with gold. The gallery is supported by scroll-trusses of iron-work, bronzed. At one end of this hall is a gallery, adapted either as an orchestra at concerts, or as a platform for public speakers. The hall is warmed by two open grates, in Bordilla marble chimney-pieces, and lighted by windows in the side, and by three gas pendants of six lights each. Adjoining this hall is a consulting-room for the magistrates. From the vestibule a staircase ascends under an elliptical arch-way, and lighted by an octangular skylight, and four-light gas pendant by night. This staircase affords an entrance to the galleries of the hall, and to the saloon or promenade-room, lighted by two gas pendants of three lights each, suspended from centre-pieces in the ceiling, and warmed by two open fires, the chimney-pieces being of veined marble. From this saloon the balcony over the portico is gained, from which public speakers may address people in the street in front. The division occupied by the Literary Institute is approached from the High-street by a flight of steps, and forms the right projection of the front of the plan. On the ground-floor is a reading-room for the members who subscribe the smallest sums, and on the upper story is a library and the honorary members' reading-room, all lighted by gas by night. Under this latter room is a large archway, with iron gates,—the roadway to the Smithfield connected with the new works. A corresponding approach on the left leads to the Savings' Bank, and another, still further to the left of that, to the police department, which consists of police-office, kitchen, scullery, sitting-room, and three bed-rooms; below which are three cells, lighted with gas and warmed and ventilated by a hot-air stove.

Grimsby.—Now that the long delayed award of the arbitrators appointed to fix the value of the blocks of houses, the property of the Earl of Yarborough, on the site of the proposed new market-place, is forthcoming, it is to be hoped something will shortly be done to carry out the covered market and corn-exchange in the spirited manner originally contemplated. The Improvement Act authorises the council, without asking the leave of any superior board, to raise 15,000*l.* for the cemetery, covered-market, and corn-exchange. It is ascertained, now that the contract has been entered into for the cemetery, that its cost will not exceed 2,500*l.* The Earl of Yarborough's compensation for the market-place property is 4,231*l.* so that the amount left at the disposal of the council for the erection of the new corn-exchange and covered market will be 8,269*l.* minus an inconsiderable amount for compensation.

Hartlepool.—Parliamentary notices have been given for works of some extent and importance at Hartlepool. The Pier and Port Commissioners, with the Dock Company, propose to construct two piers to enclose Hartlepool Bay as a harbour of refuge, to include an area of 800 acres, with a depth of water at the entrance of nearly seven fathoms. The plan adopted was originally projected, it is said, by Mr. Meik, of Sunderland. Another part of the same plan, viz. the formation of large docks on the margin of the "slake"—has been taken up by a private company. They propose to construct a large float, 88 acres in extent.——Mr. Henry Suggett, builder, from near York, has got the contract for building the new Wesleyan chapel in West Hartlepool.

Penrith.—The committee of the Workingmen's Reading-room here have purchased a piece of ground in Hunter's-lane, where they intend to build a room for the use of the society. The building will consist of a centre and two wings. The centre portion will comprise the reading-room and library, 45 feet by 27, and 16 feet high. A cottage will be built at each end. The whole length of the building will be 81 feet.

THE EARL OF RADNOR'S FARM BUILDINGS, COLESHILL, BERKS.

THESE extensive farm buildings, which have been completed within the last year, were arranged by Mr. Moore, Lord Radnor's agent, and erected from the plans and under the superintendence of Mr. George Lamb, architect.

The site, occupying about 3 acres on the west side of the mansion and park, having the turnpike-road to the north, was chosen from local considerations, and being on rather a steep incline, presented at first sight some difficulty, but this was entirely got rid of, and turned into a favourable circumstance, by forming it into two platforms, one twelve feet above the other; the lower of which is the site of the principal buildings and cattle yards, and the higher that of the timber and rick yards, which are thus on a level with the upper story of the barn and adjoining buildings: by this arrangement the necessity of hoisting the sheaves up to the thrashing-machine is obviated, and the inclination of the ground is, moreover, favourable for supplying the cattle-troughs with water from the upper ground, and for the drainage of the several buildings and yards into the liquid manure tank.

In the upper story of the barn, which is 94 feet by 27 feet, is placed the principal part of the machinery, consisting of a thrashing-machine, by which the grain is thrashed, winnowed, dressed, deposited in sacks, and weighed ready for market, at one operation, without any intervention of manual labour. A mill with a pair of French stones for grinding wheat or other grain, an oat bruising-machine, and a chaff-cutter; these, with a circular saw in the adjoining shed, and a turnip-slicer and litter-cutter, on the lower floor of the barn, are all driven by a 7-horse power portable steam-engine, in a building outside the barn wall. The engine and machinery were made and erected by Messrs. Clayton and Shuttleworth, of Lincoln.

Opening from the barn is a spacious granary, 44 feet by 33 feet; and the corn, when sacked, can be let down through a trap-door, into the waggons standing in the passage below, to be conveyed away when sold.

At the end of the barn is a large loft, 57 feet by 18 feet, for storing wool, and other goods requiring to be kept dry, with the bailiff's room beyond. Adjoining this, and opening into the timber-yard, are the sawing shed, 55 feet by 18 feet; carpenters' shop, 46 feet by 18 feet; nail-house, 29 feet by 18 feet; and wheelwrights' and masons' sheds, 94 feet by 18 feet. These are required for the work constantly going on in erecting cottages, and repairing the various farm buildings, &c. on the estate.

The lower floor of the barn is divided into compartments for receiving the chaff, straw, &c. from the thrashing-machine, the north end being reserved for storing roots, which are thrown in from the rick-yard through a shoot formed for the purpose. From this part a tram-way is laid down through all the buildings along which the food and litter is conveyed on a truck to the cattle mangers, &c.; and the manure from the boxes and stalls is taken in a similar manner to the covered pit. Beneath the granary, on one side of the tramway, is the straw-barn, 36 feet by 18 feet; and on the other two rooms, each 18 feet square, fitted up with various apparatus for steaming and preparing food for pigs and cattle, and vaults for skim milk, wash, &c.

Following the tramway, the cattle-sheds, 87 feet by 44 feet, are next entered: these are lighted and ventilated by raised skylights, glazed with rough plate-glass, and fitted with louvre openings at the sides; and the roofs of the other passages, and of those parts of the buildings where stock is kept confined, are ventilated in a similar manner. On the right are stalls for twelve fatting beasts, and on the left the piggeries, consisting of boxes walled in for twenty fat pigs, two boars, and eight breeding sows, and their young, the latter having also open yards attached. The Coleshill pigs, it may be remarked, have long had a reputation.

Intersecting this building at right angles, is another, 182 feet by 27 feet, containing a double row of cattle-boxes, forty-four in number, for thirty large, and twenty-eight young beasts, two in a box: the boxes are enclosed with oak posts and rails, and each is fitted with rack and manger, and a trough, having a continual supply of pure water.

Further west is the manure-pit, 44 feet by 23 feet, which is covered with a roof supported on iron columns, and beneath are the large tanks, to which the liquid manure runs in underground drain-pipes from all the buildings.

At the south end of the cattle-boxes is the dairy cow-house, 149 feet by 32 feet, providing room for twenty, tied up in stalls, and ten calving cows and their young, in boxes: there are also pens and boxes for twenty calves, and a hay-house. Between the dairy, cow-house, and the piggeries, are the cow-yards and shed, for 14 cows, and a house for three bulls. To the east of these is the stable-yard, with a three-stall nag-stable and loose box, harness-room, gig-house, and bailiff's office.

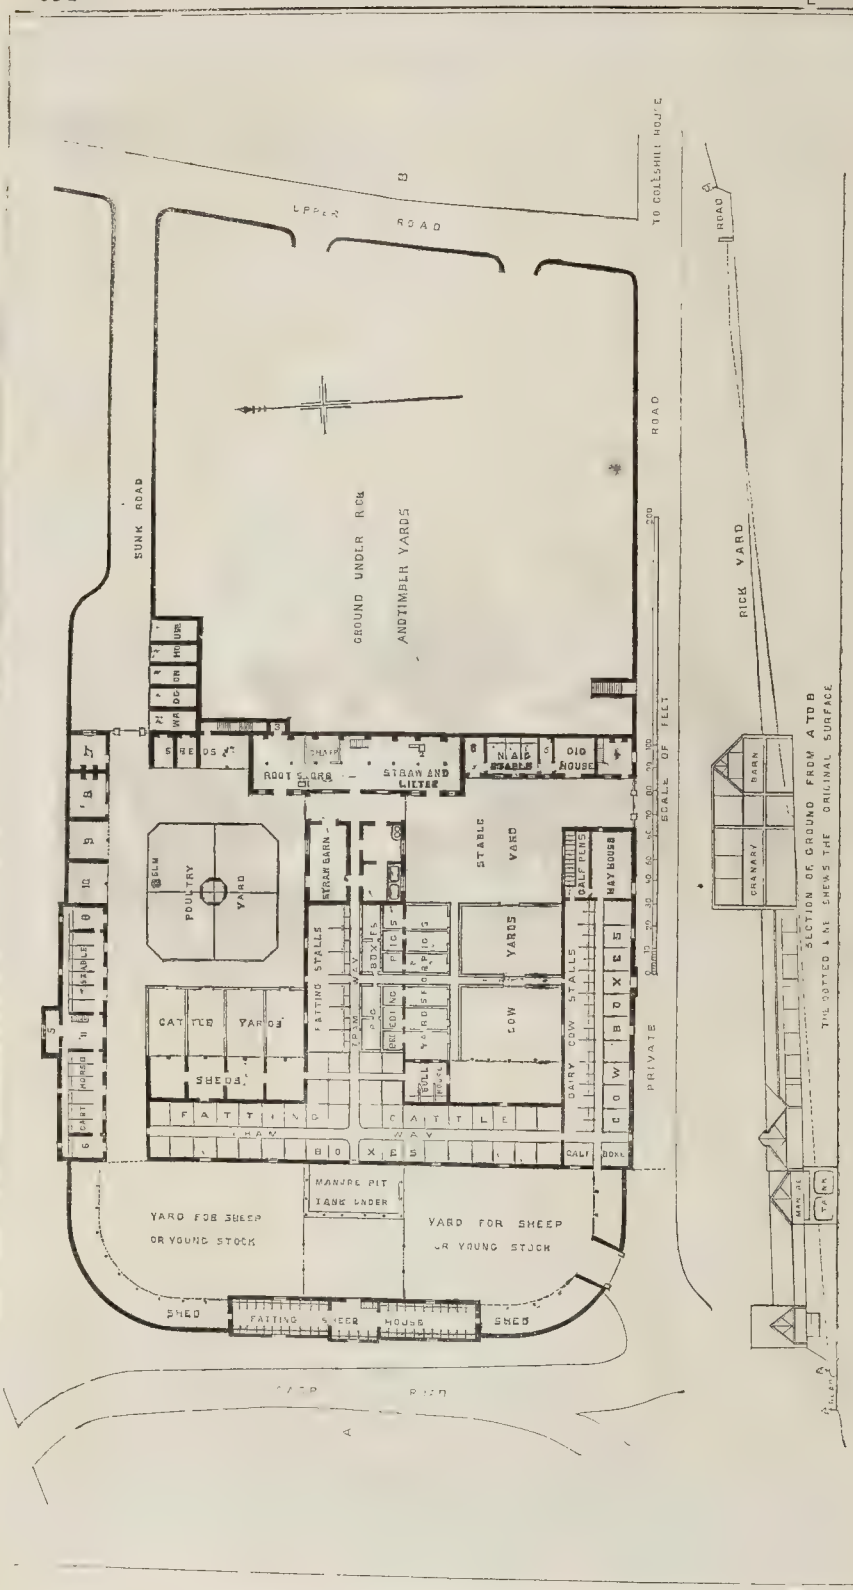
On the opposite side is the Poultry-yard, in which stands a fine elm-tree, which was preserved in laying out the site, and forms an agreeable feature. On the west side of this yard are sheds and enclosed yards for young stock, colts, &c. and round the north and east sides are the cart-horse stables, 114 feet by 21 feet, with stalls for twelve horses, a loose-box for a sick horse at each end, and corn and chaff house, harness-room and hay-loft in the centre, also sheds for tools, a smithy and men's kitchen, and arched recesses are formed beneath part of the rick-yard for waggons, &c.

Westward is the fatting sheep-house, 110 feet by 18 feet. Here is room for from 250 to 300 ewes and 100 fat sheep, the latter being tied up at rack and manger. This has an open sparred floor, with pits underneath for the manure,—an arrangement less objectionable, as it seems to us, in the case of sheep, which carry their bed-clothes about with them, and do not suffer from lying down on the hard boards, than for other animals.

On each side are yards and sheds for young stock, for thirty head of which there is ample room.

The external walls are of native stone with Bath stone quoins, window-dressings, and copings. The roofs are partly covered with stone tiles and partly with slates, and the doors throughout are made to slide, being suspended by rollers upon an iron bar, instead of being hung with hinges.

Coleshill House is interesting as an example of Inigo Jones's work. Since the Earl of Radnor has resided there, great improvements have been effected in the village: most of the old dark, ill-arranged, and unventilated cottages have given place to well-constructed dwellings, and a school has been provided for the education of the children.



Reference to Plan.

LOWER LEVEL.

1. Turnip-cutter.
2. Litter-cutter.
3. Shoot for roots.
4. Bailiff's office.
5. Harness-rooms.
6. Loose boxes.
7. Men's kitchen.
8. Smithy.
9. Shoeing-shed.
10. Tool-house.
11. Corn and chaff house, with loft over.
12. Steaming-house.
13. Food-mixing and vault house.

On the upper level, the barn is above the root store, passage and steaming-house, on lower level, and contains machine for thrashing, riddling, winnowing, and dressing the corn for market, at one operation; mill for grinding corn; oat and linseed bruising-machine, and a chaff-cutter. On this same level there is a bailiff's-room, sawing-shed, with circular-saw, carpenters' shop, wheelwrights', &c.

THE NATIONAL GALLERY.—We are informed that Mr. Wornum has been appointed director in the National Gallery.

PLAN OF THE EARL OF RADNOR'S FARM BUILDINGS,—AT THE LOWER LEVEL.

THE EARL OF RADNOR'S FARM BUILDINGS, COLESHILL, BERKS.—Mr. George Lamb, Architect.

LITTLE O—— U——.

DISRESPECTFULLY DEDICATED TO THE CHANCELLOR AND MEMBERS OF OXFORD UNIVERSITY.

O *Builder* journal! be thou kind,
And give me space to tell my mind
To Oxford University;
And to those parents who intend
Their virtuous, well-taught sons to send
To Oxford University;
Of course to work with might and main,
Degrees and honours to obtain
From Oxford University;
The worth of which, as all agree,
Is in the *truth supposed* to be
In Oxford University.
But if no *truth*, then *honour* none,
Let's see the *way that matters* run
At Oxford University.
"This seat of Faith and Learning old"
(At least, to speak that way we're told,
Of Oxford University),
Can only act by agents, who
Of course the interests pursue
Of Oxford University.
These agents make reports which, when
Passed by a vote of those wise men
Called Oxford University,
Become approved, and thenceforth all
The blame or wrong therefrom should fall
On Oxford University.
* * * * * *
"Competition is very good,"
Say those who wear the gown and hood,
At Oxford University.
"The course being kept, in every race,
Merit *shall* win." Now, what takes place
In Oxford University?

A man of sense one day perceived
That specimens had been received
By Oxford University,
Worth having all their cases glazed,
And put in buildings to be raised,
By Oxford University.
How many rooms, their size in feet,
Each lecturer wants as may be meet,
For Oxford University,
Is found, and of expense the bounds
Are fixed at THIRTY *thousand pounds*,
By Oxford University;
Which offers prizes, in the whole,
Six hundred pounds (so mean the soul
Of Oxford University)
To be divided, 3, 2, 1,
In case the building can be done
By Oxford University
For the sum named; so strict are they
Whose yank and wisdom bear the sway,
O'er Oxford University.
THE RACE'S COURSE IS THUS MARKED OUT,
Advertisements, next sent about,
By Oxford University,
Proclaim a Board of Delegates
(Supposed to represent the Fates,
At Oxford University).
These delegates declared that they
(Speaking, as any one would say,
For Oxford University),
Would not at once themselves decide,
But in a skilful judge confide,
The Oxford University.
Nor would with favour entertain
Any design (Oh! weren't we vain
Of Oxford University?)
That might the sum prescribed exceed.
The architects forthwith proceed
To Oxford University;
Inspect the site; return; design;
Delight to see line join with line;
While Oxford University
Seems in their dreams the wreath to give
That grants immortal life to live,
In Oxford University.
That is the strain in which we speak,
Or spoke, at least, until last week,
Of Oxford University.
For while the promise yet is green,
A shocking sight is to be seen
At Oxford University.
The time comes round; designs arrive,
In number nearly thirty-five,
At Oxford University.
Six of the number beat the rest,
"The most expensive are the best,"
Cries Oxford University.
Each *fifty* thousand pounds at least!
Exclaims the judge: "Lie down, you beast,"
Says Oxford University.
"If we did promise? Well! What then?
We, as you know, are still weak men
At Oxford University.
Besides, by chance, we know the name
Of him whom conq'ror we'll proclaim,"
Says Oxford University.
"As for the rest, within the sum
Prescribed, of course they'll never come,
To Oxford University,
To see the chest, until too late."
Fancy a smiling delegate
Of Oxford University
Preach, "Where no cry is raised you know
There's no harm done," "I'm right, *ergo*,"
Says Oxford University.

Is this the way to teach that TRUTH
And HONOUR best beseem the youth
Of Oxford University?
If shuffling such as this prevails,
Of course, ye parents, merit fails
At Oxford University.
The delegacy, sure, don't preach
What its examples clearly teach
To Oxford University?
They're scoundrels if they do, and in my ire,
I'd call the Board of Delegates, and Oxford
University, a LIAR:
Pah! Oxford University.

EXHIBITIONS.

The Winter Exhibition of Cabinet Pictures and Sketches has been opened at the Gallery, 121, Pall-mall. It is in different hands from those which originally started it, but preserves the same character as an exhibition. That it has the concurrence of the leading artists is, we suppose, proved by the fact that the collection, small as it is (188 pictures), contains the works of twenty-three Academicians and associates, including the president, Sir Charles Eastlake, Mr. D. Roberts, Mr Herbert (an extraordinary landscape), Mr. Pickersgill, Mr. Maclise (though an uninteresting specimen), Mr. Leslie, Mr. Stanfield, and Mr. Frith. The latter exhibits his study for the picture of "Ramsgate Sands," —an admirable drawing. "The Highland Barn," by Mr. Ansdell (1); "Religious Controversy," by Elmore, two or three small sketches by Glass, a sketch by Hemsley (91), "The Young Archers," by Le Jeune (101), Mr. J. T. Linnell's wood scene, "A Lost Game," by F. R. Pickersgill, and Sant's picture of "Dark Eyes" (164), (fine eyes they are, indeed, but the nose scarcely matches), are the works which more strikingly attract attention.

The Gallery of Illustration.—In the lecture which accompanies Messrs. Grieve and Telbin's very interesting new diorama illustrating the Events of the War, Mr. Stocqueler endeavours, and successfully too, as well to convey information on the subject of bastions, entrenchments, gabions, fascines, and other matters of which the public are now reading and hearing every day, as to follow the proceedings of the allied armies. The views include, besides St. Petersburg, Cronstadt, and Constantinople, previously exhibited, the Departure of the Allied Fleets from Varna, the Landing in Kalamita Bay, the Battle of the Alma, Charge of the Guards and Highlanders, Capture of Guns in the Redoubt, the Flank March through the Forest, and the Forts and Harbours of Sebastopol. The advance of the soldiers in the battle of the Alma (although this is scarcely to be called painting), is ingeniously contrived, and the whole serves to convey a stirring notion of the exciting scenes in which our brave troops are acting nobly.

ROYAL INSTITUTE OF ARCHITECTS IN IRELAND.

THE usual monthly meeting of this body was held on Saturday evening, the 16th instant, Sir John Benson, in the chair. Members present—Messrs. Murray, McCarthy, M.R.I.A., Telford, Lyons, Astley, Symes, Hampton, Montgomery, McCurdy, and Jas. H. Owen and Neville, M.R.I.A. Hon. Secretaries. After some preliminary business in which the yearly report was read and confirmed, Mr. Edward Henry Carson was introduced, and admitted a Fellow of the Institute.

Mr. Telford read a paper on the "Position of Organs in Places of Worship," and laid before the meeting a variety of precedents of difference in arrangement, together with his own opinion on their merits or demerits, and the acoustic results. The author maintained that especially in structues for Roman or Anglican worship, the architect should make provision for the organ in the eastern extremity, and not as in some instances in the western end, elevated so as to obscure one of the principal architectural features, viz. the western window, and isolating the organ in a place were least needed. He also dwelt upon the necessity of projecting the organ beyond the face of the wall, in cases where provision is made for its reception at the side of the chancel, and of having ample room round it for the circulation of the sound.

In the course of a conversation which followed, many suggestions were given to obviate difficulties, and the paper was referred to the council for publication. We may add that the Institute have determined on publishing their past transactions, and we anticipate the production of a volume of interest.

LONDON-BRIDGE.

THE London-bridge committee have come to a resolution to recommend to the Court of Common Council to widen London-bridge, by extending the footway on each side over the river, and throwing the present footpath into the carriage-way. A model of the projected alteration was exhibited by Mr. Bunning, the City architect. As a considerable time will be occupied in carrying out the change, the committee came to a determination to try, in the meantime, the experiment of confining the heavy traffic each way to one line, and leaving the whole of the centre open for quick traffic.

We understand that the matter had been referred to Sir John Rennie and Mr. Page. We are reminded that twelve to fifteen years ago, Professor Hosking suggested, in "The Practical and Architectural Treatise on Bridges," which he wrote for Weale's work on bridges, that London bridge might be, or have been, made wider as to its roadway, &c by an effective system of corbelling. At page 236 the professor gives some diagrams to explain his views. The writer points out that the mode here proposed of widening the effective working surface of a bridge was adopted on the flat roofs of the castles of the middle ages, where space was obtained for men to stand, together with the means of throwing down stones, by setting the parapets out on bold and massive corbellings, the parapet and corbelling forming together a cornice, having such depth and projection as to give the works in which such an arrangement occurs a character of grandeur and dignity which they retain, though in ruins.

IMPORTANT PROCEEDING UNDER THE BUILDINGS ACT.

INSUFFICIENT MORTAR.

MR. CHARLES GUNNELL, a builder, of Stamford-terrace, Fulham-road, was summoned before Mr. Beadon, Hammersmith, under the provisions of the Buildings Act, for having unlawfully erected the walls of two houses in the King's-road with lime which had been used in gas-works, and which was totally unfit for the purpose of forming mortar, and not with mortar or cement, as required by Schedule D of the Act. It appeared that Mr. Andrew Moseley, the district surveyor of Fulham, had placed the matter before the referees, and they had decided that the mortar in question was not fit for building purposes, and the case was accordingly brought before his worship to put the Act in force, and compel the defendant to pull the houses down, and to use proper materials if they were again rebuilt.—Mr. T. Hill, solicitor, attended for the defendant, and pleaded guilty to the information He was afraid the whole case was then out of court, from its not having been defended before the referees, as he believed he had an answer upon the merits. They were then in the act of pulling down the walls, and if a little time was granted them, the whole of the standing bricks would be removed.—Mr. Beadon wished to know if Mr. Moseley had given the defendant any notice, while building, that he was committing an offence under the Act?—Mr. Moseley said he gave him notice full three months ago; in fact, almost directly after the

first bricks were laid. He saw the lime he was using for the mortar, which was known by the name of "blue billy," and pointed out to him that it was not the proper lime, as it had been used in the gas works. The reason that "blue billy" was not considered proper material for building purposes was its not being sufficiently binding when put in use. He believed that from the chemical process it had gone through in purifying gas, the qualities of lime no longer remained in it. In spite of the cautions, the defendant had for the last three months persisted in erecting the houses with that particular lime. Mr. Hill submitted that a builder was not a competent judge to know of the qualities of the lime that had been used, and that a chemist was the only person to give an opinion. Mr. Beadon thought that a builder was a competent judge, much more so than a chemist. It was clear that the whole of the walls must be pulled down, and the only question for him to consider was what time he should allow the defendant to carry it into effect. After some conversation the summons was adjourned for three weeks, the defendant to pay 3*l.* 1s. 5d. which Mr. Moseley had paid to the referees, two guineas for the surveyor's trouble at the court of referees, and one guinea for his loss of time in attending before his worship.

THE NEW PARK-GATES AT PIMLICO.

Your pages being the chief organ from which the public derive information about Metropolitan improvements, I beg to call your attention to the gates now being built at the Buckingham Palace end of Birdcage-walk, and specially to point out the shutting-up of the thoroughfare that communicated from Constitution-hill and St. James's Palace-road with Birdcage-walk, leading to the Courts at Westminster and Houses of Parliament. The gates which were open to pedestrians and equestrians have been removed, and the iron-railing continued to the keeper's-lodge. This is an unnecessary and inconsiderate encroachment upon the "bye-ways," if not upon the rights of the people, and to that important class who are engaged in the business of the imperial palace and other national offices in the vicinity.

It must be a source of delay and inconvenience to the officers and men in the Wellington Barracks, who have to parade and mount guard at Buckingham and St. James's Palaces,—a circumstance which the Horse Guards may appreciate at this crisis, when these duties press so heavily upon the household troops.

EQUES.

LIVERPOOL ARCHITECTURAL SOCIETY.

At a meeting of the society last week, Mr. Huggins read a paper criticising St. George's Hall. After passing an encomium on the architect, he proceeded to analyse the style; a style not belonging to any particular country, but showing that classical architecture can be applied to suit all modern purposes. If any particular character could be discerned, it was Italian-Grecian, for in his Mr. Huggins's, opinion, Italian architecture was Grecian liberally used. St. George's Hall, as a building, was not a perfect specimen of classical art, but no one could mistake it for an ecclesiastical edifice. It had, however, many other faults in the manner in which the style of architecture had been applied. He found fault with the north and south ends of the building, as the columns there used were not good ones. The west side was bad because the windows lighting the great hall were seen; and, as they were modern, they were totally out of character. Another defect was in the west side, as the stylobate or steps leading to the colonnade were broken. He particularly found fault with the square pillars or pilasters used at the east and west sides, for their capitals being Corinthian, their form was lost sight of in the distance. Another defect was in the entrance to the great hall, because as you enter from the east side, you immediately perceive the great want of a vestibule. As for the interior, the whole plan was defective, particularly in the great hall, in the side galleries. He would not have had galleries, but in their place, a screen. He found fault with the attic above the entablatures, and with the Latin inscriptions in the great hall, also the organ, as being useless. He then concluded by deploring the great want of sculpture in all parts of the building.—Mr. F. Howard was astonished at an architect thinking that his art was dependant on sculpture. So far was this from the case, that the Greeks never thought so; and to prove this, the Temple of Theseus, the most antique, and best specimen of their architecture, exhibited no sculpture. With regard to the Latin inscriptions Mr. Huggins was wrong; for as Latin was the universal language of scholars, foreigners, when they visited St. George's Hall, could understand it,—besides, there was nothing lost, for the Latin was merely a translation of the English inscriptions. With regard to the attic on the entablatures, he was quite of Mr. Huggins's opinion, and thought that it ought to come down; but could not agree in thinking that the interior of a building should correspond with the exterior.—Mr. Picton condemned criticising St. George's Hall, as it would unsettle public opinion, and he also disagreed with Mr. Huggins about the north side, for there was nothing so beautiful as a circular portico. With regard to the plan of the building, he must confess it was defective, but thought it could not be avoided; and as to the organ, which Mr. Huggins had found fault with, he thought it was an ornament, and very useful. Mr. Picton, however, quite agreed with Mr. Huggins relative to the brass doors in the great hall, and condemned the introduction of the S. P. Q. L.

Notices of Books.

VARIORUM.

The Wiltshire Archæological and Natural History Society, although so young, have already issued three parts of a portly and interesting magazine,* which, if carried on as it has been commenced, will take its place amongst the most valuable works on the county. The insertion of the list of queries relating to the archæology and natural history of Wilts, in No. 1, was a very good step, and will doubtless elicit much valuable information. The third part contains a nice view of Kingston House, at Bradford, a good specimen of late Tudor, approaching the Elizabethan style. The writer of the account accompanying it says,—"Of the time at which it was built, the style of architecture employed scarcely leaves a doubt. It partakes of the character of Longleat; but still more strikingly resembles a portion of Kirby, the seat of Lord Winchilsea, in Northampton. The date of Longleat House is well known. It was built between the years 1567 and 1579; and according to a received tradition, by John of Padua, the "devizor of public buildings," patronized by Henry VIII. Edward VI. and the Protector Somerset; an architect who is supposed by some to have been John Thorpe, an Englishman, under the disguise of an Italian name. Kirby House was built between the years 1572 and 1638. There is therefore little difficulty in assigning Kingston House to the commencement of the seventeenth century." We should think it earlier, although scarcely so early that it could have been the house which Leland saw in 1540.——"The Land we Live in" (Orr and Co.), has reached Part IX. and is working its way onwards towards its "land's end." The present part contains a portion of the article on London, with the usual amount of illustration. It would be well that the views as well as the letterpress should be revised, however. There is, for instance, a sketch of Billingsgate as it once was seen from the river, but without any glimpse of the new and important river front; neither, indeed, is there any special allusion to the new market in the letterpress. London is a grand theme, and it is here fairly treated as the subject of a popular sketch. London is the town of towns in the British Isles in a most peculiar and emphatic sense. It actually contains more of the natives of most of the counties throughout the country than the respective capitals of these very counties do! Thus there are more Berkshire people in it than the whole population of Reading,—more Gloucestershire people than all the population of Gloucester,—more Warwickshire, than all Warwick,—about as many Devonshire as all Exeter,—about twice as many Wilts as all Salisbury,—about four times as many Herts as all Hertford,—from Bucks more than all Aylesbury and Buckingham to boot!——"Practical Directions for the Formation of Sewerage Districts," is a pamphlet by Mr. Toulmin Smith (published by Sweet, of Chancery-lane), which contains also instructions for the conduct of sewerage Boards in the neighbourhood of the metropolis, under the statute 17 and 18 Vict. c. 111.

* "The Wiltshire Archæological and Natural History Magazine." Devizes: H. Bull; London: G. Bell and J. R. Smith.

Miscellanea.

The Liverpool Free Public Library and Museum.—The second year's report of this Institution has been issued. Experience in the various departments is reported to have fully justified the expectations of those who took an interest in its establishment. Generally, the committee report an increased amount of efficiency, a more extended field of usefulness, and a greater degree of appreciation, in the public mind, of the benefits resulting from the ready and free access to the treasures of literature, science, and natural history thus provided. At the Derby Museum, the number of visitors during the year has been 122,174, being a daily average of 588 for the four days of the week on which the museum is open. The usefulness and interest of the Reference Library, in Duke-street, continue unabated, being in fact only restricted by the limited accommodation provided for the readers. During the year ending 31st of August last, 98,760 volumes have been issued, being an average of 346 per day, to which must be added the readers of the magazines and other periodicals, about 110 per day, making a total of 129,997 books perused, or 156 per day. The average number of persons reading in the room during the day is from 70 to 80, and in the evenings from 120 to 140. The room is badly ventilated, and with this number is inconveniently crowded. Space is also wanted for consulting many expensive books containing designs, which are frequently in demand by artizans in the various branches of the ornamental art. The two Lending Libraries were opened in October, 1853. The number of volumes at the commencement was about 2,000, with about 30 readers. After ten months' operation the number of volumes in the two libraries amounts to 4,435, with a weekly circulation of 1,080 volumes. The readers using these libraries between the ages of 14 and 21, are 1,111; between 21 and 35 495, between 35 and 50—159, above this age—35. It is a noticeable fact, that the larger proportion of solid reading, is among the really working classes, the lighter literature more among young men in offices and shops.

Conservative Land Society.—The second annual general meeting of this society was held at Exeter-hall on 12th inst. and was numerously attended. Lord Ranelagh presided. The chairman read the report, which showed a balance in favour of the society of 4,909*l.* 14s. 1d. for the financial year ending 29th September, 1854. The cash receipts on shares for the last quarter ending 29th September, 1854, were, 23,171*l.* 17s. 2d.; ditto for corresponding quarter in 1853, 18,428*l.* 18s. 11d.; the increase therefore is 4,742*l.* 18s. 3d. The committee recommended the declaration of an increased bonus of 7 per cent. per annum to September 29th, 1854. The abstract of the returns showed a total of 1,505 lots on estates, of which 1,192 were taken. The amount of allotment was 117,736*l.* 10s.: the amount sold was 94,456*l.* 10s. Under the new plan of building advances, proposals to the amount of 7,750*l.* had been made. The power to obtain loan on a single right had been raised from 50*l.* to 100*l.* A statistical analysis of rights exercised on estates showed that premiums varying from 500*l.* to 1*l.* per right had been given. The retiring directors, Viscount Ranelagh, Sir C. W. Codrington, bart. M.P.; Mr. J. C. Cobbold, M.P.; Hon. W. E. Duncombe, M.P.; Mr. R. Steven, and the Rev. Dr. Worthington, were unanimously re-elected. The meeting afterwards proceeded to the twenty-fourth drawing for rights of choice. One hundred shares were drawn and fifty added by seniority.

The Silver Medal at the Royal Academy.—We have received several letters respecting the award of the silver medal to Mr. C. L. Eastlake, for the best measured drawing of Burlington House. The charge made is, that the successful candidate did not himself measure the building, and was not able to produce a certificate of having attended the requisite courses of lectures which other students are required to produce. We hesitate to insert a charge against the justice of the Council in such a matter, and have no doubt it could be made clear, but the manner in which it has been made to us leaves us no discretion.

Building Artificers and the Patriotic Fund.—Messrs. Colls and Co. builders, ask us to mention, that the men in their employ have voluntarily raised a subscription of 14*l.* in aid of the Patriotic Fund, scarcely any artisan or labourer giving less than half a day's pay to the object. Considering the dearness of provisions, and the many additional comforts a working man needs at this season of the year, it must be regarded as a generous and noble act, reflecting great credit upon their patriotism, loyalty, and self-denial.——The workmen in the employ of Mr. H. D. Austin, builder, too, have contributed 25*l.* to the same object.——The mechanics (excepting the painters) in the employ of Messrs. Soward and Son, of Tottenham-court-road, have unhesitatingly contributed one day's pay towards the Patriotic Fund.

The Sharnbrook Survey.—A paragraph in the *Bedford Times* details the history of an unfortunate attempt to obtain a survey of the parish of Sharnbrook, from which it appears that about two years since, pursuant to advertisement, a contract was entered into between the board of guardians and "a practical civil engineer and land surveyor from some of the scientific resorts of the great metropolis of England," for a survey and plan of this parish. "For many weary months," continues our authority, "the professional gentleman—who produced first-rate credentials—might be seen with his staff of assistants traversing the fields, field-book in hand, forming his lines, and noting the contents of triangular, quadrilateral, curvilateral, rhomboidal, and trapezoidal fields as he passed. At length, after numerous doubts, broken promises, and disappointments, a very fine plan was produced; and certainly, so far as the artistic execution went, it was beautiful; the plotting, delineation, and colouring of woods, being done by a skilful landscape artist; but, unfortunately, on testing the work, there were discovered so many defects, that the whole survey was rejected by the parish." The board of guardians and the poor-law board both rejected and disowned it. "The question then became—what was to be done with the documents? In answer to a communication, the surveyor requested them to be sent per rail." From that time nothing more was heard of the Sharnbrook survey, until about a fortnight ago, when notice was received by the parish officers that an action had been commenced by the civil engineer against the London and North-Western Railway Company, to recover compensation for loss sustained by the non-delivery of the plan and survey of Sharnbrook, which he alleged the servants of the company had failed to deliver. Damages were laid at about 200*l.* The cause was to have been tried last week at London: the defendants and their witnesses were ready; but, when the case was called on, neither plaintiff nor attorney made their appearance, consequently, the action fell to the ground. Such is the history, and such the end, of the Sharnbrook survey.

Architecture poetically considered.—At the Bristol Athenæum, on the 13th inst. a lecture was delivered by Mr. George Wightwick, on "Architecture, poetically considered and pictorially illustrated." The lecturer observed that architecture, among the works of man, was like the mountain in nature's work, both equally unappreciated in this self-serving age; and he then took a flight over the expanse of the entire architectural world, and exhibited a number of views to illustrate his subject; the scope of which those who know his "Palace of Architecture" will at once comprehend and appreciate. At the Philosophical Institution in the same city, Dr. Alfred Day has been giving some lectures on "Church Architecture," in which the claims of mediæval Gothic as the style best adapted for modern religious use, were vindicated against objections. The causes of decline and the symptoms of amelioration were considered.

Southwark Bridge.—The Bridge House Committee of the City Corporation, have given in their report on the subject of Southwark Bridge, which they were deputed to have examined. No examination, however, was gone into by their orders. Mr. George Rennie had given evidence before a Parliamentary committee to the effect that the bridge was perfectly sound. The Bridge House Committee therefore declined incurring a cost of 500*l.* or so, in any further examination. The Commons Committee alluded to, had recommended the opening up of the tolled bridges, if they could be had on reasonable terms, before any project should be entered into for the erection of new bridges. The proprietors of Southwark appear to have been "holding back," after agreeing to take 300,000*l.* for the bridge; and the Court of Common Council, after considering the Bridge House Committee's Report, together with a motion to the effect, that that part of the reference to the Bridge House Committee, which directed them to incur expense in ascertaining the safety of the bridge, be discharged, and their report agreed to, almost unanimously voted for an amendment to the effect, that the report be agreed to, and the whole reference discharged.

British Arrangements for French Exhibition.—The Government Department of Science and Art have issued a circular, announcing to the Metropolitan and Provincial British Committees of the Universal Exhibition of 1855, that they have hired a house, No. 14, Rue du Cirque, Paris, for the offices of the British section, and for behoof of the committees and their agents, as well as a sort of house of call for the written correspondence of individual exhibitors or their agents. About eight rooms will be occupied as offices of the agents of committees, arrangements to be made as to successive occupation at stated hours, by different agents, or otherwise, the accommodation being limited.

Canterbury Hall.—This building, tenders for which we gave some months ago, is now completed, and was used last Wednesday night for the first time. It has been erected for Mr. Morton, of the Canterbury Arms, in the Westminster-road, for a concert-room, and is capable of accommodating nearly 2,000 persons. The hall is 93 feet long, 45 feet wide, and 31 feet high. The cost has been about 4,000*l.* Mr. Samuel Field, of Beaufort-buildings, Strand, is the architect.

Working-men's Memorial of the late Sir Robert Peel.—The amount raised from the 416,886 penny contributions of working men throughout the country, it may be recollected,—after defraying the cost of a tablet—was invested in the purchase of 1,745*l.* 15s. 1d. 3 per Cent. Consolidated Bank Annuities (the trustees being the council of University College, London), to be annually applied to the purchase and distribution of books, pamphlets, maps, and other aids to knowledge, with the view, more especially, of promoting the educational improvement of the labouring classes in the United Kingdom. In furtherance of this object, it has been determined to select seventeen existing libraries and other institutions in various parts of the country, to which these books, &c. are to be annually given. The annual dividends of 1,745*l.* in the 3 per Cents. when divided amongst seventeen institutions, will purchase for each but a very small number of books. The books, however, will, it is said, be good ones, and doubtless, in their selection, the special character of the fund will be borne in mind.

The District and School of St. Thomas, Charterhouse, London.—A tract, by the Rev. W. Rogers, M.A. incumbent of St. Thomas, Charterhouse, has been published by Messrs. Longman and Co. formally as a letter to Lord John Russell, as Governor of the Charterhouse, Lord-President of the Council, and a Charity Commissioner. The chief purposes of this tract are to show what has been done as to the new schools, and to describe the state of this poverty-stricken district. Speaking of the houses in this part of the metropolis, Mr. Rogers says that "many of these houses are mere kennels, such as my friends in the country would not for a moment allow their dogs to inhabit, and which her Majesty's pigs, which I had the honour to visit at Windsor, would not even deign to look upon." He maintains that "there is a singularity in the utter unmixed poverty of this district; that as a legally-constituted district there is none so utterly destitute in all its parts,—none which is such a complete bundle of rags without any particle whatever of the purple and fine linen which is to be found in other parts of this city;" and it is because this is his conviction that he feels it has a peculiar claim upon the sympathies of the public.

Writing on Shop-fronts.—I am a practical man. Surely Mr. Ruskin would not advise us to paint a black letter character (however beautiful) on a Grecian or Roman entablature (or intended for such), in which order by far the majority of our shop-fronts are designed, the deep frieze of the entablature offering an opportunity for the display of the name in a bold and attractive manner, a necessity few tradesmen in these competing times can dispense with, though I think they err in making the letters too large, the effect being to reduce in appearance the elevation of the whole front. A paragraph ran through the press a short time since, stating, on high authority, the injurious effects of black paint, when acted upon by the sun, to the woodwork on which it was laid. Now, if any one will examine an old turnpike trust board, which has been exposed a number of years, and painted a white with black letters, he will find the white lead completely perished from the wood, the black not only preserving itself but the underlying colours, so as to stand out from the wood in very considerable relief. I have found it to be the case wherever black paint has been used—window-sashes, for instance. Neither do I think the black used important.—H. H.

An awkward Passage in the Park.—Having arrived at that age which looks upon the actions of manhood as rash temerity, and having to pass daily up and down the incline passage that leads from Grosvenor-gate to Constitution-hill, I approach this part of my otherwise pleasant walk with the nervous belief of an impending misfortune, and a grateful feeling of restored confidence at my triumph over an anticipated accident. The iron railing is in some measure a security; but how nursery-maids manage with swaddled babies I cannot comprehend, and am too busy to look. I am sure there are many whose feelings I am now expressing; and as Government professes to be the servants of the public, might not the Woods and Forests take our case into consideration, and make one side of the slope into steps. I have, I am sure, no wish to deprive the little boys of their slide, and could then admire their prowess with a satisfaction I do not at present feel from the want of confidence in the security of a good footing.—

Gaiters.

London and Western Districts Cemetery.—It is proposed to appropriate 60 acres of land at Parkhill, Isleworth, 7¼ miles from Hyde-park-corner, which has been offered to a proposed or newly-formed company, absolutely or conditionally, on such terms, it is said, as will enable them effectually to drain, enclose, and complete all the necessary arrangements, with chapels, other required buildings, and every convenience, for a sum considerably under 50,000*l.* The capabilities of the locality are stated in a prospectus to be in accordance with the requirements of the Board of Health, the soil being sand and gravel, the former extending in depth 10 feet from the surface, on a bed of gravel several feet deep, without water, the whole covered with alluvial soil. The transit by road, rail, river, and canal, is said to be unobjectionable. The cemetery will have three entrances, at Brentford-end, Zion-lane, and the canal. It is estimated that, making the average burial-ground charges, 28s to 9*l.* on a proportion of one-seventh of the deaths among the population within eight miles, will secure a yearly dividend of 10 per cent. on 50,000*l.* allowing 3,000*l.* for annual expenses. In the first instance only a portion of the shares, which are 10,000 in number, of 5*l.* each, are to be issued.

Model Lodging-houses for Bristol.—The Bishop of Gloucester and Bristol has issued an address to the citizens of Bristol and others, in which he states that the town-council have finally resolved *not* to undertake the erection of model lodging-houses in their corporate capacity, such institutions in other places having almost always been established and conducted by voluntary associations or joint stock companies. The bishop therefore reverts to the plan in contemplation last year, for the erection of houses in parts of the city and suburbs convenient for the habitation of the working classes, by a company or companies of shareholders, who, by association with the Metropolitan Chartered Company, may be legally protected against any liability beyond the amount of their shares; and he suggests that a company be formed, with a capital of 5,000*l.*—a sum which he thinks may be readily raised in an opulent community such as Bristol. If the shares be of 20*l.* each, the bishop states that he will take ten; or co-operate in any other arrangement which may be deemed most expedient He would wish the interest on the capital to be limited to 5*l.* per cent.

Train-signals.—One of the multitude of inventions long since suggested for the communication between guards and drivers has at length been tried on the Lancashire and Yorkshire Railway. It simply consists of a jointed gutta-percha tube, with whistle and mouthpiece, and is certainly not new, though seemingly regarded as such, and patented. The guard can thus, of course, as by many other ways, instruct the driver to stop, go slow, &c. The safety of trains would be thus so far secured; but till some practical means of enabling passengers to communicate with guards, and *vice versa*, be added to the means, already so abundantly suggested, for enabling the guard to communicate with the driver, no system of train-signals will ever be perfectly satisfactory.

Boards of Health.—Sir Benjamin Hall gave notice in Parliament, on Wednesday before last, of his intention to move, after the Christmas recess, for the total repeal of the Health of Towns Act of 1848, and the Nuisances Removal Act, and the introduction of two entirely new Bills upon the same subjects. In giving this notice, he suggested to the local authorities the advisability of incurring as little expense as possible in the promotion of Bills for local improvements, which the new Arts may possibly supersede. It is to be hoped Sir Benjamin will be as dexterous in reconstructing the sanitary machinery of the nation as he appears to be in pulling it down.

The Manchester Exhibition of Pictures.—This exhibition was open seventy two days at 1s. and there were 6,086 admissions; six days at 6d. with 1,050 admissions; and thirty evenings at 2d. with 21,249 admissions.

Wanted! a Cesspool.—The conveniences connected with the day-schools in G——-street have no open cesspools, but are so constructed that the water from the roof of the schools and from a pump flushes the contents into the main sewer, where there is a very good fall to the river. I should feel particularly obliged if you would say whether this plan is a good one, as the local authorities object to it, not because of any nuisance, from which it is quite clear, but because it is "an injury to the sewer." They have been erected nearly seven years, and the Improvement Commissioners have no reason to think that the arrangement *is* thus injurious, only they think it *ought* to be. They want an open cesspool constructed, to be emptied in the usual way, which will of course cause a permanent nuisance more or less, and a very great one at the time of cleansing.—Querist.

*** With a sufficiency of water the plan adopted is a perfectly good one; the introduction of a cesspool very undesirable.

Dwellings for Clerks.—I was much struck with the paragraph in your journal relative to "Dwellings for Clerks," and being one of that class, I beg to trouble you with a few words. I am in the employ of an eminent firm, receiving just sufficient to come within reach of that most unjust impost which taxes alike my meagre earnings and the princely revenue of a Rothschild or Baring, yet brought up to know the comforts of a good house; I therefore for a long time was on the look-out for one to suit my small family, and wishing to escape the dreary city for their sake, I cast my eye round the suburbs, and at last fixed my residence in one, where, having scraped together a little money, I settled as owner of a small house (mortgaged, of course). Now I found out, too late, that much as I knew about indigo, coffee, &c. I knew nothing of the build of a house. I had hardly got the warm weather over, and the wet and cold began, than I found out how I had been deceived. I could give you a complete catalogue of its faults, but sum them up in a few words,—it is a "Builder's House," not fit to live in: get rid of it I must, at some no doubt, ruinous loss. How glad should I be to take *a flat* in a good substantial, well-built, wind-and-water-tight tenement, near the place of my labours, for my objection to residing here was only because I could not obtain such a dwelling as the poorer classes have in the "Model Lodging Houses." The success of such a speculation as the erection of such a pile supplied with water, gas, and all the appliances which science gives to the trade, is beyond a doubt.—A Clerk.

The Thames Tunnel.—In the week ending the 16th of December, 21,232 passengers passed through, and paid 88*l.* 9*s.* 4*d.* For several weeks past the number has been very nearly the same.

A Prize for Birmingham Artists.—The prize of the Fine Arts Association of Birmingham, awarded this year to Sir Charles Eastlake, Sir Charles has requested to be allowed to decline, suggesting, however, that the same should be offered next year, as a special prize, to be competed for by Birmingham artists, "such as either, by visit or residence, may be considered to be local men." The "Eastlake Prize," it is felt, will be no mean distinction, and it will, no doubt, excite a spirited rivalry amongst those who, by birth or residence, may claim the distinction of local artists.

New Lubricating Material. Mr. G. Cheadle, of Wolverhampton, has invented a composition for lubricating the bearing parts of machinery, &c. consisting of a mixture of palm oil, tallow, carbonate of soda, carbonate of potash, and bone gelatine. The last is first dissolved in lime-water, or a mixture of lime and chalk-water: the carbonates of soda and potash are then added, the oil and tallow added to the solution, and heat applied until the whole is dissolved and incorporated. If too thick, the resulting mixture may be thinned with lime-water.

Vergers in Westminster Abbey. A short time since, I went one afternoon with a lady to Westminster Abbey, and having duly paid the sixpence a-piece, proceeded round the chapels with the verger, listening as decorously as might be, to his deliverances about Sir Richard Tomkins and other worthies. Getting on rather faster than our *cicerone*, we strayed into the third chapel before he had quite done with the second, and were immediately commanded to come back, as the party must keep together, which command we obeyed. Arrived at Henry VII.'s Chapel, however, I wished to point out to my companion the carving of the stalls; and while the verger was expatiating upon a tomb in one corner (walked across the chapel to do so), when to my indignation the man called out, "You mustn't go there! it's forbidden to leave the guide without an order!" and having got us back to his side, continued to keep as sharp a look-out on us as if he had been a master of a charity school and we his scholars. As such a common thing as wood-carving is beneath the notice of so important a personage, we were entirely prevented from seeing what we wanted to see. So that to examine one of the most interesting parts of the finest church in London, one must have a special order from the dean,—to procure which, recommendations from M P.s and clergymen, and I don't know what besides are necessary (I doubt if a lady could get an order at all), when it ought to be open to the lowest and the poorest of the people. I have been, I think I may say, in hundreds of churches in France and Italy, and have stayed in some of them hours at a time without any let or hindrance,—paying only a few pence to the sacristan,—and that not by compulsion,—and never in any one of them was I so treated as in the first church of the first city in the world. Of course, after that, I was not surprised to hear the church cleared by a cry of "All out! All out!"—the exact counterpart of the one used to the dirty little boys in the Serpentine. Pray, sir, do something to remove these scandals, and oblige

A Belgravian.

Clay Architecture.—I am an inhabitant of an ancient town, which is situate on an extensive bed of clay. That material has, however, not been applied to the purposes of architecture more than 150 years; and, so homely is the taste, and so poor the invention of my townsmen (so far as they can be inferred from the appearance which the buildings, public and private, present), that no effort has been made, beyond the introduction of bands of brick, and cornices of the same material along the eaves line of the houses, to develope the various graceful patterns or picturesque ornaments which might be moulded from the clay. I was very much pleased, on reading lately the applicability of clay to these purposes; and my interest is excited so far that I would suggest that some idea of what varieties of decoration, suitable to English towns, moulded brick is capable, should be given to the public. I am persuaded that if this subject was taken up by skilful architects and builders, in towns where clay is abundant, a great impulse would be given to the manufacture of the article into multitudes of pleasing designs; and that our streets and street-fronts might be made to exhibit something that would at all events attract and gratify the eye, if they did not appeal to the higher power of imagination; instead of, as now, affording only long lines of poor, dreary, and melancholy flatness, indicating utter absence of taste, thought, and fancy in the builders. Civis.

Opening of the first Australian Railway.—The 12th of September, 1854, is likely to be noted in Australia, and in particular in the state of Victoria, on account of its being the date of the inauguration of the Melbourne and Hobson's Bay Railway, the first railway ever laid in Australia. The event was signalized by a festal excursion by rail from Melbourne to Sandridge, which was numerously attended, amongst others by the leading men of the community, civil and military, members of the Legislative and City Councils, of the bench and bar, and of the mercantile body. The locomotive which wafted the guests to their destination, was itself constructed in Victoria, and, indeed, was the first locomotive made in Australia. It was the work of Messrs. Robertson, Martin, Smith, and Co. and was completed in ten weeks. It is six-wheeled, with a tubular boiler; and the tender is on the same body as the engine. The engine is only 30-horse power, and its power of traction is equal to 130 tons, at a speed of twenty-five miles an hour. The most distinguished items of its freight were Sir Charles Hotham, the Lieutenant Governor, and his lady. A banquet was given by the directors in the engine-shed, "an enormous hall of zinc." The engineer of the railway is Mr. Moore.

The late Mr Mackenzie, Architect.—We are informed that the partner of the late Mr. Mackenzie, Mr. Jas. Matthews, should have credit for some of the designs ascribed wholly to Mr. M. in our late notice of him, and we willingly give insertion to the statement.

Buildings on Farms.—At the last meeting of the London Farmers' Club the subject of farm buildings was discussed at great length. Mr. Webster introduced the subject. He said:—After having visited nearly all the best farm buildings in England, Ireland, and Scotland, and noted the requirements of farmers in different localities, I have come to the conclusion that partially closed sheds, 18 feet wide in the clear, and not less than 8 feet in height of walls, are capable of being made available for all the purposes, except that of the barn, for which farm buildings are required under the various systems of farming now produced." Mr. Webster at some length explained his reasons for giving the preference to this arrangement. Mr. Mechi and others took part in the discussion, and the following resolution was unanimously adopted:—"That this club is of opinion that covered homesteads are strongly to be recommended whenever they can be introduced with advantage; but it is further of opinion that no settled plan of farm buildings can be laid down, as different circumstances of obtaining materials, adaptation of present buildings, and the actual requirements of the farm, must at all times call for a different application."

The Ruins of Memphis. — We approached the workmen, where we met the discoverer of Memphis, M. Auguste Mariette. On finding we were not Englishmen (of whose visits he appeared to be rather shy), he became very courteous and communicative. I asked M. Mariette what first induced him to dig for Memphis in that spot, since antiquarians had fixed upon the mounds near Mitrahenny (a village in the plains below, and about four miles distant), as the former site of the city. He said that the tenor of an inscription, which he found on one of the blocks quarried out of these mounds, induced him to believe that the principal part of the city lay to the westward, and therefore he commenced excavating in the nearest sandhill in that direction. After sinking pits in various places, he struck on an avenue of sphinxes, the clue to all his after discoveries. Following this, he came upon the remains of a temple (probably the Serapeum, or Temple of Serapis, mentioned by Strabo), and afterward upon streets, colonnades, public and private edifices, and all other signs of a great city. The number of sphinxes alone, buried under these high sand drifts, amounted to two thousand, and he had frequently uncovered twenty or thirty in a day. He estimated the entire number of statues, inscriptions, and reliefs, at between four and five thousand. The most remarkable discovery was that of eight colossal statues, which were evidently the product of Grecian art.—*Bayard Taylor's Landscapes from Egypt.*

Competition: Tiverton.—The Burial Board of the parish of Tiverton, after having duly considered the designs submitted in competition, have decided on accepting those sent by Mr. Chas. Law, of London.

Electro-Magnetic Motive Power.—Mr. G. E. Dering, of Lockley, Herts, has taken out a patent for obtaining motive power from electricity. The arrangement consists of a flat surface composed of a series of electro-magnets, on which is made to rock or roll by their galvanic action a cylinder, which either itself constitutes a keeper or armature for all the magnets, or carries, or has suspended to it, a number of armatures corresponding with the electro-magnets. The object of this arrangement is, that by a succession of small pulls, one long stroke is obtained, and thus the full power of every magnet secured in succession, without the loss hitherto sustained in most arrangements for producing motive power.

TENDERS

For the widening of Montpelier-road Bridge, at Brighton, for the London, Brighton, and South Coast Railway Company. Quantities supplied:—

Jay	£1,733 5 3
Davey (Lewes)	1,651 0 0
Flesher and Co. (Hayward's Heath)	1,516 0 0
Patching and Sons (Brighton)	1,460 0 0
Locke and Nesham	1,388 6 0
Camwell (Portsmouth)	1,349 0 0

TO CORRESPONDENTS.

"Damp Walls" (we have received no fewer than four letters in this week alone, asking for a remedy for damp walls. We cannot pretend to advise: each instance might require a different treatment. In the case of "Haduershire Folks," asphalte would, doubtless, be useful). "A Country Gentleman" (the architect of Holford House, now in progress in Park-lane, is Mr. Vulliamy. A view was given in our journal some time ago. There is some confusion in the reviewer's account). "W. G. S. (will be made use of). "Quondam," "Five "Constant Readers," "Houble. R. W." (shall appear). "J. S." (trap to every pipe is desirable. We have not heard any serious complaints against syphon traps). "T. G." "R. J. H." "H. W. O." "W. J. T." "J. M." "C. H. W." "An earnest Student," "L. P." "Mr. H." "H. D. A." "W. C. R." (declined with thanks), "J. S." "M." "R. C." "J. S." "T. E." (draperies will sometimes prevent echoes: each case must be judged of by itself). "A. M." "J. E. G." "F. F." "G. W." "J. D." "J. B." "W. A." "J. P." "H. B." (not expedient). "B." "W. B. W." "F. L."

ADVERTISEMENTS.

COMMON BLUNDERS MADE in SPEAKING and WRITING
By CHARLES W. SMITH.
Free by post for Five Stamps.
"It ought to be on every table, and be particularly recommended to the young, before habit makes common blunders uncommonly hard to cure"—*Britannia*.
SMITH'S HINTS on ELOCUTION. Post-free for Fourteen Stamps.
"Materials for years of reflection."—*Leader*.
Address, Mr. SMITH, Buckingham Chambers, 11, Buckingham-street, Strand, London.

TO ENGINEERS' ASSISTANTS.

A SURVEYOR of an important town under the Local Board of Health requires the services of a trustworthy and efficient ASSISTANT; he must be able to survey and level accurately, make a neat plan, and if he has had any experience in town drainage, it would be an additional recommendation, as also a knowledge of architectural plans. The office would be permanent, and the salary would increase. For particulars address to A. B. O. Office of "The Builder."

AN ARCHITECT requires an ASSISTANT, to fill, if trial satisfies, a PERMANENT SITUATION.—Address, stating references, qualifications, and terms, to L. M. N. R. Office of "The Builder."

AN ARCHITECT in extensive practice has a VACANCY for a PUPIL.—Apply by letter to O. W. Booth's Library, Duke-street, Portland-place.

PUPIL and IMPROVER.—An Architect and Engineer holding a town surveyorship (the map of which town he is now executing) has a VACANCY for an ARTICLED PUPIL, as also for a YOUNG ARCHITECT who is desirous of practical improvement and instruction in sanitary engineering and surveying.—Address, Z 12, Albert-terrace, Barnsbury-road, Islington.

TO PARENTS AND GUARDIANS

TWO ARCHITECTS, in partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply by letter, to A. B. 10, Waterloo-place, Regent-street.

TO PAINTERS AND GLAZIERS.

WANTED, by a Builder, a steady and respectable person as FOREMAN of PAINTERS. He must be competent to undertake decorations and glazing. Address, stating wages, with references, to J. J. W. care of Mr. Lewis, 40, Marsham street, Westminster.

WANTED, in an Architect's Office, a Young Man who thoroughly understands making finished and working drawings; also measuring, taking plans, and the general routine of an architect's office. Apply by letter, post-paid, to J. H. B. Clarendon-chambers, Hand-court, Holborn.

WANTED, by the 1st January, 1855, a CLERK in a Land Surveyor and Estate Agent's Office in the country, who can write, and trace and copy maps, neatly and expeditiously, and who is quick at accounts. A good reference and security for 300*l.* indispensable. A permanent situation. Salary, 80*l.* per annum. Apply, in own handwriting, stating age, if married, if a churchman, &c. to Mr. JOHNSON, Pawlett, near Bridgewater, Somerset.

TO BUILDERS AND CONTRACTORS.

WANTED, by the Advertiser, an experienced Man, a SITUATION as CLERK. Unexceptionable references can be given. Moderate salary only required.—Address, L. N. 28, King-square, Goswell-road.

WANTED, by an Architect and Surveyor, a YOUTH between 14 and 16 years of age, who can write a good hand and trace drawings, or an Improver not objected to. Apply, in own handwriting, with salary required, which must be small, to O. E. J. care of Housekeeper, 6, John-street, Adelphi.

TO BUILDERS.

WANTED, by a thoroughly competent BUILDER'S SURVEYOR and ACCOUNTANT, an ENGAGEMENT for two or three days a week; has had very great experience in taking out quantities, pricing out the same, and measuring and settling up works. Testimonials from one of the first builders. Address, C. D. E. 15, Mount-street, Lambeth.

TO MOULDERS.

WANTED, a competent and experienced Person to take the directions for work and charge of a Metal Foundry. A liberal salary will be given.—Address, W. O. 39, Oxford-street, stating qualifications and giving references.

WANTED, an ENGAGEMENT in an ARCHITECT'S OFFICE, by a Gentleman, who is a good draughtsman, &c. and understands specifications and the usual routine of an office.—Apply, A. R. X. 7, Upper Park-street, Greenwich.

WANTED, by a CARPENTER, aged 34, who understands Painting, Glazing, &c. constant EMPLOYMENT in a large establishment, or to keep a gentleman's estate in repair. No objection to the country. Twelve months' good character.—Address, H. J. D. 6, Lower Marsh, Lambeth.

TO SURVEYORS, CONTRACTORS, &c.

WANTED, by an experienced Young Man, a SITUATION as CLERK. Has a practical knowledge of surveying, draughting, mapping, planning, &c. and is thoroughly versed in accounts. The highest references given. No objection to the country, or to go abroad.—Address, A. B. Mr. Bastow's, 40, Museum-street.

WANTED, a SITUATION as MANAGING FOREMAN in a Brick, Pipe, and Tile Yard. The advertiser understands the process of white and red ware. Eight years' good reference.—Apply to Mr. D. WALLER, Builder and House Agent, 9, Buckingham square, New Kent-road, Borough, London.

TO ARCHITECTS AND BUILDERS.

WANTED, by a first-rate practical PLUMBER, experienced in hydraulic works, to fix baths, circulation showers, washing basins, sinks, &c. with hot and cold water, a SITUATION, in any part of the kingdom.
N.B. No objection to go into the country or abroad.—Address, BOSS, 1, Maidenhead court, Falcon-square.

WANTED, by the Advertiser, who is a thorough business man, and forty-two years of age, a responsible SITUATION, in either town or country. References can be had from the gentleman whose engagement he has just completed.—Direct to B. B. care of Mr. Wm. Harmer, Smith, &c. 19, Horseferry-road, Westminster; or the Office of "The Builder."

TO BRICKMAKERS AND OTHERS.

WANTED, by the Advertiser, a SITUATION as MANAGING MAN in a Brickfield or in a Saleyard. The advertiser has a general and practical knowledge of the building trade, brickmaking, and roadmaking. He is perfectly conversant with accounts. An agency would not be objected to, to keep an estate in repair and collect rents, or any other situation where an active and responsible man is required. References and testimonials of the highest character can be given.—Direct to A. Z. care of Mr. W. Wyeth, 30, Westbourne street, Pimlico.

WATERLOW and SONS, MANUFACTURING AND EXPORT STATIONERS,
65 to 68, LONDON-WALL, AND 49, PARLIAMENT-STREET, LONDON.
MILL AGENTS FOR WHATMAN'S DRAWING PAPERS.

TO BUILDERS

WANTED, by a fully qualified Measurer, Estimator, and Builder's Bookkeeper and Accountant, an ENGAGEMENT. Has had great experience in taking out quantities, and measuring up works. Temporary engagement not objected to.—Address, A. R. 5, Triangle, Upper Kennington-lane, Lambeth.

TO ARCHITECTS, SURVEYORS, &c

AS ASSISTANT in an Office, or on the Works. The advertiser is desirous of a SITUATION, is practically versed in building matters, and a fair draughtsman. Salary moderate.—Address to A. W. 25, Northumberland-place, Westbourne grove.

AN Engineering Surveyor, who is a good Leveller, Draughtsman, and Map Writer, with unexceptionable references, will be open to an ENGAGEMENT on the 1st JANUARY. Address, R. P. care of Mr. W. L. Crosby, Corporation Offices, 2, Cornwallis-street, Liverpool.

PARTNERSHIP (sleeping or active).—WANTED in an established manufacturing business protected by patents), a GENTLEMAN who can command from 3,000*l.* to 4,000*l.* This establishment is situate in the centre of London, and is replete with the most perfect machinery and tools, propelled by steam power, now carrying on a most extensive trade. Would work well in conjunction with an active mercantile or building concern.—Apply by letter to X. Y. Z. 127, Strand.

TO ARCHITECTS AND SURVEYORS.

GENTLEMAN, well qualified in the profession, is desirous of obtaining a SHARE of an extensive and lucrative PRACTICE, and of which he would wish to take the most active part. No objection to any part of the United Kingdom. References can be given, and if required. Address C. E. Gresham Club, King William-street, City.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement that requires no colouring. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well-known hard stuccoes dry quickly, and can be painted upon within a few days. Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days by CHARLES FRANCIS and SON, Manufacturers of Roman, Parian (under patent), and all other Cements in use for building purposes, Nine Elms, London.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL.—Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Portzolano.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT.—Messrs. ROBINS and CO. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. are ready to supply any quantity of Portland Cement, made with Chalk from their works, situate near Bridgewater, on the Bristol and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.
These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent regularity, the want of which is so objectionable in Cements manufactured in the ordinary method.
FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.
St. Mary-street, Bridgewater, July 26th, 1854.

6, South Wharf, Paddington.
PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing to the Trade the above superior CEMENT, which for uniform colour and quality is decidedly the best before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for work where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly. Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

PORTLAND CEMENT.—ASPDIN'S PATENT.
Messrs. ASPDIN, OBD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a great discovery (patented by Mr. ASPDIN) much improved the quality of this Cement without any increase in price.
Engineers and architects are recommended to specify "Aspdin's Patent;" as there are numerous imitations sold as Portland Cements resembling it only in colour.
ASPDIN, OBD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.
A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, Abingdon-street, Westminster; at their Works, Gateshead-on-Tyne; at Messrs. Rosher's Wharf, Holland-street, Blackfriars, Kingsland Basin, and Limehouse; or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at the Works, St. Andrew's Wharf, Earl street, Blackfriars, or Middle Wharf, Scotland yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

CEMENT.—ROMAN and PORTLAND CEMENT, and PLASTER of PARIS, manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 8, Upper Thames-street, London; and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for buildings in wet and damp situations, such as wharf-walls, docks, &c and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also peculiarly adapted for stucco. Orders received by—London Agents, BLYTH, BROTHERS, and CO. Phœnix Wharf, Paddington; and at the Works, Stockton-fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime or cement. The shell lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above is the best recommendation.
Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.
ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.
SECONDS, PAVIORS, STOCKS, and other Bricks.
CHARLES RICHARDSON, 6, South Wharf, Paddington.

O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet-street, City. Sand, from above or below bridge, delivered by the yard or per large. Ballast screened or unscreened, by the yard or per large. Stocks, lime, and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country; an extensive assortment of specimens and patterns commencing at 1*s.* per foot super, together with every particular of its cost and adaptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs ARROWSMITH and CO. 80, New Bond-street.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTOR'S, Crispin-street, Spitalfields, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 3, Queen-street, Cheapside, London, submit the following PRICES of WINDOW BLINDS, which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 9*d.*; best holland blinds, on rollers, 8*d.*; best ditto, on spring rollers, 9*d.*; gauze wire blinds, in mahogany frames, 2*s.*; perforated zinc blinds, in ditto, 1*s.* 10*d.*; outside blinds of striped cloth, 3*s.* Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 23, GREAT PORTLAND-STREET. Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

DESIGNS PREPARED for SHOP FRONTS, INTERIOR FITTINGS, and GENERAL ARCHITECTURAL ARRANGEMENTS, by Mr. JOHN DWYER, 11, Great Marlborough-street.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

ening universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot. Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 8 to 12 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being tran-parent, blinds are unnece-sary, and when used in Greenhouses no scorching occurs; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Workshops, &c for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and CO. Wear Glass Works, Sunderland.
N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate.—May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to
Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber, Deals, Oak Planks, Scantlings, Sash Sills, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

ACORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY respectfully begs to inform the Building Public, that all Baltic Goods are dearer and American Spruce and Pine are cheaper.

He asks special attention to the following, which are now on sale:—

2,000 Pieces of Timber.
20,000 Planks, Deals, and Battens.
30,000 Prepared Floor Boards, of all lengths and sizes.
5,000 Rough Boards.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.

N.B. The extensive Saw-mills are now in operation.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his large stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 20, North Wharf-road, Paddington.

N.B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings.—A large stock of dry flooring at low prices.—Southwark-bridge Wharf, Bankside.

MOULDINGS by MACHINERY at REDUCED PRICES. ARCHBUTT and ATKINSON beg to inform their customers that the 20 per cent. advance heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices. St. Pancras Saw Mills, Cambridge-street, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings (as advertised on the 5th of November last) is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

GREAT REDUCTION of PRICES.—SAMUEL PUTNEY respectfully solicits the attention of manufacturers and others to the greatly reduced prices of PINE, SPRUCE, and YELLOW DEALS, MAHOGANY, &c. &c.:—

Pine Planks, 12 ft. 3 in. by 11 in.	from 4s.	0d. each.
Spruce Deals, 12 ft. 3 in. by 9 in.	„ 3s.	6d. „

Honduras Mahogany	„	7d. per foot.
Spanish ditto	„	8d. „
Wainscot ditto	„	9d. „
Spruce Paling Laths	10s. 6d.	per 120.
Venetian Blind Laths	8s.	per bundle.

Veneers and cut stuff of every description at equally low prices. Borough-road, Southwark, and Elm-street, Gray's-inn-lane.

TO BUILDERS AND OTHERS.

AT the LOWEST PRICES.—TIMBER, DEALS, MAHOGANY, and WAINSCOT. A large assortment of seasoned prepared FLOORING and MATCH-BOARDING, of all descriptions. Also an extensive stock of dry White, Yellow, and Pine cut Stuff, Slating, Battens, Pantile Laths, Oak Plank, Sash Sills, &c. Timber of all kinds, Planks, Deals and Battens, fetched from the docks, sawn by patent machinery in the best manner, and delivered at the shortest notice.—THOMAS JACKSON, Sawing and Planing Mills, Commercial-road, Pimlico, London.

TO FANCY-WOOD MERCHANTS.

VENEER CUTTING-MACHINE (by knife only), by which process double the number of veneers can be produced more than by the ordinary method. For specimens of work and particulars of price, apply to J. CHACK, Sole Patentee, Veneer Cutting Works, 44, Robert-street, adjoining the King's-road Saw-mills), Chelsea.

CHAPEL-FITTINGS for SALE, consisting of pulpit with double-scroll circular stairs, pews, &c. complete, for the accommodation of 400 to 500 persons. The whole are in excellent condition, and may be had on most reasonable terms, on application to Mr. CHESHIRE, Chapel-street, Islington.

HUBBUCK'S PATENT WHITE ZINC PAINT. The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead.

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent. by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint. These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the production of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK—LONDON—PATENT.

If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Zinc and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks), London.

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of whiteness, and brilliancy of surface; it is unaffected by sulphurous or any other vapours or emanations. Being completely innoxious and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc. If any adulteration has taken place in the oxide, either in consequence of impurity in the materials employed, or primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them.

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark in Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO., and by the Company's Grinding Agents, in London, Messrs. CHARLES DEVOY and CO. Wholesale Agents, 82, King William-street, City; JACK and BRABY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 80, Upper Thames street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling-houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and Co. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for the WARE ENAMELLED Tiles is 31, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "TERRO-METALLIC," is the exclusive right of the Proprietors; and, thirdly, that the "Terro-Metallic Tiles" at "Jurors," page 581, of the Great Exhibition, rank the Manufactories known so long as "The Tileries," Cauldon, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 38s.; Cowley Stocks 33s. at WARD'S OLD-ESTABLISHED HONDURAS WHARF, BANKSIDE, London.—Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles and Clays. Patent Malting and Corn-drying perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

BRICK-MAKING EXTRAORDINARY!! BY OATES AND INGRAM'S PATENT MACHINE.

TO CAPITALISTS AND BRICKMAKERS.

Messrs. OATES and INGRAM beg to announce, that the above powerful and efficient machine may be seen by any party in daily operation at the works of the Vaughton's Hole Brick Company, near Birmingham.

The great advantage possessed by this machine over all others are, no tempering is required.

The bricks are produced at the rate of twenty-five per minute, smooth on the surface, being pressed in moulds, and sufficiently dense to be backed up in ranks before leaving the machine, which is entirely self-acting, consequently requires only the labour of feeding and carrying off.

Applications, either to view the machine, or for the purchase of the patent right for counties or for royalties, to be addressed, T. WELLS INGRAM, Engineer, Birmingham; or to J. F. OATES, Inventor and Patentee, Lichfield.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, half-washed Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Counting-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Light-coloured Pit Sand of approved quality constantly on sale upon reasonable terms. This does not comprise any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON BRIDGE.

MILLS and PRICE, Brick and Stone Merchants and Agents, very respectfully announce, that their business, hitherto conducted at 37, Newington-green, Newington butts, will, from MONDAY, the 11th inst. be carried on at 5, ADELAIDE-PLACE, LONDON-BRIDGE.—Dec. 8, 1854.

BRICKS for OVEN-BUILDING, acknowledged the best for that purpose, delivered, 38s. to London-bridge or Newington; beyond that distance, moderate charge cartage. Bricks of all description; yellow and light pickings, equal to seconds. Red facings, at 30s. in field; red and glazed pipes, about half the price of those usually sold, and nearly silver, in field or by barge; founders' sand and loam; good coloured gravel. Address, B. PARKS, Lewisham Brickfields.

BRICKS.—A large Quantity of hard-burnt RED BRICKS, of excellent colour and shape, are now on SALE, at the Brentwood Brick and Tile Works. Cash, price 25s. per 1,000, at which price they will be delivered into the carts or railway trucks, at the Goods' Station, which adjoins the works. Malms, Stocks, Seconds, Place, &c. at low prices.—Apply to Mr. LEVETT, Brick and Tile Works, Brentwood, Essex.

TO CAPITALISTS, BUILDERS, AND BRICKMAKERS.

TO BE LET, a valuable BRICKFIELD, containing fine brick-earth; the steam-engine and machinery for making bricks to be taken at a valuation, and the ground at a rent and royalty. It is situate about five miles from London-bridge, and near to extensive estates on which buildings are being rapidly erected. For further particulars, apply to Messrs. WIRE and CHILD, solicitors, 9, St. Swithin's-lane, City. Also, on the same estate, valuable frontages of BUILDING LAND, on long leases. Apply as above.

VALUABLE BRICK and TILE WORKS, equal to two millions a season, with plant, kiln, sheds, and TWO COTTAGES, on six acres of ground, having a depth of 15 feet of clear yellow brick earth, and beneath it an unlimited depth of strong tile-clay, approached by good public roads; 14 miles from the railway station at Esher, Surrey, and within three miles of wharfage on the River Thames. The Waterworks Companies and the several extensive building operations in the immediate neighbourhood, afford demand for more than all that can be produced.—For particulars, apply to Mr. JOHN DAWSON, Land and Estate Agent, Marlborough Chambers, 49, Pall Mall, and Kingston-on-Thames.

TO WATER COMPANIES AND PLUMBERS

HIGH-PRESSURE COCKS & CLOSETS.

The Health of Towns Commissioners having recommended the adoption of the high-pressure principle in all towns, WARNER'S HIGH-PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 115, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

BUILDING MATERIALS.

BECK'S WHARF, ISLEWORTH.

Builders having works to execute south-west of London, will find a good supply upon this wharf, on reasonable terms, with every convenience for speedy loading by travelling cranes, either into barges or carriages. Portland, Caen, Bath, and Yorkshire Block Stone, always in stock; Landings, Paving, &c. Also, Marble in Slab, Chimney-pieces, &c. Slab and Roofing Slates from the Penrhyn Quarries. Timber, Deals, Limes, Cements, Clay Goods, &c.—N.B. This wharf is very near the St. Margaret's estate.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS, and SOCKET-RINGS, for H.C-water, steam, and Gas-pipes. Packing for Engines, both round and flat. Solid Rubber Cord of all sizes. Vulcanized Rubber Door springs; also Vulcanized India rubber, in sheets, tares and four feet wide, of any thickness. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle boards. Diving-dresses of superior make, and improved Vulcanized Rubber Supply pipes for ditto. Air-beds, Pillows, and Cushions; also inflating Portable Baths, Bed-chairs, Invalid Cushions, made to any size and shape to order.—All orders and letters carefully attended to, by application at his manufactory, to JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London.

WILLIAM BARRATT, LANDSCAPE GARDENER, WAKEFIELD.

*** Plans and estimates furnished.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, of superior tone, truer in form, and at less cost, than has hereto fore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheels ready for hying. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

WHITE OXIDE OF ZINC AND ZINC PAINT.

(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brand), either in the dry state or ground in Oil.

Zinc Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innoxious qualities, is peculiarly applicable to first-class Decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is now ground in Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

CHEAP AND DURABLE ROOFING.

By Her Majesty's  Royal Letters Patent.

F. McNEILL and CO. of LAMB'S-BUILDINGS, BUNHILL-ROW, LONDON, Manufacturers and ONLY Patentees of

THE PATENT ASPHALTED FELT, FOR ROOFING HOUSES, VERANDAHS, SHEDS, &c.

Patronized by

HER MAJESTY'S WOODS AND FORESTS,
HER MAJESTY'S COMMISSION OF CUSTOMS,
HONOURABLE EAST-INDIA COMPANY,
HONOURABLE BOARD OF ORDNANCE,
HER MAJESTY'S ESTATE, ISLE OF WIGHT,
ROYAL BOTANICAL GARDENS, REGENT'S PARK,

And by the most eminent members of the Royal Agricultural Societies of England, Scotland, and Ireland; at whose great national shows it has been exhibited, and OBTAINED THE PRIZE, for being the best and cheapest article for roofing; also used for under slates at the Royal Agricultural Society's House, in Hanover-square. Its advantages are lightness, warmth, durability, and economy. It is impervious to rain, snow, and frost, and a non-conductor of heat and sound. The Felt can be cut to any length, by 32 inches wide. The price is only ONE PENNY PER SQUARE FOOT. Samples, with full directions as to its uses and the manner of applying it, with TESTIMONIALS, some of them of seven years' experience, from Architects, Builders, Noblemen, and Gentlemen who have extensively used it, sent free to any part of the town or country. A Depôt for the Felt, for covering Boilers, &c. is also manufactured, by which a saving of about 25 per cent. in fuel is effected. The TRADE are respectfully enjoined to send their orders DIRECT to the FACTORY, as the surest means of being supplied with the genuine article, and in lengths best suited to their roofs. They are likewise CAUTIONED AGAINST MISREPRESENTATION, as the Felt only works in Great Britain, where the above roofing is made are F. McNEILL and CO.'s Manufactories, LAMB'S BUILDINGS, BUNHILL-ROW. Roofs covered with the Felt to be seen at the Factory, also the new Vice-Chancellor's Courts, the passages and offices leading to Westminster Hall, and other buildings at the New Houses of Parliament.—A Liberal Discount allowed to the Trade.

J. TYLOR AND SONS' PATENT HIGH-PRESSURE BALL-VALVES.

These Ball-valves can be recommended with the greatest confidence as the most powerful and easy action Ball-valve ever offered to the public. They are entirely free from all those objections of fittings such as spindles, slides, and cylinder fittings, so fatal to Ball-valves generally. They are perfectly quiet in action, and cannot by any means stick fast, there being no point of friction in their construction. They are so arranged as to act against the power of closing against the column of water whenever required, and are warranted to stand any known pressure of water

IMPORTANT TESTIMONIALS

TO THE EFFICIENT WORKING OF

STEPHEN GREEN'S

PATENT SYPHON FLUSHING BASIN,

AND

SELF-ACTING CLOSET CONNECTIONS.

Oxford, November, 1849.

GENTLEMEN,—Sixteen of your Closets having been put into operation at Christ Church College, I have great pleasure in giving you my testimony as to their efficiency and simplicity.

HENRY J. UNDERWOOD, Architect.
R. S. HOGGAR, Engineer.

Royal Arsenal, Woolwich, June 24, 1852.

GENTLEMEN,—I have much pleasure in giving my testimony in favour of your Patent Syphon Flushing Basin, with Self-acting Closet Connections. There are several fixed here, which have been in use for upwards of twelve months, giving perfect satisfaction.

I am, Gentlemen,
Your obedient Servant,
WILLIAM CARTWRIGHT.

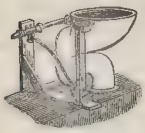
Sold by all the principal Stationers in town or country.

GUTTA PERCHA TUBING.—Many inquiries having been made as to the durability of this tubing, the Gutta Percha Company have pleasure in drawing attention to the following letter, received from Mr C. Hacker, surveyor to the Duke of Bedford:—"Office of Works, Woburn-park, Jan. 10, 1852. In answer to your inquiries, respecting the gutta percha tubing for pump suctions, I find that the water has not affected it in the least, although it will eat lead through in two years; we have much easier fixed, and a more perfect job. Yours, &c. C. Hacker." N.B. The Company's Illustrated Circulars, containing instructions to plumbers for jouning tubes, lining tanks, &c. will be forwarded on the receipt of three postage stamps.—The Gutta Percha Company, Patentees, 18, Wharf-road, City-road, London.

JENNINGS'S PATENT DRAIN-PIPES
REMOVE THE OBJECTIONS TO PIPE-DRAINAGE.

At the Institute of Engineers, during the discussion on Pipe-drainage, Mr. Robert Stevenson, when speaking on the subject, said, "He looked upon the Pipe-drainage of a Town as one HUGE MACHINE, *that was neither capable of Examination nor Repair."*



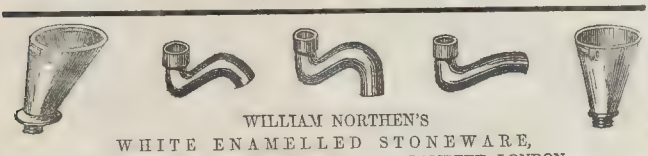
A Town Drained by JENNINGS'S PIPES can be examined at any Point, and Junctions introduced, without breaking up, or in any way disturbing the general line of Drainage.

Engineers and Architects describing these Pipes will have the GREAT SATISFACTION of knowing that their Drainage can be as easily examined as the Contents of a Tea-pot.

SEVERAL LOCAL BOARDS of HEALTH have adopted these PIPES, and they have done so unanimously; and for Public or Private Works the Patentee has now FIFTEEN MILES of PIPES ORDERED.

GEORGE JENNINGS begs to inform all interested in SANITARY PROGRESS that he is now turning his attention to the MANUFACTURE of ARTICLES in EARTHENWARE, and he hopes, by the aid of machinery, properly applied, to produce his PATENT PIPES at LESS COST THAN THE OLD-FASHIONED DRAIN-PIPES.

JENNINGS'S PATENT CLOSETS, TRAPS, SLUICE-VALVES, &c.
ARE FREE FROM ALL COMPLICATION—NO WIRES OR CRANKS.



ANY NUMBER OF CLOSETS SUPPLIED FROM ONE SERVICE-PIPE, AND THEY ARE AS READILY FIXED AS A COCK TO A SINK, UNDER HIGH OR LOW PRESSURE.

Architects furnished with references of the highest order.

Particulars of JENNINGS'S DRAIN-PIPES, WATER-CLOSETS, URINALS, LAVATORIES, SLUICE VALVES, FIRE COCKS, GULLY TRAPS, SHOP-SHUTTER SHOES, &c. &c. can be had free on application, or by post if two postage stamps are inclosed to

GEORGE JENNINGS, SANITARY ENGINEER,
29, Great Charlotte-street, Blackfriars-road.

WILLIAM NORTHEN'S
WHITE ENAMELLED STONEWARE,
UNION POTTERY, 14, VAUXHALL-WALK, LAMBETH, LONDON.

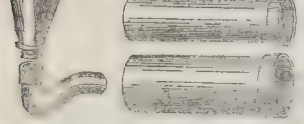
W. N. solicits an inspection of his IMPROVED WHITE ENAMELLED STONEWARE CLOSET PANS, being an entire new description of stoneware, perfectly vitrified and highly glazed, far surpassing anything of the kind yet offered to the public.

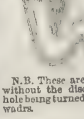
SAME PRICE AS BROWN STONEWARE—7s. 6d. Pan and Trap. WITH BLUE INSIDE, ENAMEL, 1s. extra.

HENRY MILLICHAMP, Manufacturer of GLAZED STONE-WARE DRAIN-PIPES, BENDS, JUNCTIONS, TRAPS, &c.
65, PRINCES-STREET, LAMBETH, and BRUNTON'S WHARF POTTERY, COMMERCIAL-ROAD EAST.

Watercloset Pan with Syphon-Trap. 7s. 6d. each.

Watercloset Pan with Syphon-Trap connected, price 7s. 6d. each.





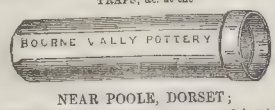
A LARGE ASSORTMENT OF STRAIGHT TUBES, IN 2-FEET LENGTHS.

Bends, Elbows, Urinals, Gully-Traps, Flap-Traps, Syphon-Traps, &c. always kept in Stock.

DRAWINGS and LIST of PRICES FORWARDED FREE ON APPLICATION.

JAMES STIFF, MANUFACTURER of GLAZED STONE-WARE DRAIN PIPES, BENDS, JUNCTIONS, TRAPS, &c. 39, HIGH-STREET, LAMBETH, LONDON. Established 1751.
Water-Closet Pans, with Syphon Traps, 7s. 6d. each.
STRAIGHT TUBES, in Socket Joints, in Two Feet Lengths.

The great advantages attending the use of these articles are now so generally understood, as to render any enumeration of them almost superfluous. Their cheapness, efficiency, and durability, are universally admitted; while the rapidly increasing demand for them proves their estimated superiority over every other kind hitherto before the public for similar purposes.



Inspection is invited to an assorted Stock of Drain Tubes, of every form and size, adapted to the various situations for which they may be required; as also to the WATER-CLOSET PANS OF IMPROVED CONSTRUCTION, and interior glaze, far surpassing any other manufactured of Brown Stone Ware.

N.B. These are made without the discharge-hole being turned downwards.

May be had also at Messrs. GLADDISH'S LIME WHARFS, Pedlar's-acre, Westminster-bridge, City-road Wharf, City Basin; Dock-head, Bermondsey; Danver's Wharf, foot of Battersea-bridge, Chelsea; Pratt Wharf, King's-road, Camden New Town; J. No. 7, Cheltenham place, Westminster-road, Lambeth.

LYDSTEP HAVEN, PEMBROKESHIRE.

TO CAPITALISTS, BUILDERS, and OTHERS.—A rare and first-rate BUILDING INVESTMENT, TO BE LET, for a long term of years, or on lives from Michaelmas next, about SEVEN ACRES of LAND, replete with lime and building-stone, and other advantages, rendering the erection of houses of comparatively trifling expense, and of a character quite in keeping with the requirements of the times. Lydstep Haven is situate in a most romantic bay, within half an hour's drive of Tenby, which popular watering-place now overflows with visitors. This most advantageous building estate is equal to freehold, and the picturesquely slopes down to the beautiful beach, whose shore is admirably adapted for sea bathing. The rocks of Lydstep are bold and romantic. The height of the island of Caldy present magnificent and beautiful features of interest from Lydstep Haven, whose climate is the same as that of Tenby. Greenhouse plants, without shelter, flourish in the open air throughout the year. The steamers plying between Bristol, Tenby, and Ireland, offer cheap, swift, and pleasing modes of transit to and from this charming bay, while the Pembroke Railway Company's railway to Lydstep Haven is one of the most desirable and easily-reached localities for bathing in the principality. For terms and every information, apply to WALKER AUGUSTUS HOLCOMBE, Esq. Solicitor, 30, Chancery-lane, London.

TO ENGINEERS, SMITHS, AND OTHERS.

TO BE LET, a small FACTORY, with engine and boiler, screw-cutting lathe, punching and shearing press, three fires, with fan and tools complete: including benches, vices, &c. Apply to AUGUSTUS SMITH, Engineering Auctioneer and Valuer, 255, Blackfriars-road, near the bridge.

BUILDING-GROUND, BRIGHTON.—TO BE LET, a very eligible FRONTAGE for THREE or FOUR HOUSES in Broad-street, immediately contiguous to the Marine-parade and Chain pier, where houses are much in requisition. Full particulars and terms may be obtained of Messrs. LOCKWOOD, Surveyors, No. 44, Upper Baker-street, London.

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Lease. Money advanced to respectable builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion-street, Richmond.

LAND TO BE LET for Building purposes about three acres, in an elevated situation, a few minutes' walk from the Wandsworth Railway Station, on the Richmond line. A plan may be seen, and particulars obtained of Messrs CADOGAN, Surveyors, Picket-place, Temple-bar.

TO BUILDERS, &c.

TO LET, PLOTS of BUILDING GROUND, in the best part of Kentish Town, to respectable parties who can give satisfactory references. Money and materials will be advanced.—For particulars, apply to Mr. DYE, 75, Carlton-road, Grafton-road, Kentish Town

VERY desirable and most eligible PREMISES and FACTORY TO BE LET, free dock near, 10-horse engine, shafting, drums, fixtures, gas-fittings, &c erected and upwards. To be viewed, and particulars had on the Premises, 75 and 76, Broad-street, near Lambeth Steamboat Pier.

TO SURVEYORS AND BUILDERS.

TO BE DISPOSED OF (with or without stock), in consequence of the death of the proprietor, a BUSINESS, established twenty-five years, in the above line, with one of the best connections among the nobility and gentry in the neighbourhood. Apply for particulars, to Mr HENSLEY, Broadway, Worcestershire, or to Mr. FRENCH, 138, High-street, Cheltenham.

DARLINGTON.—TO BE SOLD, by Private Contract, a DETACHED VILLA RESIDENCE and GROUNDS, situate within three minutes' walk of the market-place. The house is of recent construction, and comprises an inclosing and lobby, drawing-room, and cellars on the basement floor, the ground floor, with eight bed-rooms and a nursery above. A vacated. The ornamental grounds and gardens extend over about five acres. The purchaser may also have if required an additional quantity of land, with a two and four-stalled stable, single and double coach-house, harness room, garden-shed, and vinery. For particulars, apply at the offices of Mr GEORGE MASON, Central Buildings, where a plan of the house and grounds may be seen.—Darlington, December 8, 1854.

TO MASONS, BRICKLAYERS, AND OTHERS.

TO BE DISPOSED OF, the LEASE of a SIX-ROOMED HOUSE, with shew-room and workshop, good yard, 60 feet long, and large entrance to same. Eighteen years unexpired. Rent, 20l per annum. Terms very low.—Apply 31, John-street, Tichfield-terrace, St. John's-wood

TO BE SOLD, in the neighbourhood of Highbury, some PEPPERCORN GROUND-RENTS, paying 5 per cent.—Inquire of F. J. Home Villa, Hamilton-place, Highbury. Also, several genteel Private Houses for Sale.—Apply as above.

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North-Western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, about EIGHTEEN ACRES of COPYHOLD LAND, having a frontage next West-end-lane, of more than 600 feet. The Estate, which is beautifully situated, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks; and a specimen of the earth may be seen at the Offices of Messrs. WIGG, POWNALL, and WIGG, 7, Bedford-row, where lithographed plans, and further particulars, may be obtained; or of R. B. ARMSTRONG, Esq. 8, Staple Inn.

NOTICE.—MEMBERS of FREEHOLD LAND, BUILDING SOCIETIES, and OTHERS having LAND or HOUSES TO DISPOSE OF, can forward particulars of the same no charge made only when sold, and then a small commission, to Messrs POOLE and COMBS, Auctioneers, Valuers, and House and Estate Agents, 79, Bishopsgate-street Within, London

IMPORTANT to LANDOWNERS, BUILDERS, &c. desirous of quickly Disposing of Estates, without the publicity or expenses of an auction.—Apply to Mr. WILLIAM TAYLER, 1, Adelaide-place, London-bridge, Offices for Effecting Sales, Purchases, Mortgages, or Leases of Landed and House Property, on a very moderate commission.—A printed form for furnishing him, with the requisite particulars, and containing his terms, will be forwarded as directed on receipt of two postage stamps.—Life Assurances effected in nearly all the Offices by his agency without extra charge to the assured, to whom the peculiar features of each Office will be explained, and much trouble saved. Office hours, Nine to Eight.

TO ENGINEERS, MILL-OWNERS, CONTRACTORS, AND OTHERS.

AUGUSTUS SMITH, Auctioneer, Valuer, &c. 255, Blackfriars-road, two doors from Holland-street, having had seventeen years' practice in the selling and valuing of all kinds of engines, machinery, lathes mechanics and engineering tools, plants, &c. respectfully solicits a share of patronage in the above line. The most satisfactory references given if required, and all accounts settled the day after delivery; also a free registry kept of all engines, boilers, and machinery for sale by private contract.

TO BUILDERS.—A very compact Business in this line, with good jobbing connexion, for IMMEDIATE DISPOSAL; is situate in the neighbourhood of Pimlico, and has been established upwards of thirty years Premium moderate; with accommodation if required and satisfactory reasons given for retiring.—Apply to Messrs BENNETT and KELLY, Builders Auctioneers, Lower Belgrave-place, Pimlico.

SECRETARY.—Geo Keys, esq.
ACTUARY.—Griffith Davies, esq. F.R.S.

LIFE DEPARTMENT.—Under the Provisions of an Act of Parliament, this Company now offers to future insurers four-fifths of the profits, with quinquennial division, or a low rate of premium, without participation of profits.

The next division of profits will be declared in June, 1859, when all Participating Policies which shall have subsisted at least one year at Christmas, 1854, will be allowed to share in the profits.

At the several past divisions of profits made by this Company, the reversionary bonuses added to the policies from one-half the profits amounted, on an average of the different ages, to about one per cent per annum on the sums insured, and the total bonuses added at the four septennial divisions exceeded 770,000l.

FOREIGN RISKS. The extra premiums required for the East and West Indies, the British Colonies, and the northern parts of the United States of America, have been materially reduced.

INVALID LIVES.—Persons who are not in such sound health as would enable them to insure their lives at the tabular premiums, may have their lives taken at extra premiums.

LOANS granted on Life Policies to the extent of their values, provided such Policies shall have been effected a sufficient time to have attained in each case a value not under 5l.

ASSIGNMENTS OF POLICIES.—Written Notices of, received and registered.

Medical fees paid by the Company, and no charge will be made for Policy Stamps.

Notice is hereby given, That Fire Policies which expire at Christmas must be renewed within fifteen days at this office, or with Mr SAMS, No. 1, St. James's-street, corner of Pall mall; or with the Company's Agents throughout the Kingdom, otherwise they become void.

PHŒNIX FIRE ASSURANCE COMPANY, LOMBARD-STREET & CHARING-CROSS, LONDON, established in 1782.

SOLICITORS.—Messrs. Dawes and Sons, Angel-court.

Insurances against loss by fire are effected by the PHŒNIX COMPANY upon every description of property, in every part of the world, on the most favourable terms.

Persons insuring with the Phœnix Company are not liable to make good the losses of others, as is the case in some offices.

Insurances with this Company expiring at Christmas must be renewed within fifteen days thereafter, or they will become void

Receipts are now ready at the principal Offices, Lombard-street, and Charing-cross, and with the respective Agents throughout the United Kingdom.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Company for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Finsbury-square. W. S. YARDY, Manager.

THE ARCHITECTURAL and CIVIL ENGINEERING CLASSES, 24, Guildford-street, Russell-square, are OPEN for the reception of pupils, at one guinea per quarter, which includes drawing materials, instruments, colours, paper, drawing-boards, squares, &c. and instruction in architectural and civil engineering and colouring, making finished and working drawings, preparing specifications, taking out quantities, estimating, &c &c.—For prospectuses, apply to Messrs. HYDE, SMITH, and LEWIS, Architects, Civil Engineers, Surveyors, &c. at the Offices.

THE ARCHITECTS', BUILDERS', CIVIL ENGINEERS', and MACHINISTS' DRAWING ESTABLISHMENT, for giving practical instruction in architecture, civil engineering, measuring and valuing buildings, land, &c.; also, for teaching architectural, mechanical, and water-colour drawing of every description. Morning Classes, Ten till Four; Evening, Six till Nine, or Seven till Ten. Saturdays excepted.—Detail Prospectuses to be had on application at the Offices of the Establishment, 15, Old-street, City-road.

T. J. HILL, Architect, Conductor of the Classes.

NOTICE.—The DRAWINGS executed by the students during the past year, of the Architects, Builders, Civil Engineers, and Machinists' Drawing Classes, will be EXHIBITED in the CLASS-ROOMS of the establishment, 15, Old-street, City-road, on the 27th, 28th, and 29th of DECEMBER instant, from TWELVE till NINE a.m. each day. The attention of all interested in drawing is called to the above exhibition, as affording an opportunity of ascertaining the class of drawing studied at this establishment.

T. J. HILL, Architect, Conductor of the Classes.

CHEMICAL SCHOOL.—The CHEMICAL SCHOOL of the ROYAL PANOPTICON, Leicester-square, will RE-OPEN, under the Superintendence of Mr. G. F. Ansell, on MONDAY, the 1st of JANUARY, 1855. There are Four Annual Sessions of ten weeks each. Hours of attendance for Morning Pupils, from Ten to One, and from Two to Five; for Evening Pupils, from Eight to Ten daily, except Saturdays. Pupils may enter at half-time, that is to say, Morning Pupils for three days of the week, both morning and afternoon, or for five days of weekly attendance for the morning, or for the afternoon only. Evening Pupils may enter as Half-time pupils for three days of the week, the hours being arranged to suit the convenience of those who have but a portion of their time at disposal.—For further particulars, apply at the Laboratory of the Institution. Analyses conducted.

MATHEMATICAL DRAWING INSTRUMENTS.—JOHN ARCHBUTT, 20, Westminster-Bridge-road, Lambeth (next the Astley's Theatre), begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, tapes, &c. at equally low prices. A detailed price-list will be immediately forwarded, free, on application.

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr. S. BARLOW, 7, Thavies-inn, Holborn (between 1 and 3 p.m.); or to Mr. H. B. BARLOW Office for Patents, Duke-place, Exchange, Manchester.

TO ARCHITECTS AND OTHERS.

MR. EDWARD L. PARAIRE is desirous of Meeting Gentlemen who require COLOURED ARCHITECTURAL DRAWINGS External, Internal, Isometrical Perspectives got up; outlines of same neatly coloured, with background, on terms that will insure approval. Temporary assistance given in getting up Plans, Elevations Sections, Detail, and Working Drawings.—Mr. E. P. also invites a consideration in his charge where competition drawings prove unsuccessful.

Address, 8, Rathbone-place.

TO ARCHITECTS.

COMPETITION and other DRAWINGS.—Mr. THOMAS S. BOYS, Member of the New Society of Painters in Water Colours, and author of "The Picturesque Architecture of Paris, Ghent, Rouen," &c. and of "London as it is," offers his services to Sketch Backgrounds, Lands-apes, Perspective Views, Interiors, &c. From the long experience he has had in such subjects, he is fully aware of the points essentially necessary to be attended to. Drawings and designs lithographed in a superior manner.—Address, Mr. BOYS, 39, Albany-street, Regent's-park.

COMPETITIONS.

TO ARCHITECTS.

TOXTETH PARK (near Liverpool), GENERAL CEMETERY.—NOTICE.—The BURIAL BOARD of TOXTETH PARK, hereby give notice, that the time for receiving Plans and Designs for Enclosing, Laying Out, and Draining the proposed Public Cemetery, with the necessary buildings to be erected thereon, is EXTENDED to the 23rd day of JANUARY next.—By order of the Board,

Public Office, Toxteth Park, J. ROWLAND, Clerk
Dec. 14, 1854.

TO ARCHITECTS AND OTHERS.

THE BURIAL BOARD for the Parishes of the Holy Trinity, Saint Peter, and All Saints, in DORCHESTER, in the county of Dorset, is desirous of receiving PLANS, DESIGNS, and ESTIMATES, comprising ground plans, sections and elevations, for LAYING OUT a NEW BURIAL-GROUND of four and a half acres (the plan of which can be seen in my office, in the High-street, Dorchester), Enclosing the Ground, Building a Lodge, with Entrance-Gates, and Building Two Chapels, one to be consecrated and one not. The party whose plans, &c. may be approved will, at the discretion of the Board either have the superintendence of the works or be paid 15l. 15s. for the plans, designs, and estimates, which must be delivered at my office, free of expense, without the architect's name, but with a motto, on or before the 16th day of JANUARY, 1855. A sealed letter containing real name and address should accompany each design, and those not approved will be returned.—By order,

HENRY LOCK, Clerk to the Board.

High East-street, Dorchester, Dec. 19, 1854.

CONTRACTS.

THE BURIAL BOARD for the PARISH of WEYMOUTH REGIS, in the County of Dorset, is desirous of receiving PLANS, DESIGNS, and ESTIMATES for preparing ground plans, sections, and elevations for LAYING OUT a NEW BURIAL-GROUND, containing five acres, with a Road, a Building a Lodge, with entrance-gates, and Two Chapels. The person whose plan may be approved of will, in the discretion of the Board, either have the superintendence of the works, or be paid 15l. 15s. for the plans, designs, and estimates. The person who prepares, in the judgment of the Board the second best plan, will be paid 5l. 5s. All plans, &c. must be sent to my office free of expense, without the author's name, but with a motto, before TWELVE o'clock on TUESDAY, the 16th day of JANUARY next. A sealed letter, containing the real name and address, should accompany each design.

GEORGE ANDREWS, Clerk to the Board.

Weymouth, Dec. 20, 1854.

CONTRACTS.

NOTICE to BUILDERS.—The Commanding Royal Engineer of the Dover District hereby gives Notice that sealed TENDERS will be received at the Ordnance Office, Pall-mall, London, on or before the 16th day of JANUARY, 1855, from Persons desirous of CONTRACTING with the Honourable Board of Ordnance for the following WORKS at DOVER CASTLE, viz. FITTING UP the CLIFF CASEMATES as BARRACKS, including the Construction of Ablution Rooms, Privies, and Urinals, and the Improvement of the Ventilation Shafts. Plans and specifications of the works may be seen, and forms of Tender obtained, at the Royal Engineer Office, Dover, between the hours of TEN and FOUR o'clock, from the 28th DECEMBER, 1854, to the 13th JANUARY, 1855 Sundays excepted. The party whose Tender may be accepted for the work will be required to enter into a bond with two eligible securities, jointly and separately, to be bound under a penalty of 1,000l. for the due performance of the contract. Tenders for the above works to be addressed to the "Secretary to the Board of Ordnance Ordnance Office, Pall-mall, London," and endorsed "Tender for Works at Dover Castle."

N.B. The Board of Ordnance reserve to themselves the right of rejecting the whole or any of the Tenders.

Royal Engineer Office, Dover, December 13 1854.

TO BUILDERS.

SEALED TENDERS for BUILDING BARRACKS and STABLES for Royal Artillery, to be erected at Devonport; with separate Tenders for the Asphalte Work, will be received at the Ordnance Office, Pall-mall, London, on or before NOON of THURSDAY, the 4th day of JANUARY next, at Noon, addressed to the Secretary to the Board of Ordnance, and endorsed "Tender for Artillery Barracks, Devonport," on the left-hand corner of the envelope. The Royal Artillery Barracks comprise a building containing six officers' quarters and servants' rooms; a range of stables with harness-rooms, artificers' stores, sick-room, and addenda thereto, may be seen, forms of Tender and all necessary information obtained, at the Royal Engineer Office, Devonport, between the hours of NINE and FOUR o'clock, from TUESDAY, the 19th inst. to SATURDAY, the 6th of JANUARY next, Sundays and Christmas-day excepted.

Royal Engineer Office, Devonport, 13th Dec. 1854.

TO BUILDERS AND OTHERS.

SEALED TENDERS for the following SERVICES at Bull Point viz.—

1. Building Cottages for a Foreman and Sixteen Labourers;
2. Building a Cook-house and Wash house for the Crews of the two Powder Vessels, with Privy and Urinal;
3. Building an Office for the Ordnance Storekeeper;
4. Building a Civil Watch-house and a Shed for Waggons;
5. Building a Warder's Lodge and a Shoe-house;
6. Building an Engine-house;
7. Building a Boat-house;
8. Removing the present Wooden Filling and Examining-house at Kegham to Bull Point;

For SPECIFIC SUMS, will be received at the Ordnance Office, Pall-mall, London, on or before the 27th of JANUARY, 1855. Detailed specifications of the above eight services, and every requisite information, may be obtained at the Royal Engineer Office, Bull Point, daily (Sundays excepted), between the hours of TEN and FOUR o'clock, from the 9th JANUARY next to the 25th JANUARY, both days inclusive.

Royal Engineer Offices, Devonport, 19th December, 1854.

MATHEMATICAL DRAWING INSTRUMENTS. JOHN ARCHBUTT, 20, Westminster Bridge-road, Lambeth near Astley's Theatre, begs to call attention to his Stock of Instruments manufactured by superior workmen. The prices will be found considerably lower than ever charged for articles of similar quality and workmanship. Rules, scales, flasks, &c. at equally low prices. A detailed price-list will be immediately forwarded, free, on application

A SUPERIOR 12-inch DUMPY LEVEL, by GAMBLE, for SALE, with Tripod and Mahogany and Leather Cases complete, price Nine Guineas.—Apply to JOHN ARCHBUTT, Drawing Instrument Maker, 20, Westminster Bridge road, Lambeth, near Astley's Theatre

SWISS DRAWING INSTRUMENTS, equal in quality to the very best London-made instruments, and considerably cheaper.—Apply to Mr S. BARLOW, 6 Thavies-inn, Holborn (between 1 and 3 p.m.) or to Mr. H. B. BARLOW, Office for Patents, Ducie-place, Exchange, Manchester.

WARMING and VENTILATING.—COTTAM and HALLEN, 9, Winsley-street, Oxford-street, have had thirty years' experience, and have warmed by the new system, 150 dwellings, consisting of churches, prisons, lunatic asylums, halls, and staircases, galleries, conservatories, for the houses, &c. can with confidence recommend their system, which, by the numerous improvements they have made, and perfection of the details, can be fixed at the expense the generality of stoves, ranges, and ventilators, and the entrance, flues or warm air of an old wood-engraved Illustrates up to 3 pages free.—COTTAM and HALLEN, Engineers and Ironfounders, 9, Winsley-street, Oxford-street.

SYLVESTER'S HOT WATER STOVES, for Warming Halls, Staircases, Galleries, Stores, Warehouses, Hotels, and Offices, require no Flue, and are safe from all risk of fire

Any number of these Stoves may be fixed from one Boiler, and may be used equally well with Steam or Hot Water.

SYLVESTER'S IMPROVED AIR WARMER

is the most powerful, salubrious, and economical Apparatus ever used for Heating Churches, Chapels, Schools, and Public Buildings, by means of Hot Air.

Prospectuses and Estimates may be obtained on application to SYLVESTER and CO.

For Owners, and Manufacturers of Heating Apparatus, 9, Great Russell-street, Bloomsbury.

HOT AIR, GAS, VESTA, JOYCE'S STEAM STOVES for Heating, and Gas Irons of all shapes, warehousemen, grocers, bakers, and others being at this season demanded. WILLIAM S. BURTON invites attention to his unrivalled assortment, as a testimony of the ease to every conceivable requirement, is priced from 10s. each to 30 guineas. His variety of register and other stoves is the largest in existence.

GAS CHANDELIERS and BRACKETS.—The increased and increasing use of gas in private houses has induced WILLIAM S. BURTON to collect from all the various manufactories all that is best and choice in Bronzed, Or-molu, and Chandeliers, adapted for either candles, or Moderator lamps, as well as those suitable for the use of gas. Also a large assortment ON SHOW in one of his TEN LARGE ROOMS and presents a novelty, variety, and purity of taste, not equalled in any other establishment. They are marked in plain figures, at prices as low as those which have been fixed to make his Establishment the largest and most remarkable in the kingdom, viz. from 12s. 6d. (two lights) to 16l.

WILLIAM S. BURTON has TEN LARGE SHOW ROOMS devoted to the sale of GENERAL FURNISHING IRONMONGERY, such as fenders, stoves, nickel silver plated, and japanned wares, iron and brass bedsteads, so arranged and classified that purchasers can easily and at once make their selections.

Catalogues, with engravings, sent per post free. The money returned for every article not approved of.

39 OXFORD-STREET (corner of Newman-street); 1, 2, and 3, NEWMAN STREET; and 4 and 5, PERRY'S-PLACE.

DR. ARNOTT'S new OPEN SMOKELESS FIRE-GRATE, having been in use about 18 months, may now be seen in daily operation at CLEDWARDS and SONS', 49, Poland-street, Oxford-street. By this grate a smoky chimney is prevented, no chimney sweeping is required, and a saving of at least thirty-five per cent. is effected in the consumption of coal. This principle is also now carried out with complete success in Kitchen ranges, and hot-air heating stoves. Old grates are altered to this principle.—Prospectus sent on application.

ROYAL POLYTECHNIC GAS FIRE. BACHHOFFNER and DERRIES'S PATENT. The public is respectfully informed that this fire is now being made for the supply of this unique and beautiful mode of warming private houses, shops, public buildings, &c., so free from dust, ashes, and if needed, from fuel, are all entirely prevented; and in which it presents all the comfort and appearance of an open coal fire, securing at the same time perfect ventilation. To be seen in action at DERRIES'S Office, 149 Regent-street, London.

THE ONLY STOVE WITHOUT a FLUE. JOYCE'S PATENT—Plain, from 12s. to 42s.; Ornamental from 42s. to 70s. Suitable for warehouses, halls, passages, green houses, water closets, shops, or temporary buildings, requiring artificial warmth. To be seen in use at the Office Premises, 5 NASH, Lamb's-conduit-street, 283 Oxford-street, and at Clay Depôt, 116, Newgate-street, London. PATENT PREPARED FUEL for the above, 2s. 6d. per bushel. JOYCE'S PORTABLE LAUNDRY STOVE will heat and keep hot for use six flat and Italian irons, with perfect cleanliness, for twelve hours, with one pennyworth of coke or cinders.—Price 14s.

** Prospectuses, with drawings and report, forwarded free.

THE SMOKE-CONSUMING STOVE, invented by Dr. ARNOTT, and exhibited by him at the Society of Arts, on WEDNESDAY, MAY 10, insures perfect combustion of common fuel, requires no fuel, is of cheap construction, requires stoking in general use, and produces by the use of Dr. Arnott's improved Double Valve, a perfect system of Ventilation.—Manufactured by D. and B. BAILEY, 272, Holborn.

ECONOMIC COOKING-STOVE.—DEANE, DRAY, and CO. recommend with confidence their IMPROVED COOKING STOVE to the notice of the public. It is neat in its cast-steel in construction, economical, durable, and reliable. For a large amount of work with a comparatively small consumption of fuel it stands unrivalled, and is peculiarly suitable for large or small families. Its operation daily in the grate and boiler for the supply of hot water, &c. can be seen at the establishment, where ready-made furnishing ironmongery, prices of which are valued free by post.—DEANE, DRAY, and CO., opposite to the Monument, London-bridge. Established A.D. 1700.

STOVES for CHURCHES, CHAPELS, HALLS, &c. The one, two, three, and four cylinder Patent SUSPENSION STOVES are the most healthy, Economical, and Powerful BROWN and GREEN Patentees Luton

KITCHEN RANGES!—BROWN and GREEN'S celebrated RANGE is the best and most economical, is a certain cure for a Smoky Chimney. Manufactory, Luton Beds. Wholesale agents R. W. KENNARD and Co., 69, Upper Thames-street.

HEATING by HOT WATER.—JOHN WEEKS and Co., King's-road, Chelsea, solicit the attention of architects, &c. to their superior APPARATUS for Mansion, Warehouse, Establishments, and apparatus with the least possible risk of getting heated by hot water is unprecedented.

CUNDY'S PATENT PURE WARM-AIR STOVES. The only Imperial Stove which gained a Prize Medal (Class 30) at the Great Exhibition, in 1851. Especially adapted for warming all great roomy churches, chapels, schools, entrance-halls, and libraries. Can be purchased at the manufactory of CUTLER and SONS, Ironfounders, &c. 16, Great Queen street, Long-acre, where a large stock is always ready for immediate delivery; and of all Ironmongers.

Price 6l. 6s.; 9l. 9s.; and 12l. 12s.

ELDRIDGE'S IMPROVED RANGES, with Brick backs, Ovens and Boilers, 3 ft. 20s.; 3 ft. 3 in. 30s.; Extra Strong Wrought Bars, 4s. 6d. per ft. Self-acting Smoke Jacks, which roast 4 lbs. of meat 2 hrs. 3d. to 3s. 6d.; 4 ft. Patent Leamington Kitchens, with Hot Plate, 5l. 5s. Furnace Boilers, 2l. per gallon. J. ELDRIDGE, 28, Sun-street, Bishopsgate-street.

MAGNUS'S PATENT ENAMELLED SLATE CABINET FORMED FIRE-PLACE.—This is decidedly the most handsome, economical, and comfortable fire-place that has ever been introduced to the public. It is worth its cost, and stands BEFORE the opening of the chimney, projecting into the room as a regular cabinet. It is composed of fire-stone and slate and has hot-air chambers. It may also be fitted up for gas instead of coal. By the economical who desire to see half the heat from the coal wasted in the chimney, and by persons of taste who object to the stuff and unmeaning ornaments in ordinary use, the CABINET-FORMED FIRE-PLACE has only to be seen to ensure its adoption. Prices from 6 guineas upwards. Penrhyn Slate Works, 30 and 31, Upper Belgrave-place, Pimlico

STEPHENSON and PEILL, 61, Gracechurch-street, London, and 17, New Park-street, Southwark, Manufacturers of SUPERCYLINDRICAL and improved CONICAL IRON BOILERS, &c., Conservatories, Hot-houses, Boilers, either on wood or iron, for Steam and Hot Water Apparatus, Hot-air Stoves, Gentlemen's Hot-water Pipes, Chimney Cowls, and every description of Smiths' and Plumbers' Work. London: JOHN HENRY PARKER, 377, Strand
Vols. VI. to IX. may also be had at the Office of the Archæological Institute, Suffolk-street, Pall-mall East, price 1l. 11s. each.

ILLUSTRATED LONDON NEWS.—The year 1855 bids fair to be one of the most important and eventful of modern history. On the 6th of JANUARY, 1855, will be issued the first number of a new volume of the ILLUSTRATED LONDON NEWS, and not merely a new volume, but of a New Year—each volume being perfect and complete in itself—containing, for the time, a faithful record, pictorial and descriptive, of all events of interest in every part of the world. To that limited portion of the public who do not subscribe to this Journal, it may be stated, that no period could be selected more opportune for commencing the whole course being but Twenty-six Shillings per annum, exclusive of double numbers, which are issued on rare occasions, when it would be impossible to crowd the important events and Engravings into a single number; for this small sum the Subscriber will receive twenty-four large pages—seventy-two Columns of the most interesting information, carefully selected from the News of the Week, interspersed with a variety of charming Articles on the chief topics of the day.
The ILLUSTRATED LONDON NEWS has, by its impartial and consistent advocacy of the welfare of the Public, secured for itself a political influence scarcely second to any Newspaper in the Empire; and reference with some pride, be made to the support afforded to all beneficial measures, proposed and adopted by the English Parliament.
Foreign politics will ever command the attention which ought to be devoted to so important a feature of a newspaper. On the question of the Russian War, during the year 1854, ONE THOUSAND ENGRAVINGS appeared in the ILLUSTRATED LONDON NEWS. Extensive arrangements, calculated to improve this popular Journal, and engagements, such as will greatly enrich its Literary, Scientific, and other departments, have been made, and will thus combine on this paper the greatest talent of the day.
The ILLUSTRATED LONDON NEWS has been established thirteen years, during which period it has received a greater degree of encouragement and approbation than any journal ever published. This is proved by the returns of stamps issued from time to time by order of Parliament. The stamps applied for the first six months of 1854, were upwards of 2,744,000 showing a WEEKLY CIRCULATION of UPWARDS of ONE HUNDRED and THIRTY THOUSAND COPIES!
Terms (for payment in advance)—Half-year, 13s. 6d.; Year, 26s.
Any of the volumes of the ILLUSTRATED LONDON NEWS, from the commencement to the present time, may now be had, in paper or cloth. Covers for binding the volumes, 2s. 6d. each.
All numbers may be sent free by post to any part of the Kingdom and the Colonies.
Give an order for six months, to ensure all the gratuitous prints and supplements. Supplied by all Booksellers and Newsmen.
The ILLUSTRATED LONDON NEWS is published in London every Saturday, stamped, to go free by post, Sixpence per copy.
Office, 198, Strand, London.

A SUPPLEMENT, GRATIS, with the WEEKLY DISPATCH, EVERY WEEK UNTIL FURTHER NOTICE.—The unexampled interest which attaches to every incident connected with the operations of the Allied Armies in the East, has determined the Proprietors of the WEEKLY DISPATCH to devote a greater space to the intelligence from the seat of war than the ordinary limits of the largest newspaper published, could possibly afford; and, with the view of giving the amplest details, they have resolved upon the issue of a Series of supplements, Gratis, which will include every particular of interest connected with the Siege and Session of the contest at Sebastopol, and will be continued whenever demanded by the progress of the Campaign. By the publication of these Supplements the portion of the Paper usually devoted to incidents of domestic and political importance will be reserved intact, and the engrossing subject of the War will receive the fullest and most varied illustration. A Supplement will be published on Sunday next (Gratis), and on every succeeding week until further notice.—Orders may be given to all Newsvendors in town and country, and to the Publisher, at the *Dispatch* Office, 139, Fleet-street, London.

NEW WORK BY MRS. JAMESON.
In square crown 8vo. with Etchings and Woodcuts, price 18s.
A COMMON-PLACE BOOK of THOUGHTS, MEMORIES, and FANCIES, Original and Selected
By Mrs. JAMESON, author of "Sacred and Legendary Art."
"A more suggestive and charming magazine of materials for thought we have not looked into for some time." *Builder.*
"The work, which, like all Mrs Jameson's late productions, is rich in artistic beauty, etchings and woodcuts alike redolent of grace, is destined to extend still more widely the reputation of the authoress, as one who thinks deeply and writes wisely."—*Notes and Queries.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In fcap. 8vo with Woodcuts, price 7s. 6d.
PROFESSOR BRANDE'S LECTURES on the ARTS connected with ORGANIC CHEMISTRY, as APPLIED to MANUFACTURES, including Dyeing, Bleaching, Calico-printing, Sugar-manufacture, the Preservation of Wood, Tanning, &c. delivered before the Members of the Royal Institution. Arranged, by permission, from the Lecturer's Notes, by J. SCOFFERN, M.B.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

NEW AND CHEAPER EDITION.
The Third Edition, in 8vo. price Two Guineas,
GWILT'S ENCYCLOPÆDIA of ARCHITECTURE, Historical, Theoretical, and Practical: Illustrated with more than 1,000 Engravings on Wood, by H. BRANSTON, from Drawings by J. S. GWILT. With a Supplement on Gothic Architecture
London: LONGMAN, BROWN, GREEN, and LONGMANS.

ACTON'S COOKERY BOOK.
The Fourteenth Edition, in fcp. 8vo. price 7s. 6d.
ELIZA ACTON'S MODERN COOKERY reduced to a System of Easy Practice: with Directions for Carving.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In Two Volumes, 8vo. with nearly 1,600 Woodcuts, price 60s.
DR. URE'S DICTIONARY of ARTS, MANUFACTURES, and MINES: containing a clear Exposition of their Principles and Practice. The Fourth Edition, much enlarged and corrected throughout.
"These volumes of Dr. Ure's consist chiefly of original and exact treatises, written with so much accuracy and care that they may be universally resorted to as authoritative,—as indeed the former editions have been, as well by artists and manufacturers as by British and foreign scientific writers. The writer has throughout the entire work kept most seriously before his mind the one object of promoting the best and most economical developments of the arts and manufactures; and has produced a work which altogether surpasses every other of its kind with which we are acquainted." *Mechanics' Magazine.*
London: LONGMAN, BROWN, GREEN, and LONGMANS.

In 16mo. price One Shilling,
VOYAGES and DISCOVERIES in the ARCTIC REGIONS, from the Sixteenth Century to the Return of Dr. Rae in October last.
Edited by P. MAYNE,
Forming Part 73 of the "Traveller's Library."
London: LONGMAN, BROWN, GREEN, and LONGMANS.

Second Edition, revised, in fcap. 8vo. price 5s.
PSYCHOLOGICAL INQUIRIES, in a Series of Essays intended to illustrate the Influence of the Physical Organisation on the Mental Faculties.
By Sir BENJAMIN C. BRODIE, Bart. D.C.L. V.P.R.S.
Corresponding Member of the Institute of France, &c.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

THE ABBE HUC'S NEW WORK.
On Friday next will be published, in 2 vols. 8vo.
THE CHINESE EMPIRE: a Continuation of Huc and Gabet's Travels in Tartary and Thibet.
By the ABBE HUC, many years Missionary Apostolic in China.
Copyright Edition, translated from the French with the Author's sanction.
London: LONGMAN, BROWN, GREEN, and LONGMANS.

This day, price 1s. the 32nd edition of
LAXTON'S BUILDERS' PRICE-BOOK for 1855, containing 11,000 Prices and Memoranda, together with the whole of the Building Act, and Abstract of the Paving Act.
By FREDERICK W. LAXTON, F.S.A. Barrister at-law, and HENRY LAXTON, Architect.
Published at the Office of the "Civil Engineer and Architect's Journal," 19, Arundel-street, Strand, and to be had of all booksellers.

Now ready, price 8d. or Stamped, 4d.
PUNCH'S ALMANACK for 1855. Illustrated by JOHN LEECH and JOHN TENNIEL.
Office, 63, Fleet-street.

This day is published, price 3s. Part XXI of the
ENGLISH CYCLOPÆDIA, extending the Natural History Division from Locomotion of Animals, to Lydia, and including articles on Luna, Lunburg, Lusatia, Lusi, Lipari Islands, Lippe, Lisbon, Lithuania, Liverpool, Livonia, Livorno (Leghorn), Lombardo-Venetian Kingdom, London, Louisiana, Lubeck, Lucca, Lüneburg, Luxemburg, Luzern, &c.
BRADBURY and EVANS, 11, Bouverie-street.

Now ready, price Five Shillings, Third Edition of Part III. of the TREATISE on INDUSTRIAL INVESTMENT and EMIGRATION, being Suggestions for the Enfranchisement and Improvement of Copyhold, Life, Leasehold, and Church Property, by the application of the life assurance principle, with Rules and tables for the formation of Copyhold Enfranchisement and Freehold Land Societies, and a Mathematical Appendix, by ARTHUR SCRATCHLEY, M.A. F.R.A.S.
Actuary to the Western Life Assurance Society, 3, Parliament-street, Westminster.
London: FRIENDLY SOCIETIES' INSTITUTE, 23, Pall-mall, and CHARLES MITCHELL, 12, Red Lion-court, Fleet street.

THE QUARTERLY REVIEW.—ADVERTISEMENTS for the forthcoming Number must be forwarded to the Publisher by the 2nd, and BILLS for insertion by the 4th JANUARY.
JOHN MURRAY, Albemarle-street.

Third Thousand. Just published, price 6d.
THE SMOKE QUESTION SIMPLIFIED: being a Lecture on the Prevention of Smoke, delivered before the United Service Institution, at the request of the Council.
By T. SYMES PRIDEAUX, Esq. Author of "The Treatise on the Economy of Fuel," in Weale's Series.
Published at the Office of the Smoke Prevention Company, 32, Charing-cross, opposite the Admiralty; and by JOHN WEALE, 59, High Holborn.

Albemarle-street, December, 1854.
MR. MURRAY'S LIST.

JOHNSON'S LIVES of the ENGLISH POETS. Edited, with Notes, by PETER CUNNINGHAM, F.S.A. 3 vols. 8vo. 22s. 6d. ("Murray's British Classics.")

JOHN MURRAY, Albemarle-street.)

The Builder.

SATURDAY, DECEMBER 30, 1854.

WE close our twelfth volume to-day, and give an Index and Title-page to bind with it, as usual.* Recent regulations, respecting the transmission of newspapers by post, have prevented the enlargement of the sheet as on some former occasions; but we have curtailed the advertisements to meet the encroachment to some extent. The Chancellor of the Exchequer has given notice that early in the present session he intends to review the whole question; and we anticipate that we shall then be enabled to issue an enlarged sheet occasionally, as heretofore. If not, we shall arrange to give additional matter at times in some other shape.

Possessing, as we believe our journal does, the good esteem of the public, promises for the future are, it may be hoped, unnecessary. We will simply say that we have various important illustrations in progress, and shall avail ourselves of any means that may offer themselves to increase the efficiency of the *Builder*, and extend its usefulness.

Occupied as most minds are by the frightful war into which we have been forced by the guilty ambition of Russia, it is, nevertheless, to be hoped that the questions affecting our social condition and progress yet unsettled will obtain the consideration their vital importance demands; that the respective duties and rights of capital and labour may be arrived at and made known; and that the fine arts, though *par éminence* the arts of peace, may continue to receive that cultivation which was being afforded to them.

To the obscure and the striving, fitted for the race, we would offer words of encouragement and hope. Although we have no great faith in the power that does not *make* itself felt, and force its own way in one direction or another, still many have died unknown, with energies paralysed and a quenched heart, who, had they but found the first opening and a stirring word, had entered worthily on the stage of life, and been recognised as leaders and benefactors. Quite true it is that,—

> "Art is long, but time is fleeting;
> And our hearts, though stout and brave,
> Still, like muffled drums, are beating
> Funeral marches to the grave."

The chief obstacle to the progress of those whose genius inclined to the arts, has heretofore been the want, if unaided by fortune, of the means of obtaining that proper elementary instruction,—that power of expression, so to speak, which would enable them to realize their conceptions, and give their natural powers proper development. This want is being supplied to a certain extent by the elementary schools of the Department of Art and some popular institutions, and we may expect in due time, if the course be persevered in and extended, to see valuable results. For their full development an appreciating public is necessary; and, with a view to this end, it is most desirable to lead to a love and knowledge of art those who may not yet have started on that road, and to open the eyes of the worker to an appreciation of the beautiful,—thus, too, giving him a new sense, and rendering what he before viewed with indifference the cause of pleasurable and elevating emotions. If they were *only* pleasurable it would be something. The stream of life will not flow with less usefulness if its banks be strewn with flowers. We have a strong notion that if you make men happy, you help to make them good. "Materialism," says an American journalist,—"the passion for money-making and excitement, is eating up the heart of our people. We are not a happy people: our families are not happy. Men look haggard, and anxious, and weary. We want something more genial, and social, and unselfish amongst us,—a piety which prompts to petty self-sacrifices, and takes a pleasure in them, as well as in great. Any family-festivals — anything which will make home pleasanter — which will bind children together, and make them conscious of a distinct family-life — is most strongly needed. Good people are to recognise that there is a religion in Christmas feasts as well as in prayer-meetings; that a father who has made his home gloomy, has done quite as great a wrong to his children, perhaps, as he who made it irreligious."

We have devoted some space in the present and previous volume to an exposition of the miserable dens in which thousands of our countrymen and country-women are condemned to exist in this metropolis,—dens, where cleanliness is impossible, and health and morals are alike speedily degraded; and we have sought to evoke, in their aid, not merely

> "The pure high-soul'd unselfishness,"

which happily is not rare amongst us, but the commercial spirit which is ready at all times to undertake whatever is likely to afford a good return for money invested. The statements we made were justified in the most remarkable manner during the fearful outbreak of cholera that followed months after their publication,—justified, indeed, to such an extent, that they may be almost regarded in the light of fulfilled prophecies.* Some good, we have reason to believe, was effected by their publication; but had the warning been more fully attended to, hundreds of lives might have been saved, and an enormous amount of misery prevented. It is not because the cholera has left us for a time that the efforts to improve the sanitary condition of towns should be relaxed: other preventable diseases, attendants on bad drainage, vitiated air, and want of water,—diseases which hover over cesspools and come out from the overfilled churchyards,—still carry off their thousands, and lessen the powers, physical, mental, and pecuniary, of those who remain. Take the one startling fact shown by published tables, and quoted by Mr. Hopley, that in the five years, 1833, 4, 5, 6, and 7, half the men who offered themselves as recruits in Dublin, Edinburgh, and London were rejected, as incapable of bearing arms;—a fact showing that, by carrying out efficient measures of sanitary reform, and by leading to the knowledge and observance of the laws of health, the power of the empire might be enormously increased, without adding a man to the population. It is asserted by one who has the best means of knowing, that more than one-fourth part of the next generation of the English race will be born and bred in insalubrious places, which must, in the long run, induce degeneracy. Attention, however, is, we hope, being awakened to the vital importance of the matter, although too slowly, and the Future may regard as a blessing the Pestilence which has been a curse to the Present.

This subject will still receive at our hands the consideration it demands, together with those structural improvements and legislative enactments which bear upon it. The advancement of architecture as a fine art amongst us, now, perhaps, at a turning point, and the maintenance of the dignity of the profession; the interests of the building trades throughout the kingdom,—a body second to no other in importance; the spread of a knowledge of art amongst all classes of the public; the assurance of a good understanding between masters and men; and the inculcation of kindly feelings everywhere —are matters which constantly occupy our thoughts and will command our most earnest endeavours.

* A title-page in colours may be obtained, on personal application, at the Office, 1, York-street, by those subscribers who prefer it.

* The *Morning Advertiser*, in a valuable leading article on the 20th inst. pointed out one of the extraordinary coincidences to which we are referring.

THE CRYSTAL PALACE AND THE HISTORY OF ARCHITECTURE.

ONE OF THE STYLES NOT ILLUSTRATED AT SYDENHAM.

If all means be used for promoting the advancement of art now,—some examination—such as we have endeavoured to indicate in our notices of the "Courts" at the Crystal Palace—should be made of the circumstances which have led up to the present state of architecture. The investigation into characteristics of *examples* should be of a more comprehensive—but more searching—description than what has hitherto been attempted. The requirements of popular education, which have mainly been considered in works on the general history, are certainly not now to be disregarded. But it is necessary that our facilities for the apprehension of facts, should be such as to enable us to enter into the philosophy of questions, which must be raised in the mind of him who looks at the variety of opposite features in former works, with reference to the art of his own time. We are gathering much fruit together: we have yet to express the juice.

We should arrive at the ability to tell why, for instance, a certain revulsion of taste occurs from time to time in particular countries,—where the national bias oscillates between exceeding deference to rule and precedent, and the indulgence—in the pursuit of the necessary element of novelty — of *caprices*, such as a wholesome regard for precedent would have prevented. Rightly viewing these conditions, and, further, apprehending the fact that other countries defer such natural tendency in their own case, and meanwhile receive impressions from the changes elsewhere, and we shall be gradually arriving at knowledge, such as might one day give those means of direct influence upon art in our own country, which few of us now exercise, partly because we are not able to discern in what direction we should put forth efforts. Conditions of climate, and the resources of countries; national peculiarities, and political and social history should be looked to,—no less than the monuments themselves,—if we would discover why the genius of architecture has become fashioned and moulded into styles, or those minor inflexions which are to be seen in each district, or collection of edifices.

How much more numerous are the materials than what are found, or even suggested, at the Crystal Palace, the fine collection of Indian drawings, lately exhibited at the Institute of British Architects, would help to show,—particularly, bearing in mind that these are but inadequate illustrations of a mere spot of ground—on a vast continent, inhabited by many different races,—each leaving its own sculptured story. With these chapters of the chronicles of architecture we have not now to do, but we have to try to give some idea of what the history of art presents, during a period later than that of the style in Italy with which we last concerned ourselves. The series at Sydenham winds up with the fourth act of the drama, and leaves us to present the rest of the *spectacle* without the properties, with what skill we may.

The "Handbook to the Italian Court," indeed, does not quite pass over the *dénouement*; but the collection has nothing more than one or two good examples of piers panelled and decorated with ornaments in the *Louis Quatorze* style, from a votive offering erected in the cathedral of Notre Dame at Paris, by Louis XIV. in fulfilment of a vow of Louis XIII.

What then we have to make, or rather to suggest, is the examination into the characteristics of architecture during a period, the traces of which are marked in our own day. With many illustrations of particular works of art at hand, there are few attempts to which we can refer, at exposition of the characteristics of styles during the seventeenth and eighteenth centuries,

and of the relative influence of the different countries of Europe. It is beyond our opportunity to supply every omission. Perhaps, too, there is some ground for believing, that here we may apply the assertions as to the difficulty of getting to conclusions, where events are, as we may say, within too proximate a field of history.

Throughout the whole annals of European art, we may constantly remark the marvellous influence of Italy. When we spoke of the wave of progress, long undulating through distant channels—after the original element had changed, or been supplanted—we might have tracked each stream to one gushing source. Like the gift of her own *improvisatori*, the manifestation of art in Italy is of a nature peculiar to one soil alone.

The conclusion of the sixteenth century found the Italian architects somewhat afflicted with the trammels of rule and measure, and deficient in the compensating powers of design which we discovered in the works of the great artists who had gone before. Substituting one style for another, the circumstances were much the same as what we have recollection of in England, when every architect's work was traced from the same plate of Stuart's "Athens." Sooner or later, the true artist becomes dissatisfied with such absence of art, and then the architecture of a country passes through a crisis. In Italy, this was reached about forty years after the commencement of the seventeenth century, when the practice of Borromini and his fellows, effected a total change from the architecture of the Cinque-cento, though preserving most of its details.

The influence of the Italian art upon France and England during that period, was in some respects different. In France, as in the time of Serlio, the Italian artists were held in high esteem; and always, every fashion which happened to be prevalent in Italy, appears to have found its way directly to the other country, though without supplanting the style previously in vogue, or interfering with the constant deference of the best French artists to the precepts of the Italians of the earlier period. Bernini, the greatest of the men of that time, an artist of marvellous dexterity in all branches of art, and one not wholly afflicted with the unfortunate tendencies of his *compatriotes*, was induced to visit the French capital, where he was received with great distinction.

From all causes, we discover in France a number of concurrent styles, such as did not, till long after, prevail in England. This country received the Italian impressions, by the visits of Inigo Jones to Italy, and through a French medium. At the date 1600, before referred to, the Italian architecture had not come into use. Jones practised in the style so well known as that of James I. After his visit to Italy, he assumed an entirely different manner, and this, under Palladian precept, he appears to have retained up to his death, which took place in 1651. Though he was acquainted with the contemporary Italians and their works, he remained uninfluenced by them, as did the chief of his successors,—though the style of Wren was much influenced by that prevalent in France.

The style of the first half of the seventeenth century in Italy, may be said to have been formed on the principle of *disregarding* the structural element which had been one characteristic of the Cinque-cento. Columns in groups, or at irregular distances, broken entablatures, too frequently repeated (for the sake of repetition of profiles), curvilinear fronts, and "such scenery as belongs to painting," as Professor Cockerell has said, "established the novelty of picturesque architecture—a contradiction in terms,—unless by combinations from certain points of view, as in the works of Vanbrugh." If the reader will look from the river steamer, at the houses which form the south end of Salisbury-street, some impregnation of the false taste which is referred to, may be there detected. In the doorways of ordinary houses of the last century, the same degenerate Italian element will be found. The lines of pediments are broken, or they are even curved in the plan; and the horizontal members of the cornice may be omitted. The inclined sides, moreover, took every variety of shape. In old pieces of furniture,—where, however, some departure from the ordinary principles applicable to masonry, may be tolerable, or even commendable,—we find many evidences of the impurity which existed at the source. Sometimes the pediment was broken, so as to give space for a bust. In one of the plates of Sir Wm. Chambers's Treatise, are several of such forms as, he says, should be avoided. Amongst the number is one where the window, or doorway is crowned by two halves of a pediment, so joined as to form the shape of the letter V. In short, we come to a time when it was a principle, that everything should be distorted and contradictory.

Of this, the forms of vases are good illustrations. In the vase, capacity—expressed by predominating convexity of the exterior—is the essential characteristic. The antique vase had been much employed by the architects of the Cinque-cento period. The later Italians took the vase, and for the convex substituted the concave line; and further, twisted and gashed the surface, till the original idea of purpose was destroyed; and this was done without securing a beautiful form applicable as a termination, whilst free from the æsthetic objections which some have perceived to the use of vases on buildings. It cannot, we fear, be maintained that Wren even was free from this kind of fault.

Still, looking at the best works of the English architects, the style might be supposed to have scarcely penetrated to England. But the evidences of its prevalence are to be found in every old street throughout the kingdom. In this case, what has been discovered in other periods, with reference to the existence of a distinct character of art, subordinate to, or caricaturing the grand style, is perhaps equally to be asserted in regard to our own country. Evidences might be found in one or other of the books—now scarcely seen, but occasionally on book-stalls—by the erudite "architect and carpenter,"—treatises on the five orders of architecture, and the whole manner of building—books professing to teach all that can be known, with extraordinary speed and accuracy. Occasionally, a Batty Langley will create a diversion; but the degenerate Italian taste appears to form with these books the groundwork of the art; though ill-drawn plates of the orders of Palladio and Scamozzi may be not wanting. How easy would it seem to fall into a partial view of the style of a country, were the attention confined to only one class of buildings? And let it be observed, that whilst the Italian example, in one form or another, was general in towns, the traditionary influence of the Gothic style was still operative in domestic architecture—as in the recesses of the county of Kent. The unwritten history of the domestic architecture of this period, would furnish an interesting chapter of its own.

From what we have written, we have perhaps made it clear without illustrations, what was the principle—or if our readers like—the subversion of principle,—of the style which followed soon after that of Palladio and Scamozzi, to which we brought down our historic record. But it was not till the middle of the seventeenth century, or we may say till the beginning of the eighteenth, that the full result of the innovations, originally commenced by Michelangelo, was reached.

Before such time, the extraordinary executive skill of Bernini and others, seems to have seduced the artist himself, into giving forth what would hardly wait the slow progress of deduction and causation. For, the exercise of the reason, no less than the exercise of dexterity, should be constant with the artist. Without the union,—for *art*, is substituted imitation,—such as can have no permanent hold on the higher order of mind in the observer. In architecture, however, Bernini did not fall into all the vices which were current with his contemporary Borromini. The last-named architect went so far in his pursuit of novelty, as to place the capitals of columns where the bases should be. In such manner were the true principles of design, which involve the constant recognition of structural office, by the later Italians misunderstood or disregarded.

In manufactures, little had been effected in the strictly Cinque-cento. The style seems to have been felt deficient in the requisite pliability. A resumption of the Renaissance style had therefore taken place.

In France, the manner of Lescot and Philibert de l'Orme had been founded upon the architecture of Venice,—the style which had been originally introduced into France by Serlio. From all causes, the architecture of the early part of the seventeenth century, as we said, is difficult to characterize. We refer to the reign of Louis XIII. (1610 to 1643). The authors of the "Handbook" say "a rather 'Rococo' style" was in vogue, as seen by the church of St. Etienne du Mont and the chateau of St. Germain en Laye, but that the works of De Brosse were exceptions,—his Luxembourg Palace being somewhat in the style of the Florentine structures. Mr. Wornum says, as regards ornamental art, that it had a vague character, of which the various nautilus-shells are examples,—exhibiting something of Renaissance, Elizabethan, and Louis Quatorze mixed up together. In the domestic architecture,—as illustrated, amongst other subjects, in the magnificent government work, "Statistique Monumentale de Paris" (a work worthy of being imitated in our own capital), edited by M. Albert Lenoir,—the strictly Renaissance style, and a defined, though sometimes ill-proportioned Cinque-cento, are found, combined with the high-pitched roof, during much about the same period. Dormer windows were commonly used, and turrets similar to those with which we are so familiar in Scotland—to which country the form was no doubt taken—are found at the angles of buildings, and are finished with pyramidal and ogee cappings. We have here the materials which gradually settled into the best known form of French domestic architecture; which, ultimately, combined with the pavilion and Mansart roofs, reached this country, and modified the form of many of the London houses, and was fully exemplified in Montague House,—the old British Museum.

Whilst this distinctive style was beginning to take form in France, additional elements were being introduced in Italy, from which a new and marked system was ultimately to be contributed to the resources of the French artists. This was the style ultimately called the Louis Quatorze. There is little difficulty in tracing its rising in Italy, through the ordinary degenerate Italian. The segmental pediment broken and voluted, of which we discovered an indication in the time of Michelangelo, was an early indication.

The first defined example of the style is found in the Chiesa del Jesu, at Rome, which was decorated by Father Pozzi and others. The date may be 1640 to 1643. Pozzi's work on "Perspective" has a frontispiece which would supply us with the best illustration we could give of the debased architecture of which the Louis Quatorze was the natural termination. It must, however, be borne in mind, that this style also exists as a collateral, though defined system of design. The Louis Quatorze architecture is devoted to *interiors*, and during its most flourishing period in France, it did not prevent the erection of one of the finest monuments of the Cinque-cento style to be found in Europe.

THE PRESENT CONDITION OF THE PROFESSION OF ARCHITECTURE.

A PHILOSOPHICAL history of architecture has yet to be written. True, we have many sketches of the various styles, many tracings of their historical succession. But setting it down as an axiom that the first law of the art is, or ought to be, that of regular and constant progression, why our edifices should be designed after models the aims of which were the fulfilment of conditions presented by very dissimilar and past civilizations, and the satisfaction of necessities caused by differences of climate, of manners, of customs, and ideas,—in many instances, the antipodes of our own,—has always been considered by us an anomaly calling for especial explanation. And it is the more surprising, when we reflect that the present time is the only time in the world's history which exhibits so glaring an anachronism. The student, after taking a view

of what has been done, may perhaps be pardoned for asking whether we are advancing upon it. The answer simply is, that, while nearly every great nation of antiquity, and a grand institution, which flourished in its greatest splendour during the Middle Ages, devised and carried out systems of decorative architecture, peculiarly suited to the purposes for which they were required, and rising directly out of them, we, in these days, when the world has attained a higher degree of civilization than it ever before arrived at, possess so little vigour of intellect, and such slight inventive powers, as to be able to do little better than tamely copy, and that oftentimes without feeling and effect, without an imbibition of their spirit, the works of those whom, in so many other respects, we have long since far excelled. As the ancient Egyptians, the Greeks, and the Romans, the architects of the Middle Ages and of Italy, designed, so do those of the present day reproduce their structures. Certainly they are not quite indiscriminately copied,—a principle of selection prevails,—but imitation it still is, and original thought has scarcely an existence. It would actually appear as if design were exhausted. Ages ago it was perceived that "Tempora mutantur, nos et mutamur in illis;" but architecture now bids fair to continue ever the same. Instead of progressing we retrace our steps, and in this, its manhood, we go back into the youth of the world; and the result is, what has been termed "the reproduction of a galvanized corpse." Edifices are no longer in any country what they formerly were in every country, indigenous, national, and characteristic of the spirit of the age to which they owe their existence.

We are aware some may tell us that the various styles of architecture are so beautiful and so appropriate to many purposes, that it is impossible for us to advance upon them, and we may well rest content with their successful reproduction. To such wretched induction, we would reply in the words of a great and prescient author, Francis, Lord Bacon. Substituting only the word architecture for "the sciences," his remarks have wonderful force and applicability. "Let no one affirm that the sciences, increasing by degrees, have at length come to a certain full stature, and have at last, as having finished the course allotted to them, fixed themselves in the works of some few authors, so that now nothing better can be found out, and it only remains that what has been invented should be cultivated and adorned. It were to be wished, indeed, that such were the case; but the more correct and the truer account is, that this enslaved condition of the sciences is nought else than a thing bred from the audacity of a few, and the sloth and pusillanimity of the rest of mankind. For as soon as any particular science has in parts been somewhat diligently tilled and laboured, some one has usually arisen, confident in his talent, and accepted and celebrated on account of the compendiousness of his method, who, in so far as regards appearances, has established the art but in reality has corrupted the labour of his predecessors. Yet what he has done is wont to be well pleasing to succeeding generations on account of the easy utility of his work, and their wearisomeness and impatience of renewed inquiry. And if any one be moved by the inveterate agreement of opinions, as if it were the verdict of time, let him know that he leans upon a very weak and fallacious consideration."*

What can be the cause of the state of degeneracy which has been described? We believe it wholly arises from the true aim of the art being entirely overlooked; and it may be permitted here to pause, and endeavour to clear our ideas, and arrive at a definite understanding as to the nature of those principles,—formerly so attentively kept in view—now so neglected and disregarded.

Architecture, it is submitted, has two aims, or rather there are two principles† involved in its practice. The first is utility, the second, the production of a certain effect on the mind. The noblest and most perfect efforts of the architects owe their success to a happy satisfaction of these requirements. It is the necessary result of them, that an unmistakeable and peculiar devotion to its object should be the most evident characteristic of an edifice. *Fitness*, and the *appearance of fitness*, are the great points to be attended to. We see this strikingly exemplified in many of the ancient structures. Judging of the effects produced by them, *per se*, they not merely answer their purposes, but appear to rise out of those purposes. The essence of architecture, if it may be so phrased, is *realism*. A fabric is required for a certain intention. And it may be made to appear, or not to appear, devoted to its destined use, may seem a structure of the present day, or of ages long past, and yet, independently of all appearances, serve its end. Now the skill of the architect is shown in avoiding such an anomaly. And to do this is no easy task. Sir William Chambers tells us,—"The most certain test of merit in an edifice is where every part has some meaning, or can furnish an adequate reason for its existence, and will not only bear scrutiny with respect to its individual merits, but as it stands in relation to the whole."* The total want of truthful meaning in most modern structures is their obvious defect. The difficulty of combining decoration with utility, so that the one shall appear to rise out of the other and further the end proposed, is evidenced every day, not merely in architecture, but in articles of domestic use, in which, when ornamentation is introduced, the great aim seems to deceive. Direct copies from nature; objects represented with a total disregard to relative proportion; attempts to give flat surfaces the appearance of projecting in moulded and decorative forms; shadows where none could possibly be thrown; imitations on one material of another more expensive; and horses, dogs, ballet-girls, houses, and trees, floundering about without the slightest connection with other objects, are but a few of the incongruities we could name, and which the museum of the School of Design amply illustrates.

Although the evil of our present anomalous position has arisen from too exclusive an admiration of the structures of other nations and past ages, we are very far from being of those who would discourage their careful examination by the architectural student. Of the immense value of such a study, of its being rightly directed, one of the surest aids to successful progress, not the shadow of a doubt can be entertained. "Nescire quid antea quam natus sis acciderat, id est semper esse puer." And we may surely be permitted to derive instruction from the experience of others. But the study of the edifices of olden days has been uniformly perverted from its right aim,—that of progression. It has necessarily tempted modern architects to go back instead of forwards; to transcribe simply what those ancient men did, instead of moulding their tangible thoughts into the requirements of our civilization.

In just the same manner that a course of classic literature is an aid to original composition, so, an examination of fragments of antiquity should lead, not to a tame copying of them, but to an evolution of new forms. To invent, to create a novelty, it is necessary to know what has been done before; and such knowledge is the surest aid to successful progress. If we wish to comprehend the present time, it is absolutely essential first to examine into that which is past. "Ex nihilo nihil fit." Invention is commonly the consequence of understanding what has been previously accomplished, and advancing upon it. What is the profound observation of Lord Bacon in the first book of his "Advancement of Learning?" "Antiquity deserveth that reverence that men should make a stand thereupon, and discover what is the best way; but when the discovery is well taken, then to make progression."

Therefore, we would say, still study, still delineate the models of other days. But do more than simply this,—and go beneath the exterior surface. Consider the principle involved, the frame of mind of the designer, the object to be attained, and the feeling expressed. What has been done is the foundation on which to erect the future superstructure. "The man who follows another," said Michelangelo, "always is behind; but he who boldly strikes into a different path may climb as high as his competitor." The road to originality begins in the old paths. He who would tread the new, must gain while in the old a more capacious, comprehensive spirit; an appreciation of that which is now required from the observation of what was then essential; and a loftier ambition, which neither will nor can content itself with moving perpetually round in the same weary contracted circle.

That little progress is to be anticipated if the old materials at hand are neglected and set on one side, the reader will doubtless allow. But we go much further; for we are certainly of opinion that a skilful combination and merging together of the details of the styles now existing, and a melting of these down into a fitness for modern purposes is easier far than the creation of an entirely new system, owing nothing to any which preceded it.

That such endeavours have not hitherto been highly successful is the last and weakest reason for the inference that the effort must always fail. Has it ever been seriously and perseveringly attempted? Approaches, most clearly indicating the possibility of success, are everywhere abundant. Is there nothing of the horizontal principle opposed to the vertical in the long parallel lines of the river front of the New Houses of Parliament? The whole edifice is, in fact, Gothic architecture, Italianized in the mass. Show an architect, ignorant of the structure, a block plan, omitting, of course, the buttresses, &c. and he would instantly conclude from its uniformity that the elevations were in classical architecture. The style termed Elizabethan is, unmistakably, an effort to combine two distinct and opposite principles. We perceive the same attempt in the melée of Classic, Romanesque, Gothic, and Arabian forms at Venice. One of the greatest proofs of the skill of the mediæval architects is the manner in which the different periods of their art are blended together with, considering the difficulties of the task, comparatively little appearance of patchwork and confusion; one style rising progressively out of the preceding one. The principles of Norman architecture are diametrically opposed to those of Perpendicular Gothic; yet we see in the same structure, Norman, Early Pointed, Decorated, and Perpendicular melting into one another, and plainly telling us a master-mind only is requisite to make the most opposite qualities agree. There is a church at Paris, that dedicated to St. Eustache, in which a still further effort is made. Forms derived from Gothic, nay, the very tracery of the windows, are moulded into Italian details, and the *coup d'œil* is striking in the extreme. The same remarks may be made of the church of Santa Zaccaria, at Venice, and of many others. Sir Christopher Wren may be quoted as countenancing by his practice the theory we are advocating; for whence are derived his lofty and often elegant Italian steeples but from an appreciation of the beauty of Gothic spires? Many more examples might be cited to show that our proposition is not wholly visionary; but we deem it hardly needful to do so. We have thought long and much on the subject, but have utterly failed to discover a single argument countenancing the idea that design is now exhausted, and a new style an Arcadian dream. It has been seen that many systems have been directly derived from those which preceded them, and it is therefore indisputable that another may yet arise on the bases of ancient methods now so closely and so tamely copied. What we propose is, not to confine ourselves to one of these, but, by making use of all, produce a style embracing within itself the beauties and advantages of the others.

It is a system of eclecticism we advocate. Once it was applied to painting, and the noble school of the Carracci was the result. So late as the sixteenth century, Agostino Carracci thus illustrated the idea of his brother Ludovico, of selecting the more prominent characteristics of the various great masters, and combining them together:—

* Prolegomena to the Instauratio Magna.

† Thus ably defined by Payne Knight:—"Principles in art are no other than the train of ideas which arise in the mind of the artist, out of a just and adequate consideration of all those local, temporary, or accidental circumstances upon which their propriety or impropriety, their congruity or incongruity, wholly depend."

* Civil Architecture.

" Chi farsi un buon pittor brama e desia,
Il disegno di Roma abbia alla mano,
La mossa coll' ombrar Veneziano,
E il degno colorir di Lombardia.
Di Michelangiol la terribil via;
Il vero natural di Tiziano;
Di Correggio lo stil puro e sovrano,
E di un Raffael la vera simmetria.
Del Tibaldi il decoro e il fondamento,
Del dotto Primaticcio l'inventare,
E un po di grazia del Parmigianino:
Ma senza tanti studi e santo stento,
Si ponga solo l'opre ad imitare
Che qui lasciocci il nostro Niccolino."*

Whether this is really feasible as applied to painting is another question. It was, however, believed in by the Carracci, and many great painters were produced under their mode of study. So in architecture, something may be gleaned from all the styles: the beauties which exist in one are vainly sought for in another. From Egypt, massy sublimity may be learnt; from Greece, lofty conception, purity of form, and chastened elegance; from Rome, splendour and magnificence; from the Moors, airy grace, the combination of geometric forms and harmonious colouring; and from Gothic architecture, impressiveness, and the perfection of symbolism.† EDWARD L. TARBUCK.

ON LINEAL MEASURES.

As most of the readers of the *Builder* have to use, professionally, measures of length, such as chains, tapes, rods, rules, and scales, it may be useful to offer a few remarks upon the errors to which these measures are liable, and to show the necessity there is for having a proper standard by which to test them from time to time.

In 1841, I submitted some facts upon this subject, and my evidence is printed as follows in a blue-book of that date:—

"Knowing the negligence of surveyors in checking their chains, I borrowed one that had been tried about a year before in my office, and which had been used for that period in the service of a civil engineer. Upon trying it with my standard, I found it 13 inches too long. The person who had used it, said he knew twenty other chains then in use that must be just as bad. The effect of this error would be this: if I possess a square mile of land, or 640 acres, this surveyor, with the chain in question, would report the contents to be 619¾ acres, so that in selling my land at, say only 30*l.* an acre, I should lose 615*l.*

In the colonies this evil is very serious; for in setting out county and parish lines by chains of different lengths, the discordance and confusion among the details is endless, and will at some time cause dissatisfaction. In 1820, the Solicitor-General to a colony, and the agent of a nobleman who had possessions there, informed me that the discrepancies in the admeasurements were enormous.

The chain to which I have alluded was one of the best kind, as far as could be judged by the eye. The error was chiefly caused by the stretching of the wire itself, not one of the links or rings having opened: there was nothing in its appearance to indicate that it was incorrect, except that it was a little worn; and the surveyor would have continued to use it in that state as long as it would have held together. He had never been instructed that during a survey a chain should be frequently checked and adjusted by a standard.

Strange as this may appear, I believe it to be a common case. Surveyors in general have no proper standards by which to check their chains and measures; and as regards actual practice, it will be found that most measures can be traced to no better authority than to carpenters' rules, no two of which agree."

But, now let me show what dependence is to be placed on a carpenter's rule. I have just applied to a foreman of carpenters, and requested him to produce his rule. He immediately began to extol his measure, by saying that it was one of the best make, tipped with steel, and was the one he used for all his work; and the argument he mainly insisted upon to prove its accuracy was, that he had used it for years. I saw that to seem to doubt his rule, was a sorer and more personal matter than I supposed. Now, I said, if I were to ask you to make me a ten-feet rod, how would you proceed? He said he should set off the dimensions from his rule with a knife, and was sure the rod would be true. Very well, I replied: now do me the favour to set off five feet on my table as accurately as you can by your rule, and make the knife-marks all plainly on the table. When done, I gave him a correct five-feet rod, and his chagrin was great, when he found that his five-feet set-off was full one-tenth inch too short as compared with true standard measure.

A surveyor, too, having got into some serious disputes about the dimensions of iron-work, brought his two-feet pocket-rule to me, to try it by my standard, so as to back up his statements by being able to declare that his rule was correct. He should have thought of this before. He found it was just one-twentieth inch too short, though it was a best ivory rule, bearing the name of a celebrated maker, and cost a guinea.

Hence, if I were to employ either this surveyor or foreman to purchase 100 feet frontage of ground, and to erect a building upon it, I should have some inches less in frontage than I pay for, while the whole measure and value of the building would be in excess; and it was only last week I had an opportunity of seeing that one-eighth inch had to be filed off each end of an iron casting, in consequence of an error of one-fourth inch, occasioned by discrepancies among rules that had been employed. In this country we have no legal standard measure of length, the legal standard yard having been burnt when the Houses of Parliament were destroyed by fire, in 1834; and, though twenty years have elapsed, the Standard Commissioners have not yet, I believe, laid the result of their labours before Parliament.

Practically, the only standard lineal measures that exist, are the dividing-engines and brass-cutting-patterns of the principal mathematical instrument-makers. But these are of metal; and unless the metal is at the agreed standard temperature of 62° Fahrenheit, the dimensions they give are not correct, unless in transferring their divisions to metal of the same kind at the same temperature.

Hence all measures of ivory or wood will be found a visible quantity too long or too short, unless they happened to be cut at the standard temperature, and are compared with brass scales at that temperature. It seems only reasonable that all who profess to measure lands, buildings, or work of any kind, should be bound by law to have a correct standard by which to check their measures, and be liable to penalties if found incorrect. There appears no reason why lineal measures should not be under the surveillance of law as well as measures of bulk and weight. But now comes the question, as to the best kind of standard measure that should be adopted for general use, and that really is, upon the whole, best adapted for common practical purposes, and such as the law might safely patronize, if not enforce.

If you were to apply to any principal mathematical instrument-maker for a standard yard scale, he would probably recommend a brass scale graduated on the edge, and strengthened and held down flat by an edge-bar, about an inch deep, fixed along the middle. The price would be about eight guineas.

But I am prepared to prove that such a scale as that described is not fit for the purposes in question, while the kind which I proposed to the Commissioners sixteen years ago, at the price of only one-fourth of brass scales, answers perfectly, as time now enables me to prove. What I then submitted as my opinion, I am now entitled to affirm as a fact. The annexed diagram, to about a one-third scale, shows one end of the standard I propose. The bottom-piece, or scale, is about 41 inches long, 3 inches broad, and ⅝ inch thick, with an edge-bar 1¼ inch deep. The material is straight-grained yellow pine, as full of turpentine as can be selected; and it is essential that the edge-bar shall be cut from the side of the same piece as the bottom or scale. The edge-bar is attached by six strong brass screws from under the bottom-piece. On one side of the scale there are four brass return-plates, and on the other side are two similar plates, all let in flush with the wood, and securely screwed with brass screws; the four on one side being for 3 feet, and the two on the other for a length of 5 links of the land-chain. When finished, varnished, and suffered to stand by for a few weeks, the feet and links are struck off from the dividing-engine, taking an opportunity, when the temperature of the air is 62°, so as as to get upon the wooden scale the true legal measure. A small plate of ivory or brass should be screwed on each side of the edge-bar, one stating that the measure is feet, the other links, with the temperature noted. Such a standard as this is strong, not liable to be put out of order, and is adapted for the office or workshop, for testing the various measures employed.

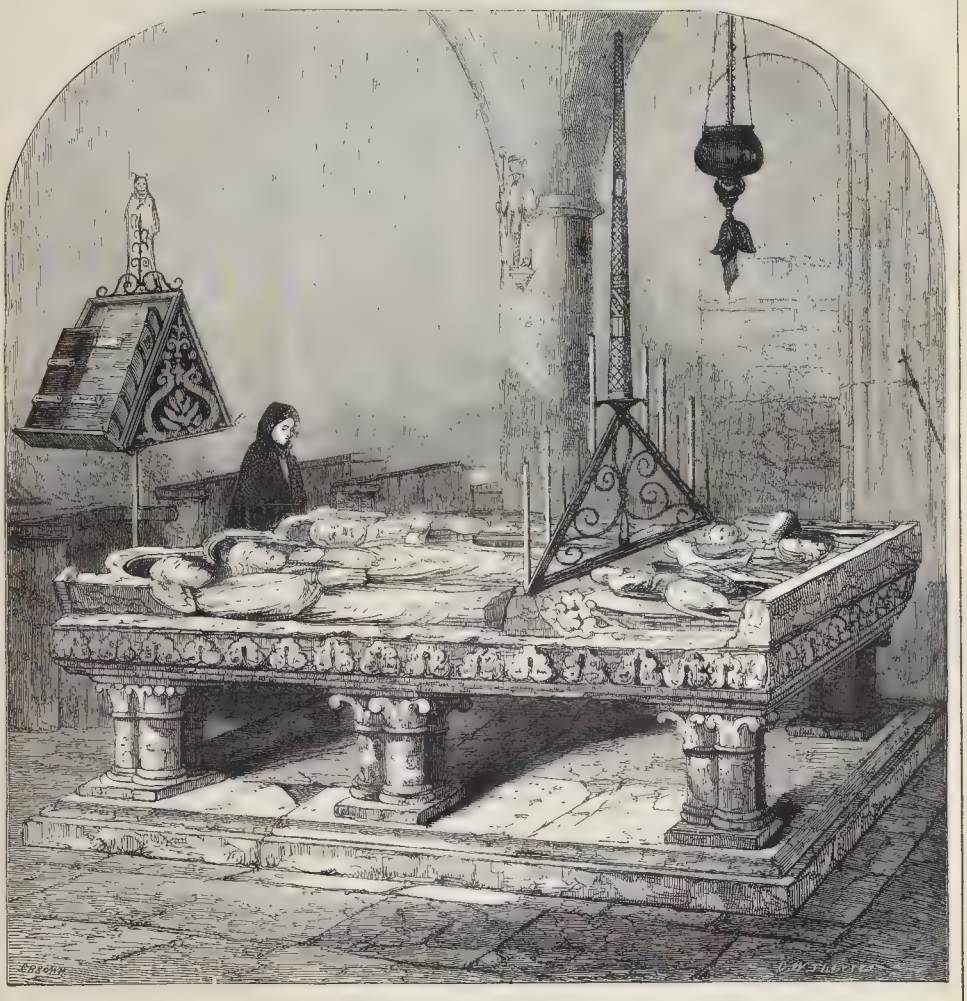
But now come a host of objections. Some will say that the measure will shrink with the heat and swell with the damp, and all the instrument-makers will declare, of course, that there is nothing like brass.

All such objections I deny. I have had three of these measures in use seventeen years, and I have tried them with the best standards, under all changes of weather, and they never vary. I have never been able to detect any change in the whole length of the five links that could be seen by a magnifyer that enables me to read a vernier to $\frac{1}{1000}$ inch; and if no error can be seen with such a glass, in a length of more than 3 feet, I call that perfection. I know that even such a quantity as $\frac{1}{1000}$ inch can be seen under a microscope, and measured by a micrometer; but when that quantity is at the end of 3 feet, it is quite another question. I have asked experienced instrument-makers whether they would venture to swear that one 3 feet scale is $\frac{1}{1000}$ inch longer than another, and they smile, and shrug, and say they would not. Hence, for all practical purposes, it may be assumed that the wooden standard never varies; and I therefore urge that it is better for common purposes than brass, which is ever changing, and requires corrections to be applied, by means of a thermometer, before a true length can be ascertained, allowing ·0000105 for every degree above or below 62° Fahrenheit.

It is curious to see how rapidly a 3 feet brass scale will expand. A scale of this length, if placed under micrometer microscopes, and one end be held down by a warmed weight, the division at the other end will be seen to creep along like a thing alive. Not so the wooden measure, which remains true, in spite of heat, cold, or moisture. It is of no use to discuss about the effects of hygrometric action upon wood full of turpentine, when no such effect can be seen by a good magnifier; while we hardly dare to breathe on a brass scale, if we wish to be very exact in our dimensions.

Thus many learned persons appear to be straining at gnats and swallowing camels, while landed proprietors are losing their acres, and people are everywhere unwittingly cheating one another and themselves, for want of a cheap and accurate unit of measure for the government of work.

Though it is of no advantage to me whatever, either directly or indirectly, I would mention that a great many of these wooden measures have been made by Messrs. Troughton and Simms. H. B. S.



TOMB OF THE THREE MARTYRS, IN THE CHURCH OF SENS, PICARDY.

THIS peculiar and beautiful tomb, remarkable for its picturesque arrangement, is of the Norman Transition period. We have given this example of the architecture of Picardy as it is useful to study the feeling which has guided the artists of different countries and to select from the best qualities of each. B.

THE BEAUCHAMP ALMSHOUSE FUND.—The late Earl of Beauchamp bequeathed 60,000*l.* for the erection and endowment of almshouses at Newland, in Worcestershire, for the benefit of infirm agricultural labourers. Nearly two years having elapsed since the decease of the late earl, the poor of that county are anxiously expecting the fulfilment of the testator's intentions, the land having been granted for this purpose a twelvemonth ago by a deed of conveyance enrolled in the Court of Chancery.

* Thus translated by Mr Wornum.—"He who wishes to be a good painter, let him acquire the design of Rome, Venetian shade and action, and the dignified colouring of Lombardy; the terrible manner of Michelangelo, the natural truth of Titian, the sovereign purity of Correggio's style, and the symmetry of a Raffaelle, the decorum and fundamental knowledge of Tibaldi, the invention of the learned Primaticcio, and a little of Parmigiano's grace; but without so much toil and study, he need only imitate the works which our Niccolino has left us here."

† To be continued.

TOMB OF THE THREE MARTYRS, PICARDY.

ANNUAL GENERAL MEETING OF INSTITUTION OF CIVIL ENGINEERS.

On the 19th instant, Mr. James Simpson, president, in the chair, the annual report of the retiring council was read. In the course of it, the leading events of the political world, and particularly the occurrence of war, were alluded to, as having tended to arrest the progress of civil engineering works, whilst, on the other hand, the mechanical engineers had found ample employment in supplying engines, machinery, vessels, tools, and stores of all kinds for the use of the army, the navy, and the mercantile service. Allusion was also made to the novel expedient of sending out a corps of "navvies" and other artizans to lay, as it was expressed, "the first section of the railway from Sebastopol to St. Petersburg." The production of the Lancaster rifled cannon, and of the wrought iron ordnance, by engineers, and the investigation, for the Government, by a member of the Institution, into the manufacture, boring, and firing of rifles, were noticed.

The few large works of civil engineering now in progress in Great Britain were then mentioned, and the onslaught of the Home Secretary upon the smoke and other nuisances of the metropolis was noticed, with the view of directing to these points, as also to the general sanitary questions and to the sewerage of the metropolis, the attention of civil engineers, whose advice would be found trustworthy, and who would discriminate between sound systems and the nostrums and baseless schemes which were now ignorantly thrust forward.

The extension of the feeding mains of the principal water companies to points high up the river, beyond the influence of the tidal range, and, in two cases, the removal of the entire establishments, was noticed; and it was maintained, that it was now only necessary to afford such an ample supply of water, at a sufficient elevation, on the north side of the metropolis, as would enable the sewers to be constantly flushed, and that their contents should be delivered at positions so low down the Thames, as to preclude the necessity for the mechanical lifting of the sewage, excepting for a limited area, and for those portions under high water-mark: and thus the metropolitan river might be rendered as pure as was practicable for a stream flowing amidst habitations and necessarily subject to some degree of pollution.

A slight sketch was given of the progress of railways on the Continent, in the colonies, and in America. The successful opening and subsequent progress of the Crystal Palace at Sydenham, was noticed; and assistance was asked for the approaching "Exposition" at Paris, in 1855. The council had given their best aid to the Government in the matter, and it was specially impressed on members to send only such models and specimens of works and machinery as should sustain the high character of the British engineers and manufacturers.

The following gentlemen were elected to fill the several offices in the council for next year:—

James Simpson, president; G. P. Bidder, I. K. Brunel, J. Locke, M.P., R. Stephenson, M.P. vice-presidents; J. Cubitt, J. E. Errington, J. Fowler, C. H. Gregory, J. Hawkshaw, T. Hawksley, J. R. McClean, C. May, J. Penn, and J. S. Russell, members; and H. Heasman, and Sir J. Paxton, M.P. associates.

PROVINCIAL NEWS.

Norwich.—A new chapel has been erected in the Surrey-road, at a cost of 2,500*l.* It is a plain but spacious building. There is no gallery, and the seats are all open benches.

Bury St. Edmund's.—A painted memorial window, by Clutterbuck, has been placed on the south side of the communion-table in St. Mary's Church here. The subjects of the six principal compartments are,—in the lower tier—"They brought young children to Jesus;" "Whosoever shall do the will of my Father which is in heaven, the same is my brother, and sister, and mother;" and "Gather up the fragments, that nothing be lost;"—in the upper tier—"Mary at the feet of Jesus;" "Jesus and Martha" ("I am the resurrection and the life"); and "The Raising of Lazarus." The tracery contains the four Evangelists and four major Prophets. At the foot is the inscription.

Diss.—Mr. L. Taylor, of Starston and Diss, some time since determined to erect a building in this town, which should be ornamental, and also capable of being devoted to various public uses, investing it in the hands of trustees, for the benefit of the inhabitants. The erection is nearly complete, but not quite fit for holding the corn market, to which its principal hall is to be devoted. It stands near the centre of St. Nicholas-street. The entrance is by a stone portico, in the Grecian Ionic style of architecture, the columns being after the model of the Temple on the Illissus—the entablature after that of Minerva Polias, at Priene. The front doors are decorated: they open to an entrance-hall lighted by a lantern, and having three doors entering into the hall, which is 77 feet long, 42 feet wide, and 27 feet high. The floor is of small blocks of oak and sabica woods, laid in diaper pattern. The roof is of "Hartley's" patent glass, in lanterns running along iron girders, weighing about three tons each. The girders are 42 feet between their bearings: they are laid on sheets of gutta-percha, which, acting as non-conductors of sound, are said to prevent the noise often observed when a note is struck in unison with the girder. The ceiling is of ground glass, divided into compartments, the light being thus equally distributed, without glare or inequality arising from side-lights. The walls are strengthened with pilasters of Parian cement, intended to be polished. A cornice surmounts the whole, the lower member of which is perforated for the admission of fresh air, the heated air escaping from the lanterns and beneath the ceilings, the whole ventilation being regulated as desired. The decorations to the doors are of "Ransome's patent stone." The hall is heated by two stoves, with descending flues; and, for evening purposes, is lighted by gas-lights on brackets. Connected with the hall are two rooms, each 33 feet by 20 feet, which may be approached by a separate entrance. One of these Mr. Taylor intends granting to the town as a reading-room and library, if the hall is used as a market. The design is by Mr. Geo. Atkins, jun. of Diss. The carpenter's work was executed by Messrs. George Atkins and Son; the stonework, by Mr. Farrow; the bricklaying, by Mr. J. Rout; and the plumbing, glazing, and gas-fitting, by Mr. J. Aldrich. Messrs. Ransome, of Ipswich, supplied the iron girders of the roof; and the wood blocks of the flooring were cut at their steam-mills.

Rye.—The new cemetery chapels, which are now finished, are very much alike: that for the Established Church is something larger than its fellow, and has a low steeple and bell. The style is Early English. They were built by Messrs. J. Judge and Son, of this town, builders. The architect was Mr. Charles Smith. Shrubs are now being planted round the borders of the ground.

Southampton.—The new graving-dock at this port was opened for general business on Monday week. The water in the dock was pumped out in less than three hours: at the commencement there was a depth of 25 feet 4 inches. The dock is 400 feet long by 88 feet wide, and is capable of taking in the largest ships ever yet built. It has been built at a cost of 65,000*l.* under the superintendence of Mr. Alfred Giles, the engineer of the Southampton Dock Company. The pumping-engines, of 112-horse power, were constructed by Messrs. Maudslay, Sons, and Field. At the opening, Mr. Giles, the engineer, according to the *Hampshire Advertiser*, gave a dinner to the foremen and principal persons engaged in the work.

Prees.—On 2nd inst. the foundations of a new church at Faul's-green, for an outlying district of the parish of Prees, Shropshire, were begun to be dug by the eldest son of Viscount Hill, on the day of his attaining his majority. The church is to be built by subscription, Lord Hill giving the site and the bricks, and building the parsonage-house.

Torquay.—The Torquay branch of "The Metropolitan Association for Improving the Dwellings of the Industrious Classes," has just commenced operation, and the contractor for the first building—a dwelling for single men—is hard at work clearing the site. Accommodation will be provided for fifty-two unmarried men, each of whom will have a separate sleeping compartment, 8 feet by 4 feet 6 in. with the use in common of a general sitting-room, kitchen, lavatories, offices, &c.: apartments for a curator, to superintend the establishment, are provided, with the last-mentioned rooms on the ground-floor, the upper stories being devoted wholly to the dormitories and lavatories. The style of the building is Italian, executed with the native limestone, hammer-dressed, pointed with blue lias. Red brick is largely used as a decoration in the quoins and door and window dressings. The roof is covered with red Italian ribbed tiles, and is surmounted with a lantern and lief ornaments. The architect is Mr. Edward Appleton, of Torquay. The same artist is endeavouring to vary the style of the villa residences of the neighbourhood by substituting the natural face of the stone of which they are constructed for the usual stucco covering, and using red tile instead of the wonted slate. A villa built in this manner, in which a campanile, detached on three sides, forms a main feature, is now fast drawing to completion in a prominent situation a short distance from the town.

Wolverhampton.—It is intended to fit the Lion Hotel premises, recently purchased in North-street, so as to afford accommodation for the corporation and their officers, and also for the borough magistrates. Mr. Henry, the new town surveyor, has prepared plans, according to which a council chamber, 43 feet by 24 feet, is to be constructed on the first-floor, and on the same floor there are to be offices for the town clerk, committee rooms, and a fire-proof chamber for the corporation records. It is contemplated, at a future time, to erect police barracks in the yard at the rear of the building. The cost of the immediate alterations will not exceed from 400*l.* to 500*l.*

SIGHTS AND SCENERY.

Theatre Royal, Haymarket.—The scenery in the opening story of Mr. Buckstone's pantomime, "Little Bo-peep," is particularly good, and will sustain the reputation of Mr. William Callcott. We would especially mention the Grove of Golden Laburnums, with a festival of shepherdesses, the whole as elegant and artistical as any could desire. In the last scene of the introduction, the Fairy Conservatory in Arcadian Regions, suspending machinery is used to carry fairies up the curved trunks of trees, and a very glittering piece of colour is the result. In the harlequinade there is a view of the Greek Court, in the Crystal Palace, very creditably painted by Mr. O'Connor. The pantomime altogether is very good, and well entitled to a large share of public favour.

Royal Olympic Theatre.—Mr. Wigan has produced a fairy extravaganza by Mr. Planché, called "The Yellow Dwarf and the King of the Gold Mines." For some years past it has happened that this author's extravaganzas have been set forth with scenery of such great beauty, as to enable those who were tired of praising the dramatist through a lengthened series of unvarying "hits," to attribute the success rather to the painter than the writer. On the present occasion, he has little to thank the painter for: to speak the truth, some of the scenes are positively discreditable to the management, and yet the piece is a great triumph, and all the town will have to go and see it. "Ay," some of the good-natured friends will say, "but then he has a great actor in Mr. Robson!" True, he has a great actor, and he has written for him a great part, fitting him to a nicety, and thus achieved, on the first night, one of the most complete and legitimate successes that we have ever seen. Miss St. George and Miss Ormonde contributed to the result by giving with point and vigour the witty things put into their mouths, and deserve their share of the praises.

Burford's Panorama.—As usual, Mr. Burford, in conjunction with Mr. Selous, has added his contribution to the amusements of the season. It takes the shape of a spirited and exciting representation of the Battle of the Alma, where our gallant soldiers first showed to a breathless world that the old spirit of England still animated her sons. The view is taken from the sloping ground, directly in front of the principal Russian redoubt, at the moment when the guards are driving all before them; but of course a number of incidents which followed each other are here represented as occurring simultaneously. Captain Turner's battery is being brought into action: Sir Colin Campbell is cheering on the historical 42nd: Sir George Brown, brave old fellow, is on the ground, and is about to shout "23rd, I'm all right:" Lieut. Lindsay and Lieut. Thistlethwaite are waving the rags of their colours over the redoubt; and Lord Raglan and Sir John Burgoyne are giving the necessary orders. Many of the heroes shown in the view are now no more, but their names will live for ever in story.

The Globe, Leicester-square.—Mr. Wyld, always ready to meet the times, has added to the very important geographical collection in Leicester-square a large model of Sebastopol, by means of which, and the lecture periodically given, a knowledge of the position of the allies may be readily attained. It is to be wished that the model had stretched as far as Perekop: it would then have served to make more evident the great strategical error that has been committed by the allies in not occupying the entrance to the Crimea. Some of the lectures given in the Globe are very interesting.

We must postpone notices of the *Lyceum*, *Princess's*, *Polytechnic*, &c. until next week.

DISCUSSION ON THE WORKS OF LIVING ARCHITECTS.

The apparently eager desire to detect any little flaw or *lapsus linguæ* in Mr. Ruskin, whether in his words or writings, and even in matters which bear no direct or practical reference to the important subject of his present well-directed labours, suggests, I think, a suspicion that truth and the advancement of the science of architecture in this country are not their object. How is it, for example, that the architects and their friends allow their own private feelings so often to stand in the way of the advancement of their art? How is it possible to improve if we are not to refer to the works of existing architects as examples of what we are to avoid or follow? If Mr. Ruskin finds fault with such curious buildings as are rising up around us, such as the Army and Navy Club in St. James's-square, or the new edifice in Leicester-square; and if he has exposed what he considers the mistaken principles which have guided the architect of the new Houses of Parliament (in reference to the calculation of the distant effect of ornamentation, and many other respects), how ought he to be met by the architects of these buildings? Why, surely, by their honestly showing the correctness or admitting the errors of their principles, but not by vituperation. But I am persuaded of better things of Sir C. Barry, and I feel sure he would be the last man to countenance the preposterous idea that a building which has been paid for by the nation must not be criticized for fear of "hurting the feelings," as it is called, of the architect! I have been led to make these remarks from noting the spirit which apparently guides your correspondents, "M. A." and "Vindex." A wise man will surely be the first to hold out the right hand of fellowship to *any one* from whom he is likely to get a useful *hint* even; and as Sir Joshua Reynolds said I think of a good painter—he will listen even to the remarks of a child. No great artist will ever allow personal considerations to interfere with the object of his heart, the discovery of the *truth*; and he will ever be on the look out to suspect himself. For these reasons I am at a loss to understand what your correspondent, "Vindex," means, when he speaks about an "unprovoked and inconsiderate *attack* upon Sir C. Barry!" Is it not, sir, folly to confound politeness towards individuals with honesty towards the science

they profess? At this rate we can make no advancement at all. I am about to become a subscriber to the Architectural Museum in Parliament-street, and trust that no feeling unconnected with the direct advancement of science will be allowed admittance.

R. W.

Notices of Books.

VARIORUM.

The first number of a work on the Ecclesiastical Antiquities of Scotland, entitled, "The Kirk and the Manse," has just been issued by Messrs. Fullarton and Co. Its object, we understand, is to give pictorial illustrations of all the most interesting parish kirks in Scotland, many of which, although hidden in sequestered spots, beyond the route of the every-day tourist, are, nevertheless, characterised by architectural beauty and picturesque effect. The few cathedrals which Scotland possesses, are also to be embodied in the work: concise accounts of them will be given, and a general introduction to the whole subject will make us acquainted with the origin and progress of the present national church. The author is the Rev. Robert Fraser, M.A. minister of St. John's, Edinburgh; and the illustrations will be from original sketches, executed in tinted lithographs, from the studio of the Messrs. Macpherson, of that city. More precise drawings than those in the first are desirable for future parts.——"The Australian Keepsake for 1855,"* contains forty views of landscape scenery, illustrating Sydney and Port Jackson, New South Wales, and is interesting as giving a good notion of the condition to which that important country is arriving. The engravings are of various degrees of merit, but the majority of them are very creditable: for example, the view of Sydney from the Old Point Piper-road, the Gap South Head, North Head, from Vaucluse, and the Nobbies. Some descriptive letterpress would make the book more interesting to English buyers.——"Murray's Official Hand-book of Church and State," appears this year much enlarged, and on a plan altered so far that the more ephemeral matters, such as ever-changing lists of office-bearers in royal households, members of the House of Commons, authorities civil and military, ecclesiastical, judicial, &c. have been withdrawn from the present volume, and printed separately, as a sort of appendix, which may either, we presume, be bound up with the more permanently interesting matter of the Hand-book itself, or kept separate altogether. Certainly the incorporation of these lists had advantages in the way of reference, but there can be no doubt that the more permanent value of the Hand-book as an article of sale is thus enhanced, In the present revised and enlarged edition of the Hand-book, the information is of course brought down to the present date, and much of it is now collected for the first time, and from many sources, by its compiler, Mr. S. Redgrave.——In "Murray's Railway Reading," now before us, we have a reissue of "Notes from Life," by H. Taylor, and of the celebrated "Rejected Addresses" of the Smiths, James and Horace. An interesting acknowledgment is made in the advertisement to the twenty-second edition of this latter little volume on the part of Mr. Murray, namely, that the copyright, which had been originally offered to his deceased father for 20*l.* and refused without even looking at the MS. was purchased by that same gentleman in 1819, after others had reaped the profits of no less than sixteen editions, for 131*l.*! and the authors themselves intimate that they sold their interest in that, and the reissue of another little *brochure*, for 1,000*l.* after reaping half the profits on various editions, issued in quick succession by Mr. Miller, of Covent-garden, who had had the *nous* to appreciate that merit which many other publishers,—with less excuse than Mr. Murray, who did not give it even a chance of recognition or discovery,—were too obtuse themselves, or too much addicted to mere name-worship, to discover in authors then too obscure as writers to have yet had any *name* to worship. And the "Rejected Addresses" are not the only Sybilline leaves which acute publishers have "rejected," and, it may be, are now rejecting, and will yet reject, to the after troubling of their pecuniary consciences, and to their sore repentance. Even the most hasty glance through the "Rejected Addresses" cannot but excite surprise at their rejection by publishers. These "Addresses" literally teem with *negotiable* fun quite sparkling with auriferous and argentine lustre. Perhaps the best joke *in* the "Rejected Addresses" is one which, as a true Hibernian might say, *isn't in them* at all. We mean the doubtless intentional omission of burlesques on Campbell and Rogers, which deceived Lord Jeffrey, as an Edinburgh Reviewer, into the idea that these two were the very authors of the "Rejected Addresses," themselves, for he says, "We marvel why he [the fictitious or nominal author] has shut out Campbell and Rogers from his theatre of living poets, and confidently expect to have our curiosity in this and in all other particulars very speedily gratified, when the applause of the country shall induce him to take off his mask." There is all the more probability that this exclusion of two eminent poets was intentional, inasmuch as it was not the first practical joke of a similar kind passed off by the two talented authors of the "Rejected Addresses," who on another occasion humbugged some one—Dr. Busby, if we mistake not—into the idea that they were the members for Old Sarum, and another "rotten borough" the name of which we do not at this moment remember.

* Published by Sands and Kenny, Melbourne and Sydney; and Sands and Son, London.

Miscellanea.

Alleged Blundering in the Civil Engineering and Architectural Department of the Admiralty.—The Admiralty civil engineers and architects are now coming in for their share of that criticism and abuse which would appear to fall to the lot of every department of Government in this country. "From the mud-machine in the Thames," it is said, "to the kicking caisson at Devonport from the concrete docks at Woolwich to the lamentable failures at Keyham," everything is wrong, and nothing ever will be right, we dare say, till the critics be themselves installed in the offices which it seems to be thought so desirable to have vacated. Smart alliterations and antitheses have often more to do, unhappily, with public complaints than positive blunders. It is quite possible, for all that we personally know, that the caissons may be kicking and the concrete docks a lamentable failure only in the columns of our daily contemporaries. We are told however, in other quarters, that one of the most important objects of the new docks at Keyham—the power of taking in ships at least at high water of any tide—has failed (by a few inches), and that too at a time of great emergency; and that at Sheerness, where many improvements and alterations have taken place in her Majesty's yard, a boiler factory that was progressing favourably, was lately brought to a stand-still in consequence of the foundation giving way at both ends of the building. A portion of the brickwork, &c. was, it is said, pulled down to lighten it. There was to be a Government survey made of it. As the ends, however, had been so far finished, it was thought they would be allowed to remain a month or two longer, to see whether the foundation gives any more: if not, there will be no occasion to pull it down. The contractors, it is said, have done all according to contract.

Gas and Water at Birkenhead.—The manager of the Birkenhead Gas and Water Company, says a Liverpool paper, is charged by Mr. H. Gough with refusing to allow him a supply of water, though he wishes to pay for it, "the reason of my refusal," he says, "being no other than that I am about to show to the inhabitants of Birkenhead that gas can be supplied at 2*s.* per 1,000 cubic feet, and much better than our company supply to you at 5*s.* 10*d.* per 1,000 cubic feet. But, to effect this, I require a supply of water, and, under the present management, my object is to be churlishly, if not unjustly, defeated." He calls upon the inhabitants to overturn such a system of monopoly.

The Portsmouth Dockyard Foundry.—Great interest was excited lately in the twisting of a new crank shaft for the *Simoom*, 18, iron screw ship. The great principle and advantages of the Nasmyth hammer were, it is said, very apparent, and its *striking* powers were put forth to great purpose. The crank shaft weighed about eight tons, and it was necessary to twist it at right angles. In ten minutes the shape required was accomplished. Government are said to require at this foundry a Nasmyth's hammer double the size of the present one.

The Battle of the Locks.—In the Court of Queen's Bench on Thursday week, the case of Parnell and Puckridge *v.* Goater, was heard. The plaintiffs in this action were the locksmiths, in the Strand, and the defendant was foreman to Mr. Chubb, of St. Paul's Churchyard. The action was brought to recover damages for a trespass in taking the plaintiffs' lock from its place in their stand at the Crystal Palace, and making a key to it, and also for slander and a libel published by the defendant, alleging that he (defendant) had fairly picked the plaintiffs' lock, and that the plaintiffs had dishonestly refused to pay the defendant a reward of 200 guineas, according to their public promise. The defendant pleaded the general issue, and that he had taken the plaintiffs' lock, and made a key thereto with plaintiffs' leave and license. As to the counts for slander and libel, he pleaded in justification that he (defendant) had fairly picked plaintiffs' lock, and that they had dishonestly refused to pay him the 200 guineas. The jury found for plaintiffs on all the three issues, and gave 30*l.* damages.

War Appliances.—Government, it seems, have contracted for ten miles of portable railway, to be used between Balaklava and Sebastopol. We do not know what connection this may have with the patriotic contract of Messrs. Peto and Co. to form a railway there at cost price. The line alluded to is said to have been contracted for with Mr. Crosskill, of Beverley, twenty or thirty of whose men are to assist in laying it down. No fewer than 2,000 navvies, it is said, are being forwarded by detachments of 150, *viâ* Austria, by Messrs. Peto and Co. The men are to have 5*s.* a day, with board, lodging, and clothing. A number of carpenters have been hired by Government to assist in erecting the wooden huts sent out and being sent. They are to receive 2*l.* 6*s.* a week, with rations. It has been proposed to render these huts fire-proof, by means of some secret composition, to be absorbed by the planking. Would not saturation with a hot silicate of lime, or of potash, effect this important and desirable object? A correspondent of our own, Mr. W. J. Tait, suggests the dispatch of some millions of small canvas sand-bags, with which, when filled with a few pounds weight of sand or earth, various useful purposes might be served in our camp before Sebastopol, such as shielding these huts themselves, or protecting the ground line of tents from wind, by being built up round them. It has been questioned whether such huts as those sent will be a sufficient protection from the cold on the heights, in which case these sand-bags might be useful, especially on their northern sides. A Lincoln founder undertook to supply the portable steam-engine required in the formation of the railway, in ten days. It has been proposed to make use of balloons as aeriel outlooks, whereby the positions of the enemy might be discovered, and advantage taken of the intelligence thus obtained. Another kindred idea is the employment of the electric light by night, to show where the enemy are at work, while the allies are in darkness. We often hear of war medals, worn on the breast, by chance protecting the life of the wearer from some deadly shot. General Canrobert is said to have been so protected by a medal presented to him by the Empress Eugenie. If such be the fact, why should not a whole breast-plate of such medals, or of some substitute for them, be worn by every British soldier? Why, indeed, is not every vital organ protected against musket and rifle balls in some such way as this? It once was so, although to a cumbrous extent, but a mere *facing*, as it were, of scale armour, would protect the valuable lives of our limited troops, and by help of good revolvers, rifles, and other appliances, offensive and defensive, an immense accession, virtually, might be made to the British army, which would more than make up for the want of great numbers.

Machine for Raising Water, and for Drainage.—A machine, which seems to be merely a centrifugal pump in principle, though it may be with some modification of its ordinary form in this country, is said to have been invented by a M. Piatti, and to be now in course of trial at Port St. Nicholas, in France. The water is raised by the centrifugal steam pump through a cone-shaped vessel, open at top.

Wrought-iron Ordnance.—In the *Builder* recently, it was said, "We hope to see Mr Nasmyth's steam hammer forthwith hard at work on wrought-iron ordnance, so as to double or triple our field artillery power by comparison with its present cumbrous weight of cast-iron." Now, with reference to the above, it is humbly submitted that the force of a charge of powder in projecting a ball must always be considered as minus the force wasted in the recoil of the gun, and, consequently, if the dead weight of metal in the piece be reduced, the quantity of powder must be increased, in order to project the ball the same distance: nor is this all, for in a light recoiling piece, the line of collimation would be thrown aside, and the precision of the aim defeated. H. B. S.

THE TELEGRAPHIC SYSTEM OF THE UNITED STATES AND CANADA.—In the States, says Mr. William Chambers, three kinds of telegraphs are employed—those of Morse, House, and Bain; the difference between them being mainly the method of indication. Unitedly, the various telegraphic systems pervade the entire region between the Atlantic and Mississippi, and from Nova Scotia and Canada to New Orleans. The number of miles of telegraph in the States is now about 20,000, and in Canada, and other British possessions, from 2,000 to 3,000 The wires are carried along the sides of the railways, across fields and rivers, through forests, and in cities they may be seen crossing the streets and the tops of the houses. From New York, two lines proceed south to New Orleans; one by way of Philadelphia, Baltimore, Washington, and Charleston, making a length of 1,966 miles; the other runs from Cleveland, on Lake Ontario, by Cincinnati and Nashville, being a length of 1,200 miles. So small a price is charged, that there is a large amount of miscellaneous correspondence, besides market and stock intelligence. A message of ten words, for example, may be sent from Washington to St. Louis—a distance of 989 miles—for 1 dollar 20 cents. Under 200 miles, the charge is about a cent. per word. On some lines as many as 700 messages are sent in one day. So rapid is the transit, that the news brought to New York by a European steamer, at eight o'clock a.m. has been telegraphed, by way of Cincinnati, to New Orleans, and the effects there produced on the market returned to New York by eleven o'clock—being a circuit of nearly 4,000 miles in three hours.

THE RAILWAY SYSTEM OF THE UNITED STATES.—The railways, now an extraordinary feature of the United States, are rapidly developing the latent resources of the country. Mr. William Chambers gives an account of them, from which we extract the following particulars:—In October, 1853, the length of railways in actual operation in the States was 14,194 miles, nearly one-half in the New England States and that of New York. They are seen there radiating in several directions from every city, interlining and crossing and sending out branches. In Massachusetts alone, in the early part of 1853, there were about 1,200 miles of railway—a large number for a State with one-third of the population of Scotland. At the same period, New York had 2,123 miles; Pennsylvania, 1,244 miles; and Ohio, a recently-settled State, 1,385 miles. Large extensions have now been made in all; and the entire railway system of the United States at the present moment may be said to comprehend nearly 18,000 miles, with several thousand miles in course of construction. It is anticipated that, previous to 1860, there will be completed at least 35,000 miles. Already gigantic efforts have been made to unite the chief cities on the Atlantic with the Valley of the Mississippi and the vast regions westward and northward. Joined to the lines now constructed, and forming in Canada, the north will be thoroughly laid open for settlement; and connected with a line proceeding southwards from Illinois, traffic will be opened upon the one hand with Mobile and New Orleans, and on the other, with the regions bordering on Lakes Huron and Superior. The next steps are to reach Oregon and California, and are now engaging earnest consideration. The most urgently called-for of these lines is that to California, by a pass through the Rocky Mountains; and when this is effected, it will be possible to reach San Francisco in four days from New York, and by the additional means of steam-vessels, to go round the world in three months. Traversing from the borders of the Mississippi to San Francisco, a country 1,600 miles in breadth, the line cannot be undertaken without liberal aid from the Government.

FALL OF PART OF THE WEYMOUTH AND PORTLAND NEW GENERAL MARKET-HOUSE.—A fall of some portion of these works took place on Saturday week. A local paper states that "this casualty has resulted from sources over which the utmost foresight and the most skilful appliance of constructive science could have exercised no control." That part of the work which has given way is a section of the brick arches which form the vaulting of the cellarage to the market-house. This work is strengthened at the intersection of each arch by a longitudinal cast-iron girder, of some 10 or 12 inches in thickness, and one of these girders, it is said, was made of iron which had not been skimmed before casting, and hence, being unable to support the superincumbent brickwork, yielded to the pressure, snapped, and the fall of the adjacent arches was the result. The same paper speaks of "malpractices which were imputed to Mr. Goodyear, and which he satisfactorily refuted on Monday week" before the local council. The brick piers were supposed to be constructed on a wrong principle. The clerk of works, Mr. Malpas, it is added, showed that the specifications are being carried out to the letter, and that the charges brought against the builder were unfounded.

HARTLEPOOL.—The plans deposited under the title of "Hartlepool Great Float and Railway," propose to occupy 80 acres on the margin of the slake; to extend the old tidal harbour considerably inland, and over the site of the present sluices; to deepen the whole harbour by dredging, and extend the jetty pier out to the line of the whole pier on the Hartlepool side. The float is to be excavated to 12 feet below low-water. The engineers of this scheme are Mr. James Abernethy, C.E. London; and Mr. Thomas Meik, C.E. Sunderland. Mr. Meik last year published a plan, under the title of the "Hartlepool Bay Harbour of Refuge," which embraced the above scheme, together with the enclosure of the bay by two great piers running out into deep water on one side from the Heugh, and on the other over the Long Scar Rocks. Plans for such piers, slightly modified, have also, it seems, been deposited by the commissioners of the pier and port, prepared by their engineer, Mr. Rendell, C.E.

CONTRACTS AND STAMPS.—A correspondent mentions that in the Court of Exchequer recently, an action was brought by a builder to recover the sum of 12*l.* 6*s.* 8*d.* due for extra work not comprised in the contract. No stamp was affixed to the document, and Mr. Pollock, the associate, called the attention of the judge to that fact. The verdict was given in favour of the plaintiff, who had to pay 2*s.* 6*d.* for the stamp, and 10*l.* for penalties, out of 12*l.* 6*s.* 8*d.* the amount awarded him by the jury.

PURIFICATION AND REGULATION OF GAS.—Mr. J. Chisholm, of Holloway, has recently patented a combustion of the red ochery substances found mixed with peat and its subsoil, with hydrate of lime, or the mixed hydrates of lime and magnesia, obtained from magnesian limestone, and employing it in the dry gas purifier. This patent is pretty clearly indebted for its suggestion to the recent Wakefield patent, under which clay and lime are combined for the same purpose. Such bastard patents are but too common. No sooner does some man of ingenuity strike out anything new or hopeful, and manages to secure it by patent, than forth comes some other "invention" exceedingly like it, and slavishly based upon it, with just enough of difference, and just avoiding the particular nature of the meritorious invention so far, as to enable the plagiarist to seize an exclusive advantage to himself, by *riding* the original patent for his own behoof. No such secondary or imitative patent ought to be allowed.——A patent has recently been obtained by Mr. David Hulet, of High Holborn, for an apparatus for regulating the supply of gas to the burners, consisting of a cast-iron vessel, with inlet and outlet passages for the admission and emission of the gas. The inlet passage is covered by a valve—the edge of which dips into a groove containing mercury. The valve is attached by a rod to a short cylinder—the lower part of which is open, and also dips into mercury. This cylinder covers and surrounds the inlet, and, as the gas flows through it, exerts an upward pressure, which adjusts the supply. ——Messrs. W. and J. Clibran, of Manchester, have also patented an apparatus for a similar purpose, in which the regulation is effected by a slide, or disc valve, and a small gasometer.

VIVIFICATION OF GASLIGHT.—A good few years since, it was suggested in the *Builder*, that a coil of platinum wire in the flame of a gas-light might promote the perfect combustion of the gas, and increase the vividity of the flame. A French patent was taken out for an apparatus of this kind, but we have heard no more about it of late, till now that we learn that the invention was recently exhibited before the Liverpool Polytechnic Society, by a Mr. Jackson, who, it is said, showed that by merely inserting a slightly-twisted platinum wire over the orifice of the burner, and within the gas-flame, its illuminative power was largely increased. Experiments, it is added, have since been made at the Liverpool Gas-works, when it was found that a saving of 17 to 20 per cent. was effected by the "new apparatus." Platinum, while so infusible as to submit to white heat without melting, is also in such circumstances incorrodible by oxygen, and hence it does not burn away as iron or even copper would, while yet it accumulates an intense heat, which excites any hydrocarbonaceous gas that might otherwise escape unburnt, to perfect or total combustion. Doubtless, even platinum will waste in time by volatilization alone, although of a very fixed nature; but it is probable that any cost arising from its waste will be as almost nothing compared with the economy or the brilliancy of light thus produced. Copper wire, however, might be tried, and but for its waste, we do believe would serve much the same end: it could be cheaply replaced. Should either platinum or copper be really found useful to the end suggested, burners could easily be made with a small hole drilled into them for the insertion of the bit of twisted wire required; or one end of the wire, perhaps, could even be merely twisted round the neck of the burner.

THE CANADIAN TIMBER TRADE.—The *Liverpool Times* alludes to the important influence of the Grand Trunk Railway of Canada upon the Canadian timber trade. In Brompton, Canada East, south of the St. Lawrence, on the St. Francis river, six miles beyond Sherbrooke, a block of lumbering mills has been recently completed by C. S. Clark and Co. of Portland. The mills are of gigantic dimensions, and are built in the best manner throughout. The block is 334 feet in length. At a low estimate these mills, it is said, will saw, in a season, working day and night, 20,000,000 feet of long lumber, and two trains a-day will be required to get this lumber to Portland, whence it will be shipped to all parts of the world. Thus, with unfailing water power, in the midst of the exhaustless forests of Canada, with such mills within easy and desirable access to the principal seaport of Maine, who, it is asked, can measure the success of this enterprise?

A BRICK.—The *Athenæum* says, "Architects will be glad to hear that a new process has been invented at Birmingham, which makes brick nearly as hard as stone. One of the new bricks sustains a weight of 2,625 lbs.: a common hand-made brick breaks at 645lbs." There must be some mistake in the figures. A very poor brick will carry more than the heaviest weight here named. We have seen a brick withstand a pressure of 50 tons (112,000 lbs.) without a squeak.

HINDS' HOUSES IN SCOTLAND.—Lately some stir has been made on the subject of improving the dwellings of farm-servants in Scotland. Mr. William Chambers, the journalist, who a few years since purchased the estate of Glenormiston, in his native county of Peebles, has had built four cottages for the servants of a farm-tenant on this estate, of which an account appears in the *Edinburgh Courant*, whence we extract the following details:—Each cottage comprises a kitchen or common sitting-room, and garret over it with two fixed bedsteads. The row of four dwellings is built of ordinary rubble, stone, and lime, and slated. The walls are rough-cast. The lintels door-steps, chimney-tops, &c. are of red sandstone. The roof has zinc roans and iron tubes to draw off water into gratings beneath communicating with tile-drains; and round the outside of the walls the ground is causewayed with small stones from the Tweed in a slope towards gutters, with gratings for slops opening into built drains 9 inches square, at the upper end of which a rill of water gushes from a pipe in an adjoining bank, and supplies the cottages as well as washes the drain. Each cottage has one sash-window in front, besides a pane of glass in the door to light a small passage into the kitchen, which is protected by an inner door, outside which is a closet for coal, pots, &c. The kitchen is floored with square yellow tiles, and plastered on walls and ceiling. It contains two bed-spaces and a store-closet shelved, lighted, and ventilated. The fireplace contains a fixed grate, and the garret is supposed to be heated by the fire of the kitchen, which is the only fire the inmates usually can afford. The length of the whole row, outside measurement, is 94 feet 6 in.; breadth, 20 feet 3 in.; size of each kitchen, within, 16 feet, by 12 feet 3 in.; height of kitchen, 8 feet; size of closet off kitchen, 8 feet 6 in. by 8 feet; size of garret-room, 12 feet square, including beds; height of wall outside, from ground to edge of slates, 10 feet 6 in. The estimated cost of the whole, exclusive of some special expenses incurred in levelling, &c. was about 300*l.* or 75*l.* each cottage. Mr. Chambers acted as his own architect. Lord Traquair, Mr. Tennant, of Glen, in Peebleshire, and other proprietors, are also improving their farm-cottages.

TENDERS

For an engine-shed and gas-house at Three Bridges station, for the London, Brighton, and South-Coast Railway Company:—

John Jay	£1,456 0 0
Joseph Davey (Lewes)	1,217 17 0

TO CORRESPONDENTS.

Proposed Competition at Lille.—In reply to numerous inquirers, the particulars, we are informed, will be found at Mr. Dolman's, New Bond-street, London, in the course of a few days.

"A. B. H." "F. O. W." "C. G." "R. J. J." "S. H." "L. and B." "P. T." "J. L. P." "J. J." "R. J. H." "W. P." "A. S." "W. C. S." "E. C. R." "J. P." "Architectural Exhibition." "One who would have subscribed," "F. W." "J. J." "W. S." "W. S. H." "I. B. jun."

ADVERTISEMENTS.

TO TINMEN AND BRAZIERS.

A GOOD WORKMAN, accustomed to the country trade, whose character will bear investigation, can hear of constant work, by applying to Mr. J. GATWARD, High-street, Hitchin, Herts.

TO IRONMONGERS' ASSISTANTS thoroughly conversant with the builders' and black iron-mongery —Apply by letter only to C. C. Office of "The Builder."

TO PARENTS AND GUARDIANS.

TWO ARCHITECTS, in partnership, holding appointments, and having several public buildings in course of erection, have a VACANCY for a PUPIL.—Apply by letter, to A. B. 16, Waterloo-place, Regent-street.

TO FIGURE CARVERS.

WANTED, a first-rate FIGURE CARVER. One used to Gothic work preferred.—Address, stating terms, to JANE and LEWIS Lower Loveday-street, Birmingham

WANTED, immediately, a good THREE-BRANCH HAND. Must be a good plumber. Constant employment for a first-rate workman, who will find the s worth his notice.—Address, V. C. J. Office of "The Builder," stating references, age, and where last employed.

TO CONTRACTORS' SUPERINTENDENTS.

WANTED, a thoroughly-experienced and active person to SUPERINTEND the erection of extensive ENGINEERING WORKS, comprising principally earthwork and brickwork — Address, stating full particulars, where last engaged, age, and salary required, to A. Y. Z. Office of "The Builder."

WANTED, an active, intelligent YOUNG MAN; he must have some knowledge of the construction of iron roofing, and be practically acquainted with the sheet-iron and zinc trades.—Apply, by letter only, with testimonials, &c. to Messrs. TUPPER and CARR, 3, Mansion-house pla-e, City.

WANTED, a Person as PLUMBER, PAINTER, and GLAZIER; stating wages required; and a YOUTH as APPRENTICE to CARPENTER; A premium required.—Address, H. Office of "The Builder."

TO ENGINEERS AND SURVEYORS.

WANTED immediately, a Person who can MAKE SURVEYS and PLANS to a large scale, for sanitary purposes He must be a g. od surveyor and draughtsman A person having a knowledge of sewerage and waterworks will be preferred Applications, stating terms, with copies of testimonials, to be addressed (post paid) to Mr. T. CURLEY, C.E Mitre Hotel, Hereford.

WANTED, an ENGAGEMENT in an ARCHITECT'S OFFICE, by a Gentleman, who is a good draughtsman, &c and understands specifications and the usual routine of an office.—Apply, A. R. X. 7, Upper Park-street, Greenwich.

TO ENGINEERS, IRON-FOUNDERS, &c.

WANTED, by a Young Man of good character, about 23 years of age, a SITUATION as ASSISTANT DRAUGHTSMAN, where he might have an opportunity for further improvement. He can draw quick and neatly, and is conversant with machinery. A moderate salary will be required.—Address, W. T. care of Mrs. C. Harry, Mount Charles, St. Austell, Cornwall.

TO BUILDERS AND PLUMBERS.

WANTED, by a Young Man, aged 29, a SITUATION as PLUMBER, PAINTER, &c. Has been fourteen years in the business. Address, H. K 30, Paris-street, Lambeth.

TO ARCHITECTS AND BUILDERS.

WANTED, by a first-rate practical PLUMBER, a SITUATION.—Experienced in hydraulic pressure, to fix baths, circulation showers, washing-basins, sinks, &c. with hot and cold water —N.B. No objection to the country, or to go abroad. —Address, BOSS, 1, Maidenhead-court, Falcon-square.

TO BUILDERS

THE Advertiser, aged 22, wishes to obtain EMPLOYMENT as ASSISTANT to the above. He is at present carrying out some large buildings, which are his own designs, for the gentleman with whom he is engaged, and to whom reference can be made. He is practically acquainted with brick-laying and carpentry. A moderate salary only required. Reference also to previous employers, and ample security given. Address, B. B. F. care of W. Austin, 431, Oxford-street.

TO ARCHITECTS

THE Advertiser, who is a good DRAUGHTSMAN, and has been accustomed to prepare specifications, plans, elevations, details, and superintend the erection of buildings, is open to an ENGAGEMENT —Address, G. G 35, Michael's-place, Brompton

TO BRASS-FOUNDERS, GAS-FITTING MANUFACTURERS, AND METAL MERCHANTS

CLERK or REPRESENTATIVE.—WANTED, a RE-ENGAGEMENT, by a Young Man of nine years' general experience. Respectable reference and security. —Address, A. J. care of Mr. Coles, Newspaper Office, 38, Kingsgate-street, High Holborn.

TO ARCHITECTS AND SURVEYORS.

A GENTLEMAN, well qualified in the profession, is desirous of obtaining a SHARE of an extensive and lucrative PRACTICE, and of which he would wish to take the most active part. No objection to any part of the United Kingdom References can be given, and will be required. —Address C. E. Gresham Club, King William-street, City.

TO ENGINEERS, PATENT AGENTS, &c.

A FIRST-RATE MECHANICAL DRAUGHTSMAN, SURVEYOR, LEVELLER, &c. wishes for an ENGAGEMENT, temporary or permanent.—Please address to D. S. L. Mr. Storer's, Homœopathic Chemist, Newgate-street.

A PRACTICAL MAN, of business habits, is desirous of an ENGAGEMENT to SUPERINTEND the erection of BUILDINGS or repairs. No objection to the country. Unexceptionable references.—Address, Y. Z. 16, Goswell-road, Islington

TO BUILDERS AND OTHERS.

A BUILDER'S and GENERAL ACCOUNTANT offers his services to make out the accounts and balance the books of builders and of other tradesmen requiring such assistance —Street-warrity and punctuality may be relied on.—Address, A. B. 20, Luton street, New North road, Islington.

TO ARCHITECTS, &c.

A CLERK of the Works of many years' standing, with first-rate references, requires an APPOINTMENT. All his works for many miles of town, and can have a public character, and his testimonials are undeniable Address Y. Y. Mrs. Stokes, Housekeeper, No. 2, Charlotte-row, Mansion-house, City.

TO BUILDERS, PLUMBERS, &c.

A YOUNG MAN, who has a practical knowledge of Plumbing, Painting, and Glazing, and is a good Plumber, wishes to ENGAGE himself for a permanent Situation in town, or within twenty miles of town, and can have a good reference.—Address A. B. 17, Queen-street, Edgware-road, London.

TO BUILDERS AND OTHERS.

A YOUNG MAN is desirous of a RE-ENGAGEMENT in a BUILDER'S OFFICE, who has filled a similar situation with London builders for seven years. References unexceptionable. —Address R. R. 12, Albert-road, Sydenham.

A THOROUGHLY Practical Man, of business habits, wants a SITUATION as FOREMAN in a JOINER'S SHOP. He is a good draughtsman, and accustomed to the general discipline amongst workmen. The most unexceptionable references can be given as to ability, sobriety, &c.—Direct A. B. 16, Gosw-ll-road, Islington, London.

AN ARCHITECTURAL DRAUGHTSMAN, aged 22, well versed in mathematics, and who has a good knowledge of surveying, levelling, mapping, and taking out quantities, desires a RE-ENGAGEMENT. Salary very moderate. —Address, A. G. Messrs. Hookham's Library, Old Bond-street, London.

PARTNERSHIP.—WANTED, a PARTNER in a BUILDING and CABINET TRADE. Capital required, 3,000l.—Apply to Messrs. RYLAND and MARTINEAU, Solicitors, Birmingham; or to Mr. R. A. PARKER, Solicitor, 30, Moorgate-street, London.

REDUCED PRICES.—EDWARD SIMMS (late William Cleave), of Wilton-road, Pimlico Basin, beg to acquaint Builders and the Trade that he has now on hand, at his Manufactory (the first of its kind ever established), a very large Assortment of Dry and Well-seasoned OAK and DEAL PREPARED FLOORING BOARDS and MATCH BOARDING of all sorts, from ¼ inch to 1½ inch thick, planed to a parallel width and thickness, and at greatly Reduced Prices. Also, Timber Deals, Oak Planks, Scantlings, Sash Stiles, Mouldings prepared by Machinery, Laths, &c.—Apply at E. SIMMS'S (late W. Cleave's) Flooring Manufactory, Wilton-road, Pimlico Basin.

A CORN TIMBER WHARF, Canal-bridge, Old Kent-road.—RICHARD MAY respectfully begs to inform the Building Public, that all Baltic Goods are dearer and American Spruce and Pine are cheaper.

He asks special attention to the following, which are now on sale:—

2,000 Pieces of Timber.
20,000 Planks, Deals, and Battens.
30,000 Prepared Floor Boards, of all lengths and sizes.
5,000 Rough Boards.

The Building Public are invited to inspect this Stock, which will be sold at greatly reduced prices.

All kinds of English and Foreign Timber kept in Stock. A "Price Current" for this month can be had on application.

N B. The extensive Saw-mills are now in operation.

IMPROVEMENT in WOOD MOULDINGS. J. SIMMONS'S improved WOOD MOULDINGS are acknowledged by all who have tried them to be the best ever produced by machinery. J. S. in returning thanks to his friends and customers for the liberal patronage already bestowed upon him, begs to call their attention to his present stock of Mouldings now on hand, feeling assured that one trial will insure a continuance of their favours. Price lists can be obtained on personal application, or by letter, enclosing six postage stamps, the cost of postage.—Steam Works, 26, North Wharf-road, Paddington.

N B. Builders supplied with all kinds of Marble and Stone Chimney-pieces, at prices lower than any house in London.

ALFRED ROSLING begs to inform his Customers and the Building Trade generally, that he is enabled to allow a discount of 15 per cent. upon his list prices for Mouldings. A large stock of dry flooring at low prices.—South-wark-bridge Wharf, Bankside.

MOULDINGS by MACHINERY at REDUCED PRICES.—ARCHBUTT and ARKINSON beg to inform their customers that the list per cent. allowed heretofore charged on the prices in their list is now removed. Seasoned flooring at extremely low prices.—St. Pancras Saw Mills, Chalcot-street, Old St. Pancras-road.

TIMBER WHARF, SAWING, PLANING, and MOULDING MILLS, Belvidere-road, Lambeth.—The General Wood-cutting Company beg leave to inform their customers that the temporary additional charge of 20 per cent. on their mouldings as advertised on the 8th of November last is removed, from this date, consequently, the prices will be those inserted in their Moulding List, as heretofore.

1st January, 1854.

By Her Majesty's Royal Letters Patent.

VENEERS CUT for the TRADE (by Knife only), by the PATENT VENEER-CUTTING MACHINE by which process a hundred per cent. benefit is guaranteed upon the ordinary method of cutting veneers.—For particulars of prices, and specimens of work done by the machine, apply to J. CHACK, Sole Patentee, Veneer cutting Works, 44, Robert-street, Chelsea, adjoining the King's road Saw-mills.

STAINING DEAL TO IMITATE ALL KINDS of WOODS It requires NO SIZING, and will stand the extremes of the weather. Prices 6s. per gallon. Specimens for W NAYLOR'S Stains may be had at the Factory, 44, James-street, Oxford-street; also Manufacturer of Improved Knotting and Decorative Varnishes.

TARPAULINS for COVERING ROOFS during Repairs. SCAFFOLD CORD and every description of ROPE used by Builders upon the lowest terms. Marquees and temporary Awnings on sale or hire. Orders per post receive the most prompt attention.—WILLIAM PIGGOTT, 194, Fore-street, City, Manufacturer, by appointment, to her Majesty's Honourable Board of Ordnance.

TERRA-COTTA.—Statues, Statuettes, Vases, Tazze, Busts, Consoles, Bas-reliefs, &c. by J. M. BLASHFIELD, of Millwall, near the West-India Docks Station, and sold at No 1, Bracton-place, Paddington Saddin, can be prices and designs can be obtained. Examples of Terra cotta, by J. M. Blashfield, are to be seen at the Crystal Palace, Sydenham, in the Mineral Court. The statues of Australia, Venus de Medici, and the colossal Tritons in the gardens at Sydenham, are in Terra-cotta, so are the fountains at the Roman Court, and the roof of the Alhambra Court. The Pompeian roof is of Terra-cotta and r-l cement combined. Since the execution of these works, J. M. Blashfield has taken a patent for an improvement in the manufacture of Terra-cotta and pottery, whereby larger and more even surfaces can be produced, and a higher degree of vitrification attained.

PATENT SOLID SWISS PARQUETERIE. This beautiful, unique, economical, and elegant description of Flooring, so extensively used in Paris and other continental cities, is now introduced into this country: an extensive assortment of specimens and patterns commencing at 1s per foot super. Together with every particular of its cost and adoptation, can be obtained of Mr. BURT, 3, Charlotte-row, Mansion House; or of Messrs. ARROWSMITH and CO. 80, New Bond-street.

GUTTA PERCHA TUBING.—May be buried for years, without injury, and it is therefore valuable for conveying water, chemicals, &c. and is peculiarly valuable for liquid manure, drain, and soil pipes. Being a non-conductor, it is not affected by the frost of winter or drought of summer, like metal or leather. Its strength is extraordinary: the small half-inch diameter tubing having resisted a pressure of 25 lbs. on the square inch, without bursting. The smaller sizes may be had in coils feet, and the larger in perfect lengths. The joints are easily made As a conductor of sound it is most valuable for conveying messages in lieu of bells. ELECTRIC TELEGRAPH WIRES INSULATED WITH GUTTA PERCHA. The GUTTA PERCHA COMPANY, Patentees, 18, Wharf-road, City-road, London.

HANCOCK'S PATENT VULCANIZED INDIA-RUBBER TUBING, HOSE-PIPES, WASHERS ENGINE-PACKING, both round and flat, and SOCKET-RINGS for Hot-water-pipes. Vulcanized Rubber Door-springs, and Solid Round Rubber Cord of all sizes of any length. Billiard Cushions and Rubber Strips cut to any pattern for bagatelle tables. Dividedness of superior make, and improved Vulcanized Rubber Suppy-pipes for ditto. Vulcanized Rubber, in sheets, from three to four feet wide, and of any thickness. Air-beds, Pillows, and Cushions, inflating Portable Baths, Invalid Cushions, and Articles of this kind made to any pattern to order.

N.B. All communications and orders punctually attended to, addressed to the Manufactory, JAMES LYNE HANCOCK, Goswell-mews, Goswell-road, London

THE VIEILLE MONTAGNE ZINC MINING COMPANY'S PURE PATENT WHITE ZINC PAINT is unequalled for permanency of colour, hardness, and brilliancy of surface; it is unaffected by sulphureous or any other vapours or emanations. Being completely innocuous and free from the pernicious effects of white lead, it may be employed in all apartments whilst in use without any inconvenience to the inmates.

The greatest caution is recommended to avoid any spurious compounds that might be sold at cheap rates as Pure Oxide of Zinc If any adulteration has taken place in the oxide, either in consequence of impurity in the material primarily made use of to produce it, an imperfect mode of production, or by mixing with the oxide certain substances calculated to give it increased weight, it then produces a very inferior instead of a very superior paint, and the economy realised by the purchasers of such oxides becomes a very expensive result to the owner of the premises painted with them

The VIEILLE MONTAGNE'S ZINC OXIDES, dry or ground in oil, are sold with the VM mark—In Hull, by Messrs. BLUNDELL, SPENCE, and CO.; when ground and dry, by Messrs. T. B. MORLEY and CO.; and by the Company's Grinding Agents. In London, Messrs. CHARLES DEVAUX and CO. Wholesale Agents, 62, King William-street, City; JACK and BRADY, Wholesale and Retail Agents, 8, Tottenham-court, New-road, and 89, Upper Thames-street, City. In Manchester and Liverpool, by Messrs. LAWFORD and CO. of 49, Norfolk-street, Liverpool, who are also acknowledged Painters to the Company for Zinc Paints, and undertake painting shops, warehouses, dwelling houses, &c. In Leith, by Messrs. R. ANDERSON and CO. Timber-bush. Dry OXIDES and PAINTS, in kegs of 14, 21, and 28 lbs. and upwards, to be had of the Company's Agents in Birmingham, Newcastle, Glasgow, Bristol, Plymouth, Portsmouth, Norwich, Ipswich, Poole, and the Isles of Jersey, Guernsey, Man, and Wight; also in Dublin, Cork, and Belfast.

The Company also employ an acknowledged painter in London, who will undertake any description of painting with Zinc Paint by contract.

For further particulars, apply to the Company's General Agent in London, Mr. SCHMOLL, 12, Manchester-buildings, Westminster.

THE VIEILLE MONTAGNE ZINC MINING COMPANY beg to inform the public that they have appointed Messrs. T. and S. KNIGHT, of Great Suffolk-street, Southwark, as their painters, who will be ready to execute any description of painting and decorating with the Pure Patent White Zinc Paint.

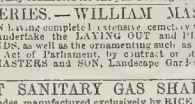
HUBBUCK'S PATENT WHITE ZINC PAINT The PERMANENT WHITE of the Ancients, previously confined by its cost to the use of the artist, is now, by Hubbuck's Patent, reduced to the price of White Lead

The principal characteristics of HUBBUCK'S ZINC PAINT are—Economy, Health, Beauty, and Durability.

Builders and Contractors find Hubbuck's Paint the only one adapted to all their purposes; possessing the great desideratum of economy, combined with its high excellence as a paint, it ranks alone. Contractors effect a saving of 25 per cent by using HUBBUCK'S ZINC PAINT.

HUBBUCK and SON feel it necessary a caution should be circulated against imitations of their Paint These manufactures, containing frequently pernicious ingredients, are baneful to health and worthless in use, whilst the inexperience of these imitators in the combination of pigments is evidenced, not alone by the coarse grainy appearance, but also by the deficiency of that body in their produce, which is known to the painter to be all-essential. That an imposition be not practised, therefore, notice that the cask is marked with the name of the original manufacturer, thus—

HUBBUCK——LONDON——PATENT.



If not so marked, the reason may be inferred.

Every information in the circular to be had of THOMAS HUBBUCK and SON, Paint and Varnish Manufacturers, Upper East Smithfield (opposite the London Docks) London

LOANS.—Persons desirous of obtaining ADVANCES, from 50l. to 250l. upon approved personal security, repayable by easy instalments, extending over a lengthened period, are invited to examine the principles of the BRITISH MUTUAL SUBSCRIPTION LOAN ASSURANCE CLASSES. Prospectuses, reports, and every information may be obtained on application at the British Mutual Life Office, 17, New Bridge street, Blackfriars. Rules, 6d. each copy, or 5s. per post. CHARLES JAMES THICKE, Resident Secretary.

SMOKE PREVENTION.—(OFFICE of REFERENCE for PATENTEES and the PUBLIC, 17 and 18, Cornhill.—NOURSE and CO having several British and Foreign Patents for the above purpose, some of them being peculiarly simple and effective, are ready to undertake the prevention of smoke in furnaces, boilers, and coppers of all kinds and sizes. An experienced practical engineer will, if required, superintend the work. Licenses granted to engineers, furnace builders, and others.

VENTILATION.—PURE AIR.

With single pulley, from 6s. each; with leading pulley, from 8s. 6d.

These Ventilators are arranged that the requisite quantity of air may be admitted for the due ventilation of an apartment without the slightest draught being felt by the occupants; and as they are placed in the external wall, their action is not impeded when the house is closed for the evening, at which time a constant supply of fresh air is most required —HAYWARD, BROTHERS, sole Manufacturers, 19a, Blackfriars road, and 117, Union street, Borough; and of all respectable Ironmongers and Builders &c

PRIDEAUX'S SELF-CLOSING FURNACE VALVE.—This invaluable invention has had a practical success unparalleled. More than one hundred have been sent out during the last six months, and are now working satisfactorily, whilst the saving of fuel is so considerable, that the cost becomes a profitable investment rather than an outlay. One hundred references obtainable at the Office of the Smoke Prevention Company, 3 Charing-cross.

N.B. Royalty commuted for one year's saving of fuel.

CEMETERIES.—WILLIAM MASTERS and SON having completed extensive cemetery works, are prepared to undertake the LAYING OUT and PLANTING NEW GROUNDS, and the orientating such as are closed by the recent Act of Parliament, by contract or otherwise—WILLIAM MASTERS and SON, Landscape Gardeners, Canterbury.

PATENT SANITARY GAS SHADES.—These Shades, manufactured exclusively by RICE HARRIS and SON, Islington Glass Works, Birmingham, on an entirely new principle, effectually destroy the effluvia and smoke which have hitherto made the use of gas so objectionable in dwelling-houses and offices where cleanliness and freedom from smell are of importance. They are simple and inexpensive, and may be had at the Works in a variety of forms adapted to the style of fitting, or the taste of purchasers; also at Mr. JOHN SHORTON'S, Crispin-street, Spitalfields, London.

TO ARCHITECTS, BUILDERS, CONTRACTORS, &c.

HARTLEY'S PATENT ROUGH PLATE GLASS,

1-8th thick, or 2 lbs. to the foot; 3-16ths, or 3 lbs.; and 1-4th, or 4 lbs. to the foot, for

RIDGE AND FURROW ROOFS, GREENHOUSES, RAILWAY STATIONS, ENGINE SHEDS, MILLS, MARKET HALLS, AND PUBLIC BUILDINGS GENERALLY.

eing universally admitted that Glass in Roofs of a permanent character should not be less than one-eighth of an inch thick, weighing two pounds to the foot, Messrs. JAMES HARTLE and CO. have directed their attention to the manufacture of a description of

ROUGH PLATE GLASS, THAT COMBINES SIZE AND STRENGTH WITH ECONOMY OF COST.

The PATENT ROUGH PLATE is manufactured in sizes expressly for Ridge and Furrow Roofs, giving a span of from 3 to 18 feet, at a price not exceeding weight for weight that of common Crown Glass. Not being transparent, flaws are unnecessary, and when used in Greenhouses never injure; its NON-TRANSPARENCY and strength render it eminently suitable for the Glazing of Conservatories and Roofs of all kinds; also Factories, Warehouses &c. for which purposes it is supplied in squares of all sizes, from 8 by 6 inches and upwards.

For further information apply to Messrs. JAMES HARTLEY and Co. Wear Glass Works, Sunderland.

N.B.—The Patent Rough Plate is supplied at a much lower cost than the common Rough Plate. May 1, 1851.

GLASS.—HARTLEY AND CO.'S GLASS TARIFF NEWSPAPER

Will be forwarded Gratis, on application, "post-paid," to

Messrs. JAMES HARTLEY and CO. Wear Glass-works, Sunderland; or Purfleet Wharf, Earl-street, Blackfriars, London.

THOMAS MILLINGTON

Begs to inform ARCHITECTS, BUILDERS, and the Trade, that he supplies the following articles of the best quality and at the same time upon the lowest terms:—

ENGLISH AND FOREIGN SHEET GLASS, PLATE, PATENT PLATE, PATENT ROUGH AND FLUTED PLATE, MILLED SHEET LEAD,

PATENT PIPE, LEAD, IRON, AND BRASS PUMPS, AND WATER-CLOSETS,

Genuine White Lead, Colours, Varnish Brushes, and every article in the Trade.

FOR PRICE SEE ADVERTISEMENT FIRST SATURDAY IN EVERY MONTH, OR UPON APPLICATION AT THE WAREHOUSE

87, BISHOPSGATE-STREET WITHOUT, LONDON.

REVOLVING SAFETY WOOD and IRON SHUTTERS—SNOXELL, Patentee, 98, Regent-street, and at his Steam-works, 15, Gd-street. These shutters have fully borne out their superiority over other revolving shutters for security, durability, and simplicity. Estimates can be given to noblemen whose mansions are fitted herewith, and numerous large establishments where some are fixed measuring upwards of 400 square feet in one shutter, and which are opened and closed in a few moments with the greatest possible ease, without the use of machinery. The Patentee manufactures Brass Sash Bars, Stall Board Plates, &c.

J. FISHER, 70, YORK-ROAD, LAMBETH, formerly shop foreman to Messrs. Lawrence, Shop-front Builder and Manufacturing Joiner. 1½ and 1¼ four-panel doors from 6s. each; 1½ inches and frames from 7d. per foot; 2 inch ditto from 8d. Wind-ws fitted with Gribbon's Patent Hinges for cleaning, painting, &c. All kinds of joiners' work estimated for, according to design.—A List of Prices sent on application.

J. MILLS (late Shop Foreman to Messrs. Lawrence and Sons), JOINER to the TRADE, 7, Princes-street, Stamford-street, Lambeth. Sash-frames, fittings, staircases, &c. Well-seasoned materials and superior workmanship, at the lowest possible prices. A quantity of doors and sashes always in stock.—By enclosing a postage-stamp, a full list of prices will be returned.

E. and W. H. JACKSON beg to call the attention of Builders and the Trade to the LOW PRICES of their PATENT PLATE GLASS, BRITISH SILVERED and for glazing, of unrivalled quality and finish. ROUGH PLATE, CROWN, SHEET, COLOURED, and ORNAMENTAL GLASS, in every variety, of the best manufacture, at the lowest terms. Designs and estimates furnished for ornamental windows, either for house or church decoration.—All applications for estimates and lists of prices to be made at their warehouse, 315, OXFORD-STREET.

SOHO CROWN, SHEET, ORNAMENTAL, PATENT PLATE, AND PLATE-GLASS WAREHOUSE, 26, SOHO SQUARE

ALFRED GOSLETT begs to inform Builders, &c. that he is prepared to Tender for the supply of EVERY DESCRIPTION of Glass, now manufactured at WHOLESALE PRICES.

WHOLESALE BRITISH and FOREIGN WINDOW-GLASS WAREHOUSE, established upwards of Sixty Years. ROBERT METTAM begs to call the attention of Builders and the Trade in general, to his present prices of British and Patent Plate, Rough Plate, Crown, Sheet, and Ornamental Window Glass of every description now manufactured. Extra size Sheet Glass of all qualities and substances for Shop Fronts. Estimates and Price Lists forwarded post-free, on application at the Warehouse, 36, Princes-street, Leicester-square, London.

By Royal Letters Patent.

THE COSMOPOLITAN GLASS COMPANY, 296, Oxford-street.

The Managers acquaint Architects, Builders, Glaziers, &c. that their Tariff for BRITISH PLATE, PATENT PLATE, CROWN and SHEET WINDOW GLASS, HARTLEY'S PATENT ROUGH PLATE, COLOURED and ORNAMENTAL GLASS, may be had, free, on application at the Company's Depôt.

Hartley's Rough Plate Tiles from 9s. per dozen

Perforated Rough Plate and Sheet Ventilating Glass, 1s 6d per foot.

Flashed Ruby, 1s.; Ground Sheet, 3½d.; Enamelled, 8d. per foot. Crown or Sheet Squares, in 100 feet boxes, 2½ per foot.

Bashes Painted and Glazed, 1s per foot.

All kinds of Agricultural, Horticultural, Architectural, Domestic, Scientific, and Ornamental Glass, at wholesale prices.

GOOD FOREIGN SHEET-GLASS, in cases of 200 feet each; average size, 40 by 30, at 32s. 36s. and 40s. per case; ground ditto, 3½d. per foot; crown and sheet squares, in 100 feet boxes, from 14 by 10 to 24 by 14, 9d. per foot; 1-inch rough British plate tiles, 1s. per dozen; also, crown and sheet glass, in crate; British and patent plate, fluted and stained glass, glass slates, &c. Sheet lead, pipe, white lead, oils, turpentine, colours, &c. G. FARMILOE and SON, 118, St. John-street, West Smithfield, London.

CRYSTAL WHITE GLASS, first, second, and third quality, particularly adapted for pictures and the best description of glazing, being far superior in colour to patent plate. In cases of 200 and 300 feet each, at 4d. 6d. and 8d per foot; sizes varying from 24 by 18 to 40 by 28.—G. FARMILOE and SON, 118, St. John-street, West Smithfield.

STEAM PUMPING ENGINES.—PATENT PORTABLE STEAM ENGINES, from four to ten-horse power, always ready to let on hire, by the week or month, for pumping, sawing, pile-driving, raising materials, &c. &c.

Contracts taken for pumping any quantity of water.

JAMES BURTON & SONS, Engineers and Contractors, John's-place, Holland-street, Southwark, London.

FARM AND COTTAGE PUMPS.

WARNER'S PATENT CAST IRON PUMPS, for the use of FARMS, COTTAGES, MANURE TANKS, AND SHALLOW WELLS.

Patent Pump	£1 12 0
Patent Pump, with 18 feet of lead pipe attached, and bolts and nuts ready for fixing	2 12 0

Larger sizes if required.

The smaller sizes are also much used for supplying Hot Fountains, and Plant Houses, from underground Water Tanks, as they can be readily fixed in any situation.

May be obtained of any Ironmonger or Plumber in town or country, or of the Patentees and Manufacturers,

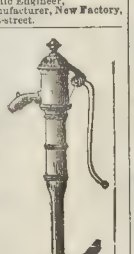
JOHN WARNER AND SONS, 8, CRESCENT, JEWIN-STREET, LONDON.

Every description of Machinery for raising Water, Fire Engines, &c.

The usual allowance to the Trade.

FOWLER'S IMPROVED FARM and COTTAGE PUMPS.

To be had of any Ironmonger or Plumber, at £1 12s.



The usual allowance to the trade.

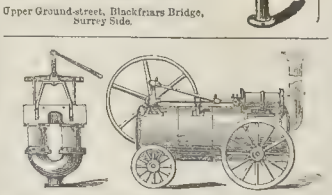
PUMPS of SUPERIOR CONSTRUCTION bored perfectly true by improved machinery, in various plain and ornamental patterns, for squares and market-places, roads, conservatories, liquid manure, ship, brewe, brickmakers, contractors, coal-heavers, brewers, chemical works, and in wrought and cast-iron, copper and brass, for hot or cold liquors, &c. &c. Long barrel and hydraulic lift-pumps, with handles on planks; and engines of various powers, for wells of any depth.

PUMPS on HIRE!—The largest stock in England of single and double pumps, from 4 in. to double 12 in. barrels, prepared for hand or steam power, ready for use on reasonable terms, at

BENJ. FOWLER'S, Hydraulic Engineer, Hot-water, Steam and Gas Apparatus Manufacturer, New Factory, Whitefriars-street, Fleet-street.

M. A. RICHARDS and SON, PUMP MANUFACTURERS and ENGINEERS

Pumps in Wrought and Cast Iron and Brass, bored by machinery, and fitted in the best possible manner, suitable for excavators, roads, brickmakers, farms, gardens, stables, liquid manure, ships, barges, well-sinking, &c. adapted for any depth. Hydraulic Pumps for deep wells.

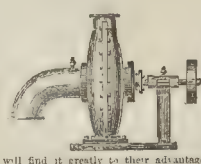


PUMPS ON HIRE.

Pumps of any size, single or double barrel, up to double 12 in. diameter, kept ready for use at reduced prices.

N.B. The above can be worked either by hand, horse, or engine power.

Iron Pails 38s. per doz. painted.
Ditto .... 48s. per doz. galvanized.



Upper Ground-street, Blackfriars Bridge, Surrey Side.

PORTABLE STEAM-ENGINES and PUMPS kept in Stock for Hire at reduced Prices. M. A. RICHARDS and SON, Pump Manufacturers and Engineers, Upper Ground-street, Blackfriars Bridge (Surrey Side).

TO CONTRACTORS.

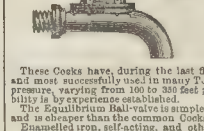
PATENT PORTABLE PUMPING ENGINES, mounted on strong waggon-wheels, on chimney horse shafts complete, strong, simple, for immediate use, several are ready for delivery, from six-horse power to twenty-five-horse power and upwards, adapted to contractors' work generally. May be hired at a rental, or purchased, and can be seen at work at Messrs. MEDWIN and HALLS, Engineers and Portable Engine Makers, 92, Blackfriars-road. These engines have been successfully employed for years.

BUILDERS, Contractors, Engineers, Brickmakers, Well-sinkers, Plumbers, Brewers, Chemists, Paper makers, Manufacturers, Proprietors of Cotton, Cotton, Indigo, or Rice Estates, Occupiers, or Proprietors of Low Lands, Fens, Marshes, &c. and all persons requiring water or other liquids shot or cold raised or forced, will find it greatly to their advantage to use GWYNNE and COS. PATENTED PUMPS, AS FOR ECONOMY, EFFICIENCY, DURABILITY, SIMPLICITY, AND POWER, THEY STAND UNEQUALLED. Waterwheels, Hydraulic Rams, and every description of Machinery for raising water, may be had by applying to GWYNNE and CO. Hydraulic and Mechanical Engineers, Essex Wharf, Tompion-place, Strand, London.

STEAM-ENGINES, BOILER, and PUMPS for SALE.—Two 8-horse high-pressure Engines, complete; Three high-pressure Boilers and Fittings; also Two sets of 12-inch Pumps each to command three pumps, with gear. The above may be had very low, together or separately. For particulars apply to Messrs. BURTON and SONS, Engineers, John's-place, Holland-street, Southwark, London; or to Mr. KNOWLES, Engineer, Waterworks, Cambridge, near Southampton.

TO WATER COMPANIES AND PLUMBERS.

HIGH-PRESSURE COCKS & CLOSETS.



The Health of Towns Commissioners having recommended the adoption of the high pressure principle in all towns, WARNER'S HIGH PRESSURE COCK is recommended as a Cock free from leakage, and applicable for all purposes and situations. Patent Closets and Basins with supply-valve for attaching direct to main pipes without a cistern, cocks, or wire.

LEAD, IRON, and TIN PIPE.

JOHN WARNER and SONS, Manufacturers, 8, Crescent, Jewin-street, London

PRIZE MEDAL, CLASS 32.

HIGH-PRESSURE VALVE COCKS.—LAMBERT'S PATENT.

These Cocks have, during the last five years, been extensively and most successfully used in many Towns under continuous high pressure, varying from 100 to 300 feet; their efficiency and durability is by experience established.

The Equilibrium Ball-valve is simple and certain in its action, and is cheaper than the common Cocks now in use.

Enamelled iron, self-acting, and other closets, upon economic arrangements, suitable for public buildings, cottages, asylums, &c.

THOMAS LAMBERT and SON, Brass and Iron Founders, Short-street, New-cut, Lambeth.

JOHN WARNER and SONS, Patentees of IMPROVEMENTS in the MANUFACTURE of LARGE BELLS.

J. W. & SONS having of late years devoted much time and study to the long neglected art of Bell Casting, have recently invented and patented a new process connected therewith, by which they are enabled to manufacture Bells of any size, note, or weight, superior to any heretofore in form, and at less cost than has heretofore been accomplished.

Bells for Churches, Chapels, Colleges, Schools, Turret Clocks, &c. cast for any size, note, or weight, singly or in peals.

TUNED BY MACHINERY.

Stocked and wheeled ready for fixing. Old Bells recast or taken in exchange.

MUSICAL HAND-BELLS tuned to the Chromatic Scale, with improved Clappers, and pegged on a new system, which gives a superior tone and facility for ringing.

PAPER-HANGINGS.—The CHEAPEST HOUSE in London for every description of PAPER-HANGINGS is GROSS'S WHOLESALE WAREHOUSE, 22, GREAT PORTLAND-STREET, Oxford-street, where you can select from the LARGEST and MOST EXTENSIVE Assortment in the Kingdom, THIRTY PER CENT. CHEAPER than any other house in the trade. Builders, Decorators, Dealers, and large consumers will do well to visit this establishment.

THE PERMANENT WAY COMPANY, 26, Great George-street, Westminster, have just ISSUED a PAMPHLET, descriptive of various Patented Inventions for the Permanent Way of Railways, which are simple, and are being applied to more than 3,000 miles of line. On application, a copy will be forwarded by post (gratis) to any parties who are interested in the construction of railways. WILLIAM HOWDEN, Sec.

PURE WATER, for manufacturing purposes, may be obtained at very moderate cost by RANSOME'S FILTERING STONE. Estimates given for large or small quantities. Builders and Plumbers supplied with the ascension and other Filters at trade prices. These filters, at one, two, three, and four guineas each, yielding 50, 100, 150, and 200 gallons per diem, will be found sufficient for ordinary domestic requirements, are self-acting, and not liable to get out of order. References to parties satisfactorily supplied with quantities up to 30,000 gallons per diem, may be obtained on application at the depôt, 71, Baker-street, Portman square, London.

WINDOW BLINDS.—TYLOR & PACE, Window Blind Manufacturers, 104, New Bond-street, and 2, Queen street, Cheapside, London, submit the following PRICES of WINDOW BLINDS which they can recommend as being made in the best manner:—Venetian blinds, per square foot, 1s.; best hollaud blinds, on rollers, 6d.; best ditto, on spring rollers, 8d.; gauze wire blinds, in mahogany frames, 2s.; perforated zinc blinds, in ditto, 1s. 10d.; outside blinds of striped cloth, 2s. Transparent blinds in great variety. Engravings, with prices and discounts to builders and the trade, forwarded on application, post free.

INDISPUTABLE LIFE POLICY COMPANY, 72, Lombard-street, and 2, Connaught-terrace.

TRUSTEES.

Richard Malins, esq. Q.C. M.P. | Richard Spooner, esq. M.P.
James Fuller Madox, esq. | John Campbell Renton, esq.
William Witherforce, esq.

A reduction of 25 per cent. has been made on the premiums of all policies of five years' standing.

ALEX. ROBERTSON, Manager.

TO MEMBERS of FREEHOLD LAND and BUILDING SOCIETIES.—POLICIES are issued by the LAW PROPERTY and LIFE ASSURANCE SOCIETY, securing the payment of his subscription after the death of a member, so that the property may pass unencumbered to his family. Particulars sent free, on application to

EDWARD S. BARNES, Secretary,
30, Essex-street, Strand, London.

LEASEHOLDS rendered as MARKETABLE and MORTGAGEABLE as FREEHOLDS, by the LAW PROPERTY ASSURANCE and TRUST SOCIETY.

*** Healthy and Diseased Lives, Reversions, Redemption of Mortgages and Loans, &c.

EDWARD S. BARNES, Secretary,
30, Essex-street, Strand, London.

THE ALBERT ASSURANCE COMPANY. (Established in 1838.)

MORTGAGE and other LOANS in connexion with life assurance are granted by this Office, either for long or short periods, on freehold and leasehold property, reversionary interests, and on good personal security.—EASTERN BRANCH, 7, Bunhary-square.

W. S. VARDY, Manager.

PORTLAND CEMENT.—D. MOUNTAGUE begs most respectfully to inform the numerous Architects, Contractors, Builders, &c. who have for the last thirty years patronised this Roman Cement, Plaster, and other manufactures that he is now enabled to supply them with a very superior Portland Cement, warranted to withstand the action of heat, frost, &c. and of uniform colour and quality. Orders received at Falcon Cement Wharf, 80, Bankside, Southwark; at Harrow-road Wharf, Stratford, Essex; and at the Cement Manufactory, Orchard House, Blackwall.

PORTLAND CEMENT WORKS, NORTHFLEET, KENT. Messrs. ROBINS and Co. with much pleasure announce to their Friends and the Public, that they have completed the enlargement of their Works, in order to meet the great increasing demand for their Cement; and are now prepared to supply any quantity of the very best PORTLAND CEMENT, manufactured by them for all the purposes Cement is applicable to.—Orders received at Great Scotland-yard, and at the Works.

PORTLAND CEMENT.—FULLWOOD THOMPSON and CO. are ready to supply any quantity of Portland, Roman, and Bath Cement, from their works, situate under Belsize, on the Bristol and Exeter Railway, and adjoining the Dunball Wharf, on the river Parrett.

These Cements are, they believe, the best for any purpose now in the market; they will set under water in a few minutes, and are insensible to extremes of heat or cold. The material used is such as will produce a certain and unvarying cementitious power, and a consequent uniformity of colour, which is so obvious in Cements manufactured in the ordinary method.

FULLWOOD THOMPSON and CO. will be happy to forward prices by post on application, and can offer favourable terms to large purchasers and exporters.

St. Mary-street, Bridgewater, July 26th, 1854.

PORTLAND CEMENT.—CHARLES RICHARDSON has the greatest confidence in introducing the Trade to the above superior CEMENT, being of uniform colour and quality (a desideratum never before attained in Portland Cements). It possesses extraordinary cementitious qualities, resists the action of frost and heat, and is more durable than any other Cement; does not vegetate, turn green, or crack; combined with which its eminent hydraulic properties stamp it at once as the first cement of the day for works where all the above qualities are requisite. It is manufactured on the only principle Portland Cement can be, and contrary to the statements put forth by those who have hitherto had the monopoly.—Manufactured by R. GREAVES, Esq. at his Works, near the River Avon, and sent to all parts of the kingdom per boat or rail, at a reduced price to the trade.

6, South Wharf, Paddington.

PORTLAND CEMENT.—ASPDIN'S PATENT.

Messrs. ASPDIN, ORD, and CO. have much pleasure in informing consumers of this valuable Cement, that they have, by means of a recent discovery patented by Mr. ASPDIN, much improved the quality of this Cement without any increase in price.

Engineers and architects are recommended to specify "Aspdin's Patent," as there are numerous imitations sold as Portland Cements resembling it only in colour.

ASPDIN, ORD, and CO. beg to call attention to their SECOND QUALITY, which is equal, if not superior, to most of the Cements sold as Portland, and is considerably cheaper.

A report of experiments made to prove the extraordinary strength of their Patent Portland Cement, may be had at their Office, New Wharf, A. Angel-street, Westminster, at their Works, Gateshead-on-Tyne, at Messrs. Rosher's Wharf, Holt-head-street, Blackfriars, Rugeley-road, Battersea, and Limehouse, or from their Agent, Mr. HENRY ROBINSON, 31, King-street, Liverpool.

PORTLAND CEMENT.—JAMES WESTON having enlarged that portion of his CEMENT WORKS on Mill-wall, Poplar, for Manufacturing the above CEMENT, begs to inform the Trade in general that they can be supplied with any quantity they may require, either at his Works, St. Andrew's Wharf, Earl-street, Blackfriars, or Middle Wharf, Scotland Yard, Westminster. Manufacturer of Roman, Lias, and Mastic Cements, English and French Plaster, &c.

ARTIFICIAL HYDRAULIC or PORTLAND CEMENT combines the valuable qualities of the natural Cements with the additional advantage that it greatly excels them in its cementitious properties; that it is not affected by frost, and does not vegetate in damp situations. Account of COMPARATIVE EXPERIMENTS on the strength of this and other Cements read at the Institute of Civil Engineers, to be obtained from the makers, JOHN BAZLEY WHITE and BROTHERS, Millbank-street, Westminster, who prepare one quality only of Portland Cement.

WHITE OXIDE OF ZINC AND ZINC PAINT.
(LANGSTON SCOTT'S PATENT.)

CROWLEY, WHITE, AND CROWLEY, *Sole Manufacturers.*

This healthful substitute for White Lead, of unrivalled colour and texture, may be obtained from most of the principal Paint Grinders, Oil and Colourmen, and Ship Chandlers in the United Kingdom, or direct from the Works, Grand Surrey Docks (Wholesale under Brands, either in Dry state ready for mixing with Oil.

Zinco Paint, being unchangeable in colour, stands pre-eminent for the highest purposes of Art; and from its perfectly pure and innocuous qualities, is peculiarly applicable to first-class decorations and House Painting. For Iron it possesses great affinity, and hence its preservative properties for that Metal, whether employed for Marine or other purposes. It is known from its Colours, and may be successfully employed on Stucco, or any other outside work for which White Lead is used; it sets harder, is consequently more durable, economical in first cost, and covers equal to any known pigment.

PRICE-LIST AND TESTIMONIALS FORWARDED IN ANSWER TO LETTERS ADDRESSED TO

MESSRS. CROWLEY, WHITE, AND CROWLEY, 39, KING WILLIAM-STREET, CITY, LONDON.

DAMP WALLS.

STENT'S COMPOSITION FOR PREPARING NEWLY-PLASTERED OR DAMP WALLS FOR PAPERING,

Is the result of practical experiments and long experience; it is unfailing in its application. Entire houses have been papered a few days after plastering. In repairs of old plastering it is invaluable. A moderate room can be papered for 2s. 6d.

Prepared only by W. J. STENT, Warminster.

LONDON AGENTS—Messrs. J. and G. WALLIS, 64, Long-acre.
AGENT FOR IRELAND—Mr. S. BOYD, 46, Mary-street, Dublin.

ATKINSON'S CEMENT, so long known and esteemed in London, for plastering purposes, is a quick-setting Cement that requires no colour to be added. Sold exclusively by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster; and Seel-street, Liverpool.

KEENE'S and PARIAN CEMENTS and FRENCH PLASTER for internal uses. These well known hard stucco-ery, quickly, and can be painted upon within a few days.—Made and sold by JOHN BAZLEY WHITE and BROTHERS, Millbank street, Westminster.

PARIAN CEMENT, for internal use, to be painted in a few hours, and papered within a couple of days.—CHARLES FRANCIS and SONS, Manufacturers of Roman, Parian Cinder cement, and all other Cements in use for building purposes, Nine Elms, London.

GEO. & THOS. EARLE, CEMENT MANUFACTURERS, HULL. Light and Dark, equal to any made. Manufacturers also, and dealers in Plaster, Paris White, Mastic, Hair, Lias Lime, Laths, Slates, and Slate Slabs, Fire-bricks, Grindstones, Cement Chimney-tops, ditto Vases, Ridging, &c. Paints, Stucco, &c. Marble Merchants and Importers of Pozzolano.

CEMENT.—ROMAN and PORTLAND CEMENT, and PLASTER of PARIS manufactured by C. J. HILTON, can be had in any quantity, wholesale and retail, at his wharf, 6, Upper Thames-street, London, and also at the manufactory, Faversham, Kent. N.B. These Cements supplied for shipment, on advantageous terms.

BLUE LIAS LIME.—NELSON and CO. beg most respectfully to call the attention of Engineers, Architects, Contractors, Builders, and others connected with the building trade, to the superior quality of their BLUE LIAS LIME, the natural hydraulic properties of which, and the great estimation in which this kind of Lime is held for building in wet and damp situations, such as wharf walls, docks &c. and for concrete foundations, is a sufficient recommendation for the adoption of it in all works of the above description. It is also properly adapted for stucco. Orders received by London Agents, BLYTH, BROTHERS, 18, South Wharf, Paddington; and at the Works, Stockton fields, near Southam, Warwickshire.

GREAVES'S BLUE LIAS LIME.—The superior manner in which the above is ground renders it cheaper for concrete or stucco than any other lime. Cement. The shall lime for mortar is burnt on an improved principle, leaving scarcely any core. The satisfaction constantly expressed by Engineers, Architects, and Contractors, of the above lime is best recommendation.

Gibbs, Canning, and Co.'s Blue Vitrified Bricks, Pipes, Junctions, Bends, and Fire Goods.

ROMAN, PORTLAND, PARIAN, ANSTON, and LIAS Cements of the best quality.

SECONDS, PAVIORS', STOCKS, and other Bricks.

CHARLES RICHARDSON, 6, South Wharf, Paddington.

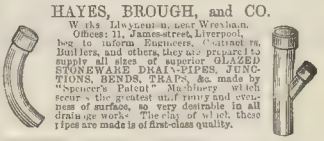
O. M'CARTHY, CARMAN, and SAND and CEMENT MERCHANT, Whitefriars Wharf, Whitefriars Fleet street, City. Sand, from above or below bridge, delivered by the yard or per barge. Ballast screened or unscreened, by the yard or per barge. Sticks, lime and old bricks. Dry rubbish delivered per barge, in any quantity, alongside the Thames.

SUPERIOR GLAZED STONEWARE DRAIN PIPES, invented and manufactured by WILLIAM NORTHEN, UNION POTTERY, No. 14, VAUXHALL-WALK, LAMBETH.

W. NORTHEN begs to inform surveyors, contractors, builders, water companies, &c. that he has completed "Spencer's" new patent machinery for making GLAZED STONEWARE DRAIN PIPES, JUNCTIONS, BENDS, ELBOWS, SYPHON-TRAPS, &c. &c. Amongst the many advantages of pipes made by this machinery over all others may be mentioned, that it insures perfect uniformity in form and size, both of pipes and sockets, the one being of a different and better construction than any others now in use; and the pipes and sockets being made by one process are secure from separation.

W. N. invites particular attention to the superior quality of the glaze used in his manufacture, which is equal to glass, and rendering stoppage in the drains impossible.

W. NORTHEN'S PIPES MAY BE INSPECTED AT THE FOLLOWING PLACES, WHERE ORDERS ARE RECEIVED:—



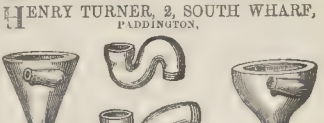
Rosher and Co.'s Wharfs: Kingsland, Blackfriars, and Millbank. Martin and Wood's Market Wharf, Regent's-park Basin. J. C. Hilton's, Crown and Horse-shoe Wharf, No. 8, Upper Thames street. C. Richardson's, South Wharf, Paddington. G. Erith's, Cambridge Heath Wharf, Hackney.—Millwood and Co.'s Wharfs, Kensington Basin, and Creek Wharf, Hammersmith.—J. Corbet's Depôt, Britton-street, Chelsea; and at the Pottery.

MILL-WALL POTTERY (near Scott Russell's).—Messrs. WILLCOX and CO. invite the attention of Contractors, Builders, and Wholesale Dealers to their extensive assortment of articles in WHITE EARTHENWARE for sanitary purposes. The only manufactory of the kind in the neighbourhood of London.—Particulars forwarded on application.

TO LOCAL BOARDS OF HEALTH, WATER COMPANIES &c.

A DESIDERATUM in SLUICE-VALVES. FREEMAN ROE'S Patent Sluice-valve can be repaired without being removed from the main. All sizes, from 2 inch to 36 inch. Patent Hydrants, self-closing Cocks, fire and other Pumps, Hot-water Apparatus, Baths, &c. Surveys made, and estimates given by FREEMAN ROE, Hydraulic, sanitary, and Gas Engineer, 70, Strand, and Upper Marsh, Lambeth.

HAYES, BROUGH, and CO. Works, Llwynegrin, near Wrexham. Offices: 11, James-street, Liverpool, beg to inform Engineers, Contractors, Builders, and others, they are prepared to supply all sizes of superior GLAZED STONEWARE DRAIN-PIPES, JUNCTIONS, BENDS, TRAPS, &c. made by "Spencer's Patent" Machinery which secures the greatest uniformity and evenness of surface, so very desirable in all drainage works. The clay of which these pipes are made is of first-class quality.

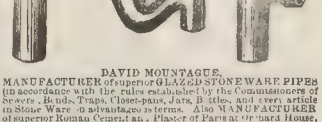


PATTEN'S PATENT HIGH-PRESSURE WATER-CLOSETS and WATER REGULATORS, manufactured upon an improved principle, dispensing with cistern, cranks, wire, ball tracks, &c. Any number of closets can be supplied from one main.

Also PATTEN'S improved powerful FLUSHING LOW-PRESSURE WATER-CLOSETS, patronised by the Board of Health, Government, and other large public establishments, in addition to numerous private individuals.—Drawings, testimonials, and references of the highest respectability forwarded by post. Price for Closet and Apparatus complete from 25s. and perfect action guaranteed. Fixed specimens to be seen on the premises of the Patentee, WILLIAM PATTEN, 22, Old Fish street, near St. Paul's, London.

AGRICULTURAL LAND DRAIN-PIPES of all sizes, and in any quantities, may be obtained of L. B. PEARSE and CO. Great Northern Wharf, York road, King's-cross.

HENRY TURNER, 2, SOUTH WHARF, PADDINGTON,



5a. Traps, 2s. 6d. 3a.

Manufacturer of Closet Basins and Traps, yellow outsides, with white insides. These are warranted to be the most durable earthenware now manufactured.—A list of sizes and prices sent free, on application. A large stock of Pipe Basins of every variety.

TO ARCHITECTS, SURVEYORS, PLUMBERS, BUILDERS, &c.

HAYWARD TYLER and CO. No. 85, Upper Whitecross-street, St. Luke's, ENGINEERS, PLUMBERS' BRASSFOUNDERS, and Sole Manufacturers of "M'Cannel's Registered Mode Water-valve." This water-closet is the most simple and efficient yet introduced for high services, and for fixing without the usual service-box, cistern-work, &c. From its construction all possibility of internal leakage is prevented.—A diagram of the above may be had on application, or the closet inspected, at the Manufactory, as above.

VICTORIA POTTERY, LEIGH, NEAR SOUTHEND, ESSEX.

DAVID MOUNTAGUE,

MANUFACTURER of superior GLAZED STONEWARE PIPES (in accordance with the rules established by the Commissioners of Sewers), Bends, Traps, Closet-pans, and other articles in Stone Ware (to advantageous terms. Also MANUFACTURER of superior Roman Cement and Plaster of Paris at Orchard House, Blackwall. Orders executed from the above places, from Paddington wharf, 80, Bankside, Blackfriars, and from Harrow-bridge-wharf, Stratford, Essex.

COLLIER'S TERRO-METALLIC and RED EARTHENWARE SOCKET DRAIN PIPES, BENDS, JUNCTIONS, and SYPHONS.—This ware, allowed by all to be the best manufactured, by the unparalleled quality, combined with cheapness, will be found to meet the approbation of consumers. Sole Agents, L. B. PEARSE and Co. Great Northern wharf, York-road, King's-cross.

TO ENGINEERS and MACHINE-MAKERS.—WANTED to PURCHASE, a SECOND-HAND VERTICAL PIPE MACHINE, for making sewerage pipes of not less than 18 in. diameter. The advertiser has a small High-pressure Steam engine, which he would either exchange for part with on moderate terms.—Address, B. C, 5, Trafalgar-terrace, Greenwich.

THE BUILDER.

SALES BY AUCTION.

TO ENGINEERS, IRONFOUNDERS AND OTHERS.

MESSRS. BARTON and SON will SELL by AUCTION, upon the PREMISES, Suspension-bridge Wharf, Belvedere-road, Lambeth, on THURSDAY, JANUARY 4th, at TWELVE o'clock, a large WROUGHT-IRON TANK, a heavy CAST-IRON CRANE, a large CARRONADE, mounted with iron carriage and wheels, now lying at the Haymarket, Newington Causeway.

FULLER and HORSEY, on THURSDAY, JANUARY 11, 1855, at ELLEN o'clock, on the PREMISES, Millwall, Poplar (by direction of the proprietors in lots without reserve, in consequence of alterations), the CHEMICAL PLANT, eighteen cast-iron pans, ten large square wrought-iron copper, fifty cast-iron carboys, of manganese pots, three iron steam boilers, three cast-iron crushing mills, with rubbing-stones, wrought-iron copper, fifty cast-iron carboys, of manganese pots, three steam boilers, from 4-horse to 12-horse power, with cast-iron boiler, two cast-iron crushing mills, with rubbing-stones, on 11 ad. three lead vertical rag packs, hydraulic press, with brass plates and boxes, wrought-iron copper-plate, two 4-inch brick and lime stone lead cells. To be had on the premises; and of Messrs. FULLER and HORSEY, Billiter-street, City.

SALES BY AUCTION.

MOST ELIGIBLE BUILDING INVESTMENTS.—Borough of Dorchester — TO BE SOLD BY AUCTION, in lots, by

MESSRS. BAKER and ENSOR, at the GUILDHALL, on WEDNESDAY, 31st JANUARY, 1855, at ELEVEN o'clock in the forenoon (subject to such conditions as will be then and there produced), all that PIECE or PARCEL of PASTURE LAND, known as, and being part of, Wollaston Field, within the said borough, containing about 4a. 3r. 23p. situate on a gentle slope, and admirably adapted for building purposes. This land is the property in possession of the Corporation of Dorchester, and it is intended, with the approval of the Lords Commissioners of Her Majesty's Treasury, to offer the same for sale in lots, for absolute terms of ninety-nine years, subject to certain fixed ground-rents, and to the obligation on the part of the several purchasers, to build a dwelling-house with offices and outbuildings thereon, according to certain plans, elevations, and specifications, which will be prepared by the Corporation, and the purchasers will be restrained by the Corporation. The houses and offices proposed to be erected will be of several classes, so as to meet the growing requirements of the town, and from the well known fact of house property generally in Dorchester being far more valuable than that of any other provincial town, no reasonable doubt can be entertained that such a building speculation as that now offered to the public will be highly remunerative. The plans, elevations, and specifications above referred to, together with the conditions upon which the estate will be held, and a draft of the proposed leases may be seen on application to Mr. HENRY HALL, of No. 61, Thornhill square, Islington, London; or to Mr. SYMMONS, Town Clerk of Dorchester, on and after the 20th day of JANUARY, 1855.

Dorchester, 2nd Dec. 1854

ST. MARGARET'S, near RICHMOND.—A few most eligible SITES for VILLAS, with a frontage to the Thames, and other plots, suitable for villas of all classes, TO BE LET, on Building Leases. Money advanced to responsible builders.—Apply to GEORGE MORGAN, Esq. Architect, 5, Chancery-lane; or to Mr. LONG, Red Lion street, Richmond.

BUILDING-GROUND, BRIGHTON.—TO BE LET, a very eligible FRONTAGE for THREE or FOUR HOUSES in Broad street, immediately contiguous to the Marine parade and Chain-pier, where houses are much in requisition. Full particulars and terms may be obtained of Messrs. LOCKWOOD, Surveyors, No. 44, Upper Baker-street, London

DARLINGTON.—TO BE SOLD, by Private Contract, a DETACHED VILLA RESIDENCE and GROUNDS, situate within three minutes' walk of the market-place. The house is of recent construction, and comprises servants' hall, scullery, pantry, and cellars on the basement floor; dining and drawing rooms, two parlours, and a butler's pantry on the ground floor, with eight bed-rooms and a nursery above. A conservatory adjoins the drawing-room, and with which it is connected. The ornamental grounds and gardens extend over about five acres. The purchaser may also have if required an additional quantity of land, with a two and four-stalled stable, single and double coach house, harness room, garden-shed, and sinery. For particulars, apply at the offices of Mr. GEORGE MASON, Central Buildings, where a plan of the house and grounds may be seen.—Darlington, December 8, 1854

TO BE SOLD, within a few minutes' walk of the Kilburn Station, on the North-Western Railway, and immediately adjacent to the intended line of the Hampstead Junction Railway, an ut EIGHTEEN ACRES of FREEHOLD LAND, having a frontage next West-end-lane, of more than 600 feet. The Estate, which is beautifully situated, is at present let to a yearly tenant, and immediate possession may be had. The soil is capable of being made into bricks; and a specimen of the earth may be seen at the Offices of Messrs WIGG, POWNALL, and WIGG, 7, Bedford-row, where lithographed plans, and further particulars, may be obtained, or of R. B. ARMSTRONG, Esq. 8, Staple Inn.

IMPORTANT to LANDOWNERS, BUILDERS, &c. desirous of quickly Disposing of Estates, without the publicity or expenses of an auction.—Apply to Mr. WILLIAM TAYLER, 1, Adelaide-place, Londonbridge, Offices for Effecting Sales, Purchases, Mortgages, or Leases of Landed and House Property, on a very moderate commission.—A printed form for furnishing him with the particulars required, and containing the terms, will be forwarded as directed on receipt of two postage stamps. Late Insurances effected in nearly all the Offices by his agency without extra charge to the assured, to whom the peculiar features of each Office will be explained, and much trouble saved. Office hours, Nine to Eight.

EXTENSIVE PREMISES in the CITY of LONDON.—The Trustees of Parish Estates will meet in the Vestry-room of the Church, on FRIDAY, the 2nd of FEBRUARY next, at SIX o'clock in the evening, to receive TENDERS for taking, on a twenty-one years' lease, the spacious Premises situate on the west side of Aldersgate street, at present used as a Workhouse by the Guardians of the East London Union. The building are well lighted, and three stories in height, with a dwelling-house and paved courtyard. From the close proximity of this property to the many extensive new railway communications, the extension of railway accommodation to the general public, it will be considerably enhanced in value.—For further particulars, and cards to view, apply to Mr. BLYTH, Surveyor, 113, Aldersgate-street.

TO CARPENTERS, BUILDERS, MANUFACTURERS, and Others requiring roomy PREMISES, with a good DWELLING-HOUSE attached, TO BE LET, on lease. There is space enough to erect two or three tiers of workshops. Has an entrance by a wide pair of gates. The whole may be had on very advantageous terms. Situate in the neighbourhood of Gray's-inn-road.—Apply to Mr. S. WYNN, Broker, 38, Upper Northplace, Gray's-inn-road; or to Mr. BUCKLE, 10, Vine-street, Hatton garden.

TO BUILDERS, FREEHOLD LAND SOCIETIES, AND OTHERS.

TO BE LET, on building lease, for a term of ninety-nine years, or SOLD, about THREE ACRES of FREEHOLD LAND, peculiarly adapted for the erection of third or fourth-rate houses, and situated about ¾ miles from Westminster-bridge, in a locality where dwelling-houses of the class mentioned are much in requisition. Leases granted direct from the freeholder. Also, a detached VILLA, adjoining the above, containing ten rooms, with stable and offices, and about half an acre of garden, at present let to a highly respectable tenant. To be sold either in quantities of one or more with the above.—For particulars apply to Messrs WEHNERT and ASHDOWN, Architects, 23, Charing-cross

TO ENGINEERS, SMITHS, AND OTHERS.

TO BE LET, a small FACTORY, with engine and boiler, screw-cutting lathe, punching and shearing press, three forges with fan and fire grinding; including benches, vices, &c. Apply to AUGUSTUS SMITH, Engineering Anchi Leer and Valuer, &c., Blackfriars road, near the bridge

TO ENGINEERS, MILL-OWNERS, CONTRACTORS, AND OTHERS.

AUGUSTUS SMITH, Auctioneer, Valuer, &c. 23, Blackfriars-road, two doors from Hound-street, having had seventeen years' practice in the selling and valuing of all kinds of engines, machinery, lathes, mechanical and engineering tools, plants, &c. respectfully solicits a share of patronage in the above line. The most satisfactory references given if required, and all accounts settled the day after delivery; also a free and strict kept of all engines, boilers, and machinery for sale by private contract.

TO BUILDERS, OF SMALL CAPITAL.

TO BE SOLD, for finishing, the CARCASES of several EIGHT ROOMED HOUSES, some with shops, in one of the most improving suburbs of London. Money advanced if finishing and the whole of the purchase-money asked may remain on mortgage if required.—Apply, personally, to Mr. ROBERT GRAY, 33, Southampton-street, Strand.

TO CARPENTERS, BUILDERS, &c.—TO BE DISPOSED OF, in consequence of the declining health of the proprietor, an excellent JOBBING BUSINESS, established above fifty years, in a central part of the metropolis, near the waterside, and in the City of London, employing upon an average about forty men. There are capacious workshops, counting-house, timber-yard, saw-mill, stabling, &c. well adapted for a first-rate business requiring accommodation for a large staff of men.—Apply to Messrs. HAMMOND and ELOART, Estate Agents, &c. 38, Chancery-lane.

GREAT NORTHERN WHARF, York-road, King's-cross.—WHITE BRICK and TILE DEPOT. L. B. PEARSE and CO. GREAT NORTHERN RAILWAY.—L. B. PEARSE and CO. Great Northern Wharf, York-road, King's-cross beg to inform builders, contractors, and others who are engaged in works at or near any of the stations on the above line of railway, that they can be supplied upon the shortest notice with Bricks, Tiles, Lime, Cement, Sand, Plaster, Drain-pipes, Fire-goods, and all other building materials of the best quality at the lowest market prices.

N.B. Orders received overnight can be delivered by the early morning trains.

MAW'S ENCAUSTIC TILE PAVEMENTS—a highly durable and decorative substitute for ordinary flooring and their perishable oil-cloth coverings; for entrance-halls, passages, verandahs, conservatories, &c.

MAW and CO. send, free of expense, their pattern and price book, with designs, to any given spaces (and estimates), free of expense.

BENTHALL WORKS, BROSELEY, SALOP.

PEAKE'S TERRO-METALLIC TILES, PIPES, &c.—Notice is hereby most respectfully given, that the LONDON DEPOT for this WARE is REMOVED to No. 21, WHARF, Macclesfield-street North, City-road Basin. Secondly, that the trade term, "PEAKE'S WARE," is the exclusive right of the Proprietor; and, thirdly, that the "REPORTS OF THE JURIES," page 381, of the Great Exhibition, rank the Manufactories known so long as "The Potteries," Tunstall, Staffordshire, as the first of the kind in the world.

GREAT REDUCTION.—Pantiles 60s. per thousand; plain 35s.; Cowley Stocks 33s. at WARD'S OLD ESTABLISHED TIMBER WHARF, BANKSIDE, London. Builders, Engineers, Gas Companies, and others, supplied with every sort of country Brick and Tile goods; Fire Bricks, Lumps, Tiles, Patents Nailing and Coal-drying perforated Tiles, real Dutch Clinkers, River Sand, Concrete Gravel, Founders' Loam, White and Red House Sand, &c. &c. at the cheapest rate.—Chief Office, 27, Regent-street.

BRICKS.—Malm Cutters, Yellow and Pale Seconds, Paviors, and Pickings, of good and sound quality, constantly on sale at H. DODD'S Brickfields, which are only a quarter of an hour's walk from the City. H. D. earnestly requests purchasers to favour him with a visit, in order to inspect his stock, and to judge for themselves.

Malm Place, Malm Stocks, and Place Bricks, also on sale. These bricks are sound, well burnt, and unusually free from defects; a very large proportion of the stock being suitable for external facing.

Apply to HENRY DODD and CO. at the Countine-house, Hoxton Brickfields, Grange-walk, near the Rosemary Branch, Hoxton.

N.B. Hightower Red Stocks, of approved quality constantly on sale upon reasonable terms. This Sand, from its not containing any saline matter, is acknowledged to be preferable to river sand.

WHITE SUFFOLK and RED FACING BRICKS

COWLEY, KENT, and ESSEX BRICKS.

Also Yellow and Pale Malm Seconds, Cutters' Paviors, Shippers, &c.

KENTISH RAG-STONE of the FINEST QUALITY.

MILLS and PRICE (successors to Mr. Benjamin Gough), 5, ADELAIDE-PLACE, LONDON-BRIDGE.
